Three other factors remain to be considered whose influence it is more difficult to estimate, because they were more vague than the four already mentioned, each of which was connected with a practical bill or proposal. The first of these three was the loss to the Liberal party of Mr. Gladstone's leadership. Although there was in its ranks a very general regard for and confidence in his successor, the departure of the chief who had inspired its efforts for thirty years, and been during all that time the most brilliant figure in English public life, with an experience, an eloquence, and a courage no one else could rival, naturally depressed their spirits. It takes some time before an army can learn to cheer the name of a new general as it cheered one who has often led them to victory. This was an unavoidable misfortune; for even had Mr. Gladstone remained in the Government which he formed in August, 1892, until it resigned in June, 1895, his advanced age would have made it impossible for him to do much fighting, and every one would have known that he could not again take office.

In the next place, there was a general discontent with the depression from which trade has been suffering for the last five years and agriculture for the last fifteen. This discontent, as usually happens, told against the government which had been recently in power, and disposed the voters to "give the other fellows a chance." In vain did the Liberals point out that trade had been bad under the Tories from 1890 till 1892, that it had been equally bad or worse in most other countries, that it had begun to revive last March, while their Ministry was still in power, and that ministries cannot make good trade any more than they can make good harvests. The sense of disquiet, the idea that a change of administrators might do good and at any rate could do no harm, was irresistible; and many elections were no doubt decided by this notion, against which it was all the harder to fight just because it was irrational. When there are no arguments to support a case, the case, though it may be absurd, becomes irrefutable.

Upon minor causes which acted in particular parts of the country, it is hardly worth while to dwell. Several seats in Lancashire were lost to the Liberals because the critical condition of the Indian revenue had obliged them to allow the Indian Government to impose an import duty on cotton goods. Several more were affected, perhaps lost, on the question of bimetallism, which has taken strong hold of Lancashire and some of the other manufacturing districts, although its advocates are far from commanding a majority in the new House of Commons. A more important factor, and the last of the three above referred to, was the impression, pretty widely felt, and influential with timid minds, that the Liberals were tinged by revolutionary or socialistic views. This impression was the more odd because the so-called Independent Labor party, which is avowedly socialistic, was, wherever it had an organization, attacking Liberal candidates, and denouncing them as being more "capitalistic" than the Tories; and actually running candidates of its own in order to keep the Liberals out. However, the fact that socialism was in the air and had frightened the property-holding classes, among whom a good many workingmen may now happily be included, told against the party which is traditionally the party of change, and made not a few of the more timid sort think property safer under the party which is traditionally that of conservatism, and to which the men of wealth, with very few exceptions, now belong.

Lest it should be supposed that the enormous majority which the Tories have obtained in the House of Commons denotes a pulverization of the Liberal party, let it be observed that the majority of popular votes obtained by the Tories in the constituencies is only between one and two hundred thousand (it is hard to make an exact calculation, because many seats, especially Tory seats, were uncontested) —that is to say, a small percentage of an electorate which exceeds six millions. This is a curious result of the British electoral system, and shows that the swing of the pendulum, which seems so tremendous if one regards Parliament, is comparatively small among the voters. It shows, also, that when the pendulum takes a swing back, the change among the voters need not be very great in order to restore the now defeated party to power. For the present, however, the Tories may count themselves safe. Their majority is inconveniently large, but, if they keep it solid, they may retain office unshaken for six years to come. G.

HOLLAND IN 1895 AND THE DUTCH UNIVERSITIES.

ROTTERDAM, August 27, 1895.

IN a certain sense the Dutch of to-day suffer in comparison with their glorious past. One who studies the faces on the canvases of Rembrandt and Franz Hals and then looks upon contemporaneous Netherlanders is struck with the difference. The heroic pride and joy of life noticeable in the former have given way to

simple content or anxious desire for gain. Familiarity with figures of arithmetic rather than of rhetoric characterizes the Dutchman of to-day. The average face in the land of dykes and guilders is much like that in the country of pounds, shillings, and pence. It is distinctly commercial. The Englishman apparently notices this even more than the American, and the "modern instances" of the British pot calling the Dutch kettle black are numerous and amusing.

Even the Hollanders themselves declare that there has been a decline in national spirit since the day of the Silent and Maurice. The pessimists who bewail these and recent degenerate days are of two sorts. The ultra-Calvinists, of whom there is yet a vast number in Netherland, point to the past with reverence because of its purer orthodoxy. They declare that the triumphs of their fathers in art, poetry, law, science, and military success were direct fruits of faith. Declension in doctrine has been followed by decay of national prestige. A powerful party in political and ecclesiastical life still shout the battle-cries of the Synod of Dort. Barneveldt will never have a statue if they can help it. Nevertheless, his name is on the new streets of the Dutch cities. Another class, usually the learned men in the universities and professions, declare that the Dutch have lost nerve. The old spirit of enterprise which led their ancestors, even while fighting giant Spain, to fill the earth with explorers and cover the once unknown lands and seas with Dutch names (which the English, with characteristic impudence, say they, have erased or supplanted) is no more. Not only have the qualities even of the very cheese and butter declined, but the merchant will not risk his ships or the capitalist his guilders unless positively sure of his five per cent. returns.

A different note is sounded by others of perhaps wider view, notably by men in the commercial marine and by the Rotterdammers. Nations, say these men, whose glasses possess a rosier tint, have their dark and bright days, their ebb and flow. Nederland, they argue, is awakening from her night slumbers. The tide is rising and a new day of prosperity is being ushered in. Look! they cry, we are out of the entanglement of European politics. We are without enemies, and need make none. From Germany there is no danger whatever. France and England are both friendly. Our colonial possessions are outside of the sphere of the ambitions of the great Powers that are busy, jealous, and rapacious in Asia and Africa. We have shown how well we can colonize and govern our subject thirty millions. Our army and navy and fixed defences are in first-class order. We are able in any emergency to protect our borders and enforce neutrality. Our schools are the admiration of Europe. Our art is living. In fisheries, trade, agriculture, we are steadily advancing. Manufactures are increasing in value and extent of sale. Rotterdam will soon be one of the greatest seaports in all Europe. The Hague and Amsterdam are prospering. While the number of new houses and people in the chief cities multiplies, the country districts hold their own. Who will say that the Dutch nation is not even now having a renaissance?

How far the boast of "Young Holland" is soundly based, the foreigner cannot certainly say, even after seeing and talking with men in the eleven provinces. It is certainly more easy to believe in the asserted renaissance while in The Hague or in Rotterdam than when, for example, in the heath-land of Drenthe or in the province of Limburg. The general air of the kingdom is that of contentment and prosperity. Everything is well kept up, neat and bright. Some of the cities which are "dead" in rhetoric and book-titles seem remarkably lively. The writer, from the point of view of the tourist, enjoyed the distant provinces of Friesland, Groningen, Zeeland, and Limburg quite as much as the two Hollands.

Probably the ground midway between the pessimistic scholar in the cloister and the enthusiastic skippers who share the Rotterdam enthusiasm, is that which is paved with truth. My own impression of the Dutch is that they are safely set in precedent and grooves and will not soon or startlingly change. Under the pressure of national danger they will, I think, be found ready, and will probably repeat their history. If anything seems clear from recent critical investigation, it is that the people of Holland led William the Silent more than he led them. These quiet men who think are not likely to quail before the bullying of the great soldier camps around them. The recent events of Lombok and East Indies, when read in their true light, argue nothing against Dutch valor or tenacity. They rather answer grandly to the traditions of the eighty-years' war. Yet the mynheers do not love strife. There is nothing of the style or aristocratic swagger in the Dutch "militaire," such as one sees so much of in Berlin, for example. All extra show, fuss, and pomp is sedulously avoided. The studied restraint, quiet dignity, and modest decorations of the recent "feest" in The Hague, when the little Queen, Wilhelmina, with her own hands, pinned on the medals to the bosoms of the warriors of Lombok, was singularly like a family party. No theatrical heralding abroad of the impressive ceremony was even thought of. Strong and bronzed heroes who had faced the deadly Malay krisses and rifle-fire of the jungles broke down and showed wet faces as the royal child's dainty fingers laid a nation's award over their hearts. None more than intelligent Hollanders are opposed to the idea of standing armies. Yet the awful experiences of the past show the unwisdom of being unready. Vigilance and defence are necessary, with such powerful neighbors all around. In the East Indies, despite the occasional outbreak of a tribe, the peaceful and successful government of thirty millions of subtropical people of varied nations and languages is a triumph of statesmanship.

In the Netherlands of 1895, then, we note quiet in politics. All executive power is removed from the royal family, and the government is that of a republic in disguise, with a pretty figurehead. With enough "socialism" in the nation and sufficient friction between the Liberals and the Conservatives (within which latter party the Roman Catholics and ultra-Calvinistics join hands to keep up a state-subsidized religion and education) to prevent stagnation, most of the business of the States-Particular and the States-General is that of routine. A steady multiplication of the comforts of life and a broadening of the franchise result. In education the Dutch are not behind any nation in Europe, though the danger is that German ideas and methods may be too closely followed. With her colonies and affiliated nations in South Africa, Holland needs, I think, to lean rather to the more practical training of the English and American schools.

In enterprise the old passion of the race for overcoming difficulties is still manifest. It seems to have been fully determined to drain the Zuyder Zee and create a new province. To accomplish this stupendous undertaking, a generation of human life in point of time, besides an expenditure of at least sixty millions of dollars, will be necessary. In reality the work to be accomplished amounts to this—to lift off the surplus of water that engulfed and hid the old Lake Flavo, which existed before the thirteenth century, and to provide drainage for the rivers debouching into the now-existing Zuyder Zee. In a word, the Netherlanders want not only to get back the "drowned" lands, but to let the old water-courses and reservoirs of their mediæval history remain practically as they were of old. The project once carried out will, curiously enough, change a half-dozen "dead cities" from seaports to inland municipalities. In all probability it will call to thriving resurrection some of those which Havard baptized as "dead," while others that now have deep water will shrivel up into villages or mere cheese-markets. Of the fertility of the recovered ground there can be no question. As a rule, the fishermen and coasting skippers oppose the plan of desiccation. The archæologists, engineers, merchants, and manufacturers heartily approve of it.

Among the learned there are no signs of somnolence. University life is active and interesting. The modern Dutch make books rather than literature. Erudition rather than creative power is their characteristic. We must not, however, forget their geographical limitations. Less than five millions of people live within thirteen thousand square miles. In the fields of modern science, theology, linguistics, and comparative religion the scholars are busy. The annual harvest of books in quantity and quality bears a ratio in comparison with France, England, or Germany that is highly creditable to the Dutchmen. These, though they can, and often do, write in languages more widely spoken than theirs, prefer their own rich, clear, and strong tongue.

I have recently visited the four great universities, besides the seats and relics of those defunct. Franeker ought to receive more attention from Americans, for here in this ultra-democratic stronghold (suppressed by Napoleon in 1811) the students and faculty were, during our own Revolution, extraordinarily active and efficient in securing the ultimate recognition, by the States-General, of the United States. Here, also, in earlier days lived some of the Pilgrim sons—both those who did and who did not become fathers of Massachusetts. One still sees (in the Town Hall) among the clustered portraits of the former professors, the mild, strong face of Dr. Ames, who, after making the first American hymn-book, started for Plymouth, only to die of a cold from flood at Rotterdam. Franeker powerfully influenced Friesland and Holland, but of Gelderland's university at Harderwijk (1648-1811) there is little trace, either in the quiet town or in Dutch annals. Founded in patriotic impulse and conviction, and with a desire to give their Protestant faith the strongest intellectual basis and safeguards, the Dutch universities are still the nurseries of patriotism. Groningen's is a memorial of Prince Maurice's deliverance of the province from the Spaniards. Its faculty of twenty-five professors and eight hundred students contains able men whose names and books are well known where English is read. Amsterdam University is renowned for its medical school, which takes precedence in the number of its students and the eminence of its professors. The centralizing of the theological influences at Utrecht leaves Professor de la Saussaye of Amsterdam, who holds the chair of the history and philosophy of religion, nearly alone in the theological faculty. Ever since the seventh century, Utrecht continues as of

old to be the religious capital of Netherland. Just now, when the turn of the tide leaves "liberalism" and "rationalism" high and dry, and when, on the other shore, "orthodoxy" is rising to flood, Utrecht is blooming like a garden of tulips. Since my visit in 1892, I note that the handsome new edifice, built in the most attractive style of modern Dutch architecture, is completed.

Every American who visits the venerable city should enter the ancient room in which the delegates from the seven provinces met, in 1579, to form the United States of the Netherland. Their union was under the tricolor revolutionary flag of orange, white, and blue, and with a written constitution which for 218 years, until the republic was overrun by the French, continued their bond of union. In the Senate room, hung with portraits of the scholars who have influenced the thought of England and America, as well as of Holland, I sat during the examination of a student for his degree of doctor of law. The young man was, on his mother's side, no other than a lineal descendant of Prof. Luzac of Leyden, to whom Washington wrote a letter of grateful acknowledgment for his part in securing recognition of the American by the Dutch Republic. Luzac was also the friend of John Adams. In this student's family, his father being the burgomaster of Nieuwersluis (which is the town next to Breukelen, the original of Brooklyn), is still preserved Washington's camp-stool sent from Mount Vernon as a present and souvenir to Luzac.

While Utrecht boasts its theology and rejoices in the revival of "orthodoxy" as led by the Queen and Court—much to the disgust of the "Modernen"—and expects over two hundred young theological students this autumn, Leyden is still eminent in law and the "secular" sciences. I missed, by a day, the grand costume procession which, by brilliant dresses, personification, and pageants, even to the negro page, commemorated the three hundred and fifth anniversary of the victorious entrance of Prince Maurice into Bergen-op-Zoom. I saw, however, the ancient city swathed in red, white, and blue. It was gay with flowers and guarded at every shop and uncurtained saloon (there are no *cafés chantants* in Leyden) with the image of Minerva. Everywhere the five arrows and the five small flags, each by its color significant of the sciences cultivated, were joined in harmony. Theology at Leyden, however, is represented only by a professor, successor of Kuenen, who lectures on the history and philosophy of religion.

A fourth tour in the eleven provinces of the land of water-tight compartments, renewed visits with professors in the four universities, examinations of some of the old and three of the entirely new, handsome, and fire-proof archive-buildings in the large cities, and chats with the men of heath and wold, as well as with some of the deck and the town, confirm many good impressions of the Dutch. Their past at least is secure. Their history and their country deserve more attention from Americans. Neither in the Empire State which they founded, nor in any American university, is there as yet one professorship of their language, literature, or history. W. E. G.

ACROSS SIBERIA.—II.

TOMSK, August 3, 1895.

A SIBERIAN city is much like one elsewhere. Omsk, the capital of the three steppe governments of Akmollinsk, Semipalatinsk, and Semiretchinsk, is a place of some fifty to sixty thousand inhabitants, situated at the junction of the Irtysh and the little river Om. A fort was built there in 1716, and for long the town was a centre for the subjection of the neighboring Kirghiz. It also had at one time a flourishing trade in hides and tallow brought down from central Asia by Bokhariot merchants and sold into Russia. The construction of the Trans-Caspian naturally put an end to this, and Omsk has languished till the railroad, which was opened thus far last year, has given it new animation. The city is not over-attractive in itself, yet not distinctly otherwise, for if it has no fine buildings or picturesque streets or large trees, it stands on one of the few hills thereabout, and the view of the Irtysh is rather impressive, especially towards evening. Besides its Russian population, there are large numbers of Kirghiz who come in from the surrounding country, and also a good many Jews, who seem to be plentiful in Siberia, in spite of the law which, I believe, forbids their being here. Omsk has, too, a Polish colony of some two thousand souls—exiles and the children of exiles transported after the insurrection of 1863 and now among the prominent inhabitants. The latest civilization is represented by telephones and bicycles.

The Trans-Siberian, as at present open to traffic, ends at the Irtysh. Many miles of further tracks have been laid in different parts of Asia, but a through connection cannot be established until the great railway bridges have been completed. The one over the Irtysh, about 720 metres long, will hardly be finished before next year, though the Omsk station, on the eastern side of the river, is now nearly built. Starting from here with two Russian engineers on their way to survey the route around Lake Baikal, I had a ride of 291 versts (about 175 miles) over an unballasted and badly laid track. Our train, which was a working one, loaded with ties, rails, etc., made slow enough progress, stopping sometimes for hours and then jogging along for many miles without a curve in the line through a country almost uninhabited. It was like what we had been through earlier—prairie with patches of woods, good soil, and evidently great possibilities of development. At the site of each future station we found workmen busy building brick water towers (before Omsk they were of granite) and good-looking wooden houses for the employees. These are the first requisites; next will come the stations themselves, and around many if not all of them towns or villages will grow up in course of time. At present, to find habitations, one must come by the post road, sixty versts longer than the railway, from which it is at times far distant, not meeting it again till at the town of Kainsk. There, as we could get no further by rail, we had to take to the road ourselves for nearly four hundred miles, in order to reach Tomsk, from which this letter is written.

The process of being jolted about in springless vehicles is decidedly fatiguing to a novice; all the more so as, less fortunate than my comrades (who had their own tarantass, or great carriage, and needed but to change horses at the stopping-places every fifteen miles or so apart), just as I began to get used to each conveyance, I had to vacate it and trust to luck for its successor, which on several occasions was a telega, or low open cart. The dust was fearful at times, the mud likewise, but it is hard to see how this can be avoided, while the road was in better condition than I had expected and than many a one in America. When it was too bad in any particular place, we kept to one side of it—a process which can be repeated indefinitely in a level region without stones, fences, or cultivation. The heat, the flies and mosquitoes, and the other amenities of posting in the summer through thinly settled lands, though trying enough, were not unendurable, and were only what one must be prepared for if one will go on such expeditions.

The character of the country long continued the same, and each village resembled equally its successor and its predecessor. Each consists of a straight, treeless street, broad and rather well kept, though the resort of calves, pigs, dogs, hens, tow-headed children, etc., etc. On the sides are weather-stained log-houses, a story and half-a-cellar high, with sheds and gates between them and courtyards behind. The roofs are of turf or boards, the sills and shutters of the little windows are painted white, as is, too, the village church with its light-green spire and dome. A sign or two show the presence of shops or saloons, and the striped post before a house, perhaps a little larger than its neighbors, indicates the posting-station, where horses are hired and carriages changed, and where the traveller can usually find black bread, eggs, and other such refreshment. He can also pass the night in a very decent room, but will not find beds or bedding; the only thing which he has a right to require being a samovar for his tea. The horses that one gets are sorry-looking creatures, but most satisfactory; the coachman is occasionally drunk, which does not seem to interfere much with his good driving. There is apt to be difficulty about obtaining fresh horses at once, and a foreigner alone would find it hard to meet the attempts at extortion; so the assistance of a Russian friend, especially one of sufficient official position to be able to take a high tone, is invaluable. Between the stations one sees few people. One comes across odd peasants of the neighborhood, an occasional traveller, and now and then one or more wagons, each pulled by a single horse, and containing the women, children, and household goods of a family, while the men trudge beside. The progress of these emigrants, however slow, is not expensive, and they often wander great distances in search of new and better homes. When, instead of one village street, we find several, three or four churches, a brick post-office, a few painted houses of some pretensions, and shops with goods in the windows, we have a town such as Kainsk or Kolyvan, with their two or three thousand inhabitants and the residences of chiefs of police, who have to watch over large districts. Still we have not yet come to great luxury; for instance, at the latter place, on sending to the home of the priest to see if his wife would sell us some butter, we discovered that she had not heard of the article—yet milk was everywhere plentiful and delicious.

Some forty miles after leaving Kainsk, the high road crosses the line of the railway, but here the track had ceased, and even the embanking was not yet completed. A few miles later, however, we found rails again which seemed to continue unbroken to the Ob, and, indeed, are laid for some distance on the further side. The river is a bad interruption, as the great bridge over it, which we did not see, and which has been building for two years, will not shortly be finished. Thus, though the part of the railway between the Irtysh and the Ob is so nearly ready that it can soon be thrown open to the public, it is cut off at each end by an unbridged stream, frozen for many

months of the year, while the local traffic would hardly require a train a week. The Trans-Siberian is first and foremost a great through route, hardly going out of its course for anything. It even leaves the important city of Tomsk fifty miles away, to be connected with it by a branch line.

Near Kolyvan, where we came to the Ob and turned to the northward, the nature of the country changed. The rest of our journey was hilly and amid birch woods with here and there a pine tree. The village street was no longer straight, and turf roofs disappeared, owing, presumably, to the abundance of wood. We crossed the Ob on a curious paddle-boat worked by two horses, then posted hard for twenty-four hours more. During our last night it looked so much at one time as if we were going to be attacked by robbers that two of our party held their revolvers ready to fire at any instant, but I slept peacefully through this experience. The morning of the next day brought us to the river Tom, and a little later to Tomsk, the goal of our efforts for the past week. ARCHIBALD CARY COOLIDGE.

Correspondence.

SONYA KOVALEVSKY.

TO THE EDITOR OF THE NATION:

SIR: Allow me, as a personal friend of Mrs. Kovalevskaya and a mathematician, to add a few words to what has already appeared on that distinguished lady in your paper and elsewhere.

It has been stated that she exacted of all who came near her that they should merge their personality in hers. I do not think this statement is true in all cases, as I know from my own experience. We disagreed on many subjects, but, when we separated, each one remained true to his original ideas. For instance, in politics Mrs. Kovalevskaya was a socialist, while I disapproved of violence of any kind, whether it came from the Government or from a revolutionary party. Mrs. Kovalevskaya contended that the manual work necessary for the subsistence of mankind should be divided equally among all, and according to her calculation two hours for each one would be sufficient. I thought, on the contrary, that intellectual work from those capable of it should be accepted as compensation for manual labor —a thing which she never granted. Another point of divergence was this: Being both scientists, we knew that science had to be studied for its own sake and not for the sake of its usefulness to humanity, but I held also the same idea with regard to morals, and thought that personal holiness was worth cultivating even without reference to its benefit to mankind in general. It is very clear that, from my point of view, love too was worth cultivating for its own sake, and to illustrate the subject I translated to her a highly finished Portuguese novel by Julio Diniz with a very happy dénouement—of an heiress marrying a schoolmaster after the usual trials. Mrs. Kovalevskaya disapproved of the novel, and even the fact that the two young people founded a school did not seem to her sufficient to grant them their right to enjoy their happiness, which she considered selfish.

I honestly believe that Mrs. Kovalevskaya's idea of love as given in her biographies must be of a later date than the epoch I am speaking of. At that time each one of us stuck to his own opinion. Generally speaking, I think I was the one who chose the books we read together. The only case I can remember of her attempting to induce me to act contrary to my own ideas was this: We had been reading at her boarding-house at Saint-Mandé till a very late hour, and, as the cars had ceased running, I was obliged to return on foot to my apartment in Avenue d'Essling. As usually happens on the outskirts of large cities, stories were current of murders committed there, so that Mrs. Kovalevskaya wanted me to take with me a crooked Eastern poniard which she had received as a present. Now, although I had been instructed in the use of all kinds of weapons from my childhood, and had won a prize for revolver-shooting at Versailles, the idea was gradually dawning upon me that all these weapons were simply nice toys and were not made to injure human beings with, so that I positively refused to take the poniard. That occasioned some discussion, but finally I carried my point and went without it. Of course nothing happened on my way back to Paris.

Mrs. Kovalevskaya resumed her residence in Paris soon afterwards, while I, after some stay there, went back to Brittany and returned to the capital only when she was wavering between life and death after the suicide of Mr. Kovalevskiy. Aniuta's husband, who had called on her, had been received in such a manner that he had no desire to call again. She seemed to have lost all interest in life, and even the appeal to the fact that her daughter needed her could not bring her to herself because she did not think that maternal love *alone* could fill her life. It was only when calling on her some time afterwards, and finding on her table sheets covered with theta functions, that I saw the battle was won, and that she needed my help no more. I returned to Brittany never to see her again. T.

SEPTEMBER 10, 1895.

A SUGGESTED MODIFICATION OF THE A. B. COURSE.

TO THE EDITOR OF THE NATION:

SIR: The subject of the college curriculum has been so freely discussed of late years that it would seem that little more remained to be said, and yet certain developments in medical teaching make it desirable that the academic course be altered in some important particulars. Last spring the Association of American Medical Colleges, which comprises some seventy-odd medical colleges, decided to extend the time of study from three to four years. It seemed best to make this time requirement absolute, since, if this were not so, the evasion of the law would be an easy matter. Students are, however, given credit for medical studies taken at other colleges. Now the better class of men take, if possible, a year in a hospital after graduation, which makes five years of professional study; and if to this we add the four years of academic work, it brings up the total to nine years. Then, in the great majority of cases, the first two or three years of practice are mainly years of waiting, so that the doctor is well over thirty before he gets actually to work. Fifty years ago, or less, a man began the practice of medicine before he was twenty-one, or at least as soon as he had reached this age: this, of course, was too soon. Now he enters into actual practice rather too late.

A remedial measure would be to include in the A.B. course of our colleges the equivalent of the first-year medical work. This is done in a few of our universities, notably Johns Hopkins. This course should be elective and intended mainly for students who are preparing themselves for scientific work. It would be easy to make the course in zoölogy which is given in most colleges a little more comprehensive. More stress could be laid on human and comparative anatomy and physiology, with laboratory work in histology. Chemistry already forms a part of the regular curriculum, and the lectures on botany could be given a medical turn. Thus the student would take his A.B. degree and also be prepared to enter the second year of a medical school. The fact that the new medical law requires entrance examinations encourages men to take the academic course before entering upon the study of medicine. The college curriculum could in this way be made more attractive without necessitating any great addition to the teaching force, and at the same time save a year to the student who intends to study medicine.

GEORGE J. PRESTON.

BALTIMORE, MD.

FEMALE SUFFRAGE IN NEW YORK.

TO THE EDITOR OF THE NATION:

SIR: In vol. xix. of the *Nation*, p. 299 (November 5, 1874), a statement was made by Mr. F. M. Holland that at that time female suffrage in New York, while only *doubling* the entire number of possible voters, would nearly treble the number of illiterate voters, because of the larger percentage of illiteracy *then* among women. I am very anxious to know whether the census of 1890 would show the same condition of things; and I should be glad if some one of your readers could answer this question.

Will you find place in your paper for this query, and ask that the answers may be sent to Yours very truly,

WM. CROSWELL DOANE.

ALBANY, N. Y., September 11, 1895.

Notes.

J. B. LIPPINCOTT CO.'S fall list embraces 'Hill Caves of Yucatan,' by Henry C. Mercer; 'The Land of the Muskeg,' *i. e.*, the domain of the Hudson Bay Company, by H. Somers Somerset; 'A Holiday in Spain and Norway,' by Caroline Earle White; 'Advance Japan,' by J. Morris; 'A Literary Pilgrimage among the Haunts of Famous British Authors,' by Theodore F. Wolfe, M. D., and 'Literary Shrines: The Haunts of Some Famous American Authors,' by the same writer; 'The Complete Works of Charles Lamb,' in six volumes, edited by Percy Fitzgerald; 'Hans Breitmann in Germany,' by Charles Godfrey Leland; 'Bismarck's Table-Talk,' edited by Charles Lowe; 'Napoleon's Last Voyages,' being the Ussher and Glover Diaries on board the *Undaunted* and the *Northumberland*; 'From Manassas to Appomattox,' memoirs of Gen. James Longstreet, C. S. A.—a subscription work; 'Turning on the Light: A Dispassionate Survey of Buchanan's Administration,' by Horatio King, ex-Postmaster-General; 'The Great Astronomers,' by Sir Robert Ball; 'Agriculture,' a general statement of principles, by R. Hedger Wallace; and a revised edition of 'Lippincott's Gazetteer of the World.'

G. P. Putnam's Sons further announce 'Charles XII. and the Collapse of the Swedish Empire, 1682-1719,' by R. Nesbit Bain; 'Wanderings, Literary and Historical,' by J. J. Jusserand; 'Impressions and Memories,' by J. Ashcroft Noble; 'Poets' Dogs,' poems selected

and arranged by Elizabeth Richardson; 'A History of Money and Prices,' from the thirteenth century to the present day, by J. Schoenhof; 'Principles and Practice of Finance,' by Edward Carroll, jr.; and 'Congressional Currency,' by Armistead C. Gordon.

Way & Williams, Chicago, promise: 'Volunteer Grain,' poems by Francis F. Browne, editor of the *Dial;* 'Little Leaders,' essays from the *Dial* by Wm. Morton Payne; 'Queen Helen, and Other Poems,' by John Vance Cheney, librarian of the Newberry Library; 'Russian Fairy Tales,' translated by R. Nesbit Bain, and illustrated by C. M. Gere; 'Paul and Virginia of a Northern Zone,' from the Danish of Holger Drachmann; and Shelley's version of Plato's 'Banquet.'

The Open Court Publishing Co., Chicago, will issue 'The Primary Factors of Organic Evolution,' by Prof. E. D. Cope; 'Post-Darwinian Questions,' by the late George J. Romanes; and 'The Prophets of Israel,' by Prof. C. H. Cornill.

A. C. McClurg & Co., Chicago, have in press 'Recollections of Abraham Lincoln, 1847-'65,' by Ward H. Lamon.

From Copeland & Day, Boston, we are to have 'Lyrics of Earth,' by Archibald Lampman; 'The Hills of Song,' by Clinton Scollard; and 'Lovers, Saint Ruth's, and Three Other Tales,' by Louise Imogen Guiney, being her first effort in fiction.

A new version of 'Don Quixote,' by George Santayana of Harvard University, is in the press of D. B. Updike, Boston. It will be issued in four thin folio volumes printed on hand-made paper, and there will be twelve full-page illustrations.

A translation of Prof. Schmoller's essay on 'The Mercantile System' will be brought out by Macmillan & Co., in their series of "Economic Classics."

It is pleasant to record a sufficient demand for the less read and less available writings of Walter Bagehot to warrant a new edition of them. This the Longmans now bring out in five volumes, three of Literary Studies and one each of Biographical Studies and Economic Studies. The editor, Mr. R. H. Hutton, acknowledges special indebtedness to the carefully annotated edition of Bagehot published by the Travellers' Insurance Company of Hartford six years ago. He could not well do less, as the labors of Mr. Forrest Morgan and his assistants on that edition were of the greatest value, indispenable to any student of Bagehot, above all to any editor of his. Most of Mr. Morgan's emendations are accepted by Mr. Hutton, though he uses his own judgment, and it appears to us to be good judgment in the cases where we have made comparisons, in preferring the old text in some instances where the American editor's corrections seem to miss the point or to smack too much of schoolmasterlike exactitude. The critical apparatus of the Travellers' Bagehot, so often necessary to check that writer's careless shots at quotation or epitome, is wanting in this reprint, as is also the exhaustive personal and topical index; but on the other hand, the Longmans' edition is of more convenient size, both of page and volume, while supplying good type and paper, with unpretentious binding. Of Bagehot himself, his vitality, his acuteness, his pungent style, it is late in the day to need to say anything.

The Historical Printing Club of Brooklyn has done well to reprint from the *New England Historical and Genealogical Register* the catalogue of 'British Officers Serving in America, 1754–1774,' laboriously compiled from the British "Army Lists" by Mr. Worthington C. Ford. The arrangement is alphabetical, and in most cases the rise in rank of each officer is clearly shown; but Mr. Ford has been very cautious about confounding officers bearing the same name, and has preferred rather to duplicate. The catalogue, which is printed on one side of the leaf only (there are 108 leaves), is preceded by a list of regiments employed in America during the period in question.

An interesting monograph on "Benjamin Franklin as an Economist," by W. A. Wetzel, appears in the Johns Hopkins University Series of Historical Studies. Franklin was constantly busy with his pen, but it was not his calling to compose scientific treatises. What he wrote was called out by the requirements of the day, and must be looked for in many periodicals published here and abroad. Yet his mind was so acute and his good sense so marked, that much of what he said is of permanent value. Moreover, his style was so forcible and so persuasive that his statements of economic truths are frequently not to be improved. Like Adam Smith, he was much influenced by the Physiocrats, and he came in contact with both Smith and Hume. Mr. Wetzel gives a list of Franklin's principal theses, among which we find several that have not been accepted with piety in Pennsylvania. Thus, he maintained that high wages were not inconsistent with a large foreign trade, that free trade with the world will give the greatest revenue at the least expense, and that manufactures will naturally spring up in a country as the country becomes ripe for them.

In the August *Portfolio* (Macmillan) Julia Cartwright (Mrs. Henry Ady) takes up the career of Raphael where she left it in a previous issue, and in 'Raphael in Rome' gives an account of the short blossoming-time and rapid decline of that marvellous genius, who, in his thirty-eight years of life, summed up the Renaissance, and, passing from the naïveté of a primitive to the full maturity of accomplished art, died the forerunner of the decadence and the exemplar of academic classicism. Raphael's frescoes in the Stanza della Segnatura were completed near the end of 1511, and Michelangelo's ceiling of the Sistine in October, 1512. That short year marks the culmination of the Renaissance, and from that time the school of Raphael stiffens into icy conventionalities, while that of Michelangelo swells into the writhing pompousness of the baroque. The school of form was dead, and nothing was left for art but to turn to the study of color and light with the Venetians and Correggio. The *Portfolio's* illustrations, which are excellent as usual, are largely devoted to these early frescoes, the most perfect decorations ever produced, in which the academic itself yet bears about it the charm of youth and the freshness of a new discovery, and to those hard and dry, but intensely vivid, portraits which must have been a great relief to the artist from his vast schemes of decoration, and which show him to us in such a new light. Perhaps the very best of these is that gravely quiet head of Balthasar Castiglione which, though it is one of the treasures of the Louvre, is less well known than it should be.

An article by Dr. Mills of Oxford, on Zoroaster and the Bible, which appeared in the *Nineteenth Century Review* of January, 1894, has been translated into Gujrati by N. Coorlawalla, a graduate of the Sir Jemshedji Zend College of Bombay, with the express permission of the editor of the magazine and of Dr. Mills. It has been published by the Trustees of the Sir J. Jejeebhoy Translation Fund of Bombay, and this fact is a guarantee that the work enlists the approval of all parties among the Parsees, who form such an important part of the population of that city.

A correspondent writes to us from Maine: "Observing the care of the *Nation* to protect ancient names of places, I ask your aid to save the name Deer *Isle* from extinction, now threatened by the general employment of the erroneous words 'Deer Island' in references to the crew of the *Defender*. Coast Chart No. 104 gives the true name, Deer Isle; so, also, Hosmer's history of the 'Town of Deer Isle' (Boston: Stanley & Usher, 1886)."

From Philadelphia we receive the following: "In your issue of September 12, 1895, page 183, your correspondent 'W. H. D.' refers to the 'magazine writers who lately went to the Bay of Fundy and vainly searched for the bore.' I beg to say that on the 20th of August, 1895, I not only searched for, but found, the bore at Moncton, N. B. The bore was from three to four feet high, and the noise of its approach exactly resembled that of a railroad train on a bridge."

—If ever a man displayed his character in his writings, Thomas Jefferson was that man. It is with keen pleasure that we note the sixth issue of the "Bulletin of the Bureau of Rolls and Library of the Department of State," containing a calendar of the letters from Jefferson in the Jefferson Papers purchased by the Government in 1848. It is a truly noble collection, the mere enumeration of which requires a bulletin of 541 pages; and yet the purchase was intended to obtain only papers of a public nature. Fortunately this description was interpreted liberally, and what was obtained constitutes an invaluable personal and political record of a man whose motives and influence are still matters of controversy. It is known that Jefferson destroyed some of his correspondence; but the wonder is that he did not destroy more for his own reputation for consistency. The partisan "Anas," and many of his confidential outpourings to Madison and Monroe, are very trying to those who would believe that the man was great. As historical material, these criticisms of men and policy are of high interest, carried as they often are to the verge of madness; but as personal records they show too plainly the intense and at times shifty feelings of one who would sacrifice all to attain an end, even when that end was very indefinite in his own mind. If Congress will complete the Jefferson papers by purchasing the private letters now offered to it, that collection will rank first in size and value. As it is, the calendar of letters to Jefferson which the department now holds will be as bulky as the Bulletin now before us.

—As Jefferson's writings are being published under intelligent editing, it is unnecessary to undertake to give the contents of any letters, however curious a compilation of "deadly parallels" might be. It is the man's industry as a letter-writer that is appalling. He rarely made use of an amanuensis, and the great mass of correspondence is in his own hand. When in France he adopted a letter-press copying machine, and on his return to America engaged C. W. Peale to make a "polygraph," by which two sheets could be written at the same time. A great part of the collection is thus either press-copy or polygraph, and in very good preservation. The attention of the reader is fixed by the letters to Washington (incomplete as these are known to be), Lafa-

yette, Caspar Wistar, Dupont de Nemours, T. M. Randolph, and Gallatin. To his political "cronies" he was a free writer, and the calendar describes a hundred and more letters to each of the following: Madison (445), Monroe (162), Jay (103, nearly all official), and fewer to Short (95), Thomas Paine, the Smiths (Robert and Samuel), Mazzei, and Giles. A man of such wide sympathies had a correspondingly varied correspondence; but whether he is exchanging pretty nothings with a Frenchwoman, or politics with Madison, or science with Wistar, he is always interesting. The editing of this bulletin is an advance on previous issues, and Mr. Allen, under whose direction it is prepared, deserves praise for the work. It is to be hoped that these bulletins will induce Congress to do something towards making this mine of history generally available to the public.

—In view of the fact that the pre-Raphaelites in general, and Holman Hunt in particular, occupy prominent places in Nordau's gallery of "degenerates" (Hunt is, indeed, the only painter whose work is considered in detail by Nordau), it is curious to find that artist in his Romanes Lecture, delivered at Oxford on May 30 ('The Obligations of the Universities towards Art,' Macmillan), speaking of much of present English art as "a fever justly enough characterized by Nordau as *degeneration*," and adding: "He is wise in this, however much he may be at fault in some of his facts." Why Nordau should have devoted so much space, in a book on what he conceives to be the disease of "modernity," to a movement nearly fifty years old, will probably remain a mystery; but if even Holman Hunt cannot refrain from using the weapons of Nordau, who in future will be safe? It is in the natural course of things that years should have changed the ardent revolutionary into a stiff-backed conservative, and that Hunt should be now as alarmed for "the future of English Art" as were the Academicians whose dovecote was fluttered by the champions of the P. R. B. in 1849. "Realism" and the mania for study in Paris disturb his slumbers, and he cries out in solemn warning at the same time that Nordau, in the *North American Review*, is complaining that pre-Raphaelism is not dead, but is "just beginning on the Continent to exercise its baneful influence." With the arts of France and England thus mutually ruining each other, it would seem that the outlook for a purely national art anywhere is bad.

—Mr. Hunt, however, believes that he has an "antidote to false taste stronger than its poison." Let "certain graduates of the universities" have a practical training in art, including "a full acquaintance with the proportions of the human figure, . . . with the laws of balance and equipoise which movements and the carrying of weights control, as illustrated in Leonardo da Vinci's treatise and in Flaxman's lectures; . . . a knowledge of the laws of perspective, . . . the simple laws of light and shade, . . . and some understanding of the varieties of each nation's Decorative Design." This course "might entitle a young graduate to a degree which should qualify him for any post of responsibility in the control of national works, or in publishing opinions on matters of Art. . . . Such a simple provision by the universities . . . would impart great vitality to the whole range of English Art Design." It is quite certain that a trial of this remedy could do no harm, and it would be likely to improve the quality of art-criticism if the critics had to take such a degree; but we greatly doubt if anything will make a truly national school of art anywhere possible again: steam, electricity, and the photograph are against it.

—Writing from England, on August 30, a correspondent says:

"Quite a serious correspondence has been going on in the London *Times* for some days past upon the portentous subject as to how and where the Yankee Twang originated. The discussion was raised by Mr. J. Y. W. Macalister, who has been visiting Cornwall this year and last. In his intercourse with the 'less sophisticated inhabitants,' he was struck by their decidedly Yankee Twang. He began to wonder whether the Twang originated in Cornwall, and whether the early emigrants from Plymouth 'consisted largely or at all of Cornish folk.' Oppressed by his 'original discovery,' Mr. Macalister, who is this year 'resting close by the Lizard,' felt bound to 'write to the *Times*.' Then Mr. G. D. Goman, becoming jealous for the glories of Devonshire, claimed at least a part of the 'honour' attaching to the origin of the Twang for that famous county. By way of a clincher, he laid down that any one acquainted with the Devonshire dialect can read with ease, as if to the manner born, the humorous writings of Artemus Ward. Another correspondent put in a claim for Lincolnshire. In a recent walking tour in South Lincolnshire, this 'pedestrian' had been frequently reminded of his American friends, and could hardly believe that some of those with whom he conversed were born and bred in Lincolnshire; and was it not well known that the bulk of the Pilgrim Fathers were drawn from Boston, Lincolnshire, and had named the Hub of the Universe after it? Another correspondent claims the Twang as 'quite English,' being 'common among the rural population of all England except in the London area and Northumbria.' A former incumbent of Newlyn, in Cornwall, the Rev. W. S. Lach Szyrma, caps the controversy by averring that the Cornish Twang is derived from America. He says: 'The Cornish miners have largely migrated to the United States, and then returned after some years' residence, bringing with them the American pronunciation of certain words, which has spread in the mining villages.' Whereupon, Mr. Harold Frederic, in oracular manner, declares that Parson Lach-Szyrma has given the correct explanation; says he himself knew it, all the time, and was only waiting to see whether anybody else was as wise as himself; and adds, that the why and the wherefore of the Twang may be gleaned from Mr. Fiske's 'The Beginnings of New England.' To-day the *Times* publishes no less than five letters upon the subject, in which as many different opinions are given by the several writers. One, with some show of learned authority, would assign to the County of Essex the origin of the Twang. Another attributes the Twang to the effects of climate. A third thinks religious energy in preaching is responsible for it. A fourth points out that the French and Spanish languages also have their Twang. A fifth repudiates the idea that Cornish men have a Twang of their own. No one seems to be aware that some of the older English Colonies also have a Twang. Thus, in Barbados, the Twang of the true Yankee kind is most marked, while, in some of the neighboring West Indian Colonies there is a very perceptible Drawl. There was hardly anything of the Puritan in the early settlers of those islands, although some of the early colonists were of the Parliamentarian party. Barbados was a hotbed of broken Cavaliers. The fact would seem to be that, while the Drawl may result from climatic conditions, the Twang is a survival of the manner in which English was spoken at the time of the exodus of those colonists who went forth from the mother country in the seventeenth century. As is customary, similar survivals are to be found in the country parts of Old England itself to this day."

—'Das Kanarierbuch' (Munich: J. Eichbichler; New York; B. Westermann & Co.) is the title of a posthumous work of Franz von Löher. In the compass of six hundred pages it gives a condensed survey of most of what has been written about the Canary Islands, as well as an elaborate argument in support of the thesis, sustained also in the author's previous writings, that the aboriginal inhabitants, whom the Spanish conquerors called Guanches, were of Germanic extraction, presumably Goths and Vandals. One of his conjectures is that *Guanches* is only the Spanish spelling of the Germanic name *Wandschen*. His method is, first, to give a full and detailed account of the partial conquests made in the fifteenth century by Jean de Bethencourt, a Norman gentleman, and of the subsequent Spanish conquest, together with copious citations from the principal books which describe the manners and customs, the religion, the character, and the physical traits of the aborigines, and, next, to compare all these qualities with those ascribed by Tacitus to the Germanic tribes known to the Romans. He discovers so great a number of resemblances, and shows, moreover, so great a variation of the Guanches from the usual type of primitive savages, that it must be conceded that he makes out a plausible case. At all events, he has produced a book full of curious and interesting learning, and presenting a very complete bibliography of the surprisingly voluminous literature of the subject, consisting of works in Spanish, French, German, and English, to say nothing of notices scattered in Greek, Latin, and Arabic writings. The English authorities are Hakluyt and George Glas.

A BOOK OF FACTS.

Harper's Book of Facts: A Classified History of the World, embracing Science, Literature, and Art. Compiled by Joseph H. Willsey. Edited by Charlton T. Lewis. Harper & Brothers. 1895.

"The editors and the publishers confidently believe that the Book of Facts contains by far the largest amount of precise and accurate information on subjects of general interest that has ever been condensed into a single volume." Such are the pretensions of the work before us. The alternative title, "A Classified History of the World," and an avowed indebtedness to Haydn's 'Dictionary of Dates,' define its scope. The compiler of such a repository has a choice of several aims. He may seek to present in small compass an epitome of universal history, arranged with a due sense of proportion, recognizing the principle of development, and allotting to each country the space which its part in the history of civilization demands. Or he may cull strange facts from out-of-the-way sources with a view to explaining allusions which would be obscure to men of small libraries. Or he may seek to arrange a compromise between these two aims. In this case he abandons exact symmetry, adapting himself to the requirements of a given community. Sometimes he travels main roads and sometimes by-paths; but, wherever he goes, he is on the lookout for what will be most useful to his special audience, and so will be sure to add detail on subjects connected with the national history.

Mr. Willsey has chosen the last of these three courses. Haydn and Vincent, who had an English audience, seldom vouchsafed to include an American fact. This defect was partially remedied in Harper's reprint of 1869, where the events of the Revolution, of the war of 1812, of the Mexican and of the Indian wars were compiled by the late Benson J. Lossing; but the amount of distinctively American information then given was meagre in comparison with that which Mr. Willsey presents. To take a single instance, in 1869 the article "United States of America" filled thirteen columns. It

now fills one hundred and eighteen. Nor are the States neglected for the sake of the Union. Massachusetts and New York get eleven pages each, and Rhode Island is given seven columns. The growth of the larger cities is also traced in detail.

One's first thought is to compare the 'Book of Facts' with its model in point of bulk. Here Haydn has been left far behind. The new material must equal in extent that of the old which has been incorporated. The bare statement that the work contains nineteen hundred columns of compressed and substantially accurate information means a great deal. This, however, is not all; Haydn has not merely been supplemented, he has been rewritten. The amount of labor involved in such an undertaking must have been enormous, and at least argues that kind of painstaking genius which Carlyle has praised. Greater precision marks the new work throughout. The system of cross-references has been retained and expanded. A host of facts can be found under any one of several heads, much to the advantage of the befogged inquirer. The printing is wonderfully accurate, and the typography commendable except in the matter of the headlines, where, for example, FRA is a poor substitute for FRANCE in an article covering nine pages.

While the merits of the book are easy to define, opinion will vary more as to its limitations. The field of history is an open tourney-ground, and it would be strange if a compiler could satisfy every one. We should say that this reconstituted Haydn would be of eminent service to the general American reader, but that it is not an ideal vade-mecum for the systematic student. When the supposed wants of the general American reader contend for space with the main lines of historical progress, the latter have to go to the wall. Speaking roughly, the affairs of this continent occupy more pages than are devoted to Egypt, Assyria, Greece, Rome, Italy, France, and Germany together. And in so far as historical perspective is thus lost, the book falls short of the ideal. But the attainment of anything like the ideal is apt to be indefinitely postponed because so few people seek to get at the relative importance of things. What is nearest is largest. Now, until a certain amount of national objectivity is gained throughout the world, we shall be forced to content ourselves with books of historical reference which are out of scale. This is a general criticism which indicts a universal shortcoming. Mr. Willsey's "Classified History of the World" is no more out of scale than the original English Haydn. The "Histoire Générale," edited by Lavisse and Rambaud, devotes more than its fair share of attention to France; and we all know how the Germans, the most objective of men, have come to write the history of the world from the standpoint of January 18th, 1871.

A more particular limitation reveals itself in what might almost be called a want of sound historical training. A few illustrations will explain what is meant. *Ancient history* is defined as follows: "Beginning in the Scriptures 4004 B. C., and with Herodotus about 1687 B. C.; is considered to end with the fall of the Eastern [*sic*] Empire, 476 A. D." For *Middle Ages* we are referred to *Dark Ages*, where we get the definition, "a term applied to the Middle Ages; according to Hallam about 1,000 years from the invasion of France by Clovis, 486, to that of Naples by Charles VIII., 1495. Learning was at a low ebb." "*Renaissance*, the revival of the classic style of art in the fifteenth and sixteenth centuries, under the Medici and others." Again, the preface states that the compiler has taken from Haydn and his successors "every fact which has more than a narrow or local interest." But on beginning with the letter A we soon find that *Ægospotami*, which Haydn included, has been dropped. Unless one is prepared to throw over the authority of Thucydides, the Peloponnesian war was a struggle of more than "a narrow and local interest." The battle by which Athens lost her last hope of imperial power ought not to have been deprived of its separate heading.

These are some of the wider considerations which are suggested by the 'Book of Facts.' In passing to the examination of specific errors, it is only fair to remind the reader of the extensive area traversed, and the difficulty of checking each statement so as to secure perfect accuracy. That an occasional lapse should occur is inevitable, and ought not to destroy confidence in the whole work. The geographical notices are not in keeping with the usual precision. They are often vague, and are not always accurate, *e. g.*, "*Gloucester*, a *seaport* town of England"; "*Mont Blanc*, in the *Swiss* (Pennine) Alps." *Montreal*, under its own heading, is styled "the *second* city in Lower Canada," and under the heading of the *American Association for the Advancement of Science* is twice placed in Ontario. The Dominion of Canada is confused with the two Canadas: "*British America* comprises the dominion of Canada, Nova Scotia, New Brunswick, Newfoundland, and Prince Edward Island, Labrador, British Columbia, and Vancouver's Island." The definition of *Pamirs*, "a lofty *mountain ridge* in Turkestan, central Asia," does not represent the latest geographical knowledge on the subject. The Marne is not one of the tributaries of the *Rhine*, as we are told at p. 682, nor is Strassburg situated "on the banks" of the latter river. A statement which shows palpable ignorance of historical geography is borrowed from Haydn: *Savoy* is described as "formerly a province in n. Italy, east of Piedmont." No uninformed reader could possibly make out from this that the possessions of the House of Savoy lay at first on the northern slopes of the Alps, and that only by marriage, grant, and conquest did they tend to become Italian. But the most complicated blunder is to be found under *Bernard, Mount St.*, "so called from a monastery founded on it by Bernardine Menthon in 962. Velan, its highest peak, about 8,000 feet high, is covered with perpetual snow. Hannibal, it is said, led his army, by this route, over the little St. Bernard pass into Italy (218 B. C.); and in May, 1800, Bonaparte crossed with his troops by the same road." This item ought to be completely rewritten, for it contains more than one error besides its confusion of the Great with the Little St. Bernard. Hospices on both passes were established by St. Bernard of Menthon, but the date, 962, should not be given for either without qualification. Canon Bourgeois, Prior of the Great St. Bernard, says that in neither case can the date of foundation be ascertained with certainty, though the Great St. Bernard hospice was founded about the end of the tenth century. The height of the Velan, "the domed Velan with his snows," is 12,353 feet. No Alpine mountain of 8,000 feet "is covered with perpetual snow." Hannibal's route across the Alps is, of course, an open question. Mommsen declares for the Little St. Bernard, but several distinguished geographers and Alpinists have other theories. It is certain that the Marengo army did not cross, as is stated, by the Little St. Bernard. Three instances of haziness in geographical definition are afforded by p. 902. "*Valtelline*, n. Italy, a district near the Rhætian Alps." It would have been much better to add, "the upper valley of the Adda." "*Vatican*, Rome, the ancient Mons Vaticanus, a hill of Rome." No intimation of its place on the Trastevere side is given. "*Vaud*, a Swiss canton, long held by the Franks," etc.

In another group may be placed a considerable number of notices which seem hardly adequate. Individual judgment varies so much as to what is important that one ought not to complain of omissions unless glaring. But when a topic is broached at all, completeness of survey is not too much to demand., *e. g.*, "*Latin Union*, that of France, Italy, Belgium, and Switzerland, to maintain the use of the same coinage, from 1865 to 1880." But the Union has since received accessions, viz., Spain, Greece, Servia, and Rumania. The article on *Coroner* does not show that the functions of that officer were ever wider than they are at present. Under *Self-denying Ordinance* the famous measure of 1645 is mentioned, along with a somewhat similar measure of the colony of Victoria in 1858, but the compiler quite overlooks the most momentous of self-denying ordinances, the one which, in 1791, shut out members of the National Assembly from the Legislative Assembly. The vicissitudes of *scrutin de liste* and *scrutin d'arrondissement* in France are partially traced, but the account stops with Welbeck [*sic*]-Rousseau's bill of 1885. The impression left is that France still retains *scrutin de liste*. On *High and Low Church* we get nothing more recent than Dr. Sacheverell. A list of imaginary political systems includes Sir Philip Sidney's 'Arcadia,' and omits the 'Leviathan' of Hobbes. *Trier* is not credited with its Roman remains. John Bright is not spoken of in connection with *Cave of Adullam*, nor Huxley in connection with *Agnostic*.

Finally, let us review a few errors taken at large. Mr. Willsey is not happy in his account of Justinian's codification. While there is no separate title for Corpus Juris Civilis, some of its component parts are treated under special heads. A list of codes comprises "the code of the Emperor Justinian in 529—a digest from it made in 533." The Digest was indeed issued in 533, but, so far from being based on the Codex Constitutionum of 529, it is a series of selections from the writings of thirty-nine jurisconsults. An equally elementary mistake occurs in the description of the Novels. "*Novels* (Novellæ), a part of Justinian's Code, published 535." *Heruli:* No good warrant exists for the assertion that Odoacer became "King of Italy, 476," although it has often been made—among others by Bryce (whom Freeman brought to book) in the first edition of the 'Holy Roman Empire.' "*Interim of Augsburg*, a decree of the Emperor Charles V. in 1548 to reconcile Catholics and Protestants, which entirely failed." The Interim is not usually represented as a step towards conciliation. This reminds one of some phrases in an inscription on the bust of Pius IV., S. Maria Maggiore, Trent: "Profligata hæreticorum pravitas, recta professio, disciplinaque stabilita, reddita orbi Christiano pax." The "reconciliation" of the Interim and the "peace" of the Catholic reaction belong to the same species. This is not the only sixteenth-century slip. The date of the publication of 'Utopia' is cited three times, and twice wrongly, 1548 instead of 1516. Lyly's 'Euphues,' which appeared in 1579, the

same year with the 'Shepherd's Calendar' and Gosson's 'School of Abuse,' is put down 1581. *Erastus* is the Greek, not the Latin, equivalent of Lieber, and *Zwingli* did not "separate Switzerland from the papal dominion as Luther did Saxony": the battle of Kappel, the Borromean League, and the War of the Sonderbund are events which prove the contrary. *Caliph* is successor, not "vicar or lieutenant." The *Hundred Years' War* came to an end with the fall of Bordeaux, 1453, not in 1437; and the *Wars of the Roses* with the battle of Bosworth, 1485, not in 1471. Under *Sacrament* the story is repeated that the Emperor Henry VII. of Luxemburg was poisoned "by a priest in the consecrated wafer." The charge should have been brought, if at all, against a Dominican friar. It is almost certainly false, and is chiefly memorable for having produced one of the choicest pieces of billingsgate in existence. Haydn had "*Neustria*, or West France, a kingdom allotted to Clotaire by his father Clovis at his death in 711. His descendant, Charlemagne, became sole King of France in 771." In revision 711 has been changed to 511, but the rest of the statement is allowed to stand. On the following page we are told that "Newfoundland consented to union with the dominion of Canada, March, 1869." Judge Prowse, in his recent and excellent 'History of Newfoundland,' says of the 1869 election: "The result was an overwhelming defeat for the Confederate party; they were simply annihilated, and, from that day to this, Confederation has never been put forward before the country as a practical political question."

The foregoing list of mistakes will show that the 'Book of Facts' is not immaculate. It would be easy to draw up another list of omissions and inconsistencies, but, remembering the dimensions and detail of this and kindred works, we refrain. We even hesitate to suggest the correction of a shortcoming which amusingly enlivens this weighty compilation, viz., in the indication of French pronunciation. "Loa des suspekts'" (*loi des suspects*), "oc-trwa'" (*octroi*), "let'r de ka shā'" (*lettre de cachet*), and "ko-ne'-sān-s dê tan" (*connaissance des temps*) will give some idea of the editor's wild phonetics. A German sample is "länt'-vār" for *Landwehr*. For its strong points, and they are many, the book merits and is sure of a wide use.

THE *CHALLENGER* EXPEDITION.—II.

Report on the Scientific Results of the Voyage of H. M. S. Challenger during the years 1872–76: A Summary of the Scientific Results. By John Murray, one of the Naturalists of the Expedition. In two parts, with Appendices. London. 1895.

In addition to the collecting of the strictly deep-sea animals, tow-net experiments were made by the *Challenger*, at depths of 500, 1,000, and even 2,000 fathoms, which led Murray to believe that the intermediate zones of depths were inhabited. More recent experiments have thrown considerable doubt on the conclusions of Murray, and seem to indicate that there is a limit, somewhere about 250 or 300 fathoms from the surface, at and below which pelagic organisms either do not exist or occur very rarely. The question of the bathymetrical extension of pelagic organisms is complicated from the fact that we know as yet but little of the composition of the so-called pelagic fauna, even within the depth at which it is known to occur, and still further from the fact that, as these organisms die, their carcasses must be caught by the nets on their way down to the bottom, where they serve as food for the deepsea-bottom species.

The pelagic algæ are the primary source of food for the majority of pelagic and deep-sea animals. Murray looks upon them and Radiolaria as well as Foraminifera as probably the descendants, slightly modified, of an ancient and universal fauna and flora derived from the simplest forms of life, which, perhaps, appeared in the accumulations about the mud line in pre-Cambrian times. Pelagic Radiolaria and Foraminifera occur in great abundance in pre-Cambrian rocks, and from this Murray infers that as they to-day abound in regions where the water has a relatively high temperature, the pre Cambrian sea must have been a warmer sea as a whole than the existing oceans. Murray points out the absence of Pteropods provided with calcareous shells of large size in the arctic and antarctic regions, and contrasts the coral-reef areas of the tropics and their absence in polar regions and at great depths with what existed in palæozoic and even later geological times, when we had massive reefs. From this he concludes that the waters of these ancient oceans must have had a temperature of from 65° to 70° Fahr. at the poles—a temperature favoring the deposition of carbonate of lime.

Murray believes that in early palæozoic times the ocean basins were not so deep as at the present time, and that life was then either absent or represented only by bacteria and other low forms in great depths, as appears to be the case at present in the Black Sea, and that there was, in all likelihood, also insufficient oxygen in deep water to support a deep-sea fauna. He argues from the evidence of the fauna and flora of the carboniferous period that there must have been an almost complete equality in the distribution of light and heat at that epoch. In early mesozoic times, cooling at the poles and differentiation into zones of climate probably commenced. The colder and denser water descended to greater depths of the ocean, and carried with it a large supply of oxygen, making life in the deep sea possible for the first time. Of the explanations which have been given to account for this uniform condition of light and heat all over the globe, Murray (who came independently to give the same explanation) adopts the one suggested by Blandet, which attributes these conditions to the very much greater size of the sun in the early stages of the earth's history. This explanation, however, has not found favor with physicists.

The general similarity between the littoral faunas and floras of the Arctic and Antarctic regions has been noted by many naturalists. The resemblance between the animals from the dredgings and trawlings in high southern latitudes and those from like positions in high northern latitudes is frequently pointed out by the naturalists who have written the *Challenger* memoirs. They have given various explanations for the existence of representative species north and south of the equator. Murray has made an analysis of the species procured south of the Tropic of Capricorn (about 3,000), which shows that fully 88 per cent. are limited to the southern zone, while only 12 per cent. extend to the tropical and northern zones; and again that 6 per cent. of the species captured in the southern zone are recorded in the northern zone, but not from the intervening tropical zone. This points to a greater similarity between the widely separated polar zones than between contiguous zones. Examining the species found in the southern zone at greater depths than 500, 1,000, and 1,500 fathoms, he finds that nearly 80 per cent. are limited to the southern zone, and nearly 7 per cent. occur in the northern and southern zones and not in the intervening tropical zone. From this Murray concludes that there is not sufficient evidence for the belief in a universal deep-sea fauna of great antiquity. There are, according to him, many indications that the migration into deep water has taken place continuously since mesozoic times, when possibly cooling set in at the poles and is even going on now. The indications that this migration is taking place principally from polar regions are more distinct than those of migration from any other quarter.

The deep-sea forms with archaic characters probably represent very ancient groups which we may consider the remnants of faunæ that have come down to our times from remote geological periods. Their discovery is only in the line of evidence of the permanence of other ancient types, such as Lingula, the horse-shoe crabs, Pentacrinus, Ceratodus and other animals the representatives of mesozoic or tertiary types among echinoderms, crustacea, sponges, and fishes, which are found in shallower waters. Moseley regarded the pelagic animals as the original stock from which other marine faunæ had sprung, so that in early ages animals with pelagic larvæ would naturally spread over greater reaches of the ocean both in the shallow waters and towards the deeper parts of continental areas. Murray infers that animals with pelagic larvæ would, on the cooling of the water at the poles, be either killed off or be driven to the tropics. There seems to be much in favor of the theory that in the tropical regions we have the remnants of a once universally distributed shallow-water fauna. The similarity of the fauna of the polar regions would be accounted for by the disappearance of its original shallow-water fauna, which had been replaced by the migration shorewards of the fauna near the 100-fathom line.

Murray calls attention to the great contrast existing between the marine faunæ of the East and West coast of Africa. He argues from this that the faunæ have been separated a longer time than the faunæ on each side of the Isthmus of Panama, where we find a number of species identical on both sides of the Isthmus. From the geographical distribution of allied species he further concludes that the land masses of the Antarctic and Great Southern Ocean have been separated sufficiently long to admit of specific variations arising even in the cold Antarctic waters—a view which is opposed to the existence of an extended Antarctic continent, connecting all other continents by their southern extremities in recent geological times. Had this been the case, we might look for many circumpolar species as in the northern hemisphere, where continuous coast lines have existed for immense periods of time in arctic and boreal latitudes.

It was noted during the *Challenger* expedition that particles of quartz were absent from the deposits towards the central portions of the oceanic basins, while small particles of quartz characterize the deposits laid down near shore. Murray thus draws a broad distinction between terrigenous deposits containing quartz particles and pelagic deposits in which they are almost wholly absent; so that while it is true that there are numerous examples of rocks apparently laid down in a deep sea, it must have been in a deep sea in close proximity to some then existing land. It is, however,

very doubtful if there is any continental rock which has been laid down under conditions similar to those under which pelagic deposits are now being formed at a considerable distance from continental land. According to Murray, lime, iron, magnesia, manganese, and other alkalies have accumulated in the abyssal deposits of the central oceans at the expense of the continental rocks, and have been deposited there by chemical changes on areas of the seabed where there has been an exceedingly slow rate of accumulation. Murray concludes that the former land masses existing in the comparatively shallow oceanic basins of former ages may be the submerged bases of oceanic islands which consist wholly of eruptive rocks. It is very probable that the oceanic areas have not in abyssal or pelagic areas been subjected in earlier geological history to such revolutions as have remodelled the continental areas, and certainly not during any of the later geological periods.

The example set by the *Challenger* has been followed by other nations, and they have filled some of the gaps left by that expedition. The French, with the *Travailleur* and *Talisman*, have explored the Eastern Atlantic off the northwestern coast of Africa. The Italians and Austrians have examined the Mediterranean and sent expeditions to circumnavigate the globe, but their results are not to be compared with those of the *Challenger*. The Swedes and Norwegians have devoted their energies to the northern Atlantic. England has sent minor expeditions off her coasts. The *Investigator* has dredged in parts of the Indian Ocean. The United States Coast Survey steamer *Blake* has, for a series of years, investigated the waters of the Gulf of Mexico, of the Caribbean, and western Atlantic. The United States Fish Commission steamer *Albatross*, not satisfied with scouring the continental slope of the eastern and western coasts of the United States, has extended her field of work to the Bering Sea, and has made one campaign in the Panamic district. And, finally, the Prince of Monaco has constructed a yacht especially intended for deep-sea work. The results of all these expeditions are gradually coming before the public, and serve to confirm and complement the observations of the *Challenger*. Covering limited areas, they are naturally carried on with greater detail, impossible in an expedition covering the ground surveyed by the *Challenger*. It is greatly to be hoped that similar investigations may hereafter be carried on by Government vessels from well selected stations, so that the work so well started relating to the physics, chemistry, geology, and biology of the sea may be continued under the most favorable conditions.

Those only who have had the good fortune to be engaged in similar expeditions can form any idea of "the enormous labor connected with preserving, cataloguing, and packing the collections on board," and of that involved in their subsequent examination and distribution to specialists in many parts of the world. Men of science are grateful to Dr. Murray for his share in the great undertaking which has come to a close. It is to his untiring zeal, to his capacity for work, to his tact under most trying conditions, to his personal sacrifices, and to his unbounded enthusiasm on behalf of the *Challenger* expedition that science owes the completion of an exploration and of researches connected with it "which mark the greatest advance in the knowledge of our planet since the celebrated geographical discoveries of the fifteenth and sixteenth century."

THE CATHOLIC CHURCH IN THE UNITED STATES.

A History of the Roman Catholic Church in the United States. By Thomas O'Gorman, Professor of Church History in the Catholic University of America, Washington, D. C. [American Church History Series.] New York: The Christian Literature Co. 1895.

An author's opening paragraph is apt to be his worst, and Prof. O'Gorman's is not exceptional in this respect. If it sounded the keynote of the whole performance, the happiest would be those who did not stay for more. But it does not, while still we have throughout rather the advocacy of the religious partisan than the impartiality of the historian, and here and there a splenetic outburst well calculated to make the judicious smile or grieve. It is hardly to be hoped that the class of persons attracted to the A. P. A. will furnish a quota, however small, to the readers of Prof. O'Gorman's story; but, if it should, it is interesting to imagine how it would impress them, especially its note of injured innocence, which is perhaps the most characteristic that it sounds. They have not been accustomed to think of the Roman Catholic Church in America as a persecuted church, a church suffering from unjust discriminations. The Jesuits of their imagination are not the saints and martyrs of Prof. O'Gorman's glowing admiration. There is much here that they would find profitable for warning and rebuke and instruction in ecclesiastical history. But if the general view is far more just than that of their brutal misconception, it is not as complete as possible. The Protestant jealousy of Roman Catholic expansion is not so entirely irrational and absurd as it would be if what is here apparent were the length and breadth of the whole matter.

But it is not as if all that has been neglected or suppressed were of the less flattering kind. Once we have passed from Part I., "The Mission Period," to Part II., "The Organized Church," the choice of material is as unhappy for the general reader as up to this point it is attractive and impressive. Everywhere there is a nervous insistence on the Americanism of the author's church which is perhaps excusable and is certainly amusing. One of its traits is a shame-faced avoidance of the terms Roman Catholicism and Catholicism. Instead we have Catholicity, a silly affectation, and appropriate only as the designation of a religious temper, not of a religious institution.

The book is generally well written, but especially so in the early parts, many of which are freshened as by a wind blowing across the pages of Parkman's delightful histories. The arrangement of the matter is perhaps the best possible, but that it is distracting there can be no doubt. Each set of missions is taken up separately and carried on to the conclusion of the mission period, and thus we are obliged to retrace the same chronological course ten or twelve times. To obtain a setting for his missionary annals, Prof. O'Gorman is obliged to make a liberal draught upon the annals of discovery and exploration. For the discovery and exploration he would, indeed, claim a religious inspiration, and it must be confessed that the strands of secular greed and religious zeal are twisted so closely that to distinguish them is difficult. The account of the Spanish missions contrasts more sharply than any other with the average conceptions of our Protestant communities; but, when all is said, what have we but an account of general mismanagement redeemed by instances of splendid personal devotion and heroic sacrifice and death? The missionary work was almost entirely that of the regular clergy. The mistake, we are assured, was in not sending the secular clergy to reap and garner where the regulars had tilled and sown. There was a lamentable series of collisions between the seculars and regulars, and between the latter, more particularly, and the military representatives of the Spanish throne. Spanish and French alike endeavored to hold the country by a tenure too much akin to that of the Roman occupation of Great Britain, the futility of which is one of the most easily explicable of all the miracles of history.

Hardly can Prof. O'Gorman be denied the satisfaction which he takes in the zeal of his church as compared with the Protestant sects for the conversion of the Indians. But then, in the sixteenth and seventeenth centuries the Roman Church had an organized propaganda perfected by centuries of use, which the Protestants had not, and the predominance of ritual in its religion made the transition easier for the Indian than did the Protestant dogmatics. For him the conversion was but the exchange of one system of magic for another, of the "medicine-man" for the priest whose water of baptism was a new and more effective charm. How deep the conversion went, how much more it meant than submission to baptism, it would be good to know, but on this head we have little information. In New Mexico, where whole tribes were gathered in, the suddenness with which they renounced their new faith and fell upon the intruders forces from Prof. O'Gorman the confession that the survivals of their heathenism were the most dangerous elements in the situation. It is a melancholy fact that scarcely less dangerous were the habits of the intruders—their intemperance and licentiousness. By far the most interesting chapter of the Spanish section is chapter vii., which treats of the Californian missions. The success of these was coextensive with their segregation of the natives in communities subject to monastic supervision. A scheme so artificial could not be indefinitely maintained, but with its breaking down came a general relapse of the natives to their original condition, miserably qualified by contact with the Spanish settlers. Could any confession be more shameful than that such contact was fatal, seeing that it was contact with a race that had enjoyed the advantages of Christianity for a thousand years? That the Californian missions cannot be credited to Prof. O'Gorman's darling Jesuits is one of his regrets, and another is La Salle's antipathy for the order. But he has many narratives that are eloquent with their well-earned praise. Father Druillettes among the Abenakis of Maine wears his halo with a delightful difference from the majority, for he "was in no hurry to give baptism," and insisted on total abstinence from fire-water and cessation from inter-tribal wars, as well as the abandonment of the native superstitions, as conditions of admission to the Church.

That there is a lack of proportion in Prof. O'Gorman's book, an exaggeration of the earlier and more picturesque elements at the expense of what is later and of more importance, is evident from the fact that the mission period has 274 pages, and the whole of the last century of organization and expansion only 230; while of recent matters of first-rate importance there is next to nothing. Did the historian "remember to forget" the declaration of infallibility, or merely forget it? It is true that this was a declaration of the whole Church, but as such the American part was as much

concerned in it as any other, and the attitude of the American bishops towards such a conspicuous development of dogma is certainly an interesting matter. Moreover, the reader would naturally like to know something about the relation of American "Catholicity" to the great questions of criticism and science which have so agitated the Protestant churches during the last half century; but of these things we have not a syllable, and but one sentence, which may mean anything or nothing, in regard to the infallible wisdom of the Pope concerning the relations of capital and labor. A full discussion of the most recent developments of the school question was to be expected, but here again we have only "brilliant flashes of silence." In short, Prof. O'Gorman's second part is devoted almost exclusively to the episcopal expansion of the Church, to the creation of new bishops and archbishops, with brief personal histories of these great ecclesiastics. While the real good accomplished has been largely the work of faithful parish priests, their humble services are hopelessly, perhaps inevitably, obscured by the fierce light that beats on their superiors in the hierarchical order of supremacy. Either as unpalatable or unimportant, the growth of religious houses for men and women is but casually mentioned.

Apart from the hierarchical expansion, the interest of Prof. O'Gorman's second part centres in three particulars: "Trusteeism," European State interference, and Native American opposition. As for the last of these, much more is made of its earlier developments than of the later and more political, which did so much to break up the old political parties and made the formation of the Republican party more expeditious. Had Native Americanism prospered, we are assured that the South would have triumphed in the civil war. It was Catholic immigration that gave the North the men and the resources that enabled it to win the victory. If this claim is excessive, the same cannot be said of any that is made of anti-slavery service. It is certain that the South between Maryland and Louisiana never took kindly to Roman Catholicism, but the Church returned good for evil, and of the prophets against slavery none were found in her house. Father Mathew hastened to allay the fears his coming stirred in the pro-slavery camp. That the war was caused by slavery and tended logically to its destruction, these chapters give no sign. Two great events are named in the decade 1860–'70: they are Lincoln's death and the Pope's Syllabus. Nothing is said of Lincoln's emancipation proclamation and the constitutional prohibition of slavery.

An amusing episode was that in which Franklin figured as an acceptable adviser of the Roman Curia, urging the supremacy of the French hierarchy over the American churches. Nothing came of this, but for a long time the hand of the Irish church was heavy on the Papal court in its American dealings, whereby the manning of the church by native priests and bishops was considerably delayed. But, of all the troubles of the church, that growing out of "trusteeism" was the most serious. In New York and Philadelphia it had incidents of the greatest bitterness, prolonged through many years. Prof. O'Gorman does not enter into the philosophy of the matter so carefully as one might wish. He assumes the malignity of trusteeism—*i. e.*, the vesting of church property in trustees and their right to choose the parish priests. Evidently this system was incongruous with the centralizing logic of the church, but it was much less incongruous with American ideas of local self-government. It agreed very well with these, and from them drew its staying quality. Archbishop Hughes gave the system its fatal blow in New York, but in Buffalo it died a slower death. In conclusion, Prof. O'Gorman stoutly takes issue with the Roman Catholics who have insisted, extravagantly, as he thinks, on Roman Catholic losses in America. He shows conclusively that they have been much exaggerated; and still the Roman Catholic communion (9,077,865) is less than it logically ought to be in view of the Roman Catholic immigration and the average rate of increase in the general population.

THE BODY OF LATIN POETRY.

Corpus Poetarum Latinorum a se aliisque denuo recognitorum et brevi lectionum varietate instructorum edidit J. P. Postgate. Londini: Sumtibus G. Bell et filiorum. [New York: Macmillan & Co.] 4to. 1894. Vol. I. Price $6 50.

The *Corpus* of Walker (1827) and that of Weber (1833) have long been almost useless. Their texts are now obsolete as a result of the exact investigations into the readings and relationships of the MSS. of the Roman poets to which so many of the greatest scholars have devoted themselves for two generations, and the development of text criticism and emendation into a science has left the more autoschediastic efforts of early scholars far in the rear. During the course of these investigations and of this development an attempt to produce a new *Corpus* would have been rash in the extreme, but at length a time has come when scholars, reposing with some degree of security upon the labors of the past fifty years, may dare to print the works of the Latin poets with greater confidence than was ever possible before. This has been done for the different writers by the various specialists who have given themselves each to the study of his chosen author, and the names of Vahlen and L. Müller, of Lachmann and Munro, of Ribbeck, Ellis, Schwabe, Keller, and Merkel seem each hardly complete without the addition of the name of the ancient poet with whom the modern scholar appears to be indissolubly connected. Now or never the time was ripe for a new collection of results into a fresh *Corpus*.

But was it ever worth the doing? Inquiry shows that opinion is divided. The present reviewer, for instance, cannot fancy himself carrying away for his vacation reading-tour this ponderous tome, held with difficulty on the knees, instead of ten convenient little volumes which weigh altogether no more and take up no greater space in a box than this one *corpus*. And he shrewdly suspects that the chief part it will play in his library will be that of a dust-gatherer. But *quot homines;* and certainly to one class of readers the work should prove most useful. The non-professional scholar, the man of "fine literary tastes" (a character by no means to be despised, in spite of the sniffs which often disturb the air about him), needs a book like this to take the place of his ancestral Delphins and Anthons, if he wants to know with any sort of exactness what it was that the Latin poets really wrote. And, possibly, a professional or two may keep it with his dictionaries in his revolving bookcase (that great boon to the sedentary), and consult it to save himself the trouble of crossing the room to his shelves.

For it is a book in which one may place confidence, and, if it was to be made at all, probably no better editor could have been found than Dr. Postgate. He has often given his proofs, and he is known in the classical world as a sound and thorough scholar. His natural conservatism well fitted him for the present task, and his reputation will be enhanced by the manner in which he has performed it. This first volume of the *Corpus* contains Ennius ('Annals' and 'Satires'), Lucretius, Catullus, Virgil, Horace, Tibullus, Propertius, and Ovid. It consists of about six hundred pages, of which Ovid occupies almost exactly half. The page is printed in double columns of from sixty to seventy verses, with the apparatus at the bottom. The type is necessarily small, but it is clear enough for continuous reading, although economy of space precluded "leading" enough to make it easy to find a passage by a glance down the page. The book has been long in preparation, and the first author, Ennius, went to press in 1888. The dates of the printing of the others are given with scrupulous exactness in the special prefaces to each author.

The general principles which Dr. Postgate laid down for his editors required them to give, in either the text or the critical notes, all the important readings of the best MSS.; in dealing with conjectures to admit to the text only such as appeared certain, and to insert in the notes all the most important conjectures, by whomsoever made, which seemed to fall short of deserving the adjective *certissima*. The selection of these, as a whole, is excellently made, and few important conjectures are missing. In the matter of orthography, uniformity among the different authors was not sought save that the absolutely bad was to be corrected away, while all traces of genuine antiquity were to be left even at the risk of inconsistency. Dr. Postgate's remarks on this subject in his preface are highly commendable, though we note here (p. viii.) the misprint of Lucr. V. 714 f. for III., 713 f. The Romans were not under the thrall of any "Unabridged," and the Secular Games inscription should be a warning against pedantry in matters orthographic.

Coming to the authors, the text of Ennius is by L. Müller, and, being a reprint, with a few changes, of his edition of 1885, it hardly needs further comment here. The changes seem to be orthographical, and based upon Cicero's comments on Father Ennius's spelling. It was useless to expect it, but it is a pity that Müller should continue to pay no attention to the protests of Vahlen and Marx against his textual conclusions. The Lucretius is another reprint —of Munro's posthumous edition of 1886; the apparatus consisting of selections by Dr. Postgate from Munro and Lachmann, with some additions drawn from later researches in the MSS. The poem, of course, went to press before the appearance of the edition of the Discoverer of Lacunæ, Brieger. Dr. Postgate himself contributes his own excellent text of Catullus of 1889, which has already been reviewed in these columns. The works of Virgil were freshly edited for this *Corpus* by the late Prof. Nettleship, and the printing was fortunately finished before his death. He accepted to the full the sound doctrine that little is to be done for the text of Virgil by modern emendations. He used extreme caution in admitting any such into the body of the work, and even his apparatus contains but very few modern names. On the other hand, he held the ancient commentators in high esteem, and introduced many of their readings into his text, while his apparatus gives a full account of its condition in the fourth and fifth centuries. This edition of Virgil will commend itself to all conservative souls, wearied of the

ephemeral brilliancy of the emender or the polytropic shifts of the transposer, and we think it matter for regret that it is hidden away in this ponderous volume instead of appearing by itself in some handy form.

Horace, too, is freshly edited by Dr. James Gow, who is known in this country chiefly by his 'Companion to School Classics,' although specimens of his Horatian studies published in the *Classical Review* have attracted some notice. His apparatus is drawn from that of Keller's smaller edition of 1878, though it exhibits readings from fewer manuscripts than Keller's (16 instead of 24) and includes the *Blandinius antiquissimus*. For Dr. Gow has no sympathy with the theory that Cruquius was a humbug. His low opinion of the critical value of Keller and Holder's three classes has already been expressed in the *Classical Review*. Differing as he does from the two Germans on two such important points, it may seem strange that he should have been satisfied to follow their manuscript collations blindly: certainly it would have been more to his credit, and less confusing to those who are likely to consult this *Corpus*, had he confined himself to the exhibition of the readings of a very few manuscripts which he might have collated for himself. On the origin of our present text his own view is that there were two editions of Horace in antiquity, and that the scribe of our manuscripts had several copies of each, from which they followed now one and now another. Here and there we think that Dr. Gow has departed too widely from Dr. Postgate's principles about the admission of conjectures. Scholars will not agree that his conjecture of *expectate* (in the famous crux of *C.* iii. 14. 11) is to be called *certissima*, yet he admits it to his text. Such things as Oberdick's *ravi* for *pauci* of *Epod.* 13. 13 and Francke's *rabulae* for *tabulae* of *Sat.* ii. 1. 86 are not entitled to the honors even of the apparatus. And, to put it mildly, we prefer Horace's *quandoque bonus dormitat Homerus* to the *quando navos dormitat* of Mr. Housman.

In Tibullus we find the last Latin work of the lamented Edward Hiller, a revision of his admired edition of 1885. Dr. Postgate himself edits the puzzling Propertius, using Baehrens of 1880 and adding a collation of the manuscript of Holkham Hall. Conservatism was naturally to be expected of Dr. Postgate as compared with Baehrens, and this indeed we have, so far as verbal conjecture is concerned; but it is surprising to find how often he resorts to transposition and rearrangement. In the employment of this dangerous and, as many think, unscientific device, the sad examples of his predecessors seem to have had no terrors for him, and it needs no prophet to predict that he will have to suffer severely in his turn at the hands of the next editor of Propertius.

The works of Ovid were intrusted to five different hands, for here again we meet with new editions throughout. The 'Heroides' were the task of Mr. Arthur Palmer, the erotic works, the 'Metamorphoses' and the 'Halieutica' of Mr. G. M. Edwards, the 'Fasti' of Mr. G. A. Davies, the 'Tristia' and 'Ex Ponto' of Mr. S. G. Owen, and the 'Ibis' of Mr. Housman. The proper consideration of their united work calls for greater space than these columns could afford, and for a longer study than we now find possible.

Malay Sketches. By Frank Athelstane Swettenham. London: John Lane; New York: Macmillan. 1895. 8vo, pp. xi, 289.

This is a series of remarkably vivid pictures of a life still scarcely touched by Western influence, yet in the moment of transition. The scenes described are not those which the ordinary traveller would see, for the Malay is reserved and suspicious, and his confidence must be won before he will reveal his true self to the white man. But in the course of the twenty years which Mr. Swettenham has lived among them as British Resident at Perak and other states of the Malay peninsula he has not only gained the confidence of the natives, but has become deeply interested in the people whom he has helped so long to govern. To enable others to share in this interest, to understand something of the Malay's life, and to "sympathize with the motives that will lead him to acts of high courage and self-sacrifice," is his purpose in writing this book.

The twenty-two sketches of which it consists may be divided into three groups, each of which is marked by some distinguishing characteristic. The pleasantest is that in which some of the amusements of the higher classes are described, as, the fishing picnics, the hunting for turtles' eggs, the symbolical dances, and the water-tobogganing. This last consists in sliding down the inclined face of a rock on a stream of water an inch or two deep into a shallow pool. In a larger group, tales of robbery, murder, and carrying off of women, the tragic element prevails, and the Malay, notwithstanding his kindly disposition, his sobriety, courage, and trustworthiness, is shown to be thoroughly "impregnated with vice." Among these is an incident, told with great simplicity and power, of the homicidal mania known as *měng-âmok*, or "running amuck," though this term is also applied to "the onslaught of a body of men in war time." In this case a priest, an elderly man of devotional habits, came quietly to his wife and her brother, and, after asking their pardon, murdered them. Then, rushing out from the house, he killed and wounded seven other persons before escaping to the jungle. Here he remained for two days, and then, with his madness unabated, returned to his village, but, before he could do further harm, was slain. No cause was suggested for this sudden development of a murderous instinct, but it is "quite possible that the man was suffering under the burden of some real or fancied wrong which, after long brooding, darkened his eyes and possessed him with this insane desire to kill."

The mysterious element which enters so largely into the life of all Eastern peoples is the characteristic of the remaining group of stories. They are all based on facts which came under the author's own observation, and are related by him without the slightest attempt at explanation. Accounts of the magic mirror, the divining-rod, the exorcising of evil spirits, and the detection of a thief by the twisting bowl, are more or less common, but the *latah* is not so well known. This is an influence, akin to hypnotism, exerted upon a person whose attention has been suddenly arrested by a touch or noise or a meaning glance; during which he will do whatever he is "told or signed to do without hesitation, whether the act signified is difficult, dangerous, or painful." Two of Mr. Swettenham's police force were subjects of this "disease," and were continually being baited by their companions. On one occasion a roll of matting was presented to the younger of these men with the words, "Kâsim, here is your wife."

"Even now I do not forget the smile of beatitude and satisfaction with which Kâsim Minor regarded that undesirable and figureless bundle. Breathing the words in a low voice, almost sighing to himself, 'Kâsim, here is your wife,' he embraced the matting with great fervor, constantly repeating, 'My wife! my wife!' Some one said, 'Kiss her!' and he kissed her—repeatedly kissed her. Then, by another inspiration (I do not say from whence), some one brought up the other Kâsim, and, introducing him to the other side of the roll of matting, said, also very quietly, 'Kâsim, this is *your* wife!' and Kâsim the elder accepted the providential appearance of his greatly desired spouse, and embraced her with not less fervor than his namesake and rival."

It may be added that neither of the men was married. The disease, which is probably hereditary, prevails among all the Malays, but is common only among certain tribes. The same kind of possession has been observed among Canadian lumbermen, though not in so marked a form, the subject being generally the butt of the camp.

The closing chapters of this deeply interesting book narrate the circumstances attending the murder of Mr. Birch, the first British Resident at Perak, and the narrow escape of the author, who was his subordinate, from the same fate. These, and many other of the sketches, in fact, throw much light on the methods by which Great Britain administers these strange lands, and exhibit the English official at his best as a man full of patience, courage, and resource. Though Mr. Swettenham aims only to portray the character and habits of life of the Malay, he describes the scenery of his land with great skill, so that one feels the strong resemblance between the jungle, beautiful yet often deadly to those who venture into it, and the people whose home it is. The make-up of the book is very attractive. It is admirably printed on thick paper, and yet is extraordinarily light.

A Handbook of English Composition. By James Morgan Hart, Professor of Rhetoric and English Philology in Cornell University. Philadelphia: Eldredge & Brother. 1895.

This manual aims to supply a more practical mode of instruction in English composition; to serve this purpose for school and college; to interest and stimulate. It is marked by a fresh presentation, and by evident care in the choice of illustrations from standard authors. There is much novel treatment with but little innovation (as in terminology), and little claim to originality in the larger sense. The author's indebtedness to his predecessors is scrupulously acknowledged, and four leading works are evaluated at some length at the close. To these would have been added, we are sure, had Prof. Hart been aware of it, Dr. Edwin Herbert Lewis's masterly dissertation on 'The History of the English Paragraph' (Chicago University, 1894).

Prof. Hart begins with the Paragraph, that foster-child of silence and slow Time which is at last cutting such a figure in the text-books; and the rest of his doctrine is displayed in a systematic way. Nevertheless, he counsels in his preface an order of instruction by select chapters which departs from his scheme, and which he might have adopted as his natural arrangement if formal exposition were not the fashion in works of this kind. We do not say he would have done better thus, but he would have set an example of flexibility in development which it is one of the objects of such manuals, if not to inculcate, at least to illustrate and commend. Possibly, also, there would have been a gain in readability (independent of instruction under a teacher); but, as it is, we think our author has succeeded in his endeavor to interest. Nor does he repel by dog-

matism, though, like his predecessors, he is not altogether free from the bias of the personal equation. He thinks the word *engineer* "ought to be reserved for the professional man who designs structures, the civil engineer. The man who merely drives an engine ought not to be called an engineer." His advice about postal cards is, "Refrain scrupulously from all expressions of relationship, friendship, or other personal matters. Express no opinions. If possible, . . . omit the signature altogether." He does not forbid the use of *cablegram*, but he thinks the word objectionable on account of its formation. As Macaulay saw no need for *talented*, Prof. Hart dislikes *to wire* as being "a mere doublet of *to telegraph*." In word-breaking at the end of a line he makes a distinction between writing and print, and taboos such well-established breaks as angel-ic, look-ing, port-er, nation-al, complete-ly, cruel-ty, which he calls "bad, at least in writing." Punctuation, by the way, he strenuously confines to the service of the eye and not of the ear.

We have remarked few assertions as being too sweeping. One such (p. 294) is that in the sonnet a carrying over of the meaning from octave to sestet is not permissible, yet Petrarch does it in his lix. *in Morte*. The criticism of defective examples is not always beyond cavil. Tillotson is accused (p. 154) of tautology in certain couplings, since "*deceit* is the same as *cunning*, *effectual* is the same as *serviceable*." A blunder in the use of a relative is charged upon Swift (p. 135) in a sentence whose punctuation by a semicolon expressly denotes the antecedent. It is accounted "a singular blunder" in Ruskin to have written, "What wits anybody had became available to *them* again." Jowett is implicitly censured by the dictum: "*Those sort of*. This is still worse, yet one hears it frequently in conversation," for in the "Charmides" he translates thus: "at least not in this way, or not doing these sort of things?" The subtle unity in the passage from Goldsmith on p. 28 is overlooked in the quest for a formal unity in which the charm of style would have evaporated. Too much countenance is given (pp. 136-8) to the foolish heresy about the specific, rigid use of the relatives *that*, *who*, and *which*, which has sprung up in defiance not only of the best usage but of all-controlling euphony. It is certainly a useful discipline to extract the pith of sentences by omitting dispensable words, but we cannot allege "pleonasm" in every sentence susceptible of this treatment, as, "*There are* many *persons who* deny this," or maintain that this with the other "above sentences would be improved by omitting the italicized words," and that (p. 156) "we should not let a sentence pass until we are satisfied that it is reduced to its most direct and simple terms." Why not, analogically, welcome *wire* as a saving of two syllables over *telegraph*?

Excepting the chapter on punctuation (inadequate in good company, we will allow), we think the strength of this manual lies in Part III., "Some Practical Features of Composition," and "Miscellaneous Subjects." These alone would make it worth the while of any teacher to use Prof. Hart's work either in class or by way of reference.

The Ancient Bœotians: Their Character and Culture, and Their Reputation. By W. Rhys Roberts. Cambridge, Eng.: The University Press; New York: Macmillan. 1895.

"Bœotian swine," says Mr. Roberts, "is a scurrilous proverb." So is "Welsh goat," and "Dutch courage," and "Scotch fiddle." The German calls the sediment at the bottom of his pipe a "Polack," and the Pole returns the compliment. There is a fine fund of neighborly malice to be found everywhere in history, and the Attics were no exception; and doubtless it is because we see so largely through Attic eyes that the Bœotians have become a byword for dulness—dulness of intellect and dulness of feeling. They were proverbially pachydermatous, and they accepted the reproach in a pachydermatous way. They may have said to themselves that the Greek word for "swine" was only a bad pun, and we know that the Greeks were tolerant of bad puns. And then the "boar swine" of Homer was a formidable animal and a poetical animal, and the sow was not the worst of female kind, as a certain one of their own poets hath said. So Corinna doubtless shrugged her pretty shoulders when her rival called her if he called her by that ugly name, and Pindar made mock of the charge of dulness implied by the proverb. For all that, the Bœotians have not escaped the brand of history, and Mr. Roberts has done well to review the evidence in his attractive book; and while even he despairs of reversing the verdict, he has pleaded successfully for a mitigation of the sentence.

Of course, one great difficulty lies in fixing the precise limits of the "ancient Bœotians." As soon as we cross the border we are confronted with a mixed population, of which Thebes claimed to be the head, but was not the head as Athens was the head of Attica. Orchomenus never forgot her ancient glory, and Platæa was ostentatiously anti-Theban. In the Persian war the Thebans sided with the invaders, partly from self-interest, partly from hatred of their neighbors. They were no better and no worse than many other Greek states which had not found out that there was a real Greece. Afterwards, when loyalty was the fashion, they put the blame upon the oligarchs, as if they were not an oligarchy at the time they made the plea. Mr. Roberts scores to the credit of the Bœotians the behavior of the Platæans and Thespians at that crisis; but, if we are to be just, their "patriotism" is not to be counted to them altogether for righteousness. There was a spice of anti-Theban malice in everything they did.

And yet, despite differences between the "city-states" within Bœotia—overbearing Thebes, pretentious Platæa, envious Tanagra—Bœotians were Bœotians as Americans are Americans; and just as Americans are "spotted" everywhere in Europe, despite all the differences which we see at a glance, so Bœotians were all more or less alike. They were overnourished by their victuals, which victuals were of the richest quality; and they were very much addicted to making music on wind instruments. Now it is very true that the famous watchword, "plain living and high thinking," might, in the judgment of some people, be as well reversed. "High living and plain thinking" has a great deal in its favor, and yet somehow there has always been a prejudice against the brain power of fat folk; and there is an ancient epigram on the fifer fellow whose sense is blown out together with his breath. But this is too large a theme for development here. Enough, the Bœotians had a certain unity of character, and Prof. Roberts, by his review of the facts, has helped the student of Greek life to understand the Bœotians better. The land of Hesiod, Pindar, and Plutarch needs no glorification in literature; Tanagra, as one risen from the dead, has of late years amply vindicated Bœotia in art; and Epaminondas, "the foremost man of Greece," is a double flower of culture and character that is nowhere to be matched in Greek history. Especially interesting is Mr. Roberts's elaborate parallel between the Bœotians and the Dutch, and yet the Dutch will hardly thank him any more than the Professor of Greek in the University College of North Wales, Bangor, would have thanked, say, the late Dr. Thirlwall for undertaking to unfold the resemblance between Wales and Bœotia.

Palestine Exploration Fund: Thirty Years' Work in the Holy Land. A Record and a Summary. 1865–1895. New and revised edition. Macmillan. 1895. 8vo, pp. 256. Illustrated.

The remarkable success of the Palestine Exploration Fund is due to several causes. The Fund is not a religious society, and accordingly it has received the support of Jews and Christians of every church. It has abstained from controversy, though it has not prevented its explorers from expressing their personal opinions on subjects in dispute. The co-operation of the War Department, which detailed officers and men of the Royal Engineers for the execution of the survey, gave to much of its work a guaranty of scientific accuracy, and placed its discoveries beyond the suspicion of serving any sectarian view. But its success is chiefly due to the high character of the persons chosen to conduct its explorations and excavations, and to the enthusiasm and skill with which they have performed their task. Among the best known of these are the late Prof. E. H. Palmer and Lawrence Oliphant, Sir Charles Warren, Sir Charles Wilson, Major Conder, M. Clermont-Ganneau, Messrs. Flinders-Petrie and Bliss, and last, Sir Walter Besant, the efficient secretary from 1868 to 1887, as well as the joint-author with Prof. Palmer of one of the Fund's publications, 'The History of Jerusalem.' He is also the editor of this book, in which is given a brief sketch of the circumstances connected with the organization of the society, and a record of its "thirty years' work," with detailed accounts of the most interesting results of each expedition. It originally appeared in 1886, and is now reissued without material change beyond an indication of the work of the last eight years and the addition of an excellent topical index.

The survey of Western Palestine, which was begun by Lieut. Conder in 1872 and completed by Lieut. (now Gen.) Sir H. H. Kitchener in 1877, is of course the monumental achievement of the Society. Sir Walter claims, with pardonable enthusiasm, that "nothing has ever been done for the illustration and right understanding of the historical portions of the Old and New Testaments, since the translation into the vulgar tongue, which may be compared with this great work." The results have been published in seven quarto volumes, consisting of memoirs or field-notes written to accompany the sheets of the great map; name-lists; papers on archæology, topography, etc.; an account of the excavations and researches in Jerusalem, a description of the flora and fauna of the country, and several maps large and small. The other publications of the society are twenty-eight in number, exclusive of the Quarterly Statement, whose seventeen volumes are a treasury of facts of every kind relating to Palestine and its inhabitants. Among the more recent important works are Mr. Bliss's account of the excavations of Tell el-Hesy, and the volumes descriptive of the par-

tial survey of Eastern Palestine. This undertaking was interrupted by the Turkish Government in 1881, and has not since been resumed, as "every attempt to obtain a firman has hitherto proved unavailing." The whole cost of carrying on the society up to the close of 1894, exclusive of the money received for its publications, was $375,000—not a large sum, considering what it has accomplished. In case any of our readers should care to aid this useful and excellently conducted Fund, we will add that a subscription of five dollars a year sent to "Palestine Exploration Fund, No. 24 Hanover Square, W., London," will entitle a subscriber to receive, post free, a copy of the Quarterly Statement, besides other privileges.

"A desperately strong little book"

is what *The Boston Transcript* calls

KAFIR STORIES.

By William Charles Scully. (Buckram Series.) 75 cents.

Review of Reviews.—"Intensely interesting."
N. Y. Times.—"Written with the sure knowledge, the sympathy, and almost with the vigor that Mr. Kipling bestows on his Hindu stories."
Churchman.—"We can cordially recommend them."
Congregationalist.—"Unusual power, both in conception and narration"
N. Y. World.—"An extraordinary piece of work."
San Francisco Chronicle.—"As direct, as graphic as Kipling."

HENRY HOLT & CO., N. Y.

Colonel Norton

A Novel.

By Florence Montgomery, author of "Misunderstood," "Thrown Together," etc., etc. Crown, 8vo, buckram, $1.50.

"It is a history of the finding of a soul, which is only found through the passion of a great love or an overwhelming sorrow. But the story is more than this: it is an analysis of a character that has been repressed. Ruth Ashley is a delightful creature. It also shows the power of love to change and transform the nature of a man, self-centered, cold, critical, bright, and interesting from beginning to end, and healthful in its every page."—*Advertiser, Boston.*

Yale Mixture.

A GENTLEMAN'S SMOKE.

You won't know the luxury of Pipe-Smoking until you use Yale Mixture.

A two-oz. trial package, postpaid, for 25 cents.

MARBURG BROS.,
The American Tobacco Co., Successor,
Baltimore, Md.

"Strength and sincerity are the distinctive features of 'God Forsaken,' wherein Mr. Frederic Breton has shown that it is possible for the modern novelist to present a realistic study of feminine character from a point of view unbiassed either by frivolity or cynicism. Singular delicacy of treatment was necessary for the correct delineation of the portrait of Christina, and in this respect Mr. Breton has been eminently successful.

"There is about the story an earnest beauty of tone which renders the book one well worth reading. Mr. Breton draws his characters vividly and tenderly, and into each one of them he has succeeded in putting the breath of life by his artistic method of treatment. Keen observation and accurate discrimination of human conduct and motive are visible in this powerful tale, which handles an old theme with freshness and unfailing delicacy."

The above criticism from the London *Speaker* has been called forth by

God Forsaken.

MAYER & MÜLLER, Booksellers.

51 Markgrafenst, Berlin (Germany).

Direct supply, at best terms, of GERMAN NEW AND SECOND-HAND BOOKS, PAMPHLETS, and PERIODICALS in any department of Learning and Literature. *Cheapest* for Libraries, Professors, and Students. Catalogues on application. Best references.

FRENCH BOOKS.

MEYER BROS. & CO.,

1127 Broadway, bet. 25th and 26th Sts., N. Y.

French Books, Photographs, School Books, Newspapers.

Send for Catalogues. Also our monthly French publication, *L'Echo de France,* giving reviews and list of all French Books. Sample copy *free!*

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 26, 1895.

The Week.

THE efforts of the Republican platform-makers at Saratoga to deal with national issues were like the stone-rolling of Sisyphus or like those of a man pumping in a dry well. They say in the first place that the Wilson tariff is "the first step accomplished in the campaign for the annihilation of American industries." Immediately afterwards they "welcome the dawn of returning prosperity following the Republican victory of 1894"; but they hasten to say that this prosperity is much exaggerated, and that the recent restoration of wages has been unduly magnified by the Democrats. After such a logical setting forth of the tariff situation we might reasonably expect a lucid statement of the Republican programme, but all that we find is a declaration that "with a complete return of the Republican party to power, and the enactment of such remedial legislation as the conditions plainly require, we confidently look for a renewal of the prosperity that marked the quarter century of its government of the country." The advantage of this is, that the kind of remedial legislation needed is left to the unbiassed judgment of each voter. The only thing reasonably sure is, that it does not mean the restoration of the McKinley tariff, because if that had been the intention it would have been expressed. In fact, McKinley's name was not once mentioned either in the platform or in the other proceedings, while those of Morton, Harrison, and Reed were greeted with great applause.

The platform touching the silver question is sufficiently explicit, and in this matter is an improvement on former deliverances by the party in New York. It is in fine contrast with the platform of four years ago, when the party endorsed the policy of purchasing the product of American silver mines and issuing Treasury notes therefor. The Democrats of New York denounced that policy as embodied in the Sherman act, and demanded that every dollar coined should have the intrinsic value of every other dollar. There is not the least doubt that this declaration of the Democrats was an important factor in the election of Gov. Flower in 1891. This year the Democrats will have no such advantage, whatever they may say in their platform. It would not have come amiss if the Republicans had said something about taking the Government out of the banking business. It is possible that the Democrats may supply this deficiency.

The organ of the Manufacturers' Club in Philadelphia sniffs at the nomination of Gov. Morton for the Presidency by the Republican convention of New York as "a pretty compliment," but not to be taken seriously. Why not seriously? Because, according to the organ, Mr. Morton is "a New York banker with British connections." This is such a complete disqualification in its view that the subject is not worth talking about; yet if a New York banker with British connections is wanted, it suggests the name of J. Pierpont Morgan as far preferable, because the latter controls the Treasury now as well as the gold market and the railroads of the country. And so the editor continues at considerable length biting files and crunching glassware in the interest of free coinage, which has lately claimed even more of his attention than the tariff. Without seeing very far into the Republican council chamber, we are pretty well convinced that the objections to Mr. Morton are not on the score of his being a banker or having British connections. Most bankers of wide repute have British connections, and find them advantageous to their business. If they are advantageous to the banker, they must be so to the country of which he forms a part. It is hard to imagine the case of a banker whose prosperity is a good thing for the country if he scorns foreign connections, but a bad thing if he has a partnership in London. Mr. Morton has to plead guilty to that offence in common with the late Mr. Drexel, the present Mr. Morgan, the Browns, the Seligmans, the Lazards, the Kidders, and scores of others.

The poll of the next Congress on the silver question, undertaken by a committee of the Chamber of Commerce, confirms in a gratifying way the general impression that the next House will be overwhelmingly against free coinage. It will contain but 88 outspoken silverites, while 216 members are ready to declare themselves as opposed to free silver, and but 52 refuse to commit themselves either way. Classified by party, the free-silver Representatives number 30 Republicans, 51 Democrats, and 7 Populists. This showing impressively marks the extent to which the silver tide has ebbed in the popular branch of Congress since the day, November 5, 1877, when Bland carried his free-coinage bill through the House by a vote of 164 to 34. As for the Senate, it was then more conservative than the House, but now has the undisputed palm for financial madness. How Senators will vote in the next Congress the Chamber of Commerce committee is not able to say positively, though it is estimated that, even in the stronghold of the mining camps, sound money will have a majority. But this does not much matter. With at least seventy-five majority against free silver in the House, the heathen may rage in the Senate to their hearts' content, and the country will but have them in derision. It was, of course, known that no free-silver bill could become law as long as President Cleveland remained alive and in office; it is now known that no such bill will ever be sent to him to veto.

We are glad to see that a call for a national silver convention is to be issued in December, so that a silver ticket may be first in the field for the next Presidential election. The silver leaders show more than their customary shrewdness in admitting that they will be unable to capture the convention or platform of either Republicans or Democrats. Hence, to precipitate a break-up of the old parties, they propose to be "early in the field." This will, they think, "impress the country with their verve," and cause thousands, who are disgusted with the lack of silver verve in the old parties, to hasten to join what is to be "the most radical party going." They are quite right. With so long and hard a race as they have to run they cannot make too early a start. Their candidate for the Presidency will look well in the field all by himself, and can seem to be carrying the country unanimously until the time comes to put up the other candidates. For that season he can run well and have a great deal of glory all to himself. In fact, carrying elections and holding conventions in advance of all others seems to be the chief function of the silver agitators at present. The Illinois convention was the earliest on record, but it is now utterly forgotten, and the men who took part in it are ashamed of themselves. So much for being "early in the field."

The Rochester banks which last week turned over $250,000 in gold to the Treasury, accompanied their act with a statement in which they pat themselves on the back for "assisting" the Government. This is a mixing up of patriotism and business in a way that is bad for both. Who is the "Government" that is to be "assisted"? Why, so far as the present currency difficulties are concerned, the Government is the sovereign lawmaking power of this country — the Congress which, last winter, hooted down every law designed to put the Government beyond the need of assistance, and which, in the matter of the bond issue alone, voted with a whoop to throw away $16,000,000 of interest. Is there any virtue, any safety, in "assisting" such reckless spendthrifts? Organized charity has taught us the danger of pauperizing the poor. It is time that the danger of pauperizing the Government were beaten into the general head, especially into the heads of bankers. If the blunders and

brutalities of the last Congress in currency legislation are to be condoned, and made up for by charitable contributions, what right have we to expect anything better from the next? We must deal with a mendicant government—in the sense of shameless and mendicant lawmakers—just as we would with an old charitable-society "rounder." Before it is given "assistance," it must agree to take a bath, to quit beer and 'baccy, to live economically, and to turn its hand to any honest way of increasing its own income. If the Rochester banks really wanted legal-tenders instead of gold, as we presume they did, let them say so and stop with that. As for assisting the Government, the best way they can do that is to look out strictly for their own interests, and to insist, with the rest of their fellow-voters and fellow-taxpayers, that the Government shall do what it can to help itself before passing round the hat.

The banks should remember how easy it is for governments to come to look upon "assistance" of this kind as a vested right. It is just as it is with tramps that have been regularly fed at a certain area window: if they are ever refused, they grow ugly and threaten to stick a knife into somebody or to set fire to the house. Great accumulations of money have always been a terrible temptation to governments. They ache to get their hands on them. Why should they be saving, or lay taxes to cover their extravagance, when there is all this wealth to be frightened into coming to their rescue? This has been the huge mischief of government banking and government alliances with banks all the way down. The Government has often practically said to the bankers: "We have exercised great forbearance in letting you accumulate so much money, and now, if you do not want us to take it all, give us a part." Under a free-banking law, such fears and such favors are entirely uncalled for. If the banks vary a hair's breadth from the line of strict business in their dealings with the Government, they simply invite, first appeals for help, then threats, then hostile legislation. The next six months, in particular, will be a most important period for keeping banking and patriotism severely separate. The only way to make Congress work out its own salvation with fear and trembling is to let it see, beyond a peradventure, that the charity "lay" is no longer possible, and that it must either work or starve.

Mr. Charles C. Jackson writes to the Boston *Herald* in favor of an increase of the Government's gold reserve to $200,000,000 as a means of safe-guarding the business interests of the country, and the *Herald* endorses and advocates that policy. The argument in favor of it is that, after the shocks which trade and industry have sustained during the past two years, there can be no real stability or permanent recuperation while the gold reserve is hovering around the $100,000,000 mark, being sometimes a little above and sometimes a good deal below that mark. It is contended that if the reserve were doubled, the distrust would cease. This does not necessarily follow, but a more important question is whether it is desirable that the distrust should cease while the fiat-money system continues. The Government's legal-tender notes are a perpetual menace to business interests, whether the gold reserve be more or less. Even a $200,000,000 reserve would have been ineffectual eighteen months ago. In fact, the Government owned very nearly $200,000,000 gold in 1890 and 1891. This shows that the size of the pile is not the main consideration; but of course a large one is better than a small one to ward off panics. The main consideration, in our judgment, is to get rid of fiat money altogether, and thus relieve the Government once for all of the necessity of finding gold to redeem its legal-tender notes with. Until this is done, there will be no real security or stability, no healthy basis of trade and industry.

Mr. David Lubin of California, with his scheme for a bounty on agricultural exports, continues to be the *enfant terrible* of the protectionist happy family. At first the elders patted him on the head benevolently, and complimented him on his precocity and promise. The Protective Tariff League was, we understand, for a time particularly gracious to him. He was a youth to be encouraged and aided. But this was before the sages of protection had read his arguments. When they did read them, it was only by the narrowest squeak that they escaped apoplexy. The fellow was actually contending that the farmer was entitled to a bounty on account of the "artificial enhancement caused by protection"! With a glib facility in handling figures which McKinley might envy, Lubin gives as a "conservative estimate" of the cost of the protective system the "grand total" of $1,035,000,000. That ended it. The *American Economist* was no longer "at home" to Lubin, and the *Home-Market Bulletin* eyed him thenceforth with a stony glare. Even the thinking editor of the *Press* (one-cent protection) began to refer contemptuously to the curious fellow from the "wild and woolly West." On this subject, we are informed, Mr. Lubin has his own opinions. He has seen the wild and woolly West in its own lairs, and he is prepared to maintain that there is more wildness and woolliness in the *Press* office than in any equal area on this hemisphere.

The better-class Republicans of New Jersey won a noteworthy victory at Trenton on Thursday, and one that will make for good government, whatever may be the verdict of the people at the polls. There would have been no doubt of Mr. Griggs's nomination for many weeks if there had been no doubt that the wishes of the people would be allowed free expression in the convention. He had been accepted as the natural leader in a campaign in which State abuses were to be the main issue, and in which the candidate for Governor ought to be a man thoroughly conversant with State affairs, free from all entanglements with State-house rings and ringmen, and possessed of the kind of courage which a political office so severely tests. Knowing that the party boss in the State had another choice, the smaller politicians assumed that Griggs's nomination was an impossibility, and they did not change their opinion until the choice of the convention was announced. There was less open pressure to defeat the popular will than usual, but the successful expression of that will encourage the belief that the end has indeed come to such bargainings and pilferings as have made the government at Trenton so long a disgrace. The platform is wisely devoted almost entirely to State issues, and the campaign will be very literally a State campaign. Here again the convention showed its good sense. Printing jobs and corrupt State-house contracts cannot be checked and punished by appeals for woollen duties.

The proposal by Dr. Parkhurst of an attempt to secure a better understanding between the cities and the rural districts of this State suggests an inquiry as to how the population of the commonwealth is divided between them. The State census taken in 1892 showed 6,513,343 inhabitants, of whom 1,801,739 were in New York city, while Kings County, all of which is now within the limits of Brooklyn, had 995,276, Buffalo 278,727, Rochester 144,834, Albany 97,120, and Syracuse 91,944. Nearly 28 per cent. of all the people were thus found in the metropolis, and the addition of the city at the other end of the bridge made 43 per cent. of the whole population within a comparatively few square miles on each side of the East River out of a total area of 49,170 square miles. Join with New York and Brooklyn the cities of Buffalo, Rochester, and either Albany or Syracuse, and more than half of the people were settled within five municipalities. With the steady growth of the cities at the expense of the country, there is no doubt that already the four largest places in the State have above 50 per cent. of the population, and it is not unreasonable to expect that, before the twentieth century is far advanced, half of the State's inhabitants will reside in the one great city that will include the two counties of New York and Kings.

The differences in the character, education, and habits of the people found in

the large cities and those in the rural districts are as marked as the contrast in the number of inhabitants. In New York males of voting age who were born abroad exceeded in 1890 natives of the United States as 269,069 to 177,729, and a good percentage of the latter, though born here, had foreign parents and have been brought up in foreign ways. Foreign-born male adults exceed the natives by a few hundred in Brooklyn, and by more than 3,500 in Buffalo, while in Rochester four out of every nine were born abroad. On the other hand, there are rural counties where a foreigner is still a good deal of a rarity. For example, Greene County, comprising the Catskills, has sixteen natives to every foreigner; Warren, in the lower Adirondacks, ten to one; and many others, six or eight to one. Of course, the people of such rural counties cannot have the faintest conception of the conditions that exist in a great city where a large majority of the voters were born abroad, and instruction such as Dr. Parkhurst proposes must be of the greatest value.

A new phase of that "American Sunday" which the Republican League clubs favored is brought to light by a controversy in the State of Washington. The town of Pullman has a "Sunday-closing" question that is altogether different from what is usually understood by that term. It appears that it has been the custom in Washington during the harvest season, when the farmers are unusually busy and cannot well afford to stop work on a week day for a trip to town, to postpone the journey until Sunday, on which day the regular purchase of meat, groceries, and machine supplies is made. The practice has been in violation of the law, but the authorities have not interfered. Recently, however, the City Marshal of Pullman notified all the business houses of the place that hereafter their doors must remain closed on the first day of the week. But there is the same discrimination in the enforcement of the Sunday law in Washington as in New York. As in this State the excise law is applied rigorously in New York city, but allowed to be violated by the authorities across the bridge in Brooklyn and by the government of every other large city, so in the Northwestern commonwealth the stores in Pullman are kept closed,but the authorities in other towns in the neighborhood permit trading to go on as usual. The incident is of interest as showing how wide are the variations in the matter of Sunday observance in different parts of the United States, such a thing as the opening of stores in the towns on Sunday for the benefit of the farmers during the busy season being altogether unknown in this part of the country.

Amid the deepening gloom which enshrouds Hawaiian annexation, what with the cholera and the sudden coolness of Republican platforms, one bright ray comes to cheer the islanders. Mr. Judson N. Cross, "one of the ablest lawyers of the Northwest," has written a letter to President Dole explaining how easy it would be for the Hawaiians to "annex themselves." All that they would have to do would be to "organize a State and run up the old flag," and then send delegates who "shall demand admission to the American Congress." Able Lawyer Cross puts the searching question why, if Congress can announce to the world that an act unfriendly to Hawaii will be considered an act unfriendly to the United States, the Hawaiian Congress has not "the correlative right to proclaim itself to all people and governments to be a part of the Great Republic." He forcibly argues that this would simply "round out the Monroe doctrine to its logical conclusion," and urges the Hawaiian Government to be the first to exercise the inalienable right of all American countries "to annex themselves." How Lodge and the other Monroe doctors would meet this we cannot guess; to us it seems an irrefragable inference from their own principles. Anyhow, the idea is received with much favor in Honolulu, and is discussed by eminent Hawaiian jurists with great gravity. One of them admits that it is not the "regular way," but that the proposition may lead to "important results." For our part, we hope to see the two Hawaiian Senators and one Representative promptly on hand at the opening of Congress. No Republican committee on credentials could reject men coming in the name of the Monroe doctrine, America for Americans, the key of the Pacific, the cause of missions, a sugar bounty, and a concession for a cable.

The criticism of the management of the ocean steamers which is now in the air should not cease without some comment on the reluctance or inability of captains to check rowdyism. The Fourth of July is a favorite day for the American rowdy to make himself a nuisance to men of other nations, and he too often avails himself of his privileges by getting drunk, howling in the night time, and making things what he calls "lively." A spree of this kind occurred on one line on the last Fourth, which was marked by great drunkenness and disorder, and the fun consisted to some extent in throwing the passengers' chairs overboard, which was done for some time without interference. An appeal to the captain met with no response, and it was only a threat of legal proceedings which compelled the culprits to apologize and pay damages in the morning. Things do not always go as far as this, but the Fourth of July has on the ocean steamers ceased to be very welcome to foreigners of very creditable to Americans. The fact is, that as the steamers have grown in size, and the multitude of the passengers has increased, the ship's officers have grown more and more reluctant to exercise any police powers, and have retired more and more into the seclusion of navigation. This is doubtless a reaction from the old régime, when captains used to flirt with the ladies, gamble with the men, and read prayers on Sunday, and there is good in it; but it has gone too far.

Emperor William's violent railing at the German Social Democrats on Sedan day seems to have done them a good turn, and in the nick of time. They were just then incurring great unpopularity on account of the resolutions passed by some of their committees against the national celebrations of the war of 1870, on the ground of the "solidarity" of the interests of the people in France and Germany. But fiery Wilhelm's denunciation of them as unworthy to bear the name of Germans, and his practically calling upon the Guards to enter upon a war of extermination against them, at once caused a reaction. People reflected that the Social Democrats, when all was said, polled a vote larger than that of any other German party. They reflected, too, it is probable, that a good part of that large vote was due to the growing disgust of the German nation with the antics of their war-lord, and that it was a grave question in many minds whether it was not more important to put a straight-jacket on him than to go to shooting the Socialists. At any rate, Wilhelm seems to have rushed in most opportunely for the Social Democrats, and to have done all in his power to rescue them from an awkward situation.

The Glasgow experiment in the municipalization of street railways has been watched with great interest, and its complete financial success confidently announced. From the working accounts submitted for the eleven months ending May 31, 1895, such an announcement would appear to be justified. The tramway committee of the corporation of Glasgow report that they are able to turn over to "the common good" profits amounting to $41,000. But along came an expert accountant a month ago, who had had exceptional experience in analyzing tramway accounts, and showed, in the London *Times*, that the apparent profit was really a deficit. From the very figures published by the corporation he asserted, and appeared to prove, that there had been "a net loss of not less than $100,000." The trouble was the old one of not writing off enough for working expenses or depreciation. Thus the actual loss on live-stock was $10,000 more than allowed for in the accounts, working expenses of $65,000 were not charged at all against the revenue, etc. The Glasgow men have not thus far made any reply to this damaging analysis, though one would seem to be urgently demanded.

THE CONSULAR REFORM.

PRESIDENT CLEVELAND has partially atoned for the "Quincy debauch" by the order which he has just issued subjecting applicants for consulships or commercial agencies, the income from which is not more than $2,500 nor less than $1,000, to examination as to fitness. That is to say, all such vacancies are to be hereafter filled either

"by a transfer or promotion from some other place under the Department of State of a character tending to qualify the incumbent for the place to be filled; or (b) by appointment of a person not under the Department of State, but having previously served thereunder to its satisfaction in a capacity tending to qualify him for the place to be filled; or (c) by the appointment of a person who, having furnished the customary evidence of character, responsibility, and capacity, and being thereupon selected by the President for examination, is found upon such examination to be qualified for the place."

The peculiarity of this order is, that it takes the matter out of the hands of Congress altogether as to about one-half the consular service, and proposes to deal with it by executive authority solely. It must be examined in the light of the history of the attempts to purify the consular service as reported by Secretary Olney. In 1864 Congress provided for thirteen consular clerks, who were supposed to be persons in training for the consular service; but if they ever came into existence, nothing has since been heard about them by the public. In 1866 the Department of State issued an order requiring all applicants for consulships to present themselves for examination at the department; but if this order is still in force, Mr. Josiah Quincy never heard of it, and at all events only one examination was held under it. In 1872 another order of the same kind was issued, but what effect it had appears to be unknown to everybody. Another order in the same year put the consulates under the civil-service act of 1871, and made candidates examinable by a board composed of three persons serving in the State Department. This system lasted two years, but perished owing to the refusal of Congress to make any appropriation for the execution of the law. The present order is issued again under the act, and it is to be hoped that it will have a better fate than its predecessors.

It is to be observed about it, therefore, that it will owe its force and permanence, like its predecessors, to executive discretion. If appointments should again be made from persons outside the three categories prescribed by President Cleveland, or if the Missouri colonels and Arkansas editors should find the examinations at the State Department a mere form, there will be no remedy, any more than there was for the Quincy debauch. But we think the chances that this reform will be genuine and will last are now better than they ever were before. In the first place, the need of fitness for subordinate offices has taken hold of the public mind as never before, and the merit system has now been working successfully for some years in most branches of domestic administration. In the next place, the Quincy debauch called more attention than anything of the kind had ever done before to the condition of the consular service under the spoils system; and, though last not least, the steady growth of our foreign commerce, and the increasing desire to compete in foreign markets, is more and more impressing people with the need of competent consular agents.

There has been growing of late in Europe a strong belief in the childishness of the American people, fostered in part by the mode in which our journalistic youths discuss public questions in the newspapers, in part by the ravings of some of our crazy men about the currency. It is helped even by the talk of some good men, for there is something very juvenile about the applause heaped on the "patriotism" of people who lend gold to the Government, and about the demand that, instead of going to Europe, we should all stay at home to help the Treasury to keep the currency at par. All this savors a little of the well-conducted kindergarten, and startles foreign investors. They do not like to lend money to people who appear to be so immature.

But nothing probably has done more to damage our national business character than our foreign consuls. That any people rich enough and civilized enough to have consuls at all, or to feel the need of them, should have *such* consuls as ours, puzzles foreigners extremely, and the only explanation which Americans have to offer—the condition of our home politics—is too long and tedious to have any value. A practical people, as we love to consider ourselves, would, they say, pay the salaries to these men in some capacity at home, and not make a display of their weakness or incompetency to strangers, whose good opinion they are apparently sent abroad to cultivate. As a general rule, even the wildest democrats in Europe and the most eager spoilsmen try to present a good front to the foreigners, by allowing only fit men to represent the nation, but we have had in this point what may be called a droll shamelessness. The way we manage to dismiss from our minds, after we have got the colonel or editor off our hands, the kind of figure he will cut as a consul in a foreign city, is one of our oddest peculiarities.

It is to be observed, however, that when Americans arrive on the ground, visit him in his office, contrast him with the commercial agents of other countries, and find where he stands socially in foreign capitals, the absurdity of our consular system does come home to them. An increasing number of Americans have this experience every year. When our system is seen on the spot under hostile eyes, and before sneering critics of our character and manners, its weaknesses become more glaring and the desire to get rid of it stronger. This is one of the great uses of European travel. It gives many thousands every summer a new point of view. From thinking of consulships as a means of travel for a consumptive friend, or a refuge for a drunken brother, or a holiday for a "live" party worker, they come to look on them as agencies for the promotion of American commerce, for the glorification of democratic institutions, and for the stimulation of rational national pride.

THE RIGHT OF PERSECUTION.

JUDGE HOLMES of the Supreme Court of Massachusetts delivered an opinion last June in a boycotting case which excited a good deal of sensation at the time. He laid it down that although "deliberate and combined interference with a man's business by persuading others to have nothing to do with him" was actionable, yet this applied only to malicious interference, or interference for pure mischief or harm's sake. Such interference, if made for "a good purpose," such as to compel an employer to accept the strikers' schedule of wages by using "persuasion, advice, and social pressure" to prevent other men taking their places, would, he held, be justifiable, although "the weight of judicial opinion was the other way."

A case has recently occurred in England, before the Queen's Bench Division, in which the whole matter was thoroughly argued, and the plaintiff obtained an injunction restraining the defendants from doing the things which Judge Holmes said they might lawfully do if their motives were good. The defendants were the managers of a trade-union of plasterers, and they had a difference with a master plasterer named Peek, and withdrew their men from his employ. As he was engaged on a contract, another master plasterer named Wright lent him some men. The union then attacked Wright by endeavoring to get his men to leave him, and to induce people to break their contracts with him, and by printing and circulating libels about him. They did procure the breach of certain contracts with him, and did prevent his getting employment. He sued for libel, and asked for an injunction. The defence set up was substantially Judge Holmes's—that there was no malice, that the union's motives were good, and that they acted from a sense of duty.

The Judge, Baron Pollock, laid it down that

"No man had a right to do that which injured another man unless by acts he had a legal right to do. In this country every one had a right to express his opinion clearly with reference to the questions of the day. But if an individual, in order to enforce his particular views, did an act knowingly and intending to inflict an injury upon another, the law did not allow that to be done. Nor could a man say, 'If you don't employ a certain class of people, we shall do certain things which will injure you in your business.'

The question was, Did the defendant say to himself, 'I will go to these people and will write such letters as will prevent them from employing Mr. Wright, and then he will be obliged to come to our terms and not to exercise any free will of his own'?"

He then left the following questions to the jury:

"(1.) Do you think that the course of conduct pursued by the defendant with regard to the employment of the plaintiff Wright was improper in the sense of being malicious—*i. e.*, with the intention of injuring him? (2.) Do you think that the letters which were written were written with an improper motive to injure the plaintiff, or were written bona-fide and with the honest intention of discharging a duty?"

The jury found that there was malice, and gave $2,500 for the libels and $1,500 for the damages caused by the breaches of contract which the defendants had brought about, and the court granted an injunction restraining the defendants in all their operations against Wright.

The reason of all this is obvious enough. Civil society could not go on if any voluntary combination of persons were armed with the power of keeping anybody they chose to disapprove of from following a lawful calling in his own way, or preventing his forming or sustaining the relations with others by which he gained his livelihood. The excuse, too, which Judge Holmes supplies, that they meant well, has been used to justify every form of organized tyranny and oppression by which man has vexed his fellow-man. The Inquisition burnt and tortured with the best of motives, and the very worst governments the world has seen have professed high aims in harassing people. It is only bands of brigands who acknowledge that they are operating for pure mischief.

The claims put forward both by the Massachusetts strikers and by the English plasterers are fresh illustrations of the tendency of the modern labor movements, particularly when they take a socialist form, towards some sort of slavery. Their main business is, in fact, coercing people, putting some kind of restraint on their liberty, and compelling the individual to substitute somebody else's will for his own in regulating his life. One day they are engaged in subjugating the laborer, the next in subjugating the employer, but every day in pursuing somebody with penalties and threats; and all in virtue of an authority drawn solely from force.

The hostility to employers to which most of this is due, and which is exerting a disastrous effect on the business of more than one country, owes its origin to the doctrine which Marx has done most to spread, but which fills hundreds of thousands of heads that have never heard of Marx, viz., that things get their value from the labor spent on them, and that they therefore rightly belong to the man who has made them. Innocent and plausible as this idea seems, it has proved in its practical influence on the working-classes of Europe and this country almost a doctrine of devils. Bishop Potter made an effort last spring, by some timely remarks on the part which markets play in production, to arrest its ravages among the clergy. For the bitter truth is that value comes, not from labor, but from demand; that the laborer labors in vain unless he can find some one to buy his handiwork. The most valuable man in industry, the man to be cherished and encouraged and protected, is, therefore, the man who finds out what people will purchase, and finds the purchasers—or, in other words, the capitalist or employer, whose daily care it is to produce, not the good thing, but the thing for which he can get cash or bills. And yet this is the man whom the clergy, the philanthropists, the legislators, and sometimes the judges seem bent on persecuting and harassing and hunting out of one country into another. No more ingenious device for his annoyance and destruction could have been concocted than the doctrine that any men he once employs he must keep in his service on their own terms as long as they choose to stay, whatever may be his opinion of their worth or their influence on the market value of his commodities; and that, should he show any dissatisfaction with this arrangement, they would be justified in reducing him to submission by any means short of assault and battery, or physical injury to property.

COLLEGE ENGLISH.

The visiting committee on Composition and Rhetoric of Harvard College, whose report made such commotion three years ago among the teachers of the preparatory schools, have reported again, and have fortified their rather lugubrious conclusions by copious extracts from the college entrance examination papers. They drew attention in the former report to the well-known fact that translations from the Greek and Latin into "free, original, and idiomatic" English have long been relied on by the schools as a test of the student's command of his mother tongue. They printed a considerable number of these translations from the examination papers, most of which showed that the translations were really not English, but a close approach to gibberish, and were, of course, neither free, nor original, nor idiomatic.

Since then things have apparently not improved. In 1893, Prof. Goodwin of Harvard, commenting on the committee's report, in the *Harvard Graduates' Magazine*, said:

"Many good people who read the committee's report will believe that our mother tongue is singled out for neglect and contempt by the preparatory schools; and some will think that the neglect of English is justified by the high standard of scholarship in Latin, Greek, and mathematics which (as they suppose) the college exacts of its candidates for admission. Nothing can be farther from the truth than both of these ideas. . . . A similar test applied to any other department would disclose a state of things in the lower ranks of scholarship which would be proportionally disreputable. . . . It cannot be doubted that a similar depth of ignorance of geometry, algebra, physics, or history might easily be disclosed."

With the view of ascertaining by actual observation what advances, if any, have been made in the three years, the committee have taken up, at random, some of the examination papers in advanced Latin of the year 1894, and print sixteen extracts from the translations. If we called them a low order of comic literature, we should not greatly exaggerate. Here is a bit of prose which is neither better nor worse than the others:

"And this Macedonia even when neighboring nations were conquering and barbarians hemming in, peaceful itself by its own efforts, and quiet, we watched over with a slender guard and small army even without a chief command, but by legates, by the very name of the Roman people; but she now is so harassed by the consular power and army, that she hardly can recuperate herself during a long peace. Nay who has not heard this, who does not know that the Guelph used annually to pay a great fortune to L. Piso, that the whole tribute and customs of the Dyrrachines were turned over to the supervision of this one man, that the city of the Byzantines most faithful to you and this empire has been harrassed after the fashion of an enemy, how he when he could screw nothing out of the poverty-stricken could tear away nothing by any violence from the wretched sent his cohorts into winter-quarters; he placed over them men whom he thought would be most diligent satelites of his crimes, ministers of his cupidity."

And here is a bit of poetry of equal merit:

"Behold however the bull smoking under the hard ploughshare fell and threw out from his mouth blood mixed with froth and stifled his last groans. The sodden yeoman departs unyoking the bullock sorrowing at his brother's death, and leaves his implements fixed in the midst of his work. Nor the shades of the lowering groves, nor the soft fields can move his mind nor the which flying over the rocks seeks the field by the streamlet (but his sides are shaken with sobs [but the depths of his sides are loosended]) and stupor presses upon his fixed eyes, and his neck by the bending weight looks toward the earth."

The ignorance of Latin and ignorance of English are here displayed in about equal proportions. In fact, no improvement is visible in these pages. Apropos of this state of things, Prof. Goodwin says:

"There is no conceivable justification for using the revenues of Harvard College, or the time and strength of her instructors, in the vain attempt to enlighten the Egyptian darkness in which no small portion of our undergraduates are sitting. The college must do something to redeem herself from disgrace, and to put the disgrace where it belongs; but she must no longer spend time, strength, and money on the hopeless task which she has recently undertaken."

The committee has not hitherto singled out any particular school as responsible for these renderings, but the report intimates that the committee will in their next publish the examination papers of candidates for admission to Harvard College coming from one or two schools of the first rank.

Prof. Goodwin's remarks touch on one of the gravest sides of this matter, when he alludes to the enormous waste in America of college funds and professorial talent in attempts to teach youths who are totally unprepared to profit by collegiate instruction. This unfitness may be equal-

ly great in other branches than English, but its most striking, most lamentable, and most readily appreciated display is in the English department. That so many of the youths of the country to whom the art of expression ought to come easiest should, at the age of eighteen or nineteen, find their mother tongue completely unmanageable when they pass outside the phraseology of every-day life, must be considered little short of a national calamity. The schools have, it is true, some little excuse in the general popular carelessness of speech even in families of some cultivation, but this does not cover the general indifference of parents to the English of teachers and the teachers' indifference to their own English. We believe the cases are rare where a teacher's English speech helps or hinders him or her in getting employment. One may go into half the schools of this city and find children taught by twangy, slangy, slipshod speakers. The whole subject of English speech and writing in the schools is attracting more and more attention. The present instruction is most discreditable, but nowhere so discreditable as in the schools which prepare for college. We are the one civilized country to-day where a man's speech does not indicate what his opportunities of training have been and what kind of social place he fills.

THE BURDENS OF THE WEALTHY.

THE heavy weight of taxation borne by the French people is at last directing general attention to the details not only of public but of private expenditure. As to the expenditure of the Government, it has notoriously increased at a startling rate, and it is not surprising to find that, as in the case of our own democracy, pensions are responsible for much of the increase. It used to be said that privileges and pensions were aristocratic abuses, but experience has shown the fallacy of this contention. On the contrary, it seems that the great danger of democracy is from the multiplication of offices and the grant of pensions, bounties, and other gratuities. An industrious investigator has recently been at the pains to look into the particulars of the French system of pensioning civil officers, and he shows that under the republic the amounts paid have advanced at an alarming pace. Between 1876 and 1895 the number of office-holders under the republic rose from 189,000 to 235,000, and their compensation from 305,000,000 fr. to 470,000,000 fr. But the amount paid in pensions has risen in forty years from 8.7 per cent. of the salaries paid to more than 12 per cent. The total has increased from 23,000,000 fr. to 63,000,000 fr. The meaning of these figures is that there is an increasing number of persons rendering no productive service who are supported out of the revenue of the community. It should be observed that these figures do not include military pensions, and that if the officers of the departments and communes are reckoned in the computation, the number of office-holders in France equals the effective force of her army and navy.

The effect of this increased governmental expenditure on private fortunes is, of course, serious. A communication was lately presented to the Statistical Society of Paris in which the budget of a well-to-do private family was carefully analyzed. The family consisted of a father and mother, three sons, aged from nineteen to fourteen, two daughters of sixteen and eleven, and two female servants. The total expenditure of this family in 1894 was 20,700 fr. The particulars were set forth with the greatest fulness, and the taxes on each item of expenditure computed. The expense of the family habitation was 3,111 fr., and the taxes were 29.45 per cent. of this. On food the taxes were 20.65 per cent., on heat and light 27 per cent., on transportation 23 per cent., on clothing 11 per cent., on entertainments 63 per cent. Upon 14,117 fr. expenditure the average tax was 23 per cent. Upon expenditure for repairs, domestic service, doctors, education, and wages, which amounted to 6,555 fr., no attempt to compute the rate of taxation was made, and it seems quite proper to regard these items as belonging to the budgets of other families, so far as the incidence of taxation is concerned. It would seem, therefore, that not far from one-quarter of the income of a well-to-do bourgeois French family goes to meet the exactions of the Government.

The publication of this budget aroused journalistic comments similar to those which were heard in this country when the income tax was under discussion. A few journals exclaimed at the weight of the burden of taxation; the rest took the position, "Only give us the income and we will gladly pay the tax." But it cannot be denied that the showing is calculated to excite alarm. It is quite possible that the ratio of taxation may have been in some cases estimated too high; it is fallacious, for instance, to assume that articles upon which there is an import duty are necessarily increased in price by the amount of the duty. But these errors are offset by others on the opposite side; and if we take the total governmental expenditure of France from the official statement of 1893 as 3,475,000,000 francs, we see that it amounts to over 90 francs per head of population. If the total revenue of the French people is estimated at twenty milliards, the expense of the Government would be 17½ per cent.; so that it is fair to say that the tax-gatherer takes one franc out of every five francs of income, if not one out of every four.

The tribulations of the "debtor class" have been of late very loudly proclaimed; but these computations show that the position of the creditor class is not altogether enviable. There are other features of the economic situation which make the future still more anxious for people of property. In addition to the incessant imposition of new taxes, those who have money to invest are confronted with a steady fall in the rate of interest. Twenty years ago 7 per cent. was generally obtained on mortgages in New York city. Now it is 5 or 4½ or 4 per cent., and this decline measures the general diminution of the rate of return on investments. In this country there are still chances for enterprising young men to start out without capital and make their fortunes; but in France both natural conditions and social habits prevent. In that country the class depending for their support to a great extent on the income from accumulated property is very large. Young men, on account of military service and a system of prolonged professional examinations, do not expect to start out in life before they are twenty-six or twenty-seven years old. But if the family income is to be much further reduced, many young men will be unable to command the means of education. There can be no further economy in reducing the size of families; the limit has been reached there. If the exactions of Government are to be increased, and the rate of interest is still to decline, the disposition to accumulate will inevitably be checked. What is the use of saving money if it will bring in only 3 or 4 per cent., and if income and inheritance taxes are to be piled up in the future? Who can expect to put by enough to enable himself to live on his income? and if he must continue to work for a living, why should he not spend as he goes on, and either dispense with children, or give up trying to accumulate for them property which will produce little income, and which a paternal government will fine them for receiving? Parsimony was once an economic virtue, to be encouraged by the state; but its results have been so exuberant that those who do not directly share them have become envious, and demand that the state shall reverse its policy. But the ultimate results of discouraging saving will prove more disastrous to the poor than to the rich; for if the accumulation of capital should be checked, employment would diminish and the wages of labor would decline.

ALASKA REVISITED.—VI.

AUGUST, 1895.

IN closing these notes on the Territory, a comparison between the Alaska of twenty or thirty years ago and that of to-day naturally suggests itself. How have the hopes and anticipations of that earlier time been fulfilled or missed fulfilment? What future is promised for this vast and to many still mysterious region?

As regards its inhabitants a complete change is conspicuous. Some thousands of white fishermen, hunters, miners, and prospectors are now scattered along the coast and rivers—on the whole, a hard-working, orderly set, with here and there a rascally whiskey-smuggler or a stranded gentleman. Apart from a few mining camps, the parasites who live by the vices of oth-

ers are few. A country where he who would live must work is not attractive to them. Cut off from direct contact with the rest of the United States, Alaska is really a colony and not a frontier Territory, in the sense usually understood. As such, its needs should have been the subject of study and appropriate legislation, the neglect of which by Congress so far is bitterly and justly resented by the entire population. In fact, this aspect of our relations to Alaska illustrates clearly the worst defects of our Government as at present administered. Into political matters I shall not enter, but must observe that among the numerous ill-paid officials few are well prepared to handle the difficult questions presented in such a community; and the executive, such as it is, is without the legal authority or the proper facilities for governing or even visiting the greater part of the region it is supposed to control. The state of the law is uncertain, the seat of authority obscure, divided illegitimately between naval officers, the revenue-cutter service, and a powerless Governor, who, whatever his wishes and intentions, is not permitted by the law to control anything. If it were not for the orderly character and good sense of the white population, the Territory might easily become a pandemonium. This condition of things is disgraceful, and reform is urgently needed.

The change in the native population of southeastern Alaska has been remarked upon in a previous letter. In a general way a similar change has taken place all over the Territory. The primitive condition of the natives has almost wholly disappeared. The turf-covered hut has given way to frame shanties; log houses are rarely built. The native dress has disappeared, replaced by cheap ready-made clothing, shabby even when new. Native manufactures, utensils, weapons, curios, all are gone, or made only in coarse facsimile for sale to tourists. The native buys flour and tea, cooks his salmon in a frying-pan, and catches his cod or halibut with a Birmingham hook and a Gloucester line. In the whole of southern Alaska, thanks to the schools, the children and many young people speak fairly good English. If the present influences continue, another generation will see the use of English universal and the native languages chiefly obsolete. The day of the ethnological collector is past. Southeastern Alaska is swept clean of relics; hardly a shaman's grave remains inviolate.

In other parts of the Territory the same is more or less true. The native population is focussing about the commercial centres; the people gather where work and trade afford opportunities; and I have seen more than one pretentious church standing empty among the abandoned houses of a formerly prosperous village. There is some admixture of blood in marriages between the often attractive "Creole" women and the incoming settlers. These marriages are often very fruitful, but the pure-blooded natives seem to be diminishing. The Aleuts, whose census is accurately made annually by the Greek Church, are distinctly losing ground, and will doubtless pass away in a few generations. The same is probably true of the Tlinkit people. As we approach the arctic region, changes of all sorts are less marked, and civilization has had less effect. The introduction of tame reindeer, if successful, will prove most important for the people of this region. Their natural food supply has been practically destroyed by the whites and by repeating firearms, of which the natives have many. The whales are almost extinct, and the whaling-fleet itself is nearly so. The walrus preceded the whale, and the hair-seal has never been sufficiently abundant in this region for a sole resource. The chief salmon streams are, or soon will be, monopolized by the whites, near the sea, and the natives of the Upper Yukon will go hungry. The present law allows unrestricted fishing to the natives, and a close time of one day a week for the whites. The latter hire the natives to fish during the prohibited day, and so the salmon have no close time. Where a salmon stream is monopolized by one firm, they do not usually cut their own throats by taking all the salmon, but, where there are several competing firms, there is little respite for the fish.

The codfishery was formerly carried on by two competing firms, who have now composed their differences. They had salting stations on shore, and bought fish at so much a thousand from fishermen who used small sailing-vessels or dories and fished near shore. Now it is found cheaper, and for other reasons preferable, to return to the older system of fishing in the open sea from a seagoing vessel, as on the Banks at the East. The preparation of the Alaska fish has often been hasty, careless, and inferior to that done in the East, so Alaska codfish, originally of equal quality, are less esteemed commercially than the Eastern cod. For some reason I do not understand, the Pacific Ocean at best offers but a small market for fish under present conditions; and so I look to see the codfishing industry develop slowly, and perhaps be the last, as it is in my opinion the most substantial and important, of the resources of the Territory. At present the salmon are commercially more important, but, unless more effectively supervised and regulated, they will meet with the same fate as the fisheries of California and the Columbia River. There should be a resident inspector at every important fishery; and as the business is carried on for at most two or three months in the year, a vigilant inspection by a cutter or fisheries vessel told off for this especial work would counteract any tendency to bribe the resident inspector. I have seen 3,500,000 pounds of canned salmon taken in one season from one small stream, representing at least 5,000,000 pounds of eatable fish, and it seems that an annual supply of the best fish-food, like that, is worth preserving. But if the work is to be put into the hands of the lowest class of political appointees instead of intelligent experts, making the offices will not save the fish.

In the matter of furs we may regard the fur-seal fishery as doomed. It is probable that few of the pelagic sealers will pay expenses after this season, and two or three years are likely to see the end of the business. It is costing us much more than the catch is worth now, and the most sensible way of ending the matter is generally felt to be the destruction at one fell swoop of all the seals remaining on the islands and the abandonment of the business.

The continental furs, owing to competition between traders, are now selling for nearly their full market value, and little profit can be expected from them. They are also growing more and more scarce, as the high prices stimulate trapping. The natural and satisfactory offset to this would be the establishment of preserves, such as the "fox farms" of which I have previously spoken. Many of these have been started, and the multitudinous islands offer opportunities for many more. But the business is hazardous, since there is no protection against poachers, and a very ill judged attempt has been made, I am informed, by the Treasury, to impose, in addition to the annual sum for which the island is leased, a "tax" of $5 on each fox killed, over twenty, from each "farm." It is doubtful if the Treasury is entitled to tax anybody without the explicit authority of Congress, and a tax of 50 per cent. on the gross value of the product not only is oppressive and exorbitant, but will put a stop to a business which should be encouraged. This is probably another instance of the "government by Treasury clerk" from which Alaska has suffered, lo! these many years.

The timber of Alaska, though by no means insignificant, is not likely to be much sought for, except for local purposes, for many years. I may point out, however, that there are millions of acres here densely covered with the spruce best suited for wood pulp, and plenty of water power for pulp mills, so that this resource is not without a future.

A forthcoming report of the United States Geological Survey will treat of the existing and prospective mining industries.

To sum up, it may be said that the whaling and sealing industries of Alaska are practically exhausted; the fur trade is in its decadence; the salmon-canning in the full-tide of prosperity, but conducted in a wasteful and destructive manner which cannot long be continued with impunity. The cod and herring fisheries are imperfectly developed, but have a substantial future with proper treatment. Mineral resources and timber have hardly been touched. No business-like experiment with sheep or cattle on the islands has been tried by competent hands, while the introduction of reindeer, though promising well, is still in the experimental stage. Socially, the Territory is in a transition state, the industries of the unexploited wilderness are passing away, while the time of steady, business-like development of the more latent resources has not yet arrived. The magnificent scenery, glaciers, and volcanoes make it certain that Alaska will in the future be to the rest of the United States what Norway is to western Europe, the goal of tourists, hunters, and fishermen. Agriculture will be restricted to gardening and the culture of quick-growing and hardy vegetables for local use. The prosecution of most Alaskan industries being in untrained hands, failures and disappointment will no doubt be frequent; but, when the pressure of population enforces more sensible methods, the Territory will support in reasonable comfort a fair number of hardy and industrious inhabitants.

W. H. D.

CENTRALIZATION IN FRANCE.

PARIS, September 10, 1895.

THERE are some people who never speak of our French administration without saying "that administration which Europe envies." I do not know how much truth there is in this phrase, which has become almost proverbial. In France, what is called the administration has an army of defenders; you may count by thousands those who belong to it. This work of the Revolution, completed by Napoleon, has survived all the revolutions that have taken place in our century. It is characterized by simplicity, and affords such a powerful instrumentality to the Government, whatever its name may be, that all successive governments have used without attempting to change it. Under the Second Empire, during the long years of oppression and of silence which my generation knew, there arose at Nancy, the ancient capital of the Duchy of Lorraine, a school which called itself the school of decen-

tralization. This school published pamphlets, even books, and delivered lectures on the necessity of giving more individual life to the French provinces and to the great French cities. As the school was not composed of open enemies of the imperial system, the Emperor Napoleon III., who was not inimical to new ideas, addressed a letter in 1863 to his Council of State, urging it to prepare legislative measures having in view to diminish or to remove the defects of the system of centralization. The Council of State was invited "to consult public and private interest by allowing all possible protection to the first, to the second, all desirable liberty."

There is a curious continuity in history, and it is not impossible to find much resemblance between the powers of the Roman governors in Gaul, of the intendants of Louis XIV., and of our prefects of the nineteenth century. M. Fustel de Coulanges, author of an important work under the title of 'Histoire des institu tions politiques de l'ancienne France: La Gaule romaine' (1891), speaks with eulogy of the centralization introduced in Gaul by the Romans. "When the Roman Senate," he says, "organized the empire, towards the year 27 of our era, it conferred upon Augustus the proconsular power over one-half of the provinces and a right of supervision of the governors of all the others. This innovation, in which some saw perhaps an attack against liberty, was the germ of a new administrative system. It turned out, in fact, that the chiefs of the provinces, instead of being real monarchs governing in their own name, were only the agents, the lieutenants, of the Prince. This fact, so simple and apparently so insignificant, was what introduced into Europe administrative centralization." M. Fustel de Coulanges does not doubt that the people looked upon this centralization as a great benefit.

After the Frankish conquest of Gaul, we come upon an era during which any attempt at centralization became futile, and, in order to find anything resembling it, we must go back to the first efforts made by the French monarchy towards national unity. The history of the intendants may be found in many recent works. These officials were at first only like the "missi dominici" under the Carolingian monarchy, like the "Enquêteurs" under Saint Louis, like the "Réformateurs" under the first Valois—commissioners sent from province to province for the execution of the King's orders; but by degrees they came to hold permanent posts. In the *pays d'élection* (France was divided between the *pays d'élection* and the *pays d'états*, like Brittany, Languedoc, Burgundy, which had diets), forming the greater part of the kingdom, the intendant administered under the direction and control of the secretaries of state and of the King's Council. In the *pays d'états*, the diets voted, under the name of *don gratuit*, the annual budget. Under the Regency which followed the long reign of Louis XIV., the intendants had become so powerful that Law could say to D'Argenson: "Know that the kingdom of France is governed by thirty intendants. You have neither parlements, nor States, nor governors; thirty *maîtres des requêtes* attached to the provinces have in their hands the happiness or the misfortune of these provinces, their abundance or their sterility."

Tocqueville passed a judgment almost as severe on the system of centralization in his 'Ancien Régime et la Révolution.' His work is a sort of commentary on the words of Law. More recent historical works have shown that the intendants have been judged with too much severity, and that, as representatives of the monarchy and of the general interests of the country, they were often very useful instruments. The phrase "provincial liberty" or "municipal liberty" often covered a multitude of abuses. In many provinces the incidence of taxation was very inequitable. In Béarn, for instance, M. Louis Lacaze tells us, in a work on the provincial liberties in Béarn, that the intendants were "the initiators of right." "Who," he asks, "created, so to speak, the South of France by the opening of roads? Who proposed the works of public utility—bringing before the diets a project for dyking the Gave, determining the construction of a bridge in Pau, organizing a sort of insurance against the periodical epidemics among cattle, and liquidating the communal debts? It is hard to acknowledge, but it was the intendant." There may be some exaggeration in the part thus attributed to the intendant, but we must remember that in Languedoc the *canal du Midi* was undertaken by virtue of an edict of Louis XIV., under the direction of Colbert, and that the diets of Languedoc at first tried to refuse their subvention to this great work.

The intendants, however, had become as unpopular under Louis XVI. as the provincial parliaments. Necker decided the King to make great reforms and to have provincial assemblies. M. Léonce de Lavergne wrote in great detail the history of these 'Provincial States under Louis XVI.' This work was severely judged by Tocqueville and is now well forgotten. The intendants were allowed to remain, but they were made powerless. The new organization was not even fairly tried, and soon there came a great cry for the States-General. The Constituent Assembly laid the foundations for a new centralization. It abolished all privileges. It divided France into departments, all subject to the same laws. It is certainly singular, but it is quite certain, that the provinces did not make even the semblance of a fight for their old privileges, traditions, and delimitations. The new territorial and administrative unity was accepted without any resistance.

The Constituent Assembly worked, however, unconsciously. It had in view the creation of department assemblies; it abolished the intendants, and left almost nothing between the department assemblies and the central power. But, in order to make its work a most perfect instrument of centralization, nothing was needed but the reëstablishment of the intendants under the name of prefects; and this change could be done in a moment and by the stroke of a pen. The system organized by the Constituent Assembly could produce only anarchy. The Convention felt the necessity of strengthening the central powers: its commissioners had unbounded powers; they were the connecting link between the intendants and the prefects. After the convulsions of the Terror, France had, so to speak, no more institutions; the laws of the year viii. were the first new definition of the relations of the State to the departments and to the communes. The State assumed the right to protect the citizens, to levy the taxes; it established the hierarchy of the prefects, the sub-prefects and mayors.

Pasquier, speaking of this Constitution of the year viii., says in his memoirs:

"The consequences of such a change were great. The principle of unity of action in the midst of all the territorial divisions, the well-established responsibilities, promptly introduced order into the Government. . . . What was more appreciated than anything was the satisfaction caused by the disappearance of a number of small functionaries, without any merit or capacity, who for ten years had become masters of the administration in the departments and the arrondissements. Most of them issued from the lowest ranks of society, and they were all the more inclined to have the weight of their authority felt. It seemed that a great gain was made when people had to deal with only one representative of authority, who, in order to maintain himself in an important post, would find it to his interest to gain the esteem of those over whom he administered."

Under the Empire, the members of the councils-general, of the arrondissement councils, and of the municipal councils were chosen by the prefect from a list of notabilities drawn up by the electors. The deliberations of all these councils were controlled by the central power. Under the Restoration, it was proposed to take away this power from the prefects; but this change was accomplished only after the Revolution of 1830. The laws of March 28, 1831, and of July 18, 1837, on the communes, of June 22, 1833, and May 10, 1838, on the departments, gave to the commune and department the right to choose directly their representatives in the municipal councils, the arrondissement councils, and the councils-general. But as the mayors, besides representing the communes, are the agents of the State in all matters of general interest, their choice was reserved to the sovereign or to the prefects, according to the population of the communes. They were, however, always to be taken from among the municipal councillors directly chosen by the people.

M. Ancoc, one of our authorities in all questions relating to administrative matters, has made himself the advocate of this régime in various publications. He has been bold enough to attack M. de Tocqueville, who, in his famous works, assumed the defence of a complete municipal autonomy: "It is in the commune," said Tocqueville, "that the strength of a free people resides." M. Ancoc maintains that the central power, without treating the commune as a minor, has a right to control its decisions and to see that they are in conformity with general legislation. The prefect is not absolute, and his decisions can always be impugned before the Council of State, which is the supreme administrative court. Much may undoubtedly be said in favor of the greatly abused centralization, and of the ordered hierarchy of powers and attributions which it creates; but, in this case as in many others, the old proverb, "Tant vaut l'homme, tant vaut la chose," is truly applicable. There is no doubt that, with eighty intelligent prefects, independent of all local interests, France would be well administered. Under Louis Philippe, the prefects remained many years in the same department, learned to know all its wants, were independent to a great extent of the Deputies from their departments; now they have become their nominees and their slaves. France is really administered at the present hour by the Deputies and the Senators. They will say to you very quietly "mon préfet," "mon sous-préfet." As soon as the prefect does not do their work, or refuses anything to their electoral agents, they turn to the Minister of the Interior and ask for his removal; and, in our present state of parliamentary equilibrium, the Minister of the Interior dares not refuse anything to the Senators and the Deputies, who have his fate in their hands.

Taine, who was not a friend of centralization, said that at any rate it had one advantage: it preserved us from democratic autonomy. He was mistaken; the system, as it

works at present, works entirely for the benefit of the electoral agents, and our democracy is a great machine, worked by them for the satisfaction of very narrow interests. Administrative centralization can produce good effects only if its principal agents, who are the prefects, are very independent, and can assume the character of arbiters in all questions where private interests and the general interest are in conflict.

Correspondence.

RALEGH'S 'DISCOVERIE.'

To the Editor of The Nation:

Sir: Two weeks ago you called attention (pp. 170–171) to the probable existence of three distinct editions, bearing the same date, of Sir Walter Ralegh's narrative of his expedition to America, entitled 'The Discoverie of the Large, Rich, and Bewtiful Empire of Guiana,' London, 1596. All three of these contemporary editions are to be found in the New York Public Library, among the early books on America gathered by Mr. James Lenox, and deposited by him in the Lenox Library building.

The book was entered for publication by Robert Robinson, in the Register of the Company of Stationers, on the 15th of March, 1596 (1595 O. S.), and each edition bears his imprint. While they agree almost line for line throughout, there are typographical differences on every page. For the information of antiquarians, and as a means of bringing to light still other possible editions, a few of the peculiarities of the Lenox copies may be noted:

Red Morocco Copy.—The title, in the 5th line, begins *Empyre;* the 6th line ends *Citie;* the 7th line has the reading *Spanyards;* and the 15th line, *Stanneries.* Page 2, line 25, begins *monlie;* page 12, line 12, reads *to Spayne;* page 25, line 12, ends *grew dailie;* page 41, line 18, ends *VVa-;* page 55, line 25, has the reading *pretie knots;* page 76, line 9, begins *ble;* page 77, line 18, ends *displant me, if;* page 88, line 27, ends *dovvn the riuer;* page 95 ends *carrie su-* in line 22, and *which* in line 23; page 103, line 5, ends *Spanyards;* page 104, line 3, begins *Spanyardes;* and page 112 has the readings *Spanyard* in line 4, *discouerie* in line 5, and *Siete bocas* in line 8. So far as can be judged by the title, this seems to be the edition described in the British Museum catalogue with the press-mark C. 32. g. 25, and perhaps it is also like the Grenville copy, which has the press-mark G. 7169. (1.)

Blue Morocco Copy.—The title, line 5, begins *Empire;* line 6 ends *City;* line 7 has the reading *spaniards;* and line 15, *Stanneries.* Page 2, line 25, begins *commonly;* page 12, line 12, reads *Spaine;* page 25, line 12, ends *grew dailie to;* page 41, line 18, ends *Wara;* page 55, line 25, has the reading *prittie knots;* page 76, line 9, begins *mable;* page 77, line 18, ends *displant mee;* page 88, line 27, ends *dc wne the riuer;* page 95 ends *carrie suger, gin-* in line 22, and *which the west* in line 23; page 103, line 5, ends *Spaniardes;* page 104, line 3, begins *Spaniardes;* and page 112 has the readings *Spaniard* in line 4, *discouery* in line 5, and *Sciete bocas* in line 8. This seems to be the edition reprinted by the Hakluyt Society in 1848.

Half Russia Copy.—The title, line 5, begins *Empire;* line 6 ends *Citie;* line 7 has the reading *spanyards;* and line 15 *Sannerries.* Page 2, line 25, begins *monly;* page 12, line 12, reads *to Spaine;* page 25, line 12, ends *grew daily;* page 41, line 18, ends *Wa;* page 55, line 25, has the reading *prettie knots;* page 76, line 9, begins *dable;* page 77, line 18, ends *displant me;* page 88, line 27, ends *down the riuer;* page 95 ends *carrie sugar* in line 22, and *which the* in line 23; page 103, line 5, ends *Spanyardes;* page 104, line 3, begins *Spanyards;* and page 112 has the readings *Spanyard* in line 4, *discouerie* in line 5, and *Sciete bocas* in line 8.

Wilberforce Eames.

New York, September 18, 1895.

A JEFFERSON LETTER.

To the Editor of The Nation:

Sir: I find quoted in the August number of a magazine, the *Arena*, p. 441, more than half of the Jefferson letter which was published by Mr. Ford in your issue of July 25. Reference is given to Bancroft's 'History of the Constitution,' pp. 463-465, which is not accessible to me here, so that I cannot verify the quotation or say whether the whole letter is there published or not. It would seem, however, that Mr. Ford was at least partially incorrect in asserting that the letter had been "never yet printed."

There are several verbal differences, pointing to carelessness in the quoted text; as, for example, the following. . . .

Respectfully, James H. Dillard.

Harrisburg, Va., September 9, 1895.

[We are informed by Mr. Ford that he looked in the index of Bancroft's History, and found that there was no letter to the Rev. James Madison entered, and so took it for granted that it was not printed in his collection, whereas Bancroft in fact printed it as a letter to the other Madison, changing the date as if to make it more unrecognizable. We omit our correspondent's list of discrepancies because Mr. Ford has compared his copy anew with the original and satisfied himself of its correctness.—Ed. Nation.]

"GRASS-WIDOW."

To the Editor of The Nation:

Sir: Since I touched on this term in your issue for March 23, 1893, a good deal of matter connected therewith has been published, in the London *Notes and Queries* more especially. What we now know of it can be summarized in a few words.

Grass-widow, for which, in East Anglia, we sometimes hear *grace-widow*, has, besides its ordinary higher sense, the lower sense of 'an unmarried mother,' and also, though rather rarely, that of 'a harlot.' But, so far as appears, no one gives it more than one of its senses.

As to its etymology, we may at once dismiss the notion of its connection with the vulgar *grouse*, 'to rape,' instead of which, it has been stated, *grass* is used locally in the United States. For no proof has yet been brought forward that *grass-widow* anywhere bears the meaning of 'a girl who has been ravished.'

The existence of the German *strohwittwe*, the Low German *graswedewe*, and the Swedish *gräsenke* certainly suggests that it is somehow akin to them. That our expression was, originally, *grace-widow*, representing the medieval *vidua de gratia*, 'a divorced woman,' has been asserted, indeed, but has not been supported by any authority.

In the sixteenth century, *grass-widow* signified 'a mistress,' or something even more disreputable:

"In fayth, quod your frend, I thynke saynt Powle ment not so. For thē had wyuys ben, in his time, lytel better thā *grasse wydowes* be now." Sir Thomas More, *A dyaloge* (1529), fol. 86 *v.*

Had we, of old, both *grace-widow*, an ecclesiastical technicality, and *grass widow*, in one or other of its present senses? Again, is the first, as a rendering of *vidua de gratia*, anything but an invention of the other day, on the one hand, and, on the other hand, as an actual rusticism, anything but a phonetic corruption? Here in Suffolk, *grass*, particularly in *spear-grass* and *water-grass*, often has the sound of *gress*, or one so nearly like it as easily to be mistakable for that of *grace*. F. H.

Marlesford, England, September 5, 1895.

Notes.

The Lothrop Publishing Company, Boston, are to publish 'The Book of Athletics,' by Norman W. Bingham, jr., and 'Child Sketches from George Eliot,' selected by Julia Magruder, with illustrations.

A 'History of the Nineteenth Century' is the ambitious undertaking of Eugene L. Didier of Baltimore. The story will be told in decades, of which the first is now ready.

Bismarck's biographer, Charles Low, has taken in hand 'The German Emperor, William II.,' with Frederick Warne & Co. for publishers. The same firm have in preparation a new pocket edition of Milton's Poetical Works, in four volumes; a wholly new edition, with some unpublished addenda, of the Poems of Eliza Cook; 'Lancashire Idylls,' by J. Marshall Mather; and 'Chess Novelties,' by H. E. Bird.

Ginn & Co. announce 'Problems in Differential Calculus,' by Prof. Wm. E. Byerly of Harvard, and 'Outline of the Philosophy of English Literature—Part I: The Middle Ages,' by Greenough White.

A. C. McClurg & Co., Chicago, will soon issue 'The Journal of the Countess Krasinska in the Eighteenth Century'; 'Beatrice of Bayou Teche,' by Alice I. Jones; 'Life and Love,' by Miss Morley; and 'Means and Ends of Education,' by Bishop Spalding.

Spon & Chamberlain publish immediately 'An Elementary Text-book on Steam-Engines and Boilers,' by Prof. Kinealy, and 'Polyphase Electric Currents and Alternate Current Motors,' by Prof. S. P. Thompson.

Swan Sonnenschein & Co., London, will publish early in October a novel entitled 'Confession,' by Elizabeth E. Evans. It is a story of New England life, the scene being laid in a mountain village of Vermont.

The calendaring of the Records in the House of Lords proceeds surely, though slowly, as must necessarily be the case with a work of such magnitude. Mr. Felix Skene is performing this work for the Commission upon Historical Manuscripts. It will be good news to Americans in general, and to Pennsylvanians in particular, that among the documents which have been passing through Mr. Skene's hands are some, hitherto unknown, concerning William Penn and the early history of Pennsylvania. It will be a considerable time before the calendar dealing with this important "find" will be published, and, even

after such publication, special authority from the House of Lords itself will be necessary before copies can be made by searchers.

The statement of a Leipzig journal that the late Prof. Heinrich von Sybel had left *druckfertig* a complete manuscript of the eighth volume of 'Die Begründung des Deutschen Reiches durch Wilhelm I.,' is unfortunately not true. Equally incorrect is the notion, generally current, that the work was to end with the seventh volume, which contains a narration of events from the opening of the Diet of the North German Confederation in March and the meeting of the Customs Parliament in April, 1868, to the declaration of war by France in July, 1870, and the futile efforts of Napoleon III. to form offensive and defensive alliances with Austria and Italy. It was the intention of the distinguished historian to write an eighth and concluding volume, describing the war of 1870 and its political culmination in the proclamation of the German Empire, just as, in the fifth volume, he had described the war of 1866 and its results in the reconstitution of the German States and the formation of the North German Confederation; but the execution of this plan was prevented by his sudden death in the seventy-eighth year of his age. Indeed, this final volume, so far from having been completed, was not even begun; only a few memoranda referring to the subject were found among his posthumous papers.

During the recent celebration of the twenty-fifth anniversary of the Franco-German war, German newspapers and periodicals filled their columns with reminiscences of the terrible conflict, many of which are extremely interesting and permanently valuable contributions to contemporary history. Such, for example, are the extracts from the diary of the deceased Lieut.-Col. Bronsart von Schellendorff, who served as Chief of Division on Moltke's staff, and was sent, September 1, 1870, to the fortress of Sedan to demand the surrender of the French forces; and the stenographic report taken by Count von Nostiz of the negotiations between the French commander, Gen. Wimpffen, and Gen. Moltke and Count Bismarck on the night of September 2, published in a recent number of the *Militär-Wochenblatt*. After the capitulation, as Napoleon, on the morning of September 3, drove away into captivity escorted by a squadron of hussars, while Bismarck and Moltke watched the scene from a window, the latter remarked, with his usual sententiousness: "Voilà une dynastie qui s'en va." It was on the same day that the famous dinner took place in the headquarters of the army at Vendresse. For the first time since the beginning of the campaign champagne appeared on the table. King William filled his glass and drank the memorable toast to the health of his brave army, to the Minister of War, Roon, who sharpened the sword, to Moltke, who wielded it, and to Bismarck, whose conduct of affairs had raised Prussia to its present proud eminence. Moltke then turned to Bismarck and offered him a pinch of snuff. This act of polite appreciation called forth from our diarist the pertinent and punning comment: "Voilà la *prise* de Sedan."

The newest reprints on our table embrace an additional volume in the Messrs. Putnam's uniform edition of the Baroness Tautphoeus's works, namely, her historical novel, 'At Odds.' This makes a timely appearance in the midst of the Napoleonic revival. It is in two neat volumes. Turgeneff's 'Fathers and Sons' takes on the unfamiliar title of 'Fathers and Children' in Constance Garnett's version (Macmillan). Of the quality of the translation in this series we think we have already said enough. It is left not to Stepniak but to Edward Garnett to appreciate the novel and define the Nihilist hero, in the Introduction. "What, then, is Bazaroff?" he asks; and answers, "He is the bare mind of Science first applied to Politics." Mrs. Anne Thackeray Ritchie furnishes a graceful introduction to Miss Edgeworth's 'Ormond' redivivus (Macmillan); and Thackeray's praise of Marryat's 'Jacob Faithful' is made the keynote of Mr. Hannay's introduction to this companion volume in an admirably chosen series, openly and handsomely printed and well illustrated. 'Great Expectations' and 'Hard Times' make one volume in Macmillan's series of Dickens reprints —at first following first editions, now following the one corrected by the author in 1869; and the novelist's namesake supplies the unfailingly interesting account of the work, biographically and bibliographically.

The Harpers have collected into a neat volume the articles 'About Paris,' by Mr. Richard Harding Davis, which have appeared in their magazine during the past year, and publish them under that collective title. Mr. Davis gives, in his bright and readable style, a picture of the tourists' Paris, but he has seen or recorded little of the Paris of those who live there. The Boulevards and the Bois and a dash at the more notorious night resorts make up most of what he shows us. It is a Paris without the Seine and its quays and bookstalls, without Notre Dame and the great museums, without its old gardens or its Latin Quarter. Mr. Davis's remarks about Americans in Paris, in spite of their jaunty self-sufficiency, contain a good deal of salutary truth. The volume is embellished with Mr. C. D. Gibson's clever drawings, and is prettily bound. It is a pity, however, that the designer of the cover did not take the pains to get the arms of Paris right. The chief with the fleurs de-lys should be blue, not white, and the galley should be gold.

The illustrated catalogue of the first exhibition of posters, at the London Aquarium (Brentano's), would hardly call for notice but that it is convenient to have an alphabetical list of the artists who devote, or lend, themselves to this branch of art in England and France. The half-tone prints of selected examples are numerous and characteristic. A well-known American archæologist, Mr. Joseph Thacher Clarke, furnishes a brief introduction.

The *Harvard Graduates' Magazine* for September gathers up all that its space permits of Commencement doings and sayings, in addition to the customary news of classes, clubs, schools, marriages, and deaths. Every one who heard must be glad to read over Sir F. Pollock's oration before the Law School Association, with which the number opens. Mr. Winsor briefly outlines the nature of the remodelling of the Library building now going on. Judge Chamberlain sketches the life of a Federal idol, Fisher Ames, whose portrait from the Harvard collection is the third in a valuable series of reproductions. We note further the founding of a Wendell Phillips Memorial Scholarship for the advantage of students who, when the junior year is reached, have given proofs of oratorical talent worth cultivating.

The *Psychological Review* for September contains several articles of general interest. Prof. Royce writes on "Anomalies of Self-consciousness," endeavoring to find in the recent work in child-psychology which emphasizes the social influences present in the development of the child's sense of self, the reason why derangements of the sense of personality in adults so often have a distinctly social reference. He also thinks that it is by reason of the associations formed in the early years between organic sensations and social experiences—in the complex make-up of the self-notion—that the variations of organic conditions get their remarkable influence in producing all kinds of anomalies of self-consciousness. Mr. Havelock Ellis of London reports cases of "Dreaming about the Dead," and shows their bearing on certain anthropological theories. The paper by R. Meade Bache on "Reaction-Time according to Race" also suggests an interesting hypothesis. He supposes that higher culture, by putting emphasis upon the deliberative processes, tends to impair the automatism and celerity of the lower and more reflex functions, and proposes to test it by investigating the reaction-time of subjects of different races. He carried out the research upon ten individuals each of whites, negroes, and North American Indians. His results seem in the main to confirm the hypothesis, except that the reaction-time of the Indian is shorter than that of the negro, while the opposite was to be expected. The whites, however, gave, as he anticipated, the longest time of all. The author accounts for the Indian's short time by his method of life; while the negro, he thinks, has a slower reaction than is normal to him in consequence of the hereditary influences of slavery, by which he has been made servile and sluggish. The subject is interesting enough to be pursued further. The "Discussion" and "Literature" sections of the *Review* are full and able as usual.

Capt. F. D. Lugard gives a graphic account of his successful race with a French expedition to Borgu on the Niger, in the *Geographical Journal* for September. Though mainly concerned with the incidents of the journey, he sketches briefly the history of the Bariba, the inhabitants of Borgu, a warrior race who have thus far maintained their independence against both African and European invaders. They are also inveterate raiders and robbers of caravans, so that the trade between the interior and the colonies of France, Germany, and England, of which their country is the Hinterland, has been almost destroyed. Capt. Lugard, the first white man to reach Nikki, the principal town, was hospitably received by the king, and negotiated a treaty with him which throws the country open to the British. Whether this will be an advantage or not depends largely upon the success of the attempts now being made, with the powerful support of the Colonial Secretary, Mr. Chamberlain, to restrict the liquor traffic which strangles legitimate trade and ruins the native races. Mr. J. T. Last's "Notes on Western Madagascar" are rather disappointing, for, after a somewhat detailed account of his collecting excursions in the northern and central coast region, he gives but a few words to an expedition into the little known Antinosi country in the south. Referring to the prevalent impression that the Hovas are practically masters of the whole island, he says that probably not half the natives are subjects of the queen, the independent tribes being those living south and west of a line drawn from Mujanga in the northwest to Fort Dauphin in the southeast.

The annual report of Mr. E. H. Hankin, bacteriologist to the Government of the North-western Provinces, as summarized by the London *Times*, contains some very interesting and surprising conclusions. Numerous investiga-

tions show that the four great rivers, including the Ganges, afford "a purer drinking supply than European rivers comparable in size." This he attributes to the fact that, being composed largely of melted snow, they contain little organic matter, and that the intense sunlight, acting at a high temperature, is peculiarly destructive to microbes. In proof of this he says that while a cubic centimetre of water at the bathing and washing places at Allahabad contains over 90,000 microbes, "at a distance just sufficient to be beyond immediate contamination, only 360 microbes could be detected in each cubic centimetre of water." In regard to the supply from wells, he has come to the conclusion that the caste restrictions and prohibitions, especially those forbidding strangers or men of lower castes to touch their drinking vessels or to draw water from their wells, are not, as has been supposed, the outcome of cruel and irrational prejudice, but are founded on a basis of sound sense and a knowledge of sanitary laws learned by centuries of experience. The plea of caste contamination acts as a defence against well-pollution.

The translation of the Bible into different languages and versions goes on with almost accelerated rapidity. From the ninety-first annual report of the British and Foreign Bible Society it appears that "the editorial subcommittee have had to deal with over one hundred versions during the year 1894." There is now passing through the press the first Pushtu Bible in the language of the people of Afghanistan, and a marginal-reference Bible in Malagasy, while versions for natives of Africa, New Guinea, Japan, the Himalayas, and Assam have recently been published.

With the opening of its new McMahon School of Philosophy on October 1, the Catholic University at Washington, D. C., will admit all properly prepared applicants. Hitherto the courses of this University have been open only to those who had taken holy orders in the Roman Catholic Church; hereafter there will be no discrimination made against either laymen or women who may desire to take the courses in science, philosophy, and arts. But while women students will be admitted to the lectures and studies in both the regular and special courses, they will not be permitted either to matriculate or to receive degrees.

We touch elsewhere on the report of the Committee on the English Department of Harvard University. Copies of this document can be obtained gratuitously on application to J. Bertram Williams, Publication Agent of the University, Cambridge, Mass.

"S." writes to us from Boston: "I sympathize with your correspondent who asks your aid to save the name of Deer Isle from extinction through the substitution of Deer Island. Deer Island to a Bostonian suggests, as Blackwell's does to a New Yorker, crime and poverty, having been a locality for similar institutions for years." We may add still another argument, namely, that a Deer Island lies adjacent to the coast of Maine in Passamaquoddy Bay.

—A number of interesting points are brought out in Mr. Alexander McAdie's paper on "Protection from Lightning," just published by the Weather Bureau at Washington. He quotes the well-known answer of certain Glasgow manufacturers when urged by Lord Kelvin, the foremost physicist of our time, to put up lightning-rods, that "it is cheaper to insure than to do so." Careful search by means of reliable statistics reveals the fact that in the United States for the five years, 1890 1894, lightning caused the death of 1,120 persons, practically all between April and September; June and July showing the greatest number. In the United States, during the nine years ending in 1893, there were 4,175 fires caused by lightning, nearly all east of the Rocky Mountains, with an aggregate loss of considerably more than fourteen million dollars. From these figures and other information, the author proves that it is certainly worth while to erect protective apparatus. As to the kind of buildings struck, the same years show 2,679 barns, 129 churches, and 831 dwellings. The statistics for 1894 are noteworthy for the number of lives lost and the amount of property destroyed. Dr. Oliver Lodge states that "almost any conductor is probably better than none, but few or no conductors are absolute and complete safeguards." This is largely because of the heretofore incompletely understood character of lightning as an oscillatory discharge. Interesting observations are recorded with regard to the kinds of trees most frequently struck, the varieties of soil peculiarly favorable to such action, and the influence of running water. Paragraphs upon the proceedings to be at once taken in case of apparent death from lightning and upon the efficiency of conductors follow, while the paper closes with fine photographs of destructive lightning flashes, and illustrations of their effects upon certain trees and monuments.

—Both Sparks (vol. vii., pp. 66 to 73) and Bigelow (vol. ii., pp. 291 to 299) give Franklin's letter to Peter Collinson of May 9, 1753, without its concluding portion, which is said to have been wanting in the copy from which it had been taken. A correspondent of the *Nation* has found among the Shaftesbury papers (section x. 24) preserved in the Public Record Office, London, a copy of the letter *in extenso*, which gives the concluding portion in the following words:

"[I do not think you are generally become such slaves to your Vices, as to draw down that *Justice* Milton speaks of when he says that] sometimes nations will descend so low from Reason which is Virtue, that no Wrong, But Justice, and some fatal Curse annex'd deprives them of their outward Liberty

"Their inward lost.—Parad. lost.

"In History we find that Piety, Publick Spirit, & Military Spirit, & Military Prowess have their Flows, as well as their Ebbs, in every Nation, and that the tide is never so low but it may rise again. But should this dreaded fatal change happen in my time, how should I even in the midst of the Affliction rejoice, if we have been able to preserve those invalueable Treasures, and can invite the good among you to come and partake of them! O let not Britain seek to oppress us, but like an Affectionate Parent endeavour to secure Freedom to her Children; They may be able one day to assist her in Defending her own—whereas a mortification begun in the Foot may spread upwards to the Destruction of the nobler Parts of the Body.

"I fear I have already extended this rambling Letter, beyond your Patience, and therefore conclude with requesting your Acceptance of the inclosed Pamphlet from

"Sir,

"Your most humble servant,

"B. FRANKLIN."

—In the year 1808, the *Correio Braziliense*, a prominent Brazilian journal, drew attention to the disadvantages likely to result from the establishment of the seat of government at a seaport, inaccessible from many parts of the country, and exposed at any time to the attacks of a hostile navy. Not until recently, however, have active measures been taken towards transferring the capital from Rio Janeiro to some point in the interior. The constitution of 1890 provides for the reservation of 9,000 square miles in the "Central Plateau" of Brazil, and the founding of a new capital. Accordingly, in 1892, a commission of twenty-one scientists was appointed by the Minister of Public Works, with Dr. Luiz Cruls as chief, with instructions to explore this region and to define the boundaries of the portion to be set apart as a new "Federal District." The results of the exploration, which was undertaken in the summer of 1892, have been published in a quarto volume of 365 pages, in Portuguese and French, illustrated by numerous excellent heliogravures. The report of the chief of the commission describes the methods employed in the scientific investigations, and gives an account of the journeys of the different divisions and a summary of the work accomplished by the expedition. Following this are special reports on the geology, meteorology, botany, and zoölogy of the Plateau by different members of the commission. An atlas, containing plans of the route-surveys and maps of the country traversed, accompanies the report. The future Federal District lies in the neighborhood of the Pyrenneos in the State of Goyaz, about 750 miles from the coast by the railway which is projected. It contains the head waters of the important rivers Tocantins, São Francisco, and Paraná. The mean altitude is 3,600 feet, and the climate is salubrious, the average temperature being 67 degrees Fahr., so that European immigrants would not experience the discomforts of acclimatation. Water is abundant and of excellent quality, and the supply of stone and wood for building purposes adequate. The topographical features of the territory are such that no difficulty would be met with in selecting a site for a great city. The growth of Brazil has hitherto been confined to a limited portion of the coast and some of the southern States, but it is now found that there exists in the interior a region abounding in natural advantages, only awaiting development to become an important commercial and industrial centre, and a powerful factor in the prosperity of the republic.

—In *La Révolution Française* of August 14 M. Cl. Perraud prints nine hitherto unpublished letters of Mme. Roland, which he has discovered while engaged upon an edition of her correspondence. These letters were written in 1791 to Champagneux, a Lyons municipal officer. Mme. Roland was at the time in Paris with her husband, who was trying to persuade the Constituent Assembly to incorporate into the national debt certain expenditures of Lyons ordered by the royal power and for its needs. The letters do not bring to light new facts about the period, but they give vivid impressions of the state of feeling among Mme. Roland's friends and their party associates during the eventful summer of the Flight to Varennes and the Massacre of the Champ de Mars. The radicals were evidently anxious to be rid of the Deputies of the Constituent Assembly, who, according to Mme. Roland's letter of May 27, were tired and "usés." She thinks them much enamoured of power, and that, if not promptly turned out, they may reenact the drama of the Long Parliament. Her July letters reveal the panic into which her friends were thrown by the Massacre of the Champ de Mars. She even goes so far as to declare that more circumspection was required than in the days when the Bastille was still standing. Another curious remark was made under the influence of the news that Roland, whom she always calls "notre ami," had been defeated in his candidacy for the Legislature

from the department of the Rhône-et-Loire. After expressing the hope that other departments will not act like theirs, she says: "Mais croyez que nous n'aurons pas de législature sans un parti de l'*opposition*, qui sera toujours celui des honnêtes gens et de la minorité." She would hardly have subscribed to this statement a year later, when the Convention was in session, or even during the last months of the Legislature. The friends of Danton and Robespierre would have had no difficulty in doing so, however.

—In the winter semester of 1894–95, Dr. Theobald Ziegler, Professor of Philosophy in the University of Strassburg, delivered a course of seventeen academical lectures, which have been just published in a volume entitled 'Der deutsche Student am Ende des 19. Jahrhunderts' (Stuttgart: Göschen). Two centuries ago the famous jurist and humanitarian reformer, Christian Thomasius, gave a series of discourses in the newly founded University of Halle "On the Wretched Condition of Students," which, as the title implies, portrayed the life and character of the *civis academicus* of that day in a not altogether rosy light. Since then hodegetics, as the general subject is pedantically termed, has become a distinct discipline and more or less prominent branch of study in the University curriculum. In rare cases the topic has been treated with such breadth of view and superior force of intellect as to acquire a national importance, as, for example, in Fichte's 'Vorlesungen über die Bestimmung des Gelehrten' (Jena, 1794), which aimed to inspire the youth of his time with a nobler conception of the mission of the scholar, Schelling's 'Vorlesungen über die Methode des akademischen Studiums' (Stuttgart, 1803), and Erdmann's 'Vorlesungen über akademisches Leben und Studium' (Leipzig, 1858). Prof. Ziegler's lectures differ from those of Schelling and Erdmann, and are similar in scope to those of Thomasius, inasmuch as they are addressed exclusively to students and touch only incidentally upon the functions of professors and other features of academical life and study. The old scholastic conundrum "Quid est studio*sus* sine studio?" serves as an appropriate text to his severe discourse on the character and career of the *fin-de-siècle* German student, who regards academical freedom as a release from moral laws and obligations, and uses it as a license for laziness and licentiousness. In order to correct this false and fatal notion of academical freedom he discusses its real nature, and gives a brief sketch of its mediæval and essentially monastic origin and its historical development until it was gradually restricted and finally abrogated as a legal privilege.

—In civil and criminal suits the university student of to-day is amenable to ordinary courts of justice; he is also subject to the same police control as the common citizen; the most despised *Philister* is his peer in matters of judicial punishment. The only exception to this rule is the right of the student in Prussia to be confined in the university "Carcer" if he has been condemned to not more than a fortnight's imprisonment. Academical freedom, in its original juristic sense, is an institution of the past, and there remains only academical discipline administered by the rector and senate of the university, who, however, do not possess absolute authority, even in this limited sphere, since they are forced to expel any student upon whom a judicial penalty has been imposed involving the forfeiture of civil rights. Academical freedom, as now understood, is partly social, but chiefly intellectual. After twelve years of strict pedagogical supervision, ending with a rigorous examination, the youth enters the university, where he is at once freed from all constraint as to the choice and pursuit of his studies. It is assumed that, having been compelled to do regular work during this plastic period of his life, he will continue to do so from sheer force of habit after the compulsion ceases. All that the university requires of him as a matriculate is, that he shall make a selection and be inscribed as an attendant of at least one course of lectures each semester; whether he actually attends them or not, is his own affair. In general, this theory may be said to work fairly well, and the great majority of students make a proper and profitable use of their academical freedom; only in exceptional instances does a young man, after a dozen years of coercive studiousness, assert his newly acquired liberty and show his appreciation of it by doing nothing or worse than nothing, thus answering to the definition given by the learned and facetious Balthasar Schupp, more than two centuries ago: "Studiosus est animal aut nihil aut aliud agens." Prof. Ziegler's defence of unrestricted *Lehr- und Lernfreiheit*, the scholar's perfect liberty in searching after truth and in publishing the results of his investigations, is vigorous and timely. Equally judicious and pertinent are his remarks on drinking, duelling, ostentation, and extravagance, sexual immorality, factitious conceptions of honor, corps and clubs, associations in and out of the university, the student's relations to the social question, politics, religion and the Church, science, art, and literature, academical instruction, professional study and general culture, intercourse with professors, use and abuse of vacations, graduation, and examination for the public service. The little volume may be read with profit by the American as well as by the German student. It is already in the fourth edition.

DEAN STANLEY.

The Life and Correspondence of Arthur Penrhyn Stanley. By R. E. Prothero. Charles Scribner's Sons.

THERE are only two kinds of biographies which it is comparatively easy to write—those of persons whose career is interwoven with great events, and those of persons who, being themselves remarkable, have left records of their thoughts and purposes, of their experiences of life and their opinions of their contemporaries abundant enough to approach the peculiar charm of faithful self-portraiture. In the case of Dean Stanley neither advantage is present. Though he played always a worthy, and sometimes a conspicuous, part in the ecclesiastical struggles which marked the history of the Church of England from 1838 till 1880, these struggles do not keenly interest the present generation of Englishmen, whose minds are already filled by new questions and hopes. Though his letters, judging by the extracts given in these volumes, were bright, candid, and vivid, they relate mostly to passing events, and do not (except those which contain impressions of travel) embody quite enough that is exquisite in form or of permanent value for the student of life and thought to make them literature in the sense in which that name may be applied to the letters of Gray or Cowper, of William von Humboldt, or Carlyle, or Macaulay. Had the Dean kept a personal journal, it would probably have been of great interest, not only autobiographically, but historically, for he had a quite remarkable power of seizing the salient points in current history, and perceiving analogies between them and those of other times and countries. But it would appear that no such journal exists.

The Dean's present biographer is under two other disadvantages. He seems to have had only a very slight personal acquaintance with the man of whom he has had to write, eminently one of those whom it was hard to understand except from personal acquaintance. And the fourteen years which have passed since the Dean's death have so much changed the face of English society, the character of the Church of England, and the topics which occupy men's minds in England, that a good deal of what is recorded in these volumes seems already to belong to a comparatively remote past, and to have no very close bearing on the problems of to-day. We say "seems," for the real change is perhaps less great than people think it; but, for the purposes of the general reader and his interest in the book, seeming amounts to the same thing as reality.

Allowing for these difficulties, Mr. Prothero has done his work extremely well. He is almost invariably precise and accurate. He is impartial in dealing with controversial matters, whether ecclesiastical or political. He has been scrupulously careful to avoid the sins of Mr. J. A. Froude and of the biographer of Bishop Wilberforce, and has admitted nothing which could either needlessly pain the living or damage the reputation of the dead. Of Stanley himself he has taken a just and worthy view, not concealing his weaknesses—they were indeed venial weaknesses—and not unduly lauding his merits, but seeking so to relate the facts that his character and conduct should speak for themselves. His sympathy is unobtrusive and his admiration discerning. The book is well planned and agreeably written; and we have little to regret except the absence of that vividness of presentation which only intimate knowledge could have secured. We think, however, that a somewhat too sparing use has been made of Stanley's own correspondence. Especially in the second volume, which is largely occupied by an account of the various ecclesiastical controversies in which the Dean's love of freedom and unselfish courage involved him—controversies in themselves of comparatively slight interest—the full account given of their details should have been abridged to make room for more letters than we find; and the letters presented should have been given more in full, instead of in the sometimes scrappy extracts to which want of space appears to have reduced the biographer. Perhaps he may correct this in a future edition; though we infer that enlargement will be given only in the separate volume of letters already announced. There are, we believe, many of considerable charm and interest from which no extracts, or only very short extracts, have been made.

Stanley was a most characteristic product of the Church of England, and much might be pardoned to her if she produced such men in greater number. There is no country of Continental Europe, Protestant or Roman Catholic, in which such a man could have grown up—no Roman Catholic country, for in them an ecclesiastic is almost necessarily an ecclesiastic through and through, obliged to think so much of his church that he must put his country, his literary or scientific tastes, his personal friendships, in the second or third

line; no Protestant country, for in none of them does a pastor enjoy the same social status, the same quasi-political position of authority and dignity, as the holder of a bishopric or a great deanery has in England. A distinguished professor at a famous university in Germany or Scandinavia affords the nearest parallel; but in those countries the universities have not the independence and wealth which still belong to them in England. Oxford and Cambridge have saved the Church of England from being too clerical, by associating the clergy on the one side with learning and literature, on the other with the upper classes and political life. Stanley was thus throughout his life quite as much a university man as a clergyman, and would, perhaps, have had both a happier and a more widely and permanently effective life had he remained at Oxford instead of going to be Dean of Westminster. He was not exactly a great teacher, in the sense of having a genius either for discourses or for exposition. His learning was not profound, nor was it accurate in details. His mind was not systematic. But it was incessantly active, and its alertness made it extremely suggestive and, in that sense, fertile. Everything interested him, and his interest communicated itself to others. One never met him in the street and talked to him for five minutes without hearing something which, if not remarkable, yet seemed worth remembering—something which no other person would or could have put exactly in the way he put it. This was a gift invaluable to him in his university, for it made his teaching stimulating and his personality attractive to his pupils. Oxford, however, was in his day much more of an ecclesiastical and political battle-ground than it is now, and less a place where many teachers prepare men for examinations and a few devote themselves to minute or abstruse studies. There was then far less examining, and also, it is fair to add, less learning. But there was a very brisk and bracing atmosphere which did more for most men than the present system seems to achieve.

Stanley was the life and centre of every academic movement and every ecclesiastical struggle. He was full of fight and courage, and wrote and preached like one who felt himself always making history, not from personal vanity, but because his imagination expanded everything it touched, and made the University seem an image of the mighty world. He was so little of a dogmatic theologian that his enemies—and his only enemies were to be found among those who did not know him personally—accused him of unconscientiousness in remaining within the pale of the Church of England. Unconscientious he certainly was not. There were certain propositions in the Thirty-nine Articles which he probably did not hold, or at any rate set very little store by. But his was not the kind of mind that actively disbelieves and feels it is disbelieving. His delight in all things was to discover resemblances and extenuate differences; and his attachment to the historical Church of England was so profound that he would have felt himself far more substantially at variance with any other Christian community, even if in abstract points of doctrine he might have come nearer to it than he did to the opinions of ninety-nine one-hundredths of the Anglican clergy. The historical Church of England, he loved to say, was built upon compromise, and her history had been one of compromise; and he would have thought it a great injury to her comprehensiveness for any one to leave her because he did not agree with the current interpretations of her formulas, or even with the literal construction and original sense of portions of those formulas themselves. This attitude of mind was that of some of his most eminent Broad Church contemporaries, and though it may be pushed to excess, and could not so well be defended in a country of many free churches, all based on creeds which they have settled for themselves, the circumstances of England still commend it to some men who differ more widely from the Thirty-nine Articles than Stanley did.

The personal charm which endeared the Dean to his friends is not easy to describe. He had a good deal of reserve, and admitted very few persons to real intimacy. But he had an immense capacity for interesting himself in and helping those whom he thought worthy, even when they had no claim on him; and this help was rendered in such a cordial and ungrudging way that it gave a pleasure to the recipient that might be disproportionate to the magnitude of the service. There was also a sort of freshness and brightness about him, an unslaked and unslakable curiosity and eagerness, which made his society extremely stimulating. He seemed to be always getting out of life the most it could yield; and in his company one felt infected by this keenness of perception and enjoyment, and became for the time able to discern in passing events more than they meant to ordinary observers. He had that delightful gift of being unlike any one else which does so much to make people interesting, and he added to it a grace of manner and a quickness of sympathy which dispelled the shyness young men felt in approaching a person of such eminence. Few men have mixed so much in the world or lived so much in the air of a court, and yet contracted so little of worldliness or the faults of the courtier. In the society of London he filled a place which has remained empty ever since, and those who knew him well still, after fourteen years, miss the slight little figure that darted about like a fire-fly, and seemed, though so short sighted that he could not recognize a face at ten yards, to perceive and grasp and judge all that was passing, and feel regretfully how often they would like to know what Arthur Stanley thought of this or that event.

TWO ARCHITECTURAL WORKS.

The Cathedrals of England and Wales. [*The Builder* Series.] London: *The Builder.* 1894.

Architecture for General Readers: A Short Treatise on the Principles and Motives of Architectural Design. With an Historical Sketch. By H. Heathcote Statham, Fellow of the Institute of Architects, Editor of *The Builder.* With illustrations drawn by the Author. London, New York: Charles Scribner's Sons. 1895.

THE literary part of 'The Cathedrals of England and Wales' consists of a brief essay upon each of the thirty-two cathedrals named. These essays are sometimes signed, as the preface is, by the initials of Mr. H. H. Statham, editor of the weekly London journal the *Builder.* The article on Lincoln Cathedral is by Canon Venables, that on Gloucester by the architect, F. S. Waller, that on Carlisle by the architect, C. J. Ferguson, and that on Ely by Mr. A. Beresford Pite. The majority, however, are not signed, and all are probably taken from the columns of the *Builder.* They are of mixed character, containing history and criticism; and each one, as a brief record of the cathedral building and its fortunes, is of great interest to a student of architectural antiquities. Illustrations are given in the columns of the text, sometimes as many as six or seven to a single notice, and these generally deal with details of the interior. In the great deficiency of easily accessible accounts of these buildings, the present series of notices is valuable. It is to be desired that they should be printed in a small and inexpensive volume.

In the present heavy folio they are the accompaniment of thirty-two general plans and thirty-two views, all reproduced by one or another photographic process from original drawings. The plans are of the greatest value, and are a real accession to the existing material of architectural and archæological study. They are on a large scale and very complete in detail, and we are fully prepared to admit the claim of superior and hitherto unattained accuracy which is made for them in the preface. The reproduction of them is only moderately successful, and in some cases the lettering is much too small, or too confused with the dotted and broken lines of the vaulting-plan to be easily read. This imperfection of the process is not, however, so marked as to destroy the value of the elaborate distinction made by the tinting of the section of walls and piers, whereby the different epochs of the building are denoted, though this device is of but a limited utility. It gives the dates of the substructure, but cannot hint at the supremely important changes which have taken place above, where fifteenth-century vaulting springs from thirteenth-century piers—and greater changes than that. All this weighed and considered, the plans remain a really prodigious gain to all students, and put the study of English mediæval architecture on a new basis. The text illustrations, above cited, have all the appearance of perfect trustworthiness, and are very exact so far as we have been able to test them; they are fairly well reproduced, and are often even pleasing in themselves. One longs for a larger supply of them. A thousand such pictures, with these plans to elucidate them, how valuable a set would that be! For these subjects are often hard to reach with the camera; in any event, photographs of such details are hard to come by, and it is photographs of such details that the student most desires

As for the general views in the volume before us, the pains and labor and thought which have gone into these large drawings are not to be ignored, but the method is out of date for representing architectural effect. Studies of building and of the way in which parts are put together are best in line-work, as Viollet-le-Duc has shown, and as the studies in the text of this very book help to show; but for the artistic result let us take such work as that in 'La Normandie Monumentale,' in the 'Épidaure' of MM. Defrasse and Lechat, in Fritsch's 'Deutsche Renaissance,' in Dohme's 'Barock- und Rococo-Architektur,' in Uhde's 'Baudenkmaeler in Grossbritannien,' in Gotch's 'Architecture of the Renaissance in England,' in Enlart's 'Architecture Gothique en Italie,' or in Gonse's 'Art Gothique.' Architecture that exists and that needs not, as Greek temples do, to be recreated from measurement and calculation, requires the photograph, and not the slow and disguising hand of the draughtsman, overweighted as he must be by the general mass of a great cathedral. Why should the mind of the artist who draws be thrust in between the work of the artist who builds and the student? Moreover, the greater number of these large pictures are of the most unsuccessful character in the combination of draw-

ing and reproduction. Some of them are phantoms of buildings, in which neither are general masses well shown nor details at all made evident. It is with regret that we are compelled to make the same remark concerning the greater number of the illustrations in Mr. Statham's 'Architecture for General Readers'; they are disfiguring to his pages and often really hard to understand. And yet Mr. Statham is an artist of real force, as two of his drawings found in the smaller book very sufficiently show.

The second book on our list is by the same Mr. Statham who appears as editor and part author of the 'English Cathedrals.' It is altogether a book for the general public, being a very well imagined handbook of the simpler and more obvious principles of architecture, and of its practice among the chief races of builders, except that the people of India are rather too hastily barred out (pp. 202 and 289). The account of theory and practice is arranged in two forms, first, in chapters on general principles, on simple building with pillars and walls supporting beams, on building with arches, and on ornament of different kinds; and, second, in an historical sketch, which occupies the last third of the volume. In the first chapter, architectural working-drawings are explained, though not, perhaps, with complete success. It is very important to add some elucidation of the *section*, and the full significance of a section taken on a line A B or C D of the plan is left uncertain; moreover, the perspective sections 23 and 24 are not working-drawings at all, and that should be made clear. In questions of design Mr. Statham is exceedingly naturalistic, an unhesitating champion of common sense and logic as opposed to mere tradition. We have nothing but approval for such an interpretation of architectural art as that to be found on pp. 20, 21, 28, and 29, and generally throughout these chapters. The analysis of styles is commonly adequate. Differences of opinion apart, it is hard to see how the essential peculiarities of each of the great styles could be better explained in the space allotted to it. The chapter on "Architecture in relation to Cities and Landscape," too, deals with a subject that is generally neglected. The brief hints given, pp. 174 to 180, on the use in cities of vistas, openings to distant views, foliage, placing of monuments, and the like, are excellent.

We have spoken of differences of opinion, and the many places in the book where another writer would interpret differently and criticise from another point of view need not be specified. In writing so briefly as Mr. Statham has done, only general conclusions can be stated. One point, however, should be made: the unfortunate use (so common in English) of the word Renaissance to cover, in architecture, all the Italian work from A. D. 1425 on, and all the work in the North which agrees with Italian work in being related closely to classical models, leads to an erroneous fashion of looking at the work of the fifteenth and that of the eighteenth centuries as in the main one and indivisible. The French way of limiting the use of the word to the fifteenth century for Italy and to the reigns of Louis XII., Francis I., and perhaps Henry II. for France, allows of and leads to a more accurate way of reasoning. The Italians, too, discriminate, though less carefully, between the Risorgimento, the Classicismo, and the Decadenza; or, following another line, between the Quatrocento and the Cinquecento. On p. 321 of the book before us we are told that the most notable single buildings of the Renaissance are St. Paul's at London, St. Peter's at Rome, the Palace of Versailles, and the Escurial; no one of which is a Renaissance building according to the French or the Italian nomenclature. This in itself is perhaps of small importance—how the limits of the Renaissance are to be marked out is matter of opinion; but the resulting or coincident inaccuracy of historical view is important. In pages 318-321 is contained the brief notice which Mr. Statham allows to the classical revival, but there is in them no hint that any changes took place, any development and decay, during the three and a half centuries following 1425. It is clear, of course, that the author does not wish to give much space or much attention to the revived classic styles, but still it is unnecessarily misleading to leave the reader ignorant of the vast difference in purpose and aim of, say, Bramante or Fra Giocondo, Pierre Lescot or Pedro de Ibarra, and Sir Christopher Wren or Jules Hardouin Mansart. These men represent not one style but three styles, and there are as many more styles which those four centuries brought into being. We cannot afford to believe that they are all "Renaissance" together.

A notice which is meant to be favorable and even laudatory must not end with fault-finding. Let it be repeated that the styles which the author undertakes to analyze and explain are well understood, and that architectural ornament as well as construction and the resulting forms is better set forth and more clearly brought to the comprehension of beginners than in any popular work we have met with in any language.

Four Years of Novel Reading: An Account of an Experiment in Popularizing the Study of Fiction. Edited, with an Introduction, by Richard G. Moulton, M.A., Ph.D., Professor of Literature in English in the University of Chicago. Boston: D. C. Heath & Co.

THE experiment of eliminating the reading of fiction from our list of amusements and adding it to that of serious occupations has filled "The Backworth Classical Novel-reading Union" with a pride that naturally expresses itself in a printed book. Hitherto the whole of America may be said to have dwelt in ignorance of Backworth, and an Introduction which shows it in the act of despoiling us of a joy is perhaps not the happiest conceivable. The medium of public advertisement of Backworth's effort towards self-culture is Prof. Moulton of Chicago, until recently an eminent University Extension lecturer in England. He feels strongly about the educational value of fiction, and boldly advises young persons of limited leisure for reading to go straight to the great imaginative writers, even if presumably veracious historians and biographers be utterly neglected. He says the study of fiction must be set about because it "is in its highest form the study of life," and he believes that careful training in youth "will determine whether fiction shall be a dissipation or a mental and moral food." An abiding faith in the contrariness of human nature leads us to forecast results from such a system not anticipated by Prof. Moulton, such as the spectacle of youth trained on Scott and Dumas either taking to Freeman's 'Outlines' for recreation in maturity, or misspending old age in devotion to shilling shockers.

The value in life of a love for good literature contracted in youth admits no argument, but whether that can be forced by a deliberate training which necessarily modifies pleasure, is by no means so certain. Prof. Moulton recognizes the difficulty of persuading the multitude to approach fiction in his own grave if not prayerful spirit, and the object of this publication is to show how that difficulty is in the way of being overcome in Backworth. The Secretary of the Union describes its inauguration and methods, adds a list of novels read and of points discussed during four years, and then follow a few essays as concrete examples of culture. The Secretary's report is charmingly naïf and sincere. Recognizing a possible vagueness in the public mind as to the whereabouts of Backworth, he begins with an exact geographical statement, and then, with admirable local enthusiasm, indicates the superiority of his own village to other villages similarly abandoned to the coal-mining industry. His picture of the awakening of Backworth to the "great educational value of literature" accomplished by a course of U. E. lectures in 1890, prompts reflection on the slow emergence of England from the dark ages, and prepares us to fancy the simple Backworthians forming a society for the study of classical fiction "with an appreciation closely allied to enthusiasm." They make a strong appeal to imaginative sympathy, even the backsliders, those who insisted on having two months in which to read their novel, and those "who refused to do any work until they had read the book," no matter how much time was required for that performance. We are glad to learn that these honest, ingenuous souls were not turned out of the Union, and that compromises were effected whereby they were enabled conscientiously "to do work" on the sound basis of knowledge.

It does not surprise us to hear that the methods of a literary society with members of that mettle have already been adopted "at such places as London and Exeter." We cannot help thinking that they would have done just as well without the "suggestion by experts" of subjects for discussion, which suggestions Professor Moulton says are of the first importance. What largely distinguishes our classical fiction from the rest is the clearness of its message, the saliency of its points; and the people who take the trouble to study it had best be left to grasp and interpret for themselves. The suggestions given from literary experts (hateful phrase!) are not uniformly creditable to their expertness, and we hope that the next publication of the society will include essays from untrammelled Backworthians only. Thus may be avoided the fatuity of discourse on why Dickens is more famous than Reade; the futility of comparison between great but totally different writers, and, perhaps, the shock of such startling information as that Reade shows "the male side of the quality whose female counterpart produces *Keynotes*, *The Heavenly Twins*, and *Trilby*"!

Thinking, Feeling, Doing. By E. W. Scripture, Ph.D. (Leipzig), Director of the Psychological Laboratory in Yale University. Meadville, Pa.: Flood & Vincent, The Chautauqua-Century Press. 1895. 12mo, pp. xii, 304.

THIS book is an offering—a very spicy one—on the altar of that bellicose faction in psychology whose shibboleth is Wundt. The author mentions him, in a quiet way, with the best faith in the world, as the greatest of psychologists. Everything that is of value in modern material civilization (in which the author includes our "tall buildings"!) is due, he says, to "experiment." It is owing to the "late introduction of experiment" into the mental sciences that they are in a "mediæval condition"—

"two hundred years behind the physical sciences"; that the "old" psychology consists of "volumes of vague speculation and flimsy guess-work," an "arm-chair science" "which anybody could teach"; that ethics is but "a conglomeration of maxims," and "philology nothing more than a history of word changes without an attempt to explain the causes."

"The difference between the old and the new [psychology] is not one of material: the subject is the same for both, namely, the facts of mind. The difference lies in the carefulness with which the information in regard to these phenomena is obtained. Instead of careless observation and guess-work, the utmost care and self sacrificing labor are expended in the laboratory in order to obtain single facts. This method of careful scientific work is unintelligible to men of the old school" (pp. 282–3).

"Hypnotic exhibitions," "thought-transference follies," and "the so-called psychical-research experiments" are "amusements," says our author, "as unrelated to scientific experiments as clairvoyant healing or faith-cure to the science of medicine" (p. 26). And in the margin, as the paragraph summary, he has written, "Quack experiments." Every little counts!

There are a good many pages in the book composed in this tone, sauced with a touch of swagger. It is a relief to turn from them to the chapters of exposition—the "old" psychologist in especial will find it so; there is much in them to console him. They give the "results" up to date of the "new" psychology, and tell briefly how those results were reached. Even admitting them to be "results" properly so called (and many of them are still in dispute—a fact which the author omits to mention), they hardly justify Dr. Scripture's flourish of trumpets; they hardly supply that "lack of information on the most vital questions" of which, he declares, we are "dying." They consist largely in the trivialities of reaction time, and in the verification, with an infinite waste of pedantry, of conclusions that the "old" psychology had reached and proved time out of mind. One doesn't need a laboratory and a lot of apparatus and experiment to prove that small objects are more likely to escape notice than big ones—a needle than a haystack (p. 93), or that "the degree of attention paid to an object depends on the intensity of the feeling aroused" (p. 96). And as for "vague speculation and flimsy guess-work," see Dr. Scripture's remarks on the connection between spruceness on a man-o'-war and duty and discipline:

"Cleanliness is not the only reason why a man-of-war is kept in a high degree of polish. The furnishings could be just as clean if painted with black asphalt; but the effect on the officers and men would be quite different. *It is impossible* to get full attention to duty and discipline in a dingy vessel."

It gives one a certain sense of security to go back to one's James or Mill.

Vita del Barone Bettino Ricasoli. By Aurelio Gotti. Florence: Le Monnier.

THIS book is a great disappointment, and the fault lies not with the subject, but with the author. A biographer who succeeds in making a tedious book about Ricasoli has mistaken his calling, for Ricasoli was not only one of the most striking personalities of his time, but also a leading actor in Italy's regeneration. Had he never carried Tuscany through the crisis of 1859, or been Prime Minister of Italy after the calamity of Cavour's death in 1861, and again during the perplexities of 1866, he would still be a figure worthy of being painted by a master's hand.

His present biographer, Signor Gotti, is favorably known as the author of a Life of Michelangelo, published about twenty years ago, and as the editor, with Tabarrini, of the ten volume edition of Ricasoli's correspondence. He cannot plead inexperience, therefore, nor lack of information; the trouble seems to be, on the contrary, that he is simply swamped by his material. He is at the further disadvantage of being unable to forget that he is writing the "official" biography of the Tuscan statesman, so that he moves with hardly more freedom than do the writers of campaign biographies of Presidential candidates. Not that he falsifies—he states Ricasoli's limitations fairly enough; but he has no sense of proportion. He gives thrice as much space, for instance, to Ricasoli's instructions to one of his farmers about planting a certain field as to the cause of Ricasoli's resignation of the premiership in 1862. Signor Gotti assumes throughout that the reader is familiar not only with Italian history, even in its most intricate political minutiæ from 1840 to 1880, but also with the ten volumes of Ricasoli's letters and documents. So he quotes without supplying dates or explaining references; and he fails to produce upon us the impression of sequence or advance. His chapters are like the radial wings of a penitentiary, which have no outlet at the further end, so that you have always to return to the central point if you would traverse a new corridor.

In so many of his methods is Signor Gotti old-fashioned that we are amused to observe how closely, in others, he resembles the most approved exponents of one modern school of historical students. He, too, like the most zealous of the young Stubbses whose monographs drop periodically with dull thuds from the historical seminars of many of our colleges, has learned the virtue of the art of dumping. Would that he had imitated some of the good qualities of those same young Stubbses. He has issued a book of nearly 400 closely printed octavo pages without an index, without titles to chapters, without headlines, so that the unfortunate student who has to refer to it for facts must be prepared to waste much time. Such an occupation will have the tedium and chill, without the excitement, of climbing a glacier from top to bottom in search of a lost object.

Meanwhile, Bettino Ricasoli awaits a fitting biographer. His character was as individual as that of the elder Cato, with additional traits which make it more interesting; for in him were strangely mixed the feudal lord and the modern philanthropist, the aristocrat and the democrat, the soberest reasoner and the man of faith. If ever any man stood firmly on his feet and walked straight through life along the narrow path his unswerving conscience marked out for him, the late Baron Ricasoli was he.

New Studies in Literature. By Edward Dowden. Boston: Houghton, Mifflin & Co.

IT is always a pleasure to receive a new volume from the pen of Mr. Dowden. His wide and exact knowledge of modern literature is under the control of a true taste, and he has at his command a facile and often eloquent style, to which one cheerfully pardons some lack of compression. He is a good interpreter, and the amiable temper of his criticism is always engaging. The contents of the volume before us consist of *Fortnightly Review* papers ranging from Goethe to Fabre d'Eglantine, and from Dr. Donne to Mr. Robert Bridges. They are mostly expository, and in some instances furnish excellent introductions to the study of the authors discussed. The last paper is the only one that was not worth reprinting. It is "an introductory lecture to [Mr. Dowden's] college class," to whom it was no doubt both agreeable and instructive; but it has little to say to the world at large. Perhaps, however, the British public have not been so pestered as the American public with educational journals and summer conventions. The papers on Goethe, five in number, are fragments of a more extended study not yet completed. Though this study may not contain much that is new to persevering sifters of the huge heaps of material which idolatrous industry is constantly piling up in Germany, English readers will look for its completion with expectancy. It is interesting to see that the author has arrived at a view of 'Wilhelm Meister' which, as he himself points out, coincides with Hettner's, though it was not derived from the German critic. "One can hardly hope to say a new word in studying a foreign literature," says Mr. Dowden modestly; "it is perhaps enough if one says a true word."

BOOKS OF THE WEEK.

Aidé, Hamilton. Elizabeth's Pretenders. Putnams. 50 cents.
Alden, Henry M. A Study of Death. Harpers.
Alexander, Rev. J. M. The Islands of the Pacific: A Compendious Sketch of Missions in the Pacific. American Tract Society. $2.
Baird, Prof. H. M. The Huguenots and the Revocation of the Edict of Nantes. 2 vols. Scribners. $7.50.
Baldwin, James. A Guide to Systematic Readings in the Encyclopædia Britannica. Chicago: Werner Co.
Beatty, Gen. John. An Answer to "Coin." Columbus, O.: S. K. Donovan. 25 cents.
Bella, Edward. A Collection of Posters. London: Royal Aquarium; New York: Brentanos. 50 cents.
Benecke, Ida. Heine on Shakspere: A Translation of his Notes on Shakspere's Heroines. London: A. Constable & Co.
Bennett, Prof. C. E. Appendix to Bennett's Latin Grammar. Boston: Allyn & Bacon. 80 cents.
Bernard, V. F. Le Français Idiomatique. W. R. Jenkins. 50 cents.
Broughton, Rhoda. Scylla or Charybdis? Appletons. $1.00.
Caine, Hall. The Bondman. M. J. Ivers & Co. 25 cents.
Carus, Dr. Paul. Primer of Philosophy. Chicago: Open Court Publishing Co. 25 cents.
Chancellor, E. B. Literary Types: Being Essays in Criticism. London: Sonnenschein; New York: Macmillan. $1.50.

BY
FRANCIS WALKER, PH.D.,
Some Time University Fellow in Political Economy.
8vo, paper cover, 75 cents *net.*

MACMILLAN & CO., 66 Fifth Ave., N.Y.

IN SOUTHERN CALIFORNIA.

TO RENT—On foot-hills, 3 miles from Redlands—Well-furnished house of 8 bedrooms, bathroom, dining-room, kitchen, pantry, hall, parlor, and study. Large grounds, containing orange, palm, and big shade-trees, pomegranates, and roses. Brook flows through place. Stable and laundry. Apply to
JUDSON & HAVER,
Redlands, California.

FOR SALE OR TO RENT.

Mrs. Head's School for Young Ladies and little Gir's, 104 West Chelten Avenue, Germantown, Philadelphia, Pa. Accommodation for 125 pupils. Large assembly-room and a gymnasium.

YALE MIXTURE.

The choicest tobacco made, and pre-eminently a gentleman's smoke.

Marburg Bros., The American Tobacco Co., Successor, Baltimore, Md.

Delightful Stories
BY
Kate Douglas Wiggin,
Clara Louise Burnham,
Eliza Orne White,
Bret Harte.

MESSRS. HOUGHTON, MIFFLIN & COMPANY invite attention to the following

NEW BOOKS.

THE VILLAGE WATCH-TOWER.

By Mrs. WIGGIN, author of "The Birds' Christmas Carol," etc. 16mo, $1.00.

Several short stories, containing admirable studies of New England Village life—bright, witty, extremely readable.

THE WISE WOMAN.

By Mrs. BURNHAM, author of "Sweet Clover," "Miss Bagg's Secretary," etc. 16mo, $1.25.

The aim of this charming story is to do away with artificial conventionalities and promote a more sincere social life.

THE COMING OF THEODORA.

By ELIZA ORNE WHITE, author of "Winterborough," "When Molly was Six." 16mo, $1.25.

A novel that may well cause discussion. The scene is a semi-rural neighborhood, the characters true to life, the incidents natural, and the narrative fresh and attractive.

CLARENCE.

By BRET HARTE. 16mo, $1.25.

A story of the War for the Union, and President Lincoln figures in it.

THE SONG OF HIAWATHA.

A Popular Holiday Edition of Longfellow's unique poem, with a fine Portrait, and 22 full-page Illustrations by FREDERIC REMINGTON. Crown 8vo, bound in very attractive style. $2.00.

JOHN KNOX.

Another excellent volume in the series of British Leaders of Religion. By FLORENCE A. MCCUNN. With a Portrait. 12mo, $1.00.

RIVERSIDE POETS.

A specially attractive issue of the Riverside Edition of the Poetical Works of
OLIVER WENDELL HOLMES, in three volumes;
H. W. LONGFELLOW, in six volumes;
J. R LOWELL, in four volumes;
J. G. WHITTIER, in four volumes.

Handsomely bound in cloth, full gilt. *Sold only in sets* (of each poet, in a neat cloth box), at $2.00 a volume. Particularly desirable for holiday gifts.

Sold by Booksellers. Sent, postpaid, by
HOUGHTON, MIFFLIN & CO., Boston.
11 East 17th Street, New York.

The Nation.

NEW YORK, THURSDAY, OCTOBER 3, 1895.

The Week.

Ex-President Harrison has the reputation of being an astute politician, and so has Gen. New, his "manager." The latter's authorized interview, therefore, in which he asserts, in the name of his chief, that Mr. Harrison is "not a candidate," though it is "absurd to say that he has withdrawn," but that he would advise against the nomination of either Reed or McKinley, was doubtless well-considered and is to be regarded as an important political move. It means that there is to be open warfare between the three from this time on. In this sense Gen. New would probably regard it as an "aggressive" stroke. No more secret intriguing and subsoiling, no more McKinley embassies to Indiana to say that, of course, Harrison will have the vote of his own State on the first ballot, but, when the break-up comes, why, just look over the border. It may be doubted, however, if Messrs. Reed and McKinley will be more pained than pleased by the Harrison announcement that they are not to be his residuary legatees. If his political estate is to come into the Surrogate's Court at all, that is the main thing. They will be willing to take their chances of getting a good slice of it, with or without the good wishes or consent of the testator. Why Harrison should dislike Reed is intelligible on the ground of giving as good as he gets from that quarter. But his stroke at McKinley seems scarcely magnanimous. He effusively signed the McKinley bill, and made an unexampled collection of clippings from the obscure English press bearing on that wonder of statesmanship, and worked them off in his letter of acceptance and final message to Congress. It shows, at any rate, that Gen. Harrison's courage is rising. Perhaps Gen. New will yet tell us what his man, who is not a candidate, thinks about free silver.

The financial plank in the Syracuse Democratic platform marks a step in advance toward the only rational settlement of the currency question. The corresponding plank of the Saratoga Republican platform was excellent also, although not so advanced as the other. We presume that a majority, indeed a large majority, of both parties in the State of New York are in favor of retiring the greenbacks and relieving the Government of all responsibility for the ultimate gold reserve of the country, yet the Democrats have been the first to say so, and they are entitled to credit for so much. The plank is in these words:

"(14.) Sound money; gold and silver the only legal tenders; no currency inconvertible with coin; gradual retirement and extinction of the greenback currency; no free and unlimited coinage of silver."

This plank is not unlikely to foreshadow the policy of the Administration at the coming session of Congress, but upon that point we have no information. No policy could be more timely or more certain to win in the long run. If the Republicans should put themselves in opposition to it, they would fight a losing battle. Enthusiasm for the greenback as a veteran of the war and a relic of patriotism has nearly worn out. The public have had a good deal of light on this subject in the past two years, and are now prepared to listen to purely financial arguments. Whenever the time comes that the question is to be decided on financial grounds exclusively, the greenback will be sent, in one way or another, to its final resting-place, and the country will once more have peace. Of course there will be a demand for some other paper circulating-medium to take the place of the greenback, but when public attention is once seriously fixed upon this problem, the necessary means will be found.

Mr. Perry Belmont's speech at the Syracuse convention was acute in its analysis of the financial troubles which beset the country and of their origin and cure. They are all traceable to the greenback. They are the direct progeny of that mischievous and mistaken "war measure." This was a Republican measure, as Mr. Belmont points out, but no political capital can be made out of that circumstance adverse to the party, because all war measures, however mistaken they may have been, are now held to be sacred. When we come to later times, we shall find that the Democrats have no call to boast over their opponents in devotion to sound money or in the display of wisdom in discerning what sound money consists of. Here Mr. Belmont's speech is open to criticism. He tries to segregate the Democrats of New York for the purposes of praise, ignoring the party in other States *pro tempore*. It is true that the party has had a good record in New York in this respect. The names of Seymour, Tilden, Manning, Belmont, and Cleveland (easily chief) are not to be surpassed, perhaps not equalled, in the Republican party in this State or in any other. It is true, nevertheless, and will be accepted as such by most people without proof, that the Republican party as a whole has been sounder than the Democratic party as a whole. It is susceptible of proof, too, that the most mischievous errors the Republican party has committed since the war have been those to which they were driven by the Democrats—by the Democratic desire and purpose to do something worse. This is especially true of the Sherman act of 1890. The Democrats wanted to pass an act for the free coinage of silver, and did pass it through the Senate. The Republicans passed the Sherman act as a lesser evil. It is true that the Republican party was then in power and was chargeable with the mischievous consequences of that act. Yet when we "take the temperature" of the two parties at that time, we certainly do not find any occasion for boasting that the Democrats were then the sounder of the two.

Senator Sherman made an *ad captandum* speech at Springfield, Ohio, the other day, which furnishes a mark for Mr. Belmont to shoot at, and, in fact, he hits it pretty near the centre. Mr. Sherman said that "the Republican party during thirty years of power furnished for the first time a truly American currency." What is meant by a truly American currency? If it is any advantage to a currency to be truly American, as Mr. Sherman implies, that advantage was shared by the Continental currency, for nothing could be more truly American than that was. No foreign nation had anything to do with it. They would not even accept it in payment for goods. The only essential difference between Continental money and greenbacks was that the latter were eventually made equal to gold. But gold is not peculiarly American. There is much testimony to be had, from the followers of Bland and from the readers of 'Coin's Financial School,' that gold is foreign. Therefore the specie-redemption act, which Mr. Sherman had something to do with in 1874-'75, could not have been the thing which he had in mind when he told the people at Springfield that the Republican party had for thirty years furnished, *for the first time*, a truly American currency. What did he have in mind? The Republican party has furnished during that interval several different kinds of money, such as greenbacks, silver dollars, silver certificates, Treasury notes, and national bank-notes. Are all of these equally American? If so, why have we discontinued the supply of that portion of them consisting of silver or resting upon it? Is not silver sufficiently American?

Senator Hill is said by his admirers to be in a somewhat perturbed, if not dejected, frame of mind over the political outlook in this State. He is opposed to having the committee headquarters established in this city, preferring Albany as both a cheaper place and one more remote from local quarrels which disturb party serenity. We should suppose, after his experience in "personally conducting" the last two campaigns,

that of Maynard and his own, that he would enter upon a third with some gloom. He made a tremendous fight for Maynard in 1893, and lost the State by 101,000. He made another tremendous fight for himself in 1894, and lost the State by 156,000. In both these campaigns he struck the "keynote" in a speech which his admirers declared to be "masterly," but it was clear from the way in which they voted subsequently that the people of the State had not taken stock in it. He has sounded the "keynote" again this year, but there are no signs that the people have paid much heed to it. The simple fact is that they are tired of Mr. Hill. They have had ten or eleven years of personal experience with his kind of politics, and they do not care for any more.

New Jersey citizens are going about with the bewildered air befitting men who are confronted with two first-class nominees for Governor. The thing is so unprecedented that their special wonder is pardonable. Shut up, as they have usually been, to a desperate choice of evils, it will take them some weeks yet to get accustomed to the idea that, whether it be Mr. Griggs or Chancellor McGill who is to be given the governorship next month, the interests of the State will be in the keeping of an intelligent and firm and incorruptible man. Such nominations draw the fangs of partisanship. No respectable Democrat has a word to say against Mr. Griggs, or doubts that he would make an able and honest Governor; no respectable Republican has aught but praise for Chancellor McGill personally. The latter's bearing has certainly been admirable. He has attended strictly to the business of his court, and will continue to do so, saying that he must give all his time to the important cases pending before him. He can dispose of them all by January 1 if he is elected Governor, and if he is not, he says it will not matter. The only condition he is known to have insisted upon as indispensable if he was to take the nomination was the retirement of the discredited chairman of the Democratic State committee; and accordingly that functionary withdrew from the scene on Thursday, with much muttering and cursing. This speaks well for the Chancellor's boldness and determination, and argues, as indeed his whole career and character argue, that the shattered remains of the old Democratic ring will have nothing to hope from him as Governor.

Rhode Island had an election last week —or, at least, it went through the forms of one, for so few people took any interest in the matter at issue that the vote was absurdly small. The question to be decided was whether the Constitution should be so amended as to substitute biennial elections for the annual system, but unfortunately it was complicated with provisions regarding the composition of the Senate and the method of electing Representatives that were objectionable to many who favored the idea of fewer elections. A three-fifths vote is required in Rhode Island to carry an amendment to the Constitution, and the proposed change fell far short of a majority, while the total poll was only 17,696, as compared with over 43,700 cast for Governor last April, and over 54,800 at the State election in 1894. In addition to the opposition caused by the subsidiary features of the amendment, there was a lack of interest in the subject, and also, according to the Providence *Journal*, a general "unwillingness to give up every other year the opportunities to make a dollar, honestly or otherwise, on election day"; this last form of opposition being most conspicuous in the distinctively "boodle" towns of the back country. The force of tradition in favor of frequent elections is also perhaps stronger in Rhode Island than anywhere else, as the original custom in that State made them only six months apart.

For some time past, the same spirit that made Knownothingism sweep like a flood across Massachusetts forty years ago has been reviving in that State under the guise of the A. P. A. movement, and public men were notified that anybody who dared to stand up in the Republican party against the introduction of religious proscription into our politics should be punished. A few weeks ago the golden jubilee of a highly respected Roman Catholic archbishop took place in Boston. Governor Greenhalge was invited to attend as the representative of the State, and he declined to evade the issue by the convenient plea of a previous engagement or any other such device. Bringing, as he said, the "greetings of the Commonwealth," he paid official and personal tribute to the Archbishop, "as a man of God and a citizen of Massachusetts"; declared that "we have been growing together," and that "a spirit of liberalism has brightened every sect, every denomination, every party, every race"; and added that "the fifty years of godly, righteous, and sober life which you have met to recognize, is something which comes home even to the narrowest bigotry and to the narrowest mind"—a rebuke to religious spite which provoked "tremendous applause" from his Catholic audience and aroused the intense indignation of the Protestant "bigots" in the Governor's own party, from which the A. P. A. organization draws its chief strength.

Governor Greenhalge is now serving his second term. Custom in Massachusetts gives a satisfactory executive three terms. If the incumbent had remained a "regular" of the type of "Rising Sun Stove Polish" Morse, for example, nobody would have thought of opposing his renomination this year. But having turned out so much of a Mugwump, the baser elements in the party resolved to secure his defeat. The disappointed machine politicians whose bill to extend the policy of State control of municipal police he vetoed in the cases of Holyoke and Woburn; the spoilsmen who could not forgive him even though his veto of the "veterans' preference bill" had not been sustained in the Legislature; the bigots who cannot bear the idea of treating a Catholic as a citizen of equal rights with a Protestant, joined hands to elect delegates in the Republican caucuses who would insist upon the nomination of some other man. The caucuses were held last week, and the result was most encouraging to all believers in decent politics. The combination against the Governor utterly failed, and his renomination by a large majority in this week's convention is assured. A great triumph for independence is thus achieved, the more striking that it is won for a man who has risen to this higher plane from the lower level of hide-bound partisanship on which he began his public career.

A striking illustration of the carelessness with which legislators do their work is afforded by the present situation in Texas. Some years ago that State permitted prize-fighting upon payment of a $500 tax for every encounter. Later a law was passed prohibiting such fights, and imposing heavy penalties for a violation of the statute. Then a revision of both the civil and the penal codes was made by the last Legislature, this work being completed last April. When the projected fight at Dallas a few weeks hence was announced, the discovery was made that the new civil code contains the old provision legalizing prize-fights upon payment of a tax, while the new criminal code includes the section prohibiting and punishing them. This raised the question as to which of the conflicting laws should prevail over the other, and this in turn the question as to which became law the earlier, the issue being complicated by the fact that neither code received the Governor's approval, and that the one which got through the Legislature first happened to be presented to the executive last. So inextricable was the tangle that there seemed no way out of it except by calling an extra session of the Legislature.

The proposition to insert in the new Constitution of South Carolina a restriction of office-holding to white men recalls the now generally forgotten fact that the fifteenth amendment to the federal Constitution, as originally reported to the Senate, included the right "to hold office," as well as "to vote," as one which "shall not be denied or abridged by the United States or any State on account of race, color or previous condition of servitude," but that the office-holding clause was stricken out before it finally got through Congress. Senator Howard of Michigan, a leading Re-

publican, opposed the suggestion as by a plain implication giving to Congress authority to fix and establish religious tests for office. He held that the right to vote did not necessarily cover the right to hold office, and that each State ought to have power to set up such restrictions upon the latter as it thought wise. As this office-holding clause was originally reported and after full discussion stricken out, it may be argued that a State may make a particular color or nationality a bar to office-holding without violating the federal Constitution; but even the Bourbons of South Carolina see so clearly the injustice and impolicy of such a course that they voted down the proposition to exclude the black man from eligibility to office.

There seems to have been a lack of clear legal proof against the Cubans tried in Wilmington, Del., for organizing a military expedition against Spain in violation of our laws. Their acquittal was therefore justified, though it is plain from the spirit in which the case was conducted—the temper of the press and the public, the address of counsel, the wild hurrahs in the court and on the streets with which the verdict was received—that an acquittal would equally have followed much stronger evidence. Our solemn national obligation to enforce the neutrality laws and live up to our treaty with Spain would have, we fear, little weight with a jury in many parts of this country. In this particular case there does not appear to have been a miscarriage of justice; but one might easily result in another trial of the kind, which would be a national shame. One can scarcely imagine a hit-or-miss jury sensitive on a point of national honor. Happily, the authorities at Washington are acting as if they really believed a government was as much bound as a gentleman to keep plighted faith, and we are sure they will not relax their vigilance in preventing us from having an *Alabama* case thrown back in our faces.

The law of nations had a bad time of it in Chicago Monday night, at the meeting to free Cuba by resolution. Two speakers openly "defied" it, and a Congressman, the Hon. W. E. Mason, "wanted an immediate repeal of that law, which was only intended to prevent one nation from interfering while another was committing depredations of some kind." He will doubtless introduce a bill for that purpose early in the next session, and will include in it, we hope, while he is about it, provisions for the repeal of international exchange of currency and mails, payment of international debts, extradition of criminals, foreign travel, and all the other odious and insulting relations which foreigners would thrust upon this proud and free people. Mr. Mason is only comic; but what about the leading Chicago clergymen who lent their presence and voices to what was, in substance, a meeting to encourage international lawlessness? Had they any trustworthy evidence upon which to base their charges of "unspeakable cruelty" against the Spanish troops in Cuba? We venture to say not a scintilla, except the exaggerated reports of lying newspapers. How do they know that the course of the Cubans is "more humane"? The Cubans themselves boast of the ravages and desolation which they are making with torch and dynamite. When religious leaders are thus violent in their ignorance, when a Protestant bishop declares his willingness to aid in "raising an army to help these people win their independence," we get some idea of what the wild passions of the mob would bring on us if we had a great navy eager to execute their behests.

Free Trade, we regret to say, has again been guilty of "astounding frauds," "amazing exaggerations," and "absurd inflation." The way of it was this: In a newspaper identified with neither Free Trade nor accuracy, it was asserted on Labor Day (note the peculiar malevolence of this) that the wages of 420,000 men had been increased under the operation of the Wilson tariff. But the *Tribune* was able to see, "almost at the first glance," that the lists given were "a body of most glaring frauds," and on Monday, after keeping up its glances for a month, proceeded to "strip" the record of the year of the "frauds and falsehoods" with which Free Traders have tried to cover it. Truly it is a painful, a most humiliating exposure. You dare assert that the wages of 420,000 men have been increased, do you? Well, what will you say, where will you hide, when you learn from the *Tribune* that the real number is only a beggarly 336,840? Democratic platforms are trying to deceive the people about advancing wages. But mark how the *Tribune's* plain tale shall put them down. In March, it says, 15,000 men got increased wages, in April 77,490 (but after Congress had adjourned, "and not before"—put that down), in July 77,000, and "since less than 40,000 per month." Free Trade will scarcely survive this. The wages of only 336,840 men increased, and the increase now going on at the rate of less than 40,000 per month!

A Treasury surplus of $3,000,000 for September may be a good thing for the country, but it has had an alarming effect on the expert whom the *Tribune* keeps at Washington to expose our wretched tariff law and the more wretched officials who administer it. The vision of free-traders "exulting" over this surplus has been too much for the poor head of this unfortunate gentleman, and he fills the air with shrieks about "a sham," "a false pretence," "an attempt to deceive the country," "a forced balance." His only comfort is that there will be a tremendous deficit this month, and a still bigger one in November. For the sake of this pitiable victim of the mania for protection statistics, all good Christians will hope there may be. One more surplus would finish him. Meanwhile, the prosaic business world, with a cruel indifference to exulting free-traders or ululating protectionists, will reckon the surplus as simply one of many signs of improving business. In their heart of hearts, Republicans themselves, except the McKinley faction, are devoutly praying that the existing tariff may produce sufficient revenue. If it does not, they will have to devise some new taxes; somebody will have to pay those taxes; in that way votes may be lost, and how then can the country be saved from the horrors of Democratic rule?

The anthropological section of the British Association had a lively discussion at Ipswich on the question of "Interference with the Civilization of Other Races." Prof. Flinders Petrie led off, and only those who had had actual experience in uncivilized countries took part in the debate. It was generally agreed that the complacent Briton, the German, the Frenchman, who had undertaken to make Matabeles, Samoans, and Hovas altogether such as they are themselves, in dress, manners, and morals, had shown but a dim idea of the real problem before them. Even granting the best intentions on the part of European colonists and administrators, their ignorance, their cool assumption that their own civilization must appear as charming to everybody else as it does to themselves, lead continually to outrages on native feeling, to exasperation, often to revolt. For example, as Prof. Haddon remarked, great evil has been wrought in savage lands by the persistence of excellent Englishmen in "confusing clothing with morality." One traveller declared that the self-denying and energetic missionaries in Australia "neutralized their efforts by insisting upon the natives wearing clothes," in a country where the amount of clothes had absolutely no relation to the amount of morality. This is but an instance of the harm wrought by the lack of a sympathetic imagination, which is required to put even the best-intentioned administrator in a position to do anything of permanent value for the natives. They do not want to be civilized at all, in the bourgeois British sense; the manners of the superior race seem to them shockingly immoral; they are able to see few blessings of condescending European rule except the loss of their property, increased taxes, and decimated numbers. This is a painful but necessary truth for those to consider, in this country as well as in Europe, who are so benevolently bent on forcing superior laws and morals upon feeble races. They can easily make themselves hateful and horrifying, while the good they aim at is rendered very problematical.

READY FOR ACTION.

THE two "great parties" in this State—a somewhat cumbrous way of designating Dave Hill and Tom Platt, which we observe because it is the usual form—have now "cleared the deck for action," and an opportunity is afforded for comparing the principles for which they stand in the approaching campaign. As everybody knows, there was really only one issue which was pressing for solution when the two party conventions met, namely, that of the excise laws. Both bodies were asked to say where they stand upon this, and it was thought possible that both might meet it in the only really intelligent and rational way, by favoring the submission of it to the people of each city, town, or village for solution. This is the principle of home rule or local option. The Republicans met it by saying, under compulsion, that "we favor the maintenance of the Sunday laws in the interests of labor and morality." There is no local option in that, but a distinct refusal to declare for local option. If the declaration means anything, it means the maintenance of the present excise laws unchanged, and their rigorous enforcement.

The Democrats regarded this Republican resolution first as a "dodge," and second as a declaration in favor of a "Puritanical Sunday." They were sure it was a defiance of the foreign-born vote, and they were voluble in promises of a manly declaration in favor of home rule and local option when their convention should meet. They put forth their platform on September 24, and the excise plank in it is as far ahead of the Republican plank, considered as a "dodge," as the mind of the political man could conceive. It favors "enforcement of all laws," a "proper observation of a day of rest, and an orderly Sunday," "modification or repeal of laws unsupported by public opinion"; opposes flatly "blue laws," and calls fearlessly for the "recognition of the fundamental principle of freedom of conscience." Having thus approached cautiously the question of the hour, it declares for "home rule in excise as well as in other matters," but qualifies that instantly by adding, "within reasonable limitations established to protect the interests of temperance and morality." No harm done thus far. The Republican declaration in favor of the "interests of labor and morality" is thus fairly and neatly offset with the "interests of temperance and morality." This achievement so encouraged the platform-builders that they went ahead boldly and finished this plank by declaring in favor of "an amendment of the excise and other laws by the Legislature of the State which shall permit each municipality expressing its sentiments by a popular vote to determine, within such proper legislative restrictions as shall be required by the interests of the entire State, what may best suit its special necessities and conditions." Done into plain English that means: "We favor just so much local option as the people of the whole State, acting through the Legislature, are willing to grant." It pledges the party to no action in the Legislature which will offend the sensibilities of the country voters.

The simple truth is, that both conventions were afraid to favor local option through fear of the voters outside the large cities. No sooner had the Republicans adopted their plank in convention than the leaders of their party in the cities began to explain that it had no application except in the country districts, that in the cities the party was in favor of local option. The Democrats have tried to gain a point on the Republicans by drawing a resolution which would put them on the Sunday-observance side in the country and on the local-option side in the city: and to persons below the ordinary level of intelligence their hodge-podge may be read in those two ways, according to personal taste and bias. It is delightful to read after it a "scathing" denunciation of the Republicans for "hypocrisy and dishonesty" on the excise issue designed to "deceive the people." That is *the* gem of the platform, next to the rousing call for the "intelligent and liberal promotion of agriculture."

What the two conventions have done, in fact, is to eliminate the excise issue from the State canvass and relegate it to the legislative districts. This is where it really belongs, and in the separate districts it can be fought out most satisfactorily. In the so-called rural districts there will be no difference of opinion on the subject between the two parties. All the candidates will be against local option, as they are uniformly against all home rule for cities. In the city districts both parties promise now to be in favor of local option. The only course for voters to follow who wish for more liberal laws, or for the granting of local option, is to vote for those candidates who can be most surely depended upon to keep their pledges. It is a safe rule to follow that no Tammany candidate's pledges are worth anything on this or any other issue. Whatever change there may be in future in the excise laws, nothing of the desirable kind will ever come through Tammany aid. The present laws are of Tammany origin, and they represent Tammany desires in this matter—that is to say, they furnish a basis for blackmail and corruption. It should be borne in mind also that even if Tammany were to succeed in the next election, it would be powerless either to change the excise laws or to mitigate the rigor of their enforcement, for Gov. Morton will remain in office till January, 1897, and the present Police Board is not likely to go out of office or to change its policy before the expiration of Mayor Strong's term on January 1, 1898. What good can the dissatisfied German or other voters accomplish for themselves, therefore, by voting with Tammany this year? Their only hope of accomplishing anything in the way of relief is through the election to the Legislature of men of their way of thinking.

As a general principle, it is better to vote for a Republican than for a Democratic legislative candidate, unless the latter be a man who is squarely pledged to favor municipal and other reform measures, and whose character is such as to give assurance of his keeping his promises. It is always possible to force a Republican member who is not inclined to do his duty to yield to the force of public opinion and to favor reform measures, but a Tammany member is invariably for Tammany, and a Democratic member is rarely or never found voting with reformers. Not a single Democratic member of either house last year voted in favor of one of the reform measures for this city. From the beginning to the end of the session the entire Democratic membership stood side by side with the Platt men against reform measures of all kinds. This is the deadly record against them, and it must be kept in mind by every voter who wishes to secure desirable legislation, on excise or any other subject, at Albany next winter.

JINGO MORALITY.

THERE is a Jingoism which is as ignorant as a horse, and which snorts and paws and falls into panic fear like that noble animal. Ex-Congressman Finerty gave a fine example of this at the convention of Irish societies in Chicago last week. He professed a fine disdain for "neutrality laws": what were they as against a nation's freedom? He respected American laws as much as any man, but he would "hail the superb vision of a hundred thousand armed men breaking the neutrality laws to liberate Cuba, or of a half million breaking them with England in behalf of Ireland's independence." Jingoism of this comic, ranting description we laugh at, as most people did at ex-Gov. Campbell's display as Jingo low comedian in Tammany Hall on July 4. When Finerty wants so passionately to shed his blood for Cuba, or Campbell his for Venezuela, the American people are not so easily gulled as to take them literally. "What office is he after now?" is the common and sufficient comment.

But there is a Jingoism which comes to us in quite another guise. It is clad in the soft raiment of an attractive literary style and wears an appearance of high philosophy. In fine Hegelian phrases it talks about a nation coming to self-consciousness, suddenly awaking to the fact that it has international duties as well as international rights, and preparing to go forth with lofty benevolence, like a knight of the Round Table, to redress wrongs and establish justice the world over. Capt. Mahan is, of course, the leading exponent

of this refined Jingoism, and his article in the October *Harper's*, on "The Future in relation to American Naval Power," exhibits his cast of mind completely. He appears to be so amiable and cultivated, and has such a delightful way of running off under cover of a lot of vague phrases just when you think he really means to tell you what the danger is, whom we have got to fight, and why we must have no end of big ships and guns, that it is hard to take offence at him. Yet the moral drift of his doctrine crops out here and there in spite of himself, and it must be said that his international morality, as thus revealed, is substantially the same thing as that of Finerty.

Capt. Mahan explicitly denies that there is any moral quality whatever about an act of international aggression, provided the aggression be undertaken by a superior race or system against an inferior race or system. His chosen example is the British occupation of Egypt. To discuss the morality of this, he says, is "as little to the point as the morality of an earthquake." It was for the benefit of the world at large and of the people of Egypt—no matter what the latter might think about it, or how they would have voted about it—and that is enough. Tacitly, he makes the same doctrine apply to the great expansion of the foreign power of the United States, which he foresees and for which he wants a navy "developed in proportion to the reasonable possibilities of the political future." What those possibilities are he nowhere says, and he gives the reader no chance of judging whether they are reasonable or not. But he speaks again and again of the development of the nation and of national sentiment as a "natural force," moving on to its desired end, unconscious and unmoral. What he says of British domination over Egypt, Capt. Mahan would evidently and logically be ready to say of American domination over any inferior power—that it has no more to do with morality than an earthquake.

Of course this really means the glorification of brute force. The earthquake view of international relations does away at once with all questions of law and justice and humanity, and puts everything frankly on the basis of armor and guns. Finerty could ask no more. No one could accuse Capt. Mahan of intending this, yet he must "follow the argument." He speaks approvingly of international interference with Turkey on account of the Armenian atrocities. But has not the Sultan a complete defence, according to Capt. Mahan's doctrine? Is he not an earthquake, too? Are not the Turks going blindly ahead in Armenia as a "natural force," and is anybody likely to be foolish enough to discuss the morality of a law of nature? Of course, the powers tell the Sultan that he is no earthquake at all, or, if he is, that they will bring to bear upon him a bigger one which will shake him into the Bosphorus. But if there is no question of morality involved, the argument and the action are simply so much brute force; and that, we say, is what Capt. Mahan's doctrine logically comes to.

Another inadvertent revelation of the real implications of his views is given where he is dwelling on the fact that "the United States will never seek war except for the defence of her rights, her obligations, or her necessary interests." There is a fine ambiguity about the final phrase, but let that pass. No one can suspect that Capt. Mahan means to do anything in public or private relations that he does not consider absolutely just. But note the way the necessity of arguing for a big navy clouds his mind when he writes of some supposed international difficulty: "But the moral force of our contention might conceivably be weakened, in the view of an opponent, by attendant circumstances, *in which case our physical power to support it should be open to no doubt.*" That is to say, we must always have morality and sweet reasonableness on our side, must have all our quarrels just, must have all the precedents and international law in our favor, but must be prepared to lick the other fellow anyhow, if he is so thick-headed and obstinate as to insist that morals and justice and law are on *his* side.

This earthquake and physical-power doctrine is a most dangerous one for any time or people, but is peculiarly dangerous in this country at this time. The politicians and the mob will be only too thankful to be furnished a high-sounding theory as a justification for their ignorant and brutal proposals of foreign aggression and conquest. They will not be slow, either, in extending and improving the theory. They will take a less roundabout course than Capt. Mahan does to the final argument of physical power. If it comes to that in the end, what is the use of bothering about all these preliminaries of right and law? They will be willing to call themselves an earthquake or a cyclone, if only their devastating propensities can be freely gratified without any question of morals coming in. With so many signs of relaxed moral fibre about us, in public and in private life, it is no time to preach the gospel of force, even when the preacher is so attractive a man and writer as Capt. Mahan.

MISSIONS—NEW STYLE.

It was some years ago that *Punch* made its joke: "Missions, Old Style, Henry Martyn; Missions, New Style, Martini-Henry." There was then only just spice enough of truth in the fling to make it thoroughly laughable; now, we fear, the jest borders hard on the unpardonable kind which contains more truth than fun. Certainly there have been of late some extraordinary developments and utterances in connection with the relation of missions to foreign affairs, which make it seem as if powder were to usurp the old place of personality in evangelizing the heathen.

The Chinese massacres and riotings, in particular, have called forth public expressions from missionaries which are models of imprudence, to say the least, and which give one a curious idea of the motives and methods of modern missions. The London papers have printed missionary letters by the column, in which sentiments that are little short of bloodthirsty have occasionally been expressed. One Scotch missionary, for example, affirmed, as if it were the obvious Christian thing to say, that hanging was too good for the Chinese officials. The implication was, apparently, that he would like to see them drawn and quartered, after all their bones had been crushed. But nothing of the kind has fallen under our eye so truly amazing as the letter of an American missionary, the Rev. Dr. Fulton, printed in last week's *Evangelist* with editorial approval. This gentleman, whose divine commission enjoins him to be as wise as a serpent and as harmless as a dove, reviles the Chinese Government in unmeasured terms. He says of its officers, sweepingly, that they are "as despicable a set of hypocrites as ever drew plunder from an oppressed people." It would be a "righteous demand," he declares, if England and America were to insist that foreigners have "unrestricted right of residence in every foot of Chinese territory," and that the local authorities be "held personally responsible for the life of every foreigner in their jurisdiction." As it is, the heads of a few criminals and ruffians are "gladly granted by China" to appease the missionary desire for vengeance; but, says this meek and lowly missionary, "we must strike at the root, not the branch"—that is, it would seem, have the heads of the officials themselves.

Next to its unconscious repudiation of Christianity, what is most startling about this is its disregard of international courtesy and obligations and its incredible recklessness. Dr. Fulton is aware of the fact, but seems to be only the more enraged thereby, that he has no right whatever to American protection outside the "treaty ports." He goes—the Chinese Government warns him that he goes, the American minister warns him that he goes—into the interior at his own risk. No rights are guaranteed him by China, no protection by his own Government. He takes his life and his property in his own hands. Of course, a missionary has a perfect right to do this. The old missionaries to China did it, and it was their glory. But the missionary who does it must be prepared to face the consequences. Is Dr. Fulton? Hear what he says, remembering how the first Christian missionaries reckoned death among the risks of their divine work: "We are prepared for scoffing and insult and hardship, but when they see our work progressing, and in pure hatred begin to burn our homes and

murder our families, *we have reached the last limit and appeal unto Cæsar.*"

The imprudence of such public utterances by missionaries is astounding. These violent attacks on the powers that be in China are sure to be reported in that country. Is human nature, is official nature, so different in that land from everywhere else that railing at the authorities is the best way to win their favor and protection; that calling, as the *Evangelist* does, the Chinese who oppose missions "wretches, half-civilized and wholly barbarian," is the surest way to predispose them to the Gospel? Imagine a handful of Buddhist missionaries in our own country reviling the Government, calling for vengeance on their opponents, demanding foreign intervention on their behalf that they might ram their doctrines down our throats at the point of the bayonet, and some idea may be had of the way our performances must strike the Chinese.

We make haste to say that we do not for a moment suppose that Dr. Fulton and his fellow-missionaries are at all conscious of the strange appearance they present. Their motives are doubtless as unimpeachable as their zeal is consuming. Nor is their appeal to force unnatural, in view of the great figure missionary complications have cut for years in Oriental diplomacy. In Turkey, as in Egypt and Persia and China, the chief concern of our ministers has long been with the missionaries, their complaints, their privileges, their rights. It is not strange, then, that the missionaries have come to think American diplomacy and gunboats exist for their special benefit, nor that, in their appeals to them, they have sometimes taken on too imperious and truculent a tone for men in their business and with their professions. No objection can be made to such appeals. A missionary is surely as much entitled to protection as a trader. Only, if it is a question of law and treaty, the missionary must be as careful to be technically within his rights as the trader, before pushing his claim. And there ought always to be some one to warn an impetuous missionary like Dr. Fulton against rushing into print in his headlong fashion. Unwittingly, of course, but none the less surely, he gives the impression of a furious animal robbed of its prey. He has been driven from the interior. A mob stands between him and the millions of Chinamen he is burning to convert. What is his country good for if it cannot wade through blood to put him back there again, and stand by with fixed bayonets while he preaches peace on earth and good will to men? Nothing like this has been seen since Frederick I. of Prussia chased a frightened subject through the streets of Potsdam, and gave the fellow a sound caning, while he cried out, "Confound you, I want you to love me!" We very much doubt whether human nature, unregenerate or sanctified, Chinese, Turkish, or American, can stand this treatment, whether from monarch or missionary.

THE REFORM OF THE HOUSE OF LORDS.

An announcement in the London *Daily Chronicle*, followed by a speech from Lord Londonderry of the same tenor and effect, is producing in England the impression that the Tories are thinking of reforming the House of Lords. This is an excellent thing to talk about, but the probabilities are that it will never go further than talk. In the first place Lord Salisbury declared formally before and after the election against the Liberal desire to make "constitutional changes," and announced that his Government would occupy itself mainly with improving the condition of poor people. In the next place, the House of Lords, just as it is, is held in Tory circles to have recently rendered very important service to the country in restraining and upsetting Gladstone, and it is undoubtedly to-day popular in such circles. One of Mr. Balfour's ablest speeches during the canvass at Manchester was devoted in part to showing the very great success of the House of Lords as a second chamber, and in fact its superiority to any other chamber that ever existed. Moreover, Lord Salisbury frequently asked the Liberals before the election how they were going to reform the House of Lords without its consent, and he never got any distinct answer; and he put the question in such a way as to show that he could not answer it himself.

Then the Liberal demand for reform was fairly laid before the country at the last election without eliciting the smallest response. In fact, this particular article was the most dismal failure in the whole Liberal creed. Nor did the Liberals themselves frame any plan of reform. Half-a-dozen plans were hinted at or discussed in the magazines, but not one met with any attention or popular acceptance. The plan now talked of—the election of the legislating peers by the others, as the Scotch and Irish are now elected—was, of course, the most obvious and most talked of. Then it was proposed to revive the old royal prerogative of summoning to each Parliament such peers only as the Crown might select, and there were some vague hints of a plan for expelling the dissolute, and ruffianly, and grossly ignorant. But not one of these attracted popular attention or was discussed otherwise than academically. When Lord Rosebery announced himself as a "second-chamber man," he made no attempt to say what kind of second chamber he wanted. The other Liberal leaders were just as reticent.

What is most important of all is this, that nobody, Liberal or Tory, ever made the smallest pretence of having discovered the means of removing the principal Liberal complaint against the upper house—the permanence in it of the Conservative majority. No way of remedying this was ever suggested, or in fact could be devised, except the election of the Peers by a popular vote of some kind, in one or two degrees, like the American Senate. But this would really convert the House of Lords into something totally different from what it now is. It would be not modification, but abolition. The history of "upper chambers" in other countries gave no support to any scheme of this kind in the eyes of the English people. The only elected upper chamber in the world which can be called a success, or which has any real weight, is the American Senate, and the House of Lords might well chuckle over the accounts which Americans themselves were giving of the Senate in 1893-'94.

In fact, in looking about the world at second chambers, it is not hard for an Englishman to flatter himself that the one he has got by mere growth is quite as good as anything that constitution-makers are likely to give him. There has been no period in fifty years which seems less auspicious for a change in the constitution of the Lords than the present one. The socialistic agitation and the general decline of parliamentary bodies in other countries have produced a great Conservative reaction in England, and have ruined the Liberal party, which did not perceive the signs of the times. Then the bulk of Englishmen are rather proud of the Peers as an institution. They are every now and then provoked with them, but when they see a Peer, or go down to the gilded chamber where they sit, he must be a very radical Englishman whose heart does not soften towards them, and who does not connect them in some mysterious manner with the historical glories of the nation. They reason about them as our protectionists do about the tariff. See how we have prospered and conquered with a House of Lords, they say. Who knows how things would have gone had we not had one?

There is also a personal factor in the problem at present which is worth notice. Neither Lord Salisbury nor Mr. Balfour is a person of a constructive turn, or very greedy of work. Lord Salisbury is a born critic, and Mr. Balfour is very fond of golf and metaphysics. They will not rush on tough jobs. They will deal with questions that are forced on them, and it does not seem likely that the reform of the Lords will be one of these. Ireland alone will furnish work for all the constructive talent in the ministry for two or three years to come. Moreover, this ministry will experience no trouble from the Lords. Lord Salisbury carries the Peers in his pocket. He rules the upper house absolutely. It obeys him so implicitly that there would be a certain cruelty in his finding fault with it. Why, therefore, should he lay aside other business for the purpose of attacking it? Besides this, foreign problems have a

great fascination for him, and it is easy to distract the national attention from everything else. There are Armenia, Egypt, China, and Central Africa, all waiting to be quarrelled over with France, or Russia, or Germany; and in discussions of this kind Lord Salisbury is a master. Foreign politics is, in fact, the field in which he makes fewest mistakes and wounds fewest susceptibilities.

THE OLYMPIC GAMES AT ATHENS IN 1896.

ATHENS, September 5, 1895.

EXACTLY fifteen hundred years, almost to a month, had elapsed since Theodosius the Great forbade the further celebration of the Olympic Games, when the Athletic Congress, held in Paris in the summer of last year, decided to revive the time-honored name as applied to quadrennial international contests of modern sportsmen. As a tribute to the land which was the home of those renowned festivals of yore and to which the world owes the foundations of its civilization—as a solemn act, legalizing the new use of the name—it was unanimously agreed to hold the first of these modern Olympic festivals at Athens.

At the first announcement this unexpected honor created considerable bewilderment in Greece. Never had Athens been called upon to execute a charge requiring so many elements of success; and it is not surprising that the first voices heard were those of the pessimists, who pointed out the financial and other difficulties in the way. And truly the difficulties of the Greek state, with its public debt, the depression of trade consequent upon the failure of the currant export, and the desperately inflated condition of the national currency, were such as to make it doubtful if the necessary funds for the respectable celebration of the games could be raised. But the abuse which has of late been lavished upon the Greeks by certain sections of the European press, with regard to the inability of the public treasury to meet the coupons of the foreign loans, stung the nation into making all possible pecuniary sacrifices for this occasion, which should afford the visitors from all lands an opportunity of convincing themselves that Greece is not a land of brigands, pirates, swindlers, and knaves. It also afforded the Greek people a special satisfaction to be called upon once more to compete with other nations on the noble field of athletics, which their ancestors had made immortal; indeed, the old Hellenic fondness for athletic contests has been asserting itself once more of late years, although athletics in the modern sense are still in a very primitive state among the Greeks. All these influences combined to make the contributions to the Olympic Fund pour in so rapidly that the original estimate of 300,000 drachmae has long been exceeded. And since the gift of an additional 600,000 dr. from Mr. George Averoff, a wealthy Greek merchant of Alexandria, for the express purpose of rebuilding the Panathenaic Stadion, all pessimism has been thrown to the winds, and all Greeks, from high to low, are bound up in the success of the project. The Crown Prince and his brothers are the active leaders of the movement, and the King himself has promised to award in person the silver olive-wreaths to the victors at the games. The Greek Government has ordered the issue of special commemorative postage-stamps similar to the Columbian, the net proceeds of which shall be shared with the fund of the Olympic Committee; and thus the latter may be expected to exceed 1,000,000 dr., besides M. Averoff's munificent donation.

The preparations are now in full swing, especially in the Stadion, which is by far the heaviest part of the work, and which, covered with huge blocks of marble and resounding with the strokes of hundreds of chisels, presents a striking contrast to the peaceful solitude which has for years and centuries reigned over its grassy slopes. This scene of the ancient Panathenæan games is an artificial enlargement of a natural hollow between two of the lowest spurs of Mt. Hymettus. It is turned towards the city, and from its entrance (by the "whispering" Ilissus) a magnificent panorama is obtained, from Lykabettos and the Palace Gardens on the right to the Acropolis and distant Salamis on the left. Its embanked sides slope up to a height of 60-80 feet around a level space 670 feet long by 109 feet wide, in the form of a horseshoe (as has been ascertained by recent excavations). These slopes were once covered with marble seats, rising tier above tier to the top, and divided into sections by flights of steps. In the age of the Antonines a public-spirited Athenian—Herodes Atticus—like George Averoff of to-day, built this stupendous work entirely at his own expense, of Pentelic marble; but little of this great mass of marble has escaped the lime-kilns of the Dark Ages, and practically the work has now to be done entirely over again. Fortunately, the plan of the original builders has been thoroughly ascertained by recent excavations, so that the new Stadion will represent the exact counterpart of that of Herodes Atticus, and will doubtless be executed in much purer classic detail than seems to have been the case in the artistic decadence of the second century A. D. Of course it will not be possible to finish the entire Stadion in marble by next March. Only the circular end, in its entire height, and the three lowest tiers along the sides will be done in marble; the remaining rows of the sides will be executed in wood and painted in imitation of marble, but will be replaced gradually by marble rows. M. Averoff has signified his intention of having this magnificent arena, which is capable of seating 70,000 spectators, finished entirely in Pentelic marble at his own expense, as a permanent field for athletic contests; and certainly Athens will regain through his patriotic liberality one of her most glorious and unique monuments, useful as well as ornamental.

In the Stadion thus restored and provided with a fine running track, the field sports, footraces, and gymnastic contests will be held; here also will be the finish of the twenty-six-mile long-distance race from Marathon to Athens, for which a special *amphora* or cup will be offered, in memory of the plucky runner of old who died to bring to Athens the news of the rout of the Persians. The bicycle races will be held on grounds specially laid out for the occasion, half-way between the city and the seashore, on the Phaleric plain. The aquatic sports—swimming and rowing—are to take place in the roadstead of Phaleron, while the Saronic Gulf, locked in by islands, will form an unexcelled sailing ground for the yacht regatta, which promises to be unusually brilliant.

These are the chief items on the programme of the games proper. But as the Olympic festivals of yore were not confined to athletic contests, so the visitors who will crowd to Athens next April will find an abundance of interesting features of the celebration entirely outside of the aforesaid programme. To pass over the numerous official and semi-official banquets which will be given to athletes, delegates, foreign squadrons, and potentates, the city of Athens is organizing various special events for the entertainment of its guests, which will doubtless give the entire celebration a character long to be remembered. Among these special features will be, for instance, the artistic illumination of the great monuments of antiquity by night, a grand historical torchlight procession, representing memorable scenes from Greek history, ancient and modern, and a series of gala representations of the dramatic masterpieces of the world, beginning with a Sophoklean tragedy and ending with Wagner's "Lohengrin." A special Olympic Hymn, composed for the occasion by the modern Greek composer Samaras, is to be rendered by a monster chorus and orchestra; and a commemorative medal is to be struck and distributed. The French Archæological School at Athens is to celebrate its jubilee at the same time, and a large international gathering of savants is expected to attend; the American School of Classical Studies, the German Archæological Institute, and the British School will also hold special public meetings during the festivities. Last, but not least, the inauguration of the games on April 6 will coincide with the seventy-fifth anniversary of the Declaration of Greek Independence, and thousands of enthusiastic visitors and delegates are expected from the five or six millions of Greeks living yet under Turkish rule, and from the numerous and wealthy Greek colonies all over the world, to take part in commemorating the day. If one adds the numerous English, American, French, Italian, Hungarian, Swedish, Russian, and Belgian athletic organizations, the great British and French yacht clubs, and the Turkish wrestlers and State College athletes, that have already promised to send their champions to the meeting, the vast concourse which will be assembled in the new Panathenaic Stadion will form the most picturesque medley of tongues, races, and costumes ever seen in the violet-crowned city of Theseus.

The interest displayed by the American people in this Athenian meeting, the promised participation of so many American athletes, and the formation of an American committee in behalf of the project, under President Cleveland's chairmanship, have aroused lively satisfaction in Greek circles. The Greeks have never forgotten the generous sympathy which the American people were the first to display for the Greek cause in 1821; the stirring eloquence of Henry Clay and Daniel Webster in behalf of Greek liberty, and the material aid brought to the Greek shores by Samuel G. Howe, both in the war of Independence and in the great Cretan revolt of 1867, are given a prominent place in every modern Greek history. And although of late these sentiments have been somewhat forgotten in the political and financial troubles which have absorbed the Greek kingdom, such an occasion as the Olympic Games suffices to rekindle the old feeling of grateful remembrance and brotherhood for the great Western land and people. At a time when the frivolous policy of the best of Greek statesmen has landed the Greek kingdom in the slough of bankruptcy, and done the whole Greek race incalculable damage in the respect of the outside world, the friendly readiness with which Americans have espoused the cause of this Athenian gathering of 1896 is doubly grateful to the Greeks, long oppressed with a sense of their political isolation. For, in spite of the

international origin of the project, next year's Olympic meeting is looked upon in Athens first and foremost as a Greek affair—an act of Greek hospitality to the civilized world, and hence an occasion with whose success Greek honor is closely bound up. The games are to be international, but in a distinctively Hellenic setting—on the storied plain of Attica, surrounded by immortal monuments of fame and unmatched vistas of mountain and sea, and by living representatives from every Hellenic city and colony throughout the world. Surely such a combination need not blush before the more stately and lavish magnificence of greater cities and wealthier nations; the immortal ruins of the Parthenon and the glorious Attic sky cannot be found or matched elsewhere.

D. K.

ACROSS SIBERIA.—III.

TIUMEN, August 10, 1895.

IN 1581 the Cossack freebooter and outlaw, Ermak Timofeevitch, at the suggestion and with the help of the Stroganoff family, possessors of huge estates in the Urals, set out to conquer the unknown land beyond the mountains. Descending, with a few hundred followers, the river Tiurá, on whose banks now stands the city of Tiumén, he came to the Toból, then to the Irtysh, where he defeated the Tatar ruler, Kutchum, and captured his capital, *Sibir*, or Siberia, which has given its name to the immense region stretching from the Urals to the Pacific. Although the whole of this territory has not been acquired till recent times, if it has yet entirely, Ermak is justly looked upon as a Cortes who added a new and mighty empire to the dominions of the Tsar. This empire has, until very lately, been of slight value, a place from which furs were brought and to which criminals and vagrants were sent. Even to Russians it seemed the ends of the earth, where no one would go willingly. This may appear extraordinary enough when we consider the untold sources of wealth in Siberia, the richness and number of its mines, many of which have never been explored, the fertility of the soil in vast tracts, whose climate is no more severe than that of Moscow or Minneapolis. We must remember, however, that the distances are so great as to render communication difficult and transportation far more so, in the absence of railways. The need of a new country has been little felt by the Russians. Nearer home, to the south, there was long an abundance of land where colonists could settle, and the nation, which has still but small accumulated capital, is not noted for industrial enterprise. After all it is only within a few years that we have thought of western Canada as more than a profitless wilderness.

At the present day a new era for Siberia has undoubtedly begun. The Perm-Tiumén railway first made it easy to get from Europe by rail and boat to Tomsk in the heart of Asia. Now the Trans-Siberian must give a great impulse to activity of many kinds; indeed, although only a small part of it is completed, this impulse is already widely felt. Enormous quantities of mineral wealth and extents of good land will soon be easily accessible, while in European Russia population is beginning to press on the means of subsistence. With present Government encouragement, immigration has got to be over a hundred thousand a year, and may soon reach dimensions hard to estimate. Nor is the country so uninhabited as to be unable to supply the first wants of the settlers. Not to mention smaller places, Omsk, Tomsk, and Irkutsk, with each from fifty to seventy-five thousand inhabitants, are important centres of distribution and growing rapidly.

Tomsk, the largest and busiest of these, is situated on the river Tom, some twenty-five miles from its junction with the Ob. The city impresses one at once as an active, thriving place. There are several handsome buildings, mostly official or schools; there are also presentable shops, some good houses, the best of them owned by Jews, and building and repairing are going on in many places, giving a general air of life and prosperity. The fine unfinished cathedral resembles on a different scale the Church of the Saviour in Moscow. There are two newspapers, a public garden, with a very fair little theatrical troupe whom I saw at a clever take off on the doctrines of Tolstoi, and, above all, there is the University.

The University of Tomsk, an institution unique in Siberia and with but few rivals in all Asia, has as yet but a medical faculty. Her twenty-seven instructors hold forth to a little less than four hundred students, more than half of whom are from Europe, as, in order to attract scholars, graduates from the ecclesiastical seminaries are accepted here, whereas they are not admitted by her sisters in Russia proper. I happened to visit the University on her seventh birthday, an unfortunate date for me, as it was also that of a public holiday when everything was shut up; hence I was able to see less than I could have wished. The fine large building, with two or three smaller dependencies, is surrounded by grounds planted with birch trees. Two professors, who chanced to be on hand, showed me what they could. The laboratory instruments, most of which come from France or Germany, seemed, as far as an ignorant layman can judge, to be of the latest kinds, though not very numerous. The small zoölogical collection is chiefly made up of native animals and birds. I was particularly sorry not to see the library, for it has about two hundred thousand volumes, among them a number of valuable books that came from France at the time of the Revolution, also rare editions of Shakspere, etc., given by various people—all of which one hardly expects to find in the depths of Siberia in an institution seven years old. In general the accounts I got were optimistic. There were many difficulties at first, but they have been overcome to a large extent, the students are poor but hard-working, while the professors are better paid and get a pension earlier than their brethren in European Russia. The Government has just decided to add a second faculty for physics and mathematics.

Another interesting sight in Tomsk is the temporary home for immigrants who have come either by river or with their carts overland on their way further eastward. At the time of my visit, there were about 1,200 of them, and there have been as many as 8,000 at once. Few arrive in the winter, but in the course of last summer 40,000 received hospitality here, the great majority of them Russians, with a sprinkling of Poles, Esthonians, Tatars, etc. Most of them remain about a week, some much longer, then depart—some settling in the government of Tomsk, others going to the region of the Altai mountains—though the Government is said not to favor this—and latterly increasing numbers, especially of the large contingent of Little-Russians, have sought the distant Amur province, where special inducements are offered, and where the settlers are said to grow so lazily well off in a few years that they hire Chinamen to do their work. In theory, every emigrant must bring with him a passport with permission to leave his home; otherwise, instead of receiving an allotment of land he will be arrested and sent back. In practice, hundreds and thousands come without papers, and, if sent back at much expense, they would return again and again with that patient obstinacy so characteristic of the Russian peasant. The only thing left to the authorities is to make continual exceptions to their rules, merely trying to do it as quietly as possible in order to uphold the principle. The premises of the temporary home are kept perfectly clean, which is creditable, for this is enforced with difficulty. The buildings include a hospital, with a compartment for lying-in, another for contagious diseases, and an apothecary shop. Typhus, particularly, is not uncommon. Each man, woman, and child receives daily, gratis, a pound of black bread—and Russian bread is good—also a meal of meat, or, on fast days, of other warm food.

The journey from Tomsk to Tiumén, the gate to Europe, takes six or seven days on the passenger steamers, of which there are two or three a week, the better of them being comfortable boats lighted by electricity. The scenery on the route is monotonous, especially along the Ob, a very broad, shallow river, full of islands that are flooded in the spring time, when the stream looks like a lake. The country beyond the low banks is marshy and wooded. No wheat can grow in this inhospitable region, whose few inhabitants live by hunting and fishing. When, however, we get to the Irtysh, the soil improves, so that Russians and Tatars are numerous for the rest of the way. The only city we pass is Tobolsk, the capital of the province of that name, founded in 1587 close to the junction of the Irtysh and the Toból—an unattractive looking place of 20,000 inhabitants, with twenty churches (so says Murray; I could count but ten, and, judging by the looks, the population cannot be much over 12,000). The citadel, the cathedral, and a few other buildings are on a cliff, as is the public garden containing a monument to Ermak; the houses are below, and many of the streets are flooded in the spring. The ultimate fate of the town depends on whether, as its citizens fervently hope, the railway is prolonged here from Tiumén, which it would then supplant as a port; but it is hard to believe that in any case it can become a great centre. Here we have old Siberia, bleak and desolate; the Siberia of the future lies to the south and east, a land of promise, destined before long to be the home of millions.

ARCHIBALD CARY COOLIDGE.

Correspondence.

DERRING DO, DERRING-DO, ETC.

TO THE EDITOR OF THE NATION:

SIR: In investigating the history of this curious pseudo-archaism for the 'New English Dictionary,' I have found its treatment in previous works to be more than usually inadequate. In one of the most recent attempts, it is said that "the word was adopted by Spenser in the erroneous spelling *derring-do* . . . from Chaucer; Middle English *dorryng don*, *duryng do*, etc., a peculiar isolated compound." It would be difficult to say how many misconceptions and misstatements are contained in these three lines. No "word" *derring-do* occurs in Spenser; he has indeed the two words *derring doe;* but the "word" *derring-do* (if it be a word) belongs only to nineteenth-century

pseudo-archaists. The Middle English *dorryng don* is not a compound, it is not isolated, and it is not peculiar; it is simply two words which chance to come together in their simple and natural construction. And, above all, Spenser did not adopt *derring-do*, nor even *derring doe*, from Chaucer. The origin of the expression can indeed be traced to Chaucer's *Troilus and Criseyde;* but there were intermediate links between Chaucer and Spenser which at once explain Spenser's erroneous spelling of the word *derring*, and that misconception of the construction and precise sense of the two words which he has handed on to the modern Romanticists. I have found that most of Spenser's archaisms which I have as yet had occasion to trace to their source, really come from Lydgate; at least, it was not from Chaucer, but from Lydgate's *Chronicle of Troy*, and actually from the edition of it printed in 1555, that he caught up the expression now before us, as I will now show.

The passage in Chaucer's *Troilus* V. 834–40, reads thus in the Campsall MS.:

> And certaynly in storye it is founde
> That troylus was neuere vn to no wight,
> As in his time, in no degre secounde
> In dorryng don þat longeth to a knyght.
> Al myghte a Geaunt passen hym of myght,
> His herte ay wiþ þe firste and wiþ þe beste
> Stod paregal to dorre don þat hym leste.

(MS. Harl. 2280 has in l. 837 "In duryng do," in l. 840 "to durre to do"; Camb. Univ. MS. Gg. 4. 27 has in l. 837 "In dorynge to do," in l. 840 "to dore don what hym leste.")

The exact construction is: "And certainly in story it is found that Troylus, in his time, was never second in no degree to no wight in *daring to do* what belongs to a knight. Albeit a giant might surpass him in might, his heart stood ever paregal with the first and the best to *dare to do* what pleased him."

This passage was thus imitated and echoed by Lydgate in his *Chronicle of Troy*, II. xvi.:

> And perygall of manhode and of dede
> He [Troilus] was to any that I can of rede. . . .
> In dorryng do, this noble worthy wight,
> For to fulfyl that longeth to a knyght;
> The secounde Hector, for his wort inesse
> He called was, and for his hye prowesse.

(MSS. Cotton Aug. IV., and Arundel 99, read "doring do.")

It is not easy to say whether Lydgate quite understood the construction of his master's passage; possibly he did not see that "that" after "dorryng don" was the relative pronoun = "that which," "what," and thus contained the object of "to don" (although he himself has precisely the same construction of "that" in the fourth line above). In any case, he used "dorryng do" *without an object*, "in daring to do, for to fulfil what belongeth to a knight," and thus employed a construction much more liable to be misunderstood. As the Fates would have it, moreover, what he wrote suffered at the hands of the printer. *The Chronicle of Troy* was printed first in 1513 by Pynson, and afterwards in 1555 by Marshe. In Pynson's edition the two lines read:

> In derrynge do / this noble worthy wyght,
> For to fulfylle / that longeth to a knyght.

In Marshe's (which was a reprint of Pynson's):

> In derryng do, this noble worthy wight
> For to fuuyl that longeth to a knyght.

In both it will be seen that Lydgate's word *dorryng* is changed into *derryng*.

The word *durryng* or *dorryng* is the true M. E. form of the word that we now write *daring*, being formed from the present stem *durr-*, seen in the infinitive O. E. *durran*, M. E. *dorre(n*, whence also the past tense *durste*, *dorste*, now *durst*. But by 1500 the *durr-dorr-* forms had disappeared from the present stem, being displaced by the ablaut-grade of the first and third person singular *dar*, so that we now say not only *I dare*, but *we dare*, for O. E. *we durron*, M. E. *we dorre(n*, *if I dare* for O. E. *gif ic durre*, M. E. *if I dorre; to dare* instead of *durran*, *dorre(n*; *daring* instead of *durryng*, *dorryng*. This change took place before the close of the fifteenth century; hence Lydgate's *dorryng* was an unknown word to the sixteenth-century printers, and they read and printed it *derryng*, *derring*, which no doubt appeared to them more like their actual form *daring*. Thus Chaucer's *dorryng don*, Lydgate's *dorryng do*, appeared in ed. 1555 as *derryng do*. In this printed form it was picked up by Spenser, in his course of collecting archaic words, and reproduced by him as *derring doe*. How, falling into the pitfall prepared by Lydgate's intransitive use, he misunderstood it, appears from the *Shepheards' Calendar* (October, l. 65):

> For ever, who in derring doe were dreade,
> The loftie verse of hem was loued aye

(*i. e.*, "For ever, by them who were dread in derring doe, lofty verse was loved ay"), where the "Glosse" explains "*In derring doe*, In manhoode and cheualrie." The same conception appears in another passage (December, l. 43):

> I durst in derring do compare
> With shepheards swayne,

misprinted "derring to," but referred to in the Glosse to "derring doe" as "aforesayd." Also in the two well-known passages in the *Faerie Queene*, II. iv. 42,

> Drad for his derring doe and bloody deed,

and VI. v. 37,

> A man of mickle name
> Renowned much in armes and derring doe.

It is indeed possible to argue that in all these passages Spenser knew the sense to be 'daring to do,' and used this as a poetical expression for 'daring to do anything,' 'daring to perform deeds'; but this is hardly compatible with the explanation given in the "Glosse" to the *Shepheards Calendar*, which, if not inspired, was certainly approved, by Spenser himself, and printed as part of the work, at the foot of each monthly "æglogue."

Spenser, however, kept the expression as two words; he was not responsible for the combination *daring-do*, which has beguiled poor dictionary-makers into the notion of a Middle English peculiar isolated compound. This we owe to the arch-archaist of the nineteenth century, Sir Walter Scott. Nobody, apparently, for more than two centuries, had reproduced Spenser's *derring doe* when Scott, with his wonderful application of the *omne ignotum pro magnifico* and his keen ear for a picturesque word or phrase of mysterious sound, resuscitated it in *Ivanhoe*, ch. xxix., where Wilfred is made to say, "Singular if there be two who can do a deed of such derring-do"; duly explained in a foot-note as (*Derring-do*, desperate courage). The transformation of *dorryng don* was now complete, and from the father of Romanticism *derring-do* was eagerly accepted by the whole brood of romancers and Romanticists, and became an indispensable article of romantic property. Lydgate, Pynson, Marshe, and Spenser had all been unconscious instruments in the transformation; but the Wizard of the North was the final transformer, under whose wand it became a very "peculiar isolated compound" indeed, which simple folk accept as Middle English.

The original *dorryng* reminds me of a passage in Prof. Lounsbury's *Chaucer Studies* which I have difficulty in comprehending. The Professor says (vol. ii., p. 64): "Gower, likewise, has some most pronounced instances of unusual rymes. He rymes the preterite *had* with *bed*, *leiser* with *desire*, and *dore* 'a door' with the verb *dare* in the form *dore*." What can the Professor object to in the last? It is a perfect rime—an example, indeed, of *rime riche*, or perfect syllabic identity with difference of word. The lines are (Pauli I. 256):

> And oþerwhile, if þat I dore,
> Er I com fully to þe dore;

and I need not point out to the student of Middle English that *if I dore* is the correct present subjunctive = late O. E. *gif ic durre*, and that it is perfectly identical in sound with M. E. *dore* for O. E. *dura*, dative of *duru*. And, by the way, the two other rimes cited by Prof. Lounsbury are not Gower's, but R. Pauli's, in that atrocious edition of Gower which it is a reproach to our scholarship not to have long ago placed in the *Index Expurgatorius* of books never to be quoted. The alleged rime *had*, *abed* (Pauli II. 96), reads in the MSS.,

> And priuely þe trompe he hedde
> Til þat þe Pope was a bedde,

where *hedde*, meaning 'hid,' is a well-known M. E. past tense of *hyde*, representing O. E. *hydde*. Pauli's *hadde* is merely one of the numberless atrocities with which his edition swarms. And, of course, it needs no knowledge even of Middle English to see that the alleged rime *leiser*, *desire*, is only somebody's garbling of M. E. *leisir*, *desir*. The passages containing them, as they left Gower's hand, were (Pauli II. 95)

> Somtime among a good leisir
> So as I dar of mi desir,

and (Pauli II. 242)

> That sche wiþ him hadde a leisir
> To speke and telle of hir desir.

All four instances are perfect rimes, as Prof. Lounsbury will be the first to acknowledge; and they entirely fail him in his contention that Gower was a careless rimer. The utter worthlessness and I fear charlatanry of Pauli's Gower (founded upon the 16th-c. printed text with a few MS. collations in obscure places) has been known to English scholars for some time; it is nearly ten years since I wrote that there was no more pressing need for Middle English scholarship than a faithful edition of the *Confessio*. That need is now about to be supplied; a competent scholar is preparing for the Oxford University Press an edition from the MSS., of which there are several excellent ones; and scholars must wait till that appears before they quote Gower for any linguistic purpose.

JAMES A. H. MURRAY.

OXFORD, September, 18, 1895.

EXCISE.

TO THE EDITOR OF THE NATION:

SIR: From the universal use of the word "excise" as descriptive of Sunday-closing laws in New York, I infer that there must be some reason for it, especially as I find it in your own articles. But certainly an excise has heretofore been supposed to mean an internal-revenue tax. Have license fees got so mixed up with the whole subject of the regulation of the liquor trade as to give it their name?

Yours respectfully, Z.

BOSTON, September 27, 1895.

[So it would appear, and that our correspondent's own State began the tampering with the meaning of *excise*. Dr,

Murray, in his Dictionary, quotes Jefferson as writing in 1789: "Excise is a duty . . . paid in the hands of the consumer or retailer. . . . But in Massachusetts they have perverted the word excise to mean a tax on all liquors, whether paid in the moment of importation or at a later moment, and on nothing else." —Ed. Nation.]

MEDICAL STUDENTS AND THE A. B. COURSE.

To the Editor of The Nation:

Sir: It is only natural that the lengthening of the course in medical colleges to four years should be met by an attempt to shorten the required preparation. Those who still believe in the theory of a good general education as a basis for work in any special line are naturally jealous of all attempts to anticipate the work of the professional school by manipulation of the elective privileges of the A. B. curriculum; but in the case of the medical students there are reasons of more than the usual weight against any short cut to the professional degree.

Most of us know that many young men, or boys, rather, are attracted towards the medical profession by motives very different from those which we wish to see in the physician whom we would call into our own houses to treat a wife or daughter. Now it is very desirable that all such unfit material should fall out by the way and not be turned loose upon the public with a medical diploma. But we cannot depend upon the medical schools to do the necessary work of expurgation, however much it may seem to be in their line. The young man who is led into the study by an unhealthy curiosity will find sufficient food for that curiosity to prevent such neglect of his work as would bar the way to a diploma. Require of him in advance, however, the work of a complete and well-balanced A.B. course, and the chances are many to one that he will fall out before this preliminary goal is reached, or that his mind will be so clarified as to make him a fit candidate for the profession. It has been a disgrace to the calling long enough that any young upstart whose head might be turned by a prurient desire to know the secrets of the dissecting-table, the operating-room, and the obstetric clinic could come forth in two or three years, regardless of any previous training or furnishing of the mind, with a legally valid medical diploma.

Granted that the average physician of fifty years ago began practice at the age of twenty-one or before, as Mr. Preston says (*Nation*, No. 1577, p. 204), he went to his work also with an average ignorance which seems almost grotesque to the better class of physicians of to-day. And the better class of physicians to day are just those who are most ready to admit that the science of medicine is yet in its infancy. Surely we have not reached the point where it is well to look for any method of lessening the mental training required for entrance upon such a work.

W. H. Johnson.

PALESTINE EXPLORATION FUND.

To the Editor of The Nation:

Sir: In a recent appreciative mention of the work of the Palestine Exploration Fund, the *Nation* kindly stated that subscriptions may be sent to the office in London. Perhaps you will allow me to add, for the sake of the Fund, that, as Honorary Secretary for the United States, I receive subscriptions and furnish the quarterly statements, books, casts, photographs, and all other publications of the Fund.

Theodore F. Wright.

No. 42 Quincy Street, Cambridge, Mass., September 30, 1895.

DEFIANCE OF THE LAW.

To the Editor of The Nation:

Sir: Doubtless the *Nation* has become weary of defining what law is to its readers; but with what freshness must it return to the duty when everywhere are seen instances of wilful defiance of the law? If Tammany Hall were the sinner, we could all join in the most scathing denunciation, and vote it out of power with a vim. But what are we to do when our most enlightened citizens, so to speak, are the guilty ones? For instance, the school directors of McLean County, Illinois, met recently, denounced the "flag law," and resolved to fight it in the courts. The understanding, if not the resolution, was that the law should be disobeyed till a decision was handed down by some court. Now this law, requiring a flag to be floated on every school of every kind, is, indeed, a sorry attempt to teach patriotism, and it will cost the State some $160,000 to carry it out. But when devout men, old soldiers, Republicans, Democrats, *et al.*, determine that what they don't like in the law they won't have, anarchists may well shout for joy. And this county is the home of the Vice-President, of ex-Gov. Fifer; here David Davis lived, and other notables.

And now comes the September issue of the *Educational Review*, with a vivid denunciation of the law regarding instruction in temperance in New York, and setting forth the same old nullifying resolutions that we have heard of elsewhere, declaring what will and what will not be done till the next Legislature meets, by the teachers of New York. The law may be very bad, but its enforcement will cause its repeal if we are to believe the current remark. But everywhere at present is taught, by workingmen's bodies, by school directors, and by teachers also, it seems, that the thing to do is to rebel, go to the courts (during the time when we are not denouncing them for other decisions), and so rid ourselves of the annoyance—and likewise of any sense of loyalty to authority. Is not this disposition among us, after all, as suspicious an influence as good men are fighting? Agitation is helpful, and denunciation permissible; but open and defiant disobedience of law still remains a subject for penalty, at least upon the statute-books.

Charles M. Moss.

University of Illinois, Urbana, September 28, 1895.

SUPPRESSION BY THE PRESS.

To the Editor of The Nation:

Sir: The action of our new Republican "reform" Mayor in the matter of the "Lake front" should be of more than local interest. That a politician, of either party, should sacrifice the interests of the city to those of a railroad corporation is nothing new, but there is a serious novelty in the fact that none of the city newspapers expose the swindle.

In the bargain made by the Mayor, the Illinois Central Railroad Company gets about ten or fifteen million dollars' worth of property in exchange for some work which it is to do, mostly for its own benefit, that will cost about one million. The railroad also conveys about six acres of land to the city; but as the land is submerged, and the road reserves the right of navigation over it, the conveyance is of no apparent value except to mislead the public.

Whatever mention is made by the press of this city of this matter is brief enough, and in vague praise of the Mayor for "settling the old controversy" between the road and the city. In brief, in the face of the facts, the newspapers have made the Mayor very popular and made his reëlection possible.

There is one question which affects the interests of the whole country: Where are the people to learn the facts about public men and public measures when great private interests are involved?—Yours truly,

Edwin Brainard.

Chicago, September 26, 1895.

Notes.

Mr. Percival Lowell will make a book of his papers on the planet Mars, and it will bear the imprint of Houghton, Mifflin & Co., who will also bring out 'Later Lyrics,' short poems excerpted by Mr. T. B. Aldrich from his later volumes of verse.

The Fleming H. Revell Co. have nearly ready 'Persian Life and Customs,' by the Rev. S. G. Wilson; 'Rambles in Japan,' by Canon Tristram of Durham Cathedral; and a Life of John Livingston Nevius, for forty years a missionary in China, by his wife.

In addition to Dr. Elliott Coues's reprint of 'The Expeditions of Zebulon Montgomery Pike,' Francis P. Harper is on the point of bringing out 'North American Shore Birds,' by Daniel Giraud Elliot, ex-president of the American Ornithologists' Union, with 74 full-page plates drawn by Edwin Sheppard.

Frederick A. Stokes Co. publish immediately 'A Century of German Lyrics,' translated by Mrs. Kate Freiligrath Kroeker.

The Rev. Dr. John Stoughton's 'Lights and Shadows of Church Life' will be published in this country by A. S. Barnes & Co.

A new boys' book, by Col. Thos. W. Knox, 'Hunters Three; or, Sport and Adventure in Africa,' is in the press of E. P. Dutton & Co.

The forthcoming concluding volume of Ward, Lock & Bowden's edition of Henry Kingsley's novels will contain 'The Boy in Grey, and Other Stories,' together with a biographical sketch of the novelist by his nephew, Maurice (son of Charles) Kingsley.

'The American Jew as Patriot, Soldier, and Citizen,' by Simon Wolf, will be issued by the Levytype Co. of Philadelphia.

By reason of his occasional verse, Whittier is a poet whose work lends itself readily to the compilation of a year-book such as Houghton, Mifflin & Co. have just brought out. J. Q. Adams, Sumner, Garrison, John Brown, Halleck, Bryant, Holmes, Lowell, Starr King, Bayard Taylor, Gen. W. F. Bartlett, Mrs. Child, Mrs. Sigourney, Channing, Joseph Sturge, Fredrika Bremer, Burns, Wordsworth, are some of the historic names commemorated; worthy, one might suggest, of portrait vignettes by way of decoration.

The sixth volume of Mr. Henry B. Wheatley's edition of Pepys's Diary (London: George Bell & Sons; New York: Macmillan) extends from October 1, 1666, to June 30, 1667, a period of the greatest disorder in the finances and discipline of the navy, ending in De Ruyter's alarming ascent of the Medway. London was

being slowly rebuilt and reformed after the great fire, whose embers still smouldered and whose fearful impression was still fresh in the minds of the anxious inhabitants. Of gossip and detraction the Diary is as full as ever, and Pepys is even more than usually indebted to the editor for a decent veiling with dots of his unbridled incontinence.

Those who believe that there is still any vitality in the Italian school of painting are apt to refer one to Domenico Morelli as a modern Italian painter who is really great. Mr. Ashton R. Willard's 'Sketch of the Life and Work' of this artist (Houghton, Mifflin & Co.) may therefore be welcomed as an attempt to satisfy a legitimate curiosity. It is a thin buckram-covered volume of 67 pages, with eight heliotype illustrations, one of them a portrait. The text is mainly biographical, and is free from extravagant laudation if also from criticism. The character of the reproductions from Morelli's paintings will hardly convince the thoughtful of his greatness. To speak frankly, his work is essentially of the frivolously picturesque kind common to modern Italian art, whether in painting or in sculpture. The head of the "Dying Christ" is as brutally realistic in conception as Bonnat's, while it has nothing of the redeeming accuracy, force, and solidity of drawing and modelling of the Frenchman's work. The Italian is formless and flabby, and his highest qualities are a tricky facility of handling, a brilliancy without depth of color, and, sometimes, a sugary prettiness of sentiment.

Did Heinrich Heine during his twenty-five years' residence in Paris become "un écrivain francisé," as Henniquin calls him; or did he, during this long period of voluntary expatriation, remain an essentially German author? This question has often been discussed, and sometimes with no little acrimony. Saint-René Taillandier, Édouard Grenier, Alexandre Weill, and other eminent authorities have asserted that, so far from being "Frenchified," he never acquired even a tolerably correct literary use of the French language. This statement has been resented by some of Heine's admirers as a characteristic expression of Gallic conceit and hypercriticism. The recently published volume of Louis P. Betz entitled 'Heine in Frankreich: eine literarhistorische Untersuchung' (Zurich: Müller) gives an entertaining and quite exhaustive account of Heine's life in Paris, and contains specimens of letters written by him in French nearly every line of which is marred by unpardonable blunders.

The thirtieth annual volume of the 'Jahrbuch des Schweizer Alpenclub,' edited by Dr. Dübi and published by Schmid, Francké & Co., at Berne, is an illustrated octavo of 500 pages. The text is not confined to records of adventure, but contains some valuable contributions to science, such as "Was ist Föhn?" by Blumer-Zweifel, and "Die freien Bauern im Algäu," by Meyer von Kronau. A supplement contains six large views of high mountain scenery, and a list of recent additions to the library of the club.

'Lebensbilder aus dem Zeitalter der Reformation,' by R. Voss (Halle: Niemeyer), is the title of No. 23 of *Schriften für das deutsche Volk*, published by the Verein für Reformationsgeschichte. The brochure is a biographical sketch of Dr. Lucas Geizkiofer, a native of Sterzing in the Tyrol, and gives a curious picture of the beliefs and customs prevailing among German Protestants in the sixteenth century, some of them quaint and harmless, and others fanatical and cruel. It was not uncommon in those "good old times" for a traveller to make the acquaintance of an apparently respectable householder who had lost his wife, and to learn on further inquiry that she had been recently burned as a witch.

A ten-cent catalogue of English fiction, French fiction, and juvenile works has just been issued in good style by the Public Library of Peoria, Ill. The French fiction fills but a page. The juvenile section is classified.

The attention of readers and buyers may be directed to the 'Catalogue Raisonné of World-Literature,' edited by Ernst Lemcke for B. Westermann & Co., the first two sections being German and French literature respectively, for the classics and belles-lettres. The appreciations of each writer whose works are enumerated are sufficient, if brief. The best translations into English are noted.

Number nine of "Münchener Beiträge zur Romanischen und Englischen Philologie," edited by Profs. Breymann and Koeppel of Munich and published by Boehme in Erlangen, is an English dissertation of 160 pages, entitled "Methodism in the Light of the English Literature of the Last Century," by Dr. J. Albert Swallow. A succinct historical survey of the rise and early growth of Methodism, with brief biographical sketches of John and Charles Wesley and George Whitefield, is followed by quotations from contemporary plays, poems, magazine articles, essays, published letters, and novels, showing the drift of popular opinion concerning Methodists and their teachings, more especially during the latter half of the eighteenth century. As the adherents of the new sect were strongly opposed to the theatre, the stage naturally took revenge by satirizing and caricaturing their persons and principles and holding them up to ridicule, as, for example, in Samuel Foote's "Minor," "A Trip to Calais" and "The Author," Henry Fielding's now-forgotten farce "Miss Lucy in Town," R. Hill's "The Gospel Shop," which was "suppressed at the particular request of some eminent divines," and "The Methodist," a low catchpenny comedy, published anonymously and advertised as a sequel to Foote's "Minor," but really written by a certain Israel Pottinger. The Methodists were also caricatured by Hogarth in the engraving "Credulity, Superstition, and Fanaticism," representing the interior of a conventicle with a ranting preacher and a sanctimonious audience. There are citations from Sterne's 'Tristram Shandy,' Richardson's 'Sir Charles Grandison,' Smollett's 'Humphrey Clinker,' Fielding's 'Joseph Andrews,' and minor works of fiction now deservedly consigned to oblivion, as well as from the periodical literature of that time. Dr. Swallow has made a diligent if not exhaustive study of the subject. Theological writings are not considered.

The New Century Educational Company, Boston and New York, sends us three boxes of cards figured to show certain domestic animals, leaves, and national flags, with and without inscription, for childish instruction. The leaves, having a photographic or zincographic origin, seem to us the best of the series.

The third of the series of articles on new British markets, now in course of publication in the *Nineteenth Century*, is by Capt. Lugard, whose subject is tropical Africa. This region presents an entirely different problem from China and Thibet, the countries previously treated. There the question is how to break down the barriers which prevent more or less dense populations, partially civilized, from buying British goods in exchange for their own products. Here the resources of countries sparsely peopled but easily accessible are to be developed. The two great obstacles at present to the expansion of trade are the gin-traffic on the west coast and slavery on the east coast. In reference to the latter, Capt Lugard quotes from a very recent report of the Consul General at Zanzibar to the effect that the plantations are almost invariably heavily mortgaged to British-Indian traders, and that the nominally Arab owners are in reality only managers. The true owners in this way escape from liability, as British subjects, to a criminal process for owning and employing slaves. The products of which there is the greatest promise in Eastern Africa are cotton and coffee, the soil and climate of districts of vast extent being apparently admirably suited to their cultivation. The coffee of the Shiré highlands, introduced only sixteen years ago, ranks among the highest-class coffees in the market, the maximum price being nearly twice that of Brazilian coffee.

The principal article in the *Scottish Geographical Magazine* for September is a description of Iceland from the point of view of a volcanist, by Dr. J. Johnston-Lavis, Professor of Vulcanology in the Royal University of Naples. While most of it is purely technical, there is an interesting passage on the influence of the winds in denuding the soil. In exposed places if but a small hole is made in the turf and left unstopped, the field and perhaps the farm is doomed. The frost scales up a layer of earth which on drying crumbles and is carried away by the wind, and the hole gradually increases like a corroding ulcer, until, in a year or two, a fertile meadow is reduced to a bare rock surface. The greatest need of the Icelander, he concludes, is good roads, by which he might easily send to the trading-ports his abundant dairy products, meat, and fish, and receive in return wood for building, coal, and flour.

A new departure at the University of Pennsylvania is the addition of an astronomical observatory. Its erection is already begun. When completed, it is designed to furnish better facilities not only for instruction, but for original research as well. The new edifice is two miles from the limits of Philadelphia and about five miles from the university buildings. The instruments are an eighteen-inch equatorial, with spectroscope attachment, by Brashear of Allegheny, and a meridian circle and zenith telescope each of four inches aperture, also by Brashear. The mountings are by Warner and Swasey of Cleveland. This institution will be known as the Flower Observatory, and its director is Prof. C. L. Doolittle, formerly of the Lehigh University at South Bethlehem.

Mr. Veeder of Lyons, New York, presented at the Springfield meeting of the American Association a careful table showing the connection between magnetic storms and sun-spots. The authority for faculæ and sun-spots fully formed or in process of formation at the sun's eastern limb is obtained from the Royal Observatory at Greenwich, and the record of magnetic disturbances is the result of tracings recorded by the declination magnetograph in Washington. Every evidence of spot formation, and every group of faculæ recorded at Greenwich, and the extent of every magnetic perturbation recorded at Washington are taken into account. While this information is supplemental in various ways, and the table is intended (so far as it goes) to be authentic beyond dispute, rather than comprehensive in respect to every detail, its results are undoubtedly suggestive, and may have the effect

of leading to improved methods of statement and publication of the data requisite for a better comprehension of this intricate subject, which so far is understood in only the most general way.

The first annual report of the Pasteur Institute in Stuttgart, which has been just issued, states that in 1894 the laboratory produced and distributed matter for the inoculation of 12,266 domestic animals as a preventive of *Rothlauf* (St. Anthony's fire) in swine and *Milzbrand* (gangrene) in sheep and horned cattle, resulting in the reduction of the cases of death from these diseases from 30 and even 40 per cent. to ½ per cent.

—The fact of William Penn's imprisonment in the Tower of London, in early life, is well known. A correspondent of the *Nation*, now in England, who has recently had access to the records of the Privy Council Office, Whitehall, sends the following extract, made by him, from the minutes of the proceedings of the Council, upon consideration, at the Board, of a petition from Admiral Sir William Penn, with reference to his son's "late ffaylings." Unfortunately, the petition itself is not preserved at the Privy Council Office :

Minutes of the proceedings of the Privy Council, held at the Court at Whitehall, the 31st March 1669.

Present
The Kings Most Excellent Maty
&c &c &c &c

Bishop of London to proceed in ye Examinacon of Pen's scandalous Booke.

The humble petition of Sir William Penn being this day read at the Boord, setting forth that ye late ffaylings of His Son William Penn by his departure from ye Protestant Religion hath been, & still is his very great Affliction, the Education he bestowed upon him being such as could have no tendency to those Courses by which he hath incurred his Maty's Displeasure, yet for as much as the Petr is not without hopes that God will in due time reclaime him, and being confident, that he will act nothing to ye Prejudice of His Maty's Government : and being informed, That he hath given reasonable good satisfaction to those worthy persons who were appointed to examine him, He most humbly prayed that His Maty would be graciously pleased to give Order for his Liberty, which His Maty having taken into Consideration, and also that the Booke printed & published by the said William Penn Intituled [Sandy ffoundations shaken, &c.] conteyneth in it severall dangerous & blasphemous Haeresies to ye scandal of ye Christian Religion, Did this day Order & require the Rt Reverend Father in God the Lord Bp of London to take cognizance & to proceed to ye Examination and judging of ye said Haereticall Opinions according to such Rules & fformes as belong to ye Ecclesiasticall court by the Lawes of this Kingdome, & in such manner as hath been formerly accustomed in like cases. And to that end It was further Ordered by His Maty That Sr John Robinson, Knt. & Bart Lieutenant of ye Tower of London be, and he is hereby required freely to permit Citations & Processes to be served upon the said William Penn within ye Tower of London, wch shall be issued out by the Bp of London in this Cause of Haeresy & also to suffer ye said William Penn in company of a Keeper & sufficient Guard to make his Appearance in ye Consistory of ye said Bp.

—The new volume of Mr. Douglas Brymner's report on the Canadian Archives (1895) has a special interest for historical students. It contains a very full calendar of the papers in the English records relating to Nova Scotia, and develops the intimate connection between that province and New England—a connection, it must be admitted, which savored more of disconnection, by reason of the intensely bitter feeling displayed against the French. The fisheries first attracted attention to the possible importance of the coast, and these fisheries were enjoyed by English, French, and New England fishing-vessels. As early as 1711 the promise of copper, fur, feathers, masting, and naval stores was held out as an inducement to settlers; but fur and fish were the staple products, and even they gave no ground for settlement, as all supplies were brought at so great a cost from Boston. This mercantile interest, added to fishing-profits, whetted the desires of New England to enjoy a monopoly of the region, and so we find the Boston representatives occasionally proposing to "take a tour to humble the villanous French inhabitants," as they are "snakes in their bosoms," and much more to the same effect, where humiliation really means pounds, shillings, and pence, or, even more openly, plunder. The rich collection of papers relating to the expedition against Louisburg, and the later history of the Loyalist settlements, gives material for the history of the United States. Mr. Brymner deserves high praise for his energy and intelligence in planning and executing a series of reports of so rich a nature. Who was the Lieut. John Washington, at Annapolis Royal in 1721, who "most impudently endeavored to bully and blacken" the reputation of the Governor and garrison by a "multitude of false and vilest Assertions and Insinuations," and by "malicious, scandalous, and vile underhand and unwarrantable representations"? He must have been an interesting character.

—"'Tis forty years since" Mommsen's 'History of Rome' first appeared in the German. It seems now strange enough that a book which has become so familiar should ever have needed the formal introduction and recommendation of a German (Dr. Schmitz) which was prefixed to Dr. Dickson's first English translation of it in 1861. Two years earlier, Freeman had already pronounced that it was the best history of Rome in existence, and his dictum still remains as true as ever. Dr. Dickson's translation, revised in 1868, is now again revised from the eighth German edition (New York: Scribners). The numerous corrections, transpositions, and additions in this (probably the final) form of the work show that the hand of the master has not wearied in spite of his years. This fact is well exemplified by the present shape of the chapter on the early constitution, where the treatment of the infant community with the distribution of its clans, and the study of their functions, have been thoroughly reëxamined. In the etymologies, too, suggested for the oldest words, such as *Ramnes* and *Quiris*, there are great improvements, and the topography also has been brought well up to date of the latest investigations (though *Roma Quadrata* still figures as the name of the Palatine city). Nor has the translator been idle. Although some of his sentences are still too long to please an English ear, nevertheless Dr. Dickson, in this version, has succeeded better than before in transmitting to us the delightfully familiar and often almost colloquial style which is one of the charms of the original work. The index is greatly enlarged, and the five handsomely bound and well-printed volumes are a credit to the publishers.

—'Jean Jacques Rousseau et les Origines du Cosmopolitisme Littéraire,' by Joseph Texte (Paris : Hachette), is a book which no reader, however wide his reading or however settled his opinion concerning Rousseau, will lay aside without a modified and heightened sense of his marvellous genius. The origin of the exotic, cosmopolitan tendency in modern French literature is traced beyond the Romantic movement to Rousseau, "the man who did most to awaken in France the taste, the need for the literature of the North." Boileau had to learn from Addison that there existed such a thing as English poetry; Louis XIV., having some curiosity as to whether England possessed authors and scholars, was informed by his ambassador, Cominges, that "a certain Miltonius" had rendered himself infamous by his dangerous writings. Such was the ignorance of the leading minds in France with respect to English letters late in the seventeenth century. By the middle of the eighteenth century the social and intellectual influence of England had grown very strong in France. Anglomania had reached its height when the 'Nouvelle Héloïse' appeared. The working of this change through the religious refugees, through Muralt, Prévost, Voltaire, forms the contents of the first section of M. Texte's book. Jean Jacques shared the admiration of his contemporaries for England; he had been strongly influenced by Muralt, from whom he often borrows. Five chapters are devoted to the various channels by which his mind was filled with English ideas, beginning with the close relations, especially in the last century, between England and Geneva, and the native element in Rousseau, which made him the most powerful bond between the genius of the North and that of the South of Europe. That from this fertile union in the person of Jean Jacques of the Latin genius and the German genius the literary cosmopolitanism in France was born, our author endeavors to show in the last third of his volume. The work bears proof of the soundest scholarship and of a thorough familiarity with the literature both of England and of France in the eighteenth century; and no student of either can afford to neglect it. We doubt whether a better presentation of Richardson's influence has ever been made. As a contribution to the study of comparative literature the book occupies the highest rank and will be of permanent value.

—The Bavarian Minister of Public Instruction, Herr von Landmann, recently addressed to the rectors of the humanistic gymnasia an official circular, in which he urged that some efficient means be devised to diminish the number of young men who seek admission to these institutions, but who are utterly unfit to pursue the course of study prescribed. At present the lower forms are crowded with pupils who have neither taste nor talent for classical learning, and who for the most part fail to reach the ninth class, or are fatally plucked at the end of it. They are thus intellectually crippled for life by a specious and superficial culture, and become, as is truly said, a "public calamity." The minister would seek to remedy this evil by imposing more rigorous conditions of admission, showing less indulgence in granting dispensations from studies and from the payment of tuition-fees, and especially by enlightening the minds of parents as to the best interests of their children. It is highly improbable, however, that these measures would bring the desired relief. In the first place, certain families deem it due to their rank or social position that their sons should enter the humanistic gymnasium, no matter what their mental endowments or natural proclivities may be. In the second place, the Government encourages this tendency by attaching certain privileges to the pursuit of a course of study in a humanistic gymnasium both as regards the military and civil service. If Bavaria would abolish these privileges, as

Prussia has already done to a considerable extent, an abatement of the evil complained of would be at once perceptible, and the thousands who now throng the portals of the gymnasium as the surest way to preferment, would turn into less frequented and more useful paths of life. The same is true, although perhaps in a less degree, of the German military academy. Many parents, especially those of noble blood, think the only career possible for their sons is that of an officer in the army. When the young man has reached the grade of lieutenant, or often not before he has been promoted to that of major, he is found to be devoid of the proper qualities, and is therefore retired from active service and placed on the pension list. Thus hundreds of men, in the full vigor of their physical powers, become comparatively useless members of society and a burden to the state. The root of this evil is the traditional prejudice against commercial and manufacturing pursuits and other occupations supposed to be plebeian.

—There are now, in all, probably two hundred Koreans studying in Japan. One party of 113 arrived in Tokyo in May, and it is said that the whole number officially chosen to go to Japan for study amounts to three hundred. The Korean Government is evidently encouraged in this by the authorities in Tokyo, the amount granted to each student being but fifteen yen per month, though even this amount, or about eight dollars in gold, is fairly liberal for a Korean. Most of the lads are sons of noblemen. Almost all these students go into Mr. Fukuzawa's famous school; the "grand old man," the "intellectual father of one half of the young men in the Government offices" in Japan, being a great favorite with the Korean Liberals. In the second contingent, the appointees are to be chosen on account of abilities irrespective of birth. On their journey by steamer and rail to the Mikado's city, the tunnels seem to have impressed them most. In her attempted reforms, Korea suffers, as Japan did not, from not having, as Japan did, a large body of educated men who, by the weight of their opinion and power of intelligent action, were able to swing the nation out of the Chinese into the Western world of ideas. Korea is now attempting to raise up such a class out of the materials at hand. Of scholars, pure and simple, of bookmen, professors, cloistered readers, and intriguing nobles, she has no lack. It is to be seen whether she has statesmen and patriots.

RECENT NOVELS.

Philip and his Wife. By Margaret Deland. Boston: Houghton, Mifflin & Co.

The Story of Christian Rochefort. By Helen Choate Prince. Houghton, Mifflin & Co.

The Vengeance of James Van Sittart. By Mrs. J. H. Needell. D. Appleton & Co.

Fidelis. By Ada Cambridge. D. Appleton & Co.

How Thankful Was Bewitched. By James K. Hosmer. G. P. Putnam's Sons.

The Adventures of Captain Horn. By Frank R. Stockton. Charles Scribner's Sons.

Peak and Prairie. By Anna Fuller. G. P. Putnam's Sons.

MRS. DELAND'S novels remind one of the child who asked, "If bulls were not made so that red made them mad, would a bull get angry when he saw red?" Her problems are as intricate as this, and of equal bearing on actual life. Sometimes it is a man who repudiates his wife because she does not believe in damnation; again it is a father who will not let his daughter marry because we must all die; and again, as on the present occasion, it is a man who wishes a separation from his wife, not chiefly because he has ceased to love her, nor for the sake of the welfare of his child, but for the salvation of his own soul, "for the honor of marriage"—asserting his conviction "that this preservation of their individual integrity would in the end, by its effect upon her character, more than compensate Molly [the child] for any pain and embarrassment which would come to her." No one will deny that Cecil was a most injudicious mother. The trouble seems to have been that she had "the passion, not of motherhood but of the mother—the dam," and that Philip "was a man capable of sustained ecstasy" and "lived upon a high plateau of noble idealism," though this is not easy to affirm, since he is so ill-defined a character that his motive is as difficult to discern as that of the book. Sometimes he wears an appearance of disinterestedness: "Can't we put self out of it? can't it be because it is right?" (of his wished-for divorce) he asks ("hoarsely" after the manner of the throat troubled man of novels). He explains "gently" to a friend that "real divorce takes place without a decree," talks loftily of "the long estrangement in thought and motive and principle," and at times professes to be thinking only of the child. But again it is said of him that "the citadel of his spirituality where self had entrenched herself was absolutely fast"—as it certainly was; and his reasons for wishing the divorce seem to have been that "except when he teased her with visions and ecstasies, Cecil made his life full of lazy and beautiful comfort." Having meant to be an artist, he turned into a lover, and "all the solemn glory and whiteness of love went out, as a star in heaven might be blotted from a man's sight by the roar of some hot fire here on his little earth"; so, finding love to be "this supremest expression of self," he falls into bitter remorse over it. Another cause for divorce was that when the child was born his wife "caressed it in a way that made him sometimes turn away his eyes." Having "thought to marry a beautiful soul, he had married instead a beautiful body," and, in the "silences of his luxurious living," "high demands" spoke: "Is not marriage without love as spiritually illegal as love without marriage is civilly illegal?" So that it is not quite clear whether he is meant to win sympathy for the "insulting of his heavenly vision," or blame for letting his "own conception of duty weigh against accepted standards," or admiration for his theory that "public morals will not suffer for private virtue"; virtue here meaning to leave an unloved wife. Whatever the writer meant him for, hero, martyr, or rogue, the reader will in most cases, we fancy, agree with the friend who remarks to Philip, "Damn you, you're not worth saving!" The discovery that the friend is in love with the wife annoys Philip, but not to the extent of sending him back to take care of her; and on second thought he is greatly pleased with the friend for confessing, and calls him "a good man."

As usual, the padding of village chronicle is the best part of Mrs. Deland's book. Naturally, there is a great deal of talk in the village about divorce, but we cannot see that anything is contributed to the subject, or even that one can ascertain the author's views, or, worse yet, the views of her characters. Hair-splitting has its part to play in the realm of fiction; but it befuddles the reader and wastes the time of the publisher to insist that the hairs shall be from the tail of an unthinkable dog.

'The Story of Christine Rochefort' is written by one who says better than she constructs, and is rather a vehicle for views on socialism than a story, although the manfulness of the effort to make and keep it a story is deserving of recognition. There is little sequence in the incidents, but they are told with finish and ease. The views of the red-handed socialist who longs to wade ankle-deep in blood to equality; of the benevolent manufacturer who is always planning model lodgings for his employees, but will not yield to strikes; of the abbé who loves his poor, but believes in paternal government; of the young and beautiful wife who in turn adopts each set of opinions (her husband's, luckily, last)—all these views are amply rehearsed, the abbé's with some eloquence; but in getting themselves connected with the story they creak audibly. The mob riots gently, the assassin stabs neatly, the lovers love curably, the whole moves as made, not born. Even the wit of the book, which is furnished by a cynical grandmother and is at times amusing, is oddly detached from the narrative, and thrusts itself out of perspective as one who shoots forth the lip. There is, however, enough matter well put to give gratification to the novel-readers who care more for intelligence than for cohesion.

Mrs. Needell has the veritable Englishwomen's knack at writing and at inventing a slight plot and building it out with infinite detail into a long, monotonous, dreary, readable, interesting novel. That omnipresent, omniscient doctor of theirs, with his rugged sweetness and his hospitals and his convalescents; that semi-cynical lady of rank who brings with her the drawing-room element of the story; those English school-boys and girls; that paragon elder sister; those wicked rich relatives and that timely apoplexy; that inevitable cab-accident; that miraculous rescue—how familiar it all is! When the plot grows so thick that there is danger of the novel coming to a premature close, what easier than to get up a case of illness on the Continent and send the perfect doctor thither? When the superfluous husband is falling into consumption before the required three hundred and fifty pages are written, what happier than to revive him, put him at bee-raising, and let him live to sudden death at the revengeful uncle's funeral? And always and continually—whether tempests roar, or incidents flag, or health or sickness sway the hour—ring for the lights and serve tea. Tea in inky floods!—it is the English woman novelist's comma punctuating all her pages. Long may she flourish and write such plodding, ploughing books for the mental calm of the novel-reading mind. Innocent occupation, if not precisely literature, they have a place in the world's affections beside the old oaken bucket and the harmless, necessary peanut. Nor is a book without a mission that holds such bits of philosophy as these, out of many: "There is only one way of bearing a remediless trouble—to ignore it and go straight on." "A sense—the most fatal and damaging that can invade the soul—that it was not worth while."

Very different is the pace of Ada Cambridge's latest novel. Here is no fine, old-fashioned writing, no plodding or tarrying. Though full of detail, it speeds along without haste, without rest, till the tale is told. Philosophy there is in abundance, more humor-shot than Mrs. Needell's, and also something

more cheerfully worldly and more touched with sentiment. It is the humor of Thackeray and of Du Maurier, and their prodigious, unsentimental sentiment. It is, indeed, in no detraction from the book that one notes that without Du Maurier 'Fidelis' would never have been written, or would have been written differently. It is the work not so much of an imitator as of an absorbent, and in the story of Adam Drewe's life, from tormented childhood up to honored middle age, we find loving reflections of the great luminary. The original flavor of Ada Cambridge is not lost but enriched by being engrafted on a sturdy stock. Her pictures of Australia and of rural England are as attractive as ever, her story better than ever. In 'Fidelis' she has not only advanced beyond herself, but has written one of the best little novels of the year.

'How Thankful Was Bewitched' is a story of the French and Indian wars. The scene is at first a frontier Puritan village, then changes, with the fortunes of Thankful, the heroine, to Canada and a Jesuit settlement, and later to the very wilderness itself. An interesting chronicle is made of life in those days of romantic hazard; of the customs of Puritan, priest, and savage, and of the wild, roving existence which became the portion of a well-born woman carried a captive from the smoking ruins of her village home. The mystery attached to a Jesuit church-bell goes hand in hand with the story of Thankful, and the whole makes a pretty and absorbing tale of love, adventure, and history.

Love, adventure, and extravaganza make up Mr. Stockton's story, which is of the most ingeniously inventive, the most gravely humorous. Nor let any one think it a book of toy adventure; real blood flows, real cut-throats and pirates people the pages of our whilom gentle author. That all may not be lost of the humor we associate with his name, an old lady from Maine is one of the heroines, and well does her nature, compounded of Yankee and Stockton, show up against the gore. The treasure-trove—the heaps of gold which are the basis of all the adventures—is enough to inflame the mind of Tammany Hall; and one is ready to call it a dangerous suggestion even to read of such booty were it not for the delightful altruism which sends the lucky finders tramping over the earth to put the gold in the hands that might have found it, but did not. The crowning touch of humor is reserved for the last paragraphs, where wealth overtakes an old Scotch woman as she is starting for the poor-house, and changes her meek lamentations into the pride of patronage and the joyful explosiveness of the virago.

Miss Fuller's Colorado sketches—several of them reprinted from periodicals—form a series of views of life on ranch, in mining-camp, in growing town, breathing every one of the presence of Pike's Peak with an almost personal affection. The sketches, like others from Miss Fuller's pen, are full of freshness and interest; the characters are often original and always well outlined; and the enthusiasm for the pure air, the sea-like prairie, and the snowy peaks communicates itself perforce to the reader. In every paper there is a thought and a picture, while the reappearance of several of the persons in the different numbers of the series gives to the little drama continuity and life.

M. Stambuloff. By A. Hulme Beaman. With six portraits. Frederick Warne & Co. 1895.

Mr. Beaman's sketch of Stambuloff shows in every page the hand of an Englishman and of a friend. English diplomacy and the English press have always served the national party in Bulgaria, and we detect here the strain which long pervaded Mr. O'Conor's Sofia despatches to the *Times*. The English journalist in the Balkans is bound to be a Russophobe, and Mr. Beaman makes no secret of his proclivities. Political sympathy and snipe-shooting were the bonds of an intimacy between him and Stambuloff which was broken only by death. For Zankoff, Karavéloff, Stoiloff, and all others who are tainted with panslavism, he has nothing but censure. Stambuloff is to him the hero of the struggle against Russia's overweening influence in southeastern Europe, the only statesman in a crowd of truckling and self-seeking politicians.

A biographer fails unless he is sympathetic, and Mr. Beaman would have been less interesting had he been more judicial. The passions of Bulgarian public life are well reflected in his pages. He deals with a land where the conspirator of yesterday and the dictator of to-day readily becomes the victim of to-morrow's yataghan. It would be strange if he wrote with the calm of Gardiner or Lord Acton. Stambuloff was the son of a Tirnovo inn-keeper, "who broke his birth's invidious bar, and grasped the skirts of happy chance." At the age of eighteen he was expelled from Russia for nihilism; at twenty-five he was a member of the Chamber which protested against the treaty of Berlin; at thirty-two he was the most powerful of the three regents who were appointed on the resignation of Prince Alexander of Battenberg; from 1886 to 1894 he was virtual ruler of Bulgaria and known to all the world. When we add that for a year before his death he was able to fix within 300 yards the spot of his ultimate assassination, it will be seen that his career furnishes every material which is required by the spasmodic drama.

Mr. Beaman gives much new information concerning Stambuloff's early life and his part in the abortive risings against Turkey. His character appears to advantage in those days of constant hardship and hazard. He never spared himself, and was hopeful in the midst of failures for which he had to bear the reproaches of his comrades. He was an admirable revolutionist. Unfortunately, when he came to power he was forced to control the bandits with whom he had once been allied. Their animosity was soon kindled against him, and when he fell they flocked to Sofia from Servia, and Macedonia, and Thrace. It could have been no difficult matter to arrange the tragedy of July 15.

Stambuloff's constructive work began in the autumn of 1885. "At this period," says Mr. Beaman, "Bulgaria was only vaguely known to the civilized world as a place where atrocities had been perpetrated, but she was not viewed as a factor in European diplomacy, or considered as anything more than a nondescript mushroom creation of the treaty." Then within a twelvemonth came the union of Eastern Rumelia, the Servian war, and the *Coup d'État*. Mr. Beaman's account of Stambuloff's share in these events is excellent, especially when he discusses the intricate matter of the kidnapping and its consequences. The theme of the concluding chapters is Stambuloff's attempt to make Bulgaria something more than a pawn in the great chess match of the lower Danube. Those who are interested in the country apart from its international relations will get nothing particularly new from this section of Mr. Beaman's book. Stambuloff's domestic administration, his system of conducting elections, his attempts to promote economic development receive scant attention, while his fight against the Conservative party and Russia is minutely treated. In an elaborate biography this omission would be serious, but we pass over it lightly in a portrait sketch which belongs to an international series.

Mr. Beaman has nothing to say in apology for Stambuloff's conduct after his fall. Theseus's words on the death of Arcite,

> "Thanne is it best as for a worthi fame,
> To dye whan a man is best of name,"

were never more completely justified than by Stambuloff's ignoble decline. Up to the time of his rupture with Prince Ferdinand he had disclosed no fatal weakness. He did many harsh, probably brutal, things after the Beltcheff and Vulkovitch murders, but his acts were those of the "strong man defending his house." His course throughout the last year of his life was simply fatuous. The *Hamburger-Nachrichten* during Bismarck's eclipse was a model of self-restraint in comparison with the exasperated *Svoboda*. Nothing but grave defect of character can account for ravings which dismayed Stambuloff's friends as much as they rejoiced his enemies. "Son œuvre fut si colossale que personne autre que lui-même pourrait la détruire. Eh bien! il le fait avec ses propres mains." These are words of one who was no enemy. And Mr. Beaman, with every good wish for Stambuloff's cause, is without hope for its future. "With Stambuloff disappears the only real adversary capable of holding the country against the Russophils."

The Oxford Movement in America; or, Glimpses of Life in an Anglican Seminary. By Rev. Clarence E. Walworth, St. Mary's Church, Albany. New York: The Catholic Book Exchange.

There are Episcopalians who are so much interested in the Oxford Movement that they imagine themselves indifferent to nothing concerning it, but these glimpses of certain aspects of it as it reproduced itself in the Theological Seminary on Chelsea Square, New York, will subject their enthusiasm to a severe and painful test. The Rev. Thomas Mozley's Oxford Reminiscences were sufficiently disenchanting in some of their disclosures. They were a kind of comic version of Newman's 'Apologia.' But, with all their cynicism and malignity, they labored under no such necessity to minimize the Anglican church and the Tractarian Movement as do the Reminiscences of Mr. Walworth, who by way of that movement passed from that church into the Roman Catholic. To write down the Episcopal Church, to make it appear worldly and foolish and illogical and absurd, is a purpose which these pages do not endeavor to conceal, and could not if they would. But it is not as if the Episcopal Church in America, or even the Tractarian Movement as it was here developed, were co-extensive with the antics of a few boys in a seminary drunk with the new wine of the Tractarian vintage. The sub-title is the true title of the book, and the reader must be on his guard against the narrowness of the *tantum* which Mr. Walworth saw, and against the levity of his disposition, which infects everything he touches with a trivial appearance. No attempt is made to represent his conversion as a matter involving serious thought and feeling. As he had become an Episcopalian by a process of mere chance and drift, so by a similar process he became a

Roman Catholic: all of his changes being due to the mere restlessness of self conscious adolescence. The amount of thought that went to them was hardly so much as would justify a change of clothing in the spring or fall.

It does not follow that he has not written in a bright and interesting manner for the general reader of the teapot tempest that the Tractarian literature and rumor raised in the theological seminary. The period of his residence coincided with the years 1843–45, the years that saw in England Pusey's suspension, Newman's secession, and the collapse of the Tractarian Movement. Here, as in England, Newman's followers bettered his instruction and got to Rome a little in advance of him. A group of students were diligent readers of 'Tract 90,' Ward's 'Ideal Church,' and the Tractarian literature generally; the professors looking on with cautious sympathy or mild distrust. The group had its crank, McMaster, and its saint, Arthur Carey, upon whose character and conduct Mr. Walworth dwells with much elaboration. He was only seventeen when he entered the school, and he remained in residence a year after the completion of his course in 1842, the modest coryphæus of the Tractarian choir. He was a model of irrational piety, reading through his Old Testament three times a year, and his New Testament five. On the eve of his ordination he was put upon his trial for a too lively sympathy with Roman Catholic doctrine and worship. The particulars of the trial, which Mr. Walworth gathers from his own recollections and contemporary documents, give a very good idea of the things to which the Tractarians were inclined and which the Evangelicals feared. The influence of Bishop Onderdonk prevailed, and Carey was acquitted and immediately afterwards ordained maugre the "scandalous interruption" of Drs. Anthon and Smith. In a few months Carey's health broke down, and he died upon a voyage to Havana. If he had lived, he would have reached his Roman destination as soon as Newman, if not sooner.

Carey's acquittal was a shot heard round the Episcopalian world, and stirred up the Evangelical party to new efforts against the set towards "Newmania" and Rome. There was a war of pamphlets in which Bishop Onderdonk took a leading part. In the Diocesan Convention of 1843 he was sharply attacked and routed his enemies. His trial for lascivious immorality, which shortly followed, is represented by Mr. Walworth as inspired by the necessity for a change of tactics if Tractarianism was not to triumph. It suits Mr. Walworth's purposes to represent that the Bishop's conduct would have been overlooked if he had been soundly evangelical, but this is barely possible. What is certain is, that in his fall he dragged down and disgraced the Tractarian cause But its defeat was far less absolute than Mr. Walworth would have us believe. The crop of converts harvested by the Roman Catholics was small, and with the break-down of the Tractarians as a party there was not here, any more than in England, a negation of their influence, which must not, however, be credited with the ritualistic travesty of Tractarianism developed further on.

In a series of chapters Mr. Walworth makes some invidious comparisons between the Episcopalians and Roman Catholics. The points touched are missions, monasteries, and personal religion. The arguments he uses to attract will probably repel his Protestant readers. They and some Roman Catholics will wonder what use God or man can have for such a rule of life as that copied from Ward's 'Ideal Church.' In his attack on married missionaries there is much wilful obscuration of the grounds on which the Roman Church objects to the marriage of her priests. Heber's verses to his wife are brought up against him, but a good many will think them no discredit to the author of

"From Greenland's icy mountains."

The book is printed carelessly, and for Finney (Rev. Charles G.) we have Phinney at least a dozen times.

Gustave Flaubert as seen in his Works and Correspondence. By John Charles Tarver. D. Appleton & Co. 8vo, 368 pp.

THE above title is a correct one for this volume; that on the back of the cover, "Life and Letters of Gustave Flaubert," is misleading, still more so its abbreviation, "Life of Gustave Flaubert," the running-title of the pages —misleading, because a third of the book, in broken portions, consists of summaries by Mr. Tarver of Flaubert's various works; not analyses, not criticisms, but crude abridgments. Now, Montaigne said, many years ago, "Tout abbrégé sur un bon livre est un sot abbrégé," and no wise man has ever contradicted him. The abridgment by an English intelligence of Flaubert's writings is not likely to change this verdict.

If the title is misleading, the New York imprint is also. The voice is the voice of Jacob: not the hairy Esau of America, but his English brother, who is familiar with "the variations of usage on the two sides of the Channel." So, naturally, the book has English faults; but it has also English virtues, and the note which the first sentence of the introduction strikes, chords with the honest and simple strain of the whole volume. This first sentence speaks of Flaubert as "a man to whom truth seemed the most sacred of all obligations." Such praise honors the praiser. And this sentence makes one almost, but only almost, accept the last sentence of the introduction, which pronounces Flaubert to have been "one of the best and noblest men of the nineteenth century." There is certainly something peculiar in the fact that those who like Flaubert at all seem always to become his warm friends, with an appreciation of the trials of his temperament and circumstances that make them not forget his follies and failures, but care for him the more because of them, and rank even his great literary successes as less important than the expressions of his warm and sorrowful heart. It is, indeed, a strange fate for a man who strove with extravagant sincerity to keep his own personality out of his books, to be loved precisely for his by no means always lovable personality by those who never saw him. This kindliness of never to be requited friendship permeates not unpleasantly all the volume before us, and gives it a moral attraction which intellectually it does not possess.

It would demand an artist of large and cultivated mind, with a tender heart and a skilled hand, to shape the fitting image of Flaubert; to create a figure that should rightly impersonate his joyless strength, his fruitless learning, his groping imagination, his idle industry, his deadening devotion to Art, his misconception of Life and Love, and not less his noble veracity, his deep and sensitive affections, his high-minded simplicities, his life-long generosities of act and deed, his faithful domestic attentions.

The Psychology of Childhood. By Frederick Tracy, Ph.D., Lecturer in Philosophy in the University of Toronto. Boston: D. C. Heath & Co.

Now that psychologists have begun the study of the speech of children, it may be well to draw attention to the all too common unscientific method of procedure, as illustrated, for example, in Dr. Tracy's thesis. Dr. Tracy evidently brought to the study of the child's language no special training in the science of linguistics, and he betrays remarkable innocence of phonetics, the side of the subject chiefly dealt with. He has made up his tables and drawn his conclusions from reports on children of diverse nationalities, these reports being based on observations made by all sorts of people and preserved in various transcriptions. And he has dealt with his material in such a haphazard fashion that its crudities and gross inaccuracies are evident at a glance. For instance, he undertakes to tell (1) the number of times a sound is supplanted in various parts of words, and (2) the number of times the various supplanting sounds occur. But, strange to say, these sums are rarely equal; they run: 55-51, 38–35, 26–26, 31–25. 29–25, etc. The illustrations are in a jumble; compare *th* (p. 153), where the first and fourth examples illustrate the first statement, the second example the third statement, the third example the second statement, the fifth example the fourth statement, etc. One sample of Dr. Tracy's phonetics will suffice. He had this material: *Tumblie* for *tumbler* (p. 152), *dotta* for *daughter* (p. 155), *dockie* for *doctor* (p. 154); that is, for final written *-er*, *-or* we have a vowel probably ranging between the high-front vowel and a mid-mixed vowel, and in the last word the *t* is dropped. But what does our author say of these? That in *tumblie* for *tumbler*, *r* has become *e;* in *dotta* for *daughter*, *r* has been dropped; in *dockie* for *doctor*, *t* has become *e*. Moreover, we do not know what "*e*" stands for: on page 126 the author says he is going to use it for the sound in *pet*, but we find it only where the child's word has *ie*, evidently some parents' spelling for final *y*, or short *i*. What the sounds were that the various children heard we have no means of knowing, for Dr. Tracy does not seem to have considered that of sufficient importance to bother with.

Legends of Fire Island Beach and the South Side. By Edward Richard Shaw. New York: Lovell, Coryell & Co.

THIS is a volume of short stories inspired by more than an average knowledge of the locality to which they relate. Too much praise cannot be accorded Mr. Shaw for the care he exercises in retaining the original and quaint names of the points and headlands comprised within the limits of the range of beach and shore of which he writes. The seven stories contained in the book are of somewhat uneven quality. The opening one, "The Pot of Gold," is the weakest of the series. It relates to the discovery of buried treasure on the beach of the south side of Long Island. Capt. Robinson, the hero of the tale, is of a type which Mr. Shaw fails to describe with the skill that he displays in the delineation of some of his other characters. He makes Capt. Robinson, the discoverer of the pot of gold, when suddenly confronted with the treasure buried in the sand, assume towards it an attitude more in harmony with that of a citizen of Hoboken upon finding a pocketbook in the street than that of a beach-comber under the inspiration

of unexpectedly acquired wealth. Then, again, Mr. Shaw is not always consistent in the dialect he employs. In "The Pot of Gold" Capt. Robinson, instead of a stormy speaks of a "monstrous" night—a word which, uttered in this connection in the presence of a genuine beach comber, would cause him greater perturbation and consternation than all the goblins and ghosts of which Mr. Shaw describes him as standing in fear. These little lapses, however, do not materially detract from what are interesting, if somewhat improbable, tales of a locality familiar to a great number of people. The notes at the end of the volume possess exceptional interest.

BOOKS OF THE WEEK.

Amicis, Edmondo de. Cuore: An Italian Schoolboy's Journal. T. Y. Crowell & Co. $1.50.

The Nation.

NEW YORK, THURSDAY, OCTOBER 10, 1895.

The Week.

THE Democrats of Massachusetts were at their best, last week, when they nominated George Fred. Williams for Governor and adopted a platform in favor of the gold standard and calling for the retirement and cancellation of the greenbacks with the substitution of bank-notes in place thereof. It may be fairly said that both parties have put the best foot foremost. Gov. Greenhalge, the Republican nominee, is a man of the same type as Mr. Williams. He has won golden opinions in the office he now holds, and Mr. Williams himself took occasion not long since to speak of his prospective rival for the governorship in terms of high compliment. It is altogether probable that Gov. Greenhalge will be reëlected, since Massachusetts is a Republican state except when the Republicans are dissatisfied with their own leaders. The only breach in their ranks at present proceeds from the A. P. A. faction, Gov. Greenhalge not being up to its standard of fanaticism and proscription against Roman Catholics. This is much to his credit, and will probably gain for him as many votes as it will lose. Whatever may be the result of the election, there is no humiliation in store for either of the leaders or for either political party. It is almost an ideal campaign that is in prospect, and it seems a pity that both candidates for Governor cannot be elected.

The platform of the Democrats is almost identical, as regards the money question, with that adopted by the same party in New York a few days ago. It says:

"We demand the maintenance of the existing gold standard of value, and that the government shall keep all its obligations at all times redeemable in gold. We oppose the free coinage of silver and any further purchase of silver bullion on government account.

"We reaffirm the demands of our platform of last year that the government shall not carry on a banking business, that the untaxed notes of State or national banks shall be the only credit currency, and that the government shall, with the development of a banking system adequate to the demands of trade, retire as rapidly as possible all United States paper money. We recommend that the administration formulate and present to the next Congress a measure calculated to secure these results."

The demand that the government shall go out of the banking business, and that the untaxed notes of State or national banks shall be the only credit currency, the greenbacks and Treasury notes being retired as rapidly as possible, is assuredly the next great question in national politics. There will be an attempt, of course, to keep the tariff issue alive as a stalking-horse for candidates who have never looked into any public question except that and the various issues growing out of the war. But every day that passes casts the tariff more and more into the shade. On the other hand, each day makes the currency question an object of greater interest. The country has been considerably stirred by the action of the Syracuse convention of Democrats the other day, and will be still more so by that of the same party in Massachusetts.

The Republicans of Massachusetts are to be congratulated on their platform as well as their candidate. Their observations on the tariff are especially commendable. They first condemn the present Democratic tariff in unsparing terms, and justify themselves in doing so by the scathing denunciations which the Democrats themselves visited upon it. Here they are on safe ground. When they come to tell how they would change it they say:

"We are not pledged to any schedules. We only pledge to each American industry such protection as shall equalize differences of the price of labor, and to that the farmer and the miner are as much entitled as the manufacturer and the artisan. In determining that we are not bound by precedents and theories, we are governed by the teachings of experience, and are as ready to learn from the experiments of our adversaries as of ourselves, from failure as well as from success."

This is also safe ground, but, we fear, will not be considered so by the wool-growing triumvirate of Ohio. It means, evidently, that if the experiment of free wool, which our adversaries have put in operation, works well, we will bow to it and profit by it. The world moves, and we move with it. All attempts to start a tariff agitation in Congress this winter will be discountenanced by the Bay State, and it may turn out that before the Republicans come into power the experiment of free wool will be pronounced a charming success. At all events we shall not be over-hasty in passing final judgment on a question which, from its very nature, requires careful statistical treatment and the calmest deliberation. To Judge Lawrence, the leading triumvir of Ohio, deliberation is simply poison. Waiting is like asking a man to hold his breath till you can make an interesting experiment on the properties of ozone. We shall expect an outburst from that quarter soon, but none the less do we consider the Massachusetts platform a wise and temperate deliverance. On the Hawaiian question, where we looked for something decisive, we find not a syllable, direct or indirect.

At the opening of 1895 the total money holdings of New York city banks were $172,591,700, or 31½ per cent. of liabilities. At the opening of June total holdings were $182,778, 600—this despite the heavy payments against the February bond issue. Call-money rates were meantime all but nominal at 1 per cent., and interior funds, unavailable in the hands of their own institutions, were flowing to New York at the rate of two to four millions weekly. It is not at all remarkable, under such conditions, that withdrawal of idle foreign capital and consequent gold exports should have again grown active. With July, however, the harvest movement of currency began, and was soon reflected in decrease of the New York bank reserves. The $35,000,000 gold exports since June have partly relieved the market, but in addition nearly $16,000,000 currency has already been shipped West and South, to meet the needs of an active harvest and of reviving trade. As a result, notwithstanding the currency receipts of July and August, the cash reserves of the New York banks last week reached $151,496,400, a decrease since June of $31,000,000. A few weeks more of heavy interior remittances will certainly contract the local supply of money, raise the discount rate, give employment to idle foreign deposits, and hence depress exchange and stop the specie shipments. That the relief is temporary, however, so long as Congress refuses either to regulate the currency or to provide sufficient revenue, even the experience of 1891 sufficiently demonstrated. Only six months after that exceptional period of trade activity, gold was again expelled in unprecedented quantity, and the Treasury approached its crisis.

The *Journal of Commerce*, through its Washington correspondence, furnishes some advance estimates from the Mint Bureau of the world's gold production for 1895. The showing is quite as remarkable as that of the previous year. The summing up of 1894 showed a production in round figures of $180,000,000, an increase of $23,000,000 over 1893. This yield was about $30,000,000 greater than the product of any year when the placer mines of California and Australia were at their maximum. The indications now point to a yield of $200,000,000 for the calendar year 1895, another increase of $20,000,000, and an increase of $43,000,000 in the annual output in two years, and of $54,000,000 in three years. As the annual supply of gold is not used up in the year, but is added to the preëxisting sum, it follows that the world's stock has been increased in the three years named by the enormous sum of $537,000,000. And this unprecedented output has taken place at a time when the public ear was filled with the most dismal predictions of a "gold famine" by the silverites of this country and of Europe.

The prevailing low rates of interest have had one rather curious effect in Eng-

land. The report of the British Postmaster-General directs attention to the unprecedented increase in the amount of deposits in the post-office banks. The increase in 1894 was over 40 millions of dollars, double that of 1893, which in its turn was the largest year on record. In the course of last year 35,874 persons deposited £50 each, the maximum annual limit in one sum. The post-office allows 2½ per cent. interest, and invests the money in government stocks at the present high prices. When normal interest rates become again common, it is likely that the greater part of these large individual deposits will be withdrawn, when the government will be compelled to sell its purchased stocks to provide the necessary cash—probably at lower prices. The government thus stands to lose by reason of affording to persons with some little capital a safe investment at a fair return during a time of business depression.

An interesting table has been compiled showing the saving effected to the city by the failure of various departments to fill offices when their heads found that they could not, under the civil-service regulations, fill them with their own men. They have actually for this reason dispensed with services worth in salaries over $17,000 a year. This is an illustration of the tendency to overman the service which exists everywhere in order to oblige dependents, hangers-on, and political followers. If one of these dependents comes to the top in the examinations, well and good; he gets the place. If he does not, it remains unfilled. Every appointing officer of course naturally desires to surround himself with men of his own choosing, and if he worked *in vacuo* he certainly ought to be allowed to do so, as private employers are. The competitive system is meant to protect him against the temptation of his own position, which is really that of a man carrying on business with other people's money, under no liability for losses, and under strong pressure to squander it. The public, therefore, says to him that it knows his weakness, and knows what kind of pressure is put on him, and enables him to bear it by means of rules.

In Chancellor McGill's remarks the other day, when accepting the Democratic nomination for Governor of New Jersey, he boldly came out in favor of laws (not named) to make the State and all its citizens prosperous and contented. This seems to have furnished an opening to his Republican opponent, Mr. Griggs, who two days later, in a speech at Hoboken, declared that New Jersey, like all the States of the Union, was "suffering from too much legislation." He said it would be his aim, if elected Governor, to "restrict the constant tinkering of the laws, and to allow the people to live without too much paternal government." This is a wholesome sentiment, and we believe it is a popular sentiment. The terror with which citizens now watch the assembling of their chosen representatives to make laws for the commonwealth is one of the things which would greatly perplex an open-eyed visitor from Jupiter, sent here to study our political institutions. That any good thing can come out of the Nazareth of a State Legislature, except under compulsion and through popular uprisings, has ceased to be believed by large bodies of voters. They view with deep alarm the promises of demagogues to cure all ills by law, and are ready, we doubt not, in constantly increasing numbers, to champion any man or system that will give them fewer Legislatures, sessions, laws, and elections, and consequently fewer nightmares.

South Carolina may be weak in the matter of just treatment of the blacks, and tender towards white rascals who carry elections by fraud, but it is firm as a rock in defence of the sanctity of the marriage relation. From the earliest times public sentiment in that State has looked upon the idea of divorce with abhorrence, and except for the brief period of reconstruction rule the courts have never enjoyed any power to dissolve a marriage. The convention now sitting at Columbia has decided to maintain the ancient rigor unimpaired, adopting a clause for the new Constitution which expressly provides that "no divorce shall be granted in South Carolina for any cause whatsoever"; while the sentiment was clearly expressed that the State will not recognize divorces granted in other States, except in so far as she is compelled by the Constitution of the United States. Tillman was ready to let down the bars so far as to permit the granting of divorces under certain circumstances, and he also offered an amendment providing for the recognition of divorces granted in other States, but this proposition was defeated by an almost two-to-one vote, and the boss of the State found that even his power was not great enough to overcome a sentiment that has generations of tradition behind it.

An election was held in the Tenth Congressional District of Georgia, October 2, which is noteworthy as the first that ever took place in the State under a registration law. The greatest laxity has always prevailed as to the making up of the roll of voters, and opportunity was thereby afforded for gross frauds. Charges of such frauds have long been made, and especially by the Populists against the Democrats, since many whites went into the third party. Gross cheating was apparently proved in the regular election for Congressman in the Tenth District last fall, when Black, Democrat, was returned as having polled 20,903 votes to 13,530 for Watson, Populist. Black himself seems to have been convinced of the frauds, for he refused to accept his election, and proposed another appeal to the people. Meanwhile a new law had gone into effect which makes registration a prerequisite to voting. With characteristic inconsistency, the Populists, having secured legal protection of the suffrage, denounced the law as soon as they found that they would probably be beaten under it, and Watson himself advised his followers to pay no attention to it, but to vote anyhow. This fresh manifestation of Populistic tendencies naturally injured Watson's cause, and he was defeated by nearly 2,000 majority in a fair election. The most striking feature of the Democratic canvass was the open bidding for the colored vote.

In an article in the *New World*, Mr. Edward Atkinson enforces anew the idea that the way to improve the condition of the poor, especially in the congested quarters of the large cities, is to teach them how to use the money they actually earn. By way of illustration he tells of a visit that he made, not long since, to one of the boarding-houses in the dirtiest quarter of Boston, thus:

> "The house belonged to the good Irish woman who kept it and who was making an effort to clean some part of the furniture. One of the inmates was reclining in a comatose condition on the steps. He had dropped his savings-bank book, and it proved that he had to his credit about four hundred dollars; other boarders were earning a sufficient sum to enable them to live in one of the unfashionable parts of the Back Bay, and to enjoy full nutrition of a varied kind if they had so chosen. An instance has come to my knowledge of an effort to supply working people with comfortable cottages, each containing a bath-room and bath-tub. In one case the bath-tub was used to pack the winter pork in, the family having come from Canada, where this had been the practice; another was used as a receptacle for ashes, both cases being only examples of other uses than bathing to which the bath-rooms were put."

There was a great outcry against the Pullman Company last year because of the restrictions they put upon the tenants of their buildings, which were said to be tyrannical in the extreme. It turned out that they were mainly restrictions against dirt and nuisances, such as prohibitions against the keeping of pigs, geese, and chickens, or the use of the rooms for other purposes than those for which they were designed, or against subletting and overcrowding. In short, they were regulations to promote the health and comfort of the tenants themselves; but the free American does not like to have his health and comfort promoted in ways that he has not chosen for himself.

The announcement that Yale has a smaller freshman class this fall than last, while Harvard has a larger, undoubtedly surprises the public. For years we have been assured that athletic preëminence was the most potent factor in attracting students to a university, and Yale's superiority to Harvard in this branch of the curriculum was never more pronounced than during the past year.

What does it mean, then, that the entering class at New Haven shows a loss, while there is a marked gain at Cambridge? Can it be that the athletic craze is dying out, and that Harvard is profiting by the fact that her faculty have been the first to put restrictions upon the old license in sports?

Cuban sympathizers who are calling for the recognition of the Cuban insurgents as belligerents will do well to remember that our Government made it a ground of bitter complaint against Great Britain that she accorded belligerent rights to the Confederacy, when it had an organized government, an immense territory, three or four ports, and an army of 200,000 men in the field. The Cuban insurgents have no government, no flag, no territory, and no army beyond some guerilla bands, no ports, no revenue, and no organs of communication with the outer world. This complaint against Great Britain was maintained to the end of the *Alabama* controversy, and was produced in aggravation of damages at the final settlement. It would probably have been well for us to accept the British contention, that belligerency was a fact, and not an opinion. There was nothing necessarily unfriendly in according it, but we did not accept that view. We said that to accord belligerency, even to such a power as the Confederacy, one minute sooner than was absolutely necessary for the protection of neutral rights, was a hostile move, and deserved resentment. There is not the smallest likelihood that the Cuban insurgents will entitle themselves to our recognition under our own rules, unless they succeed in taking and holding some of the leading Cuban ports, and thus establishing relations with the outer world. Nothing short of this would enable us to treat them as belligerents. But when they do this, the war will be virtually over and their independence achieved. Most of the talk of our sympathizers about the matter—such as the Chicago proposal to repeal international law—sounds like the merry chatter of school-children, of whom some of our agitators so often remind us and the rest of the world. In fact, our foreign politics often seems the concern chiefly of the kindergartens of our country and to be ruled by that love of abstract justice which burns in nearly all ten-year-old breasts.

No more amusing reading has appeared in the American press for a good while than the extracts published in the *Tribune* last week from other papers lamenting that we are to have no hand in the threatened fight between Great Britain and China. It does not appear that our missionaries have exceptionally suffered in the late massacres, or that we have any more complaint to make of Chinese outrages and inhospitality than the Chinese have to make of ours, or that Great Britain is not abundantly able to chastise China for her offences against her. Nevertheless, the whole Jingo press is wailing over our non-participation in the approaching fight, and loading the President with abuse for not sending our ships to share in it. The reason of this is, that nobody in the country is so hostile to Europe, or hates more the people who "go to Europe," or dreads more the introduction of European ideas, or goods, or books, than your genuine Jingo, or "intense American." But he has nevertheless imported and hugs to his bosom the one European idea which is most un-American, which is most hostile to our civilization and most likely to injure our government. This is, the idea that fighting is the highest and noblest occupation in which a nation can engage; that there is something degrading and humiliating in keeping out of a free fight, or in not being ready to fight, or in letting a chance of a fight slip by. This idea is crushing the European populations to the earth. It is threatening the existing social organization through the great armaments, and is keeping alive in every country the mediæval respect for brute force. When the United States Government was established, it was supposed we had escaped it. But the Jingo sect is really acting as missionaries for it. Unless we are "licking" or threatening somebody, or subjugating somebody, or have a few "keys" or a canal or two to fight somebody about, they writhe on their beds in patriotic agony.

The Duke of Devonshire seems to have mainly employed himself since the prorogation of Parliament in going about the country sticking knives into the famous "social programme" of the Tories, and, incidentally, into some of his esteemed colleagues in the Government. In his speech at Derby, as President of the Poor Law Conference, he graciously admitted that "we are not absolved from the duty of seeing whether it is not possible by state assistance to create such a system of state-aided insurance as many of us desire to see," but could not blind himself to the certainty that nothing of the sort was possible "for a long time to come." Mr. Chamberlain knows into whose vitals that blade was thrust. But the Duke's speech on agricultural depression was itself more depressing than anything the British farmer has had to encounter. He frankly told that much-cultivated voter that nothing whatever was to be expected from legislation, but that farming in England must be made to pay, if at all, by hard work, economy, and enterprise. No wonder that the cry is going up from rural England, "We are betrayed!" The wicked Radicals could not have played Hodge a scurvier trick. The situation lends point to a satirical letter in the *Daily News* loudly denouncing the Ministry for shamelessly going off to Continental watering-places and Scotch links, when by simply forcing a bill through Parliament they could put thousands of idle men at work, and bring back the glories of English agriculture. At least, they said they could before the election.

Religious education in public schools, how to get it, and how to guard and limit it, is a leading part of the school question so much discussed in England just now. The great aim is somehow to unite the board schools, the Church of England and Catholic and other voluntary schools, into one great national system. But there are two serious obstacles in the way. One is the expense. If all the voluntary schools are to be thrown on the state, if the proportion of the expenses of the board schools now paid by parents—about one-fifth—is also to be laid upon the public funds, what is a badgered and desperate Chancellor of the Exchequer to do? He is already at his wit's end, what with demands on him for national defence and colonial expansion. In fact, Lord Salisbury some time ago, when in Opposition, warned the advocates of school consolidation that it would not do for them to make a raid on the national exchequer. Now that he is in power will he cry, hang the expense? Probably not, with so many other more agreeable and glorious ways of spending money.

But there would remain, in any case, the enormous difficulty of devising a system of religious teaching that would satisfy Churchmen, Catholics, and Nonconformists, not to speak of Unitarians, Jews, Agnostics, and Theosophists. Of course there might be, as there is now, a "conscience clause," under which the religious part of the school exercises could be omitted by any children whose parents might so desire. But that would not do away with the evil, under which Catholics and Churchmen now groan, of ratepayers being taxed to support schools which they disapprove. The Rev. Hugh Price Hughes, speaking for the Nonconformists, has said that he would agree to a system of national schools "free from denominational bias," in which only "historical Christianity" should be taught. But denominational bias is exactly what Catholics and Churchmen want, the more of it the better. And as for historical Christianity, the question at once arises, whose? There is an historical Christianity which it would be as absurd to teach as it would historical chemistry, while, of course, each sect is prepared to maintain that its own crotchets are precisely what the Apostles held and taught. All told, the likelihood of a satisfactory settlement seems remote. Dr. Martineau shows his great liberality, at the same time that he indicates the almost insoluble nature of the problem, when he says that while "holding fast the protection for the undogmatic conscience, we should add an equal provision for the dogmatic conscience."

THE NEW YORK CITY CANVASS.

Now that the struggle of rival interests is over and the nominations are made, it is worth while considering the suggestions we in this city get from the events of the last three weeks. The first thing which strikes even the most careless observer in looking back, is the extreme oddity of the whole process as a means of filling high State and municipal offices. The traveller from Mars, for instance, would never suppose that he was looking on at the efforts of a business community to provide itself with fit and proper governmental machinery. In the first place, the public was represented in it only by the Committee of Fifty, a volunteer organization created only two or three days before the nominations. The sole business of this committee was to prevent the nomination of unfit men, and in order to do it it had to engage in long and intricate negotiations, very much like those which people have sometimes to carry on for the recovery of stolen property or the ransom of a relative carried off by brigands in Greece or Macedonia. That is to say, the object of the "Organizations" was to get in as many bad men as possible, and that of the Fifty to keep down their number. The bargaining was all about the amount of the ransom or of the reward.

That this is not an exaggerated picture we think we may fairly conclude from the fact that there never has been on the part of the Organizations any public discussion whatever of the fitness of their candidates for the places they were intended to fill. We do not know, of course, what happened in the private caucuses, but after having followed pretty closely the public utterances of their spokesmen, we are unable to recall a single attempt to commend any candidate to the voters or to the Fifty on the ground that he would serve the public faithfully and efficiently. The one argument used in his favor was that he was "our man," or "we were entitled to the place," or anyhow that "we would not support the ticket unless we got it" (*i. e.*, would kill the prisoner unless the ransom was paid on a certain day). The consequences to the city or State of not supporting the ticket were never, so far as our observation has gone, even alluded to. It was simply a threat intended to make the other fellows pay up.

The resemblance of all the Organizations to Tammany in all this is easily seen. Their relation to the city is exactly the same as Tammany's. Tammany is an association for the distribution of offices among people who help to win elections, without regard to fitness or character. So are all the others. The public interest plays no part in the councils of any of them. They differ from Tammany simply in being composed of men of rather better character, and in distributing the offices among men of a slightly better grade. But the operations of both have exactly the same effect in concealing from the voters, especially the more ignorant and foreign-born ones, the real object of the elections and the importance of the public interest.

Thanks in the main to the Committee of Fifty, good nominations, on the whole, have been secured, but with more or less difficulty. The ransom has been cut down to a comparatively low figure, and the unfortunate captive is on the way home to his friends. The fact that two improvised committees have been able to accomplish this result in two successive years seems to us full of promise. All previous efforts at reform in New York, as well as we can at present remember, have lasted only one year. This year it has been possible to repeat the process which was so successful last year. Now, we look on this as an educational agency of the highest value, and we are confident that it will be repeated every year, until we have created a genuine municipal party strong enough to meet the Organizations in a fair trial of strength in the open field. It very much resembles the gradual emancipation of the burghs in the Middle Ages from the rule of feudal lords. At first they had to beg for charters; then they had to negotiate and pay in order to keep them, but finally they went out sword in hand, smote the barons hip and thigh, and had no further trouble. The steady reappearance each year of a body of representative men, with no axes to grind, and speaking for the public alone, and successfully parleying with the party spoilers, is to the masses a practical illustration of the nature of the non-partisan idea and of the real and proper object of elections. To the average poor and ignorant man in this city, this object has seemed, for a whole generation at least, to be purely the provision of salaries for the men who worked at the polls on the winning side. Consequently there has been to him nothing extraordinary in the condition of things in the Register's office, for instance, as revealed by the report of the Commissioners of Accounts. It has not seemed unnatural to him that all these liquor-dealers, butchers, janitors, feedmen, undertakers, pugilists, and cattlemen should be employed in copying old records and keeping the archives of a great commercial community. The idea that offices exist for the public service had indeed almost perished among the mass of New Yorkers, when the Committee of Seventy sought to revive it last year. And it must be remembered that all so-called Organizations, and not Tammany only, have a tendency to keep this idea in the background or in some way to shut the voters' eyes to it.

Each canvass should now be made the means of resuscitating and cherishing it through such organizations as the Fifty and the Good Government clubs. We cannot get any new idea into the heads of 300,000 people all at once. The process must necessarily be slow, but if the operation of this year be steadily repeated each year, the result is certain. The committee which represents the public will every year grow stronger, the Organizations weaker. Besides educating the masses, we shall do something to rid the heads of young men of education of the idea that there is something awfully 'cute and practical and worldly wise in belonging to and running Organizations, to get offices for "our men," and in imposing on the public in high places the riff-raff of our politics and business, people who cannot in a land of industry make a living in any business calling. We have to teach them that this is a dirty and dishonest business, in which self-respecting men ought not to engage; that the first allegiance of every inhabitant of a city is due to the city; that he owes it to his neighbors and friends, and the community which protects them, to provide it with the best government in his power; and to the land of his birth to give it officials over whom patriots will not hang their heads for shame. Any man who, having contributed in ever so slight a degree to make our Record Office what we learn that it is, still calls himself "a patriot," is a supremely ridiculous person.

SYMPATHY FOR CUBA.

GROTESQUE as have been many of the resolutions in favor of Cuban independence, adopted variously in this country at club, caucus, or convention, those passed last week at the South Carolina Constitutional Convention easily lead all the rest in fantastic inconsistency. The main object and aim of this convention has been and is, directly or indirectly, to disfranchise the negro. Its ablest powers of double intention and skill in sailing close to the letter of the federal Constitution have been and are employed in compassing the legal rule of the minority over the majority, because the majority is black. Yet, with this tyrannous purpose unconcealed, the convention paused long enough in its work of plotting, to adopt, in a kind of tearful hush, resolutions in favor of the speedy independence of Cuba. Did the ardent South Carolinians know that more than half the population of Cuba is negro? Did they know that at least three-fifths of the insurgent bands, for whose success they so devoutly pray, are of negro blood? Probably they neither knew nor cared. They were too busy scheming to put the negroes of South Carolina under their footstool to reflect how a pious wish for negro supremacy in Cuba would strike a sceptical public.

But they are not alone, they are simply first, in such absurdity. For weeks past politicians and popularity-seekers in the United States have been disguising, or attempting to disguise, their assaults on the liberty, safety, and dignity of their own cities and States by effusive deliver-

ances in behalf of Cuban freedom. In Chicago rival Republican factions fell upon each other with more than the fury of Guelph and Ghibelline. The wounded and the dying had to be carried out of the fray, but the contending bandits were perfectly ready to declare a truce long enough to pass patriotic resolutions in aid of struggling Cuba. At the New York State conventions of both parties, where every effort was made to fool and cheat and betray the people of this commonwealth on the only issue up for decision, the tricksters dropped their work of chicane to lift up a prayer for oppressed Cuba. In this city, when Platt and anti-Platt were struggling in convention for the possession of the Republican machine, for the better degradation and spoliation of the municipality, and when the police reserves were called out to suppress the rioting, the din of the fierce contest suddenly died away as the familiar Cuban resolution was introduced. By all means let Cuba be free, though the fetters of boss, heeler, and gang be but the more securely riveted on America.

It should be said, in fairness, that this is not all trickery and hypocrisy. A good part of it springs from sheer ignorance and stupidity. The ignorance of these patriotic resolvers about Cuba is, of course, something vast and inconceivable —but we do not mean that. What they are most profoundly ignorant and stupid about is their own business. They are (if we charitably take their own account of themselves) the men who are to do our governing for us in this country. They are to furnish the policy, and the power to execute it, for our States and cities. But to devise such a policy, even to hint at it in words which shall not be too obviously ridiculous, requires some knowledge, requires some thought. But where, in their conventions, will one find skull-room for such thought? The heads one encounters there would ache at the very idea of getting up a comprehensive plan of city improvements—of bringing New York within hailing distance of the great cities of Europe in the matter of streets and docks and public charities. So of any rational policy of State administration. It is not in them. Dodging all such brain-racking subjects, they follow the line of least resistance in coming out strong for the inalienable rights of man, liberty and independence, and down with all tyrants.

But their sympathy for Cuba is not wholly an artful dodge. In it there lurks also a dim desire to do something popular. They are vaguely aware that they cut a pretty poor figure in their ravening over the spoils, and think to dignify themselves a little and ingratiate themselves with a suspicious public by expressing an unselfish interest in men who they suppose are heroic, even if they are not so themselves. But this use of Cuba for purposes of popularity is as futile as its use as a dodge. The time has gone by when a public man can be popular because his heart is true to the oppressed of all nations, unless he has some concern for the oppressed of this nation. One road, and one road only, to popularity is now open in this country. It is the road by which public servants march victoriously to good administration. Cities are to be rescued from waste and misrule. The public service of State and nation is to be made to approximate private service in point of skill and fidelity. The men who can show the people how to do this, and do it, are the men who will be popular. But they will have to be born administrators, men of war from their youth, masters of detail, persistent, indomitable. The Boys are quite right in thinking they can never win popularity in this way. Let them stick to their Cuban resolutions. But let them not think that their resolutions will make them either popular or much longer tolerable.

Lord Palmerston once told the House of Commons that the British cavalry would be an ideal body if the men only knew how to ride horseback. So would our party organizations be models of usefulness if they would but do what they profess their one aim is to do. This is to furnish good government, not to free Cuba. When they shamelessly abandon the former and set about the latter, by way of resolution, they are like nothing so much as a gorgeously apparelled trooper, armed to the teeth, but going over the head of his horse at the first charge. Their obituary will be like that of the Georgia desperado, of whom the charitable editor said that, whatever shortcomings might be laid to his charge in his dealings with his fellows, it could not be denied that he had always been kind to animals.

"*SOME PROBLEMS OF THE AGE.*"

An article under the above heading appears in the last number of the *North American Review* from the pen of Dean Farrar of Canterbury, which will add to the regret with which most intelligent students of human affairs have watched the part the clergy have taken in the economical and sociological discussions of the last twenty years. We should be sorry to say they had all worked mischief, for a good many have kept their heads, and the great majority have performed the best service most men can render to their fellow-men by active, diligent work in the field in which Providence has placed them. But by far the larger part of the talk of the talking ones about poverty and labor has simply promoted strife and irrationality, and thereby lowered the importance of character in the eyes of the ignorant and less thoughtful portion of the community. Nothing does more mischief at this crisis than the suggestion to the poor that the world is going down hill, and that the well-to-do are responsible for it. The continual reproduction of this thesis in vague and somewhat wordy rhetoric is one of the most unsettling agencies of the day, and renders the solution of nearly all the pressing and soluble economical problems more and more difficult.

Dean Farrar's first "problem" is the growth of large fortunes and the collocation of wealth and poverty in the large cities. His account of the matter would leave on the mind of any ignorant man the impression that it was the riches which produced the poverty, and the happiness of the prosperous which begot the misery of the paupers. The truth is that the connection between them is almost wholly topographical. The presence of large masses of poverty in cities is largely due to the flocking into the towns of the vicious, the lazy, the unfortunate, and the incompetent. They come there to seek their fortunes, and are soon the victims of their own mistake. The industrious and prosperous do not encourage or invite them, and could not keep them out of the cities if they would. The Dean also suggests that somebody is to blame for this rapid growth of the large cities, and quotes Heinrich Heine, James Russell Lowell, and Huxley, Lord Rosebery and Chauncey Depew in support of the thesis that there are far more people in cities than there ought to be. But what is the remedy? If he does not propose to fix the population of cities by law, what does he mean by calling the size of cities a "problem"? If he does, who is to decide when a city has enough inhabitants?

He expresses, too, great "anxiety" about "the unparalleled growth of population." But he does not say how population is to be kept down. He predicts "hurricanes of disturbance" in trade, which will throw vast numbers of people out of employment if the "unfit" do not stop increasing, and declares that "very dark days may be within measurable distance of our present conditions of society." But how are the unfit to be kept from increasing? Are the well-to-do responsible for the size of shiftless men's families? But the worst passage in the essay is this:

> "Yet though the actual laborers are ever being multiplied, 'the fund available for them becomes a constantly decreasing factor of the national wealth,' and while the rich are growing richer, the great masses of the poor are growing relatively poorer."

Nothing has done more to turn the thoughts of the poor away from honest industry and fill their hearts with bitterness than the repetition of this assertion, which in the mouth of Debs or Sovereign we should call wicked nonsense, but which in the mouth of a Dean we suppose we must treat more respectfully. Any one who wrote on this theme with knowledge would know that wages had greatly risen in all branches of industry throughout the civilized world during the last quarter of a century, and that not only

have wages risen, but the necessaries and comforts of life have fallen, so that the working classes are on the whole better fed, lodged, clothed, and taught, enjoy more freedom and in all ways a larger and happier life than at any previous period of the Christian era. What is declining is not "the fund available for the laborer," but the capitalist's share of production. This great falling off in the inducement to save, otherwise known as the lowering of the rate of interest, is in fact one of the most serious phenomena of the industrial world to-day.

What is nearly as bad is the suggestion, which runs through nearly all jeremiads like Dean Farrar's, that the rich spend all their money in senseless and selfish luxuries, so that the poor get no benefit from accumulated wealth. A very small amount of reflection ought to show any man who thinks about these things at all, that in our day all large fortunes have to be invested in something in order to produce income; that no invested fortune can yield income unless it employs labor; and that the proportion of a large fortune which even the most selfish and luxurious man can spend on himself in a year is necessarily extremely small compared with what goes out in wages and in the plant used for the employment of labor.

The Dean's fears about various other hobgoblins, cyclones, hurricanes, and cataclysms, will hardly repay discussion. In truth, they hardly need discussion in view of the fact, with which every middle-aged man is familiar, that the advance of the world during the last fifty years in everything which makes for human happiness and comfort has been enormous. In the article alone of security from violence, oppression, or injustice, this advance has surpassed the wildest dreams of all past ages. In fact, at no period in the history of mankind have the masses of the people enjoyed so large a share in the benefits of a very high civilization; and the improvement continues, in spite of the demagogues and utopists, who are now the greatest hindrances to human progress. Character, thanks to them, is having just now the greatest struggle it has ever had for its proper share in moulding the destinies of the race. Frantic efforts are being made, too many of them clerical, to persuade the masses that lack of forethought, temperance, industry, and fidelity can be supplied by legislation, and that the failures of the world have a right to live on the virtuous and happy. The result has been much heartburning and delusion, but "this too will pass." The fittest will survive, and their morality is sure in the long run to rule the world.

Dean Farrar's final remedy for the woes he describes, which comes in at the end, is "true religion." What this means he does not distinctly explain. But we suppose, when produced in a semi-economical article, it must mean something concrete and palpable, such as an immense turning to the church on the part of the masses. Dr. Strong some years ago published a book somewhat like the Dean's article, giving a very depressing picture of the moral and social condition of "Our Country." Turning over to the end for the remedy, we found it to consist in greater activity on the part of the home-missionary societies. Now we are not the least disposed to make light of the value of religion as help or consolation to individuals when sorely tried by the problems of their own lives. But to those who know the small share which organized religion has had, in five centuries, in solving economical and social problems, in improving the condition of the poor, or establishing healthier relations between classes, there is a certain mockery in inviting the masses to go to church if they wish to see population kept down, cities well governed, and the rich made to spend their money properly — and the masses feel it.

THE SCHOOL QUESTION IN ENGLAND.

JUDGING from the Cranborne - Balfour correspondence, the coalition Government is about to do more at one stroke for Liberal reorganization than could be accomplished by a score of conferences at the National Liberal Club, or by the most effective overhauling of the National Liberal Federation. It is going to reopen the compromise in regard to national education which was come to in 1870. By so doing it will at once raise a standard around which the now demoralized forces of Liberalism may gather. At present the Liberals are divided as to leadership, and are practically without a programme. As soon, however, as the education question is brought within the field of parliamentary discussion, the Liberals will settle among themselves who is to lead, and will begin to draw back to their ranks some of the numerous stragglers whose desertion helped to bring about the catastrophe of July.

With home rule for the present out of the way, there is no question of English domestic politics which arouses a livelier interest than that of state aid to denominational schools. It is the question which, more than any other, keeps alive the feeling of the old school of Nonconformists against the Established Church. Nonconformists of this school still feel that they were unfairly treated when, in 1870, Mr. Gladstone and the late Mr. Forster set up the compromise in the elementary-education system which gave so much to the Established Church. The church is the only body which, in the long run, really gained by the compromise. As a result of it, that body now handles more than three millions sterling a year from the imperial treasury, with little public control. There is no local representative control of the church day-schools, and the only imperial control is that which is exercised through the occasional visits of the inspectors from the Education Department, and the general oversight which is given by that department to all public elementary schools, whether in the hands of school boards or in those of local committees appointed exclusively by the Church of England parsons. This sum of three million pounds, however, does not meet the needs of the Church of England in connection with its 15,000 schools. Parliament never intended that it should. It was given the church in 1870, and by subsequent legislation, on the understanding that Churchmen would raise among themselves a certain quota (roughly speaking about one-sixth) of the total cost of maintaining their schools.

For several years past Churchmen have been complaining of the hardship of raising this money. They would not surrender their schools to the school boards, because that would involve a giving up of the right of doctrinal teaching which the church schools now possess. As they will not make this surrender, and as they are unable to raise the money called for by the compromise of 1870, Churchmen are now pressing the Salisbury Government to provide the entire cost of the church schools from the imperial exchequer, and still leave Churchmen in undisputed control of the management of the schools. At first the Churchmen conceived the idea that they could obtain what they wanted from local taxation, in the same way as the school boards, and it was only when they realized that any connection with local-taxation funds would involve local representative control, that they devised the plan of making a new and bold claim on Imperial funds. Any concession to this claim means an inroad on the school-board system, and already the Nonconformists and the advocates of an unsectarian school system are putting themselves in opposition to this new demand. The agitation is the most striking feature in English politics since the election.

If the Government are really determined on making concessions, any opposition on the part of the Liberals in the House of Commons will be little more than a forlorn hope in view of the great majority opposed to them. But the agitation will undoubtedly serve to pull the Liberal party together again. It may, however, prove fatal to the alliance between the Liberals and the Nationalists. The English Roman Catholics are at one with the Church of England party in demanding a reopening of the question. The Catholics, like the Church of England, have always been bitterly antagonistic to the school-board system, and in many places they have helped the Churchmen either to prevent school boards from being established, or to restrict their usefulness when they had come into existence. The English Catholics, headed in Parliament by the Duke of Norfolk, are hoping to gain something by the resettlement; and in view of this

expectation the action of the Irish Nationalist members will be most eagerly watched. Most of them are of the Roman Catholic Church. They too are hoping to get something more for the Catholic schools in Ireland from the coalition Government. If they go with the Government on the English school question, the alliance between them and the Liberals must almost of necessity come to an end. The publication of the Cranborne-Balfour correspondence was, of course, something the Liberals could not have anticipated when they postponed from August to October the meeting which was convened in London for discussing the reorganization of the party. Had they suspected that these letters were in existence, they would have had a sufficient justification for postponing the meeting until it was authoritatively known that the leader of the House of Commons was "extremely anxious that something effectual should be done to relieve the intolerable strain" to which, he alleges, the church schools are subjected.

THE EUROPEAN WAR OUTLOOK.

PARIS, September 27, 1895.

AT the time of the alliance of the three Emperors, much attention was given every year to the visits which the three sovereigns never failed to make each other. Those times are already distant; new constellations have been formed in the political sky. The triangle of Germany, Austria, and Russia was broken after the death of the sovereign who fell under the bomb of the Nihilists. At the same time that Italy became engaged in a new Triple Alliance, France and Russia felt drawn towards each other, till finally their compact, their alliance, has become a patent fact and a political factor of the greatest importance. In his pine forests Prince Bismarck can, in his meditations, plume himself on always having very keenly felt the importance for Germany of Russia's good will, or at least of her neutrality. He can remember the benefits which he derived from this neutrality during the war of 1870, and he must have seen with much alarm the growth of new ideas and new sentiments at the Court of St. Petersburg The Treaty of Berlin, however, was the beginning of the new era; and Berlin was the very place where Russia, thinking or finding herself despoiled of the result of her sacrifices in the Turkish war, was forced, so to speak, into an entirely new policy, and had to look for warmer friendships and more useful alliances. On the 26th of February, 1871, when the preliminaries of peace with France were signed, the Emperor of Germany telegraphed immediately to St. Petersburg: "Never will Prussia forget that she owes to you the fact that the war did not assume extreme proportions. God bless you! Your grateful friend for life."

Russia obtained, after the war of 1870, the abrogation of article 2 of the Treaty of Paris, but this conquest seemed very small compared to the conquests of Germany. After Sedan and the annexation of Alsace-Lorraine to Germany, Russia felt very much as France felt the day after Sadowa. The secret feeling of enmity between the Slavic and the German races, which had always existed and which had been kept under control by diplomacy and by the personal action of the Russian and German crowns, was allowed freer play, and soon found daily expression in the press and in literature. The feelings of Russia also found expression in a new interest in conquered and vanquished France, in the incessant invitations made to her to "make herself strong again." Finally, this growing interest took a dramatic and enthusiastic form, and it may be said of the Franco-Russian alliance, what young General Bonaparte said after his first victories, to the Austrian generals: "The French Republic exists; it is as visible as the sun."

The French manœuvres took place this year near the eastern frontier of France. Four corps d'armée, at the end of these manœuvres, were passed in review by the French President, who had on one side Gen. Dragomiroff, the Russian military envoy, and on the other side Prince Lobanoff, the Russian Chancellor. The presence of Prince Lobanoff is a very significant fact. The Prince is known not only as a distinguished writer (he has published interesting works on Mary Stuart, on Marie Antoinette, and on Madame de Coigny), very familiar with France and French literature; he is known besides as a very experienced and shrewd diplomatist. His presence was a sort of demonstration. France has become, as the *Times* said, the banker of Russia; Russia makes herself in return the knight in-arms of France.

The peculiar character of the Russian Government gives a great significance to the acts of the Russian Chancellor: Prince Lobanoff represented directly his sovereign, and it has now become apparent to all that the new Emperor of Russia has accepted the whole heritage of his father's policy. He has shown it not only in this recent circumstance, but also in his attitude towards the Prince of Bulgaria and the Bulgarian deputation which recently visited Russia. This deputation was cordially received, but it returned to Sofia without having accomplished its mission; much sympathy was manifested for the Bulgarian people by the Russian Government, but no distinct promises were given. The assassination of Stambuloff took place while the deputation was in Russia; the Prince of Bulgaria himself was at the time at Carlsbad, and, for a moment, it seemed doubtful if he would return to his capital. He is now at Sofia, and seems to be less eager to be officially recognized by Russia and by the Powers which were the signatories of the Treaty of Berlin. It is highly probable that his son Prince Boris will be educated in the orthodox faith if Prince Ferdinand is ever recognized. Russia does not make a formal condition of this conversion—in fact, she makes no conditions at all; she speaks only of the Treaty of Berlin. She wishes to constrain Prince Ferdinand to make a sort of unconditional surrender. If Bulgaria cannot well dispense with Russia's good will, Russia has, on her side, the greatest interest in securing, in time of war, the alliance of Bulgaria. It is, in fact, evident that the new kingdom of Rumania has been drawn into the compact of the Triple Alliance. The King is a Hohenzollern; the Rumanians have a very good army and showed great military qualities at Plevna. Within a few years Rumania has built a line of forts on the most improved modern principles, with revolving steel turrets. The crossing of the Danube by a Russian army and the march on the Balkans will now be more difficult than ever; if Rumania, in a war between Russia and Austria, brings her army into action, and forces the Russians to lay siege to her forts, the occupation of the Balkan peninsula by an invading army will become a very serious task.

Things will be very different if Bulgaria attacks Rumania in the rear and with the help of a Russian force coming from Varna; all the forts built at so much expense by Rumania will become useless and will fall, to use a military expression, like card-houses. It is therefore essential for Russia to counterbalance Rumania by Bulgaria, and to secure the services, in an eventuality, of the large and well-organized (so it is said, at least) Bulgarian army. These considerations are sure to have much weight when even the Russian Government deems it necessary to put an end to the provisional character of the Government of the Bulgarian Principality.

A young Emperor, having a whole lifetime before him, not devoid of ambition nor of intelligence, can form great plans and cherish great hopes. On ascending the throne the new Tsar resolutely declared to the Delegates of the Provincial Councils that he would maintain intact the autocratic principle; all the more must he be prepared to have a policy suited to the aspirations of his people. The most obvious trait of this policy is the alliance with France and the constant exchange of communications between France and Russia on all questions which affect either one or other of the two countries, or which might affect them both. Germany, to be sure, was a party to the agreement which imposed the treaty of peace of Simonosaki on the Japanese Government; but it soon became clear that Germany had been asked only by courtesy to join Russia and France; in reality the new Chino-Russian loan which allowed China to satisfy Japan was entirely subscribed in France.

I have read many articles on the late English elections which gave such an overwhelming majority to the Conservatives; many are the causes which have been cited to explain the defeat of the Gladstonian party. One cause has probably been operating which could not be apparent on the surface. It is probable that England was, unconsciously, perhaps, more or less moved by the present state of European affairs. The French people are more reasonable than the French press, and, I may add, than French diplomacy. The French, as a nation, have no desire to quarrel with England, but our papers have been for the past few years constantly quarrelling with England. Forgetting that we had been asked by England to join her in Egypt, and had refused, they have incessantly urged England to leave Egypt, and found fault with her agents at Cairo. This perpetual warfare could but produce a certain irritation in the English mind, and this irritation was increased by discussions about the frontiers of Siam, by a number of small questions which in themselves are unimportant, but which had a cumulative effect and created a final impression on the English mind. The cordial alliance of France with Russia (I use a word which, in the time of Louis-Philippe, was applied to the English alliance) has perhaps even more than anything else created in England some apprehension for the future. Russia is considered by England and is perhaps in reality what the Germans call an *Erbfeind*. The prospect of a gigantic struggle of all the civilized nations of Europe—a struggle in which on one side would be Germany, Austria, and Italy, on the other France and Russia—is so terrible that, even in its most shadowy form, it must invite a thinking mind to meditate on all the possibilities of the future. England is not ready to

enter into a definite alliance; she has no conquests to make or to keep in Europe, but she has interests throughout the world, and she is very jealous of her high position. The instinct of conservatism has drawn her again to the conservative side, and she waits for events, confiding in the wisdom and foresight of those whom she has now called to power.

In the present state of Europe, when a mere incident may set fire to the inflammable material which is everywhere collecting, England has felt the necessity of augmenting her navy, and she is even meditating great changes in her military organization. The situation of Europe, on the whole, is one which can but be cause of great anxiety to those who are not content with the optimistic and banal assurances of official diplomacy. If ever there was a time when it could be said, "They cry peace, peace, when there is no peace," it is our time, when all nations are preparing for war, are looking for alliances, and celebrate with unusual pomp the anniversaries of their victories.

SOME LESSER SPANISH SUMMER RESORTS.

GUERNICA, BISCAY, August 18, 1895.

"YOU will want to *see* San Sebastian, of course," the Spanish novelist Palacio Valdés was good enough to write me, "but that is too *bullicioso* (boisterous) for us who like quiet and the amiable converse with nature." He recommended instead various other, smaller places, in the north, as full of rural charm, and particularly Deva. I did see San Sebastian, the chief watering-place of Spain and summer residence of the court, and it will be remembered that bustle which is commonplace to one overfamiliar with it may be entertaining enough to a stranger to whom all its sights and sounds are novel. But to the lesser and much less frequented field I shall devote this letter.

And, first, was it not unsafe to go to Spain in summer? Can you support the heat well enough to have any pleasure there? I shall only reply, on this score, that I have never been once incommoded by the heat. Generally the temperature is of that delightful sort that you never give it a thought. No, the American is tempered by his experiences for any part of the globe. It was amusing, at Deva, the other day, to hear an acquaintance who knew America explain its climate to another who did not. "The sky is very blue," said he, "and the climate is like that of Madrid, only worse." Shall I repeat once more the old truism about Madrid climate, "Nine months winter and three months hell"?

The first of the minor resorts that I saw was Fuenterrabía. I did not know at the time that it laid claim to be a watering-place, but I came to think rather more of its modest accommodations when I had seen those further on. Fuenterrabía lies in a litle eddy just off the main line of travel from the frontier, and it owes its support largely to the tourists who find it so easy to run over there to see a surviving bit of the middle ages, and to attend the bull-fights organized for their especial benefit. I have seen several times since, in the journals, that its beach is *muy concurrida* (very much frequented), but when I was there I had a long hunt to find a bathing-cabin. I walked on beyond the last houses and around a rocky point, and a peasant woman came out from a shabby old farmhouse to open the cabin for me. In compensation, the lovely views of the rugged coast, the Pyrenees and the mediæval town, piled up around the castle of Charles V., were such as a swimmer seldom has opportunity to enjoy. This ruined castle, now about in the condition of an abandoned lime-kiln, is for sale, for $20,000. It is from the romantic sentiment of the English that most is expected, as the sign-board is written in that language. Yet it is not having rapid effect, for the sign-board looks almost as old as the castle.

The Spaniards are much bent upon making their season first at the springs and then at the sea. Even some peasants in costume—I am told that they are much better off than they look—will do this. Palacio Valdés has chosen the Baths of Marmolejo for the opening of his novel 'Sister San Sulpicio,' and the description of such an establishment therein will be found entirely accurate. To honor the custom, I visited in turn two of these baths in a famous part of Guipúzcoa. They are reached from San Sebastian by a narrow-gauge railway, and then a few hours' stage-coaching. The first was San Juan de Azcoitia. As I drew near it I saw a gay little bath establishment, striped pink and white, and near by a small *fonda* (inn), not at all so smart. It could accommodate at most a dozen or fifteen persons. It was entirely occupied at the moment by a single family—a family of distinguished standing at San Sebastian. In the party, by the way, was found an American English-speaking member, American by way of the Cuban connection with New York. The men had their cameras and bicycles, or would go and play handball in the resounding court of the bath house, into which poured the stream of cold sulphur water. Board was six pesetas (francs) a day, and the food excellent. The site is a small fertile valley, with a town at either end, and a grand monastery, erected at the birthplace of Ignatius Loyola, in the centre. People are always straying up there by twos and threes to visit the architectural marvel. René Bazin, among others, describes it in his excellent book, 'Terre d'Espagne,' which must now begin to be heard of in America. The building is said to be planned in the shape of an eagle, but it is not like an eagle at all—further than that any porch may be said to resemble a beak, any side portions wings, and any rear projection a tail.

The worst of it was that the four days' *fiestas* of the saint were in progress. They are called the most important in all this part of Spain, but Spain is quite *fiesta* enough for the stranger in its ordinary aspect, and the festival simply meant that it was almost impossible to secure a bed or a conveyance. A word of warning, then. Such fêtes break out in all the localities in turn, particularly about the Assumption, the 15th of August; and, unless the traveller is of that luxurious and far-seeing kind who commands the best of everything long in advance, he will do well to keep away at such times. It is not the mere "roughing it" that matters, for *À la guerre comme à la guerre* is a motto that every good traveller keeps well in mind; but it is the unhygienic and malodorous aspects—lodgings, for instance, that seem to poison one while he sleeps. The Basque peasants dress in grave, dark-blue stuffs, as in Brittany. They had church processions, their fine ball game of *pelota*, and bull fights, for which the main plaza of the town, as the custom is, was reserved. The enthusiastic youth who piloted me from the inn to a poor chamber in a remote part of Azpeitia at midnight would have me enter to see the tiers of rude wooden seats in the Plaza even at that hour. The people in the gayly decked balconies looking down into it from all around are the chief part of the spectacle. These "fights" are worse in a way than the great ones in the cities, for the bulls are only poor oxen, who have no desire but to run away, and the maladroit assassins cannot touch a vital part, like the masters, but stab and stab, making an endless carnage.

The second of the baths was Cestona, an hour or more distant by coach; warm baths this time, sulphate of soda and chloride of soda. You are to take them for three weeks, and meantime you dine well in a fine large banquet-hall, and dance or hear concerts in a yet nobler ball-room and theatre. There are going to be, besides, halls for play (gambling), a park with gymnasium, velodrome, and skating-rink, for it is not nearly finished as yet—it was opened only last month. That is to say, the new and expensive Gran Hotel, which is to be a bit of Saratoga, was only just opened, but this is superposed upon a sober ancient establishment, with long arcade and dampish, shady avenue that recalls Saratoga too, after the way in which all mineral springs resemble one another. Many of the people had that cosmopolitan look that equalizes types, so that it was not always easy to pick out their nationality. The village, half a kilometre up the road, the hard, level Spanish road, as smooth as one of those in Central Park, is a satisfactory spot of picturesqueness. The guest at the hotel would be well at the end of his three weeks' cure before he had transferred to his sketch book all the aspects of its curious plaza and dwellings, its neat, rural look, its half-Alpine site, the odd little chapels in the pastures, the fertile cultivation that climbs high up the mountains, and the gray summits, bare and ploughed with glacial action, that frown above it.

The small seaside resorts fall pretty much under one head as to plan, like the towns on the Riviera. There is a little break in the vast cliffs, and in the bottom occurs a patch of the smoothest yellow sand, no sand at all being found elsewhere. Generally there is a small river, which shelters some sardine-fishers, and which has seen in earlier days the building of galleys and caravels. Each has two or three modern villas. Each has sent forth naval sons of note, whose statues often adorn their market-places. From Guetaria came Elcano, who first made the circuit of the globe, and from Motrico the gallant Churruca, who fell fighting Nelson at Trafalgar.

The short links of railway are extending and will be connected, so that before long the gallop of the *diligencia* along the coast-road may be a thing of the past. I set out by coach from Zarauz, between sixteen and seventeen miles westward of San Sebastian. Zarauz itself seemed to me one of the best of these bathing-stations. It may have 3,000 inhabitants. A castellated house, with end walls corbelled out high in the air and pierced with trefoils, is a unique feature of its main street. A yet pleasanter one is that by the sea, occupied by the Duke of Grenada, with fountain and garden and one of those characteristic Spanish round entrance-arches that have the arch-stones four or five feet long and a grand carved shield over the top. This nobleman is rich in old houses, for I saw another one of his at Azcoitia, a fortress sleeked down to modern uses, and the most remarkable of them all at Motrico, an astonishingly becarved and becolumned Renaissance palace, going quite to ruin. A regular feature of the old houses, large and small, is the great projection of their darksome eaves, which are held up by two or three tiers of handsomely carved brackets.

The beach is smooth and even, without so

much as a shell or a pebble. Upon it are a dozen bathing-machines and a few bright tents, under which nurse-maids watch the children. You look down upon it from a small pavilion in the Calle del Arenal, back of which are some houses striped red and yellow, like the flag of Spain—in colors that run—bearing such names as "Villa Elvira" and "Villa Maria Teresa." Queen Isabella II. was a frequenter of Zarauz, and its handful of better villas contain a society of the most considerable titles in Spain, at least four noble dukes among them. The humbler visitor stops at the inn in the plaza, which is noisy though picturesque, or finds a furnished room along the neat Calle del Arenal. Possibly the best are at the Casino, a mere effort at sociability, a meeting-place more than modest, though it has a duke for president of honor. My most pleasant recollection of it is not of its rickety piano, nor of its scanty library, composed of a few tattered translations from Miss Braddon, but of the circumstance that a serving-maid was sweeping down the halls and stairs with a broom made of large branches of fresh mint. This had no more poetic purpose than to dislodge the wicked flea—it is a pity the specific is not more widely known and used—but it leaves, even in memory, a grateful fragrance on the air.

You leave Zarauz, rounding a very bold headland; it is the same in leaving them all. Again the strong saline breeze salutes you, and the view of the far-jutting capes of the coast, hidden there within, and the limitless expanse of that vast Bay of Biscay which can be so cruel to ships and is now so amiable and blue. The road is a mere notch in the steep glacis of solid yet friable rock, or is held up by costly retaining walls. It is a dangerous road. Even the light tread of the goats, feeding hundreds of feet above, is always sending down a fusillade of loose fragments, and the booming along of the diligence may easily dislodge larger pieces. It has already an expensive record of landslides, which will make a railroad when it comes very welcome.

Guetaria is a dark figure in the cliffs, where it is impossible to make out at once which is mere splintered cliff, which ruined bastions, which tall houses, which the original, old church, that has been declared a public monument. The *alcalde*, the mayor, keeps the inn, named for Elcano, by Elcano's statue. Zumaya, five kilometres further on, has yet taller houses, grouped around a plain church of the usual time-stained yellow stone. The bathing at both is most primitive. Here we turn back from the sea a little; the route offers a most happy combination of coast and mountain scenery. We outwit the steeps by the easy grades known to the skilled engineer. We pass under the fortress-like sanctuary of Iciar, with the straw stacks of a fruitful harvest all about it; out upon the cornice road again, and then by long windings down at last to Deva.

Deva stands on a piece of alluvial level. A row of small *fondas* with a few plain country houses extends along its small river, which further back turns mills in many pleasant mountain towns and villages. The narrow-laned town, with dark eaves, is back of this line, around the fountain and around the church, which has a square tower, unbroken, up to the bells, except by a single carved string-course, and which has a nobly spacious lofty interior and a quaint treasure of rococo saints and begilding. I should have a better opinion of the inns, no doubt, were it not that the local fêtes were on once more. The food they furnished was good. It is not the custom to use butter in the region. The prices were from 5 to 7½ pesetas a day. These are the standard prices, and Spanish money, too, is at a large discount. The guests were mostly Madrid people. They were friendly, natural, easy to enter into conversation with, and a few of the young women, the señoritas, were gay, vivacious, and comely to look at. Some of them came down gotten up for the bull-fights as *manolas*, *i. e.*, with the traditional mantilla, fan, and bright rose or lemon-hued gown, and they took pretty children along with them to see the butchery. The bathing, as elsewhere, is primitive. People sit around and watch it socially, but it is a homely rite, purely hygienic; any display of feminine grace is at once cut off by the discreet bath-cloak. I saw here a wonderful carved and gilded salon in the house of the Marqués de Valmar, dating from Philip II.'s time, and I went on to Motrico, ladder-like Motrico, to see the house and statue of Churruca.

I cannot dwell upon Portugalete and Las Arenas, the Brighton and Coney Island of the very prosperous city of Bilbao, for I must save a mere word for Guernica. The reason people come to Guernica—besides that it is a pretty mountain village in itself, with some curious palaces, frescoed outside in the Italian fashion—is that it contains the Basque liberty-oak. Being here, I pushed on too to Pedernales, at the coast, to see a much-advertised new bathing establishment just opened, It is on a bit of rocky island reached by a foot-bridge. The hotel calls itself Chacharramendi—I give it expressly as a specimen of a Basque name. It is of a severe plainness, the price is five pesetas a day, the water is clear, and it is a good resource to have at hand if one stops a while at Guernica.

The Basque provinces of Spain used to have, until they lost them through being such incorrigible Carlists, many special privileges, called their *Fueros*. It was the custom of their chiefs to swear to these rights here under an oak, always a scion of the one under which the ceremony first took place. It is something like what the Charter Oak was at Hartford. Curiously enough, the new one here, now thirty-five years old, sprang into being at just about the time the Charter Oak blew down. The old tree did not die, however, it simply withered, and its phantom-like trunk still stands, looking on in mournful fashion at the honors done to its green young successor. There is a miniature temple hard by, and, more important yet, a fine, grave building, occupied by the Legislature of Biscay before it moved to Bilbao. The hall is oval, belted round with the portraits of the historic chiefs, and having an altar elevated at one end. The curious thing about the trees is that they are gentle, almost lady-like. You expected to see gnarled trees, rugged as the bulls of Veragua, but they are slender and graceful, an index of much amenity of climate. What is really stout and rugged is the old church. There is an electric light let into its wall just beside statues so rude they might almost have been fashioned by the Aztecs.

But I find the most interesting thing at Guernica its casino or club. It occupies the upper story of the Fonda de Comercio, and membership costs five francs entrance-fee and a franc a month. No rickety piano here, but a good one, a really good billiard-table, card-tables, good refreshments, ample space; one can be very comfortable. It is excessively Spanish, not a trace of cosmopolitanism. The ascetic Spanish character crops out especially in the library. Among the books, handsomely bound, most in evidence is Veuillot's 'Life of Christ.' Fancy a life of Christ ornamenting any club table elsewhere! But, moreover, it is a Carlist club, distinctly making the Carlist propaganda. The Liberal residents of the town do not belong. The table in the reading-room is spread solely with such ultra-monarchical, such strongly Bourbon papers as *El Vasco* of Bilbao, *El Centro* of Madrid, and with volumes of the "Popular Carlist Library," published at Barcelona, to further the cause. At one end of the long assembly-room hangs a gift, a very good oil portrait of the exiled Don Carlos, long resident at Venice. It bears the following inscription: "To the Traditionalist Club of my well-beloved Guernica—Carlos."

It is a fact well known and boasted of that young Don Jaime, son of the pretender, made a trip, in disguise, all through this part of Spain, just a year ago at this time. There can be little doubt that he put in an appearance at this stronghold and the scene of the *Fueros*. He is now twenty-five years old; there is some talk of making a match between him and the elder of the two (school-girl) Spanish princesses, and so ending the long fight. I have endeavored to draw out our obliging waiter about him. "He was here, of course?" I said. "No, but the president of the club went to meet him, afterwards, in the conference that was held at St. Jean de Luz, over the French frontier." "Have you seen him?" he asked me in turn. "I? no." "*Un guapísimo!*" he exclaimed ardently—that is, a regular beauty. WILLIAM HENRY BISHOP.

Correspondence.

THE "DRIVING" OF THE REPUBLICANS.

TO THE EDITOR OF THE NATION:

SIR: In your issue of to-day you say:

"It is susceptible of proof, too, that the most mischievous errors the Republican party has committed since the war have been those to which they were driven by the Democrats—by the Democratic desire and purpose to do something worse. This is especially true of the Sherman act of 1890. The Democrats wanted to pass an act for the free coinage of silver, and did pass it through the Senate. The Republicans passed the Sherman act as a lesser evil."

What do you mean by saying that the Republicans passed the act "as a lesser evil"? They were not obliged to pass anything. They had a majority in both houses and the Presidency. To say that under such circumstances they were "driven by the Democrats" to pass the Sherman act, or, indeed, do anything that they did not want, seems, with all respect to you, to be simply absurd.

The truth is, that as long as the Sherman act appeared to be beneficial, or, at any rate, innocuous, the Republicans admitted, or rather claimed, the responsibility for its passage. But when it precipitated the panic of 1893 something had to be done to shift that responsibility, and the discovery was accordingly made that the fault really lay with those dreadful Democrats, who (although in a minority) had compelled the good Republicans (who were in a majority) to pass the iniquitous act. When it is remembered that the House was controlled by the Republicans, and the Republicans by Tom Reed, that the Senate was Republican and the President a Republican, the statement that under these circumstances the Republicans "were driven by the

Democrats" to do anything whatever, is, to say the least, rather remarkable.

As soon as the Sherman act appeared to be injurious it was, for the first time, disowned by John Sherman, with characteristic promptness. His example has since been followed by his party.—Respectfully yours,

DANIEL HOLSMAN.

PHILADELPHIA, October 3, 1895.

[Our contention was with Mr. Belmont, who wished to acquit the Democrats of all blame. Our correspondent merely amplifies the sentence which followed immediately the passage he quotes, and which read as follows: "It is true that the Republican party was then in power, and was chargeable with the mischievous consequences of that act."—ED. NATION.]

MEDICAL STUDENTS AND THE A. B. COURSE.

TO THE EDITOR OF THE NATION:

SIR: I feel obliged to express dissent from the statements made under the signature of W. H. Johnson in your issue of October 3. To determine the proper method of medical education is a problem of the highest difficulty and importance. An experience of thirty years in medical teaching, much of which was passed at one of the most numerously attended colleges in this country, has given me a knowledge of the motives and purposes of medical students. If any persons are led into medical study by any sort of curiosity, they must be in a very small minority. The moral character of medical students and graduates is not what it should be, but this is due to the influence of the period of life and to the temptations and opportunities which a large city affords. My acquaintanceship with men and women students has been intimate and extended, and I have never seen any evidence that prurient desires were prominent motives with them. The sights of the dissecting-room, operating-table, and obstetric clinic are not likely to minister to the sexual feelings of men of sound mind. Medical students, as a rule, dissect with zeal, but it is either because they realize the value of the knowledge thus acquired or are attracted by that most absorbing topic, the anatomy of the human frame. If I should see in any pupil a disposition to exaltation of sexual feeling in viewing the macerated and emaciated bodies on the dissecting-tables, I should be inclined to suspect a tendency to the form of insanity that is described in the works on sexual perversion.

Men and women study medicine as a means of livelihood. They are unfortunately not always actuated by the honest desire to obtain proper information, and some may be satisfied to take a diploma secured by fraud; but the fault in these respects rests with the college faculties, many of which in this country are little better than diploma mills, following the maxim once expressed by a medical professor: "Let the bars down low to let the boys in, and lower to let them out."

I feel sure that the study of medicine should be preceded by an education leading to a degree in arts. It is interesting to note that the extension of the course of medical study to four years has met with much more general acceptance than increase of the entrance requirements. Whatever may have been the controlling influence in this choice, we may be sure that failure to advance the standard for entrance to medical study has been largely determined by the cash consideration.

Yours, HENRY LEFFMANN.

715 WALNUT STREET, PHILADELPHIA, PA.

THE NAMING OF *PUNCH*.

MONSIEUR L'EDITEUR: Je viens de lire, dans la *Nation* du 4 juillet dernier, un très bienveillant article sur mon livre 'La Peinture Anglaise Contemporaine,' et je tiens, bien qu'un peu tard, à vous en exprimer tous mes remerciements.

Me permettrez-vous de répondre aussi un mot à l'une des reflexions de votre rédacteur. À la fin de l'article, il s'exprime ainsi:

"As, however, no Frenchman, however well informed, could write of anything English without at least one amusing blunder, we must drag forth from the obscurity of Appendix V the following passage, which nobly vindicates its author's right to the Gallic name: 'Foster donna des dessins au *Punch*, édité par M. Lemon (citron) d'où peut-être le nom bizarre de ce journal satirique."

Or il m'est impossible d'assumer la paternité de cette anecdote, ou de revendiquer l'honneur de ce calembour. C'est chez un auteur anglais que je l'ai trouvé, et si vous feuilletez 'The Art Annual for 1890,' intitulé "Birket Foster—his Life and Work," by Marcus B. Huish (Virtue & Co.), vous trouverez, page 6, ces mots:

"Foster well remembers the day when Landells came into the engraver's room, and said: 'Well, boys, we've fixed on the title; we're going to call it *Punch*,' an appellation which, when he had left, was unanimously voted a stupid one." Et en note: "The name came about from a pun upon Mark Lemon, the first editor's name, some one having suggested that *Punch* must be good with so much lemon."

Ainsi, Monsieur l'Editeur, ce passage qui, selon votre journal, "nobly vindicates its author's right to the Gallic name," se trouve être d'un anglais. La seule différence entre le texte anglais et le mien est que j'ai ajouté un "*peut-être*," ne croyant moi-même que faiblement à cette extraordinaire origine du nom du *Punch*.

Veuillez agréer, avec tous mes remerciements, l'expression de mes sentiments les plus distingués. ROBERT DE LA SIZERANNE.

TAIN, DRÔME, FRANCE, le 25 Septembre.

Notes.

ADDITIONAL announcements from the Messrs. Putnam are: 'The Ballads of the Nations,' in eight volumes, illustrated; "Stories of the Ages," a series beginning with Mrs. Gaskell's 'Cranford'; 'Tales of the Fjeld,' from Asbjörnsen, by Sir G. Dasent; 'Books and their Makers during the Middle Ages,' by George Haven Putnam; 'Russian Portraits,' by Viscount Melchior de Vogüé; 'Egyptian Decorative Art,' lectures by Prof. W. M. Flinders-Petrie; 'Israel among the Nations,' by Anatole Leroy-Beaulieu; 'The Proverbial Philosophy of Confucius,' selected by Foster H. Jenings; 'Old Diary Leaves,' the true story of the Theosophical Society, by Henry Steele Olcott; 'The Gold-Diggings of Cape Horn,' by John R. Spears; 'Fundamental Concepts of Economics,' by H. Dunning Macleod; and 'The British Barbarians: A Hill-Top Story,' by Grant Allen.

Macmillan & Co. have in press 'Browning Studies,' papers read before the Browning Society in London.

The autobiography of Mary Anderson Navarro will be issued in February by the Harpers.

Charles Scribner's Sons have nearly ready Mrs. Frances Hodgson Burnett's new child's story, 'Two Little Pilgrims' Progress.' We are also to have from them the following publications: 'The Art of Living,' by Judge Robert Grant, with 135 illustrations by Gibson and others; 'The Poor of Great Cities,' papers by Walter Besant, Jacob A. Riis, and others; 'Little Rivers,' "essays in profitable idleness," by the Rev. Dr. Henry Van Dyke; 'Reflections and Comments, 1865–1895,' by Edwin L. Godkin; 'Cruising among the Caribbees,' by the Rev. Dr. Charles Augustus Stoddard; 'Echoes from the Sabine Farm,' by Eugene Field and Roswell Martin Field, illustrated by E. H. Garrett; 'The Memoirs of Constant,' Napoleon's first valet-de-chambre; Dr. Ricci's 'Antonio Allegri da Coreggio: His Life, his Friends, and his Times,' abundantly illustrated; and a 'Cyclopædia of Architecture in Italy, Greece, and the Levant,' edited by W. P. P. Longfellow, and freely illustrated.

The Grolier Club has in hand the first complete collective edition of the poems of Dr. John Donne, to which Prof. Charles Eliot Norton will contribute a preface.

E. P. Dutton & Co. will soon bring out 'British and European Butterflies and Moths,' with thirty full-page color plates.

Duprat & Co. are preparing a fourth number of their 'Book-Lovers' Almanac,' with many and varied illustrations.

Mr. Stedman's 'A Victorian Anthology' and a volume of poems for children by Edith M. Thomas are in course of publication by Houghton, Mifflin & Co.

Prof. Morris H. Morgan of Harvard has edited for Ginn & Co. 'Eight Orations of Lysias.'

'Europe in Africa in the Nineteenth Century,' by Mrs. Latimer, will bear the imprint of A. C. McClurg & Co., Chicago.

A timely publication is 'Principles and Practice of Finance,' by Edward Carroll, jr. (G. P. Putnam's Sons). The statement of principles is intended to serve merely as an introduction to the statement of facts which makes up the bulk of the book, and may be disregarded by those who are familiar with economic doctrine. But the details of practical finance are far less accessible, and are given here with much evidence of painstaking on the part of the author. He takes up the money of the United States, the national and State banks, savings banks, trust companies, the exchanges, etc., and conducts the reader through the complicated affairs of all kinds of financial establishments with intelligent guidance. In fact, the book answers the purpose of a cyclopædia of all ordinary financial transactions, and as it is furnished with tables, a glossary, and an index, it may be recommended to those who desire to understand how monetary affairs are carried on.

'The Problem of the Aged Poor,' by Geoffrey Drage (London: Adam & Charles Black; New York: Macmillan), is an endeavor to place before the general reader in a condensed form the results of the investigations of the Royal Commission on the Aged Poor, as well as the substance of Mr. Charles Booth's inquiries, and the chief features of the Poor Law and Old Age Pension systems adopted in Germany and Denmark. The Royal Commission succeeded remarkably well in securing a large number of contradictory opinions concerning the proper treatment of paupers, but as some interesting practical information was also ob-

tained, its reports perhaps deserve exploration. It is convenient, also, to have Mr. Booth's work and the European systems treated in one volume. Otherwise, Mr. Drage's labors do not appear to us to be of any special merit, and the questions raised in England have become so complicated in their ramifications that no definite conclusions are likely to be reached, although the weight of evidence appears to be in favor of the limitation of almsgiving as being the chief cause of pauperism.

Mr. Jacob M. Moses of the Baltimore bar has published (through King Brothers of that city) a prize thesis entitled 'The Law Applicable to Strikes.' He discusses the law as it was and is concerning conspiracy and its modern developments in "boycotting" and "picketing"; the strike as affecting common carriers; and the legal remedies, action, injunction, and punishment for contempt of court. The essay is of interest chiefly to the legal profession, by whose members it may be found convenient for reference. The great strike at Chicago last year, and the action of the United States courts arising from it, naturally occupy a conspicuous place in the author's summary.

The task of tracing in the files of English and Scottish reviews the changes in the attitude of the English mind towards German literature during the last hundred years is interesting but laborious. A résumé, such as is found in Wilhelm Streuli's 'Thomas Carlyle als Vermittler deutscher Litteratur und deutschen Geister' (Zürich: Schulthess), will therefore be not unwelcome to many. The greater portion of the little work is devoted to the subject indicated by its title, and, though somewhat popular in its treatment of the theme, the book may prove of interest even to special students as a convenient summary of Carlyle's relations to the literature and authors of Germany, and of his literary mission-work at home.

One of the best of the many books called forth by the recent celebration of the twenty-fifth anniversary of the Franco-German war is 'Der Krieg gegen Frankreich und die Einigung Deutschlands' (Berlin: Asher), by Dr. Theodor Lindner, Professor of History in the University of Halle, who undertook the by no means easy task at the solicitation of the Prussian Minister of Public Instruction, and has performed it in a most admirable manner. It is written in an attractive style, and shows a fine sense of proportion in the narration of events and excellent judgment in the characterization of the principal personages. The causes of the war are clearly and concisely stated; the course of the campaign and of the several battles, the daily life of the soldier in camp, the political results of the appeal to arms are summarily but intelligibly described. The volume is neatly printed and richly illustrated, containing about one hundred and fifty engravings, of which twenty are full-page woodcuts. The maps and plans of battle-fields and of the theatre of the war in general are remarkably distinct, being free from the careless and excessive coloring and hatching which often obscure the lines of operation in such drawings. The moderate price of four marks ($1.00) for the elegantly bound volume ought to secure for it a wide circulation. The lack of an index greatly impairs its value.

The recently published report of the city savings-bank (Städtische Sparkasse) of Berlin for the year ending April 1, 1895, is a complete refutation of the assertion made by socialistic orators in Germany that the working classes are so poorly paid that they are forced to live from hand to mouth, and find it impossible to lay aside any portion of their wages. The amount on deposit at the end of the above mentioned period was 162,842,028 marks, being 11,566,766 marks more than on March 31, 1894; and nearly all these millions are the savings of laborers, men and women. The number of payments into the bank during the year was 526,295, of which 178,960 were in sums from 1 to 21 marks, and 162,212 in sums from 21 to 61 marks. The increase of the depositors, as shown by the account-books, was from 484,363 in 1894 to 509,732 in 1895. Of these account-books 159,732 contain a record of credit ranging from 1 to 61 marks, 88,527 from 61 to 151 marks, and 75,685 from 151 to 301 marks, thus proving that the depositors are mostly poor people. For the purpose of facilitating deposits and thus promoting thrift, the magistracy has established receiving-offices in all parts of the city; at present there are 76. The cash capital of the savings bank is 176,430,978 marks, *i. e.*, 13,588,950 in excess of the deposits. Of the profits 1,112,306 have been thus far expended for wo ks of public utility. These statistics suffice to show what demagogical nonsense American protectionists indulge in when they talk about the "pauper labor of Europe" and the necessity of an international barrier of high tariffs against this sort of competition.

A year ago we published some of the results of the work of the Oxford and Cambridge School Examination Board for the year 1894, calling attention to the evidence borne by them as to the conservatism of secondary education in Great Britain in respect to the teaching of the natural sciences. The tables for the present year show a still stronger preference for classical studies, for, though the number of candidates for certificates has increased by two hundred, those presenting the natural sciences are less in proportion than in the previous year. Two-thirds present Latin and more than a half Greek, but only one in eleven a branch of natural science. The subjects having the highest number of examinees were elementary mathematics, Scripture knowledge, history, Latin, French, and Greek. Eighty-two boys' and fifty girls' schools were represented.

It will interest New Englanders to learn that, in examining the records of Colchester Grammar School, Mr. Round has found an entry in the seventeenth century of a boy named Onge, who is described as having been born in New England. Mr. Round says that some of the emigrants returned to Colchester from New England, and then sent their sons to the grammar school. The results of Mr. Round's investigations will appear in the Proceedings of the Essex Archæological Society.

There is in the Ipswich (Eng.) Museum a collection of manuscripts relating to the history of the County of Suffolk that cannot but be of interest to historical students both in America and in England. It consists of about two dozen large volumes of documents, bound up according to the hundreds of the county to which they relate. They were brought together by Mr. William Stevenson Fitch, a resident of Ipswich, who died about twenty five or thirty years ago, when the collection was purchased by the Ipswich Museum. The thoroughness with which Mr. Fitch collected may be realized from the fact that among his papers are pages torn out of parish registers. He intended to write a history of Suffolk; and, in addition to documents, he collected a large number of prints relating to the county. These are now the property of the Suffolk Archæological Society. It is fortunate for historical students that Fitch's collection of MSS. is in the charge of so enthusiastic an antiquary as is the respected secretary and curator of the Ipswich Museum, who is delighted to find any one interested in the history of Suffolk.

The retirement of General Schofield from the head of the army by virtue of statutory age limit calls attention to his fellow-survivors of the civil war. Mr. F. Gutekunst, Philadelphia, has accordingly issued, in his imperial-panel series of photographic portraits of notable contemporaries, one of that well-known fighter, engineer, and military critic, Gen. William F. Smith ("Baldy" Smith), now in his seventy-second year.

We record with regret the sudden death on Friday, October 4, of Hjalmar Hjorth Boyesen, Professor of German and German Literature at Columbia College, and for many years a contributor to the *Nation*. Prof. Boyesen was a native of Norway, born September 23, 1848. A graduate of the University of Norway after studies at Leipzig, he came directly to this country in 1868, began life as a Scandinavian journalist in Chicago, passing thence in 1874 to the chair of German at Cornell and in 1880 to Columbia. He was a prolific writer of novels and short stories, essays on Scandinavian literature, etc. His temperament was ardent and his personal attachments strong. He will be much missed.

—The first number of the new quarterly *American Historical Review* (Macmillan) bespeaks no allowance and needs none. The scheme has been well thought out, the form and typography are generous and tasteful, and the leading articles are all by writers and scholars of wide reputation. The editorial salutatory has been intrusted to Prof. Wm. M. Sloane, whose theme is "History and Democracy," and who argues hopefully from the popularity of histories in this country and the line of eminent American historians of the past hundred years against the notion that democracy is unfavorable to a high order of productiveness in this branch of belles-lettres, or that a temporary exhaustion is manifest. Prof. Moses Coit Tyler tersely and effectively exhibits the numerical, intellectual, and social weight and legal justification of the Loyalists of our Revolution, by way of deprecating the treatment to which they have hitherto been subjected. Mr. Henry C. Lea contributes an inedited bull of Sixtus IV. from the Vatican archives for its bearing on the alleged hesitancy of that Pope to permit Ferdinand and Isabella to found the Spanish Inquisition. Mr. Henry Adams, exposing a trivial error in his own 'History of the First Administration of Madison,' spins, with the aid of new documents from the French Archives—which he translates—an engaging tale of the career of the adventurer calling himself in this country "Count Edward de Crillon." Prof. Frederick J. Turner begins a series of papers of obvious value and authority on a subject of which he is easily master, "Western State-making in the Revolutionary Era." This is the main feast. The "Documents" department is worthily begun with letters of real importance in American history. The reviews are very numerous and by a great variety of hands, both native and American by adoption (as in the case of Profs. Ashley and Goldwin Smith). With one exception they are all signed, and an interesting test of the *Review's* integrity is furnished by Dr. Levermore's critique of the latest volume of Prof. McMaster, one of the editorial board. It leaves nothing to be desired in the way of frankness without bias.

Notes and News, geographically classified, round out the number, which gives promise that the *Review* will fully meet the expectations of its founders and the cultivated public.

—In concluding, in the October *Harper's*, his account of the disorganized military bands that pass muster as governments in Tegucigalpa, the capital of Honduras, Richard Harding Davis expresses his conviction that the Central American citizen is no more fit for a republican form of government than he is for an arctic expedition. As long as he is left to his own devices, no development need be expected in the natural resources of his fertile country, which has a soil rich enough to supply the world with coffee, and waits only for "an honest effort" to make it the highway of traffic from every portion of the globe. But whether the duties of a protectorate are undertaken by the United States or by another Power is, in Mr. Davis's opinion, a matter of no consequence, "so long as it leaves the Nicaragua Canal in our hands." This indifference to the cardinal principle that the European nations shall keep their hands off this hemisphere is calculated to raise a hue and cry among readers whose views are represented, in the same magazine, by Capt. Mahan's article on "The Future in relation to American Naval Power." Capt. Mahan braces himself firmly against his natural shelter, the Monroe Doctrine, and presents a sweeping front of argument in favor of the development of a navy as a political factor which, in the last analysis, is "more often deterrent than irritant." What the effect of highly increased efficiency and extension in this branch of military power will be upon the temper of the American people, and the part they may play in the international political drama which seems to Capt. Mahan to be of increasing complexity, must largely depend, at any time, upon whether they are led by Jingo politicians or by statesmen. Upon the risks we run in the former contingency it is not Capt. Mahan's cue to enlarge, although they are shown clearly enough in the history which he is an adept at bringing to bear in support of his own position. His article is an instance of special pleading of the most instructive type.

—The political agitator will find nothing to his comfort in "Josiah Flynt's" "How Men Become Tramps," which is an article of the month in the *Century* that likewise calls for serious consideration. Fluctuations in the labor market do not, according to Mr. Flynt, make tramps. Misguided and misapplied charity has, as a matter of fact, more to do with their existence than depression in trade has. But it is to the promiscuous herding of boys with criminals in jails, together with the love of drink and the short-sighted thrusting of lads into evil company in reform-schools, that the incessant recruiting of vagrants is due. Nearly all tramps have, during some part of their lives, been charges of the State in its reformatories, and it is a noteworthy fact that nothing "will draw a crowd of reform-school boys together quicker, and keep them quieter, than a conversation about criminals and tramps." Mr. Flynt makes the excellent practical proposition that this interest shall be taken advantage of by the teachers in reformatories, for the purpose of substituting their own version of the probable success and rewards of crime for that of the criminal propagandist. Seen in its true light, with its attendant dangers and punishments, a life of vagabondage ought certainly to diminish in attraction to the imagination of youths of the unfortunate class doomed by present reform-school methods to almost inevitable corruption at the hands of older or more sophisticated inmates. As remote as possible in character from this pressing theme is the attractive article, "A Cruise on the Norfolk Broads," which presents, by word and picture alike, an engaging succession of scenes in the pretty and curious district which forms the latest annexation to the tourist's playground in England. Mr. Pennell is the artist to whom thanks are due for the pictures, while the writer whose yachting trip on the Bure, by Wroxham Broad, to Yarmouth, has yielded such pleasant literary result is Anna Bowman Dodd.

—To contributors' travels is also due a large proportion of the interest of the current *Atlantic*. Alvan F. Sanborn, whose disposition is evidently his fortune as a tourist, describes how the Wordsworth country may be seen, studied, and loved, at the modest expenditure, in sterling coin, of two shillings a day. Time is, of course, the commodity of which it is necessary to be prodigal in order to accomplish this joint result. As Mr. Sanborn is a law unto himself in composing a paper, as well as in exploring the Lake District, the event is as individual and as unconventionally successful in the one case as in the other. From the starting-point that his favorite Orientals will and can assimilate only such European ideas as are sympathetic to the genius of their own civilization, Lafcadio Hearn proceeds, as usual, to turn the tables of criticism to their advantage. How the Westerner is tied and debilitated by his complicated impedimenta, and how the national scale of food, clothing, and possessions leaves the Japanese free to move about at will, always bathed, combed, and civilized, notwithstanding the lightness of his pack, is shown with all the writer's charm of style. The smallness of the buildings, domestic, industrial, and public, and the impermanency of these, and even of natural features, in this "land of impermanence," give the clue to the mobility of the population. Whatever reservations a reader may make in regard to Japanese ideals of devotion, he will have none concerning their manners and taste, as artistically painted in this article. Elizabeth Stuart Phelps concludes here her novel, "A Singular Life," and Charles Egbert Craddock carries on the serial begun last month.

—In *Scribner's* the stranger is pleasantly introduced within the gates at Vailima by Lloyd Osbourne, who, without adding materially to the impressions already received of Stevenson's personality, describes the picturesque phases of his patriarchal mode of life at Samoa, and the easy hospitality dispensed by him there. In her admirable short story, "The Lamp of Psyche," Miss Edith Wharton, while adroitly avoiding the air of a homily, has found a subtle and clever touchstone of worth in the debatable case of the expatriated American. But the centre of attraction of the number will undoubtedly be Mr. G. W. Smalley's sketch of Huxley, written with a full understanding of the biographical value of details. That Huxley loved his cats as well as his friends, that he dressed well and was unabashed in the presence of royalty, are facts to which each will apply his own measure of value. That he was a genial and popular host, and that as a talker he "ranked with the best," are points of human interest that cannot come amiss to a generation of readers grateful for his inestimable services in science and in religious controversy. An illustrated account of the University of Chicago winds up with the irreconcilable propositions that "the subjects taught will increase without number, and the most catholic means of estimation or valuation will be employed," but that "our new student will be contemptuous of mere culture, of anything that derives its respect from the past alone." Soothsaying to a similar effect has been heard elsewhere; hardly, however, in interpretation of a university and its aims.

—Popular suffrage, as applied to the awarding of prizes for works of art, has seldom had a more astonishing result than recently in Venice. The public is apt to be puzzled by the awards of artists and regularly constituted juries, and to consider that the higher qualities of art are ignored in favor of purely technical merits incomprehensible to the layman. The jury of this year's Venetian International Exposition, composed of W. M. Rossetti, President, Prof. Richard Muther, Robert de la Sizeranne (author of 'La Peinture Anglaise Contemporaine'), and Prof. Adolfo Venturi, unanimously awarded the capital prize of $2,000 to "La figlia di Jorio," by Michetti, an unusually serious work by that exceedingly clever painter, and voted a number of minor prizes to a long list of artists, among whom are to be found such names as Liebermann, Whistler, and Boldini. A special prize of $1,000 for a Venetian painter only, was awarded to "Morocomio," by Silvio Rotta, a study of a madhouse scene in the vein of Jean Béraud. There was, however, a "popular prize" of $200, and this was voted by the public to a picture which the jury had entirely ignored. G. Grosso, for his "Il Supremo Convegno," received 547 votes as against only 185 for Michetti and 97 for Rotta. That the picture so selected by popular approval should be wretchedly drawn, and that its painting should be of the flashy and obvious kind, was, perhaps, to have been expected. What is surprising is, that its subject and treatment are of the most sensationally erotic order. In a great hall stands the coffin of a young man with disordered pall and overturned candles, and, riding astride or crawling upon it, and grinning in the face of the corpse, are four or five naked women. In the background two or three other women, partially draped, are entering the door. Were the technical merits of such a performance as great as they appear to be slender, its encouragement by the award of a prize would be little less than a calamity. That the prize should have been awarded by popular vote speaks ill for the morals and worse for the taste of modern Italy.

—Besides the other prizes at this Exposition, the President of the jury offered a small prize of $80 for the encouragement of a young artist, under thirty, who should have received no other recompense; this prize to be awarded by the President himself without the participation of his colleagues. It fell to a young Venetian, Vettore Antonio Cargnel, born in 1870, for his first work, entitled, "Averte Faciem Tuam a Peccatis Meis." One would be glad to see a reproduction of the picture which Mr. Rossetti has so honored. It is safe to assume that it is not of the same kind as Signor Grosso's.

—In the autumn of 1893, application was made for admission as matriculated students to the University of Göttingen by three young ladies, two of whom were American and one

English. The former were graduates of an American college, and the latter had passed her examination in mathematics at Girton College in Cambridge, England. All three wished to study mathematics and physics. Serious objections from various sources were urged against the granting of this request; fortunately, however, it was favored by the professors directly concerned, who laid scientific papers written by the applicants before the Minister of Public Instruction, and finally succeeded in obtaining permission for them to attend lectures as "Hospitanten," or guestwise, but they were not recognized as candidates for degrees. In the summer semester of 1894 there were twelve, in the winter semester of 1894-95 fifteen, and in the summer semester of 1895, just closed, twenty ladies regularly attending the lectures; of these twenty, one also passed her examination and received the doctor's degree. This is the first instance of the kind in the annals of the University of Göttingen; for although Dorothea Schlözer passed a brilliant examination on September 17, 1787, in the seventeenth year of her age, and was declared by the faculty to be eminently worthy of a doctorate, she was not publicly "promoted" or graduated, and no diploma was conferred upon her. Women who wish to be admitted to an examination for a degree in the University of Göttingen, must now have gone through a *triennium academicum*, or three years' course of study, either in a German university or in one of equal rank; the last semester must, in all cases, have been passed at a German university. Each one must also hand in a dissertation of scientific value, and sustain a satisfactory oral examination in her chief department and in two secondary departments of study. The medical faculty still refuses to admit women either as students or hearers.

SIR JAMES FITZJAMES STEPHEN.

The Life of Sir James Fitzjames Stephen, Bart., K.C.S.I., a Judge of the High Court of Justice. By his brother, Leslie Stephen. With two portraits London: Smith, Elder & Co.; New York: G. P. Putnam's Sons. 1895.

Fitzjames Stephen was an interesting personage, and we have here a candid, readable, excellent piece of biography, well proportioned, moderately stated, by his brother, a master in that art. "I have wished," he says, "to describe the man rather than to give any history of what he did." He does not undertake to estimate "the value of his performances"; and so far as he says anything of that sort, it "must be taken as mainly a judgment at second hand." Doubtless the inability of one who is not a lawyer to pass judgment upon the professional work to which Fitzjames Stephen's life was devoted, is, as his brother truly says, a serious defect in a biographer. All the more is this true in the case of one whose work was of a sort so trenchant, so difficult to estimate justly, so mixed in its character, so widely beneficial in some parts and some aspects of it, so crude and so rash in others.

But, taking the book for just what it purports to be, it accomplishes its purpose well. It does not overpraise the man; it gives to the reader the clues that explain his character, his remarkable powers, his marked limitations and defects, his deferred success. The principal criticism that we find ourselves making is that the biographer has kept himself under too severe a restraint, so that the book lacks in warmth and cordiality of appreciation. One can well understand and respect the motives which led to this reserve. But why are we allowed so few of Stephen's letters—almost none? These might well have come in to give us a glimpse now and then into the warmer and more intimate places of Stephen's heart and life. What matter we do have of this sort makes us hungry for more. And we are disposed to think that mere justice to the character of so prominent and remarkable a man required this sort of supplement to the biographer's work as we have it now. The writer has offered some reasons for this sort of omission, but they hardly justify the extent of it; the reader could better have spared some of the abstracts and discussions of Stephen's books and opinions.

A very interesting account is given of the ancestry and family connections of the Stephens. They are traced to Scotland in the person of a James Stephen, a farmer of Aberdeenshire, early in the last century. His son James studied law at Aberdeen, went into mercantile life, was imprisoned for debt, argued his own case on habeas corpus before Lord Mansfield, wrote pamphlets against imprisonment for debt, and died poor—a man of powerful physique and energetic character. His son James studied law at Aberdeen, was a reporter for the London *Morning Post*, and afterwards was called to the bar and went to the West Indies. He became greatly interested with Wilberforce and Zachary Macaulay in the anti-slavery movement, and married as his second wife a sister of Wilberforce, "a rather eccentric, but very vigorous woman," who "made her stepchildren read Butler's 'Analogy' before they were seven." This James Stephen became a member of Parliament and a Master in Chancery. Of his six children, all by his first wife, the lawyers will be glad to know that one was Henry John Stephen, the author of that admirable and scholarly book, 'Stephen on Pleading.' "I remember him," says the biographer, "as a gentle and courteous old man, very shy, and, in his later years, never leaving his house, and amusing himself with speculating upon music and the prophecies." A sister of this "Serjeant Stephen" married a Dicey and became the mother of Edward Dicey and of Albert Venn Dicey, the distinguished Oxford professor. It was a brother who became the father of Fitzjames and Leslie, viz.: James Stephen, born in 1789, of Trinity College, Cambridge, who was called to the bar in 1811, and afterwards, retiring from practice, became counsel to the Colonial Office and to the Board of Trade in 1825, and held a place in the Colonial Office for twenty two years. In 1834 he became Assistant Under-Secretary of State. Later he was made a Privy Councillor and K.C.B.; and still later, in 1849, Regius Professor of Modern History at Cambridge.

This Sir James Stephen, already having an inherited connection with the rigid evangelicals known as "the Clapham Sect," married a daughter of the Rev. John Venn of Clapham and thus became very closely associated with them. Of his mother the biographer draws an attractive picture. She seems to have been a handsome woman, "of unbroken health," serene, cheerful, whose "sound common sense . . . was her predominant faculty; and, though her religious sentiments were very strong and deep, she was so far from fanatical that she accepted with perfect calmness the deviations of her children from the old orthodox faith." Of his father the writer speaks as "a man of exquisitely sensitive nature—a man, as my mother warned his children, 'without a skin.'" A learned and able man, he was devoutly religious, and, upon the whole, his piety conformed to that of the narrow school already referred to.

Leslie Stephen's account of the delicate shades of his father's and the family's religious side is very neat, and it throws light on the qualities of Fitzjames.

"Certain learned dons discovered on his appointment to the professorship of history that he was a 'Cerinthian.' I do not pretend to guess at their meaning. Anyhow, he had avowed, in an 'epilogue' to his Essays, certain doubts as to the meaning of eternal damnation—a doctrine which at that time enjoyed considerable popularity. The explanation was in part simple. 'It is laid to my charge,' he said, 'that I am a Latitudinarian I have never met with a single man who, like myself, had passed a long series of years in a free intercourse with every class of society who was not more or less what is called a Latitudinarian.' In fact, he had discovered that Clapham was not the world, and that the conditions of salvation could hardly include residence on the sacred Common. . . . Our household must thus be regarded as stamped with the true evangelical characteristics—and yet with a difference. The line between saints and sinners or the Church and the world was not so deeply drawn as in some cases. We felt, in a vague way, that we were, somehow, not quite as other people, and yet I do not think that we could be called Pharisees. My father felt it a point of honor to adhere to the ways of his youth. Like Jonadab, the son of Rechab, as my brother observes, he would drink no wine for the sake of his father's commandments (which, indeed, is scarcely a felicitous application after what I have just said). [Namely, that 'he spoke with horror of his father's belief in the virtues of port wine.'] He wore the uniform of the old army, though he had ceased to bear unquestioning allegiance. We never went to plays or balls; but neither were we taught to regard such recreations as proofs of the corruption of man. My father most carefully told us that there was nothing intrinsically wrong in such things, though he felt strongly about certain abuses of them. At most, in his favorite phrase, they were 'not convenient.' We no more condemned people who frequented them than we blamed people in Hindostan for riding elephants. A theatre was as remote from us as an elephant. And therefore we grew up without acquiring or condemning such tastes. They had neither the charm of early association nor the attraction of forbidden fruit. To outsiders the household must have been pervaded by an air of gravity, if not of austerity. But we did not feel it, for it became the law of our natures, not a law imposed by eternal sanctions. We certainly had a full allowance of sermons and church services; but we never, I think, felt them to be forced upon us. They were a part, and not an unwelcome part, of the order of nature. In another respect we differed from some families of the same creed. My father's fine taste and his sensitive nature made him tremblingly alive to one risk. He shrank from giving us any inducement to lay bare our own religious emotions. To him and to our mother the needless revelation of the deeper feelings seemed to be a kind of spiritual indelicacy. To encourage children to use the conventional phrases could only stimulate to unreality or actual hypocrisy. He recognized, indeed, the duty of impressing upon us his own convictions, but he spoke only when speaking was a duty. He read prayers daily in his family, and used to expound a few verses of the Bible with characteristic unction. . . . 'Did you ever know your father to do a thing because it was pleasant?' was a question put to my brother, when he was a small boy, by his mother. She has apparently recorded it for the sake of the childish answer: 'Yes, once—when he married you.' But we were always conscious of the force of the tacit appeal."

James Fitzjames Stephen was born in London March 3, 1829. He seems to have been a precocious and odious sort of child. His mother kept a diary, from which the editor makes judiciously condensed statements, and they illustrate the man:

"The first conflict with authority took place on June 28, 1831, when he resolutely declared that he would not say the 'Busy Bee.' This event became famous in the nursery, for in

September, 1834, he has to express contrition for having in play used the words 'By the Busy Bee' as an infantile equivalent to an oath. One difficulty was that he declined to repeat what was put into his mouth, or to take first principles in ethics for granted. When his mother read a text to him (May, 1832), he retorts, 'Then I will not be like a little child; I do not want to go to heaven; I would rather stay on earth' He declines (in 1834) to join in a hymn which expresses a desire to die and be with God. Even good people, he says, may prefer to stay in this world. 'I don't want to be as good and wise as Tom Macaulay' is a phrase of 1832, showing that even appeals to concrete ideals of the most undeniable excellence fail to overpower him. He gradually developed a theory which became characteristic, and which he obstinately upheld when driven into a logical corner. A stubborn conflict arose in 1833, when his mother was forced to put him in solitary confinement during the family tea-time. She overhears a long soliloquy in which he admits his error, contrasts his position with that of the happy who are perhaps even now having toast and sugar, and compares his position to the 'last night of Pharaoh.' 'What a barbarian I am to myself!' he exclaims, and resolves that this shall be his last outbreak On being set at liberty, he says that he was naughty on purpose, and not only submits but requests to be punished. For a short time he applies spontaneously for punishments, though he does not always submit when the request is granted But this is a concession under difficulties. His general position is that by punishing him his mother only 'procures him to be much more naughty,' and he declines as resolutely as Jeremy Bentham to admit that naughtiness in itself involves unhappiness, or that the happiness of naughtiness should not be taken into account. He frequently urges that it is pleasanter while it lasts to give way to temper, and that the discomfort only comes afterwards. It follows logically, as he argues in 1835, that if a man could be naughty all his life he would be quite happy. Some time later (1838) he is still arguing the point, having now reached the conclusion to which the Emperor Constantine gave a practical application. The desirable thing would be to be naughty all your life, and to repent just at the end."

He was slow at his books, thoughtful, unsociable, "inclined to be indolent." At school at the age of seven or eight, "as a means of attaining holiness," he meditated on hell.

"He imagined the world transformed into a globe of iron, white hot, with a place in the middle made to fit him so closely that he could not even wink. The globe was split like an orange; he was thrust by an angel into this place, immortal, unconsumable, and capable of infinite suffering; and then the two halves were closed, and he left in hideous isolation to suffer eternal torments. I guess from my own experience that other children have had similar fancies. He adds, however, a characteristic remark: 'It seemed to me then, as it seems now, that no stronger motive, no motive anything like so strong, can be applied to actuate any human creature toward any line of conduct. To compare the love of God or anything else is to my mind simply childish.' He refers to Mill's famous passage about going to hell rather than worship a bad God, and asks what Mill would say after an experience of a quarter of an hour."

In due time, in 1842, he went to Eton.

"He was thoughtful beyond his years, although not conspicuously forward in his school studies. He was already inclined to consider games as childish. He looked down upon his companions and the school life generally as silly and frivolous. The boys resented his contempt of their ways; and his want of sociability and rather heavy exterior at the time made him a natural butt for schoolboy wit. He was, he said, bullied and tormented till, towards the end of his time, he plucked up spirit to resist. . . . 'I was, on the whole,' he says, 'very unhappy at Eton, and I deserved it; for I was shy, timid, and I must own cowardly. I was like a sensible grown-up woman among a crowd of rough boys.' After speaking of his early submission to tyranny, he adds: 'I still think with shame and self-contempt of my boyish weakness, which, however, did not continue in later years. The process taught me for life the lesson that to be weak is to be wretched, that the state of nature is a state of war, and *Væ Victis* the great law of Nature.'"

Afterwards he spent two years at King's College in London and was happy. Here he made the acquaintance of Maurice, then a professor there. In 1847 he entered at Trinity College, Cambridge. He made no great show there at his books or socially, but took an active part in the debates at the "Union," and, through the influence of Maine, was chosen into the "Apostles."

"'I have always found myself,' says Fitzjames in reference to his academical career, 'one of the most unteachable of human beings. I cannot, to this day, take in anything at second hand. I have in all cases to learn whatever I want to learn in a way of my own. It has been so with law, with languages, with Indian administration, with the machinery I have had to study in patent cases, with English composition—in a word, with everything whatever.' . . . He was without that subtlety and accuracy of mind which makes the born scholar. He was capable of blunders surprising in a man of his general ability; and every blunder takes away marks. He was still less of a mathematician. 'I disliked,' as he says himself, 'and foolishly despised the studies of the place, and did not care about accurate and classical scholarship, in which I was utterly wrong' . . . Fitzjames's comparative failure at Cambridge suggests to him a significant remark. After speaking of his 'unteachableness,' he observes that his mind was over-full of thoughts about religion, about politics, about morals, about metaphysics, about all sorts of subjects, except art, literature, or physical science. 'For art of any kind I have never cared, and do not care in the very least. For literature, as such, I care hardly at all. I like to be amused and instructed on the particular things I want to know; but works of genius, as such, give me very little pleasure; and as to the physical sciences, they interest me only so far as they illustrate the true method of inquiry. They, or rather some of them, have the advantage of being particularly true, and so a guide in the pursuit of moral and distinctively human truth. For their own sake I care very little about them.'"

Stephen was called to the bar in January, 1854. He had already begun to write for the newspapers. In November, 1854, he was engaged to be married to Miss Cunningham, daughter of the Vicar of Harrow, and was married in April, 1855. "The marriage," he says, in a fine and touching passage,

"was a blessed revelation to me. It turned me from a rather heavy, torpid youth into the happiest of men, and, for many years, one of the most ardent and energetic. It was like the lines in Tennyson—

> A touch, a kiss, the charm was snapped,
> . . . . . .
> And all the long-pent stream of life
> Dashed downward like a cataract.

I am surprised to find that, when I look back to that happiest and most blessed of days through the haze of upwards of thirty two years, I do not feel in the least degree disposed to be pathetic over the lapse of life or the near approach of old age. I have found life sweet, bright, glorious. I should dearly like to live again; but I am not afraid, and I hope, when the time comes, I shall not be averse to die."

For nearly all his life after this period Stephen was a most voluminous writer for the press. To observe how much he wrote and how constantly his thoughts for a great part of his life were running on politics, metaphysics, and all sorts of speculations on the current topics of the day, suggests the reason why he did not rise more rapidly in his profession, and make a more distinguished mark in it. His mental powers were great, his physical capacity very great, and his industry prodigious; but he was never a great lawyer or a great judge. In 1859 he was made Recorder of Newark. In 1858 he had been secretary of a royal commission to investigate the state of popular education. In 1862 he published 'Essays by a Barrister' and the 'Defence of Dr. Rowland Williams'; in 1863 his 'General View of the Criminal Law of England,' a book containing some sound thinking, but a far cruder performance than its author could have imagined it to be. In July, 1869, he was appointed legal member of the Council for India as successor to Maine, and arrived in Calcutta in December. In May, 1872, he had returned to England. On the voyage out he wrote twenty articles for the *Pall Mall Gazette*. In India he worked like a horse over legislation and codification, especially his Indian Evidence Act passed in March, 1872, of which he published an edition with an elaborate and very characteristic Introduction. This, although showing force of thought, was really a rash, academic, and ill-digested performance. But there seems reason to think that in India at that time anything was better than nothing. He soon prepared a bill for amending the law of Homicide, and later, in 1873, an Evidence bill for England, but neither of them was enacted. The latter, however, became the basis of his 'Digest of Evidence,' published in 1876. In 1873 he published 'Liberty, Equality, and Fraternity,' and was defeated as a candidate for Parliament from Dundee. In 1877 he published his 'Digest of the Criminal Law,' which "represented the hardest work he had ever done"—a valuable book. In December, 1875, he had been appointed Professor of Common Law at the Inns of Court. This office he resigned in 1879. Meantime he was at work on a Penal Code, as a member of a commission with Lord Blackburn and others. This was a carefully prepared and mainly excellent piece of work, but it was not enacted. In January, 1879, he succeeded Mr. Justice Cleasby in the High Court of Justice. "He unfeignedly enjoyed his new position. He often said that he could imagine nothing more congenial to all his wishes." But "he is resolved to make the bench 'a base of operations,' and 'not a mere shelf.'" In 1883 he published in three volumes his elaborate and very valuable 'History of the Criminal Law of England.' He also published a 'Digest of Criminal Procedure,' and in 1885, in two volumes, his story of 'Nuncomar and Impey,' "an episode in the great Warren Hastings story."

This was his last book. In April, 1885, he had what appears to have been a stroke of paralysis, while at Derby conducting the assizes, but he was at his judicial work again in the summer. Mrs. Maybrick was convicted on August 7, 1889. "I have not the least doubt," says his biographer, and he is probably well supported in his opinion, "that his humanity and impartiality were as conspicuous in this as in other cases." In 1888 he lost by death two most valued friends, Sir Henry Maine and G. S. Venables, and in February, as the ultimate result of a distressing casualty, his son, James K. Stephen, the author of the brilliant little books of verse, 'Lapsus Calami' and 'Quo Musa Tendis?'

"On March, 17, 1890, he had an attack of illness during the assizes at Exeter, resembling that which he had previously had at Derby. He was again ordered to rest for three months. Sir A. Clark allowed him to go on a circuit in the summer. . . . In March, 1891, he was on circuit at Exeter again with Lord Coleridge. It was thought right that certain public remarks should be brought under his notice. He immediately took the obviously right course. He consulted Sir Andrew Clark, who advised resignation. Fitzjames did his last work as judge at Bristol, March 15 to 23, and finally resigned on April 7, 1891, when he took leave of his colleagues at an impressive meeting. . . . He had no serious suffering.

He became weaker and died peacefully at Ipswich, March 11, 1894. He was buried at Kensal Green in the presence of a few friends, and laid by the side of his father and mother and the four children who had gone before him. One other grave is close by, the grave of one not allied to him by blood, but whom he loved with a brotherly affection that shall never be forgotten by one survivor."

It can hardly be wrong to understand these last words as referring to the grave of that daughter of Thackeray who was the first wife of him who writes. And now, alas, we have been hearing lately of another like bereavement to Leslie Stephen.

Let us add the simple and just words with which the biographer closes his book:

"Whatever may be thought of Fitzjames's judgments of men and things, it must be granted that he may be called, in the emphatical and lofty sense of the word, a true man. In the dark and bewildering game of life he played his part with unfaltering courage and magnanimity. He was a man not only in masculine vigor of mind and body, but in the masculine strength of affection which was animated and directed to work by strenuous moral convictions. If I have failed to show that, I have made a failure indeed; but I hope that I cannot have altogether failed to produce some likeness of a character so strongly marked and so well known to me from my earliest infancy."

A Study of Death. By Henry Mills Alden, author of 'God in His World: An Interpretation.' Harper & Bros. 1895.

For those who were so fortunate as to read Mr. Alden's 'God in His World,' the present book will lack one charm in which that abounded, namely, that of a wonderful freshness and surprise. But it will be a very real pleasure for them to trust themselves again to the guidance of a writer whose "pastures new" could not be hemmed between the covers of a single book. The title will discourage many, and it is strange that Mr. Alden was at so little pains to choose one more engaging and expressive. It gives only the faintest indication of the breadth of his discussion and the variety of ideas and suggestions that it carries on the bosom of its placid stream. Only a few pages at the beginning and the end are directly concerned with death in the narrower implication of the term. For the rest we have a philosophy of nature and history in general and of Christianity in particular. The thesis everywhere maintained is, that death is neither accident nor harm, but a divine and beautiful necessity. "If we think of life apart from death, our thought is partial, as if we would give flight to the arrow without bending the bow. No living movement either begins or is completed save through death."

The same optimism which was so characteristic of the author's former book is here also, illuminating not only death but evil upon every page. He has no vision of a time when sin and death will be no more. Without them the loom of time could never have woven, and can never weave, the garment of the Eternal. So confidently and insistently are the goodness and necessity of evil dwelt upon, and so serene is the contempt expressed for moral conduct understood as obedience to a social law, that if the book were going to be read for moral guidance, there would be likelihood of its encouraging some to "continue in sin that grace may abound." We are told that "our human flesh was as dear to Jesus as that of children to their mother, and never in word was there any animadversion upon our carnal plight. He enjoyed the festival, and even turned water into wine for those already well-drunken." On another page we read that "we are not therefore called upon to repudiate ethics, or even that social specialization of morality which seems to contradict the words of the Master." Such qualifying phrases should not be overlooked, but they do not represent the average temper of the book, which, in appearance at least, is antinomian. Love is the one thing needful. A formal righteousness is of small account. Of course the doctrine is that we must have something more and not something less. The fact remains that "mere morality" is treated as cavalierly by Mr. Alden as by the orthodox theologians.

The book requires for its full enjoyment a supreme indifference to scientific method, and this no less because Mr. Alden's appeals to science are many, which only means that he "pounces on his own wherever he finds it." There is probably not a position in the book at which he arrived by any scientific course, while he has great ingenuity in availing himself of Weismann, whose name is misspelled, or any other scientist who can furnish him with real or apparent illustration. Everywhere the personal equation is dominant and selective of its own. This is quite as obvious in matters of criticism as in the field of natural science, where the derivation of man from any other species is set aside as dogmatically as it could be by an infallible pope. In Biblical criticism Mr. Alden takes or leaves the modern results to suit his purposes. He disdains the supernatural, but cordially accepts the miracles as natural events; the resurrection of Jesus being central to his exposition, but in the vaguest way, without any estimate of its proofs, or any endeavor to justify the character assigned to it (which is not corporeal), or to show us how an event so isolated is related to or expressive of a process that has no beginning and no end.

Those who are nothing if not critical and scientific may possibly be irritated by the naïveté of a dogmatism that plays fast and loose with their properties; but those who choose to be amused will choose the better part. The book is not a scientific treatise, it is not an argument, and barely is it an exposition. It is a rhapsody upon the unity of life and death. Those will be least apt to be disappointed who do not expect much from its coherency, who set out to get their satisfaction less from the forest than from the trees. Those whose approach to the book is made with this understanding must be strangely narrow in their sympathies if they do not find much to please them, much to charm them, and some things to cause them "a great trembling of the heart."

The style as well as the thought is so individual that we seem to be overhearing a soliloquy rather than listening to a direct address, and sometimes we do not seem to catch the words, or they are in an unknown tongue. But the book abounds in sentences and phrases of peculiar force and beauty, and there are passages of such lyric rapture that one must go to Shelley or to Dante's "Paradiso" to breathe an air so fine. Take, for example, the passage on pages 70-72, in which the earth, under the similitude of a wandering prodigal, dreams of the sun from whose bosom she has torn herself away. Mr. Alden has the poet's predilection for a novel use of words and texts, and sometimes he startles us with the freshness and vivid aptness of his bold adventures. The whole of his third book, "Prodigal Sons: a Cosmic Parable," is one of these, wonderful in the delicacy of its elaboration; and the first section of this part, "The Divided Living," is a variation on the theme, "He divided unto them his living," than which a more subtile and impressive would be hard to find in all the range of allegorical interpretation. There are many pages in the book quite as remarkable as these, and one could easily select from it a tender and fragrant anthology of shorter passages and sentences.

In the first book "the body of death" is briefly touched with reverent hands, and then "the mystical vision" is displayed in which death is seen as the parent and the ministrant of life, and as a process always going on in every living thing. Some of the analogues with which Mr. Alden fortifies his position seem to be more fanciful than real. In the second book, entitled "Native Impressions," we have an exposition of men's earliest thoughts of death, or rather of Mr. Alden's imagination of those thoughts. It is Wordsworth's "Intimations of Immortality from Childhood" writ large, an application to the infant race of Wordsworth's line,

"Heaven lies about us in our infancy."

The representation is too much an imputation of Mr. Alden's inner consciousness to the primitive man, but it is doubtless true that the earlier views were simpler and less monstrous than those of a deliberate theology. The next book, "Prodigal Sons," elaborates the specialization of life, and attempts to show, as does the next, "The Moral Order," how all seeming aberration from the House of Life is part of a curve which has its inevitable return. For the remainder of the way we have our Pegasus in harness. There is something altogether arbitrary and artificial in the transition from the generalizations of the preceding sections to the historic Jesus and Christianity, and the incongruity is not entirely dissipated by the vagueness of the exposition and an eclecticism which is devoid of all responsibility. Small indeed must be the audience that is fit for the reception of these concluding chapters with a responsive mind. A conventional orthodoxy is affronted upon every page, and the free intellect will find no justification for the emphasis that is placed upon a special series of events, and will resent a mixture of rhapsody and traditional opinion when it is seeking for some rational basis of belief. But when every deduction has been made, the book is fascinating and suggestive to a remarkable degree, and has all the charm of the remotest foreign travel in its difference from the beaten tracks of our habitual thought.

After Five Years in India; or, Life and Work in a Punjaub District. By Anne C. Wilson. London: Blackie; New York: Charles Scribner's Sons. Pp 312, 8vo.

It would be difficult to find a better popular account of the method by which England governs India than is contained in this book. The subject is treated in two distinct ways. Pictures of native life in various aspects, and the description of a deputy commissioner's work during a single day, present in a concrete form some of the problems in administration which confront an official in a country district. Then the general system of the Government is explained, together with its application to the public works, education, and the land laws. A peculiar value attaches to this (the larger) part of the book in that it is derived from the practical experience of the author's husband, who is the collector of a district in the Punjab.

From her father, Dr. Norman MacLeod, Mrs. Wilson inherits a clear and picturesque

style, which is naturally shown to greatest advantage in her narratives. These sketches of the natives are full of life, and impress one with their truthfulness, due, perhaps, as much to the writer's keen interest in and sympathy with them as to her literary skill. An added charm is given by the vein of humor which runs through them, especially in the descriptions of her servants and the natives who come with petitions to her husband. There is pathos also, as, for example, in the story of the farmer who falls into the hands of the village usurer, and of the money-lender himself, and the tragedy which embittered his prosperous career. Here is a scene, taken almost at random, from her account of a day in her husband's official life: "And now, the jail inspected, the treasury visited, the cash counted and compared with the treasurer's accounts, the deputy commissioner turns his face towards home. A veranda in the bungalow is full of black figures, dressed in their best of spotless cotton. They have come to 'pay their respects,' and rise like a covey of birds, while one of the orderlies, dressed in scarlet, kneels to dust his master's shoes." Among the throngs who had gathered to a tent-pegging entertainment given in their honor during a tour through the district, were some strolling performers,

"men with bears, monkeys, and goats, wrestlers and acrobats who seemed to have learnt the secret of the fourth dimension, and to have acquired the power of living in space in a condition of perpetual somersaulting. The performer who interested me most was a small boy who sang a song. He was a slight, graceful child of about fifteen, with a scarlet sash and turban. He climbed to the top of a pole, and a burly giant poised one end of the pole on his chin, with the child on the top. The man had a brass ring round his right ankle, with bells attached. As he jingled these and the drummer beat on his tom-tom, the boy stretched out his arms, and sang his song with upturned face. Indian music to my ears, as a rule, is only another name for discord. But this song had a haunting beauty of its own. It reminded me of the song I heard the Spanish gipsy sing in Granada. It was the voice of the spirit of loneliness, like the sound of the wind,

"'Wandering o'er the wastes of earth,
Sighing to the lonely stars of heaven.'

A song from the homeless hearts of outcasts."

The account of the administrative system and its special applications is not entertaining, but it is full of interest to one desirous of learning something of the secret of England's success in ruling the vast congeries of peoples of different races, languages, and religions known to us as India. Possibly this success is largely due to the fact "that in no country, except America and Great Britain and her colonies, is the individual so little interfered with by the Government." No kind of pressure, like the conscription, is put upon the Indian to be anything but what he pleases. He may profess what religion he likes, express any opinions; he enjoys the right of public meeting and can criticise the Government freely without fear of consequences. Then, again, the attitude of the Government towards its subjects is one of help and encouragement. Mrs. Wilson aptly compares the Government to "one of those Hindu idols stretching out its arms in every direction, and, like the idol, she is expected to appear upon all occasions as a fresh embodiment of benevolence." This dependence is, of course, often carried to absurd lengths, as when the railway station-master telegraphed to his superior: "Tiger on platform. Please arrange." The methods of procedure under the one uniform system of law now applied to every part of the country are explained at some length, and the benefits conferred upon the people by the canals, roads, and railways are dwelt upon with great satisfaction. On the other hand, it is frankly confessed that education is not yet sought for its own sake, but only as essential to entering the public service. The idea of setting up for themselves as doctors, engineers, or schoolmasters does not seem to have occurred to the educated natives. The number of Government places, however, is far smaller than that of the applicants for them, and much of the unrest and dissatisfaction which finds expression in the vernacular press and the "National Congress" comes from the unsuccessful scholars. Technical education is making some progress, as is that of women, an instance being given of a flourishing girls' school which was started by the people of a hill-village in the Punjab.

The principal failure of the English rule to better the condition of the people seems to lie in the land laws and the settlement of the farmers' debts to the money-lender. Land which was inalienable was suddenly made property which could be bought and sold, and the system by which usurers' claims were settled on a rude principle of equity by the village council was swept away and the letter of the bond enforced on the debtor. The consequence has been that the cultivator of land which had been the property of his ancestors for untold generations has too often become a homeless laborer. A partial remedy for this evil has been found in the Deccan Ryots Act, by which the peasants' interests are safeguarded as if they were minors. The act is in force in a district containing over three million people, and so beneficial has been its effect that in five years 10,000 mortgageors had redeemed their land and many of the money-lenders had given up their business.

The chapter upon caste is perhaps the least satisfactory in the book. Among the more unfamiliar facts stated are the countless number of castes, amounting to many hundreds in the Punjab alone, the frequent creation of new ones, and the possibility of passing from one to another. "The system, as a whole, is a curious mixture of rigidity and latitude, and might be compared to a prison whose windows are not altogether barred, and in which ladders, ropes, and other means of escape are to be found, of which the prisoners from time to time avail themselves, although their ambition may only be to exchange one thraldom for another which is held in better estimation."

Some reproductions of photographs, illustrative of native customs, add to the attraction of this interesting and instructive book.

Sir Samuel Baker: A Memoir. By T. Douglas Murray and A. Silva White. Macmillan. 1895.

We can sum up our opinion of this work by saying that it is interesting but not satisfactory. It is interesting because Sir Samuel Baker was an uncommon man, thoroughly English, of splendid courage, coolness, and determination, a born hunter, traveller, and explorer—the sort of man whose restless energy and spirit of adventure have done so much to extend the boundaries of the British empire. The two great episodes of his life, his discovery of the Albert Nyanza and his governorship of the Egyptian Sudan, have both been described by himself and are enough to prevent his name from being soon forgotten. Even in mere every-day life what he said and did was often worth preserving, for it was everywhere affected by his strong personality. His biographers are distinctly competent, and have given us a book that is in many ways well written. Our quarrel with it and with them is, that we too often feel that they had another purpose in view besides writing the life of their hero. Baker, like other men of his stamp, was always in favor of resolute action for others as well as for himself, unmindful of opposition. Such men are more successful in carrying out the measures of a government than in inspiring them. Baker was full of patriotism, and also full of that spirit which many of a man's fellow-countrymen call patriotism, though when they find it in some foreigner at their expense they are apt to give it some less flattering name. In his zeal for the greatness of the British empire, Baker was always in favor of taking everything, no matter to whom it belonged, that might be useful to that greatness. In particular he looked upon England as the natural owner of Egypt. In short, he was a thoroughgoing Jingo. So, too, are his biographers That is no business of ours, but we wish they had kept their Jingoism out of this book. Again and again we are made to feel that the Life of Baker is hardly more than a stalking-horse for a political pamphlet, that his opinions on questions are brought up not so much on account of their intrinsic interest as to serve as arguments in favor of a certain policy. The running commentary heightens this impression. If in any case it strengthens the force of the arguments, it diminishes the value of the book as a memoir. The public does not gain by the exchange.

Still, we repeat that the work is altogether interesting and well written, even if unequally so. The world is being partitioned so fast that there will soon be no unknown regions left to explore, or even savage countries for civilized nations to appropriate. The histories of explorers, however, will always possess interest, and the greater names of this century, as of previous times, will not be forgotten. Although Baker's is hardly among the first of these names, it comes very soon among the second; and this is no mean title to fame.

Heine on Shakespeare: A Translation of his Notes on Shakespeare's Heroines by Ida Benecke. London: A. Constable & Co. Pp. 189.

The title of this handsome volume promises more than its contents fulfil. 'Shakespeares Mädchen und Frauen' is a feeble piece of hackwork, hastily put together at the instance of a publisher to accompany a set of engravings. These engravings, representing the heroines of Shakspere, had been published in England and France, and in preparing a German edition it was decided that a text should be supplied, as Heine himself says, "by a great author." The great author lent himself reluctantly to the task, impelled thereto largely by the consideration that if he did not, Tieck would. Contrary to his custom, Heine dictated the entire work. "Dictating is a bad business," he writes to Campe; "I have tried it (on some things they have teased me to write about Shakespeare), but the pregnant brevity and rich clearness of the style are lost" The book came out in 1839. Heine's conflict with the Suabian school and its allies was just at its height, and his new work did not strengthen his position. Gutzkow's remark "that this new and expensive publication of Heine's on Shakespeare's women will be a great consolation to his friends" was a malicious thrust. But the author was as well aware of the weakness of his performance as were his readers. "Between ourselves," he had written to

Campe, "this is not a masterpiece, but still it is good enough for its purpose."

These notes are of the flimsiest texture, trifling, superficial, often commonplace; the spectres of the July Revolution play their irrelevant pranks in frequent political allusions, and the few eloquent passages and occasional flashes of wit cannot redeem the whole from its general dulness. Heine's dictation had, according to his own admission, injured the grace and vigor of his style; the translator has removed the last traces of those qualities, although she has made, on the whole, a faithful, business-like rendering. We have noticed only a few insignificant errors. The shortcomings of this translation may be seen at once if the reader will compare the opening paragraphs of the Introduction with the spirited version contained in William Stigand's English biography of Heine. This Introduction, beginning with the scathing and oft-quoted denunciation of Englishmen, "the most repulsive people that God in his anger ever created," is the most entertaining portion of the book.

The sum of our considerations is, that a translation of this unimportant work was in no wise needed. A passage from one of Heine's letters to Moser might serve as a motto: "I am not at my ease in Shakespeare's company; I feel only too keenly that I am not his peer; he is the all-powerful minister and I only a counsellor, and it seems as if he could dismiss me any minute."

Russian Fairy Tales. From the 'Skazki' of Polevoi. Translated by R. Nisbet Bain. Chicago: Way & Williams. 1895.

THE translator informs us, in his preface, that the twenty-four fairy tales which he presents to our notice are derived from P. N. Polevoi's volume, published in 1874. This contained about three dozen stories selected from the great collection of Afanasieff, softened down and manipulated for the use of nurseries. "With the single exception of 'Morozko,' a variant of which will be familiar to those who know Mr. Ralston's volume ['Russian Folk Tales']," he says, "none of these tales has seen the light in an English dress before." One has, however, but to compare these stories with the volume translated direct from Afanasieff's collection by Jeremiah Curtin to find a full reflection of the originals. Where changes have been made, it is often difficult to understand the reason for them. Naturally, the student of folk-lore will prefer Mr. Curtin's unimproved versions. It may be useful to some if we mention the tales from the two books in pairs:

BAIN.	CURTIN.
The Muzhichek-as-big-as-your-Thumb-with-Moustaches-seven-Versts-long.	Ivan, the Peasant's Son, and the Little Man Himself One Finger tall, his Mustache seven Versts in length.
The Little Feather of Fenist the bright Falcon	The Feather of bright Finist the Falcon.
The Enchanted Ring.	The Ring with Twelve Screws.
Go I know not whither—fetch I know not what.	Go to the verge of Destruction, and bring back Shmat-Razum.

Bain's "Tzarevna Loveliness-Inexhaustible" will be found to contain features in Curtin's "The Water of Youth, Life, and Death," and in the first of the two stories which bear the title "Koschei without Death," "Two out of the Knapsack" is identical in subject and almost in matter with "Cudgel, Bestir Thyself," a Kashubian story in A. H. Wratislaw's 'Sixty Folk-Tales,' while "The Flying Ship" contains incidents nearly corresponding in character with those in the Bohemian story, "Long, Broad and Sharpsight," in the same collection by Wratislaw, and to folk-tales in other lands. "Gore-Gorinskoe" greatly resembles the version of that widespread tale which is to be found in Kirby's 'The Hero of Esthonia.'

All the stories are delightful, and the sly humor, even gentle sarcasm, of many among them prevents their becoming in the least wearisome, even to those who have passed the day of fairy tales, and who are not even students of folk-lore. But neither in this respect nor as regards their poetical qualities and their ingenuity of invention can they be compared to that remarkable collection of Esthonian Tales to which we have referred. One curious point about them is the manner in which whole paragraphs of phraseology and divers incidents have been taken from the Epic Songs, and incorporated with phrases and incidents which, obviously, did not come from a kindred source. The result is a composite structure which suggests opportunities for research. The hero of "Thomas Berennikov" brags in a way which would do credit to Diuk Stepanovitch of the Epic Songs; and this story, with that entitled "The Tale of Little Fool Ivan," offers the best instances of the type. The ancient legend of Perseus and Andromeda, or, rather, the queer version of it sung by the Russian Wandering Blind Psalm-Singers, will be recognized in "The Two Sons of Ivan the Soldier."

The book has six very satisfactory illustrations, and is charming in every way. We must take exception, however, to the definition of *kisel* as "a sourish meat-pottage." On the contrary, it is a very popular "fasting" dish, and is made from the juice of any sourish fruit which may be preferred, thickened with potato flour to about the consistency of blanc-mange, and served cold, at dessert.

In the Land of Lorna Doone. By William H. Rideing. Thomas Y. Crowell & Co. 1895.

THIS little volume contains charming descriptions of widely different corners of England, some of which are well known to the wandering American, while others are removed from the beaten paths of travel. In the former category are Scarborough, Warwick, Kenilworth, and the various coaching trips out of London; in the latter, Cornwall and the "land of Lorna Doone"—being that part of North Devon which Mr. Blackmore's romance has invested with a peculiar interest. Mr. Rideing writes of these places with the accurate knowledge of a native, but with an eye to what is likely to attract the attention of the traveller who has left the Atlantic behind him. He visits Cornwall "with an umbrella," and wisely so, for in summer the warm winds from the Gulf Stream are constantly driving in masses of cloud, which "float over the languishing ears of corn or descend in heavy rain to retard and injure the harvest." He finds that three-fourths of the wonderful submarine tin mines which we have always been accustomed to associate with the idea of Cornwall, are suspended or abandoned, and the miners are now working in the mines of Pennsylvania or Lake Superior or Nevada. In other ways, too, things are not as they used to be. The English peasant, even in remote districts, is becoming accustomed to travelling strangers, and the old superstitions of the countryside are disappearing before the freer circulation and the more varied intercourse of this cycling age. But there are still nooks and corners of the little island that retain a pleasing flavor of mediæval life and manners, and to such places Mr. Rideing is an interesting and sympathetic guide.

BOOKS OF THE WEEK.

Alden, H. M. A Study of Death. Harpers. $1.50.
Andersen, H. C. Stories and Fairy Tales. 2 vols. Dodd, Mead & Co. $3.50.

The Nation.

NEW YORK, THURSDAY, OCTOBER 17, 1895.

The Week.

In the speech made by Secretary Carlisle in Boston on Saturday evening, he was doubtless correct in asserting that the danger of free coinage of silver is past, although there still remains a sufficient body of belated Democrats and of silver-mining Republicans to make it necessary for the friends of sound currency to "go armed." They cannot abandon the field so long as the enemy shows fight, but, as the Secretary says, they will not be able to exercise a controlling influence in the national councils of either party next year. Accordingly he addressed himself chiefly to the greenback question, seeking to show that the legal-tender notes are the disturbing element in our currency now, and that it is a mistake to consider them a cheap currency. He referred to the requirement imposed upon the Treasury Department to keep all kinds of Government issues at a parity, which means keeping them all equal to gold, but without any means of doing so except the sale of bonds whenever a demand for gold arises. This, he said, would be resorted to as often as the emergency should arise, but he submitted that that could not be considered a cheap currency which called for the issue of interest-bearing bonds running from ten to thirty years to keep it at par with gold, as the law required. It is true that the banks sometimes make voluntary exchanges of gold for legal-tender notes with the Government, but these are in the nature of a gratuity, and are not to be depended upon. Since the resumption of specie payments in 1879, the sum of $386,000,000 in greenbacks has been presented for redemption, in gold, and they are all still outstanding and liable to be presented again. This, he submits, cannot be considered a cheap currency.

The silverites of this country will be confounded to learn that the Rothschilds are bimetallists. Whether our Western friends will be pleased or shocked by this information we shall not attempt to predict, but we fancy that they will find some difficulty in swallowing all the hard things they have said about this hateful house, who are always "cornering gold" and making money dear in order that they may suck the blood of borrowers all over the world. The information that they are not gold-bugs is printed in the *Independent*, and comes from no less an authority than President Andrews, who quotes it from the *Saturday Review*. Worse and worse, Mr. Andrews says it is a mistake to suppose that the banking interest in London is solid for gold: "London bankers are among the most enthusiastic propagandists of bimetallism." Even this does not tell the whole story. Great Britain is marching to bimetallism just as fast as could be expected. English farmers are being ruined by the gold standard, and they know it. "British merchants trading with silver countries find their capital invested there reduced by one-half," and their present trade with those countries is either ruined or made a mere matter of gambling. Yet it appears that they are such fools as to continue it. All this leads us to ask, What can be depended upon? Must we take back all that we have been saying all these years about Lombard Street and Ernest Seyd and the millions raised abroad to bribe Congress to commit the crime of 1873? Is there any sure foundation for anything? If the Rothschilds and the London bankers are no longer to serve as a target for Bland and Bryan, Blackburn and Hardin, Jones and Stewart, and the rest, where shall they look for one? May not Wall Street be the next to fail them?

The general increase of exports of American manufactures is one of the most encouraging signs of the revival of business. The *Journal of Commerce* publishes some figures obtained from the Bureau of Statistics which are very noteworthy. Thus it appears that our total exports of manufactures during the present calendar year to the 1st of September have been of the value of $129,000,000, against $118,000,000 during the same period last year. This is a gain of $11,000,000, and, if it continues through the year, there will be, in a total of $194,000,000, a gain of $17,000,000 for twelve months. But the real significance of these figures lies in the fact that our exports of manufactures are likely to be higher by $11,000,000 than they ever were in any year before.

Two articles, or kinds of articles, stand out prominently in the list of exports, viz., agricultural implements and machinery. Of the former, the value exported during the first eight months of the present year has been about four and a half millions, a gain of half a million over the highest previous year; of the latter, seven and a half millions, a gain of nearly a million and a quarter. These two classes of articles are symptomatic of a coming great expansion in our sale of articles made of iron and steel to foreign countries. We have now reached a point where pig iron can be produced as cheaply here as in any country on the globe. If we cannot as yet produce steel billets as cheaply as any other country, we shall be able to do so very soon. The chief components of machinery, wood and iron, being placed at the service of our manufacturers at as low figures as are reached in Europe, the inventive faculty of our people will soon put them at least on a footing of equality with those of England and the Continent in general, and in some particulars will give them an advantage. A gratifying increase is shown in our exports of carriages, chemicals, clocks and watches, paper, flax and hemp goods, scientific instruments, builders' hardware, locomotives, sewing-machines, and boots and shoes. In the item of copper manufactures there was a remarkable increase from $252,000 to $818,000. In view of these facts it will be difficult to deny that the United States has outgrown the need of a protective tariff as regards the chief branches of manufacturing industry.

The death of William Mahone removes from the stage a man who fifteen years ago was one of the chief figures in national politics. During the last two years of the Hayes Administration the Senate had been controlled by the Democrats for the first time since the beginning of the civil war. The elections of 1880 enabled the Republicans to recover some of their lost seats, but the division of the body in the forty-seventh Congress remained in doubt, because David Davis of Illinois had maintained an independent attitude and William Mahone was coming from Virginia without any announcement of his purposes. When Mahone took the oath as Senator on the 4th of March, 1881, he came as a political freebooter. He represented all that was worst in the politics of his State. While he had remained a regular Democrat, he was charged by the Republicans with having participated in the grossest election frauds. Personally unscrupulous, no sentiment of honor or State pride deterred him from taking up repudiation as a means of securing office from a combination of the worst voters in both parties, and he went to Washington as the first man ever elected to the United States Senate on the platform of cheating the creditors of a commonwealth.

But he was also the first man who had been elected since Reconstruction days from any Southern State on any platform except that of regular Democracy. He had been supported by nearly all of the Republicans in the Legislature that chose him. He was believed to be willing to sustain Republican measures in the Senate if he should receive sufficient consideration. On the 14th of March, replying to Ben Hill's challenge, he declared his independence and virtually announced his purpose to support the Republicans. The Republicans were only too glad to welcome this political pirate into their ranks. Mr. George F. Hoar of Massachusetts joyfully extended the right hand of fellowship in

a speech which it seems almost an act of cruelty towards a now old man to recall. The new President from Ohio followed the lead of the Massachusetts Senator, and a bouquet from the White House conservatory on the repudiator's desk next day foreshadowed the willingness of Garfield, and later of Arthur, to turn over the patronage of Virginia to Mahone. Never were the offices of any State so completely handed over to one man. With his previous hold upon Virginia thus reinforced, he carried the next Legislature and elected his man Riddleberger as his associate and tool—an utterly worthless fellow, who became a common drunkard and intolerable nuisance before his term expired. Under such leadership Republicanism in Virginia sank to the lowest depths of degradation, and Bourbonism recovered control of the State. Now that it is all over, even Mr. George F. Hoar must see what disgraceful folly it was from the start.

An election for Mayor in Indianapolis ought not, in the nature of things, to be a matter of much concern outside that city. But when an ex-President of the United States participates in the canvass, and when his home organ invokes support of its candidate for the effect which his election or defeat will have upon national politics, people throughout the country naturally give attention to the result. On the morning of the contest the *Journal* declared that "every voter in Indianapolis who desires to strengthen Republicanism in Indiana, to help sustain Republican ascendency in the States which vote in November, and to put Kentucky into the Republican column, will hurry to the polls and vote the whole Republican ticket this morning." The Democratic candidate was elected by a majority of about 3,700 in a total vote larger than was cast at the corresponding election two years ago, when the Republicans won by a majority of about 3,100. After it was all over, the *Journal* made a complete recantation, and declared that "the plainest feature of the situation is that from a party point of view there was no politics in the result"—a view which is endorsed as the right one by the *News*, the Independent journal of the city. Naturally, however, the Democrats after election accept the *Journal's* ante-election position as the sound one.

It is clearly Tammany's intention to put its worst foot forward this year, and for this we should be thankful, for it thus removes all chance for doubt as to the character of the organization. For the Supreme Court it has nominated Messrs. Smyth and Truax, who were rejected by the people a year ago for good and sufficient reasons, and has associated with them Mr. Charles F. MacLean, whose nomination is openly confessed to be the price of the support of the "Ridder crowd," who continue, with delicious humor, to call themselves "The German-American Reform Union." This name was adopted last year, and was designed to show that the German voters were in favor of good government as opposed to the rascality of Tammany Hall. To continue the name after they have gone over to the side of Tammany and rascally government, is as good a joke as the proposal to get their Sunday beer by putting Tammany men into the offices of County Clerk and Register and into the courts. Not one of the offices to be filled in the city this year has any connection whatever with excise matters, nor can the result of the city election have the slightest effect upon the Sunday-beer question.

One encouraging feature of this year's election is the assurance of a closer approach to honesty and accuracy in the registration and balloting in New York and Brooklyn than was ever before known in these cities. The new registration system is more exacting than the old one in several respects. No man born abroad can vote under the new Constitution unless he shall have been for ninety days before election a citizen of the United States—a provision which prevents the naturalization frauds that were formerly perpetrated toward the close of the canvass. The "dodge" of pretending to be illiterate, or unable to prepare a ballot by reason of inability to handle it, is also rendered difficult and dangerous by the requirement that a man must make oath to such illiteracy or physical weakness when he applies for registration. The danger run in fraudulent registration is vastly increased by the provision that every applicant, in addition to telling his age, as heretofore, must give his height, weight, color of hair, and any mark or scar that will fix his identity—a requirement that is sure to frighten off not a few would-be repeaters. Moreover, not only are the election laws in better shape than ever before, but their execution is also in better hands. The nominees of the two parties for these offices in this city were subjected to an examination which resulted in weeding out one in every seven as utterly unfit by reason of incompetency or indifference. In Brooklyn the election board, itself composed of admirable officials, established a system of instruction for the registrars, inspectors, poll-clerks, and canvassers.

The movement for constitutional revision in the Episcopal Church in this year's general convention has met with failure, and this is but the latest example of the enormous difficulty of getting a modern church to revise either its creed or its polity. The Presbyterians voted a few years ago to revise, appointed committees to revise, debated and re-debated revision until everybody was wearied and talked into disgust with the whole subject; then it was dropped. The Congregationalists succeeded in adopting a simplified creed, but this was only because creeds, whether simple or complex, have little binding force in the Congregational Church. Several Presbyterian bodies in Scotland and England have, we believe, incorporated in their standards a "declaratory clause," practically serving notice that the signers of the creed are at liberty to hold it in a non-natural sense. But in general this is a bad century for either devising or revising articles of religious belief. In the sixteenth and seventeenth centuries the thing was easy enough. Nothing seemed simpler to the theologian of that period than to emphasize your dissent from an outworn creed by making a new one which you would vow, and make your descendants vow, should last perfect and unchangeable till the crack of doom. Why are revisers so much less successful nowadays? Certainly not because they have minds less sensitive to theological difficulties, or because they are less conscientious. They are, however, no doubt more modest and less strenuous. Some of them have a saving sense of humor, too, and see the absurdity of laboring for perhaps twenty years to bring a creed "up to date," with science and religion well harmonized, only to find it obsolete as soon as fairly completed. But their main source of reluctance to revise, we imagine, is an unwillingness to fly to evils that they know not of. All the old difficulties and all the old shifts to explain them away, they are perfectly familiar with; the necessary proof-texts, the patristic citations, the logic-chopping, they have handy; the freedom which use and wont always creates, even under the most stringent terms of subscription, they enjoy and prize. How can they be blamed for dreading to give up these old facilities and privileges? A veteran common-law attorney could not with more justice look with apprehension upon the introduction of a code that would make all his learning void and his experience vain.

Mr. Arnold White has been writing in the London *Observer*, suggesting the creation of a royal commission to inquire into the net result of the missions to the heathen during the last century. The question is at present assuming a good deal of importance in England, owing to the late massacres which the Government has had to avenge at great expense, and which are very likely to be repeated as long as missionaries reside or travel in the interior. It is quite true that missionaries understand very well that in going inland among the Chinese they carry their lives in their hands, and, strictly speaking, have no right to call on their own government for redress. But in our day no government could stand by and see its subjects slaughtered or outraged simply because they were rash or fanatical. Moreover, the missionaries

now claim protection as a moral right. One of our own proclaimed the other day that the Gospel ought to be supported among the heathen by iron-clads; and to those who remonstrate with them for preaching doctrines which excite the Chinese to violence, they oppose the command —"Go ye into all the world," etc. Now, Mr. White's contention is that, if the policy of protecting the missionaries in places where they have no standing under the local law is to be persistently pursued, there ought to be an inquiry into the matter from the purely secular point of view. He says there are now fifty-four Protestant missionary societies in Great Britain which spend one million sterling a year. If, Mr. White says, this is good for the empire and taxpayers, the missionaries ought perhaps to be encouraged and protected, but they ought at the same time to be called on to agree on the theological doctrine which the Government is to help to propagate. Thus far religious people have not even agreed on the theological doctrine to be taught in their own schools at home, and the heathen are daily puzzled and scandalized by the exclusive claims on their attention urged by each of the sects which have missions among them. How little chance there is of any such agreement, however, every one knows; but until it comes about, the Government might well decline lending its gunboats and Maxim guns to every variety of créed which chooses to attack the Chinese philosophy or superstitions.

The French military successes in Madagascar were, of course, foregone, and have served mainly, like the English exploits in capturing Chitral, to give occasion to glorifying despatches and decorations. President Faure's congratulatory telegram to Gen. Duchesne, as was said of one of Wellington's peremptory communications to the Portuguese Minister, would have sounded better if addressed to a stronger Power. There may be higher motives, in the war against Afghans and Hovas, than to try the machine guns and smokeless powder and get a little cheap glory, but the absorbed professional air with which military men fix their attention on these points alone makes it look as if they cared for nothing else. For many years, in fact, the savages in Africa and Asia have had no final cause of existence, from the technical military point of view, except to furnish material for experiments in the modern art of war. The French thirst for *gloire* is uncommonly strong, but it must also be uncommonly easy to satisfy if a victory over uncivilized tribes can long appease it.

The rush and crush for place in all departments of the public service in France continues to show how thoroughly imbued with the true spirit of democracy that country has become. Some statistics have lately been published for the prefecture of the Seine, which give some idea of the pressure for even minor offices. The committee on education had some forty places to fill with male teachers; the number of applications was 1,850. No less than 7,139 certificated female teachers contested for 54 vacancies. Even for the position of school-janitress, the applications were to the vacancies as 134 to 1. There were 8 clerical offices to be filled in the state tobacco factories: applicants, 2,679. The prefecture had to appoint 20 clerks in various departments, and had its choice among 3,126 candidates. For one vacancy in the public news-stands only 3,150 applicants presented their petitions, warmly endorsed by municipal councillors, Deputies, Senators, even Ministers. Such figures tell their own story. We need not dream about a distant future when the masses will rise up and demand that the state support them; the masses are already up and pouncing upon every state employment in sight.

An indignant German writes to a Berlin paper giving a list of the dramas performed in all the Berlin theatres on the evening of Sedan Day. In every case but three, the piece was a translation or an adaptation from the French! "Where is our national dramatic art," cries this outraged patriot, "if it can make no better showing on such a great national anniversary?" Emperor William will have to look into this. The worst of it is, though, that he has looked into it, and, in his capacity of judge of fine arts by divine right, has rebuked the popular Sudermanns and Hauptmanns, and told the stupid public that his favorite Wildenbruch is the really great German dramatist. No one can say, therefore, that the Emperor has not done his duty; and if Sudermann wins triumphs in Paris, that only shows how unsound and perverse is Gallic taste. The wicked French critics, on the other hand, attempt to console the Germans by reminding them that it has always been the rôle of Prussia to produce soldiers, not artists. They will yet be raking up the ill-natured things Sainte-Beuve said about the suspicious beer-splashes and tobacco-stains always to be found on the most *spirituel* pages of a German writer.

The new Austrian ministry assumes office with the assured parliamentary support of but one of the principal parties—the Poles. Count Badeni, the Premier, has as Governor of Galicia made an excellent reputation, and, although a conservative and a good Catholic, he is not a Clerical, and will be a warm adherent of the Triple Alliance. The Liberals are reserved in their comments on the new cabinet, not a single member of which was taken from their ranks, but the usually turbulent Young Czechs, strangely enough, extend a cordial greeting to Count Badeni. This is interpreted in the Liberal camp simply as a bid for office on the part of their leaders. The two principal tasks before the Badeni ministry are electoral reform—a legacy of Count Taaffe's, left undisturbed by both Prince Windischgrätz and the provisional Kielmannsegg ministry—and the renewal of the compromise with Hungary. There is little doubt that the new Minister of Finance, Von Bilinski (who is a distinguished political economist), will arrive at an understanding with his Hungarian colleague satisfactory to both parliaments. The greatest difficulty which confronts the new ministry lies in the violence of the anti-Semitic agitation which has so long disgraced Vienna, and which has just culminated in the election of 92 anti-Semites against 42 Liberals to the Municipal Council of that city. The Austrian Government will have finally to deal with this craze. The Liberal members of the Council are certain to make common cause with the Liberals in the Reichsrath, and Count Badeni will have to reckon with them first of all in casting about for a majority. He is not likely to bid for the support of the discordant elements which make up the anti-Semitic party.

Mr. S. F. Van Oss has a valuable study of "Golden" South Africa in the last *Investors' Review*, the most effective part of which, perhaps, is the condensed way in which he sets forth the immense and absurd inflation of mining shares on the London Stock Exchange. The yield of the Witwatersrand mines last year was 2,000,000 ounces, worth $37,500,000. One-third is reckoned as gross profit, and, in fact, $7,900,000 was paid in dividends. Estimating the yield this year at 2,500,000 ounces, the dividends will be of course proportionately increased; and supposing, as is likely, that the yield next year will be 3,000,000 ounces, there will be $11,500,000 for dividends. But the present market value of the Witwatersrand gold shares is upwards of $750,000,000, which would show a return of only 1.53 per cent., even discounting in advance the output of 1896, and making no allowance whatever for the gradual and inevitable exhaustion of the property. The question is, therefore, how long will people go tumbling over each other to make less than 2 per cent. on their money? Already there are signs of uneasiness in the "Kaffir Circus," and nothing can be more certain than that, sooner or later, the tent will be blown down over the heads of the performers. They have tangible property of enormous value—there can be no doubt of that; Mr. Van Oss's investigations confirm strikingly the assertions about the richness and abundance of the South African gold deposits. But gold, when capitalized at three or four times its value, is just as sure to come down with a crash as is pig iron or copper.

THE CONDITION WHICH CONFRONTS NEW YORK CITY.

THE fact in the present canvass in this city which not only dominates all other facts, but makes every other fact seem petty and unimportant, is that we are threatened, through the coming election, with a return of Tammany to power. We are not to-day concerned with the question whose fault it is; the even distribution of blame may be left to quieter times. But it may be said in general terms that it is the fault of the population of this city. We are firm believers in the doctrine that people generally, in the absence of foreign conquest, have the kind of government which they deserve and their particular variety of human nature calls for. The gang who took possession of the city in 1888 did not seize it by force; they were voted into it. Nor did they get their renewed lease of power in 1892, after four years of crime and outrage, by any special interposition of Providence. They got it by consent and approval of 173,000 New Yorkers, among whom were men of all classes and conditions, including members of the City Club. It took six years of administration compared to which that of Turkey is respectable, and a final explosion of vice and wickedness such as no civilized city in modern times has ever seen, to rouse enough of us into casting these devils out of power.

What we are now asked to do by some is to express our disapproval of "dickering," and our sense of the imperfection of the Committee of Fifty, and our faithfulness to the principle of non-partisanship, by running the risk of restoring Tammany, with all its horrors. That the Plattites and Stecklerites and O'Brienites should be willing to run this risk, it is easy to understand. The Tammany régime never was really repulsive to these gentry. In fact, they flourished under it as they could not flourish under a reformed city government, by means of bargains, and dickers, and deals, and "diplomacy," as Platt calls it. They would vastly sooner have Gilroy or Grant in the mayoral chair than Mr. Strong or Mr. Low or Mr. Smith. What astonishes and perplexes us is, that a good many people who surely hate and fear Tammany as much as we do, seem to contemplate its restoration with a certain calm, if it only enables them to protest against "dickers" and to maintain their own character for consistency. Their attitude strikes us as very much resembling absorption in the question of the best form of government, or the comparative merits of protection and free trade, when a Tartar horde was one day's march from the city.

If it were possible that defeat at the polls next month would leave the cause of reform where it stood this time last year—with an overwhelming torrent of indignation and hope and moral fervor behind us—we do not know that we should not cheerfully face defeat for the sake of a ticket to which no one could object on the ground of either principle or expediency. But we cannot go back. Much has happened since then. The situation has changed, and it has changed owing to the character of the constituency. Who could have supposed last year that the German-American Reform Union, composed, as we thought, of such nice, intelligent immigrants, would, after all it said and saw of Tammany, turn round this year, and offer to put Tammany back for a certain number of barrels of Sunday beer? Who could have supposed that a large body of native Republicans, middle-aged, Presbyterian, Methodist, and Baptist, would combine together to hinder all legislation necessary to make the defeat of Tammany effective for reform and purification of the city government? And yet both these things have happened. No; we cannot go back one year. If we go back at all, we must go back six years. We must go back to the days when 30,000 Republican registered voters refused to vote to defeat a Tammany Mayor; when thousands of resolute optimists thought Tammany rule not such a bad thing after all, and its assailants ridiculous and crack-brained persons; when the masses of the poor believed Tammany invincible and police blackmail a feature of American government, and when our leading public offices were firmly held by the scum of our population.

Tammany did not get possession of the city at one stroke. It took four years to do it. It will take four years, in the popular eye, to oust it. It will never be thoroughly gone until the bulk of the voters believe it is gone. They do not believe it now. They expected what we now see—a division among the friends of reform on all sorts of pleas, some good, some bad, and some trifling. They do not yet understand what reformers mean by non-partisanship. They have seen the offices of the city distributed by reformers on the old Tammany principle, to which they are used and which they comprehend. The reformers, in fact, they look on as a subject population might look on a foreign conqueror, who would probably soon depart and leave them under their old rulers. Hence a very widespread readiness to run back to the "Wigwam" on the slightest sign of wavering or dissension among the supporters of the new régime. That Tammany thinks these hopes or fears well founded, we may fairly infer from the character of its nominations. In none of them is there the slightest sign of concession either to the Fifty or the Good Government clubs, Parkhurst or Roosevelt, or any other champion of reform. No pandering to the moral sense of the community is visible in one of them. In fact, it has made a collection of all its worst and most notorious rascals and offered them, in sheer defiance, for nearly every office now vacant. Moreover, it expects to elect them through the divisions of its opponents. If it succeeds, all the consolation we shall have will be that the Good Government men sold their lives dearly, and that Dr. Parkhurst made it hot for the enemy under the old flag.

We reformers are not engaged in founding a new religion, or establishing a church in New York, or seeking to emancipate slaves or convert the heathen. We are trying to provide the city of our residence with a decent administration, and, in a measure, to force it on an ignorant and unwilling constituency. In many ways our work resembles an attempt to get the denizens of a tenement-house not to keep potatoes in their bath-tubs, and not to cut away the stairway for kindling-wood; but we have perforce to get their consent to their own elevation, and the apostles of dirt and disease are waiting outside to witness our failure. Is it not, under these circumstances, rather absurd to ask us to risk this failure sooner than acknowledge that Keating is as good a man as Blauvelt, or Hamilton as good a man as Lockman? Which is the better man we confess we do not know, and our position, we take it, is that of about 100,000 voters in this city. Nor are we disposed, i view of the danger to which our disputations expose us, to inquire too curiously just now as to the considerations to which either Hamilton or Keating owed his nomination. The penalty of quarrelling over them is too tremendous. We are not willing to burn our house down to roast a pig, no matter how scarce fuel may be. We prefer fasting a while if necessary.

THE LATEST SOCIALISM 300 YEARS AGO.

To learn that folly is no new thing under the sun is, it must be confessed, only a dubious comfort. If the wild whimsies of unreason have marked all past centuries, the chances are they will not be absent from future ages; and that, as Thomas Fuller said, when discoursing on the hereditary nature of evil, "is bad news for my son." But even a captious mind may be reassured by reflecting that, if folly has been persistent, so have the social forces which somehow meet and vanquish it; that the world has, after all, blundered along to happier ways, and will doubtless wag on pretty successfully till a comet or the return of the ice age winds everything up. In particular is there a certain amount of rest for the weary to be found in the knowledge that social and political doctrines which, we are often told, are as entirely new as they are to be entirely fatal to liberty and property, are really but so many cast-off clothes brought out from ancestral attics.

A writer in the *Journal des Économistes* for September 15, M. Castelot, makes some of the very latest forms of hostility to "capitalism" seem antiquated enough by his researches into the commercial and economic and legislative history of Germany in the sixteenth century.

Scarcely one of our most thoroughly "modern" attacks on capital fails to appear in M. Castelot's enumeration of the evils complained of and the remedies proposed three hundred years ago in Germany especially, and in the Holy Roman Empire in general. As early as that time had the great discovery been made that a large accumulation of wealth in the hands of one man or one family was a most detestable and dangerous thing, necessarily creating widespread poverty. "How can it be lawful," cried Luther, "in the eyes of God or of men, that one man should in so short a time become rich enough to buy kings and emperors?" It was the head of the great house of Fugger that he referred to—a name that then, in the denunciations of wealth and avarice, played the part which is taken nowadays by that of Rothschild or Rockefeller or Vanderbilt. Nor were the wise ways of limiting great fortunes which some of our social reformers consider their own pet inventions, unknown to their predecessors of the sixteenth century. Among the "Twelve Articles" put forth in the Peasants' War of 1525 (for the nineteenth century read, at will, Knights of Labor, Coxey's Army, the Populist party), was one proposing to restrict private fortunes to ten thousand florins. Any merchant possessing more was to be forced to loan of his superfluity to the less comfortably off, "évangéliquement"; if he would not, the state was to take over the surplus and loan it to the "bougeois pauvres" on easy terms, with no mention of security.

Rage against foreign trade, denunciations of luxury, fierce hatred of bankers and merchants, plans to regulate private life by force, laws and ordinances by the hundred against usurers and monopolists—all these things does M. Castelot show to have been common phenomena in the early part of the sixteenth century; and the phraseology in which they were expressed has often a curiously contemporary sound. Thus, an Augsburg chronicler records, under date of 1519, that the city was then the richest of all Germany, but that, unfortunately, the great merchants were all "great robbers." By their black art of "keeping accounts" and charging interest, they had impoverished all their more honest and less skilled neighbors. For Augsburg read Wall Street, and for the chronicler take one of our Christian Socialists, and the thing becomes at once up to date. The Christian Socialists, in fact, have a good right to call down curses on the heads of Luther, Zwingli, and Ulrich von Hutten, for having said all their good things before them. All the reformers appear to have taken their turn against capital and banking and trade. Luther admitted that commerce must go on, but contended that it must be conducted "chrétiennement." This is to be understood in the same sense as the "evangelical" mode of making loans—that is, to "lend, hoping for nothing again." Of course, Luther, in his charming offhand manner, was for putting "a hook in the snouts" of those merchants who were reluctant to carry on their business in the pure spirit of the Gospel.

Popular rights and the privileges of labor, also, made as great a stir, in their way, in the sixteenth century as they do now. The trades unions took hold of the City Council of Augsburg and proposed to legislate with as high a hand as their lineal descendants in the London County Council. Another link between the centuries will be found, we fear, in the statement that the minority of patricians in the Augsburg Council had little difficulty in managing the majority artisan members, by means of "petits emplois" and a little ready money on occasion. The development of manufacturing brought with it a turbulent working-class, which raged against the competition of foreign manufacturers, and demanded a "minimum wage," in the true spirit of modern enlightenment. There was even a sixteenth-century Grand Army, to complete the happiness of the times and to complete the parallel, as we read that the soldiers who had made the campaign in Italy came back wholly averse to earning an honest livelihood, and loudly insisting on grants from the public treasury with other privileges.

M. Castelot's article is written in a purely historical spirit, and, except in his title, and here and there an incidental phrase, he scarcely glances at the bearing of his investigations on present-day difficulties. Of course, no analogy of the kind can be completely made out. When all is said that can be said for the essential identity of ideas, the modes of expressing them and propagating them and fighting for them are so different from age to age as really to make each affair a new one. It would occur to any one's mind, for example, that socialistic and industrial troubles in a few sections of Germany three centuries ago must be very different, in their magnitude and peril, if not in their fundamental causes, from our world-wide disturbances. But it should be noticed, after all, that the international character of labor troubles and social unrest has already ceased to have the terror which enveloped it, for many thoughtful minds, ten and twenty years ago. The scale of the problem does not alter its essential nature. International resistance has met and conquered international aggression. Capital has always known how to defend itself from attacks of the kind M. Castelot describes, and doubtless always will know how.

LECTURES BEFORE COLLEGES.

The Boston *Congregationalist* printed some unpleasant remarks a few days ago on the invitation given by Cornell University to Mr. C. A. Dana of the *Sun* to lecture to the students on "Journalism." An announcement that a students' lecture course at the Michigan University is to be opened on October 25 by Senator David B. Hill shows that the point of view on which it commented is spreading among the colleges—or, in other words, that the young men are taking the suggestion of their teachers to heart. To speak more plainly, the colleges are evidently following the example which has been set now for many years by the periodicals in refusing to maintain standards of morality of any kind, or to make any discrimination between writers, on moral grounds, or to consider anything in the selection of contributors, or even of subjects, except the questions, "Will he be read? Will his article pay?" There were visible signs of a tendency towards this commercial standpoint a year or two ago over the football matter. As the football craze grew among the youth, the opinion (mistaken opinion, it would seem) gained ground that football triumphs would draw students to the institution which achieved them, and there were too many instances in which the faculty seemed to encourage this belief—that is, to encourage the athletic mania, not in the interest of either health or learning, but as a matter of business. And yet if there be a single place in the United States in which commercial considerations should never tell, it is in seats of learning. It is of the last importance that the American man, in the period when his moral gristle is turning into bone, should find himself in a region in which things are not expected to pay.

Asking people to lecture to young men without reference to the moral place they occupy in the community, and without reference to the influence their career has had in lowering or raising the standard of public morality, or in moulding the tone and temper in which men approach the great social and political questions of the present day, is surely a very serious matter. A lecturer always seems to young men to be armed with some sort of authority; and some sort of authority he ought to have—that of learning, or public service, or intellectual distinction. Some such authority he generally has, though men lecture often who have none of it, and propose simply to gratify people's curiosity, like the Claimant, or Breckinridge, and the story-tellers and funny men to whom Major Pond sometimes treats us. But certainly no lecturer should be introduced into a college and presented by the faculty or by any lecture committee to the students, whom they are not willing to present for admiration or imitation; of whom they cannot say: "Here is a man worth listening to because he has deserved well of his country and his kind, because his success in life has been achieved through manly arts, and because the record of his experience in his calling is sure to be pure and inspiring."

No other kind of lecturer should ever get a hearing in any such place.

We think it would be well for the public if the magazines adopted a rule of the same kind about their contributors, but then, magazines are avowedly published to make money and not to instruct youth. Their selection of writers, therefore, on the ground of simple notoriety we can object to only for the reason for which we might object to the exhibition of "freaks" and monsters in a dime museum. Such displays may do harm, but no one pretends that they are meant to do more than amuse, or gratify a more or less vulgar curiosity. Furthermore, the objections of moralists would probably do no more to purify the magazines than the newspapers. Business is business, and when the money is coming in, the cry of the preacher waxes very faint.

But colleges are not, or ought not to be, in business. They are in ethics, in civics, in philosophy, in jurisprudence, but they are not in business. Consequently, even though Croker were to draw a full house by discoursing on organization or blackmail, or "Rocky" Moore on the registration of deeds, it would be wrong for a college faculty to invite either to deliver a course to the undergraduates. We may say the same thing of David B. Hill. If there be any standard of morality left in our churches, schools, and colleges in this country, Hill is an infamous man. Why? Because he concocted, carried out, and boldly defended some gross election frauds on the people of the State of New York. For this the people punished him by defeat at the polls by an enormous majority. Now, if on moral grounds he is not fit to be Governor, he is still less fit to lecture in colleges on any subject. You cannot in such places separate the lecturer or the politician from the man. When a man gets up before a body of youths to tell them the results of his experience, he cannot cut himself in two and leave his worse half in the ante-room. He stands before them not simply as an orator, but as an influence and career. The audience are sure to think of him as such. If Hill were to lecture on any subject that he thoroughly understands and on which he can speak with authority, that subject would be tricks, intrigues, chicane, fraud, and the art of deception for base purposes. It is by such arts he has risen into prominence. It is these arts which have made him known at Ann Arbor, and which have suggested the invitation to lecture. On no subject which it concerns a young man to understand thoroughly, and upon which it is his duty to listen to the voice of a master, can Hill speak as one who knows; while his whole history as a public man suggests nothing but "ways that are dark and tricks that are vain."

We trust sincerely that this mania for listening to notorious people is not going to run now through all the colleges of the country, as such things sometimes do. It is an honor to be asked to lecture before a college, and, if we are to maintain any standard either of professional competence or of personal morality, it is an honor which should be bestowed with great discrimination. It is in vain that we ask our young men to live with the mighty dead, with Plato and Shakspere and Milton and Fénelon, if we ask them at the same time to live also with Dick Croker, Dave Hill, and Matt Quay. We must make our election. If colleges are meant to make tricky politicians and electioneering cheats, there must be no hypocritical pretence of respect for the great names of other ages, for the men of light and leading who make the glory of the race.

AMERICAN COLONIAL MANUSCRIPTS IN THE BRITISH MUSEUM.—I.

LONDON, September 1895.

IN my recent letter upon manuscripts relating to the history of America which are preserved in the British Museum, a list of some of those manuscripts was promised. This list is now given: D. D.

Egerton MSS. 1,717, f. 117—Extract from a letter respecting the discoveries by the Russians on the northwest coast of America, September 23, 1764

Lansd. MSS. 1,177, f. 217.—Dissertation sur les côtes occidentales de l'Amérique Septentrionale.

Lansd. MSS 1,177, f. 268.—Remarque sur les côtes occidentales de l'Amérique Septentrionale, la terre de Jesso, et la Californie.

Add. MSS. 28,140, f. 34b.—A generall description of the American coasts and seas, with bearings and distance of capes and headlands, observations on currents, etc., translated from a Spanish MS. written by Capt. Domingo Gonzales Caranza, royal pilot 1718.

Add MSS. 27,856–27,858.—Francis Place. Papers relating to the discovery and history of America. Three volumes Paper, xix. cent., quarto.

Add. MSS 27,891, f. 1.—Sailing directions for different parts of the eastern coast of the United States, 1772–1778.

Sloane MSS. 3,861, f. 67.—History and description of the English Dominions in America.

Add. MSS. 15,898, f. 129.—An account of his Majesty's Plantations in America, n. d.

Add. MSS. 23,615.—Copy of the representation of the Lords Commissioners for Trade and Plantations upon the state of His Majesty's Colonies in the Continent of North America; Whitehall, 8 Sept., 1721. At the end is "A Map of the English and French Possessions on the Continent of North America. 1727. H. Popple." See King's MS. 205. Paper, xviith cent., folio.

Add. MSS. 21,886.—List of plans, chiefly of places in N. America Paper, xviii. cent., quarto.

THE POLICY OF UNIONISM.

LONDON, September 25, 1895.

WHAT can the Unionist Government do to secure the maintenance of the Union?

My purpose is to answer this inquiry from the point of view of a Unionist; but, that my reply may be understood, I must insist upon two preliminary considerations which sometimes escape the attention of Americans. The policy of Unionism is, in its essence, a policy of conservatism. Its aim, as regards England and Ireland, is to maintain the existing Constitution; its aim is not, directly at any rate, to introduce a new condition of affairs. A Unionist Government, therefore, by the mere fact that it prevents the Act of Union from being tampered with, to a great extent fulfils the object of its existence. To place a check, even for a time, on innovation, is in itself no small matter. The mere dead opposition of English statesmen to repeal from 1834 to 1844 broke the power of O'Connell and terminated the agitation for the Repeal of the Union; the six years of Unionist administration from 1886 to 1892 have assuredly weakened, if it be only for the moment, the strength and the prestige of the Irish Nationalists. The party which nominally follows Mr. McCarthy does not wield half the influence of the party which in fact obeyed Parnell. Resistance, let it be conceded, is in one sense no remedy; but a policy of resistance has constantly given time for a rally on the part of the conservative forces in the state and for the gradual spread of disunion among a revolutionary Opposition. A period, moreover, of opposition to change ought to supply, though it rarely does supply, the time within which to cure the real evils which are the sources if not the justification of revolution.

The danger to England of Irish discontent is, in the judgment of Unionists, less pressing than it appears to foreign critics. This is a point on which it is painful to write. That a large proportion of the citizens of a country should be discontented with its form of government is in any case a most deplorable fact; it is the outward sign of a disease the cure whereof is imperatively demanded by every feeling of patriotism. There are few Englishmen who would not make heavy sacrifices for the sake of rendering the majority of Irishmen as loyal citizens of the United Kingdom as are the vast majority of Scotchmen. Yet on all topics of public interest it is well that the plain truth should be spoken. It is therefore right to assert that the actual peril to England of the disloyalty now existing among large classes in Ireland easily admits of exaggeration. This discontent is a subject of the deepest regret; it is not and ought not to be to Englishmen a source of fear. For the most painful feature of the relation between England and Ireland is in one sense a ground for confidence. Irish disloyalty, caused to a great extent by gross misgovernment in the past, is a chronic or a secular phenomenon in the history of the English people. The hatred of

England on the part of many Irishmen has been in former times a much more intense feeling than at the present day, and in past generations Irish discontent has threatened England with far greater peril than at present. In the midst of the war with the American colonies, not only the populace but the leading men of Ireland were united in resistance to England. Yet England survived the loss of the American colonies, and, for good or bad, did not finally lose the control of Ireland. A century ago the Irish people were on the verge of rebellion; the disloyalty of Belfast was as marked as the disloyalty of Cork or of Dublin, and far more dangerous. During the whole of the great war, any French army which had landed in Ireland would have found, as Gen. Humbert's army did find, thousands of Irishmen prepared to welcome the invader. The population, moreover, of Ireland was at the beginning of this century larger than at present: it formed also a far larger proportion than to-day of the population of the two islands which now make up the United Kingdom. Yet England, though surrounded by perils, came victoriously through the severest contest which the country has ever sustained.

Do not let any one for a moment suppose that in recalling these facts I argue or suggest that England can or ought to resist just claims on the part of Irishmen. Might is not right, and no policy will ever, in the long run, succeed which rests upon their identification. But facts must always be recognized. A war between England and some great Power, say with France, is a possibility. In such a war the present condition of Ireland would be a source of English weakness, though, in the judgment of Unionists, not nearly so great a source of weakness as would be the existence of an Irish Parliament controlled by Mr. Healy or Mr. Redmond. My only contention is, that were things to remain as they now are, Irish discontent cannot in 1895 be anything like the same peril to England that Irish disloyalty was in 1782, in 1795, or in 1800.

If these preliminary observations be taken into account, it will be understood why Unionists perceive some great advantages even in a merely defensive policy. Their position in this matter, as in some others, resembles the position of American Republicans during the war of secession. Let me now, however, proceed to answer my question.

My reply, in its most general terms, is that Unionists ought to set before themselves two objects, of which the first is to strengthen the political defences of the Constitution, and of which the second is to remove every cause of Irish discontent that can be removed without touching the Act of Union. Each end, they believe, is attainable by appropriate measures.

First, as to the political defence of the Constitution. Parnell forced Irish grievances upon the attention of the English public by his system of parliamentary tactics. He organized, if he did not invent, obstruction, and thereby for a short time rendered the working of parliamentary institutions all but impossible. Any man who carries his memory back over twenty years or so can remember the striking immediate effect produced by this new plan of party warfare; but any one who looks a little beyond mere momentary success will probably admit that a system of annoyance cannot in the long run insure the triumph of those who adopt it. A nation cannot be brought into bondage by the misuse of parliamentary forms. Obstruction may change and permanently damage English parliamentary procedure, but it will never enable a minority to usurp the authority of the nation. Parnell's success, however, and the passing through the House of Commons in 1893 of a measure of home rule which it is now all but admitted could never have commanded the assent of the nation, are warnings to Unionists that the Constitution must be guarded against insidious or hasty attacks; and Unionists, as it happens, have it in their power both to render Parnell's parliamentary tactics impossible of repetition, and to increase the difficulty of any attack on the Act of Union. They can, by adopting the democratic principle, which prevails in France, in Switzerland, and in other countries, that representation ought to be strictly in proportion to numbers, at once transfer twenty representatives from Ireland to England. This reduction of the Irish representation to eighty or eighty-one members would probably reduce the number of Irish Nationalists in Parliament to a little over sixty. It is, again, on every ground desirable to do away with illiterate voters throughout the United Kingdom, and this step would lessen, though to what extent no one can tell, the parliamentary strength of the Irish Nationalists. Add to all this that, in consequence of recent events, the House of Lords has obtained the power of insisting that no home rule bill shall pass into law until it has definitely received the sanction of the electors at a general election, and that it is easy to trace the slow but certain growth throughout England of the opinion that fundamental changes in the Constitution ought to be submitted directly to the verdict of the electors. Whoever will fairly consider these things will come to the conclusion that the Unionist majority will find no insuperable difficulty in providing political safeguards for the maintenance of the Act of Union.

Secondly, as to the removal of Irish discontent. There exist, as most Unionists conceive, at least three different methods for removing some of the sources of Irish dissatisfaction. In the first place, the desire for home rule may, as most Liberal Unionists suppose, be partially satisfied by the extension to Ireland of the kind of local self-government which now exists in England and Scotland; and Lord Salisbury's Government will, we may feel sure, introduce some measure of which this is the object. Nor is there any reason to doubt that such a measure, if supported by the Irish members, may pass into law. There is some advantage in establishing throughout the United Kingdom the same system of local self-government, and it is at least possible that some Gladstonians whose zeal for home rule, which was not very warm at any time, and has now grown extremely cool, may, on the extension to Ireland of local self-government such as exists in England, desist from the advocacy of home rule. But, though most Liberal Unionists hope much from the effects of an Irish Local Government Act, many persons outside politics find it impossible to share these hopes. Whether such a system of local administration as now exists, but has not yet received a complete trial, in England would meet the needs of the Irish people, must appear problematical. It is difficult, further, to believe that, under the present condition of Ireland, the central Government will not be compelled to retain and exercise a power to check the aberrations of local authorities such as the Government does not possess and does not need in England. But, if this be so, it will be hardly possible to assert that Ireland has received the same kind of local government as England. Nor is it easy to convince one's self that the desire for home rule, which is either a wish for Irish independence or at lowest for the recognition of Ireland as a nation, can be satisfied by any extension whatever of self-government to Irish counties or parishes. My doubts, whatever their worth, are not shared by Unionists, who as a party certainly believe that a measure of local self-government will meet whatever is reasonable in the demand for home rule.

In the second place, Unionists, or at any rate Conservative Unionists, hold that a Unionist Government can go a good way toward meeting the wishes of Irish Catholics, and especially of the Irish priesthood, in the matter of education. This is certainly a course more easily pursued by Lord Salisbury and his colleagues than by a cabinet kept in power through the votes of English Nonconformists. What are the concessions, if any, which an English Government could rightly make, or which would conciliate the Irish priesthood, no one could pronounce who has not an intimate knowledge (certainly not possessed by the present writer) of the state of education and of public feeling in Ireland. All that a Unionist can assert is, that to leave questions as to the education of Irishmen, in so far as the state is concerned therein, to be decided in accordance with the wishes of the Irish people in the same sense in which questions as to education in Scotland are decided in accordance with the wishes of the Scotch people, is consistent with every principle of Unionism.

Lastly, Unionists hold that the root of Irish discontent is dissatisfaction (which has lasted in one form or another for centuries) with the system of Irish land tenure, and that just and vigorous legislation may turn Irish tenants into the owners of the land they occupy and thus deprive the home-rule movement of its effective strength. Here we come upon the fundamental disagreement which divides Gladstonians from Unionists. The followers of Mr. Gladstone maintain that Ireland is disturbed by the ardent desire of the people for the recognition of Irish nationality; that the agitation for home rule is part of the great nationalist movement which has distracted Europe for more than half a century, and conclude (as Unionists think) not quite consistently, that aspirations for national independence may be satisfied by the concession of the qualified political dependence which is known as home rule; hence, to English Home-Rulers, the wish of Irish tenants for changes in the tenure of land appears to be a subordinate portion of the demand for the recognition of Ireland as a nation. Unionists, on the other hand, if they are wise, never deny that the agitation first for repeal, next for home rule, and, when occasion has offered, for independence, does represent a real and widespread feeling; but they believe that aspirations for independence would remain little more than aspirations unless they were connected with a very ardent and effective wish on the part of the Irish peasantry for the ownership of the land. This view finds its confirmation in the experience of other countries, in the conclusions of foreign thinkers such as Gustave De Beaumont, who explored the intricacies of the Irish question with thoroughness and impartiality, and above all in the conduct of Irish leaders, who have never found any effective response to their appeals till, so to speak, they touched the earth. Labor has, curiously enough, been the teacher quite as much of Mr. Balfour as of Parnell. Whether the Unionist view of the situation be well or ill-founded it is not my purpose on this occa-

sion to discuss; my wish is only to urge that this view dominates their whole position, and leads to the conclusion that they can take away the sting, so to speak, from Irish discontent by boldly carrying out the system of the purchase of land by means of loans from the state.

For the achievement of this end the present Government have several advantages. The purchase of land (Ireland) act, 1891, committed the whole Unionist party to the settlement of the Irish land question. The certainty that all hope or expectation of the immediate establishment of a Parliament at Dublin is at an end, makes it impossible for any tenant to count on obtaining within a few years almost for nothing the land which he now occupies; an Irish farmer therefore will, it may be supposed, look favorably upon any scheme for purchase on easy terms. Irish landlords, again, must know that there is never likely to be in power in England a Government more disposed than the present Ministry to treat their claims with justice. They may think, and with reason, that the only choice open to them is the choice between immediate purchase or future spoliation. Then, further, though on this point every one must form his own opinion, it is, to say the least, very doubtful whether the mass of the British electors would refuse to sanction a bold and liberal scheme, even if it involved considerable expense, for turning the Irish tenants into peasant proprietors. Neither the vices nor the virtues of the present electorate run in the direction of rigid economy. Be this, however, as it may, Unionists hold, and this is the only point on which I insist, that, by an extension of the policy embodied in the land-purchase acts, they can at any rate prepare the ground for the growth of contentment and loyalty in Ireland. A century ago discontent, not to say sedition, prevailed in Ulster. Gladstonians now blame Ulster for loyalty to the Union. AN OBSERVER.

Correspondence.

THE CHICAGO LAKE-FRONT SETTLEMENT.

TO THE EDITOR OF THE NATION:

SIR: In your issue of the 3d inst., you publish, under the heading "Suppression by the Press," a letter from Mr. Edwin Brainard, dated the 26th of September.

Of course, you can know nothing of the merits of the matter referred to in Mr. Brainard's letter, but it seems to me that I have scarcely ever seen a clearer instance of pure impudence and unadulterated falsehood. The arrangement come to with Mayor Swift is universally recognized by all parties having the real interest of Chicago at heart as being an extremely beneficial one to the city, and the only sentiment one hears generally among citizens is that of surprise that the railroad company should have been brought to accede to the terms which its officers have agreed to.

There has been no "suppression by the press" in this discussion. The general feeling of the community and among newspapers is one of congratulation at the result obtained, and hope and expectation that the City Council will have the good sense to ratify the arrangement come to by the Mayor. It is only this morning that in the Chicago *Tribune* appeared a whole column of interviews with the leading citizens in the city, all men of almost national reputation, and the unanimous consensus of opinion is that the arrangement is a beneficial one to the city of Chicago and should be carried through.

I think that Mr. Brainard has hit upon a very unfortunate instance to illustrate "suppression by the press." Even the *Daily News*, a paper which has for years been the most active opponent of the Illinois Central Railroad, has little to say about this arrangement.—Yours respectfully, EDWARD A. BRANDEN.

304 OHIO STREET, CHICAGO, October 7, 1895.

PIECE-RATE WAGES.

TO THE EDITOR OF THE NATION:

SIR: Through the kindness of a friend who is an engineer my attention has been called to a short paper entitled "A Piece-Rate System," by Fred. W. Taylor of the Midvale Steel Company, Philadelphia, which ought to prove of interest to a larger group than will have opportunity to see it in the Transactions of the American Society of Mechanical Engineers, where it has been printed. I beg leave to report it briefly.

The essence of the system consists in determining the least time in which each and every one of the elementary operations can be performed successfully. The time required for any new piece of work is to be accurately computed, not guessed at. In making out the scheme, such questions had to be considered as: "To determine, formulate, and finally practically apply to each machine the law governing the proper conditions for obtaining the best results." As a first result many machines and tools of standard make had to be altered according to designs determined by the company.

Commissioner Wright (Sixth Annual Report, p. 87) says of the production of iron: "There is not, as yet, a scientific determination of the necessary expenditures in labor, in administration, or in the different classes of supplies in the production of these materials." Mr. Taylor's testimony is that, "of the three managing departments, the commercial, the financiering, and the productive, the latter, in most cases, receives the least attention from those that have invested their money in the business, and contains the greatest amount of risks." Systematization is recognized as a proper means to secure economical management. But can it be introduced into the machine shop and mill? Will it not become "red tape," *i. e.*, be abused and become a hindrance? Mr. Taylor answers from his experience.

The plans for increasing the output were introduced into the shops in connection with a "differential piece-rate" wage. Not only were the men stimulated, but the friction between the men and their employers was reduced, their *morale* improved, and their individuality developed. Whether or no this system of wages proves to be the "final solution of the wages problem," the possibilities arising, through a scientifically economical method of production, for a greater output to be divided between the men and the company, are strongly suggested by the following:

"A standard steel forging, many thousands of which are used every year, had for several years been turned at the rate of from four to five per day under the ordinary system of piece-work, 50 cents per piece being the price paid for the work. After analyzing the job . . . the writer became convinced that it was possible to turn ten pieces a day. . . . In place of the 50-cent rate that had been paid before, they [the men] were given 35 cents per piece when they turned them at the speed of 10 per day, and when they produced less than ten they received only 25 cents per piece. . . . From the day they first turned 10 pieces to the present time, a period of more than ten years, the men who understood their work have scarcely failed a single day to turn at this rate." FREDERICK W. MOORE.

VANDERBILT UNIVERSITY.

UDALL AND CHAUCER.

TO THE EDITOR OF THE NATION:

SIR: Some time ago, in tracing the sources of the "Roisterdoister," I found that, as had already been pointed out by various German scholars, our first comedy was based upon the two allied Latin plays, the "Miles Gloriosus" of Plautus and the "Eunuchus" of Terence. I was, however, unable to account for certain things in the English play which I felt were not original with Udall. As I believe I have now found an English source of Udall's inspiration, I take this means of calling attention to it, postponing for the present the detailed treatment of the general subject of the sources of the English play.

In his Latin models, Udall found his heroine, if we may so call her, a courtesan, who, in the absence of her lover, entertains another admirer. This character he transforms into a widow, named *Dame Custance*, betrothed to a merchant *Gawyn Goodluck*, who is temporarily away on a journey. During his absence *Dame Custance* is pestered by a young fop of the place, whose approaches she repels. In revenge, he makes an assault upon her house, but is put to rout (iv. 7–8). Nevertheless, the affair places *Dame Custance* in a suspicious light (iv. 3), and when *Gawyn Goodluck* returns, he is loath to admit her innocence until he has made a careful investigation among his friends (v. 1, etc.). Alone and disheartened, *Dame Custance* offers up this prayer:

"O Lorde, howe necessarie it is nowe of dayes,
That eche bodie live uprightly all maner wayes,
For lette never so little a gappe be open,
And be sure of this, the worst shall be spoken.
How innocent stande I in this for deede or thought?
And yet see what mistrust towardes me it hath wrought.
But thou Lorde knowest all folkes thoughts and eke intents
And thou arte the deliverer of all innocents.
Thou didst helpe the aduoutresse that she might be amended,
Much more then helpe Lorde, that never yll intended.
Thou didst helpe *Susanna*, wrongfully accused,
And no lesse dost thou see Lorde, how I am now abused,
Thou didst helpe *Hester*, when she should have died,
Helpe also good Lorde that my truth may be tried."
(v. 3.)

Her innocence is proved, the betrothed are reconciled, and all ends well with a grand supper at *Gawyn Goodluck's* house (v. 4).

In the "Tale of the Man of Law," Chaucer, like Gower, retells one of the stories in the Anglo-Norman Chronicle of Nicholas Trivet, written about A. D. 1334 (Skeat's 'Chaucer,' iii. 409 ff.). A widow, *Dame Custance*, living in seclusion, is pursued by a young knight dwelling in the town (line 585), whose ardent approaches are repelled (589). In revenge (591), he enters her house at night, slays the woman with whom she is sleeping, and later charges her with the crime. The king, who has been away on a journey, returns (604), and, while pitying *Dame Custance*, institutes a trial (618).

"Allas! Custance! thou hast no champioun,
Ne fighte canstow nought, so weylawey!
But he, that starf for our redempcioun
And bond Sathan (and yit lyth ther he lay)
So be thy stronge champioun this day!
For, but if Christ open miracle kythe,
Withouten gilt thou shalt be slayn as swythe.

"She sette her doun on knees, and thus she sayde,
'Immortal god, that savedest Susanne
Fro false blame, and thou, merciful mayde,
Mary, I mene, doghter to Seint Anne,
Bifore whos child aungeles singe Osanne,
If I be giltless of this felonye,
My soccour be, for elles I shal dye!'"
(631–644.)

Her innocence is proved and she becomes the

King's wife. Troubles are not wanting, but in time all is well.

"Who can the pitous joye tellen al
Bitwix hem three, sin they ben thus y-mette?
But of my tale make an ende I shal;
The day goth faste, I wol no lenger lette.
This glade folk to diner they hem sette;
In joye and blisse at mete I lete hem dwele
A thousand fold wel more than I can telle."
(1114-1120.)

The touching episode in which the prayer is found is an insertion of Chaucer's, and so could not have been borrowed by Udall from the original or from Gower. There is, however, a somewhat similar passage in the "Eunuchus":

Thais. me miseram, forsan hic mihi
parvam habeat fidem
atque ex aliarum ingeniis nunc me iudicet.
ego pol, quæ mihi sum conscia, hoc certo scio,
neque me finxisse falsi quicquam neque meo
cordi esse quemquam cariorem hoc Phædria:
et quidquid huius feci, causa virginis
feci, etc. (i., 3.)

It is probable that this was the original source of the scene in the "Roisterdoister"; but that Udall changed the soliloquy into a prayer in which *Custance* refers to Susanna, must be due to the recollection of Chaucer's *Custance*, who did the same thing.

The letter sent by *Roisterdoister* to *Dame Custance*, which, by wrong punctuation, is made to say just the reverse of what the lover meant to convey (iii., 5), may possibly have been suggested to Udall by the episode in the "Tale of the Man of Law," in which the letter sent by the King to his wife *Custance* (757 ff) is intercepted and replaced by one of exactly opposite import (792 ff). GEORGE HEMPL.

ANN ARBOR, October 5, 1895.

Notes.

T. Y. CROWELL & Co. include among their fall announcements: 'Beautiful Houses,' by Louis H. Gibson, with many illustrations; 'The Narrative of Capt. Coignet,' in a new and cheaper edition; 'The Hawthorn Tree, and Other Poems,' by Nathan Haskell Dole; a new edition, two volumes in one, of Hepworth Dixon's 'Her Majesty's Tower'; Keats's Poetical Works in two volumes, with biographical sketch by N. H. Dole; a revived 'Scottish Chiefs,' and Prof. Bascom's latest book, 'Social Theory' (vol. vii. in Crowell's Library of Economics and Politics).

E. P. Dutton & Co. will get out a new and fully illustrated 'Robinson Crusoe,' and will also publish 'The Blue Balloon,' a war-story for boys.

Lee & Shepard, Boston, have nearly ready 'Old Boston,' being half-tone reproductions of etchings, with descriptive text by Henry R. Blaney, and 'Gymnastics,' by W. A. Stecher, a text-book of the German system. The same firm also publish collected 'Poems of the Farm'; a new edition of Clifton Johnson's 'The New England Country,' at a reduced price; and 'Two Years on the *Alabama*,' by Lieut. Arthur Sinclair, C. S. N.

The Macmillans will soon publish M. A. Flory's 'Book about Fans,' carefully illustrated, together with a chapter on fan-collecting, by Mary C. Jones. They also announce Mr. Frederic Wedmore's work on the art of etching, in which particular attention will be given to certain neglected artists of the past, while the work of the best contemporaries will not be overlooked. The volume is to contain fifty illustrations.

Prof. F. M. Warren of Adelbert has edited Corneille's "Le Cid" for Heath's Modern Language Series.

Mayer & Müller, Markgrafenstrasse 51, Berlin, W., write us that the library of the late Julius Zupitza, Professor of Modern Languages in Berlin University, has been put in their charge, and that they hope to dispose of it "als Ganzes."

Frederik Muller & Co., Amsterdam, invite subscriptions to 'Abel Jansz. Tasman's Journal of his Discovery of Van Diemen's Land and New Zealand in 1642,' with documents relating to his exploration of Australia in 1644. The volume will consist of photolithographic facsimiles of the original MSS. at The Hague and elsewhere, with an English translation, under the care of J. E. Heeres, of the Dutch State Archives, and C. H. Coote, of the British Museum. The edition will be sumptuous and will be limited to 200 copies. The same firm will continue its reproduction of "Remarkable Maps" in their original size, begun last year, with a double Part ii.–iii., containing about twenty large maps of the seventeenth century showing the various epochs in the cartography of Australia, as understood by the Dutch cartographers. Mr. Coote again furnishes the notes.

A collection of reproductions of sixty-four of the best specimens of Lucas Cranach's woodcuts has just been issued by G Grote, Berlin (New York: Westermann). It is accompanied by an introductory sketch of the artist's development and productiveness by F. Lippmann.

An interesting discovery has been made in the public library of Perugia. It is a copy of the original edition of Dante's 'Questio de Aqua et Terra,' a volume of such exceeding rarity that five copies only are now known. One of these is among the recent acquisitions of the British Museum.

We notice somewhat tardily the fifth and sixth volumes of Dr. Thomas Hodgkin's 'Italy and her Invaders' (Oxford: Clarendon Press; New York: Macmillan). The history in its original form has been before the public for ten years; but Dr. Hodgkin, not content with the high praises it has received, has so amplified it as to make of this late edition a new work. In the present fifth volume, which covers the period from 553 to 600, he describes the Lombard Invasion, following as surely as the somewhat meagre authorities permit the course of intricate events. The great figures of this period are Alboin and Gregory the Great. The sixth volume treats of the Lombard Kingdom, 600-744, and in it we have the story of the remarkable race which seemed likely, at one time, to conquer all Italy and to establish there a united kingdom. That it failed was due to the intervention of the Frankish King, Charlemagne, whose overthrow of the Lombards will be the subject of Dr. Hodgkin's next and concluding volume. It is hard to see where any future historian will find a field to glean after Dr. Hodgkin's careful, thorough, and intelligent harvesting. He has exhausted all sources, and embraces in his survey the political, social, religious, and legal conditions of the age under consideration. The importance of his work is apparent when we reflect that the centuries between the fall of the Western Empire and the advent of Charlemagne were the period not only of the dissolution of the Roman world, but also of the rise of the races from which modern Western Europe has sprung. Maps, views, and genealogical tables add value to these volumes.

'The Islands of the Pacific' (American Tract Society), by Rev. James M. Alexander, is a brief sketch of Protestant missions in those regions. The larger part of the volume is taken up with the narration of the familiar facts of their early history, and comparatively little information is given as to the present condition of the islands. There are evident marks of haste or carelessness in the preparation of the book, which detract from its value. The illustrations of the natives and the scenery are interesting.

The *Virginia Magazine of History and Biography* for October prints in full the interesting will of Benjamin Harrison, father of the signer of the Declaration of Independence and also Governor of Virginia, and ancestor of his namesake our ex-President; ancestor, too, as the name of one of his sons, Carter Henry Harrison, indicates, of the notorious ex-Mayor of Chicago. He was a large slave-owner, and in his bequest to his son Charles he expresses his desire that "there may be Five Slaves bought (Vizt) three women and two men as soon as Conveniently can be to Full slave the three Plantations on Secarnis"—a sentence hardly more afflicting to the moralist than to the enemy of the split infinitive. However, respecting some slaves to come to his estate by reversion, he directs that they be "divided into six as equal Parts as Possible, Without Parting men and their Wives." There are more letters of William Fitzhugh in the seventeenth century, a valuable series. "I add no more in this," he says to Nicholas Hayward, "because I am hurried away & hard in drinking with two masters taking their leave"; and twelve days later (August 20, 1690) he asks Mr. John Cooper's aid in "getting of us an able, learned, serious and sober Minister." It is odd to find this number closing with a censure of John Fiske's 'History of the United States' for its neglect of the Plymouth Governor Winslow by one of his descendants writing from Boston.

Lafayette College is to celebrate on October 24 the seventieth birthday of Prof. Francis A. March. The same date will mark the completion of forty years' service of the college by this distinguished philologist.

The American School of Classical Studies in Rome opens this week. Courses for 1895-'96 (the full school year is ten months) cover instruction in the following subjects: Latin literature as relating to customs and institutions; Latin epigraphy and palæography; the antiquities of ancient Italy, and especially the topography and monuments of Rome; early Christian antiquities; mediæval art in Italy. Graduates of American colleges, as well as other persons submitting proof that their studies have been such as to enable them to profit by the advanced work of the School, will be admitted on application. No charge will be made for tuition. The Director for the coming year is Prof. W. G. Hale of Chicago, and the Associate Director Prof. A. L. Frothingham of Princeton. Three fellowships are within the award of the School, two of $600 and one of $500; these have been assigned for the current year. The circulars, announcements, and regulations of the School may be had by applying to the temporary secretary, Prof. Samuel Ball Platner, Adelbert College, Cleveland, O.

The privy councillor, Dr. Von Anrep, has been appointed Director of the Medical Institute for Women at St. Petersburg, which is designed chiefly to provide female practitioners of the healing art for the country districts of Russia. The courses of study, while giving special attention to diseases of women and children and to obstetrics, embrace anatomy, physiology, general and special pathology, therapeutics, diagnostics, physics, chemistry, mineralogy, toxicology, surgery, sanitary science, dermatology, ophthalmology, psychiatry, neu-

rastheny and kindred disorders, and extend over five years. A school of pharmacy is also to be established in connection with the institution. For the benefit of non-resident pupils there is a dormitory, with dining-room under the supervision and control of an "inspectress," who is appointed by the Director. Candidates for admission must be, as a rule, not less than twenty nor more than thirty-five years of age—and they must also be Christians! Every student is required to wear a uniform.

—The September number of the *Portfolio* (Macmillan) is devoted to a study of the 'Dutch Etchers of the Seventeenth Century,' other than Rembrandt and his school, from the competent hands of Laurence Binyon of the department of prints of the British Museum. Rembrandt's etchings and, to some extent, those of his pupils were dealt with by the late Mr. Hamerton in the first number of the new series of the periodical that writer created. Ostade, Ruisdael, and Paul Potter are the most important of the artists dealt with in the present number, and a fair idea of their etched work, together with that of Backhuysen, Van der Velde, Berchem, Dujardin, and others, is given by the four plates and twenty-nine text illustrations. Ostade is much the most fully illustrated of any of them, with one plate and ten cuts, and justly so, as he is by far the best etcher of them all, and at his best not too far below Rembrandt's average. We could wish that some other example of Ruisdael had been chosen than "The Cornfield," which has been so often reproduced. Paul Potter shows better, perhaps, as an engraver than as a painter, but an engraver rather than an etcher he was. The same inflexibility that mars his painting marks his work on copper. Mr. Binyon's text is scholarly and critical.

—Volume xxii. of the Transactions of the Asiatic Society of Japan is completed by parts ii. and iii. just issued, volume xxi. being in one part. Besides the paper already noticed in these columns, we have an account of "Three Popular Ballads" by Lafcadio Hearn. Living in Izumo, one of the oldest seats of Japanese culture, he finds near Matsué four pariah or outcast classes dwelling in villages apart from the thirty-six thousand residents of the city. The normal Japanese shun these villages "as they would a place of contagion." Only by concealing their identity and emigrating to distant places, can these former Eta and assistants at public executions secure the rights and privileges of ordinary citizens; and this, notwithstanding that their legal disabilities were removed and they were "elevated to citizenship" in 1870. The materials for a Japanese 'Uncle Tom's Cabin' are abundant; and in Japan no more than in the United States do social prejudices melt away upon the issue of an edict or even of the gift of suffrage. In two of these settlements of outcasts, the people are believed to be descendants of the family and retainers of Taira no Masakado, the only man in all Japanese history who (in A.D. 939) conspired to seize the throne for his personal occupancy, and whose wooden statue (as the local deity of Kanda) in Tokyo was in 1868 chopped to pieces by the imperial troops. The three ballads preserved by these singularly situated people are in still more singular contrast with Japan's life at this end of the nineteenth century. They are faithful mirrors of very ancient customs and superstitions, and show how much human nature at a similar grade of culture is alike whether in Nippon or Britain. The Rev. A. Lloyd is one of the comparatively few missionaries in Japan who have given earnest study to the peculiar phases of Buddhism in Japan. His presentation of its "Developments," as expressed in prose and verse, occupies 163 pages in volume xxii, part iii. Besides setting forth a general historical view, derived from the best foreign sources, and some suggestive parallelism with and contrasts to Christianity, this English clergyman gives a valuable digest of Japano-Buddhistic moral teachings. He agrees with other critical students in declaring Nichiren (born A.D. 1222), with whom the doctrinal evolution of the Indian faith in Nippon culminated, "distinctly the most picturesque character in the whole history of Japanese Buddhism." It is clearly shown that the coming of Roman Christianity in the sixteenth century saved Japanese Buddhism from self-destruction through intestine quarrels. The appendix on Japanese hymnology, showing the use of popular sacred music to an extent undreamed of by foreigners, is of high value. These twenty-two volumes, now indexed, have no peer in worth to the student of the Japanese country and people.

—The *Korean Repository*, conducted by American scholars in Seoul, continues its good work of enlightening the small world of its readers concerning a nation not yet out of the traditions of hermitage. In the April, May, and June numbers, Dr. H. N. Allen writes of places of interest in the capital, describing especially the white marble pagoda, around which, as rumor has it, the renaissance of Korean Buddhism will be celebrated by the erection of a new monastery. Dr. J. B. Busteed tells of the Korean doctor and his methods. Apart from inevitable quackery and superstition, "the same qualities which characterize a successful physician at home must be found in a good doctor here." The Korean pony, with infallibility in his feet, exhibits total depravity in his general behavior, but affords plenty of fun to the linguist, James W. Gale. Prof. H. B. Hulbert, in a striking article on the origin of the Korean people, works out the clue derived from Dallet, attributes to them a southern beginning, and connects them with the Dravidian tribes of India. The linguistic part of the argument is strong. Of direct American interest is the graphic narrative of a native eye-witness of the massacre of the adventurers who made "an experimental trading voyage" into this country, not yet open by treaty, in 1866. In the schooner *General Sherman* they penetrated to Ping Yang, in defiance of warnings to leave. After resisting with rifles and artillery, during four days, the archery and jingal-fire of the native soldiery, they were driven from shelter by fire-boats, and the whole company of nineteen (three Americans, with two British citizens) were shot, drowned, or beheaded. This episode led to the American expedition of 1871. Wholesome reviews of recent books on Korea, with notes, news, and linguistic essays, fill up this very creditable magazine.

—Some years ago Prof. Raoul Pictet of Geneva, Switzerland, invented a refrigerator for the purpose of fluidizing gases by means of atmospheric pressure combined with a rapidly cooling process. He afterwards experimented in a Berlin laboratory with dogs and other animals in order to determine the effects of extreme cold on living organisms. It was observed that a dog at a temperature of —92 degrees C. breathed more rapidly and showed signs of great hunger, voraciously devouring pieces of bread which a few minutes before he had refused to eat. On February 23, 1894, Prof. Pictet placed himself up to the shoulders in the refrigerator, warmly dressed and wrapped in a fur cloak so as to prevent his skin from being blistered by contact with the metallic sides of the apparatus. He found that at a temperature of —50 C. the fur cloak sufficed to check any perceptible radiation of the natural warmth of the body, but proved to be of no avail at a temperature below —70 degrees C. At a temperature of —105 C. Prof. Pictet experienced, after the expiration of four minutes, an indescribable sensation of tickling in the legs and thighs and even in the interior organs, accompanied by gnawing hunger; his pulse rose from 63 to 67 beats in a minute, and his respiration from 15½ to 19. After remaining 8⅔ minutes at this temperature, he emerged from the refrigerator with a prickling sensation in his whole body and a ravenous appetite that began to be positively painful. After walking two or three minutes on his way home, a reaction set in like that which follows a cold bath, but far more intense. As the circulation returned to its normal condition, his whole body seemed to be full of little needles, and this feeling continued for at least a quarter of an hour. He then ate a hearty dinner and digested it. Since that time the dyspepsia which had made his life a burden for six or eight years has not given him the slightest trouble. This result was all the more gratifying because it was wholly unexpected, for it was with considerable reluctance that Prof. Pictet had entered the refrigerator, simply because he regarded himself as a confirmed dyspeptic. He calls the new method of healing "frigotherapy," and believes it to be an equally effective cure for gout, rheumatism, and similar disorders due to the functional inactivity of any organ arising from lack of vital energy. A building is now being erected in Usedom-strasse, Berlin, under the direction of Prof. Zuntz, as a "Kälteklinik," in which diseases will be treated on the frigotherapeutic principle.

—In a biography of Goethe to be completed in two octavo volumes (the first of which, containing nearly five hundred pages, has just been issued by Seemann of Leipzig), Dr. Karl Heinemann, author of 'Goethes Mutter,' has made a careful study and critical use of the newer sources of information, and has thus produced a work which promises to be by far the best hitherto written on his fascinating theme. The knowledge derived from archival researches has been supplemented by special visits to Frankfort, Leipzig, Strassburg, Sesenheim, Wetzlar, Weimar, Rome, Naples, Palermo, Syracuse, and other places in which Goethe sojourned, and which exerted a more or less marked influence upon his intellectual and literary development. Thus, in the opening chapter, describing the poet's childhood, we have a vivid picture of life in Frankfort during the latter half of the eighteenth century. Interesting, too, is the study of Goethe's pedigree in the light of the doctrine of heredity based on the theory of evolution: on his father's side a stern and sturdy race of North German artisans, and on the mother's side generations of genial and accomplished South German scholars, mostly men of eminence as jurisprudents and of high authority as magistrates; himself the harmonious combination and resultant of these antagonistic factors. Equally graphic are the descriptions of manners and customs in Leipzig and Strassburg,

where Goethe pursued his university studies; and it is curious to note that in 1770 the latter city, although annexed to France, was far more German than the former. The leaders of society in Leipzig were in fashions, ideas, and morals servile imitators of the Parisians, and deemed French the only proper language for conversation. The Strassburgers, on the other hand, still remained German in speech and sentiment as well as in dress. The present volume ends with Goethe's return from Italy in 1788 and the completion of "Tasso" in the following year. The work is profusely illustrated, and will contain about four hundred engravings, among which are thirty different portraits of Goethe. It is to be hoped that the rather meagre table of contents will be supplemented by a full index.

MORE FICTION.

In the Year of Jubilee. By George Gissing. D. Appleton & Co.

The Story of Bessie Costrell. By Mrs. Humphry Ward. Macmillan & Co.

The Zeit-Geist. By L. Dougall. D. Appleton & Co.

The Plated City. By Bliss Perry. Charles Scribner's Sons.

In the Fire of the Forge. By Georg Ebers. Translated by Mary J. Safford. D. Appleton & Co.

An Errant Wooing. By Mrs. Burton Harrison. The Century Company.

Almayer's Folly. By Joseph Conrad. Macmillan & Co.

Kafir Stories. By William Charles Scully. Henry Holt & Co.

In 'The Year of Jubilee,' Mr. Gissing's dreadful subject is "The New Woman," whom he handles without gloves. He does not pluck her from among the idle ladies of the aristocracy who live for notoriety, nor from the needy literary ladies who perhaps can't manage to live without it, but hales her forth from the obscurity of the middle class. Here he finds her diversely manifested, but always in active revolt against the respectable dulness proudly enjoyed by her mother. In the French family she assumes deplorable shape or shapes. There are three Frenches, each provided by a defunct father with an income sufficient for an old-fashioned girl, and by nature with a store of coarseness and vulgarity. Not one has an elementary notion of duty or regard for religious, moral, or social restrictions of personal liberty. Each pursues her own ends with an unflinching selfishness which excludes not only family affection, but the tribal instinct of union for defence. Flouting principles and propriety, and cynically frank of speech, there is little to choose between the clever, commercial Beatrix, the frivolous Fanny, and the mendacious virago, Ada. The last-named lives earnestly up to the conception of matrimony as of a blessed state in which a woman may shed responsibility, do no work, dress gorgeously, and behave badly, all at the expense of her hapless deliverer from spinsterhood.

Scarcely less offensive than the Frenches, but not so devoid of virtue, is Jessica Morgan, the daughter of reduced circumstances and a vague tradition of gentility. She declares her right to belong to the new order by setting herself to achieve intellectual distinction so far as that may be advertised by matriculation at London University. Worsted in her struggle with "exams.," this feeble creature avenges herself for failure by vindictive betrayal of her friend Nancy Lord, and, that occupation gone, grasps a poor publicity as a fervent leader of the Salvation Army.

The several streams of the narrative merge in the story of Nancy Lord, and the romance interest is attached to her and a lover socially superior to Camberwell trades-people—Mr. Lionel Tarrant. Nancy is sown with the seeds of corruption, but, for various reasons, offers some resistance to their growth. She is as discontented as are the Frenches and Jessica, but saner; as keen for "life," but more fastidious, less egotistical, more passionate, infinitely more difficult to see through and forecast. She alone of the group is capable of abandonment to feeling without calculation of cost; she alone has enough moral sense to know when she has transgressed and to be ashamed. The unpleasantness of the situation between her and Tarrant is seldom mitigated by its treatment in fiction, and it is not for Mr. Gissing to gild facts; yet, alike without gilding or grossness, by a presentation which impresses our reason and feeling, he has stamped the episode with an inevitableness which lifts it beyond questions of taste, and relieves it from any need for justification. The delineation of Tarrant is quite appallingly cold and judicial. A faint suspicion of possible virtue always surrounds him, but the evidences are so scanty and intermittent that, almost to the end, one cannot determine whether such suspicion has not done him injustice. There is, however, no doubt that he is a common product of his time, that Mr. Gissing knows all about him, and, in imparting that knowledge, shows fine technical skill, particularly in illustrating the principle of dramatic suspense.

Since we have and support a school of fiction that aims only at reproducing more or less shocking reality, to 'The Year of Jubilee' let a high place be given. The reality here is perhaps of the most shocking kind, because the author's observation is radical, his courage to expose dauntless, and his criticism of wide application. Yet is he not comprehensive! A not unfair generalization from the novel would be that modern education and opportunity have demoralized women, that they have dropped religion, discarded duty, and, in pursuit of luxury and license, may be led into any immorality that seems to pay. This is, of course, not true, for it takes no account of the women who use freedom from narrow domesticity for intellectual and spiritual advancement. Nancy Lord, it may be remarked, escapes the worst results of her follies from causes quite independent of education or opportunity. Perhaps no novelist can escape his temperament, certainly not Mr. Gissing, no matter how studiously he avoids the appearance of prejudicing the reader. His story is fashioned by his feeling as certainly as his method is devised by his strongly constructive mind. Technically his work is very admirable, and his cold, undecorated style is perfectly suited to concentrate attention on the narrative, and not on the narrator. He is as good a novelist as his school has produced, and for his not being a better one we may blame the pressure of the times.

In 'The Story of Bessie Costrell' Mrs. Ward confines herself to narrative from which we are not distraught by consideration of widely significant problems, social, ethical, or religious. She has so well escaped from generalization that it is permissible to hope that the sordidness, envy, and malice displayed by the village of Clinton Magna may not be intended to indicate an even distribution of bad nature among English rural communities. The incident on which the short tale hangs is flagrantly exceptional, but the three people chiefly involved in its development appear very probable and natural. These are John Bolderfield, an elderly laborer, contemplating an old age of ease to be derived from seventy-two pounds hoarded in solid coin through many years of toil; his flighty niece, Bessie, and her most incompatible husband, Isaac Costrell, an upright and gloomily religious man. Bessie's character is cleverly reasoned. Without the special temptation, her respectability might have long endured unimpaired; with it she was doomed to rapid and complete destruction. Her burning desire to be thought a person of consequence, and not dishonest intention, prompted her to urge her uncle to confide to her his treasure-chest. Then the money was in her cupboard; the shops and the taverns were close at hand. The connection of idea was made, and theft, drunkenness, debt were but natural steps in the progress towards degradation and despair. At the climax, the strains of cowardice, audacity, and violent passion in Bessie are admirably indicated by her remorse, which meant terror of detection, her defiance of the commission inquiring what she had done with John Bolderfield's money, her vain appeal to Isaac to save her from the law, and her final act, impelled by mingled rage and despair.

The large public that has read Mrs. Ward's novels with a comforting sense of self-improvement, of being for the time of the company of great thinkers, will probably be disappointed in the 'Story of Bessie.' Even the satisfaction of liking somebody or sympathizing with anybody is denied them, for nobody of importance is amiable or funny or kind, and the episode, not rising to tragedy, is abominably depressing. On the other hand, the few who care for an exhibition of literary skill and finish will cheerfully grant that Mrs. Ward's short story is in these respects an immense improvement on her elaborate novels.

The motive of Miss Dougall's story, 'The Zeit-Geist,' is presumably to show the spirit of the time expressing itself through independent conceptions of God and of the right way to magnify and praise him. The name is a little large for the narrative of Bartholomew Toyner's wrestle with the devil in the form of drink, and exposition of the purely personal idea of God at which he arrived through the working of his own mind, and by which he was saved. This idea does include the prevalent feeling that love and service of humanity make a rational acknowledgment of the abiding presence of God in the universe, but is otherwise isolated and individual, the outcome of thought applied to the facts of one man's experience. Toyner, aside from his mania for drink, was a good man, especially open to spiritual influence. He wanted to keep straight, and, perceiving that nothing but firm belief in a supernatural control could withhold him from evil, when that failed him in one way, he knew no peace till he regained it in another. The study of Toyner's adjustment of conflicting natural tendencies is interesting, but his conclusions were probably more satisfactory to himself than they can be to any one else. The drama is supplied by the temptations set before Toyner, and includes two or three picturesque incidents vividly set forth. Miss Dougall begins her story at the end—not for any reason the best way, and in this instance unfortunate, because the drop from the somewhat subtle and polished discourse of Toyner of fifty to the illiterate talk of Toyner of thirty shocks the sensibilities and excites incredulity

ty. Piety allied with money may bring about many changes in twenty years, but manner of speech is largely an expression of early environment, and cannot be so perfectly transformed by the discovery of religious beliefs, however adequate to his needs, after a man has come to thirty years.

Few novelists have been more successful in giving a distinct and truthful impression of the social atmosphere of a New England manufacturing town than is Mr. Perry in 'The Plated City.' These towns, as everybody knows, are provided by nature with an excellent line for social demarcation. In the narrow streets about the mills and river are the crowded tenements of the operatives. As the houses climb the rising ground behind the flats, they improve in looks like the elms, while the hill-top rejoices in a varied assortment of pretty and even splendid dwellings, with trees to suit, which give the streets the air of stately vaulted aisles. In paying more attention to the people on the hill than to the denizens of the Flats, Mr. Perry may display a reprehensibly frivolous spirit, especially as he has not discovered among them any glaring vices, any depravity of mind, body, or soul. For this neglect of the lower quarter he partially atones by giving a prominent place to two dwellers in the lowest, that contemptuously isolated region where are permitted to exist people of that race to emancipate which 'The Plated City,' when it was rural Bartonvale, had enthusiastically given its best and dearest. Hence it will be inferred that the question at issue is the social disability which even a suspicion of African blood imposes as heavily in the North that freed the slave as in the South that owned him. Fortunately, the author's handling of a most difficult problem is deft and discreet. There is no argument or discussion; we are not bidden to harass ourselves about rights and wrongs, but only to weep for poor Tom Beaulieu, for whom neither loyalty, nor kindness, nor the glory of the baseball championship sufficed to tempt a friendly hand across the "color line."

The story of Tom and his half-sister Esther is romantic, old-fashioned enough to involve a mystery and to come to an end not hopelessly desolate. It is intricately bound up with the story of Dr. Atwood, who, after the war, had abandoned medicine and given his energies to the manufacture of silver plate. Atwood is drawn with great assurance and vigor. When he gave orders that Esther Beaulieu should be "kept on," his answer to the foreman's reluctance was: "The fact is, in the Atwood plate-works what the old man says goes." When the Rev. Whitesyde Trellys objected to certain French fiction in the Atwood library on the ground of its immorality, and wished to awe the directors with the opinions thereon of the *Flying Buttress*, "Skip it!" cries the donor; "who cares what that fellow says? You take the book, Mr. Trellys, and read us the worst things in it. We're none of us boys, and I guess we can stand it." The end of an extremely amusing incident was the confession of the Rev. Trellys that he could not read French. When an excited mob bars Esther Beaulieu's way shrieking, "Scab!" and "Nigger!" "Fall back! fall back!" shouts the doctor, and, taking the hand of the terrified girl, he leads her to his carriage. These are instances of the doctor's plainly perceived will power and resource in emergency; the plot of the story turns on the force of his concealed sentiments. The doctor is imperfect, but nevertheless a fine and lovable old man. This is the boldness and distinction of Mr. Perry's novel, that, in all his characters, there is not one who might not be well loved by somebody. Even the priggish rector becomes passionate and manly and useful when fire is devouring the Atwood plate-works and threatening scores of lives. We are grateful to Mr. Perry for thus insisting gayly on what the scientists call an "important factor," and what most of his contemporaries and confrères make it a point of duty and honor to ignore.

Since the incoherent historical romances of Dr. Ebers continue to be translated and published in the well known neat and handy edition, it must be assumed that they are acceptable to some portion of the American public, an evidence of a patient plodding spirit not superficially apparent. A little learning is proverbially dangerous, but that is safety's self for a romance-writer compared with too much. Dr. Ebers overflows with German learning and German sentimentality, and has an insensibility to the charm of order, method, form also characteristically German. Such is his natural antipathy for directness that he becomes positively ingenious in obstructive device. For instance, a large part of this tale of Nuremberg in the thirteenth century goes on under the supervision of "Luna," to whose possible comments on the action and feelings we are invited to pay extraordinary deference. Through this complicated representation of nobles, knights, and burghers, of their feuds and loves and intrigues, there doubtless runs some connecting thread, but we take it on faith, the evidence of things not seen. What we have seen and know is the author's failure to write even one of his many fundamentally picturesque or exciting incidents in a way that warms imagination or makes a clear, strong impression on the mind.

While notable British novelists are beating the middle ways of life and the slums for subjects, it is curious to observe the attachment of some Americans to the habits of the aristocracy. We say habits advisedly, for their serious aim seems to be to set their uninitiated compatriots right on questions of etiquette, correct clothing, correct service, and the true inwardness of the function of afternoon tea. To no one is our debt in this respect greater than to Mrs. Harrison. 'An Errant Wooing' is an additional testimony to her slavery in the cause of our higher civilization. Outside of this improving theme the noteworthy passages are descriptions of wanderings in rural England and in Spain, which, though not bristling with original observation, are readable. They are enlivened by some international jests, ancient, yet still able to provoke a smile. Of the story and the people the less said the better. By our manners are we known and judged in this world; then why should we care about the medium of information so helpful for engaging in the scramble of goats wishing to be transformed into sheep?

A novel in which the only white man of importance is a Dutch trader, while all the women are Malays or half castes, does not promise much entertainment. It is well, therefore, to approach 'Almayer's Folly' with no expectations. The figure of Almayer is pathetic, but almost lost in a mob of raging heathen engaged in battle for rum and wives on the banks of a river of Borneo. We have become inured to tiresome fiction supposed to be descriptive of outlandish places, but a feeling of resentment smoulders. 'Almayer's Folly' offers a good opportunity for protest. Borneo is a fine field for the study of monkeys, not of men. The only interesting native of Borneo got away and was long ago introduced to an astonished civilization as

> "The old man from Borneo
> Who's just come to town."

There is nothing intrinsically more interesting about the Kafir than about the Malay, but Mr. Scully, the author of 'Kafir Stories,' manages to use his simple savage with considerable literary effect. He has the artistic sense for selection and proportion and a just perception of dramatic value. Besides that, his way is an excellent one, for when you are done reading the stories, you reflect that his way of telling them gives much of the force and all the charm. Of the stories in which European blood tells, "The Fundamental Axiom" is the best. The incidents and characters are very vividly realized, and the detailed horrors of the last scene may be forgiven because of their forceful presentation and the unquestionable use of each item to the whole structure. "The Quest of the Copper" is a fine tale of battle, and stirs the blood as tales of battle should, though the combatants are only naked Zulus and Makalakas. The last three stories are of utterly heathen practices, and, except the very last, which is funny, decidedly revolting. From the literary point of view, all the work is good, neat, strong, effective, implying ability to tell good stories about any sort of people of whatever race or clime.

SHAW'S HISTORY OF CURRENCY.

The History of Currency. By W. A. Shaw. G. P. Putnam's Sons.

No higher praise can be accorded this book than to say that it is worthy of its subject. The amount of research which it has required is immense, and the difficulties encountered in ascertaining the details of the coinage of the precious metals in past centuries must have been prodigious. The work was, as the Germans say, of a "road-breaking" character, and it stands by itself, as practically the sole authority on the subject. To Soetbeer and Haupt alone of modern writers does Mr. Shaw confess obligation. The eighteenth century, he says, produced some grand, solid, and scholarly works on monetary history; the nineteenth century has brought forth only essays which are slight, polemic, and transitory "to a nauseating degree." But we should explain that Mr. Shaw confines himself to the history of metallic currency and standards, and avoids all reference to the use of paper money. Nor does he investigate the coinage prior to 1252, for before that date the imperfection of records and the insignificance of commerce render inquiry futile.

The most impressive inference to be derived from the vast collection of facts presented by Mr. Shaw, is that of the folly and mischief of all governmental attempts to maintain bimetallism. As he conclusively proves, every such attempt inured to the benefit of astute dealers in bullion and to the detriment of all the rest of the world. Sovereigns were incessantly engaged in fixing the ratio between the precious metals, and they were invariably unsuccessful. If they happened in rare instances to approximate to the market ratio, fluctuations in production and value soon vitiated their ordinances, and they found that one metal or the other was continually taking to itself wings and flying away, in spite of the most stringent legal prohibitions and the most barbarous punishments. In the earlier period of which he treats, "the advantage which was to be de-

rived from a trade in bullion, and from an understanding of the effects of differently prevailing ratios in different countries, was known only to the Jew and the Italian. They plied their trade in secret, and the legislator was only apprised of the result by suddenly finding a slipping away and dearth of coinage."

Gradually the influence of a law of tender came to be understood. Prior to the eighteenth century both gold and silver had been actually employed in European commerce without any idea either of declaring or of restricting the tender of either. During that century limitations on the tender of particular classes of coins came to be imposed, with a view to restricting bullion operations in them, and the final outcome of this practice was the modern monometallic system—the only system which can prevent the secret robbery of the people by the substitution in payment of debts of the cheaper metal for the dearer. England was the first country to adopt this system, and long the only one. It is a mistake to suppose, Mr. Shaw adds, that the law of 1803 worked a revolution in French practice. It abolished the seigniorage on minting, and put a stop to the debasement of currency; but it was framed without any conception of a theory of bimetallism, or of "a bimetallic function to be performed for the good of the human race by bimetallic France. The modern theory of bimetallism is almost the only instance in history of a theory growing not out of practice, but of the failure of practice; resting not on data verified, but on data falsified and censure-marked. No words can be too strong of condemnation for the theorizing of the bimetallist who, by sheer imaginings, tries to justify theoretically what has failed in five centuries of history, and to expound theoretically what has proved itself incapable of solution save by cutting and casting away."

As Mr. Shaw points out, the debasing of coins is a different affair from the attempted establishment of a ratio between silver and gold. His aim is to describe the ebb and flow of the precious metals due to the action of bimetallic laws, but he incidentally shows how debasement promoted this action. The natural effect of debasing coin is an apparent rise of foreign prices. This at once unsettles internal prices, and they rise in the same proportion, but with such inequality of motion as may happen to flow from friction, local ignorance, or want of communication. This is of course the opportunity of the bullion-dealer and speculator, and presently the country finds itself deprived of the best of its money and compelled to struggle with a mass of clipped, mutilated, and counterfeit coins which make it nearly impossible for honest traders to carry on business. Then follow complaints, protests, and petitions, and finally a recoinage, in which generally the same blunders are repeated, even if the same fraud is not attempted. The history of currency as outlined by Mr. Shaw is full of these deplorable performances, and is a pitiful record of human folly and wickedness. Fortunately the era of falsifying coin by governmental action is past, and Mr. Shaw's presentation of the facts makes it seem improbable that the equally mischievous practice of insisting upon a double standard can be maintained in the future.

As to the example of France, of which so much has been made by the bimetallists, Mr. Shaw finds no difficulty in making it clear that at no time during the present century has the actual market ratio of the metals coincided with the legal ratio of 15½ to 1; nor do we need to quote his illustrations of the mischievous results brought upon France by these divergencies. It is enough to say that the figures given by him show that the bullion-dealers alternately exchanged silver for gold and gold for silver, as the values of the metals varied, and that the French people paid the expense of these transactions.

We regret to leave unnoticed many of the merits of this scholarly and powerful work; but any review of it must be inadequate. It will at once take its place as the standard treatise on the subject, and future writers will begin their labors where Mr. Shaw has left off. His collection of mint records and statistics, arranged in tables and expressed in diagrams, is simply invaluable, and no commendation of the enormous industry he has displayed can be too high. The appendices are full of valuable matter, and an interesting index of coins is added. No other index, however, is furnished, but it must be allowed that a work composed so largely of figures is not easily susceptible of analysis, and we are not disposed to cavil at the omission. Mr. Shaw has so greatly enriched the literature of monetary science that it would be ungracious to intimate that he might have done still more.

PUTNAM'S WILLIAM THE SILENT.

William the Silent, Prince of Orange, the Moderate Man of the Sixteenth Century: The Story of his Life as told from his own Letters, from those of his Friends and Enemies, and from Official Documents. By Ruth Putnam. G. P. Putnam's Sons. 1895. 2 vols. Pp. xxii, 391; ix, 490.

Some careers are of perennial interest. Such, conspicuously, is that of the subject of Miss Putnam's biography. Yet so fully is the story of William of Orange woven into the brilliant narrative of Motley that a new setting forth of his history seems a somewhat courageous, albeit a desirable, undertaking. The abundance of documentary sources now accessible in printed form, to a considerable extent of recent publi cation, gives ample basis for a fresh life of the father of the Netherlands; but it renders the task of the writer necessarily one of selection. Miss Putnam's aim is well indicated in her title. Her two volumes bear throughout the evidence of minute study of and careful selection from the mass of correspondence and official papers which have been gathered by Gachard, Groen, Kervyn de Lettenhove, and others, as well as of the older histories of which Motley made so skilful use, and of the literature which has appeared since his volumes were written. In her preparation, also, the writer has searched for unpublished material at The Hague, Brussels, Breda, and Geneva, and has gained at least a traveller's acquaintance with scenes of interest in her story, including in her journeyings not only Dillenburg, where her hero was born, but Orange, which he never saw, but from which his familiar title is derived. The biographic method adopted, and probably natural limitations of style, give more of the aspect of a chronicle than of a flowing portrait narrative to the work—a characteristic acknowledged in the preface, and detracting, it must be said, from the popular readableness of the story.

Though Miss Putnam's work is thoroughly her own, she exhibits everywhere a close acquaintance with Motley's narrative. Of this she makes no concealment: "Through the labyrinth of partisan opinion . . . Mr. Motley has been my guide, and I have patiently followed his inspiring lead with growing admiration for the untiring industry of his laborious researches, and for the accuracy and skill of his adaptations from the enormous mass of matter that he examined." But her following is not blind. She recognizes the panegyric note in Motley's history as overstrained. "It is possible that, if Mr. Motley had written in the end instead of the middle of the nineteenth century, he might have painted his characters in less heavy lines of black and white, as the aim of the modern historian is to find the man under the dust of the past, not to draw an heroic portrait."

Miss Putnam's William of Orange is essentially identical in qualities with that of Motley; but the figure is more sober, its shortcomings more freely acknowledged, its growth to the greatness of its ultimate attainment more distinctly emphasized. Thus Motley represents the famous interview with Henry II. of France in the forest of Vincennes in 1559 as fixing William's purpose to resist the Inquisition, and he has the testimony of Orange himself in the 'Apologie' as to the importance of the event. But Miss Putnam suggests: "It is doubtful whether any crisis is quite so dramatic at the time as it appears in the light of after events; and the prince, writing twenty-one years later, may have let the knowledge of 1580 color the feelings he experienced in 1559." A similar criticism has sometimes been made regarding Luther's visit to Rome. In like manner, while Miss Putnam does not fail to make evident the thoroughgoing nature of William's opposition to the Inquisition, she evidently ascribes greater weight to the infringed political and commercial rights of the Netherlands, and the imposition of foreign administrators, in developing the Prince's hostility to Spanish misrule, than does Motley. "Whether," she says, "on receiving the memorable confidence of Henry II. in the forest of Vincennes, the prince did then and there resolve to devote himself to checking religious persecution, may be questioned. But, undoubtedly, in the year 1559, there began to grow in the Netherlands a resentment against foreign domination, whether over consciences or property."

Motley calls William's leaving his eldest son in the Netherlands, on his temporary abandonment of the land in 1568, "a remarkable oversight," and has no explanation to offer of an exposure which made the Count de Buren a captive and a Spanish sympathizer. Miss Putnam believes that he "was sacrificed to his father's hope of preserving his Netherland estates, by leaving a representative on the soil." Motley holds that semi-sovereign authority was forced upon Orange by the Estates and people in 1572; Miss Putnam believes that "he had sought it by all the means in his power, having really assumed authority when he issued letters of marque in 1571." In Motley's opinion, again, William "was more than anything else a religious man." Miss Putnam "would not call him a religious man in the sense that to him a religious faith was his stay and his guide, as it was to many humble people in the provinces, who cheerfully suffered persecution, both for the old Church and the new creeds—as it was to the mother of the Nassaus, the Countess Juliana." To Miss Putnam's thinking, need of sympathy, rather than the independence which Motley praises, would "seem to be his [William's] most prominent characteristic"—a judgment to be received with hesitation.

As is naturally to be expected in a biographical work, William's domestic affairs find large

place in Miss Putnam's pages, and constitute a story of much interest. The negotiations attendant on the Prince's marriage with Anne of Saxony, the unfortunate outcome of that union, his quasi-divorce and seemingly imprudent marriage with the excellent and affectionate Charlotte of Bourbon, the less significant stories of his two other matrimonial alliances, are all given appropriate place. The warm ties that bound the Prince and his brothers, and the family affection and mutual trustfulness of the Nassau connection as a whole, are interestingly portrayed.

Like Motley, Miss Putnam recognizes that William's desire was to secure unity and freedom for all the provinces, not for the north only:

"The prince's dream was to establish a constitutional government for the United Netherlands. For a brief space the provinces were bound together by the Pacification of Ghent, and there was fair prospect that this project would prove no dream, but a substantial fabric, a solid foundation for an independent European state. But at the disintegrating touch of sectional interests, of theological differences, the union dissolved, and in history the name of William of Nassau has not been identified with those seventeen units whose joint interests he had at heart, but with Holland. It was Holland who gave her name to the little Protestant republic of which Orange was the unwilling founder. His scheme had been far larger, far more comprehensive, far more catholic, far more tolerant, and far more democratic in fact, though it had included a protector of royal blood. He never saw the republic of which he is called the father."

Probably the most striking personal trait of William of Orange was his tolerance of religious differences—a tolerance foreign to the spirit of his century. It was a quality little understood even by his nearest associates. His brother John and his friend St. Aldegonde had no sympathy with it; but the political situation, the non-sanguinary disposition of the Hollanders, and William's own insistence and example enabled the Prince to make his own principles, in part at least, the policy of the republic he founded. Undoubtedly William's career was peculiarly adapted to teach the lesson of tolerance. His parents were Lutheran, and the religious character of his mother, at least, was such as to make an impression upon her distinguished son; he was himself educated from his twelfth year as a Catholic, and without parental objection; his beloved brother Louis early became an ardent Calvinist. Thus the three prominent types of sixteenth-century religious faith were represented in his own family connection. William himself was attached to each of these religious parties in turn. From 1544 to 1567 he was, in observance at least, a Catholic. In 1567 he was so far a Lutheran as to have his son Maurice baptized in accordance with the rites of that communion. In 1573 he became a communicant in the Calvinist congregation at Dordrecht. But the Prince's toleration had a deeper basis than the circumstances of his career. As a Catholic he was far removed from the spirit which inclined Philip II. to say to a Protestant noble: "I would carry the wood to burn my own son were he as wicked as you"; he could feel, even in 1559, that Protestants might be worthy people. As a Calvinist he was equally removed from sympathy with a St. Aldegonde who would exclude Anabaptists from citizenship, or with his own brother John who disliked generosity to Catholics. He differed from the men of his age in that he felt these distinctions of dogma were not the most weighty of divergencies. He did not view the importance of such distinctions as the sixteenth century almost universally did; and he perceived that there might be bonds of union stronger than unity in religion. The phrase which Hoofd represents him as employing in 1567 in recommending mutual tolerance to Lutherans, Calvinists, and Anabaptists: "Het geschil is te kleen, om, dieshalven, gesplijt te blijven"—a sentence which Miss Putnam takes as the motto of her work—is one which embodies William's feeling, whether it was actually spoken by him or not. But the capacity to entertain such an opinion shows that, on that point at least, he was not of the sixteenth century, and must be deemed his most remarkable trait of character.

The typographic execution of Miss Putnam's book is admirable, and its beauty, as well as its usefulness, is much enhanced by more than fifty portraits, allegorical tableaux, facsimiles, and maps, chiefly reproduced from contemporary prints. A brief bibliography and a series of notes on the historians and editors from whom her letters and documents are chiefly drawn are of aid to the reader.

H. de Balzac. The Wild Ass's Skin. Translated by Ellen Marriage.—At the Sign of the Cat and Racket. Translated by Clara Bell.—The Chouans. Translated by Ellen Marriage.—The Country Doctor. Translated by Ellen Marriage. With Introduction and Prefaces by George Saintsbury. 4 vols., 8vo. London: J. M. Dent & Co.; New York: Macmillan & Co.

ANOTHER translation of Balzac—of Balzac the untranslatable! Balzac's style was one of the least of his merits, it was almost one of his demerits, but the quality of its inelegance and of its clumsiness, as of its vigor and vitality, was the very quality of the man himself, and no hand but his can shape phrases in harmony with the marvellous life of his characterizations and the marvellous heaviness of his reflections. If the public must have Balzac in English, these pretty volumes perhaps supply the need as well as any. The eight stories here given (there are five in Miss Bell's volume), to be followed by others, are unobjectionable in character, and are among the best-known of Balzac's works, though they cannot be counted as among the most characteristic, or as giving any adequate impression of the "Comédie Humaine."

Mr. Saintsbury's editing adds little to the value of these volumes. His superficial and careless criticism rather hinders than helps the reader; and one may suspect he has rather hindered than helped the translators. The title "The Wild Ass's Skin" is of his choosing, and indicates a dull-minded tendency that pervades the whole to give the meaning of the *word* rather than the meaning it *expresses*. One may be certain that Balzac's sketch of "a wild ass" is a *hors d'oeuvre*, and only presented itself to him as an after-thought in writing the 'Peau de *Chagrin*'; and "shagreen" is a word too well established in our language to be overlooked or rejected. In other instances Mr. Saintsbury and Miss Bell (Miss Marriage is more successful) seem to have no ear for *association*, or they would not translate "loup-garou" by "warlock," "pékin" by "counter-jumper," "sarpejeu," and "diantre" by "by Gad," "mon Dieu," by "good Heavens," "un regard flamboyant" by "a glaring look," or "un air inimitable de finesse et de grace," by "an inimitable gleam of shrewdness and grace." A longer sentence will still better show the quality of work: "Ce personnage était de tous les colonels de l'armée le plus jeune, le plus élegant et le mieux fait"—"This personage was, of all the Colonels in the army, the youngest, the most fashionable, and the finest man." The volumes are sold separately.

The English Flower-Garden: Design, Arrangement, and Plans, followed by a Description of all the Best Plants for it and their Culture, and the Positions fitted for them. By W. Robinson. Fourth ed. London: John Murray.

THE author is well and widely known as the skilful editor of various horticultural and allied journals. His present work utilizes a portion of the voluminous materials which such journals have brought together from many sources. The first edition was issued in 1883, and, as the trite saying goes, filled a long-felt want. The subsequent issues differ considerably from the earliest, but the changes have not much modified the general character of the treatise. It is readable, and, for England, is practical, and is kept within well-proportioned limits. The author treats first of various styles of flower-gardens, touching lightly, as indeed is best, on the different styles of landscape architecture, and then passes to diverse subjects which illustrate more or less fully the relations of gardening to art. The divisions of the chapters do not by any means separate the subjects in all cases; in fact, there is a tendency to repetition and overlapping, but this is managed in an attractive way, and does not really injure the usefulness of the book. In truth, many readers will profit by being obliged to retrace their steps over ground made familiar in the early chapters.

Part second gives a more or less full account of many of the plants which can be employed in the flower-garden in England. It is probably impossible to make any such descriptive list wholly satisfactory, for it is likely to happen that just the plants one wishes to know most about will be omitted or only slightly treated. Hence descriptive catalogues are sources of disappointment. But, on the whole, the author has used good judgment in his selection and has been skilful in the treatment. The book is an excellent guide to the management of plants in a humid climate, while its perusal will serve in our drier climate to make many hours of our amateur gardeners pass pleasantly. But, unless much allowance is constantly made for the difference between the English atmosphere and ours, it cannot prove a trustworthy guide, in all cases, for America.

It is pleasing to note that the author has steadily exerted his influence here, as elsewhere in his writings, in the direction of true art. To him, as to all right-minded people, the formal mosaic bedding of plants for so-called "emblems," is an abomination, degrading and disgraceful. For the sake of sparing the feelings of sensitive persons, we will not give the name of the city which furnishes him his horrible example. He calls it the "last expression of 'carpet gardening' at ——." Would that it might be the last.

Frail Children of the Air: Excursions into the World of Butterflies. By Samuel Hubbard Scudder. Boston: Houghton, Mifflin & Co. 1895.

IN this attractive volume of nearly three hundred pages, the author of that magnificent work 'Butterflies of the Eastern United

States' has discussed, in his felicitous manner, most of the interesting problems which naturally arise in the study of these butterflies. As originally published, in a series of excursuses in the costly work above mentioned, they could be known and enjoyed by comparatively few persons, while, in the convenient form in which they are now presented, they will be read with delight by hundreds of lovers of nature. The young naturalist will find much in the volume that he would look for in vain in purely scientific treatises. The author has succeeded in thoroughly infusing these pages with his enthusiastic love of butterflies. The titles of some of the chapters indicate the fascinating nature of the topics discussed, for example: "Butterflies as Botanists," "How Butterflies Pass the Winter," "Aromatic Butterflies," "Butterflies at Night and at Sea," "A Budget of Curious Facts about Chrysalids." Each one of the thirty chapters will prove delightful popular reading. Nine well-executed plates serve to illustrate the text.

BOOKS OF THE WEEK.

A Book of Airs from Dr. Thomas Campion. Portland, Me.: Thomas B. Mosher.
Ashley, O. D. Railways and their Employees. Chicago: The *Railway Age*.
Banbury Cross. 12 vols. Macmillan. $6.50.

NEW PUBLICATIONS.

The Scottish Chiefs.

By Jane Porter. Two vols, 12mo, cloth, gilt top, illustrated, $3.00; white back, fancy paper sides, $3.00; half calf, gilt top, $6.00.

For a century Miss Porter's "Scottish Chiefs" has been the delight of successive generations. It is romance, yet it is history, and will inspire in the young a love for the study of the past. The illustrations are carefully made from photographs depicting the scenes where the events of this prose epic were carried on.

Beauties of Shakspeare.

By the Rev. William Dodd, LL.D. With numerous additions. Two vols., 16mo, gilt top, with photogravure frontispieces, $2.50: half calf, $4.50.

Dr. Dodd's work has been from the beginning a book of great popularity. It is now published in new and elegant form from new plates; the text has been carefully compared with that of the Globe edition, many additional passages have been interpolated, and no pains have been spared to make it a perfect anthology.

Dear Little Marchioness.

The Story of a Child's Faith and Love. With introduction by Bishop Gailor of Tennessee. One vol., 8vo, 60 pages, 3 illustrations by W. L. Taylor, cloth, $1.00.

The Three Apprentices of Moon Street.

Translated from the French of Georges Montorgeuil, by Huntington Smith. With illustrations by Louis Le Rivérend and Paul Steck. One vol., 8vo, $1.50.

Half a Dozen Boys.

Illustrated edition. An Every-Day Story. By Anna Chapin Ray. One vol., 8vo, 318 pages, 18 illustrations by Frank T. Merrill, cloth, $1.50.

"Half a Dozen Boys" was first published five years ago. Few books have ever given a greater impression of wholesome reality. The new edition, with its cleverly drawn illustrations, will attract not only new readers, but many who have already made the acquaintance of the lively six, and followed them in their little history.

For sale by all booksellers, or sent, postpaid, on receipt of price by the publishers,

Thomas Y. Crowell & Co.,

New York, 46 East 14th St.
Boston, 100 Purchase St.

American History

1. GEORGE WASHINGTON.

The Writings of George Washington. Comprising his Diaries and his Public and Private Correspondence, including numerous letters and documents now for the first time printed. Edited by Worthington Chauncey Ford. 14 vols., octavo, half leather, gilt tops. Per volume, $5.00.

The Science of Finance.

An authorized translation of Gustav Cohn's *Finanzwissenschaft*, by Dr. T. B. Veblen of the University of Chicago. *Now Ready.* Large 8vo, cloth, 12+800 pages. $3.50 *net.*

Gold and Prices Since 1873. By J. Laurence Laughlin. 8vo, paper, 64 pages. 25 cents,

Food as a Factor in Student Life. By Ellen H. Richards and Marion Talbot. 8vo, paper 28 pages. 25 cents.

History of the English Paragraph. By Edwin Herbert Lewis. 8vo, paper. 200 pages. 50 cents.

Metaphor and Simile in the Minor ELIZABETHAN DRAMA By Frederic Ives Carpenter. 8vo, paper, 220 pages. 50 cents.

The Constitution of the Argentine REPUBLIC AND THE CONSTITUTION OF THE UNITED STATES OF BRAZIL. By Elizabeth Wallace. 8vo, paper, 96 pages. 50 cents.

Notes on Mexican Archæology. By Frederick Starr. 8vo, paper, 16 pages, with plates. 25 cents.

Phallicism in Japan. By Edmund Buckley. 8vo, paper, 36 pages, with frontispiece. 50 cents.

Studies in Classical Philology.

I. VITRUVIUS AND THE GREEK STAGE. By Edward Capps. 8vo, paper, 24 pages. 25 cents.

II. THE ANTICIPATORY SUBJUNCTIVE IN GREEK AND LATIN. By William Gardner Hale. 8vo, paper, 92 pages. 50 cents.

III. THE OSCAN-UMBRIAN VERB SYSTEM. By Carr Darling Buck. 8vo, paper, 68 pages, 50 cents.

Germanic Studies.

I. DER CONJUNKTIV BEI HARTMANN VON AUE. By Starr Willard Cutting. 8vo, paper, 54 pages, with 24 inserts of charts and tables. 50 cents.

II. VERNER'S LAW IN GOTHIC (I.) and THE REDUPLICATING VERBS IN GERMANIC (II.) By Frank Asbury Wood. 8vo, paper, 44 pages. 50 cents.

Any of the above publications will be sent, prepaid, on receipt of price.

JOURNALS.

The Journal of Political Economy. Edited by Prof. J. Laurence Laughlin. About 150 pages, published quarterly. Vol. IV. will begin with the issue for December, 1895. Subscription price, $3.00 a year.

The Journal of Geology. Edited by Prof. T. C. Chamberlin. Published semi-quarterly. About 120 pages. Vol. III. will end with the issue for December, 1895. Subscription price, $3.00 a year.

The Astrophysical Journal. Edited by Prof. George E. Hale. About 100 pages. Published monthly, except July and September. Vol. I. will end with the December, 1895, issue. Subscription price, $4.00 a year.

The American Journal of Sociology. Edited by Prof. A. W. Small. About 120 pages. Published bi-monthly. Volume I. began with the issue for July, 1895. Subscription price $2.00 a year.

The Biblical World. Edited by President William R. Harper. 80 pages, published monthly. Volume VI. of New Series will end with December, 1895, issue. Subscription price $2.00 a year.

Hebraica; The American Journal of SEMITIC LANGUAGES. Edited by President W. R. Harper. Published quarterly—About 70 pages. Subscription price $3.00 a year.

Sample copies of any of the above journals will be gladly mailed upon application.

All remittances should be made payable to the order of The University of Chicago.

THE UNIVERSITY OF CHICAGO PRESS,

Chicago, Ill.

The Flower of Modern British Poetry.

Messrs. Houghton, Mifflin and Company take great pleasure in announcing for publication next week,

A VICTORIAN ANTHOLOGY.

Selections illustrating the Editor's critical review of British poetry in the reign of Victoria ["VictorianPoets"]. Selected and edited by Edmund Clarence Stedman. With brief biographies of the authors quoted, a fine frontispiece portrait of Queen Victoria, and a vignette of the Poets' Corner in Westminster Abbey. Large crown 8vo, bound in attractive library style, $2.50; full gilt, $3.00; half calf, $4.50; full levant, $6.00. *Large-Paper Edition*, limited to 250 copies, printed on paper of the best quality. 2 vols. 8vo, $10.00, *net.*

Mr. Stedman has availed himself of the vast range and richness of the field of poetry in Great Britain during the last sixty years to prepare a book of rare value and attractiveness. It is a companion volume to his critical work on "Victorian Poets." Mr. Stedman has devoted to this work the same conscientious care which he bestows on his original volumes. The book is typographically beautiful, is printed on the best paper, and bound in a very attractive style.

MRS. JAMESON'S WORKS ON ART

Sacred and Legendary Art, 2 vols.
Legends of the Monastic Orders.
Legends of the Madonna.
Memoirs of the Early Italian Painters.
Edited by Miss Estelle M. Hurll, with a memoir and portrait of Mrs. Jameson. This will form a very beautiful and desirable edition of Mrs. Jameson's Art Works. 5 vols. octavo, bound in simple but artistic style. Each volume contains nearly 100 illustrations, selected from the works of great masters. The first two volumes are now ready. $3.00 each.

ANIMA POETÆ.

Selections from the unpublished Note-Books of Samuel Taylor Coleridge. Edited by Ernest Hartley Coleridge. 1 vol. 8vo, uniform with Coleridge's Letters. $2.50. (Ready 19th.)

A book in general character like Coleridge's famous "Table Talk." The topics treated or touched upon are varied, and all are marked by that affluence of intellectual light, that free play of imagination, and the literary charm which belong to Coleridge.

MR. RABBIT AT HOME.

A Sequel to "Little Mr. Thimblefinger and his Queer Country." By Joel Chandler Harris, author of the "Uncle Remus" books. With 25 illustrations by Oliver Herford. Square 8vo, $2.00.

With Mr. Harris to tell stories and Mr. Herford to illustrate them, an irresistible and most delightful result is assured.

A QUESTION OF FAITH.

A Novel by Lily Dougall, author of "Beggars All," "The Zeit-Geist," etc. 16mo, $1.25.

This novel bids fair to surpass in popularity Miss Dougall's previous novels, which have gained her a host of readers. A leading feature of the story is the unwillingness of a lover to trust thoroughly the girl he expects to marry. A religious element enters into it, not disturbing but adding zest.

LITTLE MISS PHŒBE GAY.

By Helen Dawes Brown, author of "The Petrie Estate," etc. With colored cover design and other illustrations. 16mo, $1.00.

A charming companion book to Miss White's "When Molly was Six," but intended for girls of ten years or thereabout.

OVER THE TEACUPS.

By Oliver Wendell Holmes. In the exquisite *Birthday Edition*, uniform with this edition of the Breakfast-Table Series. 2 vols. 16mo, $2.50.

Sold by booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., Boston.

11 East 17th Street, New York.

The Nation.

NEW YORK, THURSDAY, OCTOBER 24, 1895.

The Week.

THE speech of ex-Governor Merriam of Minnesota at the bankers' convention at Atlanta was very judicious in itself, but its chief significance lies in the fact that a conservative banker, who is also a trusted Republican leader, declares in it that the greenback currency is now a national stumbling-block, and that it ought to be superseded by a bank currency of an elastic kind based upon money and not upon Government bonds. The latter phrase may seem paradoxical to some, but it is nevertheless truly descriptive of the thing we most need. We have learned, or ought to have learned, by this time, that a currency to be really serviceable must expand and contract simultaneously with the expansion and contraction of business, and that neither the greenbacks nor the national banknotes do this or ever did. The Government's legal-tender notes are a fixed sum. Within this fixed sum there may be more or less of them in circulation, according to the collections and disbursements of the Government, or, as in recent instances, according to the sales of bonds and the demands of gold-exporters. These changes are not what we mean by expansion and contraction according to the needs of business. Such changes were never looked for when the legal-tender notes were first created, in 1862, nor when the later issues were made in 1890, on the basis of silver bullion. The first was a war measure and the second was a political dodge, as everybody who is capable of forming an opinion on these matters understands. Expansion and contraction must be looked for in the bank issues if anywhere, but our system has a requirement that the bank must first lodge with the Government something more than $1.10 for every dollar of currency that it puts out. At present the amount required is $1.15 per dollar. The operation is still further hampered by red tape, so that two or three months must elapse before the new currency can be made available, and then the demand may have mainly ceased. As ex-Governor Merriam showed in his speech, this is not an elastic currency. We may have a secure currency under the present system, but we cannot have one which responds to the public demand.

Senator Chandler publishes in the Concord *Monitor* a comforting letter to the officers of the Republican State League of Colorado, assuring them that if they stand firmly by the Republican party, and if the party is kept in power continuously for about twenty years, certain things will happen for the benefit of silver. These are (1) that the decline in the price of silver bullion will be arrested by an international agreement; (2) that the price will be made to rise gradually; and (3) that "it will be brought to an equality with gold, within a period somewhat shorter than the twenty years during which demonetization has been making its deadly progress." The gentleman to whom the letter is addressed might reply in the language of the gambler who was offered by a fellow-gambler his note, at twenty years, for the losses of an evening's play: "Twenty years—isn't that rather hencey?" The silverites contend that twenty years, and more, have been running against them now. If they are to wait twenty years more, the total will be forty or more. Besides, there is no guarantee that Chandler will be living twenty years from now, or if living will be able to carry out the arrangement. The letter looks like a scheme for delay, and will be so considered, we think, by the Colorado people. Yet the strong point in Chandler's favor is, that they cannot do any better. If they turn to the Democrats, they are likely to get as bad terms. Chandler says they will get worse terms. And as for the Populists, they are a declining faction anyway, and may not be in the field twenty years, or even five years, hence. Moreover, the people of Colorado, at the end of twenty years, may not want silver remonetized at all. Indeed, this is most probable, and we shouldn't wonder if Chandler were "banking" on that very hypothesis.

Senator Sherman's latest deliverance on the subject of the national finances ought not to be taken too seriously. It is impossible to know, at any particular time, whether his utterances on the stump represent his real views or not. Thus, in 1868, he joined hands with Ben Butler and George Pendleton in declaring that the Government bonds were payable in greenbacks, and he said that the bondholders were censurable for demanding payment in gold. He was the author of the inflation bill of 1874 that was vetoed by President Grant, with the slight difference that he wanted the greenback limit put at $382,000,000, while the bill as passed fixed it at $400,000,000. The volume of greenbacks had been reduced to $356,000,000 by law prior to 1873. During the panic of the latter year, Secretary Richardson had reissued $26,000,000 of the redeemed notes on his own responsibility, without authority of law. Senator Sherman proposed to sanction this act of inflation and violation of law, and reported the bill for that purpose. Senator Schurz moved to put the limit at $356,000,000, where it was before Richardson raised it. Mr. Sherman voted against the Schurz amendment. He also voted against the amendment to raise the amount to $400,000,000, but this was inserted in the bill, which passed both houses, and was vetoed by the President. It is true that Mr. Sherman voted against the bill, as amended, and he also voted to sustain the veto, but it was a difference of only $12,000,000. The terms of the veto message were directed against his bill as well as the one which actually passed.

It would probably be safe to say that Mr. Sherman has been, at one time or another, on both sides of every important question of finance that has been before the country in the past thirty or forty years. He was Secretary of the Treasury when the silver-remonetization bill was before Congress, in 1878, and he gave his influence in favor of that measure, by testifying before the finance committee that its passage would be an aid to specie resumption. We do not overlook the services he has rendered to the country in the course of this checkered career. As Senator and as Secretary, he was largely instrumental in the resumption of specie payments, perhaps more so than anybody else, and for this he will always have due credit. The criticism that will be visited upon him is that he habitually misleads people who are less well informed than himself, when he sees, or thinks that he sees, a political advantage in doing so. The result is generally more damaging to himself than to anybody else, because in every such case he loses some part of the confidence of the cultivated and capitalist classes with whom his political strength chiefly rests. In his recent speech at Massillon he maintains that the greenbacks are "the best form of paper money ever devised," and he censures President Cleveland and Secretary Carlisle for using the gold "specifically pledged for the redemption of United States notes to make good the deficiency of revenue caused by the Wilson-Gorman-Brice tariff law." This is simply ludicrous. Mr. Sherman cannot point to a dollar of gold that has been paid out for other purposes than the redemption of legal-tender notes; and as for the Wilson-Gorman-Brice tariff bill, that was not passed until August, 1894, whereas the sale of bonds to replenish the gold reserve began in February of that year, and could not have been avoided without causing national bankruptcy. President Cleveland, without much previous training in financial matters, possesses the confidence of financiers in a far greater degree than Mr. Sherman does now, or ever did in his palmiest days. He has achieved this preëminence by telling the truth at all times and acting upon it at all times.

Senator Sherman's loud demand for a restoration of the McKinley bill, "with

modifications," does not seem very powerfully to impress the Republican statesmen now gathering in this city to settle the policy to be pursued by their party in the next Congress. They understand perfectly that any demand of Mr. Sherman's is always itself to be taken "with modifications," and they are now said to be engaged in supplying the modifications. Ex-Speaker Reed is, as he has been all along, against any tariff bill whatever next winter. He firmly withstands the blandishments of the interviewer, and regrets exceedingly that he will not be able to make any political speeches this fall; but privately he tells the party statesmen that Congress must do nothing except possibly revise one or two of the "schedules." But even this cautious suggestion has proved very much like taking a dog by the ears. "Revising the schedules, eh?" cried the Ohio wool-men, with minds and ears erect like the folks in Virgil; "well, we have a nice little wool schedule that you'd better not overlook in the shuffle." So had the ore-men a schedule, and the iron-men, and the potato-men, and eke the silver-men. They have all thoroughly mastered the protectionist lesson, so long dinned into their ears, that no schedule liveth or dieth unto itself. To their cynical minds, revising the other fellow's schedule and leaving their own to take care of itself is a most bare-faced and selfish proceeding, which they will not tolerate for a moment. It is only by amalgamating several thousand bits of selfishness that you arrive at that grand mosaic of pure benevolence known as a protective tariff.

"No American pig iron in Canada," says the *American Manufacturer* of Pittsburgh. "Our pig iron has been forced out of the Canadian market. . . . Even in western Ontario, where American pig some time ago monopolized the entire trade, it has since been driven out." This calamitous result would seem to be sufficiently accounted for by facts reported in the columns of the same paper week after week, implying, or rather affirming, that the home demand for iron was far in excess of the supply, and was limited only by the amount of foreign ore that could be secured on outstanding contracts. If this is true, it follows that American pig, instead of being "driven out" of the markets of western Ontario, where it monopolized the entire trade some time ago, has been drawn out by our own buyers. It has been attracted away from Canada by the offering of higher prices at home. Some people are never satisfied. When prices are good, and the public call for more iron than can be supplied, they want a part of the consumers to wait until they can catch up, and if they cannot meet the demand of a particular market, either domestic or foreign, they think that they have been driven out of it with a bludgeon, and that the police ought to be summoned.

The Ohio Republicans are trying to make beer an issue in their canvass. There has been more or less said, among Republicans as well as Democrats, about the advisability of doubling the tax of one dollar a barrel on beer as the best way of meeting the deficiency in the revenues. The Republican organs in Ohio think it good policy to treat the project as purely Democratic, and to argue therefrom that the brewing interests ought to vote for the Republican candidate for Governor in the approaching election. The Cincinnati *Commercial Gazette* says that "the Republican party has shown by its action, through Congress, in the last fifteen years, that it favors, not the increase of internal taxes, but a decrease"; and it thinks that "the brewers of Cincinnati understand this business pretty well, and they will hardly, in view of the pending Democratic policy, be in a hurry to go to the polls in November in this city and vote the Democratic ticket." The brewers probably have little fear of any increase of the tax, with a Presidential campaign coming on in which neither party wants to run any risk of offending so important a vote.

It is reported from Washington that Secretary Carlisle will recommend in his annual report an additional tax of $1 a barrel on beer. If the Treasury must have, certainly and speedily, an added $25,000,000 to $30,000,000 a year, there is no better way to get it. But if such a tax is laid, or even recommended by the Secretary, it will be a curious illustration of the way we do things in this country. The whole subject was thoroughly studied by Mr. D. A. Wells in 1893. This was done at the request of Mr. Carlisle and the Ways and Means Committee. The results were submitted by Mr. Wells in his usual lucid style, but the Democratic majority simply said, "That's all right," threw the pamphlet into the waste-basket, and plunged into the income-tax madness. It would now be quite in keeping with our methods of helter-skelter taxation if the expert suggestions which, two years ago, were scorned as the idle dreaming of a theorist who had not the faintest conception of the way to hold "the German vote," should be taken up as an original and profound discovery.

The political situation in this city is probably the most "mixed" ever seen. There is scarcely an element of it which is not subdivided in one way or another. The reformers are divided between Goo Goo and Fusion. The Goo Goos are themselves divided, four of their clubs having formally refused to support the ticket, and a large element in the membership of other clubs desiring to do the same thing. The Fusionists are scarcely more harmonious, especially the Republican wing of them. The Platt section is at war with the anti-Platt for bringing Warner Miller here to make a speech. The *Tribune* sustains Miller, and charges Platt with treachery to a portion of the Republican ticket. The Germans are divided into two sections, one, under Ridder, going over to Tammany Hall, and the other, under all the most reputable leaders they ever had, supporting the Fusion ticket. Tammany itself is rent with dissensions and jealousies and hatreds, and has a ticket in the field which many of its members declare openly that they will not support. Circling around this general confusion appear Thurlow Weed Barnes and a considerable host of other political thinkers of like calibre, who imagine if they talk violently and foolishly they will convince the public that they are really great men and leaders of the people. It is an era of little men in politics, evidently, but we do not believe that the public will be so much confused by their clamor that the real issue of Tammany against anti-Tammany will be obscured.

Mr. Chamberlain's plan of dealing with the Venezuelan question is to be commended from every point of view, because it proposes to do something instead of disputing for ever. It was this policy which made an end of the Corinto dispute. As long as it was a war of words, everybody in the United States had an opinion, although nobody knew anything about the merits, and those who were loudest in the expression of their views had the least desire to know anything. Nobody cares about Corinto now, and few even remember that there was such an affair. Yet if it had been nursed along for ten or fifteen years, as the Venezuelan question has been, there would have been an increasing number of blatherskite politicians and newspapers prepared to prove that the British claim on Nicaragua was unfounded, and that the enforcement of it was a violation of the Monroe doctrine; and a corresponding number of Fighting Bobs in the navy anxious to win the approval of the newspapers. We do not profess to be better informed than other people concerning the merits of the Venezuelan question, but we are strongly of the opinion that it is no concern of ours, and that the Monroe doctrine would have nothing to do with it even if that doctrine were an accepted part of international law, as it is not. President Monroe, when he propounded that doctrine, put it upon the ground that "the political system of the allied powers is essentially different from that of America," meaning that there was danger to republican institutions from the spread of their sway in this hemisphere. Now, nobody can apprehend the spread of anti-republican doctrines and forms of government as a consequence of the adjustment of the disputed Venezuelan boundary, in any case, since the British colonies are more republican (although less anarchistic) than the general run of Central and South American governments.

Mr. Chamberlain's policy is to bring the sore to a head and have it tapped, instead of leaving it to fester ten or fifteen years longer. This is desirable especially to us, since the longer the dispute is open, the more will this class of quarrels multiply. If these Spanish-American republics can drag us into all their difficulties with European Powers, we shall presently have nothing else to do but attend to them.

The temperance people in England have begun to recover somewhat from the stunning blow given to their local-option scheme by the late election. At the meeting of the National Temperance Congress, which opened on the 1st of October in London, the President, Sir Benjamin Ward Richardson, the eminent doctor, delivered an address which has attracted a great deal of attention, owing both to its power and the novelty of his treatment. He dwelt particularly on the fact "that every man and woman should in the matter of total abstinence be a law unto themselves," and that the more widely the operation of this law extended, the less important would "crude and biassed parliamentary legislation" become. He pointed out, too, that the influence of literature which for three thousand years had sung the praises of alcohol, was not to be overcome in a day, and that it still counted for a great deal in the way the young are taught to regard alcoholic drinks. He said in support of this that 'Pickwick' was "an alcoholic story from beginning to end, and that there never could have been such characters as those in it if alcohol had not performed its ridiculous part on them and by them." The rôle of brandy and water in the book is certainly very great. But his best point was that the work of temperance legislation must be in the main personal rather than parliamentary. No such thoroughly effective Sunday closing can come from any legislation as from the unwillingness of individuals to go to the public-house; and the success of cafés and temperance saloons must depend largely on the growth of a public which likes them and *finds in itself* other sources of entertainment and excitement than alcoholic drinks. As a general rule the class which has fewest sources of amusement, or nervous recreation, is the one most disposed to drink. This is one of the most familiar facts of daily life, and it is full of suggestion for legislators and reformers. To the ignorant laboring man, alcohol supplies something which other people get in other ways and will not go without. Asking him to give it up is somewhat like asking the well-to-do not to go to the theatre, opera, or concerts, not to read novels, not to go to dinners or evening parties, not to travel, and to sit at home on Sunday, reading religious books. That is, it lifts him for the moment into another world, where things seem brighter and more beautiful than the sordid one he lives in, and opens up possibilities to him of which in his natural state he never dreams.

The exact terms of the Armenian settlement are not yet made known, but it appears to be certain that the Sultan has agreed to give representatives or nominees of the Powers the right to supervise the execution of the promised reforms. Without this the whole thing would be a farce, as the unvarying experience since the treaty of Berlin shows. For twenty years the Turks have been doing their own reforming, in accordance with the solemn pledges of that treaty, and the main result has been to make the last state of Armenians and Macedonians worse than the first. Turkish tender mercies are cruel, and the crimes committed in the name of Turkish reform are enough of themselves to justify European interference on the score of humanity. Lord Salisbury has had too long and melancholy an experience of deception and promise-breaking at the hands of the Porte to trust it out of his sight again, and, if he now accepts the Sultan's terms of surrender, it will be presumptive proof that they are satisfactory. The pith of the whole is European oversight. The Sultan's reforming zeal always ebbs and flows with the going and coming of war-ships in the Bosphorus. These will probably not be withdrawn until the reforms which the Porte has been frightened into promising, it shall also be frightened into executing.

"Collectivism" in Switzerland has recently encountered another decided check. The overcrowded condition of the match industry in that country has led the smaller factories to impose upon their workmen by means of a wretched "truck" system, and factory inspection has wholly failed to do away with the extremely unhealthy nature of the business itself. The Federal Legislature, accordingly, proposed an amendment to the Constitution by which the whole business should be taken over by the Government. The cantons voted on this proposal on September 29, and rejected it by the extraordinary majority of nearly 40,000. According to the London *Speaker*, the proposal had the support of the Socialists, the German radicals, and humanitarians generally; moreover, about half the total electorate abstained from voting. A vote of 600 nays to 359 ayes was the answer of the district of Frutigen in the Kanderthal, where some of the worst evils of the trade are found; while in the Valais the adverse majority was as forty-three to one, one hundred communes voting solidly in the negative.

No indictment of socialistic doctrine could be more severe or just than that which Prof. Sidgwick makes in the last *Economic Journal*, where he says that "no positive contribution of importance has been made to economic science by any socialist writer throughout the century." This criticism suggests the almost unvarying character of the utopian writing that passes for "scientific socialism." The most it ever does is to appropriate, usually in a muddled way, some truth or half-truth of political economy, and then urge with great vehemence that, if these things are so, there is no stopping short of the whole socialistic programme. It knows nothing of the patient and prolonged inquiry, the massing and sifting of facts, the reflection, the maturing and testing of theories, which alone can produce a work of value in any field of investigation. Learning at second hand, and newspaper and magazine clippings, are usually enough for our instructors in the blessings of socialism; they were enough, for example, for Mr. Kidd, whose 'Social Evolution' revealed only the reading of a clerk filling up a scrap-book in odd hours. But it is too late in the day for such a method to set us all right at one stroke. Prof. Sidgwick makes a neat point in the matter of socialistic experiment. "Never mind our theories," say the socialists; "just look at our experiments." But he says he has looked at all the historical experiments, and that they are all failures. Why are there no modern experiments? Oh, it would not be "scientific" to make any by groups, or communities, in the old style; we must have "the state" make them. Very well, says Prof. Sidgwick, just keep your eye on Germany. "One nation will probably be found sufficient; and I trust that we shall all agree to yield the post of honor to Germany in this branch of the pursuit of knowledge."

Two mining engineers, Messrs. Hatch and Chalmers, have published a book on the South African gold mines, or rather on those of the Rand district, in which they estimate the future yield at a higher figure and a longer duration than any previous writers have done. They believe that mining operations can be carried to the depth of 5,000 feet, and without any greater expense than is now incurred, but this the London *Economist* thinks is most improbable, since the price of native labor is likely to rise and the value of gold measured by commodities is likely to fall. Messrs. Hatch and Chalmers estimate the annual yield of the mines at the end of the present century at £26,000,000, which is £6,000,000 higher than any former estimate. This is equivalent to $126,000,000, or three times the present annual yield. If the other gold-producing districts of the world merely remain stationary, the aggregate yearly production will then be about $280,000,000, or nearly double the highest rate known in the fifties. But, even allowing that the views of Messrs. Hatch and Chalmers are correct, the *Economist* contends that the present capitalization

Fancying stocks is grossly excessive.

THE VENEZUELA TROUBLE.

WHETHER Great Britain or Venezuela has the better historical and legal title to the territory so long in dispute between those two countries, no one without the easy omniscience of a Lodge, a Campbell, a Blaine, or a *Tribune* editor would venture to decide offhand. It is an intricate and dubious question. England derives from the Dutch, Venezuela from the Spanish, possessions; but just what were the boundaries of each it is difficult to tell. Those who wish to see the evidence on either side in condensed form should consult Senate Executive Document 226, Fiftieth Congress, first session. Therein the Venezuelan case is set forth by different hands, as is also Earl Granville's outline of the British claims, with the evidence to support them, historical, diplomatic, and geographical. The controversy is eminently one for experts to pass upon, and for arbitration to determine.

Our Secretaries of State of recent years have all had something to say about the conflicting evidence in the case, and most of them have refused to discover the truth, as only a great historical scholar like Senator Lodge can, "at a glance." Secretary Gresham declined to express "an opinion concerning the merits of the historical and other data upon which the conflicting territorial claims may respectively rest." Secretary Frelinghuysen was equally modest—or lethargic, if one chooses. He refused to commit this country to any "prejudged solution in favor of Venezuela," and added that the United States "does not seek to put itself forward as the arbiter of international disputes affecting America." Mr. Bayard, when Secretary, wrote to Minister Phelps instructing him to propose our good offices to heal the quarrel and to bring about arbitration, but weakly referred to the dispute as "merely one of geographical limits and title, not of attempted political jurisdiction." It was reserved for Mr. Blaine, in 1890, to discover that "the volume of evidence in favor of Venezuela is overwhelming."

This will be conclusive with all those who have forgotten how Mr. Blaine's Bering Sea evidence was equally overwhelming. In that case he had his maps, his treaties, his international law all ready to confound the English diplomats, and he did confound and triumph over them most gloriously in every Republican newspaper and stump speech for many resounding months. But on an evil day his overwhelming evidence was submitted to an international tribunal of arbitration, and the whole of it was laughed out of court, even one of his own arbitrators voting that the Blaine history and geography were pure myth. That was the first and only time that one of the Blaine international arguments was passed upon by competent judges, and the humiliating results ought to make us a little circumspect. Certainly, if we now see that it would have been folly to go to war, on our own account, for a case in which Mr. Blaine knew that we were overwhelmingly right, we ought to have some better warrant than his to go to war in behalf of another country. The overwhelming might turn out of another sort.

Another thing to bear in mind in the whole controversy is, that the Venezuelan authorities have all along been visibly anxious to draw us into their quarrel. In fact, if we will not fight for them, they are ready to quit at any time. This appears over and over again in the correspondence. In 1881 the Venezuelan President showed our Minister an "ultimatum" which he was ready to hurl at Great Britain, provided he were "assured of the support of the Government of the United States." This was during Mr. Blaine's first secretaryship, but he was busy elsewhere, and strangely ignored this appeal for backing. Two years later Venezuela felt of Mr. Frelinghuysen, saying that she herself could "never afford the means to stop Great Britain," but hoping that she might find help and encouragement in the Monroe doctrine. But the Secretary coldly wrote to Mr. Lowell that "formal action in the direction of applying that doctrine to a *speculative case* affecting Venezuela seemed to me to be inopportune, and I could not advise Venezuela to arouse a discussion of the point."

The most curious of all these appeals to us was made in 1887. Venezuela had unlawfully detained two English schooners, and had refused to pay the damages demanded. Thereupon came a note from the Governor of Trinidad, giving the Government seven days in which to pay over $40,000, or else to be "responsible for any consequences that may arise." There was a great scurrying about to find the American Minister. Alas, he would do nothing except write home about it. Then the dean of the diplomatic corps was appealed to, but he wrote back, with the deepest sympathy, that the members had decided unanimously that it was not their duty "in any way to interfere." So the money had to be paid, as the Minister for Foreign Affairs expressed it in his note, "to avoid ulterior complications." The same course will doubtless follow Lord Salisbury's recent demand for reparation for the arrest and detention of British officials.

As we said, the right to the disputed territory seems to be just the kind of question that should be submitted to arbitration, and Monday's London despatches show that England will agree so to submit it. It is certain that she by no means takes it for granted that the territory in controversy is all to be hers. The British authorities in Demerara notify prospectors and miners that "England will not guarantee protection or compensation in case boundary questions are decided in favor of Venezuela." In 1885 a treaty of arbitration was all but closed between Earl Granville and Guzman Blanco, but Salisbury came into power and insisted upon modifications which wrecked the negotiation. Shortly afterwards, in 1887, Venezuela broke off diplomatic relations with Great Britain, and since then nothing has been done except to aggravate the ill-feeling on both sides. Our Government has throughout been friendly to both countries, and will doubtless so continue, ready to do anything in its power to compose the difficulties. When Venezuela finds out that Salisbury and Chamberlain mean what they say and that our Government means what it says—that there is no possibility of a bloody Monroe-doctrine war, in which we should get all the hard knocks and the Venezuelans all the glory—negotiations with England will probably be reopened and the prolonged dispute amicably settled.

UNION PACIFIC REORGANIZATION.

THE plan of reorganization of the Union Pacific Railway was promulgated on Thursday. We shall not undertake to deal with those parts of it which are of a purely private nature—as to what each class of security holders ought to receive, or ought to pay for the privilege of receiving something hereafter. Those are matters of detail which only the parties in interest are competent to deal with. There is a large public interest in the road—indeed, a public interest of two kinds. The Government holds a second mortgage on the main line of road amounting to $53,000,000 of principal and interest. The possession of this claim and the impossibility of its being paid in full at maturity have led a large number of people along the line of the road and on the Pacific Coast to demand that the Government take the road and operate it.

When this subject was before Congress last January, we remarked that there were two methods of dealing with the second-mortgage debt. One was to extend the debt and take such security as the company could give, and the other was to assume the prior mortgage of thirty-three millions, and take the road and operate it as public property. It happens that the debt comes due at a very unfavorable time, the earnings of the company having fallen off heavily. It results from this that a sale of the road under the Government's second mortgage would probably find no bidders. The only persons who have any motive or encouragement to come to the rescue are the stockholders. They control the branch lines and feeders. A new company bidding at a mortgage sale would be compelled not merely to assume the first mortgage, but to make terms with the owners of the branches, who would be pretty sure to get the best end of the bargain. So, practically, the Government would have to take the property and operate it, or extend the debt.

There was a bill before Congress at that time known as the Reilly bill. It was the

result of much labor, and had been reported by the House committee on Pacific railroads. There is no reason to suppose that it was inspired by any other motive than the public good. It proposed to extend the Government's mortgage for fifty years at 3 per cent. interest. "The question before us," said Mr. Lockwood of New York, "is simply a question whether you will collect the debt that is owing by these Pacific railroads to the Government, or whether you will abandon your claim—for it ultimately means that—and squander more millions in litigation, and, by a foreclosure on the part of the Government, take possession of the roads, operate and manage them by the Government; or, on the other hand, you can now make a business arrangement and settlement of the Government's claim in the same manner as individuals would settle their business affairs, and thus secure the payment of every dollar, principal and interest, of the money due to the Government of the United States by the roads."

This was a truthful statement of the facts, coupled with the best possible advice, but the House, to the surprise of all who looked for the exercise of common sense in dealing with the matter, voted by about seventy majority to reject the bill and to take no action whatever; since, at that stage of the session, there was not sufficient time to prepare a new measure if any had been proposed by those who voted down the old one. The Reilly bill, it may be said, was the product of more than ten years' discussion of this very question during successive Congresses, guided by the light of two or three voluminous and exhaustive investigations. One of these, which was made by a commission consisting of Gov. Pattison, David Littler, and Ellery Anderson, had sifted every particle of testimony and brought out every fact that could possibly have a bearing on the question, and all this was before Congress in an official form.

But this was not wanted. Facts were not wanted. Common sense was thrown out of the window. The bill was rejected in the interest of buncombe. "The only thing for this House to do," said one of the principal speakers against the bill, "in order to maintain the dignity of the American Congress and the sovereignty of this Government, is to stand still and allow the officers of the Government to go forward with their foreclosure proceedings, sell this property out, and get rid of the entire business." This was a proposition to sacrifice the whole claim in order to save the Government's dignity. But how was any dignity to be saved by throwing $53,000,000 over one's shoulder? The same speaker who favored us with the foregoing sentiment explained his meaning. "If we pass this bill," he said, "we shall condone all the frauds, all the crimes, all the thefts, all the robberies that these directors and stockholders have committed against the Government of the United States and the people of this country, and besides we shall continue to give them an additional subsidy for fifty years more." The directors and stockholders that he referred to were mostly dead. All chance of collecting anything from them, if they owed anything, was long past, as everybody knew. Yet the chance to make a parade of voting against capitalists, monopolists, robber barons, and what not, could not be missed, even though the Government's claim was put in jeopardy. So the bill was rejected.

Obviously the Government ought to do what the private holders of a second mortgage would do under like circumstances. It should aim to get its money—if not now, then at some future time—and it should accept such rate of interest meanwhile as the property can pay, even if it were as low as 1 per cent. Half a loaf is better than no bread. What has this generation to do with the sins of the Crédit Mobilier of thirty years ago? How can the present shareholders or bondholders be made answerable for transactions which took place in the sixties, whether they were good, bad, or indifferent in themselves? It has happened that the reorganization of the Union Pacific property has been slow, and that Congress will have one more chance to save the money due to the Government. If this Congress, too, takes no action, the foreclosure of the first mortgage will undoubtedly receive the sanction of the courts, even if it cuts off the Government's claim, and public opinion will justify it, since the rights of the Government in the premises are in no wise superior to those of individual citizens.

In a very handy monograph on the history of the Union Pacific Railway, by Henry Kirke White, just published by the University of Chicago press, one fact, which has been generally forgotten, is brought out, namely, that a number of leading statesmen, at the time when the subsidy was voted, said in public debate that they did not expect that the money would be repaid. Messrs. Clark of New Hampshire, Morrill of Vermont, Wilson of Massachusetts, and others were of this opinion. They voted for the subsidy, not because they thought that the Government would get its money back, but because they considered it a good investment for the Government in other ways. The only Senator quoted by Mr. White who believed that the road would be a paying investment was Lane of Kansas, a blatherskite in most matters, but who happened to be nearer the truth in this particular than any of the wise men who sat beside him. Lane said in 1862 that the road when completed would be "one of the great paying thoroughfares of the world." Of course, he did not contemplate that six or seven other Pacific railroads would be built in competition with this one. It was his idea, and that of the other Senators of that period, that there would be only one, and all of them except Lane thought that that one would not pay. Yet the Union Pacific alone, with its western terminus at Ogden, earned $22,000,000 gross and $10,000,000 net in the year 1880, and paid dividends on its common stock.

BUSINESS ADMINISTRATION.

If there be any philosophic observer in either hemisphere to-day who does not understand why the government of New York has for forty years been so bad, we advise him to study the existing situation. It contains the whole New York problem as in a nutshell. As we have pointed out in these columns a hundred times, the central fact of the failure of popular government in this city is that the vicious and ignorant are united solidly, while the intelligent and virtuous are split up into many sects and parties; and yet the intelligent, virtuous, and industrious are in a large majority, and must be so, or the social organization would break up. There never has been an election for half a century in which the union of the latter would not have put the administration of the city into good hands. It is the perception of this fact many years ago by a few shrewd adventurers which has made Tammany the power that it is, and our government the disgrace that it has been.

Moreover, the good people have always had a reason to give for these dissensions. They have never divided through pure "cussedness." The principal reason always was that they "would never under any circumstances vote for a Republican" or "for a Democrat," as the case might be. To vote for a Democrat, the Republican considered, would be a condonation of all the enormities committed by the Democrats everywhere since 1857; while to vote for a Republican, the Democrats considered, would be an endorsement of the Republican tariff policy, the pensions, and corruption generally. Both had a "principle" to show for their course. The result was that Tammany generally got the offices, while the other parties had their "principle." The most striking example of the way the "principle" worked was the election of 1888, when the Republicans insisted on running a third candidate, and finally handed the city over completely to Tammany, with the results that we know of.

We have been actively engaged in pointing all this out to the public for twenty years, but we have no doubt we might have gone on for twenty years more without much result but for the revelations of the Lexow investigation. That roused the people, much in the way an earthquake or an inundation does. We all said: "This is horrible; this must stop. We must try non-partisanship, and get through non-partisanship a business administration of city affairs." Under the influence of this excitement we at last got the Good to unite, and the result showed that we were right in our oft-repeated assertion that they had only to

unite in order to overthrow the Bad. But hey had to unite by consulting with and winning over the various warring sections of the olden time. They united, in short, for non-partisanship on the old partisan basis. They conferred in the old way with the various "organizations," and persuaded them with the old arguments and promises. Not one of the candidates was "ideal," or anything like ideal. Of Mayor Strong few of the voters knew anything. He was taken to satisfy the Republicans. The recordership, the Supreme Court judgeship, and the shrievalty were given to the State Democracy and the Germans. The difficulties of getting all these people to agree on the ticket were very great—so great, indeed, that we confess that the very day before the agreement was reached we felt satisfied that the enterprise would fail, as it had so often failed before.

The gain that followed was immense, but it consisted mainly, not in the establishment of any distinctly new régime, but in the defeat of Tammany. In that lay the spoils of victory, in spite of the fact that the Mayor went to work immediately to make appointments on the old plan of using the offices to reward supporters. We hailed the defeat with delight as a step in the right direction, for amid shouts of rejoicing of the tens of thousands who voted against Tammany on account of its amazing wickedness, the voices of thousands could be heard high and clear, proclaiming that this was not enough; that we must press on and embody the non-partisan idea in our city usages. That this non-partisan idea would or could, in one short year, however, be converted into a principle of division among good people, like the partisan idea of the Republicans and the Democrats, was, we confess, something which never occurred to us. Non-partisanship in the distribution of city offices, we knew, was something which not one-twentieth part of the voters understood, and something which only a very small body of them really desired. Even the non-partisan candidate for Mayor, as it turned out, did not know what the phrase meant. So we said to ourselves: "Our gains in the way of positive reform are wonderful, but if we are to make a distinct and permanent change in city administration, our main work for some years to come must be that of education and persuasion. These people who do not understand non-partisanship or want it, but who must be got to consent to its establishment, and who outnumber us ten to one, must be enlightened, and there are only two ways of doing this. One is by writing and talking; the other is by the practical illustration of non-partisanship in such departments as we can get and keep hold of—the Police and the Street-Cleaning Department, for instance, as the two which come most conspicuously under the popular eye. But all this will need time. We must, above all things, while we are carrying on our work, keep Tammany from getting again into power, which would throw us back for twenty years more. If, therefore, next year we make even a slight advance on our present position, if we get more reform legislation at Albany, so as to show our work still more perfectly in other departments, and if we can, even by the same means as last year, get a few more candidates of our way of thinking into office, we shall do very well, but, at all events, let us make no step backwards."

It would be difficult to describe our astonishment, however, when we found our old non-partisan idea, which we had been preaching for a quarter of a century, converted into a new "principle" of division, just like Democracy or Republicanism, which was once more to prevent good citizens from acting together against the common enemy; that non-partisans could not act with partisans even for the common good; that it was to be a crime in city affairs to confer with men of whose ideas of government or political morals you did not approve, and that nobody who had not the right ideas was to be allowed to vote our ticket; that we were once more to be called to fight Tammany through "ideal candidates," who in the existing situation are about as effective against Tammany as flint-locks against the Mauser rifle. But this has come to pass, and the city to-day presents about the same spectacle that it did in 1888—three or four sets of good people under different banners, and armed mainly with gongs, preparing to fight a large force of well-armed and disciplined pirates who have no moral ideas at all. Was there ever a more striking illustration of the difficulty of governing men through discussion and voting?

Non-partisanship, to our mind, is a means to an end, and that end is a business administration of municipal affairs. If partisanship gave us good government, we should advocate it just as readily. But we find ourselves surrounded by people who think it is an end in itself, and talk as if to be a good administrator a man only needed to be non-partisan. The truth is, that if we were all non-partisans to-morrow, we should have the old difficulty in electing "ideal candidates" every year. The business men of this city are all non-partisan in their own business, but 90 per cent. of them fail now and then. How far, too, non-partisans may be from the idea that municipal affairs are business, and not religion, or poetry, or art, has been curiously exemplified during the last few days by the determination of a body of them to run a dividing, paralyzing ticket, under the advice of an ethical philosopher, clothed in "beautiful language." Fancy the results of carrying on the business of a firm in this way. Fancy the junior partners, when a venture was proposed to them, taking time to study the ethical aspects of a new machine, and concluding that, as one of the manufacturers of it was an unfaithful husband, they could not use it. It would not be difficult to figure out the history of a business administration of any kind which steadily refused to use the bad motives of other people for good ends. Government and business both would be impossible on such a basis.

What we fear now is that the thousands who do not take an abiding interest in city affairs, but were roused into enthusiasm and activity by the union of last year, will be driven back into their old attitude of indifference and disgust by the spectacle of our divisions, and the unutterable silliness and childishness of some of our reformers, and will be found scattered on wheels through the adjacent country on election day. These we beg not to be discouraged, to remember that the folly we are witnessing has lasted so long that it could not possibly be extinguished in a single year; that if we win again now, we shall have made another step in advance and have added largely to the enlightened majority through which alone non-partisanship can be made an abiding instrument of reform.

DISCORDANT CHURCH UNITY.

THE action of the Episcopal General Convention on Thursday in voting down by a decided majority the report of the committee on church unity, doubtless marks the end, for the present, of the whole movement. It has enlisted the zeal or excited the alarm of many worthy men in different churches for many years. The religious world has been fully instructed about the "Lambeth quadrilateral" and the "historic episcopate," on the basis of which, it was said, a dissevered Christendom was somehow to be united. From the first, however, there was something unsubstantial and visionary in the entire affair, and for some time it has been evident that the thing would come to naught. The Presbyterians seemed for a while, of all the non-episcopal sects, to entertain the proposal most seriously, but it was only their politeness, after all, and in some of their later discussions the more plain-spoken brethren sniffed audibly at the "historic episcopate," which they called historic nonsense.

The total outcome, in fact, of all these years of discussions about Christian union and brotherly love and the need of making concessions and of coöperating peacefully in the work of saving the world, has been rather to stiffen and sharpen denominational peculiarities and prejudices. The popular cry in the Milwaukee General Convention—the cry that carried the day—was that "all who come into the Church must accept the prayer-book from cover to cover." Similarly the Presbyterians are ready to welcome the whole world on the basis of the Westminster Confession; the Congregationalists, Baptists, Methodists, and the rest, to compromise, in a true spirit of mutual forbearance, upon the basis of their own

creeds and politics. So, too, in England, Pope Leo points out to Anglicans astray from the true fold that all they have to do is to submit to his authority, and at once the seamless garment will be made whole again. Not to be outdone in courtesy and concessions, the Archbishop of Canterbury replies to his Holiness that he is as desirous as the next man for church unity, but that, of course, the English Church has the true *via media*, the eirenicons, and all the other remedies in her possession. To crown all, Frederic Harrison comes forward to say that the wretched jangling will never cease until the weary world finds rest and joy in accepting and uniting upon Comte's "Relative Synthesis." "Give us that," he affirms without the flicker of an eyelid, and we shall all lead "lives of usefulness, of self-control, of self-devotion to daily duty, in quietness, in confidence, in hopefulness." This, we are bound to say, exceeds the pretensions of Pope or Archbishop, historic episcopate or Westminster Confession, and seems to leave Relative Synthesis far in the lead.

The great obstacle to church unity has all along been the absence of any evidence that the masses of church people wanted it. They may have vaguely assented to it as a pious hope, or have agreed to it on the understanding that all the others would at last acknowledge the error of their ways and accept what *we* always knew to be the Scripture truth; but as a practical proposition, involving the abandonment or serious modification of their own religious beliefs and practices, they have never meant it. One of the speakers at Milwaukee uttered a solemn truth when he denied that there were "any large bodies of Christians knocking at the door of the Episcopal Church for admission." This was an alarmingly realistic view of the situation to take, and it seemed to come as a surprise to many. They were so bent on arranging nice terms of admission that they had omitted to inquire whether anybody wanted to be admitted on any terms. There has undoubtedly been a considerable accession to the Episcopal Church from other Protestant communions, but the reason for it in the vast majority of instances has been, we venture to submit, something quite other than the bishops and clergy suppose. Creeds and theories have played a small part in the going over of so many individual Congregationalists and Presbyterians to the Episcopal Church, and considerations of a social nature, the æsthetic sense, a desire to escape ecclesiastical nagging, and to be where you are never called upon to stand and deliver your belief, be it small or great, have had much more to do with it.

The arguments for church unity are many and weighty. Those who appreciate their force can be excused for vehemence in dwelling upon the waste, the unseemly competition and strife, the jealousies and scandals and absurdities which grow out of a divided and discordant Christendom. From the point of view of economical handling and outlay of charitable funds, of common supervision, above all of putting an end to the crying shame of rival denominations pulling and hauling, each in the name of the true church, for the conversion of the heathen world, the arguments for church union are truly unanswerable. But religious preference does not live by argument alone. The arguments are not answered; they are simply ignored—or rather they are met, as Bagehot said the English farmer would meet political arguments which he could not refute, by affirming, "What I say is this here which is the same thing I was a-saying yesterday." The true place to test the sentiment for church union is, not in mission boards and charity commissions, not in the great cities where daily friction rubs off so many of the religious as well as other prejudices of men, but in the towns and villages all over the land. Any one who has carefully marked in them the power and persistence of religious prejudices, which are as strong in their influence as if they were religious convictions, will not be surprised that the prolonged exchange of courtesies and good wishes between the denominations has come to nothing practical. In such a world as this, with human nature what it is, as Bishop Butler was fond of saying, the movement for church unity was doomed to failure from the start.

A CENTURY OF LITHOGRAPHY.

PARIS, October, 1895.

THERE has just been opened in the Champ de Mars one of the most interesting exhibitions held in Paris for some time past: *le Centenaire de la Lithographie*, it is called. Nothing could be more appropriate than the place and time chosen for the show. Lithography reached the very height of its popularity and artistic development in France, which, in this case, certainly means Paris; and it is now one hundred years exactly since accident led Senefelder to a discovery destined to prove so important in its results. Some art historians have urged the year 1898 as the proper centennial, since it was in 1798 that Senefelder perfected his experiments, and from his first crude efforts evolved the lithographic process, which is virtually the same as that used to-day. And now that the "new criticism" bases appreciation of any art, or art work, upon the wholesale destruction of its hitherto accepted history and traditions, other authorities would wrest all credit from Senefelder to present it to his friend Gleissner, the Munich Capellmeister who shared his expenses and studies. But, save for the purposes of critical gymnastics, the old version answers well enough, and it seems satisfactorily established as fact. You may read it not only in the technical handbooks: it has long been public property, and probably has been most widely spread by Thackeray, who was in Paris in 1840 when lithography was still greatly in vogue, thanks to Daumier and "Robert Macaire," and who gives a sketch of Senefelder in his paper on "Lithography in Paris."

The story, which is amusing enough, is chiefly this: Aloys Senefelder, a poor hard-worked actor, musician, and composer, with a mother and eight brothers and sisters to support somehow, was seeking to discover a cheap way to reproduce his music, which no one would publish for him. One day he had to make out a list for his washerwoman—as Thackeray says, "rather a humble composition for an author and artist." There was no paper on hand, but, close by, one of the smooth Solenhofer stones, now well known to lithographers, but then familiar chiefly to Bavarian street-pavers and Turkish builders. On this he wrote his list with the sticky, soapy ink with which he had been experimenting, hopelessly, on wood and iron, steel and copper. When the ink dried, he submitted the stone to the action of nitric acid, then inked it again, and, putting the stone in a press, was able to get an impression from it. From this moment lithography was practically invented, though it was not until three years later that he had brought it to a stage of development when he could offer it to the public. Such is the very insignificant and prosaic origin of an art which has made the fame of more than one artist, an industry which has made the fortune of more than one printer during the last hundred years. It is only right, when a retrospective view is being taken of the growth of lithography, that the slight tribute of retelling his story should be paid to its inventor.

Senefelder, shiftless as he seems to have been, always in pursuit of a new fad, always hankering after a still newer invention, at least had the sense to patent his lithographic process. If he had had no thought of inventing a new graphic art, if his sole object had been the autographic reproduction of his own work, he could still value the importance of a discovery which surprised, probably, no one more than himself. With the help of Gleissner and various publishers who scented a good thing in it, he carried his invention to London, as early as 1801, where it had no great success, stifled possibly by the fine name "Polyautography" bestowed upon it; then to Paris, where also it languished; and then to Vienna. It was really, strange to say, not until the fashionable world took it up that lithography began to flourish as it deserved. But when M. le Baron Lejeune, some years afterwards, arrived in Paris with one hundred proofs, printed in Munich, from his own actual drawing on the stone, there was no denying the truth that lithography was something so simple that any one could practise it. Society went quite mad over its new plaything. Everybody who was anybody played at lithography, and the stone was to the man or woman of fashion much what skates and racquets became to succeeding generations, much what the bicycle is to our own. The impetus thus given, together with the reports of the genuinely artistic work being done in Munich, led to the establishment of the first great firms of lithographers in Paris. The houses of Lasteyrie, Engelmann, and Delpech were all three opened in 1815—altogether a memorable year. The art no longer needed the support of fashion. Artists recognized in it a new autographic method of multiplying their designs, the technical details to be mastered being absurdly few and easy; while its commercial aspect was not lost upon the layman, who could realize the advantage of speedy and cheap reproduction. Two things which the exhibition makes clear are, first, that technical perfection was reached almost at once; and, second, that, after the first hesitation, lithography was quickly popularized throughout all parts of Europe. Senefelder seems to have experi-

mented even in color and wash; there is shown a lithograph by him in nine colors, printed from nine different stones. Del'Armi, his pupil, carried the art to Italy. A very characteristic bull-fight by Goya bears witness to the prompt attention drawn to it in Spain. And the excellent color-work by Landzevelly in Austria dates as far back as 1819. One of his prints, with Hungarian lettering, was published in as remote a corner as Segesvar, that little hilly Nuremberg in Transylvania, almost on the Russian frontier.

The occasion being what it is, it follows that the larger part of the show is reserved for a retrospective collection. In this the progress of the art is readily traced from 1815 onward to about 1848, when it sank into temporary insignificance. Naturally, the most important section is the French, since, as I have said, it was in France that the art was most popular, and since, too, it was in France that artist-lithographers had such a large and powerful influence, during some thirty years, upon all public affairs, political, social, and artistic. To make the round of the galleries is to pass in review the chief tendencies and interests of the French people from the fall of the first Napoleon to the rise of the third. The series begins with the first achievements of fashion. There is the very "Cosaque," by the General Baron Lejeune, which made such a thrilling sensation in the great world of Paris. There, too, are the amiable efforts of the Duc de Montpensier and of Colonel Lomet, while in a print of Engelmann's one may see that prosperous lithographer receiving, in great style and elegance, no less a person than his Majesty Charles X. It must be added, however, that, but for its historic merit, this aristocratic work might be dismissed with a glance. For artistic qualities, one turns willingly to the designs of the first group of artists who figured as lithographers; of Carl and Horace Vernet, Isabey, Engelmann, who was no mere amateur, Vivant-Denon. It is curious to note how, from the beginning, these men directed lithography into the two great channels in which it was to prove such a power. It was Horace Vernet who first celebrated on stone the soldiers and wars of the Empire; a subject treated with still greater technical skill and artistic beauty by Charlet, Charles Lami, Raffet, the greatest of all, until among them they created that *Légende du Grand Empereur* which has brought the Bonapartes back to France once already, and which now and then threatens a new restoration. There are few prints in the collection more impressive than Raffet's lithograph of the retreat from Moscow—"Ils grognaient et le suivaient toujours." It alone would go far to explain the effect of this work upon a people as excitable and responsive as the French. While Horace Vernet was busying himself with military heroism, Isabey was creating his "Mayeux," that popular type by which he, and Traviès after him, scourged the *bourgeoisie*; to be followed by Vigneron's "Calicot," Henri Monnier's "Prudhomme," who, Daudet says, was no other than Monnier himself, and, gayer and more irrepressible still, Daumier's "Macaire." There is no exaggerating the social and political force wielded by this group of satirists and caricaturists, which included also Gavarni, with his 'Fourberies des Femmes,' Granville, with his scathing and deliciously funny caricatures of prominent politicians, his 'Scènes de la Vie Privée et Publique des Animaux,' Philippon, with his famous *poire*—in a word, all the men associated with *La Caricature* and *Charivari*.

There was also a third way in which lithography made itself felt. In 1820 Didot published his 'Voyages Pittoresques et Romantique dans l'Ancienne France,' with lithographs by Ingres and Horace Vernet and Fragonard and Bonington; and in their work, in their return to mediæval models and architecture and motives, some writers have found the very germ of Romanticism. However that may be where the poets and novelists were concerned, there can be no doubt that the painters of the Romantic movement were eager to give expression to artistic fancy and fact upon the stone. Paul Huet, Delacroix, Ingres, Géricault, Isabey, Rousseau, and Jacques are represented in the collection; and also the men who were the chief illustrators of Victor Hugo, and Gautier, and all the *Cénacle*—the two Johannots, Jean Gigoux, the two Devérias, Achille and Eugène Boulanger (who are better known, however, by their work on the wood-block).

Where there is so much that is of enormous and genuine interest, it is almost impossible to mention special examples, but here and there is a masterpiece more conspicuous than the others: Delacroix's wonderful "Tigre Royal," a unique impression, I believe, from the collection of Mr. Curtis; the portrait of Tony and Alfred Johannot, by Jean Gigoux, who, it will be remembered, in his 'Causeries sur les Artistes de mon Temps,' tells the story of its wild success, proof before letters being eagerly disputed for; the portrait of Madame Hoffman, by Devéria—not Eugène Devéria, whom, with Boulanger, Gautier immortalizes in his 'Château du Souvenir,' but Achille, whose portraits on the stone are of amazing delicacy and strength, and who, he himself confesses, could with ease make by them his two or three hundred francs a day—a practical form of recognition which genius does not always receive. Lemercier printed much of this work, as he continues to print a large proportion of the best done to-day; and in *L'Artiste*, the organ of Romanticism, many of the most notable lithographs appeared, among them the portrait of the Johannots, for instance.

There are examples given of Doré, but these are not remarkable. The man who bridges over the gulf between the earlier schools, before 1848, and the modern may be said to be Manet, who here makes a delightful showing; above all, in a big color-print of a species of Pulcinello, or Stenterello, apparently a legitimate descendant of Isabey's Mayeux. But there is nothing else that calls for attention until one comes to that work which is the outcome of the recent revival: work contained chiefly in three well-known publications, 'L'Estampe Originale,' 'L'Épreuve,' and 'Les Peintres Lithographiques.' I have said so much about it already in my notices of the Salons during the last three or four years, that to attempt to criticise it again would be useless repetition. All the men who have distinguished themselves in the yearly exhibitions, with the exception of M. Lunois, are here. Two reproductive-lithographers, M. Laugée and M. Mariou, appear to greater advantage, perhaps, than ever before. And it is amusing to contrast the posters of M. Chéret, M. Lautrec, and M. Anquetin with those done, by the same process, some fifty years ago to advertise the portfolios of lithographs and the illustrated books of the day. It must be admitted that, if technically little has been learned in the meantime, the designers of posters have improved tremendously in breadth and simplicity, and hence in effectiveness.

The other sections (for the show professes to be international) are much less complete, and this is to be regretted. America is quite unrepresented. The most accomplished of the modern Germans, the Munich Secessionists—Steinhausen, Thoma, Greiner—have unfortunately absented themselves altogether. Belgian and Dutch mystics, evidently accepting Toroop for master, have joined forces, with no very marked results. Otherwise, Holland contributes only the work of Storm, Van Gravesande, and Ten Cate. England has made the most serious and consistent effort, so that it seems the greater pity that just a trifle more energy could not have been exerted to make the English collection truly representative. As it is, but scant justice has been done to the earlier and often very fine lithographs produced by Englishmen. Bonington has been allowed to figure with the French lithographers with whom he worked, and thus the English section, in its retrospective series, loses what should be its chief attraction. While space has been found for portraits by Lane and Vinter, lithographers to the royal family, such men as David Roberts, J. D. Lewis, and Owen Jones have been omitted; and, on the other hand, unimportant examples of Prout, who did so much architectural work in lithography, Harding, Nash, and Cattermole, have been chosen. It is amusing to discover several of the Academicians, Sir Frederick Leighton and Mr. Alma-Tadema among them, endeavoring to prove themselves "in the movement" by now appearing for the first time as lithographers, but their designs, which are commonplace enough as drawings, are absolutely wanting in all appreciation of the qualities which go to make a good lithograph. Better are the prints of Mr. Chas. Shannon and Mr. Rothenstein, two of the younger Englishmen who understand the medium, and the workmanlike experiments of Mr. Alfred Parsons, Mr. Hague, and Mr. Hartley. But, when all is said, England, in the Champ de Mars, now owes its great distinction to America. It is not merely that Mr. Sargent and Mr. Abbey exhibit—Mr. Sargent, vigorous and intelligent as he is, in his study of a model, is not yet at home in working on the stone; nor, indeed, is Mr. Abbey. But Mr. Whistler here, as in any and every show to which he contributes, towers above most of his contemporaries. The public that cares is familiar with the greater number of the prints he has sent, since they have already been published. He seems to work with equal facility in line and in wash, directly on the stone and on the prepared lithographic paper. (This lithographic paper, by the way, and photo-lithography are the two most important improvements made in this century.) Whatever his method, he is ever the master, knowing just exactly what effects and qualities may be obtained from the stone. He forgets the painter and the etcher to become the perfect lithographer. There is but one drawback to his exhibit: it does not include one of his delicate color prints.

I have dwelt entirely upon the artistic side of the exhibition, because, necessarily, it is the more interesting. But the mechanical side has not been neglected. There are machines and papers and inks for the benefit of the commercial lithographer. Indeed, commercially as well as artistically, the show must, one would think, give a new lease of life to the hundred-year-old invention of Senefelder.

ELIZABETH ROBINS PENNELL.

AMERICAN COLONIAL MANUSCRIPTS IN THE BRITISH MUSEUM.—II.

LONDON, September, 1895.

THAT the short descriptions of the items, as

catalogued, give but the faintest idea of the abundant contents of some of these collections of manuscripts, will be the better understood by some account of one of them, namely, Egerton 2,395. No less than 128 distinct documents, ranging in date from 1627 to 1699, are bound up in this volume, which was purchased at Sotheby's, on the 16th of February, 1875, for £25, by Mr. Bernard Quaritch, on account of the Museum authorities. It was observed by Mr. Quaritch at the time that "only a very young man" had bid against him for the prize. Besides numerous papers relating to Nova Scotia, Newfoundland, and the West Indies, the volume contains papers relating to New England and Virginia, of which a list is subjoined hereunto. The student wishing to examine the papers should have at hand the printed catalogue of 'Additions to the Manuscripts in the British Museum, 1854-1875' (vol. ii.), published in 1877. Therein he will find noted (pp. 1034 to 1042) the contents of the volume of 678 folios, with the reference to the folio of the particular document sought for. When this collection was bought, its contents were arranged according to the colonies of which they treated, but the documents have since been rearranged and bound up in order of date. This accounts for the rather confusing double-numbering that exists on the folios. The following list comprises the papers relating to New England and Virginia:

NEW ENGLAND MSS. IN EGERTON 2,395.

List of Printed Books (in ye Plantaçon Office) treating of New England.

An Acco^{t} of all ye Trading Towns and Ports in New England.

A Brief Description of New England together with ye present Goverm^{t} thereof.

Names of ye Rivuers & chief Sagamores that inhabit upon them.

Certain Notes and Informations concerning New England.

Important points for ye Settlement of New England.

Proposals for New England.

30 May, 1665.—Letter concerning ye Northern Boundaries of the Massachusetts Colony.

1635.—Two Warrants against the Massachusetts.

1635.—Judgment on the two Warrants against the Massachusetts.

23 April, 1664.—Instructions to the King's Commissioners for New England.

1665.—State of ye Colony of Kenebeck from ye Commsrs. of New England.

1665.—State of the Province of New Hampshire from ye Commsrs. of New England.

1665.—State of ye Province of New Plimouth from ye Commsrs. for New England.

1665.—State of ye Colony of Rhode Island from the Commsrs. of New England.

1665.—State of the Colonie of Conecticut from the Commsrs. of New England.

1665.—State of ye Colonie of ye Massachusetts from the Commsrs. for New England.

1665.—Certificats concerning the Northern limits of the Massachusets Colonie.

1665.—Order concern ye Northerly bounds of the Massachusets.

1665.—Reports of Peter Weare concern ye North Limits of ye Massachusets Colony.

17 May, 1665.—Deposition of Richard Waldern concerning Merimack River.

10 April, 1666.—Letter from His Majesty to the Commiss^{rs} at New Engl^{d}.

1675.—Sir W^{m} Petty's Account of New England.

2 Oct., 1667.—Order for ye Committee to meet about New England.

18 Decr., 1674.—Draft of a letter for His Ma^{ty} to ye corporation of Boston concerning New Hampshire.

8 April, 1661.—Report from ye Council of Plantations concerning the encroachments of the Massachusets.

Petition of Merchants against the Bostoners.

Queries and objections agst the Massachusets encroachments.

1675.—Extract of a letter from New England concerning the Indian War.

Printed paper concerning Levies in New England & the war there.

30 April, 1681.—Paper of M^{r} Randolph for regulating the Trade of the Massachusetts.

The List of Books in the Plantation Office is supposed by the Museum authorities to have been made about 1677. It is as follows:

Printed in ye yeare

1671.—Ogilby in his America.

1625.—Purchas his Pilgrims ye 4th part.

1659.—Ferdinando Gorges, Esqe.

1641.—Abstracts of Laws of New England.

1643.—New England's first Fruits.

1622.—Relation of Plimouth in New Engl^{d}.

1622.—New England's Trials by Capt. Jn^{o} Smith.

1646.—A Short Discovery of America, by W^{m} Castel.

1676.—The Warrs of New Engl^{d}, by Increase Mather.

1616.—Description of New Engl^{d}, by Capt. Jn^{o} Smith.

1674.—Dutch Patent to a West India Comp^{a}.

1624.—General History of New England, by Capt. Jn^{o} Smith.

1676.—New England's Crisis.

1634,—New Engl^{ds} Prospect, by Wm. Wood.

1637.—New England's Canaan, by Thomas Morton.

1672.—Description of New Engl^{d}, by S^{r} Tho: Lynch.

1675.—Two Voyages to New Engl^{d}, by John Josselyn.

1672.—New England's rarities, by John Josselyn.

1672.—Laws of New England.

1638.—Capt. John Underhill's News from America.

1642.—Tho: Lechford's News from N. England.

1628.—Voyage into N. Engl^{d}, by Ch^{r} Levet.

1652.—Ill News from N. Engl^{d}, by John Clark.

1630.—New England Plantacon, by A. Divine.

1643.—Simplicity's Vindication against the seavenheaded Church-Government.

A Discourse and view of Virginia.

Computation of an Iron Work in Virg^{a}.

Enquiries concerning several things reported to be in Virginia and Bermudas, but not in England.

4 March, 1660.—Letter from the Council of Plantations to Virginia.

30 March, 1663.—Letter from S^{r} W^{m} Berkeley Gov^{r} of Virg^{a}

18 April, 1663.—Lre from S^{r} W^{m} Berkeley touching potashes, fflax @ Hemp &c.

28 March, 1663.—Letter from S^{r} W^{m} Berkeley and the Council at Virginia.

Letter from Anthony Langston of Virg^{a}.

Proposals concern building of Towns in Virg^{a}

Proposals concern ye Custom of Tobacco.

M^{r} Bland's case as Collect^{r} of ye Customs in Virg^{a}.

28 Aug., 1676.—Letter from M^{r} Bland to M^{r} Powey.

16 Sept., 1675.—Letter from M^{r} Bland to ye Gov^{r} of Virg^{a} concern ye execution of his office.

Lre from M^{r} Bland concern ye suspension of his office.

29 June, 1676.—Letter from Mris Bacon concern her husband.

M^{r} Bacon's acco^{t} of their troubles in Virginia.

1676.—Order of ye Gov^{r} concern the Assembly.

10 May, 1676.—Declaration of Sir W^{m} Berkeley.

Declaration of the People agst S^{r} W^{m} Berkeley.

The humble Appeal of ye Volunteers to all well minded men.

25 May, 1676.—Copie of M^{r} Nathaniel Bacon's letter to a Sec^{ry} of State.

Declaration of the people of Virginia concern their adherence to N. Bacon.

21 Nov., 1674.—Order of ye Gov^{r} @ Council concern M^{r} Bland.

The Virginians plea for opposing the Indians.

Peticon of Martin Noel, &c., about ye West Indies.

Proposicon of Martin Noel, &c., for improving the English Interest in ye West Indies.

Proposals for improm^{t} of part of Carolina.

13 March, 1670.—An Acco^{t} of the Bahama Islands by Solomon Robinson.

13 July, 1676.—Instructions to M^{r} Charles Chillingworth to the Gov^{r} of New Providence @ ye rest of ye Bahama Islands.

Correspondence.

SCHOOL ENGLISH.

To the Editor of The Nation:

Sir: The Committee of the Overseers of Harvard College on Composition and Rhetoric have issued a second report on the lamentable ignorance of English which they still find in the compositions of those who are entering college. They have certainly justified their criticisms by the examples which they give, and any defence of the state of affairs would be useless. Two things are perfectly plain: first, the ignorance of English which is found in boys of eighteen or nineteen, who are supposed to have had the best schooling which the country affords, is simply disgraceful; secondly, it is a pitiful waste of the resources of a great university to spend them in a vain attempt to teach English in college to persons who are so helplessly ignorant, for no teaching which a college has a right to give can be of the slightest use to them. It is further admitted on all hands that the colleges are not directly responsible for this deplorable condition of things. The youths in question are fresh from school, and have never been under college influences. Are, then, the high schools and academies which send them to college responsible? There is as yet no evidence which implicates them directly. These schools are in the same anomalous position as the colleges. They are compelled to receive many pupils whose previous education has been wofully defective, and they must either abandon their own proper work while they lay the neglected underpinnings, or they must proceed to build their own houses on a foundation of sand.

We come back to the oft-repeated truth—which is as stubborn as ever, though few comprehend its deep significance—that our students come to college at an average age of nineteen, in most cases poorly prepared to pass an examination which schoolboys of sixteen or seventeen would easily pass in England, France, or Germany. These youths have generally spent the previous three or four years doing boys' work, which they should have finished before they were fifteen or sixteen. The teachers see that time is precious to these belated wayfarers, and they do their best to hurry them through what is absolutely required for admission to college in the easiest manner. And this is probably the best that can be done for them under the circumstances. It is too late to lay the foundations of accurate scholarship after they come to the high school, but they can be pushed into college by skilful management. They are too old to be taught English like boys, and they have generally fallen into careless habits of writing, which only severe and regular discipline can eradicate; but for this they have neither time nor patience. If the teachers were to insist on every translation from Latin, Greek, or French being presented in correct, idiomatic English, the requisite amount of these languages could never be crammed into such pupils' heads. The result is what might be expected. In a large class of schools, English is taught as a thing by itself, in the hours assigned to it, and the other languages are taught as if English did not exist; and large numbers of their pupils come to college every year badly pre-

pared in most of the elementary learning which is required of them, and with no solid foundations of scholarship in any branch.

Perhaps none of our schools are entirely free from this class of pupils, and only a few of the most favored can escape the necessity of providing inferior instruction to suit their needs. A pupil who has time to prepare himself for even the moderate entrance requirements of our colleges without undue haste, and who can cultivate literary taste besides getting his lessons, is, I fear, a rare exception in most of our schools. A bright boy of fifteen who should come from one of the better schools in Germany, France, or England, would find his level here with boys of seventeen or eighteen, who had lost the precious time which he had saved. Besides the large class of belated and hurrying pupils, who suffer from want of early training through no fault of their own, every school has its share of the stupid and the lazy, who cannot or will not use even the advantages which are offered them. These would, of course, be a drag on scholarship under any system.

The original compositions published by the committee seem to come from both of these classes of students. The worst translations must come from the class of idlers and dunces, as they generally show no better knowledge of the classics than of English. I will repeat an illustration of the "dead level" of ignorance in both Greek and English, which I gave in discussing the previous report of the Committee in 1893. (See the *Harvard Graduates' Magazine*, No. 2, p. 192.) At one of the admission examinations of Harvard College, the two following attempts were made to translate the *same passage* of the 'Iliad' (ix. 247–251):

No. 6. "But up, if you are courageous and help the sons of the Greeks cooped up from being destroyed by the din of the Trojeans. You will be grieved afterwards, nor to any extent does the priest find evil in the sacrifice. But much before do you consider how you shall ward off an evil day from the Greeks."

No. 8. "But rise, if you have been here and heard the tired sons of the Greeks speak, under the din made by the Trojans. Anger against yourself will be put aside, nor is it possible to find and remembrance (knowledge) of the evil performed, or anger; but consider much first in order that you may not ward off the evil day from the Trojans."

It is hardly necessary to add that these wonderful productions have little resemblance to the real verses of Homer, which may thus be literally translated:

"Up then, if thou art minded, late though it be, to save the wearied sons of the Achæans from the battle-din of the Trojans. Else wilt thou have grief hereafter; and for harm once done there is no way to find a cure. But while there is yet time, do thou take thought how thou mayest ward off the evil day from the Danaans."

There is one charge which cannot be brought against these writers. They have surely not neglected their English for Greek. They are simply trying to translate from one unknown tongue into another. It is hopeless to attempt to improve these by any change in system or by any better instruction. Other translations, which show a better knowledge of Latin or Greek, but the same slovenly and ungrammatical English, must come from the other class, whose want of elementary training in youth obliged them to omit the "humanities" in their preparation for college. These victims of a bad system can be helped, and it is our duty to help them, or at least their successors.

What, now, were these boys doing before they were fifteen, when they ought to have mastered their elementary studies, including English? This question has been completely and satisfactorily answered by President Eliot in his Washington address and in many other papers and addresees. They were wasting time at school, spending seven or eight years in doing work which should have been done in five or six years, and which is much better done in that time in other countries. Whatever study is to be pursued with effect must have its foundations laid before the age of fifteen. Many of the English public schools offer scholarships which are restricted to boys under fifteen, sometimes to boys under fourteen. In the examinations for these, papers are set in algebra (by no means elementary), geometry, and trigonometry; and classical papers which include simple passages from the Greek tragedians and Livy (to be translated by the help of a dictionary), with Greek and Latin composition. Questions in history, French, German, and English, show that these studies are not neglected, and we can assume that in an English school English in all the translations is carefully watched. What interests us chiefly here is the universal assumption that boys of thirteen or fourteen can translate Æschylus, Sophocles, and Livy, even with a dictionary, and can use geometry and algebra freely. What would a scholarship examination for boys of thirteen or fourteen be in this country? All this belongs to a school system entirely different from ours—one which we sometimes laugh at as old-fashioned and aristocratic.

From what has been said it is obvious that English boys from fifteen to eighteen in good schools are not working on the elements of Latin, Greek, and mathematics. At Westminster School in London, in which no boy is allowed after he is nineteen, we find boys from fifteen to eighteen studying Homer, Æschylus, Sophocles, Euripides, Aristophanes, Plato, Lysias, Lucretius, Terence, Horace, Cicero, St. Augustine, and St. Cyril, with algebra, trigonometry, conic sections, statics, and dynamics. The study of English is stimulated by lessons in the English Bible and by "repetitions" from standard authors. There is an air of elegant leisure about all this, which often astonishes both teachers and pupils in American schools. It is sometimes said that these are "picked boys." But why cannot our "picked boys" do something like this? Those who take these higher studies propose to study for honors at the University; but they will enter colleges at Oxford or Cambridge most of which have no higher requisites for admission than Harvard or Yale. They know, however, that no teacher of distinction at either university will give his time to "pass men," who bring to college merely what is absolutely required for admission; and they therefore carry their studies in some branches at least two years beyond these requirements. A few of the better Oxford colleges, as Balliol, refuse to take pass-men on any terms, and protect themselves by special examinations; but these are exceptional cases. If these pupils had chosen to enter college by simply passing the ordinary examinations, they could have gone to the university when they were fifteen or sixteen. Under these circumstances they naturally pursue their studies in a very different spirit from those who are goaded on to a dreaded examination. We can easily see how the English schools can secure due attention to writing English, which they all demand from such pupils as these, *i. e.*, from more than half of the school.

What Dr. Everett tells us of the University of Cambridge, "Bad English will condemn a translation quite as much as incorrect rendering" ('On the Cam,' p. 84) is equally true of the English schools. In the *Spectator* of September 21 there is a letter from an English scholar praising his old master in the Oakham Grammar School. He says: "That which most stimulated us in our appreciation of our own tongue was, I think, the constant demand which our old master made upon us for idiomatic and vigorous English in our rendering of classical authors, and his constant citations of English classics in illustration of what we read." Such translations as are published by the committee do nothing to discredit the value of translations from the classics as exercises in English composition. We must only remember that, to make this process effective, a pupil needs not merely some knowledge of English, but also some knowledge of Latin and Greek.

I repeat that it is not the fault of the teachers who send students to our colleges that all this is impossible here. They cannot take boys of fourteen or fifteen, or even sixteen, who have not yet begun the studies which are to prepare them for college, and who have learned no systematic habits of study, and make scholars of them before they are eighteen or nineteen. Can we further demand of these teachers that they shall at the same time eradicate the habit of writing slovenly English, which in many of these boys is a second nature, and teach them a pure and simple style? Everything here must be taught under pressure, and the English generally comes off no worse than the Latin, Greek, or mathematics; only the bad English is more obvious, even to a casual observer. No real reform can be expected here until a radical change is made in our lower education, by which pupils shall enter the high schools at least two years earlier than they now do. The elementary studies, which now occupy the years from fifteen to nineteen, can then be put back where they belong, and pupils can use these important years for studies which belong to their age. It is beyond dispute that this can be done, with benefit both to the pupil and to his studies, unless we admit that English, French, and German boys are brighter than our own. Indeed, the reform is already begun and is in successful progress. The city of Cambridge has a grammar-school course of four years (an alternative to the old established course of six years), now in its third year of operation, by which the brighter and more willing pupils —all in whom there is any hope of future scholarship—will regularly be ready for the high school at the age of twelve, thus saving two years and establishing better habits of study. The same good work is going on elsewhere, and the outlook is more hopeful every year. On the success of this reform depends greatly, in my opinion, the future of the higher education in this country. Until it is effected, our higher schools must go on teaching full-grown young men what they should have learned as boys, and our colleges must go on teaching their students what they should have learned at school; while studies like English, which cannot be taught without constant personal influence and supervision, will remain as they now are. The committee of the Harvard Overseers may congratulate themselves on the progress of this movement, although no tangible results can be expected

from it until it has had at least four years to work in.

In the meantime the colleges can do something to help on the reform, and to palliate the evil which they cannot cure by themselves. They can apply a powerful pressure from above upon the schools below them, which will be in turn eagerly transmitted to the lower level where the real work must be done. The colleges have no engine so powerful as their bachelor's degree, which never fails when it is judiciously applied. They should declare that slovenly and ungrammatical English will no longer be accepted at the entrance examinations, even if it is necessary to condition three-quarters of the candidates; and they must further make it known that the degree will not be conferred on any who do not show that they can write correct English either before admission or afterwards. This would mean simply that English is to be a real requisite for the degree, on an equal footing with the languages and the mathematics. And college teachers must no longer waste their time and strength and the college revenues in attempting to teach these delinquents. No colleges now pretend to teach the elements of Latin, Greek, or mathematics to those who fail in these at their admission. Why should they teach the elements of English? In this way the colleges can make it plain in the right quarters that time must be saved in the lower schools for the development of the higher studies, and that a fair portion of this time must be devoted to our native language. W. W. Goodwin.

Cambridge, Mass., October 14, 1895.

"COLLEGES" AT HARVARD.

To the Editor of The Nation:

Sir: The increase in the number of students at Harvard again draws attention to the administrative problem, and may perhaps bring on further discussion of the late Secretary Bolles's suggestion that there might be an administrative division of the college. It will be remembered that the chief opposition to his suggestion—it was hardly specific enough to be called a plan—sprang from the fear that the name Harvard College might be lost, or might come to be applied to only one of several groups of buildings, officers, and students.

Possibly this objection would lose some of its force if it were known that, in the early history of the institution, there was, at least so far as names went, a certain adherence to the English usage in the matter of separate colleges. I find in the archives in Gore Hall a vote of the Overseers, of date July 9, 1712, naming a committee "to survey the Roof of *Harvard College*, to Report the State of it, & their Judgm^t for the best Methods for its Reparation." In their report, rendered a few weeks later, the committee recommend as follows: "Wee are of Opinion w^th respect to the *Old College* [the second Harvard Hall, which was burnt in 1764]. That the best way is to take off the Roof. . . . As for *Stoughton's College* [the first Stoughton Hall], Wee gave in o^r Opinion this time two year of what we thought proper to be don . . ." The italics are mine.

Numerous other extracts from the records might be given to show that the term College was commonly applied to each building after more than one had been built. Moreover, there is evidence that each of the seventeenth-century buildings contained the chambers necessary for such physical wants of the students as they were allowed to gratify in those days—chambers, studies, a dining hall, etc. There is, however, no evidence, to my knowledge, of any division of the teaching force at any time previous to the establishment of professional schools.—Very respectfully,

Wm. G. Brown.

THE LITERARY AND THE MEDICAL DEGREES.

To the Editor of The Nation:

Sir: The proposition of your correspondent W. H. Johnson, that the difficulty and expense of obtaining a medical education should be increased in order to discourage those who might be led to undertake it from motives of prurient curiosity, is one the injustice of which is equalled only by its absurdity under present conditions. It is no more true that, in any considerable proportion of cases, the choice of the medical profession is determined by such motives than that the degree of A.B. is a guarantee of the purity of its possessor's mind; but even if such were the case, a college course is the last thing about which a man, if such there be, who wishes to study medicine for such purposes need trouble himself. It will be a long step in advance when no medical school in the country will admit a man without a decent English education, and there are but few States in which either a literary or a medical degree is practically necessary to enable any one who is so disposed to set up as a doctor. The remedy for the evils which Mr. Johnson deprecates is in the hands of the patients. No system can be devised which will mechanically exclude from the profession men of good abilities and bad character.

The thing to be desired under all circumstances, but especially when, as at present, it is easy to get a degree with a very inadequate amount of both general and professional education, is to make it as easy as possible to get a first-class medical training. Believing, as I do, that it is desirable that every physician should be a liberally educated man, it has long been a matter of concern to me to see that the proportion of college graduates in the medical schools of this country is diminishing. With the increased entrance requirements of the colleges and the lengthening of the medical course, it is a very formidable undertaking to obtain both degrees, and the ambitious student in this country is, in this respect, handicapped as compared with those who aspire to the most thorough training in foreign countries. The German student finishes his course in the gymnasium at eighteen or nineteen, about the time the American is ready to enter college, takes his five years' course in the medical department of the university, and may graduate with the highest honors by the time the American has completed his first year of professional study. Substantially the same is true, I believe, everywhere on the Continent, and in England the proportion of graduates of Oxford or Cambridge among students of medicine is very small. That the finished product of the schools of this country shows any such superiority over that of the Continental schools as to compensate for the increased outlay of time and money, I do not believe that any one who is acquainted with the facts will claim.

Whether or not it is desirable that the entrance requirements of the colleges should be so modified as to reduce the average age of the students, I will not undertake to decide; but it is my firm belief that it is practicable to incorporate the scientific studies which lie at the foundation of the medical art with the college curriculum so that the graduate may have the equivalent, at least, of the first year of the medical school, without at all detracting from the value of the college course as a means of mental discipline or liberal culture. Every college requires some study of natural science, and most allow a considerable amount to count towards fulfilling the requirements for the literary degree. There is no reason why the study of the structure and functions of the human body may not be made as valuable for all the purposes of a liberal education as that of the formation of the earth's crust and the movements of the planets. Bacteriology has as much disciplinary value as any other branch of botany, and neither the interest nor the benefits of chemistry and modern languages would be diminished by the knowledge that they were to be available for practical purposes. In my opinion, not a few students who perfunctorily cram studies in which they have no interest, to be forgotten as soon as the examinations are passed, would pursue with enthusiasm a line of work which fell in with their tastes and directly furthered their plans for the serious business of life.

Whatever may be thought of the practicability of such a plan, which is, I believe, in operation at the University of Michigan, and perhaps elsewhere, I am satisfied that until the aggregate of time and expense required for the literary and medical degrees can be diminished, the great body of aspirants for the latter will continue to dispense with the former, to their own regret in many cases, and to the detriment of both the profession and the public. W. L. Worcester, A.M., M.D.

Danvers Lunatic Hospital, Mass., Oct. 15, 1895.

ART DECORATIONS IN PUBLIC LIBRARIES.

To the Editor of The Nation:

Sir: The daily papers announce that the Chicago Public Library is to be magnificently decorated with mosaics; that the "reading-room is to be an exact transcription of the ducal palace of the 400 in Venice," and elsewhere in the building will be seen "pilasters in Austrian gold and green, shading into iridescent blues finished in bronze," as well as "a wainscoting thirty or forty feet high of statuary vein marble, each section of which is ornamented by a band of mosaics composed of Tiffany-Favril glass, semi-precious stones, mother-of-pearl, and pure gold."

These extravagant plans for embellishing the interior of a building designed for the storing of books and the accommodation of readers lead me to raise the question as to the propriety of making a library so attractive to the general public that it becomes a show-place instead of a quiet and comfortable resort for students; in short, to what extent should the fine arts find place in our public libraries? From several weeks' experience as a reader in the splendidly appointed Boston Public Library, I have found that the introduction of the much-lauded decorations by eminent artists is a great drawback to the undisturbed enjoyment of the privileges for which the building is primarily erected. The throngs of people who crowd the grand staircase to visit the splendid building are not content with gazing at the wall decorations by Abbey, Sargent, and others, but must needs tramp through Bates Hall as well, clicking their heels on the stone floor throughout its entire length.

One morning, as I sat at a table in the reading-room, I noted, within the space of one hour, a troop of eleven women tourists, two bands of school-girls personally conducted by their mistresses, besides scores of individual sightseers of all ages, alone or in groups of varying numbers. The authorities realize that readers are disturbed by these visitors to the art-treasures, and express a belief that, as soon as the novelty has passed, the disturbance will cease. They plan also to open special rooms for the use of scholars on the upper floor; but these rooms are not convenient to the books of reference so liberally placed in Bates Hall, nor to the card-catalogue, without which shelf-numbers cannot be had.

Should the reading-room be closed to casual visitors and open only to bona-fide readers, the tax-paying public would feel defrauded of the right to view that which has cost so great a sum. On the other hand, we hear of no complaints because the stack-rooms are not thrown open. Should the original plan be carried out, of placing Whistler's canvas on the east wall of Bates Hall, and other works of art in the panels which are as yet bare, readers might as well abandon attempts at serious study.

The splendid stonework, the noble provisions for making the building fireproof, are worthy of all praise; but I have thought that if the princely sums expended on merely decorative features had been devoted to the purchase of books, the present stringency would not have arisen, and earnest students would not be obliged to conduct their researches amid the social surroundings of a public art museum.

H. Carrington Bolton.

New York, October 14, 1895.

Notes.

At last the English Dialect Dictionary challenges the public support without which the mighty enterprise cannot begin to get into print in June, 1896. A thousand subscribers are needed, willing to engage to pay $7.50 annually for eight years, in return for two half-yearly parts. All such in this country should notify, without delay, the American agents, G. P. Putnam's Sons, No. 27 West Twenty-third Street, New York. There ought to be at least a thousand public libraries which would deem this monument to the language indispensable to their collections.

B. Westermann & Co., 812 Broadway, invite subscriptions to a 'Bibliographie Française,' a collection of the catalogues of French booksellers analogous to our own 'Publishers' Trade-List Annual' and the English 'Reference Catalogue of Current Literature.' The price in paper will be four dollars a *copy* (there may be several volumes). Besides an alphabetical index, there will be a systematic classification. This is good news to all libraries and students.

Two collections of unpublished letters of David Ricardo have been brought to light in England, during the past summer, by Dr. J. H. Hollander of Johns Hopkins University. They comprise Ricardo's correspondence with J. R. McCulloch, and a series of letters addressed to Hutches Trower, Esq. It is proposed to publish both collections, numbering some seventy letters in all, and Dr. Hollander would be glad to hear of any other letters of Ricardo in private possession.

A popular Life of the late Prof. Blackie, by H. A. Kennedy, will be issued by James Clarke & Co., London, close upon the publication of Miss Anna Stoddart's two-volume biography. It will be illustrated with portraits and otherwise.

Mr. Scargill-Bird's valuable 'Handbook to the Public Record Office' having gone out of print, a second edition of it has just been passed for the press by the author, before he left London for Constantinople for his holiday. The new edition will differ materially from the first, owing to its embodying the rearrangement of records as made of recent years by that energetic official, Mr. Maxwell Lyte, C.B., the Deputy Keeper. By the new system, all papers relating to the several Departments of State are grouped together, instead of being found under several headings, as was formerly the case. A number of new lists and indices have hence been issued during the past five years, which will, of course, be noticed under their proper heads. Another feature of the new edition will be an elaborate general index. It is noteworthy, as evidence of the usefulness of the 'Handbook' to others than historical students, that it has been the means of inducing students of the Inns of Court to resort to the Public Record Office for the perusal of old documents illustrative of legal procedure.

The volume upon the West Indies for Mr. Fisher Unwin's "History of the Nations" series will be written by Mr. James Rodway, author of 'The Struggle for Life in the Guiana Forest.'

Edward Arnold, London and New York, will shortly publish 'A Little Tour in America,' by Dean Hole; 'My South African Journey,' by Alice Balfour; 'Memories of Mashonaland,' by Bishop Bruce; 'Fire and Sword in the Sudan,' by Slatin Pasha; 'Robert Louis Stevenson,' by Walter Raleigh; and 'Benjamin Jowett,' by the Hon. Lionel Tollemache.

Mr. Edmund Gosse, in the *Athenæum* for October 5, disavows any responsibility for an edition of the works of Thomas Gray associated with his name by the American house of Frederick A. Stokes & Co.

Macmillan & Co. have become the American agents for the "Arber Reprints," of which the Paston Letters are the latest issues. In connection with the Cambridge (England) University Press they will publish 'The Scientific Papers of John Couch Adams'; 'Collected Mathematical Papers of the late Arthur Cayley'; 'The Geographical Distribution of Mammals,' by R. Lyddeker; 'The Renaissance Period of Geographical Discovery,' by E. G. Ravenstein; 'The Early Renaissance in England,' by Bishop Creighton; 'Woman Under Monasticism,' by Lena Eckenstein; and 'The Growth of British Policy,' by the late Sir J. R. Seeley. For themselves they are about to bring out 'Bookbindings, Old and New,' by Prof. Brander Matthews, and Mr. John La Farge's admirable lectures at the Metropolitan Museum in 1893, under the title, 'Considerations on Painting'; and will shortly begin publication of an English translation of the entire works of Friedrich Nietzsche.

Additional announcements by Charles Scribner's Sons are 'The Art of Living,' by Robert Grant, and 'An Old New England Town,' by Frank Samuel Child.

D. Appleton & Co., will give a fresh garb to White's 'Natural History of Selborne,' in two volumes, with an introduction by John Burroughs, and a first appearance to Anthony Hope's 'Chronicles of Count Antonio.'

A. C. McClurg & Co., Chicago, have in press 'Our Industrial Utopia and its Unhappy Citizens,' by David Hilton Wheeler, and 'That Dome in Air,' reviews of the works of Emerson, Lowell, Cowper, Blake, Whitman, and others, by John Vance Cheney, Librarian of the Newberry Library.

The Munich Verlagsanstalt für Kunst und Wissenschaft (New York: Westermann) will publish directly 'Richard Wagner, sein Leben, Lehren und Schaffen,' by Houston Stewart Chamberlain, with numerous portraits, facsimiles, and other illustrations.

Some nine months ago our Paris correspondent dealt fully with Albert Pulitzer's interesting work, 'Une Idylle sous Napoleon I.,' which Dodd, Mead & Co. now publish in English, in two handsome volumes, under the secondary title of 'The Romance of Prince Eugene.' The translation is by Mrs. B. M. Sherman, but it is not on the level of the typography. The want of command of either idiom is shown in these examples: "That Napoleon should say the word, and he [Murat] stood ready to sacrifice his family, his subjects. 'I should be lost,' he says, 'but I should have proved to you that I am still your best friend.'" "She never asked anything of me for her son, nor, by a perfection of tact, did she thank me for what I had done for him." There are two portrait frontispieces. The same firm send us a new edition of Charles Reade's 'Christie Johnstone,' with unfathered illustrations in wash-drawing, and Goldsmith's 'She Stoops to Conquer,' with illustrations by J. C. Gordon. The latter is well printed and richly bound, and the pictorial embellishments are much above the average, but their diversity (pen-and-ink and tone work) rather mars the decorative effect.

The *Portfolio*, though nominally a periodical magazine, is really a serial library, with each issue a book or section of a book. We have already commented on Julia Cartwright's two monographs on 'The Early Work of Raphael.' These have now been bound up in a plain yet elegant manner, and form a very desirable possession (Macmillan). There are eight photogravure plates, and a large number of half-tone cuts in the text. From Macmillan we have also a pretty reissue of Goldwin Smith's 'Oxford and her Colleges,' with characteristic photographic illustrations, including a boat-race; and an externally taking edition, in pocket-size, of Charles Kingsley's novels, 'Alton Locke,' 'Two Years Ago,' 'Westward Ho!'—but the compression has required a small type and thin paper, which will not commend them to those who enjoyed these classics in their youth.

Thicker paper, but fine type still, we find in the neat and companionable Cameo series of the Messrs. Scribner, which has lately been extended by 'A Chosen Few Short Stories,' by Frank R. Stockton, 'A Little Book of Profitable Tales,' by Eugene Field, 'The Reflections of a Married Man' and 'The Opinions of a Philosopher,' by Robert Grant, all which have a well-defined place in the lighter literature of the day.

Our list of reprints is enlarged by the addition of G. P. R. James's 'Richelieu,' in two volumes in the well-known style of the Knickerbocker Press, to the "Representative Novels" of the Messrs. Putnam, among which we may recall the writings of the Baroness Tautphoeus; and by a respectable, but scarcely beautiful, reproduction of the Chapman & Hall edition of Eugene Sue's 'The Wandering Jew,' in two volumes, by T. Y. Crowell & Co.

After the praise we gave Prof. C. F. Bastable's 'Public Finance,' on its first appearance in 1892, it is necessary for us only to note the issue of a second and revised edition (Macmillan). The revision involves a thorough overhauling of facts and figures, an account of several new tax laws enacted since the first

edition, a new chapter on "Maxims of Taxation," and (a serious defect made good) an index.

Mr. Alfred Daniell's 'Text Book of the Principles of Physics' has reached a third edition (Macmillan). The author states that his treatise is intended primarily for students of medicine; and in adapting it to the wants of such students, he points out a physician's need of training in the great subjects of mechanics, light, heat, and electromagnetism—a need which even now is not fully recognized in the courses of study of medical schools in England and America. The treatise is an excellent book of reference; it does not contain unnecessary pictures, or descriptions of apparatus which is not strictly of use in developing the subject.

Prof. Horace Lamb's 'Hydrodynamics' (Cambridge, Eng.: University Press; New York: Macmillan) may be regarded as the second edition of a treatise on the 'Mathematical Theory of the Motion of Fluids' published by the same author in 1879. It contains, however, so many additions and alterations that the author has concluded to adopt a new title. Much space is devoted to the theory of waves and to the subject of viscosity. The subject of vortex motion is not enlarged upon, for the writer apparently considers it of chief importance in connection with that of motions of the ether. Both in this new treatise and in the new edition of Rayleigh's theory of sound, one perceives the influence of Maxwell's mathematical treatment of electrical problems upon the subject of wave motion in fluids. Conversely, in order to read Maxwell's great treatise on Electricity and Magnetism understandingly, one should read first such a treatise as this on hydrodynamics. The book fully sustains the reputation of the author.

A new edition of W. Slingo and A. Brooker's 'Electrical Engineering' comes to us from Longmans, Green & Co. It is designed for electric-light artisans and students, and embraces the branches prescribed in the syllabus issued by the City and Guilds Technical Institute. It contains excellent descriptions of the principal forms of direct current dynamos and alternating-current dynamos; of the various forms of electric lights and their manner of distribution; and of the instruments used in practical electrical measurements. The authors have given largely English types of machines and examples of English practice in electrical engineering. The treatise is therefore disappointing to an American student. There is no reference to the principle of the D'Arsonval galvanometer, and the American instruments devised by Weston are not mentioned. These instruments are now being rapidly introduced into England and Germany, and are far superior to instruments for the same purpose which are described in this treatise. One is surprised, also, to find no reference to the rotary magnetic field, and to the subject of "alternating"-current motors. In the United States the electric-fan alternating electric motor is already widely used. There are installations of alternating-current motors for transmitting power over considerable distances, and the use of periodic currents in motors has passed the experimental stage.

The rapid progress in the construction of the Siberian Railway lends special interest to an account, in *Petermann's Mitteilungen* for September, of the Province of Transbaikalia. The larger, northern part is still clothed with dense forests of pine, cedar, fir, larch, and beech, and its 600,000 inhabitants (about equally divided between natives, Russians, and Cossacks) are scattered along the valleys of the numerous southern streams. Its seven towns and seven hundred and fifty villages have been built by direction of the Government so as to separate the native settlements from each other, the Cossacks being placed along the Chinese frontier. The chief occupation of the people is agriculture, though mining is making some progress. Nine thousand men are gold-miners, their annual earnings for the eight years preceding 1890 being 3,500,000 rubles. Besides gold, which is apparently found in all the streams, there are deposits of silver, lead, tin, iron, quicksilver, coal, and salt in various places. The silver and lead mines are worked chiefly by convicts, who are paid regular wages, of which 45 per cent. goes into the provincial treasury, 45 per cent. into the prison fund, and 10 per cent. is given to the convict when his term of hard labor is over. If his behavior has been good, he can then become a farmer. There are now sixteen thousand of these paroled prisoners, the yearly average of fresh arrivals being twenty-two hundred. Another occupation, principally of the natives, is the transportation of tea, of which twelve million rubles' worth pass every year over the two great trade routes from China westward. The return freight of the caravans consists mainly of skins, gold, and silver.

The *Scottish Geographical Magazine* for October opens with Mr. H. J. Makinder's presidential address to the geographical section of the British Association, in which he treats of the history of geography in the last two centuries, its place among the sciences, and the true method of teaching it. Mr. Scott Elliot gives an encouraging account of the capabilities of eastern tropical Africa for colonization.

—Those who would not lose a keen pleasure, as well as a source of deepest profit, should not overlook Prof. William James's article entitled "Is Life Worth Living?" in the current number of the *International Journal of Ethics*. It is not so much that he gives a final answer to the question, but the amount of clear thinking and of clear, straight, vivid feeling that the article contains is enough to furnish forth many articles of lesser men. His first task is to demolish whatever residue may remain, in the minds of the people he is addressing, of natural religion: the physical order of nature, he concludes, taken simply as science knows it, cannot be held to reveal any one harmonious intent; it is mere *weather*, as Chauncey Wright called it, doing and undoing without end. He then gives a most taking setting forth of the grounds for a more reasonable conception of the universe—grounds which, shreds and patches though they be, may yet reconcile us to a less gloomy view of human fate. It is a treatment of the subject which cannot but bring good heart to many a weary soul, whether or not it is all that can be said upon the question. For most of us, indeed, the question is not worth asking; we find a world full of human beings the great majority of whom are sure to go on living from an instinctive liking for life, without taking thought as to whether that liking has good grounds or not, and we also find that we who have energy, courage, leisure, can do an immense deal towards making their living, necessary evil even though it may be, far happier than it would be without us.

—The Japanese periodical press is now so voluminous and varied as to require a *Review of Reviews*, and the age of indexing has begun. The chief luminary is the *Sun*, the numbers of which from May to August are now on our table. The variety of themes treated by able native specialists in nearly every known department of science and speculation forces contrast with the cramped intellectual conditions of old hermit days. In a circle of bright young men who have come home with certificates of study or diplomas from schools beyond the oceans, a few untravelled natives like Prof. Kumé do more than hold their own. China, Korea, Formosa, and Russia claim especial attention from the points of view of the geographer and statesman; but literature, commerce, industry, agriculture, history, fiction, the drama, domestic economy, science, the fine arts, education, religion, and miscellaneous topics are luminously and ably discussed. The well-written editorials in English and the illustrations add emphasis to the proof of the thoroughness of Japan's acceptance of Western ideas. The *Fuzoku Gaho*, or illustrated magazine of Japanese life, and the *Maru-maru Shimbun*, the chief comic paper of Japan, bear witness of the same sort. As yet, however, the decency and self-restraint shown in their art and literature have not reached the merry side of their life. Japanese fun is still too coarse, and the *Puck* of Japan shows as yet, after ten years or more of publication, little else than the rudest caricature. The *Rikugo Zasshi* continues, with surprising vigor, to be the best Christian theological review in the empire. Eight or ten of the seventy sects of Japanese Buddhism also publish periodicals in vindication or propagation of their tenets. The war-magazine, which enjoyed a grand success during the continental campaign, is now gathering up the fragments of anecdote and history besides diligently reporting the fighting in Formosa. The *Historical Review* continues its solid work of investigation and critical scholarship.

—Harper & Bros. publish 'A Concise Dictionary of the English and Modern Greek,' by Dr. A. N. Jannaris, a cultivated Greek gentleman who visited this country a few years ago. This volume is confined to the English-Greek part, and will be very useful to the increasing number of visitors to Greece and Asia Minor who wish to learn the language of the country. Dr. Jannaris often gives us a great variety of Greek words as the equivalent of a common English word; these descend from the most elegant expressions seen in literary prose and heard in the most elegant circles in Athens down to the colloquial language of the streets. Many forms are marked to distinguish their character as "archaic," "literary," or "colloquial"; and the traveller is wisely advised, in talking with Greeks, to use the colloquial language by preference, and to avoid learned and archaic words. This dictionary will be a safe guide to a foreigner in Greek lands who wishes to enlarge his vocabulary after he has learned how to speak from a tutor and a phrase-book. In no language is there greater need of a sensible tutor who will teach a dialect which is neither too vulgar nor too scholastic. He who is led too far by an enthusiasm for restoring ancient Greek will find his language is understood by only a limited circle. The late Dr. Schliemann was fond of addressing his servants in a language based on the ancient Attic, but they always needed an interpreter to make it intelligible to them. Dr. Jannaris tells us how to say "go away" elegantly by ἀπέρχομαι and colloquially by φεύγω; but everybody in Athens understands the latter, and very few hesitate to use it. In many cases the use of the more elegant classical expressions is checked

by their length. Nobody will use the polite word for wardrobe, ἱματιοφυλάκιον, when everybody understands and uses the Turkish δουλάπι for this piece of furniture. We notice a few words in the dictionary which we hardly think will ever need to be translated into Greek. Such are *hoity-toity*, *hugger-mugger*, *hocus-pocus*, and *bilk*, which have no real equivalents in Greek. It is almost comic to see *nous* given as an English word, translated, of course, by the same word in Greek letters. We hope this work will soon be followed by a corresponding volume with a Greek-English dictionary.

—The name of Johanna Ambrosius, the peasant poetess, has within a few months become a household word in every German home. The discovery of a new poet in that land of song could not of itself excite our special wonder, but the deep root which this woman's poems seem to have taken in the hearts of all classes of her countrymen is a circumstance sufficiently remarkable to arrest the attention of readers everywhere. The life of Johanna Ambrosius has been one of hard and humble labor in farm-house and field. Amid sordid cares and physical sufferings she found consolation for her sorrows by uttering them in hopeful, uncomplaining verse. The only sources of her scanty culture were the newspapers and the periodicals, and it was through the medium of these that from her home in a remote village of East Prussia her voice reached the outside world. These waifs of the poet's corner at last attracted the attention of Prof. Schrattenthal in Pressburg; he collected them, and at Christmas, 1894, they were published. In less than three months a fourth edition had appeared, and now the seventh is at hand. These poems have the winning beauty of directness and simplicity; their language is pure and their construction faultless; nowhere are we obliged to make allowance for the humbleness of the singer's station or for the meagreness of her educational opportunities. She reveals a genuineness of feeling and a lofty spirit of resignation which speak at once from heart to heart, and her words found a quick response in the imperial palace and the humblest home. The Empress, it is said, has given her a cottage and provided for her declining years; the most distinguished men of letters have spoken in her praise, and now comes the news that one of the greatest of modern song-composers has been inspired by the charm of her verse. In the near future we may expect to find the names of Johanna Ambrosius and Johannes Brahms linked to some lyric gem. The eminence as well as the number of the admirers of this peasant woman would seem to assure her a place above the foot-hills of the German Parnassus.

—An interesting report of Mr. Preston's geodetic and other observations in the Hawaiian Islands has recently been published by the Coast Survey Office. Not only have determinations of latitude, gravity, and the magnetic elements been made, but a new result for the mean density of the earth has been reached. After making a continuous study for one year of the force of gravity at Waikiki, an expedition was undertaken to the summit of Mauna Kea, an extinct volcanic crater, elevation 13,825 feet. At this unique station magnetic, latitude, and hypsometric observations were carried on and surveys made. Also, among other points, at Napoopoo, on the lee side of Hawaii, the magnetic elements were determined anew, where Captain Cook made similar observations in 1799; and at Lahaina, where De Freycinet established a station in 1819. At Kawaihæ are the remains of an ancient temple, famous in the early history of the islands as being the scene of the first steps toward consolidation of them all. A remarkable feature of this ruin is that although the early inhabitants had no metal tools, and are not even yet good mathematical reasoners, still their temples quite uniformly present accurate right angles. Ascending Mauna Kea, camp was established on the banks of a lake known as Waiau, one of the highest bodies of water in the world, at an elevation exceeding 13,000 feet. Mamame trees were not seen above 10,000 feet, and the last remaining trace of vegetation disappeared at 11,500 feet, although on the banks of the lake itself four kinds of plants were growing, and flies, spiders, and butterflies were seen. The extremes of temperature were very trying, 13° F. at night, and 108° F. in the daytime. Mr. Preston made an extensive collection of the rocks on Mauna Kea, from a study of which he derives a density of the mountain; and, combining this with his pendulum observations, he finds for the mean density of the earth 5.13, a constant probably one-twelfth part too small.

RECENT POETRY.

It is worth considering wherein lies the charm that attaches, it appears, to 'The Black Riders, and Other Lines,' by Stephen Crane (Boston: Copeland & Day). It is an attraction which makes young people learn it by heart, carry it into the woods with them, sleep with it under their pillows, and perhaps suggest that it should be buried with them in their early graves. Undoubtedly it offers new sensations: the brevity of its stanzas; its rhymelessness and covert rhythm, as of a condensed Whitman or an amplified Emily Dickinson; a certain modest aggressiveness, stopping short of actual conceit. The power lies largely in the fact that this apparent affectation is not really such, and that there is behind it a vigorous earnestness and a fresh pair of eyes. Even the capitalization of every word seems to imply that the author sought thus to emphasize his "lines"—just as Wordsworth printed "The White Doe of Rylstone," in quarto—to express his sense of their value. A mere experiment will show how much each page loses by being reduced to what printers call "lower-case" type; and yet this result itself seems unsatisfactory because anything which is really good, one might say, could bear to be printed in letters as small as in those microscopic newspapers sent out of Paris under pigeons' wings during the siege. The total effect of the book is that of poetry torn up by the roots—a process always interesting to the botanist, yet bad for the blossoms. As formless, in the ordinary sense, as the productions of Walt Whitman, these "lines" are in other respects the antipodes of his; while Whitman dilutes mercilessly, Crane condenses almost as formidably. He fulfils Joubert's wish, to condense a page into a sentence and a sentence into a word. He grasps his thought as nakedly and simply as Emily Dickinson; gives you a glance at it, or, perhaps, two glances from different points of view, and leaves it there. If it be a paradox, as it commonly is, so much the better for him. Thus (p. 12):

> In a lonely place,
> I encountered a sage
> Who sat, all still,
> Regarding a newspaper.
> He accosted me:
> "Sir, what is this?"
> Then I saw that I was greater,
> Aye, greater than this sage.
> I answered him at once,
> "Old, old man, it is the wisdom of the age."
> The sage looked upon me with admiration.

That is all, but it tells its own story, and is the equivalent of many columns. At other times he not merely intimates his own problem, but states it, still tersely (p. 26):

> Behold the grave of a wicked man,
> And near it a stern spirit.
>
> There came a drooping maid with violets,
> But the spirit grasped her arm.
> "No flowers for him," he said.
> The maid wept:
> "Ah, I loved him."
> But the spirit, grim and frowning,
> "No flowers for him."
>
> Now this is it.
> If the spirit was just,
> Why did the maid weep?

Again, he gives his protest against superstition (p. 56):

> A man went before a strange God—
> The God of many men, sadly wise.
> And the Deity thundered loudly,
> "Kneel, mortal, and cringe
> And grovel and do homage
> To my particularly sublime Majesty."
> The man fled.
> Then the man went to another God—
> The God of his inner thoughts,
> And this one looked at him
> With soft eyes
> Lit with infinite condescension,
> And said, "My poor child!"

Better, perhaps, than any of these polemics are those "lines" which paint, with a terseness like Emily Dickinson's, some aspect of nature. Since Browning's fine description, in "England in Italy," of the "infinite movement" of a chain of mountains before the traveller, the same thing has not been more vividly put than here (p. 38):

> On the horizon the peaks assembled,
> And, as I looked,
> The march of the mountains began.
> As they marched, they sang,
> "Aye, we come! we come!"

That is all; but it is fine, it tells its own story. If it be asked whether it is also poetry, one can only remember Thoreau's dictum, that no matter how we define poetry, the true poet will presently set the whole definition aside. If it be further asked whether such a book gives promise, the reply must be that experience points the other way. So marked a new departure rarely leads to further growth. Neither Whitman nor Miss Dickinson ever stepped beyond the circle they first drew.

Mr. Henry T. Wharton issues the third edition—somewhat expanded, like its predecessor—of his admirable work on Sappho, to which we have heretofore called attention. It is doubtless the most complete and perfect tribute ever paid to any classic author, this perfection being of course facilitated by the very small fragment of Sappho's literary work remaining to us. Of the one hundred and seventy surviving pieces, only two or three are complete poems, and these have been oftener translated and more commented upon, probably, than any other remains of ancient literature. Mr. Wharton gives anew the text of every fragment, in an uncommonly beautiful Greek type, accompanied by his own literal translation of each, with a selection from other versions, some of which are of American origin. He also adds a new preface and a charming little view of Mitylene, by the late Clarkson Stanfield. The book, of course, takes the place of all other editions of what Swinburne called "the imperishable and incomparable verses of that supreme poet"; and one can only wish that this English critic, in attempting to borrow her passion, could have emulated the dignity and verbal restraint of his model.

Two tributes to the late Mr. Stevenson, both published by Copeland & Day, lie before us, the little pamphlet entitled 'A Seamark: A Threnody for Robert Louis Stevenson,' by

Bliss Carman, and a book not much larger, 'Robert Louis Stevenson, and Other Poems,' by Richard Le Gallienne. Of the two threnodies both are wordy, but the American poet's is the stronger. Mr. Carman seldom fails in strong phrasing and imaginative expression, while the mystery and tragedy of the sea always touch him powerfully. He has striking verses like these:

> With all the nomad tented stars
> About him, they have laid him down,
> Above the crumbling of the sea,
> Beyond the turmoil of renown.
>
> . . . . . .
>
> His fathers lit the dangerous coast
> To steer the daring merchant home;
> His courage lights the darkling port
> Where every sea-worn sail must come.

Mr. Le Gallienne has also his fine touches:

> Death! why at last he finds his Treasure Isle,
> And he the pirate of its hidden hoard;
> Life! 't was the ship he sailed to seek it in,
> And Death is but the pilot come aboard;

or this characterization of human language:

> Strange craft of words, strange magic of the pen,
> Whereby the dead still talk with living men;
> Wherein a sentence, in its trivial scope,
> May centre all we love and all we hope;
> And in a couplet, like a rosebud furled,
> Lie all the wistful wonders of the world.

There are a few other poems in the book, and a deep personal sorrow has taken Mr. Le Gallienne further into life's depths and pruned away some of his affectations. These tributes call new attention to the yet unsolved problem of Mr. Stevenson's permanent fame, and are curiously contrasted with the omission of his very name from the new volume, just issued, of Johnson's revised Cyclopædia.

'First Poems and Fragments,' by Richard Henry Savage (Copeland & Day), is attractive to the eye by reason of the simple cover of brown pasteboard, with paper label, a form associated with the golden period when Tennyson and Browning were first coming before the world, and Moxon was their publisher. The contents of the book have the same honest simplicity; they are youthful without being crude, and are bathed in the atmosphere of American hills and forests. A note so true and tender as the following gives great promise (p. 62):

> I love the hills, but she the open shore,
> The shore because it lies along the sea.
> I would be lofty, solitary, free,
> Selfish at times; at times, hearing the roar
> Of the ocean where beneath the bending oar
> It does the planet service, I would be
> As rich in blessing, yea, as rich as she
> Is rich in blessing; I could not be more.
> I walk apart; my heart is in the sky,
> Yet ever yearning downward to the land;
> She walks where all the world is crowding by,
> And holds a little child in either hand;
> I bless her service with a troubled cry
> Of one who would, but cannot, understand.

Mrs. Sangster's 'Little Knights and Ladies' (Harpers) is a very pleasing cluster of poems inscribed to the children of the "Round Table," yet leaves it still an open question whether these old-world phrases and designations are appropriate to American children, and whether they had not better be left to the grown-up "Sir Knights" who call themselves "Templars." The following (p. 128) is one of the most effective of her little lays, and might really take rank with Norman Gale's cricket-poems:

AFTER THE MATCH.

> Both nines could not beat, of course!
> One must be the winner!
> Shouting till our throats were hoarse,
> Home we went to dinner.
>
> And the little sister there
> Met the nine defeated
> With so very sweet an air
> All their gloom retreated.
>
> "Oh, such meanness!" she exclaimed:
> "Why, your game was splendid.
> Everybody felt ashamed
> At the way it ended.
>
> "*You* were *fine!*" she firmly said,
> Beaming on her brothers;
> "Such a fuss!" she shook her head,
> "Just about the others."

If Emerson's "Hitch your wagon to a star" were the only prescription for a poet, Mr. Louis J. Block would have long since attained greatness. In 'The New World' (Putnams) his themes are of the highest; besides the New World itself, he sings of the Parliament of Religions, of Plato, Orpheus, Goethe, Dante, and the rest. But he makes it clear that much must still depend upon the wagon; and his chariot bears many words, but none that haunt us or charm us. It is little that his rhymes run riot and he matches "was" with "cause" and "gain went" with "attainment" (p. 23), but he fails to command or reach the reader, and never quite clears himself of the reproach of mediocrity. Mr. W. W. Nevin, a lawyer, has also hitched his poetic wagon to a star in publishing 'Dies Irae: Nine Original Versions' (Putnams). In dealing with a poem of a permanent fame, and one of which there have been already so many versions, it would have seemed better to spend a life in perfecting a single one than to have, so to speak, flung nine versions at random. The result is necessarily somewhat mediocre; but the preface is interesting, as pointing out how much of legal phraseology is really contained in this solemn hymn, and how well it reproduces in its atmosphere the actual trials of the Middle Ages.

'Religio Clerici,' by Alfred Starkey (London: Stock), is one of those prolonged, thoughtful, "Excursion"-like monologues in blank verse which are still produced in quiet English vicarages. They come especially from virtuous hearts somewhat divided between the charms of the Roman Catholic ritual (p. 27) and the tangible works of the Salvation Army (p. 24). It is difficult in prose to find a common formula for these two aspects of religion, and it proves no easier in verse. 'God's Parable, and Other Poems,' by Susannah Massey (Putnams), is pleasing and cultivated, drawing material from various lands; this material not, however, yielding any salient merit. 'A Bank of Violets,' by Fanny H. Runnells Poole (Putnams), has graceful out-door passages, and commemorates New Hampshire mountains, which is a merit; but its rustic heroines are christened Doris and Daphne, and, on the whole, nothing in the poems is so felicitous as their title.

'Songs of the Pines,' by James Ernest Caldwell (Toronto: Briggs), adds another name to the list of those young Canadian poets many of whom Mr. Sladen and Mr. Witherell have chronicled, but without mentioning this latest name. He shows little of the peculiarly attractive quality exhibited by Roberts and Scott and Carman, but has a pleasing simplicity, weighted down, however, by the total want of humor which permits his putting in print such lines as these (p. 27):

> "So wrote the misanthrope, aged twenty-two;
> A restful tomb just rising to his view,
> While as he wrote, beneath his own rooftree,
> A dread disease had come insidiously.
> Diphtheria had touched a little alien boy
> Far from his home, which erst was not of joy.
>
> . . . . . .
>
> Here let him learn to turn aside from self;
> Nor live for pride or power or place or pelf."

Every year or two brings us from London—or quite as often from Oxford—some slender volume which shows us that youths and maidens still read their Praed, and the youths at least try their hand at his easy jingle. Given a few smooth double rhymes, a few alliterations, and some utterly unexpected combinations, and you have something which at least sends you back to Praed for pleasant associations. The latest of these is a slim volume, 'Ad Sodales,' by Frank Taylor (Oxford: Blackwell). Open wherever you please, you have the lilting strain (p. 25):

> "Where Pan from every reedy pool
> Leaps up to kiss the nymphs, his nieces,
> Where old Silenus plays the fool,
> And all the flocks have golden fleeces;
> Where no one rides in trams or trains,
> Where milk has always got the cream on,
> There Doris lives and Doris reigns,
> The loveliest maid in Lacedæmon."

It is not much; but it bids us turn back to our Praed and forget both Mr. Taylor and ourselves in the unexhausted charm of "Quince" and "The Belle of the Ball" or "Twenty-eight and Twenty-nine."

In the beautifully printed volume, 'Last Poems,' by James Russell Lowell (Houghton, Mifflin & Co.), we have the few final oozings from a rich and varied vintage; and it is a deeply interesting thing to compare them with those first warm, sweet drops that flowed in 'A Year's Life,' a book which, more than half a century ago, touched the heart of youth and taught contemporaries that a new poet had come. Margaret Fuller was in those days thought unjust to Lowell, and yet she perhaps said the acutest thing about that early volume when she wrote that its best critic would be some young person to whom it had acted as a stimulus. And so, at the other end of life, the best appreciation of this closing volume will come from those no longer young who will pardon the loss of something of that early and gushing enthusiasm, in view of the ripened product, the surer touch, the genial wisdom yielded by years. There is here no acidity, no narrowness; and in the closing poem on Grant, unfinished though it be, we have a twin picture with Lowell's magnificent characterization of Lincoln in the "Commemoration Ode." If less eloquent, it is more remarkable, since the temperament of Lincoln was far more nearly allied to that of Lowell than was Grant's; if the poem is more rugged, so is its theme, and its closing couplet will be accepted as the final summing up of the man selected for description:

> "Doer of hopeless tasks which praters shirk,
> One of those still plain men that do the world's rough work."

FITZGERALD AND MRS. KEMBLE.

Letters of Edward Fitzgerald to Fanny Kemble, 1871–1883. Edited by William Aldis Wright. Macmillan. 1895.

"I ASKED Donne to tell you, if he found opportunity, that some two months ago I wrote you a letter, but found it so empty and dull that I would not send it to extort the Reply which you feel bound to give. I should have written to tell you so myself, but I heard from Donne of the Wedding soon about to be, and I would not intrude then—I hope to the satisfaction of you all—and I will say my little say, and you will have to Reply, according to your own Law of Mede and Persian."

With this sentence opens the first letter in this collection, July 4, 1871, though far from the first of the correspondence with Mrs. Kemble, which began some four years previously. We quote it because it illustrates both the unity and the monotony of the series, inasmuch as some reference to Donne or his family occurs in the great majority of the letters up to the date of the death of the examiner of plays, and generally serves as a pretext for writing at all. In March, 1880, we find an allusion to "my average time of writing to you," and then to a lunar interval; the full moon being Fitzgerald's reminder of his old friend. In the years 1879–'82 his letters ranged from twelve to seventeen per annum, and there were twelve in 1875 also. Perhaps more were written than have been preserved or published, and it is an odd

circumstance that but two bear the date of January. All told, they number 112, and, of these, twenty now see the light for the first time. The latest was written but eighteen days before Fitzgerald's sudden death on June 14, 1883.

The monotony and the repetitions are readily forgiven for the sake of the total impression of the relation between two such eminent personages; and a student of diction may even take delight in the variation of the formulas of apology and of courtesy with which these letters begin and close. Indeed, like the more miscellaneous series in two volumes uniform with the present, the epistolary style is a never-failing charm, enhanced by an erratic yet reasonable and often very effective punctuation and a wilful use of capitals, and by the racy idiom of the Suffolk coast. Fitzgerald writes to Mrs. Kemble that "Spedding tells me he is nearing Land with his Bacon," but in a contemporaneous letter to his editor he conveys the same news in the local manner: "Old Spedding . . . tells me that he begins to 'smell Land' with his Bacon." Two years later he does not hesitate to presage his end to Mrs. Kemble in the same manner: "I told you I had not been well all the Summer; I say I begin to 'smell the Ground,' which you will think all Fancy." On the one hand we meet with "Yankeeisms" like "down East" and "expect" (for suspect); on the other, good but old-fashioned English, as in "My Castle Clock has gone 9 p. m., and I myself am but half an hour home from a Day to Lowestoft," keeps company with passages like the following, which has a flavor of Pepys's Diary:

"I kept this letter open in case I should see Arthur Malkin, who was coming to stay at a Neighbour's house. He very kindly did call on me: he and his second wife (who, my Neighbour says, is a very proper Wife), but I was abroad—though no further off than my little Estate; and he knows I do not visit elsewhere. But I do not the less thank him, and am always yours."

Our previous knowledge, through self-revelation, of the shy recluse of Woodbridge and Lowestoft is confirmed rather than enlarged by these letters. He is still the most independent of critics, who cannot admire Goethe's "Faust" as a work of construction or imagination, or "doat on George Eliot," or take any satisfaction in Tennyson's later productions (least of all, in the "dramas"), or join a Browning Society, or find Irving endurable as an actor. His "famous Lyceum Hamlet . . . was incomparably the worst I had ever witnessed, from Covent Garden down to a Country Barn. . . . When he got to 'Something too much of this,' I called out from the Pit door where I stood, 'A good deal too much,' and not long after returned to my solitary inn." Towards "Daddy Wordsworth" there is a noticeable softening. Reproaching Tennyson with talking too much about his own writings, and the criticisms of them, he adds: "Even old Wordsworth, wrapt up in his Mountain mists, and proud as he was, was above all this vain Disquietude: proud, not vain, was he: and that a Great Man (as Dante) has some right to be—but not to care what the Coteries say." In Keats's letters in Lord Houghton's Life, he tells Mrs. Kemble, "you will find what you may not have guessed from his Poetry (though almost unfathomably deep in that also) the strong, masculine Sense and Humour, etc., of the man: more akin to Shakespeare, I am tempted to think, in a perfect circle of Poetic Faculties, than any Poet since." His love for Carlyle is renewed by Froude's biography, and he has but slight censure for Froude's publication of the Reminiscences. Mr. Wright prints a curious deprecatory letter from the historian to Fitzgerald, elicited by the tender of letters from Carlyle, "the fuliginous and spasmodic," as he is elsewhere designated; in 1876, "quite well for his Age: and vehement against Darwin, and the Turk."

American readers can but be struck by Fitzgerald's criticism of Lowell and Hawthorne. In place of quoting this, we extract a part of the luminous comparison of two Old World poets:

"What inspires me now [1873] is, that, about the time you were writing to me about Burns and Béranger, I was thinking of them 'which was the Greater Genius?'—I can't say: but, with all my Admiration for about a Score of the Frenchman's almost perfect Songs, I would give all of them up for a Score of Burns's Couplets, Stanzas, or single Lines scattered among those quite *im*perfect Lyrics of his. Béranger, no doubt, was The *Artist;* which still is not the highest Genius—witness Shakespeare, Dante, Aeschylus, Calderon, to the contrary. Burns assuredly had more *Passion* than the Frenchman; which is not Genius either, but a great part of the Lyric Poet still. What Béranger might have been, if born and bred among Banks, Braes, and Mountains, I cannot tell: Burns had that advantage over him. And then the Highland Mary to love, amid the heather, as compared to Lise the Grisette in a Parisian Suburb!"

Fitzgerald's own rating of himself is worth remarking. He has, he says, "but little, if any, faculty of critical Analysis," but is "very strong in Scissors and Paste," as when engaged in popularizing Crabbe—"a very, very little Job, you see; requiring only a little Taste, and Tact." Speaking of Arthur Helps's writings, which he "could never relish," "I suppose," he allows, "they will help to swell that substratum of Intellectual *Peat* (Carlyle somewhere calls it) from [which] one or two living Trees stand out in a Century"; and he subscribes himself "A very small Peat-contributor." The happy phrase is traced to its origin in a footnote by Mr. Wright, and proves to owe its proverbial quality to Fitzgerald alone, in that process of *rifacimento* to which he seemed to subject everything that seized hold on his memory. On the grand scale we see this process in his version of the quatrains of Omar Khayyám, of the "Agamemnon" and the Spanish dramas, of the "Bird Paradise." More humbly it is visible in the Haydon verse included in his queer scrap-book, 'Half-Hours with the Worst Authors.' "There are," observes Mr. Wright, "seven stanzas in the original, but Fitzgerald has omitted in his transcript the third and fourth, and slightly altered one or two of the lines." Again, he cites, as if from Crabbe, this couplet:

"Friend of the Poor—the Wretched—the Betray'd,
They cannot pay thee—but thou shalt be paid."

Mr. Wright, however, cannot ascertain that these lines are to be found in Crabbe, "but they appear to be a transformation of two which occur in the Parish Register," to wit:

"Friend of distress! The mourner feels thy aid.
She cannot pay thee, but thou wilt be paid."

Here Fitzgerald's "Taste and Tact" have worked to good purpose, even to the substitution of *shalt* for *wilt*, and to the skilful employment of the dash.

One gets glimpses in this volume of Fitzgerald's family, and particularly of his mother, "a very handsome, clever, and eccentric woman," as Mrs. Kemble testifies, and her son corroborates:

"She was a remarkable woman, as you said in a former letter; and as I constantly believe in outward Beauty as an index of a Beautiful Soul within, I used sometimes to wonder what feature in her fine face betrayed what was not so good in her Character. I think (as usual) the Lips: there was a twist of Mischief about them now and then, like that—in the tail of a Cat!—otherwise so smooth and amiable."

She was first cousin to her husband—"stesso sangue, stessa sorte," as the clasp of a bracelet of his hair was inscribed—and from this union sprang our Edward, "distinguished," in Mrs. Kemble's words, "from the rest of his family, and indeed from most people, by the possession of very rare intellectual and artistic gifts. A poet, a painter, a musician, an admirable scholar and writer, if he had not shunned notoriety as sedulously as most people seek it, he would have achieved a foremost place among the eminent men of his day, and left a name second to that of very few of his contemporaries." With this most just estimate we take leave of our subject, after remarking two errors in the American edition of the 'Letters.' The omission of *how* after *hear* makes Fitzgerald unfeelingly remark (p. 163): "When last you wrote, you were all in Flannel; pray let me hear you are now." And in the footnote on page 169 the second *as* should be *at*. Mr. Wright's notes are, as usual, models of helpfulness and restraint. Perhaps one should have been provided for Fitzgerald's misleading statement, March 31, 1882 (p. 228): "It is my seventy-fourth Birthday," even if on the opposite page he says: "Here is a day for entering on seventy-four!" As he was born in 1809, most people would reckon a seventy-third birthday.

The Greater Poems of Virgil. Vol. I., containing the first six books of the Æneid. Edited by J. B. Greenough and G. L. Kittredge. Boston: Ginn & Co. 1895.

Prof. Greenough's Virgil has been some time before the public. The present edition is in many respects a new book. The editor is fortunate in securing the coöperation of so extremely accomplished a linguist as Prof. Kittredge. The introduction is very elaborate, containing an account of the literary conditions of the Augustan age, the nature of epic poetry in general, and the position of Virgil in his own and later times. The instructions for translation and metrical reading for the benefit of learners have been remodelled; the pictorial illustrations made much more numerous, with inclusion of an elaborate colored picture of the fall of Icarus, from a Pompeian wall-painting; and a profuse variety of quotations from modern poetry inserted, in which Virgil has been imitated or paralleled in the many centuries from Dante to Tennyson.

It is very doubtful if these additions help in the practical instruction of Latin at the age when Virgil is generally studied. Captivating as pictures are to the eyes of school-committeemen who are to decide on the introduction of editions, they serve chiefly as sketches for boys to elaborate with irreverent pencils; and however much the mass of parallel poetry may charm those who are bemoaning every day the subordination of the literary to the philological side of scholarship, it remains true that the mind of keen and studious youth is much more easily stirred by critical than by æsthetic culture. They may be stirred by the very best poetry, if it is simple enough; but Gower, George Peele, and Phineas Fletcher will assuredly be wasted on them. To such authors they are not likely to have access in an ordinary school, and the same is true of many others quoted in this book. If they can get at

a Dante, what will they make of the quotation on page 251, where Inferno xii. is misprinted ii.? This quotation, by the way, like many others, is dragged in with very slight parallelism.

It is strange to see two such scholars clinging to a sort of half belief that the 'Culex,' 'Ciris,' 'Copa,' etc., were written by the author of the 'Eclogues,' and what is meant by καταλεπτά on page xix.? Is it a misprint for καταληπτά? When did the Medicean manuscript get moved from Florence to Rome (page xxxiii.)?

Li Hung Chang. By Robert K. Douglas. [Public Men of To-day.] Frederick Warne & Co. 1895.

Our first feeling in reading a book like this is that of sympathy with and admiration of the biographer. To write the biography of a living Chinaman is even more difficult than to reconstruct in print the life of a dead European or Japanese. Even in Mikado-land, most modern biographies are based on the personal letters, journals, speeches, diaries, or other data from the subject's own hand, lips, or mind. In China, where no social life, in our sense of the term, exists, women are club-footed prisoners, private letters (in our sense) are curiosities, and things are for show or imposing sham, the materials for a biography of anything but a human figure head are excessively scant. Nevertheless, the keeper of Oriental manuscripts in the British Museum, who had the temerity to name his penultimate volume 'Chinese Social Life,' now sends forth what may fairly be called a signal success in biography. He pictures the rise of the student who, born in 1822, became a Taotai in 1859. Standing, physically and mentally, head and shoulders above the average of his countrymen, he displayed from the first high intellectual powers and a thorough mastery of the details of Chinese official life. It may be safely said, however, that his greatest teachers, in those phases of character and in the actual achievements which have made him the incarnation of such progress as China has been able to make in the past forty years, were not Confucians. If anything seems plain from the documentary and other evidence given by Prof. Douglas, it is that the American Ward, the Englishman Gordon, and even the Frenchman Burgevine were true trainers of the man who stands before the world, apparently, as a new type of Chinaman.

Yet with all the rhetoric and facts set so pleasantly before us in this book, there is no evidence that Li, in adopting Western externals, ever became anything more than a Chinese, a worshipper of the dead, and a "corruptionist" of the true Cathayan order. That he has been converted in any real sense seems absurd to believe. To him the teaching of the ancient sages in the infancy of the world is perfection. The Westerns are but machinists. In morals and statecraft they are to him hopelessly barbarous or weakly imitative. Even at Shimonoséki, the proofs that his idea of patriotism or political service differs in no wise from that of our own bosses, were strikingly clear. His towering conceit in 1894 led him to provoke war with Japan, hoping thereby to secure money and concessions for the building of a railway to the Russian frontier. He expected quickly to sink the "pigmies'" fleet and annihilate their armies, by playing his old game of simply setting one set of foreign machines against another. Thus would he win Korea back to Chinese vassalage. After this he hoped triumphantly to combine patriotism and personal advantage in railway building. Unfortunately for Li, the Japanese, in changing weapons for the better, had changed their minds also in the same direction. Prof. Douglas reads his subject aright when he says of Li, "Nothing he has heard, nothing he has seen, nothing he has read of Western lands, has served to shake for an instant his implicit belief in the ineffable wisdom of the founders of Chinese polity, or in the superiority of the civilization of China over that possessed by any other nation on the face of the earth."

That saviours and regenerators of China are yet to come out of her own people, it is not impossible to hope or even believe, but it will be only when "the traditions of the elders," as embodied in the books which Confucius emasculated and edited, and in the "history" which he falsified, are reduced to things as harmless as extinct volcanoes. Whether wrought by the labors of scholars, the teaching of missionaries, the blows of war, the example of Japan, or a slow and total change of mental climate, such a consummation is to be devoutly wished.

So good a book deserves an index, which it inexcusably lacks.

Echoes of the Playhouse: Reminiscences of Some Past Glories of the English Stage. By Edward Robins, jr. G. P. Putnam's Sons. 1895.

Although, in view of the immense amount of antecedent literature upon the subject, it would be unreasonable to expect to find anything absolutely new in a book of biographical and historical notes relating to the English stage, the compact and attractive little volume put together by Mr. Edward Robins, jr., will prove both interesting and valuable, not only to such casual readers as may wish to obtain a bird's-eye view of the whole field of theatrical development at a small expense of time and trouble, but to genuine enthusiasts, who will discover in it a pleasant means of renewing acquaintance with treasured memories. It is a rapid and fragmentary, but lively, judicious, and well proportioned sketch of English theatrical history from the days of the old miracle plays in the twelfth century down to the end of the eighteenth century, void, indeed, of dry, laborious antiquarian detail, but mindful of most of the salient facts and personages in the gradual evolution of the modern theatre and drama from the early moralities, masks, pastorals, and interludes of the pre Elizabethan period to the golden age of Garrick and Siddons.

The conspicuous merits of the book are the orderly arrangement of its contents, its agreeable style, its adroit use of quotations from such contemporaneous authorities as Cibber (an admirable critic in spite of his egotism), Pepys, Quin, Addison, Steele, and others, and its skilful avoidance of stale material. While giving due prominence to the great lights of the theatrical profession, Mr. Robins devotes a large share of the space at his disposal to men and women famous or notorious in their era, but comparatively unknown, except to specialists, in the present generation. He gives us glimpses, for instance, of Charles Hart, Shakspere's grandnephew, and of Joseph Haines, a comedian who won renown by his impersonation of such characters as *Sparkish* in "The Country Wife," and created a great hubbub by announcing his conversion to Rome in consequence of a visitation by the Virgin Mary with which he professed himself to have been honored. His character as a practical joker caused grave suspicions to be entertained of his sincerity, and indignation was so hot against him that he found it expedient to make a public recantation before the footlights. A much more picturesque rascal was that Cardell Goodman, commonly known as "Scum" Goodman, who forsook the stage for the highway, and narrowly escaped hanging on that account, only to be put in peril of his neck again for his attempt to kill two of Lady Castlemain's children. Other interesting paragraphs refer to the bewitching Moll Davis, one of the many mistresses of the reprobate Charles II. and an ancestress of the Derwentwater family; Clun; the unfortunate Will Mountford and his dazzling wife, and Sanford, who was accounted the completest stage villain of his time.

A capital account of Thomas Betterton, fortified with copious extracts from Cibber, conveys a clear notion of the powers and limitations of that famous player, and incidentally relates the coöperative experiment tried by Sir William Davenant in the management of his company—a plan which might be imitated, perhaps, with advantage to-day, when theatrical art is suffocated by the greedy and ignorant speculators who control it. After due tributes to the beauty and abilities of Mrs. Barry and Anne Bracegirdle, and of that wonderful mimic Dick Estcourt, immortalized in the pages of Sir Richard Steele, Mr. Robins furnishes an appreciative chapter upon the drama of the early eighteenth century, sketching lightly but critically the characteristics and style of Congreve, Vanbrugh, Farquhar, Mrs. Centlivre, the disreputable Aphra Behn, and the classical Addison. Very good, too, in its colloquial vein, is the chapter upon Colley Cibber, who, in great part, is made to draw his own picture by means of neatly selected quotations from his 'Apology,' a book brimful of interesting reading.

But space will not admit of even the barest enumeration of the familiar names which follow each other in quick succession through these pages. The brilliant career of Nance Oldfield is traced from her first triumph as *Lady Betty Modish*, and her later scarcely less remarkable achievements in tragedy, to the hour when it was crowned by her burial in Westminster Abbey. Sufficient tribute, too, is paid to the grace and skill of Robert Wilks, that theatrical Prince Charming, and to the mannered but doubtless highly effective style of Quin, whose fame would have been brighter if he had not had the misfortune to be eclipsed by Garrick. Charles Macklin, one of the most savage personalities and one of the finest actors in theatrical annals, the genius who first recognized and revealed the tragic and pathetic elements in *Shylock*, is the subject of a full and interesting study, and there are many judicious excerpts from the rich fund of anecdote relating to Foote, in his varied capacities of actor, manager, wit, mimic, and humorist. Liberal space, of course, is accorded to the phenomenal Garrick, but on that topic there is nothing new to be said. Mr. Robins's review, however, evinces a discriminating comprehension of little Davy's distinctive qualities as actor and man, and presents him faithfully in both aspects. His sketch of Peg Woffington is also well done, and he closes his notes with brief references to Miss Young and Mrs. Yates.

As an interesting summary of English stage history in its personal aspect, from the Restoration to the beginning of the present century, this little book fulfils its object. It contains a large amount of information, with an abundance of well-authenticated anecdote, and suc-

ceeds in imparting an air of freshness to an old story.

Studies in English, Written and Spoken, for the Use of Continental Students. By C. Stoffel. First Series. Zutphen: Thieme; London: Luzac.

Of the various studies in modern English that have come to us of late from Continental scholars, the above-named work is up to the standard in the matter of close observation and laborious scholarship. Stoffel's subjects are not, however, of the sort that admit of philosophical treatment or demand original thinking, as are, for example, those handled by Jespersen in his 'Progress of Language,' recently reviewed in these columns. In the chippy style one is accustomed to from Herrig's *Archiv*, Stoffel deals with various functions of the preposition *for*, with the difference between *no* and *not*, with *only* in the sense of 'except,' etc. He has a chapter on Scriptural phrases and allusions, and an elaborate study of slang, based upon the "'Arryese" of *Punch*. Much that the author has brought together will be welcomed by the next generation of dictionary makers; but it is rather in dictionaries and grammars that the material belongs than in would be essays.

Moreover, colloquial speech is very dangerous ground to the foreigner, whatever his familiarity with it. He is apt to lack that indescribable instinctive feeling which will guide the native aright. Our author is struck with the phrase "How is that for high?" which he says is the American's first question on tasting a pie.

"The American plays with the sense of the word *high* in this vulgar phrase: he intends it to mean 'slightly putrid,' 'strong smelling,' referring to the game inside the pie. . . . The meaning of the hackneyed phrase *How's that for High?* in the American speaker's mouth is therefore: 'What do you think of the strong smell and taste of the game inside this pie?'"

Dr. Stoffel found "dog-gone" in *Punch*: "Chicago makes ready for more derned, dog goned *Fêtes* [in honour of Columbus] to last till, at least, next October!" upon which he makes the learned comment: "*Dog gone*, wonderful, astounding; an Americanism about which I can give no further information."

BOOKS OF THE WEEK.

Bartlett, Prof. E. J. Laboratory Exercises in Chemistry. Leach, Shewell & Sanborn. 50 cents.
Bingham, N. W., Jr. The Book of Athletics. Boston: Lothrop Publishing Co. $1.50.

The Nation.

NEW YORK, THURSDAY, OCTOBER 31, 1895.

The Week.

SENATOR LODGE substantially declared war against England under his own signature in the New York *World* of Saturday, in a despatch from London. He says we cannot permit England to occupy Venezuelan territory, and that the Monroe doctrine has to be recognized as a "fact" of the same order as the independence of the United States. He declares accordingly that any appearance of British fleets and armies to coerce Venezuela will be a signal for war with the United States. We have long felt that this was coming, but supposed Lodge would delay putting on his "dust and sweat," and tackling "the work of the world" once more, till he got home. The responsibility which this bold bad man is taking on himself is something awful to contemplate. Of course, it is to our advantage to have him over in London just as the war breaks out, seeing what is going on at the enemy's headquarters; but what we cannot understand is Salisbury's not sending him his passports, but letting him wander about among the dockyards and fortifications. This does not look like the vigorous foreign policy which Englishmen were promised when the Tories came in. They knew perfectly well that Lodge was a dangerous man ever since he proposed to discriminate against English goods in order to make England drop her beastly gold standard. We feel sure, however, that if he stays in London till this despatch gets back, he will be "shadowed," and then there will be more trouble; shadowing of Americans being expressly prohibited in the Monroe doctrine.

We have Horace Bushnell's authority for believing that there are moral uses for dark things, and so we need not despair of finding profit in the study of the dark moral mystery which Senator Chandler presents. Knowing his antecedents, there is nothing strange about his now taking refuge in intensest patriotism. But his burning desire for a war with England, his visions of bloodshed and death and glory, his more than berserker rage, do make up something of a puzzle in a land where people are supposed to read and think, and where the sense of humor is reputed to be unusually acute. He is at least useful in reminding men like Lodge and Roosevelt of the hopelessness of competing with him and his kind in international truculence. He will outroar them every time. If popularity depends upon insolence and bloodthirstiness, Finerty and Chandler are sure to lead all the scholars and respectables in politics. See how easily Chandler outstrips Lodge at this juncture. The latter telegraphs from London that we must be alert, that we must stand by the Monroe doctrine, keep an eye on England, and, by inference, suspect all Anglomaniac Senators who spend their vacations in London. But the Honorable Bill does not waste time fooling with such generalities. Under six definite heads he tells us why war with England is "inevitable," how it will "arise" and be "forced" and "fought," how it should be "welcomed," and what its "sure result" will be. It is perfectly clear that if any New England Senator can bray himself into the vice-presidential nomination, his name is Chandler, not Lodge.

Two Admirals of the American navy have just got into trouble by the too free use of their tongues—that is, by gross indiscretion. One of them undertook to "sass" his own Government because he disapproved of its politics, and another arrogated to himself the functions of the State Department, and opened diplomatic relations of his own with foreign potentates. Signs of this growing indiscipline have been long visible. It is due in part to the way in which the late Administration allowed naval officers of all ranks to magnify their office in public, with the view of helping to get appropriations for the new navy; in part, also, to the unscrupulous way in which the Jingo press and orators encourage naval officers to despise and criticise any administration which pursues a peaceful policy and respects the law of nations. This disposition to drag the navy into the political arena has, in fact, grown steadily ever since the Republican party entered on a policy of extravagance in order to make a high tariff seem necessary. And yet there could not be a more ominous sign of national decadence than the enlistment of either army or navy in party conflicts. What is oddest about all this is that the Jingoes, who, more than any other class, will need a highly disciplined fleet to protect their various keys and canals, are foremost in this work of demoralizing the soldiers and sailors. They are almost making insubordination and insolence to Presidents and Secretaries of the other party a military virtue. But no navy which did not keep its mouth shut and obey orders was ever worth much.

The difficulties of diplomacy in this country are much increased by the number of diplomats at work on its various problems. In the first place, we have to reckon with all the newspapers. These have the earliest "hack at it" because they "come out" every day, whereas the most vigilant stump ambassadors, like Finerty, or Lodge, or Roosevelt, are heard only at intervals, when the State Department is growing deaf to all considerations of honor and decency. Sometimes a quasi-public body like a State convention or a State legislature lends a hand if there are any votes discerned in the distance. A good deal of attention was bestowed upon our foreign relations at the World's Fair at Chicago, but it was generally of a peaceful nature, sometimes bordering on the jocose, especially when Mayor Harrison took part in it. Thus we had "days" set apart for various nations, with special exercises for each, intended to promote good feeling and to bring in some extra gate money. Now it is proposed that the Atlanta Exposition shall be annexed to our diplomatic equipment by setting apart a day devoted to Cuban independence, or to the republic of Cuba, or to something of that kind. It is said that this demonstration was originally designed to take place during President Cleveland's sojourn there, for the purpose of bringing pressure to bear upon him (his susceptibility to pressure being well known), but that he indicated his objections to that mode of administering foreign affairs, and that consequently the date was postponed to the 17th of December. If "Cuba day" is to be celebrated at Atlanta, then surely we ought to have Hawaiian day, Armenian day, and especially Irish day. Perhaps it would be better to have one day set apart for all oppressed people everywhere, including those of South Carolina. Then the orators could orate without any fixed limitations, which would be an advantage to them as well as to the oppressed. It would also be advantageous to us, since it would require no embarrassing explanations from the Secretary of State, whereas a Cuban day alone would produce emotions in Spain which would not be easily allayed.

One of the pleasing little fictions with which Republican orators and organs now amuse themselves is, that South America is never really happy and contented except when the Republicans are in power in the United States. Look at this wretched paltering over Venezuela, they say, this criminal delay in driving the Spanish out of Cuba, and just think what a Quigg as Secretary of State would have done. No wonder the Venezuelans are crying out, "Oh, for one hour of Jim Blaine!" But the fact is, that they had about five years of him, and got far less aid from him in their boundary dispute with England than from either his Democratic predecessor or successor. What they did get from him was an arbitrary, discriminating, and offensive tax laid on one of their principal exports to this country. That was the kind of sweet content the Republicans were giving South America. They threatened Argen-

tina with similar offensive duties on hides. They domineered over Chili in a way that led to the suggestion of a South American alliance to resist the aggressions of the United States. In fact, when Harrison went out of power, he left a distinct feeling of suspicion and exasperation against this country in all Spanish America. When the news of his defeat reached Brazil, the editor of the *Rio News*, himself an American, in explaining the pleasure of South Americans at Mr. Cleveland's election, said: "The fact seems to be that South America was always nervous over President Harrison's foreign policy, and expects Mr. Cleveland's Secretary will show less inclination to have a finger in every pie." In like manner the *Revista Ilustrada*, a journal devoted to South American interests, spoke of the "great satisfaction" with which the election of Mr. Cleveland had been received "from the Rio Grande to the La Plata," on account of "the principles of justice at home and abroad which that statesman represents." It is safe to say, therefore, that the South Americans are not exactly pining for a return of the party to power which shows its extreme fondness for them by discriminating taxes, threats, insults, and ultimatums.

A religious paper publishes a programme for a series of meetings in this city to promote interest in foreign-missionary work. The reasons given for this special effort are, the low condition of mission funds, and the criticisms which "a hostile world" is now "hurling" at the cause. We know of no evidence that the world is hostile to foreign missions. They are a source of great expense and anxiety and diplomatic complications to many purely secular governments, yet none of them proposes, that we ever heard of, to falter in its support of missionaries. One of the reasons, in fact, for the degradation of an American admiral was that he had insulted a missionary, and, in his person, the cause of missions. The kind of criticism which a hostile world hurls at missions is mostly in the form of questions. It wants to know why men are not allowed to preach to the heathen what they may preach at home; why the sectarian divisions of Protestantism need to be thrust in so unseemly and confusing a fashion upon pagans; why missionaries are allowed publicly to vilify the authorities to whom they are legally subject—to call them "wretches" for whom "hanging is too good"; why the converted Hawaiians so suddenly became monsters of lewdness and deceit when a scheme to steal their country from them was worked up, and not a missionary of prominence, or a missionary board, had a word to say in their defence. In fact, the "hurling" has almost all been done by missionaries and champions of missions, and all that a hostile world has done has been to point out some of these curious things, and ask how they were to be accounted for. No better work can be done by the speakers at the coming meetings than to try to explain these anomalies, and "hurl back" the criticisms by answering them calmly and fairly.

The question of "reorganizing" the Senate seems now to be troubling the sleep of the Populist members of that most august legislative assembly on earth more than that of either Republican or Democratic Senators. Several of the New England Senators have declared that they will enter into no bartering with the Populists for the clerkships. The Democrats say less, probably because, if the others cannot combine, the clerkships and the chairmanships will remain safely in their possession. But the Populists, who counted on being assiduously wooed by both parties, have now taken up the wooing themselves. Stewart, it is true, cried out in great bitterness of soul the other day, that it was of no use for the Senate to "organize," or even meet at all, so long as it was simply to register the decrees of Wall Street. But this was only a passing burst from an anguished heart, and Senator Butler of North Carolina now announces the Populist plan of reorganizing. The thing should be done, not by a dicker or deal, not on party lines, but "on silver lines." What could be simpler? A majority of the Senators were elected as silver-men, and how can their haughty spirits brook being admitted to the Senate chamber by a gold doorkeeper, or having their committees served by non-silver clerks? The plan to change all this on silver lines is seductive, but it is unfortunately true that whenever silver lines get tangled up with party lines, the latter always prove the stronger. Senator Butler might as well talk of organizing the Senate on Populist lines. The whole thing is a matter in which the public takes little interest. Popular zeal for reorganizing the Senate might easily be aroused if it were a question of how to get rid of some of the agitators and corruptionists who sit at the desks, but when it is simply a squabble over who shall open doors and answer messages and write letters, the august assembly will be left to fight it out at its own convenience and in its own style.

There could be no stronger evidence of the subsidence of the old sectional issues that grew out of slavery than the general lack of concern in the North as to the practical disfranchisement of the majority of the negroes in a Southern State contemplated by the Constitutional Convention now in session at Columbia, S. C. Republican newspapers, it is true, comment upon the course of proceedings at the South Carolina capital, but the editors evidently feel that their readers have only a languid interest in the matter. The Philadelphia *Bulletin* states the truth when it says of the South Carolina movement and the similar action taken by Mississippi five years ago, that "there was a time when the Republican party throughout the North would have been aflame with indignation over these disfranchisements of the negro." What is the cause of this complete revolution in public sentiment? The good Republican newspaper from which we quote is perfectly frank in answering this question. "The plain truth is," says the *Bulletin*, "that the Republicans generally have come to the conclusion that universal negro suffrage has been a failure, and that the desire of the South to free itself from the evils of a great mass of ignorance, stupidity, and superstition at the ballot-box is largely pardonable." The Philadelphia journal even goes so far as to say that "it is difficult to find an argument against either the Mississippi or the South Carolina plan of disfranchisement, however much we may detest the race prejudices which have partly inspired it."

But while admitting that it will not be easy to show that the fifteenth amendment is violated by the application of an educational test, the effect of which is to debar most negroes from voting, the *Bulletin* holds that there can be no doubt as to the duty of Congress, under the fourteenth amendment, to reduce the representation in Congress and the electoral college of any State which thus decimates its black voters. It regards this as so plain a matter that it declares that "the number of Mississippi's and South Carolina's seats in those bodies should be cut down at as early a day as the facts can be ascertained for legislative action." But is this as simple a process as the *Bulletin* represents? The fourteenth amendment provides that when the right to vote is denied or abridged by any State, except for participation in rebellion or other crime, "the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State." Apply this principle to Mississippi. That State five years ago adopted a constitution which provides that, in order to vote, a man "shall be able to read any section of the Constitution of this State, or shall be able to understand the same when read to him, or give a reasonable interpretation thereof." This plan was designed to let in all of the whites and keep out all of the blacks except the most intelligent. But how can anybody ever find out how many blacks are thus denied the suffrage? The census shows how many "male members of such State, being twenty-one years of age and citizens of the United States," in 1890, were negroes; but there are no records which show how many of these negroes are unable either to read the Constitution or to understand it when read to

them. It is difficult to conceive of any practicable method of ever settling this question, and we can see no way in which "the facts can be ascertained for legislative action," according to the *Bulletin's* idea.

"Jersey justice" is in danger of becoming proverbial in a new sense, if it keeps on letting one public criminal after another go unwhipped. The latest acquittal makes it practically certain that not one of the men smirched by the investigations of the Voorhees committee last spring will be convicted. Even the frightened head conspirator, who fled the State, may as well come home and snap his fingers at the law, as it appears that there is no legal machinery in New Jersey to convict self-convicted public thieves. The Senate investigation put the moral evidence of guilt beyond dispute. No apologist was bold enough to say a word for Ford or Van Cleef or Mullins. They were indicted speedily enough; but the prosecution broke down most impotently in the cases of the last two, and Ford is safe in hiding. Even he could not now, it is probable, be convicted of conspiracy to rob the State, for which he stands indicted. No intelligent citizen of New Jersey doubts that the State capital swarmed with thieves, yet no one now expects to see anything done about it.

The full registration figures have convinced the Tammany "bluffers" that it was a mistake to bet on the result of the election until the registration was completed. Sheehan put forth his claim of from 40,000 to 50,000 Tammany majority on the registration of the first two days, and the offer to bet $10,000 to $8,000 on Tammany was made on the same incomplete basis. Both claim and bet were quickly withdrawn, and Tammany gloom reigned in their stead. There is not a really competent "arithmetic man" in the city who does not believe that the registration is heavily against Tammany, and that it became so largely through the additions of the two closing days. Sheehan's "bluff" was, in fact, a very bad blunder, for it aroused an apprehension throughout the city that Tammany was in danger of getting back into power, and thereby induced thousands of respectable citizens, who had been indifferent to the election, to put their names on the voting lists. The simple fact that the total registration this year, while not so large as that of last year, is more than 15,000 greater than that of 1893, the last "off year," shows that the people of the city are not indifferent to the result. The further fact that there has been a great falling off in the totals in the Tammany strongholds removes all doubt as to the meaning of the figures. The people of the city are determined that the Tammany disgrace shall not be put upon them again.

The falling off in the registration in the Tammany districts is due unquestionably to the more stringent requirements of the new election law. There has been some disposition to ridicule these requirements, especially those relating to the color of the hair and the age and weight of the voter, but it is very evident that "floaters" do not take a jocose view of them, and it was at this class of Tammany cheats that they were aimed. Then, too, we have had this year a more competent and honest force of registration officials than ever before. The old incompetents and rascals were weeded out by the examinations which the Police Board instituted, and honest and capable men were put in their places. Another influence for good has been the memory of the convictions for cheating at the polls which followed the elections of 1893 and sent so many Tammany workers to jail. In short, reform has played havoc with Tammany's regular vote, which stood so solidly against all assaults for many years, and which gave so many estimable people an overpowering sense of Croker's great abilities as a leader because he was able to predict so accurately what the Tammany majority would be. If you can by repeating and false counting make your majority just what you wish it to be, prediction becomes a very simple matter. The hated reformers have made repeating and false counting so dangerous by their new registration requirements and their watching at the polls that Croker's basis for predictions has been completely washed away.

Mr. Cram, the President of the late Tammany Dock Board, did not do well to "yawn" and grow tired at his examination by Mr. Terry on Monday. He was assisting at the explanation of a great mystery. Mr. Cram is the son of an eminent father, a graduate of Harvard College, a "gentleman" in the technical sense of the term, a man of means, and yet he has for two or three years been associating intimately, night and day, with a lot of thieves, cheats, and ruffians. Moreover, whenever they were near being found out, they were in the habit of coming forward and saying, "Look at Cram. Cram would not be with us if we were doing anything wrong." So that for years the town has been asking what Cram was doing among them. Consequently, in submitting to examination, he is helping in the solution of an interesting municipal problem. He is one more illustration of the extreme uncertainty of the bird known as the "gentleman in politics," or, as he is sometimes called, "the scholar in politics." "The gentleman in politics," the college graduate, and all that sort of thing, appears to be just what we want in politics until he gets into it. As Tacitus said of Galba, every one thinks he would make a first-rate politician till he becomes a politician. When he does, as a rule, the gentlemanhood and the scholarship tumble from around him, like the scaffolding of a jerry-built house, and he becomes as ardent and enthusiastic a humbug as any of the politicians. They at first use him as a decoy, and say: "This is the kind of men we want for office. Would we had more of the same. His presence in our councils shows you how the papers lie about us." As he warms to his work, however, and his fraternal relations with the public cheats can no longer be concealed, he is assigned the duty of answering the critics, which he does sometimes angrily, sometimes with a long-suffering, patient-merit air, and sometimes with that of a victim of public spirit, because he stays among the bad men to prevent their getting worse.

We should like to print a list of the ones we have in mind, but it is not necessary. Every reader can make out a list for himself. That such a list can be easily made out, however, is a painful fact. It seems to show that while the colleges are undoubtedly diffusing through the community wider knowledge and higher aims, they are not able to arm any man against the temptations of office-seeking. It seems as if the minute a man wanted an office, even a small municipal office, he looked his personality over, and carefully got rid of whatever qualities he had derived from honorable parents, or from a university education, which political ruffians and blackguards were likely to despise or dislike.

Herbert Spencer's contribution to the Canadian copyright discussion is most weighty. If Canada is to insist, with the United States, upon separate publication in order to secure copyright, it will be a disastrous blow to the higher orders of literature. To multiply centres of production—in the sense of compelling an English book to be printed separately in three or four places—would be, says Mr. Spencer with great force, so absolutely wasteful a process that the margin of profit would be destroyed. If forced to reprint in this country his works since 1860, he says, not one of them would have been written. The principle is most important. Our own law compelling simultaneous and separate publication has already proved a source of endless vexation to English authors, and of loss, æsthetic and moral if not pecuniary, to the American public also. On its face the law defies convenience and economy, as well as international courtesy and equality, and that is a sufficient condemnation of any law affecting the production and distribution of literature. It has been said that if Scott had had an American copyright, he need not have worked himself to death to pay his debts; but under our present law, the extra labor of reading two sets of proof, making two sets of plates, and, in general, doubling all the care and trouble of publishing, might easily have sent him to his grave sooner than he actually went.

MORE ABOUT THE MONROE DOCTRINE.

A CORRESPONDENT asks us certain questions about our views on the foreign policy of the United States, which we have great pleasure in answering, or trying to answer. He justly observes that while we "have frequently instanced where we should not interfere in any matters affecting any of our neighboring nations," he "has not observed instances indicated by us where we should." The explanation of this is easy. We do not in this journal carry on academical controversies or write essays on international law. We discuss the questions of the day as they arise. No proper case for the interference of the United States in the affairs of neighboring nations has, in our opinion, arisen since the French invasion of Mexico thirty years ago. We have, therefore, when treating such interference, treated it "negatively," that is, have opposed it on several occasions when urged by Jingoes or young newspaper warriors. We have said, You must not do that, because it is not lawful or expedient; and this was enough for our purpose.

But being now requested to cover the whole ground, we answer frankly to the first question, that, in our opinion, we should "remonstrate or interfere in the proceedings taken by powers other than American with American nations on this continent other than our own," in all cases arising under the Monroe doctrine. What is the Monroe doctrine? Here it is, taken textually from President Monroe's message:

"We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers, to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power, we have not interfered and shall not interfere. But with the governments who have declared their independence and maintained it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling in any other manner their destiny, by any European power, in any other light than as the manifestation of an unfriendly disposition towards the United States. . . . But in regard to these continents, circumstances are eminently and conspicuously different. It is impossible that the allied powers should extend their political system to any portion of either continent without endangering our peace and happiness; nor can any one believe that our Southern brethren, if left to themselves, would adopt it of their own accord. It is equally impossible, therefore, that we should behold such interposition, in any form, with indifference." (Message of December 2, 1823.)

Consequently, if any European power should seek to set up or impose on the people of any South American state, by force of arms, any government or form of government which the people did not demand or were opposed to, or should seek to "oppress them or control their destiny" in any manner, we should hold it to be the duty of our Government to repel by as much force as might be necessary any such attempt. The invasion of Mexico by the French was an attempt of this order, and Mr. Seward acted properly in giving them peremptory notice to quit as soon as we had forces available to compel compliance. This is an answer to questions 1 and 2.

The third question, apropos of the Venezuelan trouble, requires more extended treatment. England is already a neighbor of Venezuela, and holds conterminous territory by a title which nobody denies. The frontier runs for a long distance through a tropical wilderness. There have, for this reason, been disputes of long standing over the exact line, as there are between nearly all Spanish-American states. They are aggravated in this case by the fact that this wilderness is a gold country. All this raises the strong probability either that neither side is quite right, or that the truth of the matter is hard to get at. The Venezuelans are no more moral than the British, and no less greedy, and if we acknowledge the right of Great Britain to hold territory on this continent, we must acknowledge her right to protect that territory against invasion or appropriation. We cannot ask her to consider herself in the wrong because she is the more powerful, or confess that weakness, any more than might, makes right, because we should never think of applying such a rule to ourselves. We have always, in all disputes with these little South American states, imposed on them our own view of the justice of the case. Witness our treatment of Chili in 1892.

The dispute is in part historical, in part topographical, or, in other words, one to be settled by lawyers and surveyors, not by big guns. It has been so treated by all our diplomatists, and is so treated still, and the ascertainment of the facts is an essential preliminary to all judgment on the affair. A person who writes on it as Senator Lodge does in the magazines, or as the young men in the *Tribune* office do, with hardly any knowledge of these facts, is as ridiculous as your lawyer would be if, the minute you employed him on a difficult real-estate litigation, and before he had looked at your papers and proofs, he began to make it hot for your adversary in the newspapers by calling him a notorious robber and defrauder of widows. All this sound and fury, besides making us a ludicrous spectacle as a nation, seriously embarrasses our officials who are charged with the duty of deciding what part we shall take in foreign disputes, and who have all the available and most correct information about it on their tables. Whatever their faults and shortcomings, they are our chosen and accredited representatives, and the business of deriding them because they do not take a hand in other people's quarrels should begin only after they have publicly revealed their folly or stupidity.

As to our duty in such quarrels, neither the Monroe doctrine nor any other doctrine known among civilized men gives us the right to protect the South American states against the natural consequences of their own insolence and folly. If they quarrel with a bigger power, rob its subjects, or assault and insult its representatives, they must take the consequences, which are usually a fine with some sort of security till it is paid. There are eighteen Spanish-American states, with a population of about 50,000,000. Not one of them has ever exhibited the slightest desire to accept our influence or control except when it got into a row with some European power. They are independent sovereign states, *de facto* and *de jure*. We are in no way responsible for them, and our policy towards them has always been marked by a little dislike and a good deal of contempt, so that the notion that we are injured or insulted if anybody makes them pay their debts or indemnify people whom they have robbed or outraged, is worthy only of schoolboys who want to see a naval battle or read about it.

Whether Great Britain is proposing or "trying wrongfully to take and hold a large share of Venezuelan territory and hold it permanently as England's own" is something which we do not know, and we do not know anybody in the United States who does know. There cannot be less trustworthy witnesses on this subject than the Jingoes and the young newspaper men. Not only do they not know the truth, but they do not want to know it, if it is favorable to England. And we shall never make beneficent or rational contributions to international law until this presumption against England gets out of the heads of people who write or think on this class of questions. To a great many Americans, "abroad" or "foreign powers" always means England, and England is a monster who is always trying to seize more territory. When these publicists want to annex something, they always declare that England wants it too, and sit down and wait for the appearance of the British fleet. This is funny, but it disturbs the judgment, and makes a great deal of our talk on international affairs sound irrational. England is very much like other nations except in having a larger fleet. This superstition causes, too, a widespread but comic popular belief that anybody who opposes any bit of aggression or fanfaronade on our part, is either in the pay of Great Britain or is secretly working for her interest and aggrandizement, and he is therefore not listened to. This, together with the boyish eagerness for a big fighting force, like a fleet, that will not entail risk or inconvenience to people on shore, is rapidly causing us the loss of the great place in the international forum which we occupied in the beginning of the century, and which the founders of the government thought we would solidify and improve as we grew stronger. We need more men in public life, in the press, who seek national greatness in the sphere of mind and law, and resist the popular

longing for more bloody corpses, desolated towns, and the general "hell of death and destruction" called war.

SHERMAN AND CARLISLE.

WE have adverted to some of the strange sayings of Senator Sherman in his recent speech at Massillon, Ohio. There are some things in that speech which are unaccountable on any theory except that Mr. Sherman is in his dotage. For example, this:

"When Cleveland was elected President with the avowed purpose of reducing the tariff, both houses of Congress were willing to authorize the issue of 3 per cent. bonds, to meet the anticipated deficiency, and these could readily have been sold at par. I introduced a bill for that purpose, *but it was defeated by the declaration of both Cleveland and Carlisle that it was unnecessary.*"

When we read this part of the Senator's speech, we had a clear recollection that either Cleveland or Carlisle had said the very opposite of what Mr. Sherman here affirms, in some message or report to Congress—*i. e.*, that one or the other had recommended to Congress the very thing which Mr. Sherman says was defeated by their declaration that it was unnecessary. We find by reference to Mr. Carlisle's regular reports that he twice urged upon Congress the very thing that Mr. Sherman says he rejected, thus:

"I recommend that the third section of the act to provide for the resumption of specie payments approved June 14, 1875, which confers authority upon the Secretary of the Treasury to issue and sell certain descriptions of United States bonds be so amended as to authorize him to issue and sell, at not less than par in coin, bonds to an amount not exceeding $200,000,000 bearing a lower rate of interest, and having a shorter time to run than those now provided for. . . . The United States 4 per cent. bonds payable in 1907 are now selling at a rate which yields investors less than 3 per cent. upon their cost, and I am confident that a bond bearing interest at the rate of 3 per cent., payable quarterly and redeemable at the option of the Government after five years, could be readily sold at par in our own country."

This was in the Secretary's first annual report, that of December, 1893. In his next one he repeated the recommendations in these words:

"As the power to issue and sell bonds already exists, and the present state of our financial legislation compels its occasional exercise, I repeat the recommendation made in my last annual report, that, in the interest of the Government and people, power be conferred on the Secretary of the Treasury to negotiate loans at a lower rate of interest and for a shorter time than are now allowed. . . . The law should be so amended as to conform to the conditions and requirements of the public credit and service at the present time, and I earnestly hope that Congress will take early and favorable action upon the subject."

We have carefully examined President Cleveland's annual messages which were sent to Congress simultaneously with Mr. Carlisle's reports. We find nothing in them which conflicts in any way with these recommendations. In the message of December, 1894, the following paragraph occurs, reinforcing the Secretary's recommendations:

"I desire also to earnestly suggest the wisdom of amending the existing statutes in regard to the issuance of Government bonds. The authority now vested in the Secretary of the Treasury to issue bonds is not as clear as it should be, and the bonds authorized are disadvantageous to the Government both as to the time of their maturity and rate of interest."

Now, in the light of these facts, what does Senator Sherman mean by saying that his bill for 3 per cent. bonds was "defeated by the declaration of both Cleveland and Carlisle that it was unnecessary"? It is not to be supposed that he intended to falsify the public records in such a bare-faced manner when the proofs were so easy of access. We can only account for such a statement as a lapse of memory, which is one of the commonest failings of old age.

The Philadelphia *Press* in a muddled way attempts to justify Senator Sherman. The *Press* says that the influence of Cleveland and Carlisle took effect after the bill had passed the Senate and gone to the House. The only member of the House whom it quotes in support of this contention is George Fred Williams of Massachusetts, who said: "I am not aware that the incoming Secretary of the Treasury has desired that this amendment be passed, or in any way identified himself with this amendment." It is quite true that Mr. Williams said this, but when the bill came back to the Senate, the House having non-concurred, Mr. Sherman embraced the occasion to show how much his own information was superior to Mr. Williams's lack of information, although he did not mention any names. He said:

"I drew this amendment as it now stands, and it was submitted to the incoming Secretary of the Treasury. He, having been formerly a member of the committee on finance and a member of the Senate, and being familiar with us all, came before the committee on finance and there stated the reasons why in his judgment it might become, in case of exigency, important for him to have the power to issue a cheaper bond. He expressed the hope and belief, and I am inclined to agree with him, that it might not be necessary to issue these bonds at all, but that, when the emergency came, *he must meet it as quickly as a stroke of lightning;* that there must be no hesitation or delay; if there should be a disparity between the two metals or a run upon the Government for the payment of the United States notes, he must be prepared to meet this responsibility in order to obtain coin with which to redeem the notes. That statement was submitted to the committee on finance in the presence of the honorable gentleman who is to hold the high and distinguished office of Secretary of the Treasury. I know of no man in the United States who is better fitted to hold that office than he. We were glad, indeed I was glad, that we could in any way aid him by legislation to meet the difficulties of his office. *No doubt his persuasive arguments,* together with my own firm belief, caused the committee on finance, which is very diverse in its views upon the question of free coinage of silver and gold, to agree with practical unanimity upon this provision of law. When I introduced it, I had no expectation whatever that there would be any opposition to it" (*Congressional Record*, pages 2330, 2331).

This was said on the 1st day of March, the session coming to an end on the 4th. Senator Gorman in the same debate confirmed what Senator Sherman had said, and he took occasion to contradict flatly the insinuation that Mr. Carlisle had no knowledge of or was in no way responsible for the measure under consideration. He said:

"Mr. President, after the statement of the Senator from Ohio, I feel that I ought to say a few words. This amendment, which was reported by the committee on finance, came here not only with the approval of a majority of the committee, but it was, as I feel authorized to say, the result of a consultation of those who are in control of the financial department of the Government and the gentleman who is within a few days to take charge of that department. I believe that it is due to all concerned to make that statement in view of the fact that it has been stated elsewhere in a legislative body that the incoming Secretary had no knowledge of or was not in any way responsible for the amendment. For one, I am not content to let the statements in the public press and the statements made elsewhere go unnoticed" (*Congressional Record*, page 2237).

The Philadelphia *Press* actually quotes this paragraph from Mr. Gorman's speech as though it were a confirmation of what Mr. Williams had said in the House, instead of being a contradiction of it.

It should be remarked that Mr. Williams in the House never pretended to speak for Mr. Carlisle. He merely said that he was not aware of this and that, and he had been careful to say by way of introduction that he spoke as an individual only. Yet the *Press* is not content with putting Gorman and Williams in the same team. It goes on to say:

"One word of contradiction by Secretary Carlisle of the statements made in the House by his party leaders, to the effect that he did not want authority to issue such bonds, would have secured the passage of the amendment. But he made no such denial. There are others besides Mr. Williams who can tell the reason why."

The truth is, that the 3 per cent. bond clause was killed in the House by the silverites, and especially by Mr. Bland's threat that he would defeat it by filibustering. On the 27th of February Mr. Bland announced his intentions in these words: "I say, Mr. Speaker, for one, that, so far as my voice and my vote are concerned, every parliamentary rule that I can resort to I will use to resist this insult of the Senate." Bland called it a revenue bill, which could originate only in the House, and therefore he considered it an insult to the House. The *Press* says that, in spite of Bland, "under the power of the Speaker's gag-rule committee, the amendment could easily have been brought to a vote." Perhaps so, but Mr. Carlisle was not the Speaker. That office was filled by Mr. Crisp, and if Mr. Crisp happened to agree with Mr. Bland (as he did generally on these questions), the "gag-rule committee" would have worked the other way. It was well understood at the time that Bland had the power to kill the whole bill (the sundry-civil appropriation) at that late day in the session, and that he would have done so without scruple. What communications, if any, passed from Mr. Carlisle to members of the House at this juncture, when the real question was that of killing the whole bill and perhaps making an extra session of Congress necessary, we do not know. Nor can any judgment be pronounced upon them unless

they are produced textually. Considerable doubt is thrown on the existence of any such communications by a speech of Senator Gorman in the next Congress nearly a year later (January 31, 1894), in which he repeated his denial quoted above, thus:

"When the Senate passed that provision, and it was stated in another body which deals with appropriation bills that Mr. Carlisle, who was to be the Secretary of the Treasury, did not want the authority to issue 3 per cent. bonds. I rose in my place in the Senate, as the *Record* will show, and I stated without fear of contradiction that that provision had been agreed to by Mr. Carlisle, and that its defeat elsewhere and the attempt to hold Secretary Foster alone responsible for the desire to issue bonds was not justified by the facts, and was a gross injustice to Mr. Foster and to the now chairman of the committee on finance [Mr. Voorhees], as well as to the Senator from Ohio [Mr. Sherman], and all who supported the proposition."

This was said in the course of a debate with Senator Sherman. If Mr. Sherman had known anything to the contrary then —and he probably knew as much then as he does now—that would have been a fitting time to say it.

THE TRANSFORMATION OF AFRICA.

It seems but yesterday that Stanley emerged from the heart of the Dark Continent and told of his year-long wanderings and perilous descent of the Congo. Now the trader rides by railroad nearly half the distance between tide-water and Stanley Pool, and at this place buys a ticket by either of two lines of steamboats to stations fifteen hundred miles distant from the Atlantic. Farther south the Portuguese are working diligently, though with limited means, at the transcontinental road by which they once proposed to connect their possessions on either ocean, and the planters two hundred miles from the coast send their rubber, sugar, and coffee by rail to St. Paul de Loanda. The miner seeking the goldfields of Mashonaland has the choice of two routes. He may take the train at Cape Town, and, from the present terminus of the northern road, almost a thousand miles distant, go by coach to any of the great mining centres. Or he may prefer the shorter land route from the east coast, and be carried by the Beira railroad to the very edge of the auriferous plateau. In his mining-camp near Fort Salisbury, which a few years ago was practically inaccessible to the white man, he reads the London papers only five weeks old. The Hindu merchant seeking his fortune in the British Central Africa Protectorate is transferred from the Bombay steamer at the mouth of the Zambesi to one of the fleet of the African Lakes Company's steamers, which, with a hundred miles "carry" around the Shire rapids, lands him on the shore of Lake Nyasa. If from thence he travels three hundred miles westward to the remote Lake Mweru, where Livingstone's wanderings ceased, even here the postman will bring him letters from his home in far-off India.

Rapid transit into the interior has not made so great progress further north. Only some thirty miles of the German railway from Tanga to the Victoria Nyanza are completed, and the money for the parallel English road to Uganda has but just been appropriated. The Italians have built twenty miles of a projected line from Massowah on the Red Sea to Kassala on the northwestern frontier of their colony of Eritrea. The grasp of the Mahdists on the middle Nile has been loosened, and any day we may hear that the water route from Egypt to the great lakes has been reopened. The other northern routes, from the Mediterranean ports into the Sudan, are still closed to white men; but the trans-Saharan railroad by which it is proposed to connect the Algerian system with the French lines pushing eastward from Senegal and northward from the Guinea coast, has almost passed out of the realm of mere visionary schemes into that of possibilities.

The advance of civilization, then, into Africa is from every quarter, and in many places the goal is already reached. At the present rate of progress, in a few years the whole continent will offer no more difficulties to the traveller than India does now. It is not inconceivable—nay, more, it is probable—that in 1905 the Cook tourist on the Nile will not be obliged to turn back, as now, at the second cataract, but may keep up the river to Lake Albert, and thence by alternate rail and water to the mouth of the Zambesi or to Cape Town. Then the traveller around the world will not be confined to the Suez Canal or the passage round the Cape, but will have the choice of several routes across the continent. He may take the African lakes route from Chinde to Nyasa, and cross by coach or rail the British Protectorate, connecting at the Portuguese frontier with the trains of the Royal Company for the Atlantic seaboard. Or he may choose either of three roads to the Congo—the German Central, now being surveyed, from Dar-es-Salaam, opposite Zanzibar, to Lake Tanganyika, the German Northern to Lake Victoria, or the British Uganda railway past the magnificent snow-clad Ruwenzori range. At Stanley Pool he will be able to take the cars of the State Road to the head of navigation at Matadi, or, if he prefer, the all-rail route through French Congo to the port of Loango.

In other words, the barrier of desert and fever-haunted coast belt which has separated central Africa from the rest of the world since creation, has been finally and permanently broken down. And just as the water brought in artificial channels from the eternal snows of the Alatau Mountains is transforming the arid desert of Turkestan into a region of smiling villages and cultivated fields lined with shade and fruit-trees, so these wagon-roads, steamboats, and railways are but so many irrigating streams which will fertilize the mental and moral wilderness in which the negro lives. For that which has kept him in a state but a remove above the wild beasts who share with him his forests and grassy plains has been chiefly his isolation. With the in-rush of the white man into his solitudes, intent on gain though he be, and bringing with him the countless evils of civilization, but at the same time their antidotes, a new era has opened for Africa and the African. The full import to the world of this great fact it is impossible to grasp. This, however, may be said with confidence. It has increased the available cultivable land of the globe by a fifth and doubled the area within the tropics. That is, the sources from which man can draw his food supplies in the future have been almost indefinitely expanded. To what extent the opening of the country will add to his mineral wealth is still a matter of conjecture, but that the African highlands contain the precious and useful metals in abundance every traveller testifies. But of greater importance than these material advantages is the fact that the sum of human happiness will be immeasurably increased. These railways, with the stable government which is the essential condition of their existence, mean the absolute suppression of the greatest curse which has ever blighted man's growth, the slave-raid. They mean the raising of the standard of living, the creation of a knowledge of the rights of property, of the profitableness of labor, the dignity and value of human life to fifty million of our fellow-beings. They mean the binding together by common interests nations, tribes, and villages now mutually hostile. They mean the indefinite multiplication of such oases (even now happily numerous in the great wilderness) as the settlement of which we read in a British official report, that here "will be seen clean, broad, level roads, bordered by handsome avenues of trees, and comely red-brick houses with rose-covered verandas peeping out behind clumps of ornamental shrubs. The natives who pass along are clothed in white calico, with some gaudy touch of color superadded. A bell is ringing to call the children to the mission-school."

THE MOUNDS OF THE MISSISSIPPI VALLEY.

For a hundred years and more the origin of these structures has been a subject of debate, and various theories have been brought forward at different times by way of accounting for them. Thus, for instance, we are told by one class of writers that they were built by the Toltecs; others ascribe them to the Aztecs, the Pueblos, etc., etc.; and then, again, there are those who assert that they were the work of a mysterious people who once dwelt in the Mississippi Valley, but who are now extinct. Differ as these theories do in certain particulars, they may all be classed under one head in so far as they are based upon the assumption that

these remains (and under this term we include the earthworks of every sort, size, and description) indicate a phase of civilization to which, in point of artistic, religious, and political development, the Indian is said to have been unequal.

From this extreme view there has always been more or less dissent, though it is but fair to say that since the publication by the Smithsonian Institution, in 1848, of 'The Ancient Monuments of the Mississippi Valley,' Squier's theory as to the superior civilization of the mound-builders and the low condition of the modern Indians, together with its corollary as to the origin of these "monuments," has been accepted by a large majority of those who have written upon the subject. Indeed, so comprehensive is his statement and so clear and compact his reasoning, that, in spite of numerous errors of detail for which he was not always responsible, to say nothing of his adoption of a system of nomenclature which not only was erroneous in itself, but has been a prolific source of error in others, his book is still the great storehouse from which the advocates of the mound-builder theory draw their arguments. But while we yield to no one in our appreciation of Squier's great work, it is well to remember that he subsequently so far modified his views as to admit that "the earthworks of western New York were erected by the Iroquois or their western neighbors"; and that although he never changed his opinion in regard to the origin of the so-called "sacred enclosures," etc., of southern Ohio and elsewhere, yet even upon this point his conclusion has been successfully questioned by a school of ethnologists who do not find in the mounds, or in anything that has been taken from them, any indication of a higher degree of civilization than the Indians of the Mississippi valley, such as they were when the whites first came in contact with them, are known to have reached.

Among those who have been especially prominent in advocating this theory, Prof. Cyrus Thomas of the Bureau of Ethnology is easily first. Placed in charge of the department of mound exploration soon after its organization in 1881, he has had exceptional advantages for studying this problem; and to those of us who are familiar with the amount and character of the work that has been done in the library as well as in the field, it is needless to say that he has made the most of his opportunities. He has labored assiduously in every branch of the investigation, and though some of his contentions—as, for instance, the theory about "archæological areas and distribution of types"—are open to doubt, yet, in the main, his researches have led to decisive results. To enumerate a tithe of the difficult points he has cleared up would lead us too far astray; and we content ourselves with calling attention to the fact that, in the way of field exploration alone, hundreds of groups of earthworks have been examined, numerous graves, cemeteries, caches and cave deposits have been opened, and "over two thousand mounds, including almost every known type of form, from the low, diminutive, circular burial tumulus of the North to the huge truncated earthen pyramid of the South, have been explored." In a word, "every variety of construction hitherto known, as well as a number decidedly different in detail," are said to have been examined, and hundreds of them, we may add, are figured in the twelfth annual report of the Bureau of Ethnology, issued this year.

Of the tangible result of these explorations the account is somewhat meagre, though enough is told to enable us to form an idea of the size and value of the collection. In the item of pottery, for instance, there are "1,500 specimens, including most of the known varieties and several that are new in form and ornamentation." Of implements and ornaments in stone, bone, copper, and shell there is a large and varied assortment, among which we recognize the carved shells and copper plates from the Etowah (Georgia) group of mounds, about which we have heard before. Of the great mass of these articles, however, so far as we are permitted to judge of their character, it may be safely said that while they tell us nothing new of the life of the people who made and used them, they do, when taken in connection with the graves and mounds in which they were found, give us a good picture of the arts and industries, manners and customs of the people whom it is the fashion to call mound-builders. Unsatisfactory as this result seems to be, it is, nevertheless, a step in the right direction, for it establishes a test or standard of mound-builder work, and thus marks out the course which the investigation must follow. Evidently, if it can be shown that at some time in the distant past there lived in the region in which these mounds occur a people who were in the same stage of development as the mound-builder—a people who, in other words, made and did all the things that he is known to have made and done—then the question as to the origin of these works may be regarded as settled, and the search for that interesting but somewhat elusive personage yclept mound-builder becomes a waste of time.

This in effect was the shape in which the problem presented itself to Thomas, and in solving it he adopted the comparative method—the only one which has thus far given positive results. Thus, for example, instead of indulging in idle disquisitions about the civilization of the Aztecs or the Pueblos, neither of whom can be shown to have ever held a foot of the region in which these mounds are found, he began his investigation with the Indians who were in possession of the valley when it was first visited by the whites, and instituted a comparison for the purpose of determining how far, in their arts and industries, manners and customs, as revealed in their implements and ornaments, or described in the early records, they surpassed or fell short of what we have termed the mound-builder standard. It was a crucial test, and demonstrated beyond the possibility of a doubt that these two peoples, admitting that they belonged to different races, had attained to about the same stage of development. In fact, as has been said elsewhere, the two classes of remains agree in every essential particular, not a single specimen having been taken from the mounds which the Indian could not have made, or might not have bought from his neighbors in Mexico or on the Atlantic Coast, with both of whom he carried on more or less traffic. Important as this agreement is, as a link in the chain of evidence that points to the identity of the Indians with the mound builders, it is strengthened by the fact that the Indians are known to have built both mounds and earthworks; and when we add that they are the only people except the whites who, so far as we know, ever occupied the region in which these remains are found, it will be seen that there is ample ground for the conclusion that the mounds and enclosures of the Mississippi Valley, of every sort, size, and description, "were the work of these same Indians, or of their immediate ancestors." All other inferences are denied us until it can be shown that, at some time in the past, there lived in this valley a people, other than the Indian, who chipped flint, wove cloth, hammered metals, worked in stone, bone, and shell, manufactured pottery, built mounds and earthworks, and did all the other things that the mound-builder is known to have done.

FIELD EPIGRAPHY.

BOSTON, October 18, 1895.

THE world that sits in libraries knows little of practical epigraphy. Archæology, in these days, rests largely upon this science of the stones, and in every community of scholars the term epigraphy is partly apprehended, standing to men's minds for certain bulky volumes with thousands of entries, and an ever-increasing flow of pamphlets from the universities and academies of Europe. But before this literature can be issued, there is the work of the explorer in the field, the actual collector of the inscriptions. Of its details as well as of the fatigue and nervous waste of field-work in a semi civilized land; of the insolence and often treacherous character of the inhabitants (as Boeckh says, *Turcis instantibus et impedientibus*); of the thousand circumstances that make against the perfect calm of mind and body which the epigraphist should bring to the inscription, M. Salomon Reinach, in a little book addressed to intending archæologists ('Conseils aux Voyageurs Archéologues,' Paris, 1886), has made mention with French grace and sympathy. In Crete, for some months, I tried the trade. Epigraphy there is epigraphy at its worst—and at its best. The conditions are exacting, but the field has been little worked.

The huge tomes of the work known by scholars as C. I. G. (*Corpus Inscriptionum Græcarum*), begun half a century ago by the great Boeckh, the real founder of the science, and, in spite of perennial supplements and addenda, still far from completion, contain only a scanty sheaf of the stone records of Crete, derived from the most various sources—manuscript copies of medieval travellers in the days before epigraphy was a science, erroneous and untrustworthy; haphazard readings of local antiquaries, hardly more trustworthy; and, finally, the collections made, in passing, by the handful of modern explorers who have visited the island, often for other purposes. In later years much has been done for Cretan inscriptions, chiefly by the Italian scholar, Dr. Halbherr (whom I had the honor to assist), who has added to them by hundreds, and, to some extent, by a few scholars of Cretan birth.

Under the spade of the peasant, in building and in public works, the written records of the classical past are for ever coming to light. In Greece, Italy, and some parts of Turkey, the inscription surely finds its editor and its academic public, and goes on file into the vast repository of such documents, from which, some day, the archæologist is to build for the unborn the true story of antiquity. But in Crete, in a spot remote from university and printing-press, one cannot count upon these things. Again and again the ground must be covered, the peasant induced to yield his treasures, and the discoveries of each season made secure in the pages of a note-book until they can be studied and given to the world. Inscriptions, then, are gathered by trips through the country, far and wide. Arrived at a village, we ask the first person if there are γράμματα or "letters" to be found thereabouts. The chance is that he will lead us to the village church, and, after a careful survey,

we shall discover old friends from the pages of C. I. G. which have been copied and recopied a score of times. Do not despair. Ask for the priest or the leading man of the village. In fact, any one who can read will be serviceable, for the educated will love to assist you with the stone and interpret your rendering to the admiring bystanders. If your peasant-guide has relations by blood or guest-friendship in the village, all goes well. Introductions follow, much wine is drunk, and the epigraphist finds his own. It is not always so. The villagers may be rude and insolent, and pretend they do not understand. But it is never well to take a denial. A show of coin, treating the crowd at the local café, or, as a last resort, the display of a pasha's firman, in Greek and Turkish, may do the business. Once, however, we spent days in futile negotiations for a glimpse of a stone, and never knew whether it really existed, hidden away in a cottage, or was a mere myth of a churlish peasant's brain. In Turkish regions more difficulty is experienced, and, in particular, stones in or near a house can hardly be examined, for the reason that the women must be removed before one can enter. This entails more trouble than the average Turk will take. The only solution is to have the stone, if portable, brought out to the street, where you may inspect it at leisure. The Greeks are almost always accommodating. Several permitted us to knock down whole pieces of their walls, and would take no remuneration.

The stones are found in all possible and impossible places—wherever the peasant discoverer cared to employ them. Two situations—the church and the ἀλώνη, or winnowing-field, enclosed with a low, circular wall of upright slabs—yield the most to the epigraphist. Ignorant always of their meaning, the finder yet prefers those stones which bear letters, and, fortunately for science, usually sets them in his building face outward. And yet, riding past the rough stone hovels of a Cretan village, one never knows what treasures the silent walls might yield! One little church at the village of Kastelli was fairly built of Greek inscriptions, of many periods and the most various states of preservation. Marble wears the best, but the ancient Cretans more often used, to our loss, the material that came to hand, a soft, brown limestone, extremely perishable. The interior of the church contained a large and most crabbed Roman imperial decree in Latin, and the tables in the chancel were *stelai*, or gravestones, of the pagans turned to that strange use. As for the ἀλώνη, you are sure to find in the vicinity of any vanished city the gray, lettered marbles leaning among the grasses or half sunk into the ground.

Now for impossible places. At first one is surprised to find an inscription ten feet down a well, moss-grown, and just recognizable in the dark and damp, where the mere cleaning of the stone means the toil of hours; or blackened with soot, in a chimney; or built into the arch of a dirty cottage, usually near the clay floor and plastered thickly with many whitewashings; or, sometimes, even in the coping of the roof-tops. Far afield in some lonely vineyard or sheep-run the rider spies a stone on the brown soil. Often a détour adds a new item to his note-book. In one way and another the stones wander far from their first setting; but ten or twelve miles from an ancient site may be put as the limit at which inscriptions will be found.

The actual process of copying varies with the stone. The inscription is washed, the moss and discoloration removed carefully with a knife; the locality, dimensions, and nature of the stone, the height and character of the letters noted, and the name of the owner of the property. Curiously enough, the actual reading is more a matter of eyesight than of scholarship—dependent on the physical condition of the moment. The pupil's eye may be keener than the master's, and even the opinion of a peasant is not to be rejected. A difficult stone must be read gradually, "line on line," with the most painstaking comparison of recurring letters and spacing. M. Reinach notes the danger of knowing too much; of anticipating, so to speak, the story of the stone, and of reading into a doubtful line some ready-made formula. Formulæ, however, and stereotyped ones, continually occur in later records, and a discreet knowledge of them is indispensable. One day the inscription baffles the student; the next, it reads easily, so much is the matter one of nerves and health. Of those inscriptions which do not yield even to such patience, or which are especially notable from any cause, the epigraphist will bear away a photograph or a verbatim copy by impression or *estampage*, as the French call the process known to English-speaking scholars by the clumsy term of "squeeze"; that is, an impression taken on dampened paper prepared for that purpose. Read from the back or dusted with rouge so that the depressions and shadows are accentuated, in the leisure of the library the squeeze may frequently be far more trustworthy than the stone.

Crete, remaining one of the fair provinces of the ancients still in the clutch of the Turk, is to-day a land of the Middle Ages. At the seaports there is a thin veneer of civilization; inland the life and manners of the past abide. You travel in the old fashion by horse and donkey across rude trails in the country-side. The island is imperfectly mapped, new villages appearing, and old ones, marked by the geographer, having disappeared in later insurrections. That familiar and now vanishing figure of travel in the Levant, the *agoyátes*, or dragoman, is here a necessity. He is a peasant, half-servant, half-guide, and rides upon a pack-horse loaded with clothes, rugs, coffee, sugar, photographic apparatus, and the large tin cylinder, or *tináki*, which contains rolls of paper for impressions. Sitting sideways on the heavily burdened animal, the *agoyátes* makes slow progress. His speed is that of the party, and fifteen miles is the average distance traversed in a day.

At night, wearied by travel or the nervous strain of work, you are received into a peasant's house in a strange village. Then come the hardest hours of field life. The body needs good food, and there is the tough boiled fowl and rancid olive oil. The mind needs to be let alone, and there is the fire of persistent questions from the assembled magnates of the village. Clothes, manners, and appearance are audibly criticised; yet it is still necessary to be polite. At last one lies down on the clay floor or the wooden platform beside the host and his family, and sleeps as he never sleeps in a bed.

It is all horseback-riding, fatigue, dirt, change of scene, adventure, and strange encounters with peasants, soldiers, country priests—all manner of primitive men—this life of the epigraphist; in its details quaintly like that of the American cowboy. Great also are its compensations. The fine air of the hills, the constant exercise, the occasional sense of peril are stimulative, and the body responds with a thrill. Mere physical existence becomes a pleasure. One is glad to know on what simple basis life is endurable, and in the mortification of the flesh there is an ascetic glow.

Intellectually, the experience is exhilarating. In one of his archæological essays, somewhere, Sir Charles Newton expresses the satisfaction felt by the scholar, hitherto familiar only with the books, in handling inscriptions, real documents—the newspapers and posters of the past. This can hardly be exaggerated. I remember finding by a well-side a stone in memory of one Menander, dead at fifty years and buried at the civic expense. Great names fallen low and country echoes of an imperial reputation enlighten these labors, and any silent stone may awaken the fancy. The marbles, with their clear-cut letters, traces of red often lingering in the deep notches; the archaic or local alphabets, so individual, so different from the stereotyped character of the books; the errors, omissions, corrections of the forgotten lapidary that make the inscription read like an ill-writ letter—into how close a touch with the living ancients these bring one! One bears away, too, many memories: of the flash of costume, of old-world folk gossiping in dialects, of puffy Turkish governors and astute Greek officials, of shepherds sitting silent among the ruins of ancient cities or driving their flocks over wind-swept hills. Perhaps the most vivid is of that hour, at sundown, when the Cretan girls repair to the fountain outside the village, and glide back, unconsciously classical, with pitchers poised firmly on their heads.

JOHN ALDEN.

FRANÇOIS TRONCHIN AND VOLTAIRE.

PARIS, October 9, 1895.

SUCH is the power of attraction of a great name that the Genevan Tronchins are among the numerous satellites which have been revolving round the world-wide reputation of Voltaire, and have been dragged down with him to posterity. They belonged to a family which had its origin in Provence. M. Henry Tronchin, who has given us very recently an interesting volume on the Councillor François Tronchin, informs us that his ancestors had a good place in the nobility of Provence as far back as the fourteenth century. In the sixteenth century they were among the first who espoused the cause of the Reformation. They were obliged to leave France during the religious wars. One of them, a cavalry officer, saved by a priest during the massacre of St. Bartholomew, took refuge in Geneva, and entered into the service of the Republic, which was then at constant war with the Duke of Savoy. His son was the godchild of Théodore de Bèze, and became his disciple and his friend. Théodore de Bèze left to Théodore Tronchin his library, which was all his fortune. This same Théodore Tronchin entered into relations afterwards with the famous Duke de Rohan, the last great military leader of the Protestants of France. In the eighteenth century we find the Tronchins among the powerful families of Geneva, which had become a sort of oligarchy. The legislative power was in the hands of a Council of Two Hundred, and the members of the "Petit Conseil," which had the executive power, were recruited among the members of this Council of Two Hundred. Practically, all the power and the patronage was in the hands of a few families, whose children always intermarried, and who formed a kind of aristocracy in the democracy instituted by Calvin.

Four members of the Tronchin family were

conspicuous at the time when Voltaire came to live near Geneva. Most interesting to us is Dr. Théodore Tronchin. His father had been completely ruined by the failure of Law's bank, and it was probably for this reason that he became a doctor. He acquired a great reputation, and his name appears often in the memoirs of the eighteenth century. He was one of the first who practised vaccination in Europe and who adopted the ideas and methods of Jenner. The Duke d'Orléans, who was, as is well known, very progressive and what we now call advanced, sent for him at Villers-Cotterets, to have his children vaccinated, which appeared at the time a most daring and almost guilty experiment. Mme. d'Épinay was, after Voltaire, one of the most famous patients of Tronchin. People came to Geneva from all parts of Europe to consult him or be under his care. It is much to be hoped that M. Henry Tronchin will give us some day a volume on Dr. Tronchin as rich in original documents as the volume which he publishes now on the Councillor François Tronchin.

The Councillor was a man of modest fortune; he was for a short time a member of the "Petit Conseil," but he was a man of leisure, fond of the fine arts, of literature, an incessant correspondent. "His," says the editor, "was a physiognomy without much relief. He is less an original type than a somewhat casual example of a whole category of his contemporaries, men of the world with a smattering of philosophy, whose horizon was limited by the confines of the very polite and very artificial society in which they moved." After he had finished his studies, François Tronchin went to Paris, as was usual with young men of his condition among his contemporaries, and spent some time at the house of his brother Robert, who was a financier, and who had become a *fermier-général*. He tells us in an inedited manuscript that in 1722, when he was in the pit of the Comédie-Française, a very thin young man with a black coat and a long, natural head of hair passed near him. "I was sitting next to a man unknown to me, who asked him how he was getting on. 'Always on the go, always suffering,' was the sole answer, and I recalled it as I learned a moment afterwards that it was Voltaire who had just passed us. He never ceased 'going and suffering' in the fifty-six years before his death. I always knew this to be the case with him." Tronchin had a decided taste for the theatre, and he composed a tragedy, "Marie Stuart" (I wonder how many "Mary Stuarts" have been written), which was represented in 1734 first at the French Theatre and afterwards before the Court at Fontainebleau. In 1736 he married a young lady of Saint-Quentin, and established himself at Geneva in a little country-house where the Rhone leaves the city. He entered the Council of the Two Hundred, and was ever afterwards called Councillor.

Voltaire, finding himself banished from Berlin and virtually exiled from France, tired of his wanderings in Mannheim, Mayence, Strasbourg, Colmar, made the acquaintance of Robert Tronchin, the financier, at Lyons. To him he confided the greater part of his fortune, and started for Geneva with a letter to François Tronchin. He arrived there with his niece, Mme. Denis, on the 12th of December, 1754. The laws of Geneva did not allow any person professing the Catholic religion to own land in its territory, and it allowed foreigners to reside there only precariously, on a *permis de séjour*. François Tronchin obtained this permit for Voltaire, most of the Genevan magistrates being his friends or relations; but Voltaire, poor Catholic though he was, could not buy a house, and Robert Tronchin, the financier, became his intermediary for the acquisition of a country-house belonging to M. Mallet. The house was bought in Tronchin's name. "You know," wrote Voltaire to him, "how difficult it is for a stranger and good Catholic like me to make a bargain with the people of God." He offered to be his "concierge" as long as he lived. This negotiation was the cause of a long correspondence, which will be found at length in the volume now published, and in which Voltaire shows, with his usual inexhaustible wit, a contentious disposition which must have sometimes tried those who had no other wish but to oblige him.

As soon as he was in the "Délices" (such was the name of his house), he applied his activity to arranging and changing everything. He received a visit from Lekain, the famous actor, and equipped a small theatre. The consistory of Geneva now became uneasy. Calvin held the same ideas as Bossuet on the immorality of the stage, and his tradition was still respected. "All your respectable family," writes Voltaire to Robert Tronchin, "whom I love tenderly, have just left me . . . We played 'Zaïre' before the Tronchins and the Syndics. Calvin did not suspect that Catholics would one day draw tears from the eyes of Huguenots on the soil of Geneva. Lekain helped us well, Madame Denis marvellously performed *Zaïre*, and I represented the bonhomme *Lusignan*." Voltaire was working at the "Orphan of China," and wanted to try it on his little stage, when he heard that the ministers of Geneva had prohibited theatricals at the Délices, and he received an order to close his theatre.

Soon afterwards, his quietude was troubled by rumors—"ridiculous rumors," as he calls them—which were spread all over Europe. Copies of the "Pucelle" had been read in Paris, and Voltaire was accused of being the author of this too famous poem. Copies had been sent to Geneva, and a publisher at Lausanne was on the point of bringing out the poem. Voltaire took the simple means of denying that he was its author; he was even bold enough to begin a law-suit against an agent of the bookseller at Lausanne. After a while, Voltaire found the Délices too small, and bought Ferney, outside of the territory of the Republic of Geneva. He found the ground of Geneva not solid enough for his feet, amid the alarm caused by an article in the 'Encyclopædia,' said to have been inspired by him. Ferney was under the authority of Gex, and Voltaire became the *Seigneur* of Ferney, with all the privileges attached to the title. He had vassals, tithes to collect, law-suits to continue, which gave him an agreeable occupation. He could, however, act only for his niece, Madame Denis, for the estate had been bought in her name.

The two Tronchins, the Councillor and the financier, were his constant advisers and correspondents on an infinity of subjects. The editor has given us even the shortest notes written to them by Voltaire; we can but approve of this, for Voltaire shed his *esprit* at all times on all subjects. He was permanently in trouble; he jumped from Scylla to Charybdis. At Ferney, he wished to have the cross of the old cemetery removed from his sight. He was accused of having used very abusive language during the removal. The secular and ecclesiastical judges came to Ferney, made an inquest, and criminal proceedings were instituted against Voltaire. He placed himself under the protection of the parlement of Dijon. François Tronchin had to go to Dijon, and succeeded in getting the author of "Zaïre" out of difficulty once more. The publication of 'Candide,' which was written at Ferney, added new fuel to the fire. So did a number of anonymous pamphlets which bore the mark of this prolific writer. I have collected the first editions of 'Candide,' the masterpiece of Voltaire's novels, and have found as many as four, published under the name of Prof. Ralph in different countries. 'Candide' was burnt on the 2d of March, 1760, at Geneva, by the hand of the executioner. The 'Dialogues Chrétiens par M. V., . . . imprimés à Genève, 1860,' contained bitter attacks on the Genevan clergy. In a letter to Théodore Tronchin, Voltaire boldly denied their paternity. The pamphlet was burned by order of the Council. Voltaire became more and more angry with Geneva, "cette ville hargneuse," and with these "prêtres pédants" who did not allow their flock to take part in the comedies played at Ferney. Voltaire became by degrees an object of aversion to the Genevan patriciate. The only friend he kept was François Tronchin. He gave up the Délices in 1765. He was made very angry by the favor some of the Genevans showed to J. J. Rousseau, and writes to his friend (January 22, 1765): "You seem astonished that Rousseau should be a dishonest man. Have you not read the memoirs which I have read? You would have seen that he is neither good nor a philosopher; he is gloomy, ungrateful, false in his ideas, in his feelings, in his actions; in short, he conceals the soul of a criminal under the mantle of Diogenes."

Few of the readers of M. Henry Tronchin's book will take any interest in his ancestor's tragedies and his vain attempts to become a writer. As a picture-collector he was more fortunate; he formed successively two good collections, the first of which was bought by the great Catherine. He was in relations with the picture dealers of Paris, and followed all the great sales of the times; his brother, the financier, had introduced him to most of the French artists, to Carl Vernet, to Soufflot the architect, to Pigalle the sculptor, to Falconet. He remained to the end the friend and correspondent of Voltaire, though his friendship grew somewhat cooler by degrees. François Tronchin lived long enough to see the total disruption of the frivolous and elegant society in which he had made so many friends. He celebrated his golden wedding on the 6th of April, 1786, and died after the terrible years of the Revolution and of the Terror, on the 7th of February, 1798.

Correspondence.

SCHOOL ENGLISH.

To the Editor of The Nation:

Sir: While I generally concur in the conclusions set forth in Prof. Goodwin's extremely valuable, as well as interesting, letter on "School English" in the last issue of the *Nation*, there is one point in it to which I take some exception, and to which I want to call attention.

I refer to that paragraph in which Prof. Goodwin says that "it is not the fault of the teachers who send students to our colleges" that the present state of affairs as respects written English continues; and, further, that it is impossible to take boys of from fourteen to sixteen "who have learned no systematic habits of study, and make scholars of them before they are eighteen or nineteen."

While this is generally true, yet I cannot but think far more could be done in this direction, under other methods, than is now accomplished. The trouble with the existing system as revealed by the examination papers which come under the eyes of the visiting committee on English is, that in the preparatory schools a system of almost exclusively *oral* teaching is pursued to prepare boys for *written* tests. From the day the scholar leaves the preparatory school and presents himself for examination at Harvard, up to the day when he receives his baccalaureate degree—if he ever does receive it—the whole system now rests upon written examinations. The translations from Latin and Greek into English which have been submitted in the reports of the committee bring out, more clearly perhaps than could be brought out in any other way, the failure of those orally instructed when subjected to the test of written result. It is the old familiar lesson of the "spelling bee." When, formerly, the scholars in our grammar schools were stood up in rows and given words to spell, though they might spell them accurately in the class, it was found that, when called upon to write the same words down, the oral instruction had no practical connection with the written result. The wildest work was made by the best spellers with even the most familiar words.

It is precisely the same with the translation of the classics. Any visitor who has ever sat through a recitation in a preparatory school, and heard scholars stammer and bungle out an English rendering of Greek or Latin authors, knows what a piece of work they make of it. The translation is in no respect English. When, after recitations of this sort, these same scholars are from time to time told to sit down and make written translations, they are in much the same plight as the unfortunate children who, having been taught to spell orally, had a pencil put in their hands and were told to write out the same words. The last state was infinitely worse than their first—though that at the time seemed bad enough!

The defect in the system now in use in the preparatory schools, as revealed in the papers, is, therefore, that when, at the age of twelve, boys first go to those schools, they are not subjected to severe and constant training so far as written English is concerned. It is unnecessary and, indeed, inadvisable to give this training in the form of themes or stated written compositions. It should constitute a part, and a large part, of the regular daily routine work at the desk. English should thus be taught as an incident, and not as an end. When the committee on English at Harvard made its report of three years ago, they found among all the preparatory academies one school, and one school only, where "the preparation of English was carried on in every other subject. The translations from other languages were carefully criticised for their English, and the geometrical propositions were often rewritten many times on account of poor English." It is impossible to believe that, in a school where the rule was that a certain portion of the translations to be made from Greek and Latin every day should be written out, a scholar could stand up before the class and read aloud from his paper such singular performances as those printed by the committee. Such grossly defective results would at once become apparent, and the necessary remedy would have to be applied.

When a scholar presents himself for admission to Harvard, the advantage he has, if he feels at home and thoroughly self-confident with a pen or pencil in his hand, is enormous. On the other hand, the position of the unfortunate youth who sits down for the great test without that necessary training and practice which enables him to express his ideas easily in his native tongue, is something to be imagined. There is a feeling of forlorn helplessness in the situation which has in it a decided element of pathos. For this his preparatory school is responsible. He is in a strange position; and the position need not be strange.

So far as rudimentary English at Harvard is concerned, the existing condition of things has now been set forth by the visiting committee of the Overseers in two reports—the elaborate report of three years ago, accompanied with lithographic facsimiles, numbered 28 in the series; and the more recent report, numbered 49. The mere printed reproduction of the students' papers in the latter report gives a very inadequate idea of the real facts. But the facts call loudly for reform; and the reform to be effective must reach down into the primary schools. That which should have been done six years before admission to Harvard is now attempted in the freshman year.

The visiting committee of the English department is at present considering what step next to take. As I have said, the mere printing of the students' papers does not suffice. The only way to furnish a clear and unanswerable object-lesson is that adopted by the committee in their report of 1892—the production of a body of facsimiles. The trouble is that so doing is cumbersome and expensive. Nevertheless, it—and it only—does set forth the cold facts in a way which admits of neither denial nor extenuation.

It is not improbable, therefore, that, in their next report, the committee will, as in the report just presented they intimate they may do, take the papers of all the scholars who present themselves from two, if not four, of the leading and best considered academies which prepare boys for Harvard, and submit those papers in facsimile and in full. Not impossibly, schools and academies will be taken whose scholars exhibit the best and the worst results, and so put them in contrast. However expensive and cumbersome such a publication might be, it would, in the judgment of the committee, amply repay as an object-lesson both the money and trouble it involved.

With such a possible test in view, it might be worth while for teachers having the English department in the preparatory schools in charge to give more than a cursory examination to the reports I have referred to as already made. I can supply them, and would be glad to do so; or both reports can be obtained from J. Bertram Williams, the College Publication Agent, at No. 2 University Hall, Cambridge.

I am, etc., CHARLES FRANCIS ADAMS.

23 COURT STREET, BOSTON, October 28, 1895.

COLLEGE ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: The Report of the Committee on Composition and Rhetoric to the Board of Overseers of Harvard College, noticed in a recent issue of the *Nation*, does not locate the blame for "the lamentably low average of the English exercises" and of "the examination-books in which Greek and Latin were rendered into the native speech." It leaves the college, the schools, and the "system" to divide the responsibility as best they may. It seems to me that the committee fails to discover the quarter in which the chief, if not the sole, accountability should be fixed; and I am happy to quote in support of my opinion the always interesting and influential judgment of President Eliot. He has already publicly expressed this view; but, so far as I have noted, the significance of it has not been fully emphasized. In a letter to me, written nearly a year ago, he says (the italics are mine):

"I hope you do not suppose that I had any disposition to complain of or to criticise American schools because American boys advance more slowly than European boys. *It may be partly the fault of the schools; it certainly is partly the fault of the colleges; but I believe it is chiefly the fault of parents and of unfavorable conditions of American society.*"

Whatever applies to the general work of schools applies *a fortiori* to work in English: the latter will never be profitably done without an endeavoring interest that the pupil assumes his right to excuse himself from; beyond that, no "system" has any extenuation to offer.

I fancy few schools now claim that their pupils do or can attain "a terse elegance of English expression by translating orally Greek and Latin." Those that do are certain to stultify themselves, and gratuitously at that. Whether they do one or both, neither consideration has any bearing on the literal, word-for-word and order-for-order method of rendering. For purposes of accuracy, in an age when the varying and diffusive devices for procuring interest dissipate accuracy, it is almost the last recourse; for impressing the Latin movement that is to make Latin prose-writing a possible realization, it is indispensable; it is not intended or expected to teach English, which is, after all, not learnt, but at best merely practised, in schools; only this method must be treated as a means, not as an end, for those who get far enough to see the end. It is better to be accurate, if awkward, as far as you go than to be elegant and untrue; and "free, original, and idiomatic renderings" of schoolboys are sure to be too untrue even for the present modest demands in grammar.—Very truly yours,

CASKIE HARRISON.

THE LATIN SCHOOL, 145 MONTAGUE ST., BROOKLYN, N. Y., October 14, 1895.

LECTURERS AND COLLEGES.

TO THE EDITOR OF THE NATION:

SIR: The question discussed in your editorial on Lectures before Colleges is one that has frequently been considered in college associations. The parties that engage in the controversy are, broadly speaking, the denominational and the undenominational institutions. The former contend that one of the important functions of their faculties is to exercise an oversight over the morals of those who come to them for instruction; the latter, that an educational institution of high grade is neither a reformatory nor the custodian of the character of its students. We are told, moreover, that a student is generally a person of mature age; that he stands in the same relation to the laws of the commonwealth with every other citizen, and if he transgresses them he is to be treated just like any other criminal. Everybody knows that this is the status of the German student at the present time, and there is reason to believe that his morals are on the whole better than they were when he was subject to the police power of the university authorities. There are, of course, in all American universities teachers like Prof. Ziegler of Strasbourg who take a deep personal interest in the moral welfare of the students, but there are also many who do not. The assumption is, that the

young man who has not learned to obey the moral law by the time he is old enough to enter a university will never learn it, and the quicker he goes to the dogs, the better for the community at large. This is a practical application of the law of the survival of the fittest in the domain of ethics.

Students, especially those liberally supplied with money, are proverbially reckless. With their time largely at their own disposal, and without the restraints of the home or of some compulsory regular employment, they are prone to walk in forbidden paths. Those persons who make it a business to board and lodge students do so for the pecuniary considerations involved; and however much they may be incommoded by the bad behavior of their tenants, they feel that they cannot afford to offend them seriously and thus lose their patronage. There are doubtless cases, too, where patronage is quite as important to a college as it is to the keeper of a lodging-house, though there is reason to believe that at present very few of the former would hesitate to dismiss a disorderly student after the second serious offence.

Then, too, State universities are particularly liable to attacks for anything that may be construed into an infringement of the liberty of speech. If their students invite a dissolute or otherwise disreputable politician to lecture before them, and the faculty interferes, the outcry will at once be raised that this interference was prompted by political and not by ethical considerations. Questions of propriety and expediency, but especially of personal liberty, are so inextricably intermingled in cases of this sort that college authorities are usually content to let matters take their course as the easiest way to keep out of disagreeable notoriety. In our time, when the academic air is full of *Lernfreiheit* and *Lehrfreiheit*, when the students in a number of universities and colleges are not only allowed to study what they please, but even to elect whether they will study at all, it is hardly to be expected that the teaching corps of those institutions which seek the patronage of the larger public will be selected with much reference to the interest its members are likely to take in the moral welfare of those who come to them for instruction. We may soon witness the general adoption of a governmental code as laconic and simple as that which is said to be in force in a certain well-known American university: Students are prohibited from setting any of the buildings on fire and from killing any member of the faculty. CHAS. W. SUPER.

ATHENS, O., October 23, 1895.

FICTION IN THE BROOKLINE LIBRARY.

TO THE EDITOR OF THE NATION:

SIR: The note in your issue for August 22 (p. 134), beginning, "The head of the Public Library at Brookline, Mass.," was published while that officer was in Europe, and I have supposed this was the explanation of the fact (if it be so) that you have not been asked to retract the statement with which the note ends: "This library keeps in circulation a full line of the trashiest novels in existence."

I regret that no one authorized to speak for that library has protested against this extreme overstatement, but would like, at this late date, to ask you to do better justice to one of our most representative smaller public libraries, and so to the general practice of our libraries in the matter of fiction. It is simply untrue that the library (as represented in its catalogue of fiction under review in your note) keeps either "the trashiest novels in existence" or a "full line" of that moderately trashy fiction of which it has some representatives. The authors whose names, appearing in this catalogue, caught your eye and led to this sweeping accusation, are about four, viz., Mrs. Southworth, Mrs. Stephens, Mrs. Holmes, and "The Duchess." (If there are others whose names you think would better not appear in such a list, you would confer a real benefit upon our library fraternity if you would name them, and so help us in our efforts to get a consensus of the best opinion as to where we are to draw the line.) Now this quartet of women writers do confessedly write trash, but I submit that it is far from being the "trashiest kind in existence." And to call the seventy-four titles given under these names collectively (very much less than all their works) a "full line of the trashiest kind," approaches hyperbole of a dangerous sort. It may or may not be best for the public libraries to circulate any trash - on that point there are differing opinions among equally competent and well-meaning librarians and library directors. But that a catalogue which presents almost an honor-roll of writers of sound and wholesome fiction should, by its inclusion of so small a modicum of (I repeat, *not* "the trashiest") trash, bring such a library as that at Brookline under so severe a reproach as you have visited upon it, is, to use moderate terms, at least regrettable. W. I. FLETCHER.

AMHERST COLLEGE LIBRARY, October 21, 1895.

[It seems to be merely a difference of opinion between us and Mr. Fletcher as to what constitutes "trash." We did not say that the Brookline Library contained a majority of trashy novels, or that the greater part of its fiction was trash, but we maintain that it has the most trashy: we have always heard the works of Mrs. Southworth cited as the type, the extreme form, of trashiness. We noticed the presence of these books in the Brookline Library with surprise, because that town is much above the average in cultivation, having no very poor or factory population. The constituency of the Salem Library is, we believe, below that of Brookline in this respect, yet none of the authors referred to are represented in its catalogue (August, 1895), nor in that of Peoria, Ill. (1894), with a population nearly four times as great. We may add that we expressed no opinion as to whether "it may or may not be best for the public libraries to circulate trash."—ED. NATION.]

"DISCORDANT CHURCH UNITY."

TO THE EDITOR OF THE NATION:

SIR: Will you permit a few remarks upon your editorial in No. 1582 (Oct. 24) with the above title? I would state in passing that the convention met in Minneapolis, not in Milwaukee, and that "the great debate," as it has been called, took place on a report from the standing committee on amendments to the constitution. Thus it was a radical change in the constitution of the church, and not merely the report of a special committee, that was rejected. It is not objection to the Prayer-Book that keeps members of other denominations out of the Protestant Episcopal Church. On the contrary, the use of the Prayer-Book constitutes the chief attraction for very many, as the increasing use of liturgical forms by other Christian bodies well shows. If church unity ever comes, it will come on the basis of liturgical worship.

You are, however, very right in saying that there is no great demand for such unity, and certainly, until the desire is aroused, the object cannot be attained. The discussion, able as it was, appeared to the undersigned purely academic and unpractical. As was well said by Mr. Biddle of Philadelphia, in his witty speech in opposition to the amendment, "it was a dream without its iridescence." Perhaps in the course of time it may become more than a dream. In the words of the sanguine author of the amendment, the distinguished rector of Grace Church, New York: "It might take twenty-five years, but it would come." For such a glorious result all Christian people will pray, and will be well satisfied if it comes in twenty-five years. JAMES M. GARNETT.

CHARLOTTESVILLE, VA., October 25, 1895.

THE DECORATION OF PUBLIC LIBRARIES.

TO THE EDITOR OF THE NATION:

SIR: A recent complaint of disturbance to readers by sight-seers in the Boston Public Library is doubtless well taken from the student's point of view. But the mural decorations of this splendid building have, it appears to me, as well as the books, an educational mission. The pictures thrust and repeat the thrust of an unavoidable impression upon that large class who need, more than aught beside, to have their imagination stimulated or their complacent bourgeois conception of beauty and reality intimidated. No art museum accomplishes just this, because it reaches only those who intentionally seek its teachings. F. E. P.

PROVIDENCE, R. I., October 28.

Notes.

FURTHER announcements by G. P. Putnam's Sons are: 'The Gold Diggings of Cape Horn: A Study of Life in Tierra del Fuego and Patagonia,' by John R. Spears of the N. Y. *Sun*; 'Sketches from Concord and Appledore,' by Frank P. Stearns; 'The Evolution of Horticulture in New England,' by Daniel D. Slade, M.D.; 'The History of the Foreign Policy of Great Britain,' by Prof. Montague Burrows; and 'Cretan Pictographs and Præ Phœnician Script,' by Arthur J. Evans, keeper of the Ashmolean Museum at Oxford.

George H. Richmond & Co., 12 East Fifteenth Street, have in press for immediate publication a sumptuous edition of Henri Beyle's romance, 'La Chartreuse de Parme,' for the first time rendered into English. It will be in three volumes, with thirty-two etchings by G. Mercier, from designs by V. Foulquier, and an etched portrait of the author. The edition is limited, as is that of a 'Letter from Capt. Cuellar to His Majesty Philip II., dated October 4, 1589,' now first translated into English by Henry D. Sedgwick, Jr. Froude makes constant reference to this letter in his 'Spanish Armada,' and it is designed to be the first of a series of historical tracts relating to the Spanish Armada.

'The Universities of Europe in the Middle Ages,' an important work by Hastings Rash-

dall, M.A., and 'Electric Wiring,' by Russell Robb, are in the press of Macmillan & Co.

Edward Arnold has nearly ready 'Studies in Early Victorian Literature,' by Frederic Harrison, and the first of a Pioneer Series of novels, 'The Demagogue and Lady Phayre,' by William J. Locke.

D. Appleton & Co.'s second list of autumn announcements includes 'Greenland Icefields,' by Prof. G. Frederick Wright; 'Movement,' by E. J. Marey; 'Pioneers of Science in America,' edited by Dr. W. J. Youmans; and 'Old Faiths and New Facts,' by W. W. Kinsley.

D. O. Haynes & Co., New York, have undertaken an imperial octavo, 'One Hundred Years of American Commerce,' under the editorship (or should we say the "protection"?) of Chauncey M. Depew. One hundred Americans will tell the patriotic story.

Thomas Whitaker will place on the American market a limited number of copies of a profusely illustrated work on the 'Episcopal Palaces of England.' The drawings are by Alexander Ansted.

E. P. Dutton & Co. will publish 'The Witness of Denial,' by Vida Scudder, and a new edition of George Eliot's novels in twenty-one volumes, 16mo, illustrated by photogravure.

D. C. Heath & Co., Boston, will bring out directly 'Principles of International Law,' by Prof. Thomas J. Lawrence, lately of the University of Chicago.

William Doxey, San Francisco, announces "The California Authors Series," beginning with 'In the Sanctuary,' by A. Van der Naillen.

The London Bibliographical Society's forthcoming issues for the current year are five in number, namely, part ii. (and last) of vol. ii. of the Transactions, and part i. of vol. iii.; Mr. Ashbee's Iconography of Don Quixote; Mr. Duff's Hand-lists of books printed by Wynkin de Worde, Notary, R. & W. Faques, and J. Skot; and a facsimile of Ratdolt's Tradelist, by way of supplement to Mr. Redgrave's Ratdolt.

No more cheerful and solidly elegant volumes are within sight than the third and fourth of North's Plutarch's Lives (ninth and tenth of the "Tudor Translations" of David Nutt, London). We have already paid tribute to this admirable enterprise. We must report progress also in the case of two other beautiful series, the Dent-Macmillan Defoe, which makes two volumes of the Life of Colonel Jacque; and the Temple Shakspere, which now adds "Hamlet" and "King Henry VIII." Mr. Aitken summarizes the story of Colonel Jacque, which has to do with Virginia and negro slavery among other things, and appends two social pamphlets by Defoe which are a good deal more than padding, though they eke out the second volume. Take this passage from "Everybody's Business is Nobody's Business," which has been already appropriated for Dr. Murray's Dictionary, and will be quoted again there: "The next great abuse among us is, that, under the notion of cleaning our shoes, above ten thousand wicked, idle, pilfering vagrants are permitted to patrol about our city and suburbs. These are called the black-guard, who black your honour's shoes, and incorporate themselves under the title of the Worshipful Company of Japanners." Finally, we note the appearance of two more volumes in Mrs. Garnett's translation of Turgeneff's novels, namely, 'A Sportsman's Sketches,' or 'Annals of a Sportsman,' as an American edition has accustomed us to designate these short tales, full of the feeling of the open air, and charged with pictorial criticism of Russian institutions.

The Messrs. Putnam have surpassed themselves in their "Malta Edition" of Marryat's 'Midshipman Easy,' which is generously printed and very tastefully bound. Mr. Zogbaum's pen-and-ink vignettes are truly decorative; more so, to our thinking, than his full-page wash drawings. We get rather show than substance in the two volumes of Miss Porter's 'The Scottish Chiefs,' on which T. Y. Crowell & Co. have lavished a gaudy covering, with small regard to typographical comeliness.

Two miniature editions come to us from Oxford, on the famous thin paper of the University Press (New York: Macmillan). One is a six-volume set of Scott's Poetical Works in a neat box with its table of contents upon the lid. The type is by no means trying, even in the notes, and the manufacture throughout is eminently pleasing. The other is the *tour de force* of 'The Imitation of Christ' for the vest-pocket; a tiny volume, little more than an inch square, yet containing 576 pages.

In line with the Erasmus revival participated in by Mr. Froude among other scholars, is a reprint of Mrs. Anne Manning Rathbone's 'Household of Sir Thomas More,' which dates back to the beginning of the present half century. The American publishers of this pretty volume, open-lettered and illustrated with slight pen sketches and Holbein's drawing of the head of More, are Charles Scribner's Sons. The Rev. W. H. Hutton furnishes an introductory abstract of More's career, his religious affiliations and companionship, and does well to quote some apt and still timely remarks of his on the education of women: "It mattereth not in harvest time whether the corn were sown by a man or a woman; and I see not why learning in like manner may not equally agree with both sexes."

The same firm remind the public of the existence of Mr. Clarence Cook's 'The House Beautiful: Essays on Beds and Tables, Stools and Candlesticks'—articles to which the æsthetically minded still need, as eighteen years ago, to devote their attention; but the scope of this helpful work is much broader than is indicated by the sub-title. Mr. Cook's practical advice, assisted by numerous cuts, is conveyed in a literary style too rare in such a connection, and his book remains the tasteful product of the printer's art that it was originally.

G. P. Putnam's Sons have rolled into one illustrated volume Mr. George Cary Eggleston's 'American War Ballads and Lyrics,' which it is only necessary to remark go back to the colonial wars. The get-up is very pleasing.

To their enviable "Cambridge Edition" of the complete Poetical Works of Longfellow and Whittier, has just been added by Houghton, Mifflin & Co. the 'Poetic and Dramatic Works of Robert Browning,' brought within the compass of 1,000 pages, save for the poet's essay on Shelley printed as an appendix, the notes and illustrations. The type is necessarily small, but the press-work is excellently clear, and the convenience of this collection between two covers speaks for itself.

Mr. Noah Brooks has brought together in book form the entertaining articles on 'Washington in Lincoln's Time' which originally appeared in the *Century* (The Century Co.). Like all the work from the DeVinne Press, this attractive little volume is easy to read, with its large, clear type, good paper and press-work. The matter of the book is well worth its permanent form, for it is a vivid and faithful picture of the capital in war-time, as seen by a newspaper correspondent who had more than common facilities for seeing and hearing all that was made public, with occasional peeps behind the scenes. It is, besides, very well and clearly written, in English often terse and vigorous, and has a good many descriptions of persons and things that are worthy of a permanent place in the public gallery of portraits and historical scenes.

A small but comprehensive manual is Mr. Charles Collins's 'Greenhouse and Window Plants: A Primer for Amateurs' (Macmillan). In it may be found lists of plants suitable for various conditions indoors, and all the information that would be needed by an amateur in the cultivation of ordinary plants at home. In following directions here given, some allowance must be made by Americans for the difference between our climate and that of England. It is sincerely to be regretted that the author of so useful a little book died untimely before its publication—a fact mentioned in the preface.

The October number of the Norwich (Conn.) Library Bulletin includes in a list of American historical novels 'Personal Recollections of the American Revolution,' by Lydia M. Post, adding that Winsor mentioned the book as being what it purported to be, but that contemporary critics spoke of it as a fiction. On referring to the book, it seems that it was published in New York in 1859, and was "edited" by one Sidney Barclay, under whose name, with no suggestion that it is a pseudonym, Kirk chronicles the 'Recollections.' Neither he nor Allibone mentions Post, although Sabin in his 1868 volume gives Barclay as a pseudonym, with cross-reference to real name. Mr. W. M. Griswold makes the same omission in his 'List of Historical Novels' (1895). He quotes, however, a contemporary criticism which asserts that the book, though a good imitation of the style of the period described, was a fiction. The 'Narrative and Critical History of America' cites it twice, once as written by Barclay, once by Post. As the author's middle name was Minturn, it is probable that she was a daughter of Dr. Minturn Post, whose works Allibone mentions. The introduction of an editor (in this case "Barclay") was a common device to give *vraisemblance* to a work purporting to be a genuine record.

Dr. Schweinfurth has recently written to the *Zeitschrift für Aegyptische Sprache* to complain of the wanton and ruthless destruction of monuments and remains which is now going on in Egypt. His letter discloses a most painful state of things. Not much will be left, he says, after a few years of such ransacking as is now going on. Ignorant and careless explorers are pillaging whole cemeteries, digging up and throwing away many things which are really of great value, merely because they are not objects which would especially strike the eye of the visitor at the Gizeh Museum, or bring in much money to the dealer in antiquities if offered for sale to foreigners. No records of the discoveries are kept, not even such important ones as those which designate what objects were found together. Dr. Schweinfurth lays the blame for this vandalism not only upon the curiosity-dealers, but also, and heavily, upon the authorities of the Gizeh Museum. Ignorant natives are sent out to make excavations without any proper supervision; and, even in cases where trained Europeans are present, the work is often carelessly done. He urges that the Museum should give over further digging, at least for a time, and devote itself to the cataloguing and arrangement of its already vast collections, and to the preservation of such monuments as still remain intact.

We call the attention of students of the classics to an article of over fifty pages on 'Le

Navire *Argo* et la Science Nautique d'Apollonios de Rhodes,' which M. H. de la Ville de Mirmont, the French translator of the 'Argonautics' of Apollonius, contributes to the September number of the *Revue Internationale de l'Enseignement*. The author treats, with great fulness, of nautical matters so far as reference is made to them both in the work of the Alexandrian poet and in the Homeric poems as well. From the abundance of his erudition he sometimes throws new light upon disputed points, sometimes furnishes additional proof as to problems solved—as in the case of the Homeric πρότονοι, the forestays of the mast. Apollonius did not write for the public but for an élite of scholars; no such anachronisms as the Greek tragedians made use of to adapt themselves to an audience of contemporaries are found in his poem. He restores in its primitive form the ship of the 'Odyssey' and the 'Iliad.' Students of Homer can therefore not fail to be interested in M. de Mirmont's treatise.

Ever since the lamented death of Pasteur a very lively interest has been manifest in Paris as to who will be chosen to succeed the great savant as director of the Institute in the Rue Dutot. This is a question which can be decided only by the Board of Directors of the Pasteur Institute, a body made up in about equal numbers of men of science, like MM. Duclaux, Roux, and Brouardel, and laymen like M. Jules Simon and Baron James de Rothschild. It is not likely that there will be a meeting of this board before the close of the festivities of the centenary of the Institute of France. The general opinion seems to be that M. Duclaux will be chosen as director in the place of Pasteur, and that M. Roux will take his place as sub-director. M. Duclaux is the oldest sub-director of the Pasteur Institute, and has already on various occasions acted as director *ad interim*. He is a great savant, of extreme modesty, and well known to the scientific public by his works and discoveries, some of which were made in fields where Pasteur himself had won laurels. The names of MM. Bertrand and De Lapparent, mining engineers, and of M. Dufet, professor at the École Normale, are mentioned in connection with the succession of Pasteur as member of the Académie des Sciences. All three are authors of important works in mineralogy or physics.

Our note on p. 275, referring to Hodgkin's 'Italy and Her Invaders,' was not, as a correspondent reminds us, sufficiently explicit. Volumes v. and vi. of that work, recently issued, are not, as we seemed to imply, an amplification of an earlier edition.

In our review, last week, of "Recent Poetry," we inadvertently misprinted, on page 297, the name of the author of 'First Poems and Fragments.' It should have read *Philip* Henry Savage. We also neglected to credit Mr. Wharton's 'Sappho' to the Chicago publishers, A. C. McClurg & Co.

—A couple of years ago we noticed with some misgivings and many caveats a book published in London by a certain Dr. William Wright, 'The Brontës in Ireland; or, Facts Stranger Than Fiction,' in which the author not only professed to trace the history of four generations of Irish Brontës, but undertook to prove that the plot of 'Wuthering Heights' was founded on family history, and that the other Brontë novels had likewise an Irish origin. In the *Westminster Review* for October, the Rev. Angus Mackay finds it an easy task to show that this book is one of the most charming tissues of absurdities that have yet seen the light. One of the myths of Dr. Wright is his story of how Hugh Brontë, one of the brothers, set out, shillelagh in hand, to find and to chastise the *Quarterly* Reviewer who had traduced his niece. This interesting story naturally found its way into almost every newspaper in Great Britain, and it will probably continue to be told as fact for many a long year to come; in America, a variant upon it has been produced in which the hero of the tale is Charlotte's brother, Branwell, although this poor fellow was dead and buried before ever the *Review* article was written. Mr. Mackay has been able to show with perfect conclusiveness that this tale, in spite of its taking quality, is absolutely apocryphal. As to the main theory, there is nothing of it left, and the wonderful genius of Charlotte and Emily Brontë remains as inscrutable as ever.

—The Report of the Principal Librarian of the British Museum (London: Eyre & Spottiswoode) upon the progress of that institution during the year 1894 shows that many valuable additions have been made to the collections of printed books, manuscripts, prints and drawings, Egyptian and Assyrian antiquities, Greek and Roman antiquities, British and medieval antiquities, coins and medals, as well as to the natural-history collections. Of items that might be classed under the heading Americana the following were among the year's acquisitions: A "Manumission to a Manuduction," Leyden, 1615, by John Robinson, the chief promoter of the colonization of Massachusetts by the Pilgrim Fathers. Mr. Richard Garnett, the keeper of printed books in the Museum, describes this acquisition as being "absolutely unique." He further observes that "this tract has not hitherto been included in Robinson's collected works, as no copy could be met with." Among books enriched with manuscript notes, Mr. Garnett mentions a copy of Southey's 'History of Brazil,' given by the author to Coleridge, with the autographs of both, and marginal notes by Coleridge in the first volume. Another book so enriched is the American edition of Tennyson's 'Maud,' 1855, with the last stanza of the poem as now printed, which did not exist in the earlier editions, in the poet's handwriting, and preceded by the commencement of two cancelled versions; "proving," Mr. Garnett observes, "that it was there written down for the first time." Acknowledgment is made in the report of a presentation by Col. H. S. Olcott of Secretary Stanton's proclamation offering $100,000 reward for the apprehension of the assassin of President Lincoln. The Department of Coins and Medals acquired a rare brass medal of Admiral Vernon, 1739, with the inscription, "In Portobello there's not his fellow." It will be remembered that Lawrence Washington served under Admiral Vernon at Portobello, and that it was in admiration of his old chief that the young Virginian called his place Mount Vernon, leaving the property, on his death, to his younger brother George, as whose home it became famous throughout the world.

—"Propriété Littéraire" is printed across the broad back of the last volume issued of the encyclopædic "Pandectes françaises : Nouveau répertoire de doctrine, de législation et de jurisprudence" (Paris : Chevalier-Marescq & Cie.) ; but upon examination hardly more than one-third of the 847 closely printed quarto pages are found to relate to copyright, the remainder dealing with patents and designs. The protection accorded to the literary or artistic expression of a thought by copyright, and the monopoly of the use of an idea, through its practical application, intended to be secured by the law of patents, are so distinct in principle that they are hardly to be grouped together, except as both may be said to create property in intellectual productions. Practically, also, there are objections to the common habit of dealing with these two subjects in one book. Their commingling in the present volume is the more vexing to the copyright student because, after being saddled with so much material relating to patents, he is still obliged to supplement the literary-property matter by going to other volumes of the series to learn what is said concerning the protection of posthumous works, architectural productions, and dramatic copyright. More than eighty pages are devoted to international legislation and jurisprudence, but the Norwegian copyright act of 1893 is omitted, and no mention is made of the international copyright relations entered into by the United States in consequence of the Act of March 3, 1891, though the provisions of that law are stated. The French citations come down to the middle of 1893. A bibliographical index includes nearly two hundred French words relating to copyright and patents, but the titles are very much abbreviated; and as neither the places of publication nor the dates of issue are given, this material is almost useless. These shortcomings stated, it is to be added that no one desiring to obtain a thorough knowledge of the theory and practice of French jurisprudence relating to patent law and copyright can afford to be without this volume, which can be had separate from the series at a price of 25 francs.

—"A park in the open ocean"; "a garden in the sea"; "a bit of southern California anchored off shore"; "an isle of summer even in winter"—these are a few of the epithets bestowed by Charles Frederick Holder on Santa Catalina Island, in a little book of 125 pages named after its subject and recently published by C. A. Murdock & Co., San Francisco. Mr. Holder believes that as an all-the-year-round health resort Catalina Island has perhaps no equal, its climate lacking even the few changes of the mainland. In six years frost was seen but once at Avalon, the principal village on the island, and sea-bathing can be indulged in all the year round, which is the more remarkable since at San Francisco the ocean is too cold for a bath even in midsummer. Nor is its climate the sole attraction of this California island. At least 340 days in the year can be spent by the invalid out of doors; and if he is fond of mountains, flowers, hunting, and fishing, he has endless sources of amusement. There are numberless cañons to explore, and the list of plants growing on the island includes 512 species, 26 of which have not been found on the mainland. Quail-hunting on the mainland is not what it was ten years ago, but on Catalina these birds are as abundant as ever. The principal pastime, however, is fishing. At Avalon "the biggest man is he who catches the biggest fish," and Mr. Holder's chapters "On the Trail of a Jew Fish" and "Rod and Reel Fishing" give a good idea of the exciting nature of this sport. Nor is there a lack of food for the intellect. The Indians who inhabited this island when first discovered by Europeans appear to have been of a superior type, and although tons of their implements have been carried off, the explorer may still find many artistically shaped objects belonging to this mysterious people, who once had their villages in every cañon, subsisting on fishes and aba-

lones. It is only within the present century that some light was obtained regarding these early inhabitants, through the discovery of some papers in a library at Madrid, giving an account of the voyage of Cabrillo. The island has belonged successively to Spain and Mexico, which latter granted it to a Governor Pio Pico, who deeded it to Nicolas Covarubias, from whom it was purchased by James Lick. At present it is the private property of the Banning Brothers of the Wilmington Transportation Company, who are doing all in their power to make it a pleasant resort for tourists and invalids, while taking measures against the ruthless destruction of the animal life to which Catalina owes so much of its charm.

—According to the latest (forty seventh) issue of Prof. Ascherson's 'Deutscher Universitäts-Kalender' (Berlin: Simion), the whole number of persons attending lectures in German universities during the winter semester of 1894 '95 was 33,021, of whom 8,755 were in attendance at Berlin, 1,587 at Bonn, 1,350 at Breslau, 1,168 at Erlangen, 1,216 at Freiburg, 556 at Giessen, 843 at Göttingen, 775 at Greifswald, 1,643 at Halle, 1,230 at Heidelberg, 667 at Jena, 532 at Kiel, 737 at Königsberg, 3,112 at Leipzig, 852 at Marburg, 3,561 at Munich, 421 at Münster, 420 at Rostock, 980 at Strassburg, 1,184 at Tübingen, and 1,492 at Würzburg. At Berlin, however, the matriculated students numbered only 5,631, the remaining 3,724 being *Hospitanten*, or persons who had received permission to attend lectures without being enrolled as *cives academici*; at Leipzig there were 127 *Hospitanten* and at Munich only 86. In the law department (including cameralistics and forestry) there were at Berlin 1,667, at Leipzig 985, and at Munich 1,230 students; in the medical department (including surgery and pharmacy) at Berlin 1,220, at Leipzig 752, and at Munich 1,168; in the philosophical department (including philology, mathematics, etc.) at Berlin 1,660, at Leipzig 856, and at Munich 700. In theology, Halle still takes the lead, having 552 students, whereas Berlin has 484, Leipzig 392, and the Catholic universities of Breslau, Freiburg, Würzburg, and Munich have respectively 245, 215, 128, and 152. Münster, which is not a fully developed university, being in reality only a Catholic school of theology with a philosophical faculty attached, has 276 theological students. In the number of professors and tutors Berlin stands first, having 377, whereas Leipzig has 195, and Munich 171. Among the universities which are German in character, but not in nationality, Vienna holds the highest rank, with 6,714, of whom 2,158 are *Hospitanten*, and 350 professors and tutors; then come Graz with 1,552 students, Innsbruck with 1,008, Geneva with 784, Zurich with 783, Berne with 712, and Bâle with 527. The newly fledged and as yet merely nominal University of Lausanne registers 516 students, most of whom are no further advanced than the pupils of a German gymnasium.

A HISTORY OF EARLY ENGLISH LAW.

The History of English Law before the Time of Edward I. By Sir Frederick Pollock and Frederick William Maitland. 2 vols. Boston: Little, Brown & Co. 1895.

THE period covered by these volumes is that of Kemble's 'Saxons' and the earlier portion of Reeves's 'English Law,' the age of Glanvil, of Bracton, of the establishment in England of a legal profession and of many legal institutions, practices, and habits of thought which have survived to the present day. With Edward I. begins the long series of our law reports, and the reign of the "English Justinian" has always been regarded as marking the opening of a new legal era. To give life and meaning to the legal history of the two centuries succeeding the work of the Conquest, has involved not merely an examination of hundreds of early records to interpret which a special education is required, nor of a library of books, modern and ancient, authentic and unauthentic, for the use of which a special training of the judgment is necessary. For the work done here an ear for the meaning of words and terms of art as delicate in its way as that of a musician, and an historical imagination and sympathy strong enough to enable one not simply to conceive of a state of society and law wholly different from ours, but of attitudes of mind and habits of feeling and reasoning wholly at variance with ours, have been needed. Sir F. Pollock, in a generous note to the preface, says that "by far the greater share of the execution" belongs to Mr. Maitland, and to those who are familiar with the latter's writings in legal periodicals, his hand in the work will be readily apparent.

It is difficult to speak of the book in terms which will not seem exaggerated. It is a genuine mine of information and monument of patient and accurate research. To review or criticise it in detail is out of the question; the critic would first need to devote a lifetime to the examination of the materials out of which it is made. It will be more to the purpose to give a brief account of the manner in which the authors deal with certain points of general interest. To convey an idea of the scope of the work we may say that it deals with Saxon law, Norman law, and incidentally with Roman and canon law, with primitive law generally, with the English law of property, contract, and person in the early Middle Ages, with ownership and inheritance, with family law, crime and tort, and with procedure. In the very inadequate review to which we must limit ourselves, our object is not to criticise, but rather to call attention to the character and interest of a work the most important of its kind which has yet appeared in English. It should be said that the book embodies the results of the latest researches not only of English and American, but of Continental scholars also.

The authors do not go into constitutional or political history, but the opening chapters are, nevertheless, of very general historical interest. They deal with the meaning and effect of the Norman Conquest as regards private law. With regard to the period before the Conquest they call attention to the fact that the manners, dress, and dialects of our ancestors are far better known to us than their laws. We are accustomed to regard law as something permanent and prescribed, preserved in books and handed down from generation to generation, ascertainable beforehand by means of study, and modified as occasion may arise by legislation; it is certain that this was a conception wholly foreign to the mind of the early inhabitants of England. The great body of Anglo-Saxon law consisted of traditional custom (vol. i., p. 2), Germanic in nature and origin, the "dooms" issued by English princes from time to time not having been promulgated with any idea of constructing a body of law. The glimpse that we get in these pages of the Saxon period shows us many features with which we are familiar as belonging to later times (the Norman Conquest did not destroy the Saxon world, but rather developed it in a new way) and many that are common to other primitive societies. There is first the free man and the slave; and of free men some are lords, while the rest are followers or dependents of lords. The family is "the joint family or household which is still an integral part of Hindu and South Slavonic life." We must conceive of kindred, "not as an artificial body or corporation to which the state allows authority over its members in order that it may be answerable for them, but as an element of the state prior to the state itself" (p. 7). The power of the state, however, is increasing; in the tenth century, by drawing upon the forces of three counties, it is able to bring an offending member of a powerful family to justice. The blood-feud, a purely family custom, is in full force, and, perhaps owing to that respect for women which from the time of Tacitus has been noticed as a Germanic peculiarity, runs on the mother's as well as on the father's side.

Preëminence is accorded to men of noble birth. A noble by birth is an "eorl," the ordinary freeman a "ceorl," the thane is a sort of country gentleman attached to the household of a great man (every one is follower or slave of some greater man) with a definite legal rank, so that the sum fixed as the price of his death, to be paid to his kindred, is six times as great as in the case of a common man (p. 10); his oath is more valuable also. A keen eye for exchangeable value seems to have distinguished the mind of our race from the earliest times. Foreigners are amused when we, nowadays, speak of a man's being "worth" so much. It is a very old habit, but in the tenth century it had a more literal meaning: a "twelve-hundred man" or "two-hundred man" meant a man whose death would cost respectively twelve hundred or two hundred shillings. Civil and ecclesiastical authority are sadly confused: the bishop, for instance, sits in the county court (p. 17); it is enough to say that, the clergy being the educated class (outside the church, writing and books are unknown), legislation, the direction of justice and government in general, are to a great extent in their hands. "Probably we owe it to the Church that Anglo Saxon law has left us any written evidences at all" (p. 11).

Slavery approaches the slavery of the Roman law. Serfdom is "much more of a personal bondage, and less involved with occupation of particular land," than after the Conquest (p. 13). A lively slave trade is carried on through English ports, and, what is probably an illustration of one of the leading primitive causes of slavery, free men enslave themselves in time of distress as a means of subsistence. Nevertheless, the practice of manumission exists, and a deep-rooted antipathy to slavery is shown by the clergy; we hear of Wulfstan, Bishop of Worcester, who held his place through the Conquest, going to Bristol in person and putting down the trade between that port and Ireland.

Courts of justice, as we know them, do not exist. To understand the condition of things, we must imagine a still earlier society in which the state plays no part, and redress for wrongs is obtained by the strong arm. The effort of the state as it becomes organized (the King originally being the state) is to do away with this method of redress, and not only to provide justice, but to compel people to settle their differences in court rather than outside of it. In Anglo Saxon times, this process has not gone very far; in fact, there are no obvious means of compelling obedience to a legal summons, and a large part of the law consists of provisions for the conduct of suits when the

parties make default. This carries us back to the earliest times, when the jurisdiction of a court depended upon the consent of the parties (p. 14) Public courts are held in the open air, private courts in the house of the lord.

As to the substance of the law, that of property consists almost entirely of unwritten custom and local usage. The law of contract is so rudimentary as to be barely existent, for there is hardly any foreign trade, business is transacted by word of mouth with neighbors, there is no system of credit The only rules of law that are fully and explicitly stated relate to killing, wounding, and theft, chiefly cattle stealing. As wrongs of this sort are much older than either kings or state, we should anticipate that, even in Anglo-Saxon times, offences against the latter would be distinguished from the former, and so they are; but the procedure in the two cases remains substantially the same till within a century of the Conquest.

All procedure is archaic and based entirely on form. "Mistakes in form were probably fatal at every stage" (p. 15). In other words, the substance of a controversy is not the rights or injury involved, but the form in which it is stated. Difficult as it is to imagine the attitude of mind which renders such a conception possible, it is no easier to comprehend the primitive view of proof. The Anglo-Saxon oath is not simply a means of affecting the witness's conscience ; it is proof in itself. An oath duly made is conclusive, and the oath is not to specific facts, but to the claim or defence as a whole (p. 15). The number of oaths required depends on the nature of the case and the rank of the persons concerned.

As law consists mainly of custom, all questions of property and most questions of justice are local. Private jurisdiction is common, and the county court and hundred court suffice for most purposes. The "King's justice" is exceptional, and is not to be invoked until local justice has failed. If some powerful lord interferes with the administration of justice locally, the King may be called in, but instead of his being recognized as the "fountain of justice," the royal intervention is exceptional, and resembles rather a descent upon rebels than process of court.

As to land-tenure in Anglo-Saxon times we have little information, but we know that it was not feudal. Land is either book-land or folk-land, the former consisting of what we should call royal grants to bishops and religious houses or to lay nobles (p. 37). Folk-land in all probability means the bulk of the land held by unwritten customary right, and what this was we do not know. In the grant by book the authors see the germ of the coming feudalism. It is a grant of lordship and revenues, perhaps of jurisdiction and its profits; but as it is a grant in what we call fee-simple, the distinguishing mark of feudal tenure is wanting On the whole, though it may be true that Anglo-Saxon civilization would sooner or later have produced a feudal system, what seems certain, on the evidence here brought forward, is that the determining factor in the production of the system of law known to us as English was the Conquest. "The Norman Conquest is a catastrophe which determines the whole future history of English law" (p. 57). And yet here, as elsewhere, it is the unexpected which happens. The result is not Norman, nor French, nor Continental. It is a new government, a new language, and a new law, each quite different from any other in existence.

Strange as it may seem, we have fewer contemporary materials for a knowledge of Norman law than we have of Anglo-Saxon. The authors are so averse to generalization that they object to the word "feudal" as descriptive of the system which grew up in England under the Normans, because feudalism covers several centuries of history and many very different countries. Nevertheless, whatever it be called, medieval tenures in England cannot be said to have existed among the Saxons. With regard to immediate differences the evidence shows, first, that the invaders were French, and brought French laws, language, and ideas with them; second, that Norman law was feudal—that is, that the invaders brought the theory of dependent tenure with them, as well as the idea of seignorial justice, to say nothing of ordeal by battle. Money compositions, the *wer* of the Saxons, seem to have been unknown to them—in other words, they had advanced beyond this primitive conception of punishment, which is clearly connected with that of family, tribe, or kindred; while they had in the Inquest a simple but strictly probative inquiry into matters of fact, the germ not only of trial by jury, but of rational as distinguished from superstitious methods of proof. Finally, and, considering the times, the fact is significant, themselves soldiers and men of action, they knew the value of uniform law. The conqueror's right-hand man was Lanfranc, the great lawyer of Pavia, traces of whose Italian training are believed to be still visible in the pages of Domesday Book.

The foregoing may serve to give some slight idea of the earlier chapters. To go more into details, let us take trial by jury. Is there anything new to be learned about it? We have long known that the primitive jury was not at all the body that we know, and it has been the fashion to say that whereas now jurors constitute a special tribunal of fact and pass upon the credibility and probability of testimony offered by the parties, they were formerly witnesses. Now a witness is a person who comes into court and testifies to a fact. On points which we call points of law he is not allowed to open his mouth. Yet nothing is clearer in the early cases than that the jury was relied on to settle questions of law. In the Year-books the verdict takes the form of question and answer ; and such questions are asked as, Which of the two has the greater right to Blackacre, William or Hugh? or, What damage has A done B? The jury answer, "William," or "Hugh," or "100 shillings," as the case may be. What the authors say about trial by jury seems to explain the whole matter. Before the introduction of the jury, there was in England practically no notion of proof as we understand it, and, what is more, law consisted of local custom, which could be proved only by local evidence. The right of William or Hugh to Blackacre, for instance, would depend on facts within the knowledge of persons living in the neighborhood, and the right would be known to them and nobody else. Consequently, if proof by ordeal (or multiplication of oaths, which was the method in force in the Saxon world) was to be supplanted by a rational method, one of the first steps would naturally be an inquiry of those locally cognizant of the facts as to what the facts were. They would therefore be witnesses, but they would often be witnesses to what we call law as well as to fact. The machinery for this inquiry the Normans had in the Frankish Inquest, and it is among the smaller surprises of which this book is full to find it laid down as pretty well settled that the origin of the palladium of our liberties is "not English but Frankish, not popular, but royal" (vol. i., p. 121).

To turn to a question of procedure, a very interesting account of the "forms of action" makes many points clear, though suggesting, of course, questions which the authors do not answer. Whatever the origin of the Writ may be, the only way to understand a medieval action is to bear in mind that while to us the right or injury involved in a controversy is the main thing (and a large portion of our reports consists of discussions of the nature and extent of rights and injuries), these considerations nine centuries ago were practically unimportant. Injuries were few and simple, rights were governed by custom; the great question was one of relief. Could relief be had? Now what the Chancellors of the first English Kings appear to have done is to have devised a royal writ for any form of wrong that was brought to their notice. It is generally said that the common law provided a vast number of fixed forms of writs for interference with real property, and had only one, that of trespass, for almost every other kind of complaint. The facts given here (vol. ii., ch. ix.) seem to make it quite clear that what actually happened was that writs were invented as fast as they were needed, and that at one time writs multiplied until nearly every possible form of complaint or demand had been put into this form. If the writs at a given period could be all brought together, we should have a complete codification of the law of the time. The writ, therefore, did not represent originally a spirit of formalism, but of constant innovation. The formalism is seen when we come to inquire what takes place after the writ is issued. Then we find that the plaintiff, having selected his form of action, must stick to it. He cannot make a general complaint and let the court determine afterwards what the action is. The golden age of these forms may be regarded as one of progress; at a later date we find an entirely new process going on. Writs can no longer be invented; to give a new right of action, Parliament must be resorted to, or else the judges by means of fictions develop one form of action out of another. Why the change should have taken place we do not know, but it is obviously a mistake to imagine that the writ represented that sort of rigid formalism which we associate with the early Roman law. As the authors say, "Let us not be impatient with our forefathers." It was through their determination not to allow judges to do what they pleased with actions that the English race escaped the system of the civilians and canonists, which was later to prove a ready weapon for tyrants. It is the boast of the modern law-reformer that he has swept away form and put in its place substance; and yet in these pages a time is revived when Form was the "twin sister of Liberty."

Fingerprint Directories. By Francis Galton, F.R.S., D.C.L. Oxford, and Hon. S.C.D. Cambridge. Macmillan. 1895. Pp. 127.

In his former book Mr. Galton has convinced his wondering readers that the total number of different fingerprints in the world—that is, the patterns in which the papillary ridges in the bulbs just below the tips of the fingers are disposed—is very great indeed; so great that there is less than one chance in four that any one finger should ever find in the whole wide world another finger to match it exactly. He has also made it plain that these markings of the finger-tips do not vary with age; in none

of the many cases examined after an interval of years was there any change, with one exception, that of a child of two years, on whose finger at the age of fifteen two little ridges had fused into one. And nothing is easier than to take the impression: a copper plate is smeared with a thin smooth layer of printer's ink, the fingers are pressed firmly upon it and then upon a piece of paper, and the thing is done. It is evident that this extraordinary individuality in the tips of the fingers furnishes a sure means for the identification of criminals—far surer, even, than Bertillon's system of measurements. In practice (for the method is already in practice in England), the impressions of all ten fingers are taken, to make assurance doubly sure, and there is then no possibility of not being able to recognize a given man by his markings after any interval of time. It is wholly inconceivable that two persons should show coincidence in the prints of two or three, not to speak of ten, fingers. The method is therefore simplicity itself as a method of *proving* identity, and incomparably more certain than personal recognition or identification by photograph.

It was a very different question how far it could be used for the purpose of *tracing* identity; that requires a classification of finger-prints, and it might easily have happened that they did not readily lend themselves to classification—that they had exhibited interminable intermediate gradations, as do the individual members of a heap of broken stone by the road-side, instead of falling into distinctly marked families, or groups, as do the natural kinds (to use the logician's term) of the animal or vegetable world. The fact that they do not constitute a continuum is what gives them a superiority over Bertillon's measurements as a means of identification. It is to the explaining of his method of effecting this classification that Mr. Galton's present volume is devoted. It turns out that there are three *types* of pattern, to one or the other of which every finger-print may be referred—namely, the papillary ridges may be arranged in *arches*, *loops*, or *whorls*, and this characteristic alone, combined with the fact that there are ten fingers instead of one, and that the several fingers vary independently, is sufficient to subdivide the class of English criminals into some 60,000 groups (the tenth power of three), containing each an easily manageable number of types, which can then be discriminated from each other by the examination of several minuter forms of difference. A man's description might then be

w l l a a w a l ,

which means (in the order which will hereafter be adopted) that the little finger of his left hand presents a whorl, the ring-finger a loop, the middle finger a loop, and so on. By this means the time required to see whether a man who has just been arrested has already left his finger-marks in the criminals' card-catalogue is reduced to a few minutes. It is true that very many of the possible types do not occur, and some occur with disproportionate frequency, but the method has none the less shown itself to be a perfectly practicable one; it was hit upon only after many other seemingly possible schemes had been rejected.

Society owes to Mr. Galton a due meed of gratitude for having put into its hands, as the result of much patient labor, one more weapon to be used in its long fight against the criminal classes. At sixty-three English prisons finger-prints are now taken by trained wardens and forwarded to a central bureau for classification by experts. There would seem to be every reason why the system should be introduced into other countries as rapidly as possible.

Municipal Home Rule: A Study in Administration. By Frank J. Goodnow. Macmillan & Co. 1895.

PERHAPS there was never a time when a deeper interest was felt in the government of our cities, and the title of Prof. Goodnow's book will doubtless attract many readers. But it is only fair to warn the public that there is nothing "popular" in the methods of investigation and presentation adopted in this treatise. It is essentially a law-book, and large parts of it will be found quite unreadable by the laity unless they are animated by a most determined spirit of inquiry. All attempts at reform in municipal government, Prof. Goodnow contends, "must of necessity depend upon an accurate delimitation of the sphere of action which can, with due regard to the interests of the State as a whole, be assigned to our municipal organizations." This is so because of the intimate connection of municipal with State government, and this connection must be thoroughly understood before we can determine what is feasible in the way of improved city government.

The American municipalities are by origin and development different organizations from the municipalities of Europe. In that continent the origin of local self-government is to be found in the old feudal idea of the autonomous rights of the cities. Every one knows the great part played by these semi-independent communities in the Middle Ages; but it is perhaps commonly supposed that the development of centralized administration in the seventeenth and eighteenth centuries extinguished local autonomy. Prof. Goodnow points out that this is an erroneous view, and that, after the French Revolution, the principle came to be recognized that municipal corporations had a sphere in which they could act free from all central control. The relation of the general Government to the municipal governments is similar to that of the Government of the United States to the States. The presumption is in favor of municipal competency, and the central administration can interfere only where it has express authority. In America the case is reversed, and it may be laid down as a general rule that none of our cities has any self-governing capacity except such as is expressly delegated to it by constitution or statute.

This feature of our system is in the main due to English precedent. The English cities have had no such careers as those of the Continent, and their influence in English political history is of recent date. The incorporation of municipal boroughs in the time of the Tudors had the purpose and effect of enabling these bodies to own property, but gave them very limited governing powers. The corporations formed under these charters consisted of a small number of citizens, and their incapacity for efficient administration of public affairs, as well as their political corruption, has been proverbial. For a long time the tendency was to create additional administrative bodies for special purposes, as new wants were developed; but during the last half-century the whole system, or muddle, as it might better be called, has been reconstructed. We cannot consider the details of this process, but the general result has been to create genuine local legislatures with administrative powers, subject to the supervision in certain lines of national boards of commissioners; and this result is commended to our favorable consideration by Prof. Goodnow.

The American municipal organization consisted in the first place of a municipal council, which discharged nearly all the functions of government. By way of improvement this council came to be organized as a bicameral body, and as a further check to misgovernment the mayor was made independent of it. Then followed the changes demanded by the spirit of democracy; the extension of the suffrage leading to the election by the people of pretty nearly all the principal administrative officers. The reaction from this state of affairs led to the investment of the mayor with enlarged functions, giving him, as Prof. Goodnow says, "a plenitude of power which is unexampled in the aristocratic society and monarchical governments of Europe." This form of government, however, he regards with disapprobation, because it has not so far been very successful, and because foreign municipalities have secured better government by a different system. But as he seems to ignore the fact that foreign municipalities are not governed by universal suffrage, we cannot assume that we have only to imitate their institutions to obtain their success.

The complications arising from the control of the administration of municipal affairs by State legislatures have been infinite, and the attempts by constitutional restraints to remedy the mischiefs so resulting have not succeeded. Prof. Goodnow examines at length the cases arising under the prohibition of "special legislation," and devotes much space to the decisions that have defined the liability of municipal corporations for tools and for the management of their property. His analysis and comparison of these decisions is very thorough, and has much interest for lawyers and students of political institutions; but it is altogether too technical to be considered here, and, indeed, most of it might have been omitted without injury to the writing of the treatise. It would have been sufficient for the author's argument had he stated the principles recognized by the courts without summarizing the cases, although, of course, the method that he has followed is more satisfactory from the legal point of view. The chief points that he makes are the necessity of withdrawing matters of purely local concern from the control of the State Legislature, while retaining State control in affairs of general interest. The distinction and its difficulties are well illustrated by the agitation concerning the excise laws which is now prevailing in New York. According to Prof. Goodnow, it would not do at all to permit cities to manage their own affairs without some State control, but this control he proposes to limit to such things as are of public importance, and to commit its exercise to central boards of administration, as has been done in the case of State boards of health, education, etc. In short, he proposes to introduce something of the centralized administration against which De Tocqueville warned us. This change in American policy is too momentous to be examined in this review, and we will confine ourselves to remarking upon the changes wrought by time in the political doctrines inculcated at the college where Lieber thundered against bureaucracy.

The Silva of North America: A Description of the Trees which grow naturally in North America, exclusive of Mexico. By Charles Sprague Sargent, Director of the Arnold Arboretum of Harvard University. Illus-

trated with figures and analyses drawn from nature by Charles Edward Faxon. Vol. VIII. Cupuliferæ (Quercus). Boston: Houghton, Mifflin & Co. 1895.

THIS sumptuous treatise progresses steadily, on substantially the lines marked out by Prof. Sargent in his introduction. Following the generally accepted sequence of the natural orders of flowering plants, the work has now reached in its development the interesting family to which the oaks belong. To the fifty species of this genus growing north of Mexico, and to a few hybrids between certain species, the present volume is devoted.

Of the system of nomenclature adopted by Prof. Sargent it is not perhaps necessary to speak at this time, further than to express again what has been embodied in the notices of the earlier volumes, namely, the belief that the system greatly impairs the permanent value of the whole work. But, this kept out of view, one can have only words of praise for the pages of illustration and of text now before us. The proportions in the letter-press have been well kept, and most of the illustrations are even more satisfactory than those which have preceded them in the earlier orders.

A treatise like this must, from the nature of the case, consist of at least three threads in the strand. There is, first, the plant-portrait with analytical details. It is this which imparts to the treatise, if the work is thoroughly well done, as it is here throughout, a high degree of value which cannot diminish as the years go by, although so much else in science becomes obsolete. Mr. Faxon's fidelity to true morphology, his remarkable insight into recondite matters of structure, and his artistic feeling as well as skill, place all the eight volumes easily in the first rank. It should be said in passing, that the reproducers of Mr. Faxon's work have not fallen off from their early excellence. In some of the plates there is a decided improvement. Perhaps attention should also be called to the fact that the superb plates in this volume exhibit many characteristics displayed by the trees in their winter state. The second thread of the strand consists of the systematic descriptions, which are, of course, mainly verified amplifications of the details presented by the many botanical authors who have first studied the species in question. But with them must be incorporated the results of more recent investigations, and the whole coördinated. While a final decision as to the success attained in this must be reserved until the descriptions have been subjected to actual trial at the hands of students, it can now be said that the difficult task appears to have been well done. The third of the factors referred to is less important in itself, but it goes a long way towards making such a work of immediate interest, and that is the matter of general information. Almost all trees have interesting peculiarities; these characters have been happily seized on by Prof. Sargent and felicitously treated. Nomenclature aside, therefore, we have only commendation for the volume. It remains to be seen whether the appearance of biographical sketches of living botanists given freely as footnotes will have the effect of stimulating or of repressing botanical research.

As generally limited, the genus Quercus, or Oak, comprises not far from three hundred species, of which about fifty occur in North America, north of Mexico. Our species are grouped rather naturally into the white oaks, more than half the whole, and the black oaks, which, with one anomalous species, make up the rest. White-oak acorns, taking the term white oak in its large sense as signifying a class, have very little or no downiness on their inner surface, while the other group is characterized by the presence of a surface which in some cases is velvety. Besides these obvious characters, there are certain distinctions between the classes which mean a good deal to botanists, such as the number of the stamens, the length of the styles, and the position of the abortive ovules. But when one comes to the divisions of the two classes themselves, it is necessary to make use of the fact that some of them ripen their fruit in one year, while others take two; after this division, one has to employ the leaves to obtain further characters. Veining, shape, and surface all have to bear their part in furnishing distinguishing characters. Leaves are variable at best, and oftentimes most puzzling, but in the genus Quercus they are fairly constant in shape and lobing. Hence Mr. Faxon's faithful delineations give trustworthy standards, which cannot fail to settle some disputed points. And, too, his excellent drawings of bare twigs will enable the very impatient, who cannot wait until next summer for the leaves to appear on their oaks, to make a shrewd guess as to the species in hand.

Those who would construct the family tree of oaks out of the existing fragmentary evidence in the strata of tertiary or earlier formations have concluded that the genus had its origin with the chestnuts far to the north, and that possibly it has seen its best days. But the wide range of the three hundred surviving species, and the innumerable uses to which the valuable trees may be put, stimulating man to cherish and even cultivate certain sorts, indicate sufficiently that the oaks are far from being really decadent.

Advance Japan. By J. Morris. Philadelphia: J. B. Lippincott Co.

WHETHER Mr. Morris, who has been in the employ of the Japanese Department of Public Works, means the first word of his title to represent a verb in the imperative mood or an adjective qualifying the noun—with the suggestion of a letter dropped at the end of a participial form—might puzzle a grammarian to decide. His full title is "Advance Japan: A Nation Thoroughly in Earnest." The work reminds us of a snap-photograph of a procession. It is the literary picture of the Japan of 1895. The style is that of a writer for an encyclopædia, and the chapters are broken up into paragraphs with headings, each of which in bold-faced type names the subject treated of below. The author gives us more than four-score modern illustrations (besides some capital charts and outline maps), which are reproductions mostly of photographs, in various degrees of artistic merit. He uses the best authorities, though he quotes or gives credit to none. His statements are therefore as accurate and as pragmatic as an engineer's notebook. Traces of literary beauty are few, and there is no index. The book is, however, a superb campaign document in questions of British foreign politics. It will handsomely supplement Messrs. Curzon and Norman's proofs that Japan is well worthy of being an ally of Great Britain.

This is the book to read for information, for it is an excellent example of the literature of knowledge. The clearness and thoroughness with which Mr. Morris has digested, distilled, and decanted a whole library of books on Japan is such as will exasperate the unquoted authors and ignored investigators, while delighting the busy reader. History, geography, language, manners and customs, communications, etc., etc., are tersely described in the genuine style of the staff writer on a dictionary. In the last four or five chapters the author's diction warms appreciably, for when he pictures armaments and narrates the story of the Chino-Japanese war, he tells about that of which he was part. Being much in the interior, he knew the men who made soldiers, as well as their machines and methods of engineering and transportation. The account of the war operations is accurate, as well as clear and detailed, and, with the illustrations, forms probably the best existing digest of what was, in reality, an eight-months' strife between Japan and the two or three only (of the eighteen) Chinese provinces interested.

Like almost all the men who have come into closest contact with the Japanese, Mr. Morris believes that they are not a people "prone to content themselves with a mere veneer of scientific culture." Despite his evident lack of acquaintance with the moral forces making the new Japan, he believes that "relapse is impossible." He finds in the Japanese exactly that quality which Orientals are popularly supposed to lack, and which he calls "mental ballast." He says: "Unlike other Asiatic peoples, they preserve their equilibrium under all conditions, are thoroughly practical, persevering, and sincere." To which verdict, after twenty-seven years of close acquaintance with the Japanese, we say "Amen!"

Though vastly more than a tourist, Mr. Morris is not a scholar, for he translates the title of the retired *kuambaku*, or regent Taikosama, as "Great General." To an American who knows that Townsend Harris was the first and real maker of the treaties and the opener of the ports of Japan, the credit awarded to Lord Elgin (p. 126) seems either a joke or an illustration of the way some Englishmen write history. Almost as a matter of course, Mr. Morris uncritically accepts the prehistoric chronology of the native fabulists and myth-makers, which was invented a thousand years or so ago. Except a few slips like these, the seeker after facts will not be disappointed in this book.

The Natural History of Aquatic Insects. By Prof. L. C. Miall, F.R.S. With illustrations by A. R. Hammond, F.L.S. Macmillan & Co. 16mo, pp. 389, figs. 116.

THIS volume is a contribution of more than ordinary value toward the growing demand for information concerning the habits and life histories of the insect world. The author is Professor of Biology in Yorkshire College, Leeds, and is evidently one of the class not contented with serving simply as an instructor; he is also an investigator and an earnest student of nature. While the purpose in view in the preparation of this volume is modestly announced as a desire to revive an interest in the writings of certain old zoölogists, as Réaumur, Lyonnet, and De Geer, the work contains several studies which are obviously new, illustrated with drawings made by the author or under his supervision. As one of these, we would cite the chapter on *Simulium*, or the black fly, in which is told (although by another writer) how the fly which lives in its larval and pupal stages beneath the water, when in readiness to assume its final winged form is released from its pupal case enclosed in a bubble of air, which, when reaching the surface, explodes, at the same time spreading out the limbs of the fly so that it can run upon the water until it finds some solid support where its wings may expand

and dry and fit it for flight. To those of us who knew the black fly only as the terror of the Adirondacks and of some of the Southern States, it will be a surprise to learn that "in Britain the flies of *Simulium* are perfectly harmless."

It will also be a surprise to most of the readers of this volume to find how much of interest is connected with a study of aquatic insects, differing so greatly as they do from those which ordinarily come under our observation. It will be quite new to learn of their number. Instead of there being a single family of "water-bugs," representatives of most of the orders in their early stages are to be found in the water, even the caterpillars of moths, larvæ of ichneumon flies, and grasshoppers. The author maintains that an aquatic life has been acquired by insects Originally they were all terrestrial Later, "both fresh and salt waters have been successfully invaded by insects." The successive steps by which this has been accomplished is shown in the varied habits of the *Tipulidæ* (crane-flies), etc. The larvæ of some of these live in dry soil, others in moist earth near streams. Some live immersed in soft mud or water, but come to the surface for air; while, finally, there are those which obtain their entire supply of oxygen from the water.

There are many interesting features in this volume to which attention might properly be called, but it may suffice in this brief notice to commend its careful reading to those who desire to know more of the life of nature in its infinitely varied forms. The book is worthy also of a place, for reference use, in the libraries of working entomologists.

BOOKS OF THE WEEK.

Abbott, A. V. The Electrical Transmission of Energy. London: Low, Marston & Co.; New York: D. Van Nostrand Co. $4.50.

Abbott, C. C. A Colonial Wooing. Philadelphia: J. B. Lippincott Co. $1.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 7, 1895.

The Week.

It was only the very sanguine who looked for a victory for good government in this city on Tuesday. There were no city offices to be filled. The real trial of strength with Tammany will not come off till the mayoral election of 1897. It is in that year that we shall find out finally whether the reform sentiment which worked so powerfully for good has held firm. Tammany's highest vote this year is 122,000. Last year it was 112,000. Here is a gain of only 10,000 votes. The accessions of 10,000 German voters on the excise issue would account for all this increase. Nobody doubts that there were more than double that number of accessions. A generous estimate of the thick-and-thin Tammany vote this year is 90,000. This is only a little more than a third of the total vote cast, which was about 242,000. It is the old story. The people of the city have allowed a minority of their number to get the upper hand of them in an election. Several thousand German voters helped directly to put Tammany in the front by voting for its candidates, but Tammany would have been defeated had not a much larger number of voters, who took the trouble to register, refrained from voting. The total registration was 281,000, and the total vote was not much over 242,000. Nearly 40,000 voters, for reasons known only to themselves, had interest enough in the election to register, but lost that interest before Election Day arrived. Undoubtedly many of them chose abstention from the polls as the best method by which to express their disapproval of the enforcement of the excise law. They could not bring themselves to the point of voting directly for Tammany; neither could they bring themselves to the point of voting in favor of the American Sunday. A large number of other voters came to a similar conclusion about the relative merits of the Fusion and Tammany tickets. When professed reformers told them that one was little better than the other, and that it was really a choice between Platt and Croker, they decided that they would not vote at all.

There were some notable victories elsewhere for the cause of good government. The reëlection of David B. Hill to the Senate on the expiration of his present term is rendered impossible by the Republican success in the State at large. In Maryland the bell has begun to toll for Gorman also. It has already tolled for Brice in Ohio. These two men wrecked the Democratic party when they joined together to defeat the Wilson bill in the interest of the Sugar Trust. Gorman has met his first serious defeat in the rejection of his candidate for Governor of Maryland, and in the assured election of a Republican Senator in place of Gibson, who is his echo and *alter ego* in the Senate. Brice is certainly defeated for reëlection. It was loudly proclaimed before the election that if Campbell were successful in Ohio, he would be the Democratic nominee for President next year; and this peril has been averted. If the later returns confirm the reported election of Bradley in Kentucky, that will be fitter cause for rejoicing than the defeat of Hill, Gorman, Brice, and Campbell all together, since it will be the death-knell of the silver faction in the Democratic party. It is not necessary to say that when silver ceases to be a nightmare of the Democrats, it will cease to disturb the dreams of the Republicans also. The far-Western Senators who have been taking on such airs during the past two years, will become as humble and submissive as any other needy office-seekers when they can no longer gain anything by abandoning their own party. The defeat of Hardin in Kentucky will be a sure sign that the Democratic party, neither in the campaign of next year nor in any future campaign, is to be a silver party; and this will be a boon to the country beyond measure.

His own State has "gone back on" one of the leading Jingoists of the country. When Secretary Herbert recently decided that the bid of a Michigan firm for building a war-ship could not be accepted because our treaty with Great Britain forbids the construction of such vessels on the great lakes, Don Dickinson came out with a "ringing" demand that our Government should not be restrained by a little thing like a treaty, and an ingenious plea that we might get around the prohibition by building parts of vessels, but not the whole, in his State. The people of Michigan, however, are not inclined to run the slightest risk of disturbing the present arrangement with Great Britain, even in order to gratify one of their own statesmen. The Detroit *Tribune* points out that, if our Government should take up the Dickinson idea, Great Britain would undoubtedly regard the action as an infraction of the agreement and terminate the treaty, as either party has a right to do. It would be folly, the *Tribune* holds, to give Great Britain the slightest excuse for withdrawing from the bargain, since "all the advantages of the arrangement are on our side," and "it is a mighty fine bargain for us as it stands." Nine-tenths of the lake shipping belongs to this country, much of it could be quickly made available for war purposes in an emergency, and within a week of the outbreak of war the whole Canadian shore would be at its mercy, while our military advantages are equally obvious, and we could effectually block the entrances to the lakes against the war-vessels of England. The prosaic conclusion of the *Tribune* upon the Dickinson outburst is that, "however little we may care to please Great Britain elsewhere or in other matters, the jingoest of Jingoes, if he be intelligent, must hesitate to give her the slightest cause for uneasiness in this." Meanwhile, the President has sustained Secretary Herbert.

The Treasury deficit of $6,500,000 for October was expected. Last October it was $13,500,000. For the four months of the fiscal year now elapsed, receipts are behind expenditures to the amount of $16,000,000. This would indicate a deficit at the end of the year of $48,000,000. But no such figure is likely to be reached, as the returns from customs show a steady increase, the excess of the four months this year over last being upwards of $10,000,000. Still, there is little or no chance of income balancing outgo by next July. Whether more revenue will have permanently to be provided is a matter for nice calculation. With a net cash balance of $87,000,000 now in the Treasury, the probable deficit for two years could be comfortably faced under ordinary Government financing. But our Government financing is fearfully and wonderfully extraordinary, with its demand notes outstanding to the amount of four times the gold on hand to redeem them. This is the nightmare of the Treasury officials and of the business world. The question how to get the Government out of the banking business must keep pace with the question how to put the Treasury in funds.

There is some preliminary chatter at Washington about an investigation by Congress of the bond-syndicate operation of last February. It is to be hoped that any members of Congress who think there is political capital to be made by airing that matter again may be gratified. Every fact that it is possible to know except the names of the associated bankers—that is, of those who came in after the Belmont-Morgan party took hold—is already known. It is known exactly what they paid for the bonds and what they sold them for, and what the present market price is. It is known also that the Government might have saved upwards of $16,000,000 on the transaction if Congress had been willing to make the bonds payable specifically in gold. If anybody is deserving of impeachment for matters connected with it, those members of Congress who voted in the negative on this question are the ones. Nevertheless, they all ought to have their curiosity gratified. If there is to be such an investigation, it

ought to be undertaken soon. The opportunity for blather will be very great, and it will be a public advantage to know early in the session who the new blatherskites are.

The Georgia Governor's vigorous condemnation of lynching is only one of many expressions showing a growing sentiment in the South against mob rule. From the newspapers in Florida, Alabama, Georgia, Tennessee, and Texas there is a chorus of appeals to the people to make legal methods paramount in the treatment of criminals. The old attitude of regretting the necessity of Judge Lynch has given place to expressed opinions that in no case is lynching justifiable. It detracts somewhat from the appreciation of the motive underlying these expressions of sentiment to be told, by the Knoxville *Sentinel*, that the change is due to "the recent examples of the extent to which the barbarism of lynch law may be carried." When the victim of the mob was only hanged, and when only one crime came within the jurisdiction of the lynchers, then "public opinion sanctioned the summary vengeance of the mob," to quote the Memphis *Appeal*. But now, when "men are lynched for crimes which are not capital felonies," and when mutilation of the victim's body "is a common practice," it is time for the law—still quoting the *Appeal*—to cease to "divide its jurisdiction with the mob." It is only fair to say, however, that the majority of the Southern newspapers rise to a higher moral level in their condemnation of the mob, and in their support of the law for the law's sake.

Through the influence of Senator Tillman a section has been inserted in the draft of the new Constitution for South Carolina declaring that each township in the State "shall constitute a body politic and corporate," and empowering the General Assembly to create additional townships and to provide a system of township government. As was indicated by the debate in the Constitutional Convention, the adoption of this section looks to the introduction in South Carolina of the New England system of town government. The experiment will be watched with interest. By many, the New England town government is regarded as indigenous to the soil, as a manifestation of the spirit of the Puritan settlers, finding expression in home rule for the little communities and in the production of the first written constitution emanating from the people. In South Carolina the conditions have been radically different. There has been more of the autocratic tendency in a system under which appointments of county officials have been made at the capitol, the active interest of the citizens in local affairs lying dormant. The strongest arguments in the convention in favor of the adoption of the township system were that better local officers would be secured, better schools and roads would be provided, more economy would be exercised in the handling of the public funds, and a higher class of citizenship would be developed through the town meeting. The system is to be applied at first only in counties where the negro voters do not predominate, and with a suffrage requirement of one or two years' residence in the township.

The State Grange of California is loudly calling upon the American Protective Tariff League to come on. It sets forth the following facts as the basis of its cartel: The League requested Bro. David Lubin of Sacramento to contribute to its funds. Lubin sent on $1,000, to be paid over when an impartial committee should decide (a) that the present system of protection is just to farmers, or (b) that a bounty on agricultural exports would be inequitable as long as there is a protective tariff on imports. The League declined to claim the money under these terms. On September 4, 7,000 farmers, at a Missouri harvest home, submitted the same "issue of principle" to the Hon. William McKinley. He made no reply. Now, therefore, comes the Grange and demands that the League give a categorical answer to its questions. No dodging will be allowed, as copies of the demand have been mailed to both the President and the Secretary of the League. We trust that Lubin will not let up on the League, and will continue to flourish his $1,000 check until he gets his answer or compels the League to come over to his position and advocate a bounty on exports.

The Cleveland Chamber of Commerce has set a good example by adopting a resolution protesting against the tendency to prolong the Presidential campaign; declaring that the time intervening between the conventions of the two great parties and the election should be shortened from six months to three; and requesting the national committees, "in the interest of the commerce of our country," to consider earnestly the desirability of fixing a late date for the holding of the conventions. This question has been much discussed during the last few weeks, and an overwhelming majority of the newspapers of both parties have come out in favor of a short campaign. There can be no doubt that the press reflects the sentiment of business men, but it is most desirable that this sentiment should find expression in action such as has been taken at Cleveland. The resolutions adopted by the Chamber are to be transmitted to representative commercial bodies throughout the country, and a general expression of opinion from such organizations ought to have some effect upon the politicians who compose the national committees.

The *Tribune* tells us that a Reed dinner took place at the Brunswick Hotel week before last, at which a number of prominent politicians from various parts of the country were present. The phrase Reed dinner means a dinner to promote the nomination of Thomas B. Reed for the Presidency by the Republicans next year. It is said that an attempt was made to work such a dinner at the Arlington Hotel in Washington, last May, but that, when the diners came together, a considerable number of them failed to harmonize on Mr. Reed, or, as the *Tribune* report puts it, "The McKinley sentiment was so strong that no direct pledge from all present could be secured." This shows the necessity of sounding your diners before they come to the table—a precaution which was observed in the present instance, thanks to the discernment of Mr. Samuel Fessenden of Connecticut. Mr. Fessenden succeeded in bringing together Senator Matt Quay, Mr. Thomas C. Platt, Mr. Thomas H. Carter of Montana, Chauncey I. Filley of Missouri, and other politicians of note to the number of ten. Their substantial agreement in favor of Reed being assured, they next considered the ways and means to make their desires effective. The first step was to secure the right place for holding the convention. Upon this point the *Tribune* account says:

> "Joseph H. Manley, chairman of the executive committee of the Republican national committee, and one of the most adroit Reed boomers in the country, is in California. He was at the meeting, however, in spirit. He went to California, it is asserted, to feel the pulse of the Pacific Slope and see how that region would take the nomination of Mr. Reed. It is said to be his advice that the Republican national convention be taken to San Francisco, with the understanding that the West stand with the men who bring it there to secure the nomination of Mr. Reed. That is what was talked of and what was done at the dinner at the Brunswick. Those who recognize in the men who were present the anti-Harrison combination of 1892 will wait to see whether they will be successful or not."

It seems to us that altogether too much publicity has been given to this dinner for the good of the candidate. The people, as a general rule, do not like to see the Presidency disposed of by ten or a dozen men in dress coats, sitting around bottles of champagne, in a fashionable New York hotel. Mr. McKinley, if he is wise, will tell his dozen of boomers to take their dinner in some quiet rural community, wash it down with hard cider, and smoke pipes after the repast. Then if the affair should get into the newspapers, it will look much better than this Brunswick Hotel Reed dinner.

Sir Henry Tyler, the well-known English railway expert, writes a letter to the London *Times* from Panama on the subject of the renewal of work on the Panama Canal. This letter, contrary to the prevailing opinion in England and the United States, and contrary to the preconceived opinions of the writer himself, expresses the belief that a canal on the plan now proposed, beginning where the Lesseps company left off, can be com-

pleted for a sum not exceeding $100,000,000. Not only so, but he believes that the money will actually be found by the French investors, who already have so much of their capital in the work that they cannot afford to let it lapse. Sir Henry did not visit Panama for the purpose of examining the works, but was en route to Peru on other business, and he remained on the Isthmus long enough to inspect them and to look over the plans. He found 1,500 men actually at work, and 800 more under contract to begin as soon as they can be brought from Jamaica and other West Indian islands. He was informed that the number would be increased to 4,000 as soon as the right kind of laborers could be found. It is to be hoped that Sir Henry's conclusions are well founded. The only object of a canal is to pass loaded ships through the Isthmus. If the French people, who have already spent $290,900,000 according to the official report of the liquidators, are willing to spend $100,000,000 more, we ought to thank them. Undoubtedly there is a considerable infusion of French national pride in the renewed attempt to join the oceans at Panama, but that does not harm us in any way.

Two canals, however, are not wanted in that quarter of the globe at present. If the Panama Canal is to be completed within six years for $100,000,000, we do not need to spend an equal sum on the Nicaragua Canal. It would, of course, be helpful to those who have already put money into it if the United States Government would either advance the money for finishing it or pay them what they have already spent. If the French company is really going on, with a prospect of completing its work, it would be cheaper for us to reimburse the Nicaragua Construction Company and stop there than to build another canal. In fact, public opinion will not tolerate the spending of public money in a foreign country for anything so visionary as a duplicate waterway from the Atlantic to the Pacific. There is a large amount of Jingoism enlisted in the Nicaragua enterprise, but it will evaporate very fast if the ships of the Old World are not under the necessity of using the Nicaragua Canal at all.

Just before the unexpected fall of the French cabinet, a good deal of significant talk was heard in France about the need of "concentrating" political groups and factions and really setting up a system of party government. M. Goblet, for example, made a speech at Toulouse on October 19, in which he drew a vivid picture of the imbecility of the present system. It is only a question of the time any given Prime Minister will fall. His only way of getting a majority is to placate a certain number of "groups" with offices and other governmental good things. But from their very nature, by the inner law of their being, such groups will not long stay placated. One of them finds that another is getting more sub-officials or getting into more syndicates than itself, and then there is a cry to heaven. Bones must be flung its way, or the ministerial majority will disappear. But sooner or later the supply of bones gives out, and down goes the ministry. This is a wretched and nerveless system of government, says M. Goblet truly, and the aim of France should be to form two great parties in Parliament and the nation, by which something like cohesiveness and stability could be secured. For his part, he would have the Radicals and Socialists of all shades make a beginning by coalescing. This union would force other factions to unite, and thus in the next election voters would have a choice between two parties instead of being perplexed by the appeals of a dozen. Such a political consolidation is, no doubt, most desirable, but it is certain that it will not come for the first time of asking. Leaders in control of a tight little group of parliamentary votes are not going to give up their power and perquisites without a fight. It is all very fine to talk of "concentration," but they will beg leave to point out that concentration means suicide for them. Already, in fact, the Socialists have declined M. Goblet's proposals with marked coldness.

Unhappily, there is not much use in discussing the prospects of the new French cabinet. It will probably, in a few months, or it may be weeks, furnish one more proof of the impossibility of tacking on the British cabinet system to democratic institutions. Its failure was predicted at the outset by the best observers, and it may now be said to have occurred. The British system of electing ministries by the Legislature could succeed only where party ties are strong, where it has also strong traditions behind it, and, above all, where the members of the Legislature are not paid. The payment of members in a country like France fills the Chambers with small men, the great body of whom are in some way "on the make," or eager for favors of some sort. It is therefore impossible for any ministry to keep on good terms with them very long, and when they get vexed with the Minister, they also try to "get even" with him. The system would break down very soon, even in this country, where the party discipline is extremely rigid. No Minister, elected by Congress, would be long in office without creating a clique of enemies, who would determine to "have his scalp" on the first opportunity, if all that was necessary to turn him out of office was an adverse vote on almost any question that came up. Every one who listens to the denunciation of the cabinet, for the time being, by Congressmen in Washington every year must feel thankful that its tenure depends on the President. The evil is aggravated in France by the fact that public opinion in the provinces does not concern itself in the least with the quarrels of the politicians in Paris. What most concerns the French people outside of Paris is the administration, and this is very strong, efficient, and regular under all ministries. Consequently, the masses toil and spin and save and take their "consommations" in almost complete indifference to the Parisian crisis. In fact, the evanescence of the ministries has now become a popular joke. "What an inn the Ministry is," and "I always come to Paris when my father is Minister," are two of the pleasantries in recent popular plays, and they bring down the house. In fact, as long as the Chambers do not propose to fight Germany, the only power that could conveniently invade France, the provincial public takes but little interest in their proceedings. The best thing that can be said for the existing régime is that it is, on the whole, about as good as if not better than any that have preceded it.

M. Bourgeois pledges himself to enact a bill prohibiting members of either Chamber from holding positions as directors in companies having contract relations with the state. Such a measure might easily become law, as everybody would feel bound to vote for it, and no corruptionist would find it at all hard to get around it. Members of Parliament who have been paid for their legislative services to corporations by being made directors, would simply have to take their fees as counsel, conciliators of public opinion, or in some other guise easy to assume. To pass in England such a law as the one proposed in France would vacate half the seats in Parliament, and no one would think of suggesting it. The difference is, of course, the difference between a Parliament made up largely of a wealthy and leisured class serving without pay, and one composed mainly of needy local politicians and country lawyers, paid, but poorly paid, and trained to look upon a political life as the way to make a fortune. There is a marked English sensitiveness about directors in public office, but it relates purely to members of the ministry. Some three-score directorships were held by members of Lord Salisbury's Government when appointed to office. Mr. Balfour, when questioned about it in the Commons, laid down the rule that was to be followed. No member of the Government was to be allowed to hold a directorship in any company that might have legislative favors to ask, or a directorship the duties of which would consume time that properly belonged to the public service. As a consequence of this rule, fully half of Lord Salisbury's directors in office promptly severed their connection with their companies. This was enough to still the mutterings of the most savage radicals.

THE REAL MISCHIEF OF JINGOISM.

SOME of the wretched Jingoes declare that we calumniate them when we say they are seeking to drag us into war. They declare there will be no war; that they never meant to go to war; that what they are doing is preserving what we must call an attitude of manly asininity towards foreign powers, especially Great Britain. But no rational person ever supposed that the issues of war or peace were in their hands, that they could open hostilities with anybody, or that they would ever themselves be caught within five hundred miles of a battlefield. They are no authorities on any subject of either national or international concern. Nobody minds what they say about the right or wrong of any international dispute. What we accuse them of is active hostility to American civilization.

In the first place, they try to destroy the influence of the last eighty years of international peace by preaching the barbarous European doctrine that war is a noble and inspiring national occupation, no matter what its cause or aims; that a nation can be elevated by slaughtering great numbers of young men and laying waste vast tracts of country, and by practising on an immense scale and for a considerable period the highwayman's doctrine that might makes right. In the next place, they make it difficult for the officers of the Government to approach any international question in a spirit of legality or justice, by producing the impression that the public will consider any such spirit a sign of meanness and want of patriotism. In the third place, they degrade us and make us ridiculous in the eyes of the civilized world by opening every controversy with epithets and abuse, so as to make our diplomacy look like a row between a bartender and a lover of free drinks.

In other words, they powerfully reinforce the influences which are to-day tending to barbarize the United States, and against which good men and women are everywhere fighting, one might say, for their lives. For example, we do not believe there is a single civilized country but our own to-day, in spite of the great armaments of Europe, in which public men like Lodge, and Ware, and Grout, and Chandler would get up and publicly advocate war as a profitable and useful undertaking, in the absence of any distinct quarrel with anybody. There is in the Old World great pride in war and respect for military virtues, but every one who speaks of it publicly speaks of it with horror as a dreadful necessity, and recognizes its savagery. Even the commanders of all the great armies profess to-day to be working might and main for peace. It is only in the United States that we can find statesmen clamoring for war as a sort of commercial venture, and as a good means of teaching patriotism to the young. They talk of it, in short, as an Indian chief might talk who was organizing a war party against a hostile tribe.

To appreciate the full significance of this, it has to be taken in connection with such incidents as the rising of "labor" two years ago to block the national highways, and inflict untold suffering even on women and children, in order to settle a trumpery trade dispute; with the frequent attacks on jails by armed lynching parties, not in the frontier States only, but all over the country; and, above all, with such occurrences as the following which was reported in all the papers on Wednesday week, and which passes as an ordinary bit of news, though it is not the first, second, or third event of the kind:

> "Henry Hillard, a negro, who assaulted and murdered Mrs. Leonard Bell, the wife of a young farmer, near Tyler, Tex., on Monday night, was captured yesterday and burned to death in the public square at Tyler by a mob of 300 armed men, and in the presence of thousands of persons, including women and children. The negro was slowly tortured to death, the fire being quenched at intervals to prolong his agony."

Such things are now absolutely numerous. What is the effect on the "women and children"? It would not be unnatural or surprising if a community fed on such horrors should eventually abandon peaceful industry and turn buccaneers.

It is to be observed that nearly all the noisiest Jingoes are Republicans, and this is what one might expect from the outburst of what we might well call ferocity which marked the close of the high-protection period. The last effort to save the McKinley bill and make necessary a large revenue, as our readers may remember, consisted in vigorous stimulation of the hostility to foreigners. The Republican orators revelled in descriptions of the sufferings our new tariff had caused among the European working poor, and Mr. Chauncey Depew produced, as McKinley's highest title to admiration, the fact that there was no American so detested abroad as he was. The demand for a large navy as a good way of spending money when the pensions as a source of expense were exhausted, had then to be supported by vigorous denunciations of other naval powers, and wide-spread reports of their evil designs against American peace and honor. From these things an open demand for war, as an end in itself, for education, for glory, for money, or even for fun, was not far off, and now we have it.

The effect of all this on our public life, too, is very visible. The young men who go into it, far from modelling themselves on Webster, or Clay, or Marcy, or Seward, or Everett, or Adams, to say nothing of the founders of the republic—far from trying to speak with the voice of any of these eminent men on international law, or on currency, or exchange, or trade, or commerce, or trying to become trusted authorities on any of these questions—are taking up the rôle of international swashbucklers, as the true way to political promotion, and "holler" for more ships, and hurl defiance to the four corners of the earth. It is a melancholy fact that there is to-day not a single man in public life who is listened to with respect or confidence on any of these topics. Daniel Webster's place in the Senate is filled by a man who sought to discriminate against the goods of a foreign nation in order to make it change its standard of value, and a pupil of his has urged us to avoid arbitration as a means of settling international difficulties. In fact, the kind of instruction our leading men are pouring out on a much troubled people would, if effective, carry us back before long to the condition of the barbarous tribes whose only peaceful occupation was raising corn and bacon to feed the fighting men. That the America of Washington and Franklin and Jefferson should come to this in a century, shows the absurdity of political prophecy.

WHO MADE CROKER?

THE great significance of the two checks for $125 each which Mr. Greene, the Chief Engineer of the Dock Department, says he sent to Richard Croker in order to retain his place, lies not in their amount, nor in the conditions under which they were sent, but in the undoubted fact that they are samples of thousands of similar remittances to the same man from various elements of this community. If every man in this city who holds vouchers which have come back to him through his bank with the clumsy and ignorant scrawl of "Richard Croker" on the back, were to come forward with them, what an innumerable cloud of witnesses should we have as to the sources of Croker's wealth! Croker himself bears testimony voluntarily on this point by saying that he does not "care a damn" about Mr. Greene's revelation, that his (Greene's) checks "were sent, like many other checks, as campaign contributions," that "it might prove interesting reading to the public if the names of some of the men who have contributed to the Tammany Hall campaign fund were published," and that "there are many members of the Committee of Fifty that have sent generous checks to the campaign fund of Tammany Hall, and *these checks were endorsed by Richard Croker.*"

It will be observed that Croker admits that it was the custom to draw the checks, as Mr. Greene drew his, to the personal order of Richard Croker. What Croker did with the proceeds was nobody's business except his own. He deposited Mr. Greene's checks in his personal bank account, and all others undoubtedly went the same way. There was no accounting to anybody. Croker was at liberty to spend as much of the money as he chose for campaign purposes and to keep the remainder for himself. As we have pointed out repeatedly in the past, no financial position in the world compares for a moment with the position which Croker held in Tammany Hall, so far as opportunities

for sudden and great wealth are concerned. Every office-holder in the city was compelled to do what Mr. Greene did in order to retain his place. Every candidate for a Tammany nomination for office was forced to contribute anywhere from a few hundred dollars up to as high as $25,000 or even $40,000 for it. Every corporation in the city which was at the mercy of Tammany officials here, or a Tammany-controlled Legislature at Albany, made its contributions also. No account was kept in the name of the treasurer of Tammany Hall. Small wonder that Croker snaps his fingers in the face of the revelation of his system of obtaining vast wealth, and says: "As for those checks, I don't care a damn about them." Why should he? He has received the money for every one of them. He is rolling in riches; has something like a half-million dollars in a stock farm and racing-horses; only a day or two ago bought a new horse for $25,000; lives in an $80,000 house; has a fine residence in London; rides in handsome carriages, and, when he travels over the country, has a special car for himself and family. No man, under such conditions, would "care a damn" for the full revelation of the system by which he attained his wealth.

The men who ought to care are the contributors. Mr. Greene does not appear to think that he did anything discreditable when he bought retention in his office of Croker for $125 a year. The men who contributed to his campaign fund possibly did not think that they were doing anything discreditable, though they were buying legislation, or immunity, from him. They were recognizing his right to sell them the government of the city in which they live. All the men who sent him checks contributed to his power as the ruler of New York. They are the makers of Croker and of all Tammany bosses, past, present, and to come. Their money it was which made the power of this ignorant, brutal wretch, who came to this country from a foreign land, and from youth to manhood spent his days in brawling and carousing with one of the worst "gangs of toughs" that the city has ever known. His power and wealth were bestowed by American money, and if all the checks upon whose backs "Richard Croker" has been scrawled with such visible effort could be held up to the light of day, the names signed to the great mass of them would be found to be those of good Americans.

This is the crowning shame of the matter. The system whose methods Mr. Greene's checks reveal has been known to exist for a long time. We have now the visible proof of its working, and for the first time Croker's confession of its simplicity and perfection. Small wonder, in view of the great success which he has had in the operation of the system, that he should be indifferent to its exposure and to public opinion about it. For him "the past is secure," and he cares nothing for the future. Nothing can be revealed which will injure his character. What he did as Tammany boss was exactly what was to have been expected of a man of his antecedents. The "government" which he gave the city, and which so many reputable persons went about saying was "really a very good government," is now seen to have been a division of plunder by rascals and thieves who kept up an outward semblance of decency in order that their opportunities for plunder might be continued. This was precisely the kind of government which was to be expected in payment for cash. Could anybody expect that a scoundrel who had bought the power to rule would rule honestly? Many people seem to have expected a miracle of this sort, but we are glad to believe that they have been convinced of their error.

Croker's use of the word "informer" is an interesting reminiscence of the experience of his Irish parents. He himself came to this country at the age of twelve, but he must have heard his father and mother and their friends often discourse on the peculiarities of the political system they had left behind them. "Informer," in the mouths of Irish Catholic peasants, means a man who gives evidence against his confederates in a criminal conspiracy of a political or agrarian character. It is not used to describe a witness in a prosecution for any other crime, or in the prosecution of a single man. The "informer" is generally, if not always, a man who has become acquainted, either as *particeps criminis* or otherwise, with the offences or designs of an organization of some kind engaged in criminal enterprises, and gives evidence against its members in a court of law, or puts the police on its track. So thoroughly demoralized have the Irish people become, too, that the character of a witness in such a prosecution is, in the eyes even of those who hate or suffer from the crimes he exposes, the very basest a human being can bear. Some illustrations of this which came out in the disturbances that followed the rise of the Land League in 1880 are among the most curious incidents in the history of human society. It is not unnatural that this tradition should make a deep impression on a man like Croker, whose own youth was passed in an atmosphere of hostility to the police and the law. Moreover, we have no doubt that if the mind of the great body of the more ignorant Irish supporters of Tammany could be got at, it would be found that Tammany was to them a vague and shadowy reproduction of the "Peep-o'-Day Boys," "Whiteboys," "Moonshiners," and "Molly Maguires"—that is, an organization which somehow came in between them and the Government, and gave them protection and succor which the Government ought to give, but does not.

Croker's refusal to tell what becomes of the money he receives, on the ground that if he told he would be an "informer," shows that some such view of the organization is in his mind, though he does not perceive the consequence of revealing it. In fact, Tammany greatly resembles the "Molly Maguires" in Pennsylvania. Those who remember the history of that organization will recall that it got its members, some of them notorious criminals, into the county offices, and thus barred the course of justice against its murderers. The indifference of Tammany to the character of its men springs from the same source. Although it had full command of the city offices only for a year or two, the number of indicted men and public brawlers and semi-criminals whom it managed to thrust into city offices was a striking proof of the extent to which the organization had, in the minds of Tammany men, supplanted the State. Croker himself rose into power from the ranks of the criminal classes, and it would probably be impossible to-day to shake his power by bringing any accusation of crime or illegality against him. Saying he stole would be very like saying a Moonshiner had shot an "informer," or a "Molly Maguire" had killed a foreman. In fact, Tammany's cohesive power is easily understood by any one who is familiar with Irish peasant life. What is not so comprehensible is the number of native Americans who belong to it—some of them, like Cram and Comptroller Fitch, men of education—and the still greater number who are willing to use it and work with it for party purposes.

LITERARY ADVICE AND PATRONAGE.

Some unpublished letters of Sainte-Beuve's, lately printed in the *Figaro*, yield an instructive idea of the great critic's attitude towards literary aspirants who sought aid and comfort from him. A young Breton, M. Luzel, with a provincial reputation as a poet, had come to Paris in 1855 to try his fortune, and, after some months of literary ups and downs (mostly downs), applied to Sainte-Beuve for advice. He got it, cold and unwelcome. Sainte-Beuve honestly told him that his poetry was only ordinary, and that, at his age (thirty-four), it was doubtful if his verse would ever acquire the originality and impact which it lacked. The thing for him to do was to go back to Brittany and resume his position as teacher. M. Luzel was obstinate, however, and continued, for a time, to cultivate literature in Paris on a little oatmeal, saying to himself that he would teach the critic not to consider himself infallible. But it was not long before he was glad to arise and go to his father, and in later years he could not say enough of the wisdom and real kindness of Sainte-Beuve's advice.

In one of the latter's letters to Luzel is the following passage:

"To give you a sort of preface or letter of introduction, to be placed at the head of your collection and so aid you to find a publisher, is a kind of thing I have never done. No critic with independence and reputation to guard

ever does it. That form of good-nature, moreover, does not long deceive anybody."

There is solemn truth in this for critics, and if we did not believe that all our Sainte-Beuves already appreciated it and acted upon it, we should be tempted to give them a word of exhortation. But there is equally solemn truth in it for the thousands of young men and women who still go to Paris, as they did in 1855, and to London and New York also, to seek their literary fortune. Out of the heads of too many of them it is impossible to get the idea that the thing is to be done by trick or favor. The whole secret, they think, is to get properly introduced, to be launched under favorable "auspices," to secure weighty patronage. This idea is at the bottom of the numerous literary associations that are founded, ignorantly or fraudulently, to persuade obscure writers that a way has at last been found to give the humblest author a powerful friend at the editorial court. "Your manuscripts," they say to their victims, too ready to be convinced, "are fully as meritorious as any that are published, but they are rejected because you have no one to bring them to the editor's favorable notice. Pay us for doing it, and your light will no longer be hid."

Now, that there is such a thing as literary boosting, or that it may be highly successful for a time, we should not think of denying. Examples to confute us, if we should, would be too ready to hand. But it still remains true that, as Sainte-Beuve said, such boosting cannot be long successful. Examples of this also are ready to hand. To mention names would be invidious, but every reader with a memory can recall writers boosted high, five or ten years ago, only to fall the harder and be the more thoroughly forgotten. In the long run, "auspices" can do nothing for an author, except, perhaps, to hasten a little his opportunity for a hearing, and whether that will do him any good depends on himself; it would have been found by himself, sooner or later, in any case. A great deal of confusion on this point has survived as a superstition from the time when literary patronage was essential, because without it there was no such thing as publishing at all. But the Mæcenases and the Elizabethan nobles are only nuisances, as literary go-betweens, in an age when editors and publishers are bidding wildly against each other for every scrap and kind of popular writing.

The old literary ambition will long continue, and long may it. The Daudets and the Luzels will keep on going up to the great capitals, and crying with swelling hearts, as they catch the first glimpse, "À nous deux maintenant!" But they ought to understand what a tough and remorseless antagonist they are challenging, how increasingly cynical he is about literary recommendations, and that the one thing which will lay him on his back is demonstrated merit. Hence the inevitable emptiness and uselessness of the literary advice, so eagerly sought, so wearily given. The best advice, in fact, comes down to the form of two questions. The first is: "Are you a genius?" If this can be answered in the affirmative, nothing further need be said; no advice is possible, no help is needed.

But if, by any possibility, the answer is negative, then all that is left to ask is, "Do you know anything? Do you know any one thing better than any other one man? If you do, can you write it out in a way to command attention?" If so, the world is an opened oyster before you. We lately saw a letter from a well-known writer who was speaking a good word for the literary life. He said that his first offering to a newspaper was accepted, his first magazine article likewise, and his first book also. But he omitted to give the reason. The work was that of a specialist in each instance. Neither paper, magazine, nor publisher could have got just that matter from any other source. There is no mystery, no favoritism, in such success. Even in our age of ignorant scribbling, the men who know are heard gladly. But if you do *not* know, if you know only as well as thousands of others who are in possession ahead of you, the best thing you can do is to go back and learn. To genius the world will surrender on sight; to knowledge it will surrender all in good time; the aspiring writer who has neither, had better look out for a soft place to fall.

There probably never was a time when it was more important than it is now to insist that writing does not come by nature; that "happy-thought" literature is worth no more than happy-thought law or medicine; that long apprenticeship and study are as essential to the writing art as to any other. Hence the harm of such rash prophecies as the one just put forth by the editor of the *Century*, that we in America are on the eve of a great "revival of creative literature," because we have so many interesting "problems," because we are growing very "serious" (evidence for this not given), and because so much attention is now bestowed upon municipal politics and charities of all sorts. Creative literature is a mysterious business, but we are certain there cannot be any without creators, and we would ask what signs there are that we are on the eve of them in any great numbers. Creation *ex nihilo* may pass in theology, but it never will in literature. Forty years ago an acute critic wrote: "The reason why so few good books are written is that so few people that can write know anything." Even the bare art of knowing how to write has declined since then, from lack of knowing anything to write about, if we may believe the late Prof. Nettleship. In an address on "Natural Science and Literature," he had something to say which it would be well for the smooth prophets of creative literature to consider, and which critics giving, and young writers seeking, advice may profitably ponder:

"I am bound to say that for some time past, at least in England, there has been more of manly effort, more of patient self-renunciation, among the students of natural science than among the students of literature. . . . In the present generation it seems to me that a kind of paralysis has seized upon the thinking power which should produce good literature. One cannot but notice, side by side with a restless desire to produce, a curious impatience of the labor of learning, of thinking, and even of writing well. Emotion, sentiment, a newly awakened interest in a subject, are taken as ample justification for writing about it."

THE ATLANTA EXHIBITION.

ATLANTA, October, 1895.

THE wrong way to estimate the importance and comprehensiveness of the Cotton States and International Exposition at Atlanta is to ask those who have visited it if it is as good as the World's Fair at Chicago. This, however, is the question most commonly put. We must set aside comparison with Chicago, and judge the Atlanta Exhibition on its own merits. The managers of the World's Fair attempted to carry out a gigantic and difficult undertaking. Backed by the whole country, and with the official participation and aid of numerous foreign countries, they succeeded admirably. The managers of the Atlanta Exhibition, with little besides the support of their own town of 110,000 inhabitants, 50,000 of whom are blacks, planned a comprehensive exhibition on the general lines of international shows, pushed the execution of their project with indefatigable industry, and now present a general exhibition the completeness and extent of which, considering the conditions of the enterprise, are extraordinary.

The exhibition grounds are situated in Piedmont Park, about two miles from the centre of the city and easily reached by trolley-cars and omnibuses. There is a large plateau with high ground on one side A lake and stream called "Clara Meer," a plaza about equal in area (at a guess) to Madison Square, and wide avenues are the decorative features of the plateau and the means of communication between the buildings. There are gondolas and electric launches on the lake, omnibuses on the roads; and broad flights of steps reach up from the level to the higher parts of the grounds. About the only distinctively bad things in the decorative scheme are some tall columns placed about these steps. They are surmounted by figures which are in general about as good artistically as the ordinary Indian tobacco-sign. A frieze in color in the portico of the Art Building is of no better quality, but makes a good spot from a distance. The Art Building, the Woman's Building, the Pennsylvania Building, and the New York Building are the best on the grounds in general aspect and purity of design. Few of the others are pretentious, and all seem well adapted to the purposes for which they were erected. None of them offends by positive bad taste. The color scheme for the larger buildings is bluish gray with white trimmings, and the roofs are colored moss-green. The Art Building, a pretty and commodious structure of Renaissance design, the Woman's Building, and some others are entirely white. The general effect is good, and a bird's-eye view of the Exhibition embowered in the forest that surrounds and reaches into the city is altogether pleasing. There is a "Midway," as at Chicago, called here the "Midway Heights,"

and it is a very good pleasure street. Some innocent attractions, such as the very interesting "Old Plantation," are infinitely better than the so-called Oriental shows. Cairo Street, with the exception of some long-suffering but picturesque camels, with their native drivers and "shouters," is a Cairo street only by a most vigorous effort of imagination. By night the grounds and buildings are lighted up by electricity, with fine artistic effect. It is so well done, indeed, that it suggests the thought that new appliances and methods have been added to those adopted two years ago so successfully at Chicago. Red fire is used at times in addition to the electric illuminations, and the general effect is fairy-like.

High praise is due to the directors of the Exhibition for their management of the difficult question of making awards. President Gilman of Johns Hopkins University was appointed Commissioner of Awards. He was ably seconded in the details of his work by Prof. Gore of the Columbian University at Washington, who was United States Commissioner-General at the Antwerp Exposition, and by Mr. John Birkinbine of Philadelphia. Dr. Gilman appointed a jury that included some of the best-known and ablest educators, experts, and critics in the country, and the Atlanta people had the satisfaction of seeing arrive in their city on the 15th of October a body of men who constituted a better jury of awards than any other exhibition in this country has had, and one quite competent to judge at any international exhibition. The citation of a few names from the list of judges is sufficient proof of this. The list includes: Gen. Henry L. Abbott, U. S. Engineers; Presidents Adams of Wisconsin, Mendenhall of Worcester, Dabney of Tennessee, MacAlister of the Drexel Institute, Philadelphia, and Miss Irwin, Dean of Radcliffe College, Harvard; Profs. Simon Newcomb of Washington, C. S Sargent and I. N. Hollis of Harvard, C. B. Richards of Yale, Rowland and Remsen of Johns Hopkins; ex-Gov. Bullock of Georgia; Admiral Belknap, U. S. N.; G. Brown Goode of the Smithsonian Institution, D. H. Burnham of Chicago, and Thomas Nelson Page. These gentlemen and their associates have publicly testified to the extent, variety, and excellence of the exhibits in the separate sections within the scope of the exposition. While not officially represented in the exact sense of the word, there are creditable displays in the building for Manufactures and Liberal Arts from Great Britain, France, Italy, Germany, Austria, and Russia. Mexico, Chili, and other South and Central American countries have duly accredited commissioners and comprehensive or special exhibits. The State of Georgia, in a large building of its own, displays its natural resources and home industries, and California and other States do likewise. In the Negro Building the progress and achievements of the race are shown in education, science, and labor. A Japanese village and a number of restaurants and cafés offer refreshment and food to the visitor, and, with its lawns and oak trees enclosed by an iron fence, the pretty house of the Piedmont Driving Club, flanked by the New York and Pennsylvania buildings, furnishes hospitality to its guests, and makes a convenient and fitting place for official luncheons. The United States Government has a large and well appointed building, and makes therein an exhibition that is generally conceded to be the best it has yet presented.

The standing committee of the Exhibition on the Department of Fine Arts wisely decided, when plans were laid, to secure the services of a competent chief or superintendent who should set to work to obtain as complete and representative a collection of works as possible. This task was allotted to Mr. Horace Bradley of New York, a native of Georgia. The result of his labors is seen in the exhibition in the Fine-Arts Building. The excellent portraits of the colonial and Revolutionary periods in the State exhibits in the Woman's Building were brought together under other auspices. The exhibition proper in fine arts consists of between 1,000 and 1,100 works in oil painting, sculpture, water-color, black-and-white drawing, and etching. There is a special exhibit under the head of "Mural Painting," and a good collection of architectural work is sent by the Architectural League of New York. The exhibition of sculpture would be considered an excellent one in New York, and is simply a revelation to the average Southern visitor to Atlanta. It includes groups and figures of heroic size, such as "Gallaudet and his First Deaf-Mute Pupil," by D. C. French; J. Q. A. Ward's "Pilgrim"; F. Wellington Ruckstuhl's "Mercury Teasing the Eagle of Jupiter"; medals and bas-reliefs in bronze by the great French artist Vernon; half-a-dozen small bronze figures by F. W. MacMonnies; figures, busts, and bas-reliefs by Olin L. Warner, Herbert Adams, W. A. Davis, J. Scott Hartley, Wayland Bartlett, E. C. Potter, and other well-known sculptors. The collection is a large one, filling the entire central gallery, and is catholic and representative in character. It is not marred by bad work.

Mr. Bradley's representations to French and other artists, together with the zeal of some of the foreign commissioners, have resulted in bringing to the art galleries a collection of pictures which, while it lacks, of course, most of the familiar names, yet includes some that are of the first rank. Two delightful works by Olivier Merson, "Je vous salue, Marie!" and "L'Ermite"; "Danse Enfantine," by Mme. Demont-Breton, and "La Légende," by Adrien Demont, are conspicuous. Mme. Madeleine Lemaire, Louise Abbema, Souza Pinto, Checa, Belloni, Nunes-Vais, and J. H. S. de Haas are other foreign exhibitors. A group of water-colors by Weissenbruch, Mme. Roosenboom, Kever, Valkenburg, Hanrath, Duchattel, and other painters of the Dutch school is especially noteworthy. Many of the best American painters, both at home and abroad, are represented. Portraits by Miss Beaux of Philadelphia, Vinton of Boston, Eastman Johnson, Beckwith, and Fowler of New York, and Hinckley of Washington are notable. A fine little picture of a lady in black is by H. Van der Weyden of New York. Twenty-eight pictures, depicting landscape and landscape and figures, are contributed by Theodore Robinson of New York, and well exemplify the methods of a clever and artistic painter. Two figure subjects by R. W. Vonnoh; a large and ably handled genre, "Brittany Legend," by Henry Mosler; two large decoratively treated canvases with well-drawn figures by Mrs. Mary F. MacMonnies; "Upland Cotton," a new work by Winslow Homer; "Christmas Bells," by E. H. Blashfield, and subject pictures by Messrs. Walter Gay, Gari Melchers, Bridgman, C. S. Pearce, Du Mond, Weeks, H. R. Butler, J. G. Brown, Curran, Albert Herter, and others give variety to the walls and set a standard for the exhibition. In landscape work there is nothing quite so good as "Abandoned," by Charles H. Davis; and Mr. Howe's cattle and sheep, Mr. Bisbing's bulls in combat, and Mr. Horatio Walker's pigs in a "Siesta" are the prominent canvases in animal painting. Other excellent landscapes are shown by Messrs. Woodbury, Steele, Picknell, Ranger, Whittredge, Parrish, Hayden, and Whittemore. Messrs. Richards, Nicoll, and Chapman are the noteworthy painters of marines. Some delightful water-colors are signed by Miss Kate Greatorex. Her skill in broad treatment of this medium is most effectively shown in "Bateau-Lavoir, Moret, France," and forms a striking contrast to the charming, carefully finished drawing in color, by Albert Lynch of Paris, intended for the title-page of the American edition of Louis Morin's 'French Illustrators.' The water-color and black-and-white drawings form a strong feature of the art department, and the catalogue includes the names of many of the best American water-color painters and almost all of the noted illustrators. Twelve large working drawings in color for figures of the apostles, executed in mosaic in the Church of the Madeleine, Paris, by Charles Lameire, and some four or five mosaics by Grasset, are especially worthy of mention in the department called "Mural Painting." Here, too, are representative projects or finished works by John La Farge, Shirlaw, Low, Blashfield, Armstrong, F. S. and Ella Condie Lamb.

Well placed and well housed, the Fine Arts Department, which might, perhaps, have been expected to be a weak display at Atlanta, is seen to be one of the best parts of the Exhibition. There are no pictures whatever by some of the most celebrated American painters, but this deficiency, while apparent on reflection, is not felt in a general view of the galleries. What has been brought to Atlanta is of so good an average of merit that the first impression is one of completeness. Now that visitors to the great Southern Exhibition have the opportunity to see for themselves the present state of American art, perhaps a more general appreciation may follow, just as occurred in the West after the Philadelphia Exhibition of 1876—an appreciation that gained in acuteness and breadth as a consequence of the World's Fair at Chicago in 1893.

WILLIAM A. COFFIN.

THE VENETIAN ART SHOW.

VENICE, October 22, 1895.

THE International Fine Art Exhibition which is about closing is especially interesting in its display of *fin-de-siècle* tendencies of all modern schools. Every variety of method now in vogue seems to be represented here, although few of the most important foreign artists have deemed it worth their while to send their best works, and some send only studio rubbish, unsold failures, which to a great extent deprives the exhibition of its intended value as representative of living art.

A cursory survey of the Italian section impresses us with the fact that the art of Italy of our own time has received its inspiration from Paris rather than from the example of the great native masters. There are a few exceptions, as, for instance, Giovanni Costa and his pupils, but they are not well represented. The master himself has a work which is very splendid in color and interesting in composition, "Ad Fontem Avicinum"; but figures are not his forte, and there are too many obvious defects in drawing in his peasant women around the fountain not to mar the general effect. A work which has attracted quite unmerited attention is Grosso's "Il Supremo Convegno" (The Last Meeting). The indecency of the subject excited the Patriarch of Venice, after visiting the exhibition in the

spring, to write a pastoral letter to the faithful through the Venetian papers, exhorting them not to go there. To this day there is a placard in Latin to the same effect hung up in the sacristies of the churches. But although Venice is considered especially clerical in its tendencies, the letter attracted an immense crowd continually before the picture, so that for many weeks two municipal guards had to protect the safety of this work of art from the pressure of the great concourse of people. Granting that it is permissible to every artist to choose his subject, and that the dramatic quality is not lacking here, Grosso cannot be considered a great artist, excepting in a certain brutal power of realization; his flesh painting is hot in tone and wanting in delicate gradation of color. The same lack of any refinement or subtlety is chargeable to his vast canvas, evidently a portrait, of a woman with bare shoulders in a white satin dress against a white background, called "Sa Majesté la Femme"—a type of femininity appealing to man's lower instincts. This lady seems to preside over the show, greeting the eyes of any one entering, and her supremacy would account for any falling off of the race of this pleasure-loving people.

On our left is Giuseppe Ferrari's very black "Transiat a me calix iste"—Christ with outstretched arms in a wood of ilex trees. This picture also is of a size quite disproportionate to its poverty of design. The Saviour of men has assumed the person of a common Abruzzese model, and the artist has limited his range of color to terre-verte, black and white. Far more amusing is the work of the "Vibrists" on the opposite wall. This sect paints in streaks of primitive colors which fuse together when seen at a distance, but which look like an obsolete form of Berlin wool-work when one is rash enough to approach. Morbelli has represented the figures of seven women from the middle downwards, standing in water at work in a rice field; there is only one head (in profile and covered with a handkerchief) to the seven, and six of them are, but for variations of color in their cotton skirts, exactly alike in position and equidistant from each other. In simplicity of design this beats the Primitive school. An Italian critic calls this style "la pittura del morbillo" (the measles style of painting), and the expression exactly describes the appearance of the fourteen colors of the stooping forms. Segantini paints now on the same principle, but has besides entirely smeared the underpainting of his picture with particles of gold, which breaks the color. This picture, No. 311, "The Return to their Native Soil," peasants in a cart going along a mountain path under a rosy sky, is a sad falling off, through perverse mannerism, of a painter who, in his early work, had great freshness of conception and originality. Previati, another "Separatist," adding mysticism to this deplorable manner, contributes "The Burial of a Virgin," a procession of shadowy women following a bier and winding away into infinite distance, as if the phantoms of Saint Ursula's eleven thousand had come to the funeral of the last of their kind. Oreste da Molin, a Venetian painter who loves to depict the humorous side of life, sends a picture entitled "By the Day at Two Francs," an episode in the existence of the unoccupied. Two clerks, in threadbare, patched clothes, are doing up accounts, while a third, not having any work, is hungrily gnawing at a bare thigh-bone of antediluvian dimensions. The painting is extremely clever, the scene lifelike, but savoring rather of caricature in the emaciated types of the clerks.

Of the Italian Impressionists, Boldini, a Ferrarese painter, long established in Paris, holds the palm. His portrait of a child in black and white against a slate-colored background is the best thing of its kind here; the head is excellently modelled and drawn, but the long thin legs, stockinged in black silk, finishing in pointed black shoes, are inordinately drawn out. A pastel of Verdi, in the same room by the same artist, is also in excellent style. Occupying the centre of one room is Laurenti's "Parable" in two compartments separated by a column of its frame. The artist represents steps going up on the left, with children and maidens rushing on full of joy, a marriage at the summit; on the right, figures clothed in sober colors are descending. Notwithstanding a certain weakness in drawing, this picture, painted in tempera, makes a good impression through its freshness of color and its simplicity of treatment.

Michetti, who is regarded by Italians as their great genius, sends the "Daughter of Jorio," a work which has received the highest prize, and which Italians are inclined to consider the most remarkable work in the exhibition. The catalogue advises us to place ourselves as far as the room will allow from this picture in order to enjoy the general effect. At a first glance it occurs to the spectator that this is a sketch in which only the heads are finished and the rest roughly indicated on a coarse gray canvas, such as is used for the sail of a boat; but on closer examination it is evident that the striking eccentricities are intentional, and that the artist is satisfied that he has produced a great work, for which studies for the principal heads, of gigantic proportions, hang on either side. The scene is in the Abruzzi, and represents a peasant girl, shrouded in brown, in the costume of the country, resolutely walking down hill, her head bent and covered so that only the end of her nose, and lip, and chin can be seen. The outline of her back indicates that she is carrying a baby in the shawl wound across her shoulders and head; her movement of stepping down hill is that of a wooden doll of prehistoric mechanism. On a ridge of land above her a number of men are lounging in nonchalant idleness, observing her and sneering at her. One of this company has no head, the picture ending at his shoulders—no feet either, for a mound of earth hides them from view; we are told in explanation, again by the catalogue which acts as the chorus in a Greek play, that "the woman is the daughter of Jorio—she who sinned for love, and who, through her sin, is branded with shame and fascination. She is passing along a mountain path, followed by the derision and evil desires of the men lying along the stony mountain ridge in lazy attitudes." The expression on the men's faces tells the tale well enough; but why all effort should have ceased there, is a mystery the catalogue does not attempt to elucidate; nor does it explain why the picture is placed outside its frame instead of being inside, according to long-established custom. Were not the frame an elaborate design of wild mountain flowers and grasses in relief, we might suppose that the misfit was accidental. On examining the foreground, we note that the inequalities of the surface, meant to represent rapid execution, are produced by the canvas having been, as a preparation, besmeared with plaster, lumps of which give texture by actual light and shade. Michetti is the most prominent of the Neapolitan painters, and has a number of followers who believe this to be a great work. It seems incredible that, with Tintoret's painting within reach, such mountebank trickery of the brush should be seriously discussed. Morelli is another Neapolitan of mark who is responsible for a very weak picture of Christ in the desert being ministered to by angels after having been tempted. This has neither the clever painting of his usual work nor the modernity of conception which is his chief merit. The Italian artists of the present day are not imaginative; the only work which passes muster is of realistic tendency. Rotta has a clever representation of the pleasure-ground of a mad-house, in which the patients are taking the air, each displaying his own peculiar form of madness. The picture is painted in a gray key sympathetic with the theme, with a remarkable open-air quality, and is full of character.

The pictures of Venice which are noticeable for extremely clever work are the "Piazza of St. Mark," by Zezzos, which is somewhat injured by a multitude of open parasols and umbrellas in the foreground, and a "View of the Grand Canal" by a very young, self-taught man, Feruccio Scattola, the *traghetto* and water in the foreground being quite admirably painted; it is a pity that the point of view has been chosen haphazard. To be quite modern "il faut faire le morceau," and it matters little which. Fragiacomo, a well known painter of seascapes, has two works, neither of them as good as usual, though the King has bought one of them. Pasini, the Venetian painter *par excellence*, and one of the patrons of the Exhibition, has only an Oriental praying at the door of Sultan Ahmed's Mosque, Constantinople, which hardly does justice to his great abilities. There are several landscapes of considerable merit and some forcible portraits.

The French and English sections are not as good as one could wish, especially the former. Puvis de Chavannes sends only a red chalk study, a pastel sketch; Carolus Duran, a nude study against a brown background with red drapery, together with a portrait of a poet with a mandolin—a very living presentment, painted with great skill. Besnard has a lady in orange dress, with blue-green background and green face, and a nude called the "Vision of a Woman" rising out of a thicket of rhododendrons and pansies. Duez has a picture of a woman dressed in red on a red sofa in a room the walls of which are red. Biraud, a painter of the *grand monde*, sends a small portrait of the poet Armand Silvestre at his desk, a cigar in his mouth, while two nude muses from Olympus are floating around whispering in his ear. Dupré, and Lhermitte, the painter of French peasant life, have contributed small pictures, while Dagnan-Bouveret's famous Virgin in white in the vine-grown cloister tells all the more impressively for being one of the few simple and serious French works here. Forain has several sketches in oil, clever and at the same time trivial enough. No one could form any just opinion of the ability of the French school from the work exhibited here.

We wonder if Mr. Whistler considers his place among French or English artists. His charming "Little White Girl" is placed with the English section, and has justly received the Murano prize. This picture, painted thirty years ago, is a marvel of bright and subtle color and of studiously dexterous workmanship. The painting of the puffed sleeves of the white dress, the pink and red azaleas touched in against the cool white marble and gray steel of the mantelpiece, the flesh tints and red hair, are all most masterly in treatment. There is nothing in the whole exhibition which can com-

pare with this as a piece of entirely beautiful color. Italians are beginning to desire an acquaintance with the art of England of the present day, so that it is a pity that Burne-Jones has sent only "Sponsa de Libano," which gives no idea of his power as a colorist. G. F. Watts has only two small studies, very gray, as if seen through fog, of Psyche and Endymion and two babies, bloated in form, catching butterflies. "May Day on Magdalen Tower, Oxford," Holman Hunt's well-known picture, is very much observed; there is no scamping of work here—every face is a careful portrait, every flower has modelling; the clouds also have the effect, from excessive elaboration and relief, of being made of solid substance. Some of the boys' heads are quite beautiful in drawing and in type, but the portraits of the fellows' heads singing look galvanized. It is a work which fills us with sadness to see honest study resulting in a thoroughly unsatisfactory accomplishment. Sir F. Leighton's "Andromeda" has none of the directness and grace of line which usually characterize his work, and the dragon is weakly grotesque and unimaginative. W. B. Richmond and Breton Riviere are represented very poorly by the "Bath of Venus" and "Ganymede" respectively. Millais's well-known "Ornithologist" is certainly the best English picture in the exhibition, though painted years ago; the head of a little girl to the left is delightful in freshness of painting, and so is that of the young mother bending over the invalid. It is a stronger and more sincere work than any of Millais's later years. Alma-Tadema's miniature-like portrait of a lady has all his skilful, minute treatment of detail. There are several English landscapes of interest—one by Davis, one by East, a Venetian summer night by Fisher, "Our Village," by Herkomer. Among the portraits of distinction is Ouless's Cardinal Manning, quite the best in this section and splendid in color. The American painter Alexander sends a *pro fil perdu* and back of a gray lady in a stiff gray dress starting out of the frame, a red ribbon the only note of color. This, and another back of a woman in a black ulster, with her reflection in a looking-glass, have been much noticed for their graceless eccentricity, and by no means respond to the painter's early promise.

The German room in the exhibition contains an excellent portrait of the Emperor by Max Koner, several portraits by Lenbach, very scratchy and black in color, with the quality of colored drawings rather than works in oil. Dettman's picture of a child's funeral in a fishing village on the Baltic is full of sentiment. This painter is considered one of the most clever of the young German artists. He also exhibits a triptych called "Work." Uhde, who is classed among the mystics, sends a "Sermon on the Mount," a well-known work. A very excellent piece of color and painting is Vogel's portrait of a priest making an architectural design. One wall is entirely covered by Karl Marr's "Flagellants," an immense canvas, containing innumerable figures, in which groups of people, stripped to the waist and bleeding, are being scourged by a priest. It is a ghastly sight, without dignity of conception or any decorative quality. These gigantic historic pictures are fortunately rare and out of date.

Among the Spanish contributions deservedly prominent is Villegas's large picture of the coronation of the Dogaressa Foscari. Here we have a subject which lends itself to decorative effect, with its Byzantine Gothic architecture and splendid Venetian costume. In the distance the Dogaressa in gold brocade is being led out of the palace; the maids of honor dancing before her fill the centre of the picture. They are in ample skirts of transparent white, with short gold bodices. To the right come the Doge and his suite, splendidly attired in stamped and brocaded velvets; he is looking towards the Dogaressa. Opposite him stand the pages in waiting with her crown, and a lady enacting the part of Venice. The arches of the palace are filled with onlookers. The ground is covered with a scarlet vermilion carpet; wreaths of laurels of vivid green are hoisted above, and in the air there are standards of many hues. The picture is a blaze of color, the costumes are very well chosen, and there are admirable bits of painting throughout, especially in the pages' heads and the red velvet and gold of Doge Foscari's robe. The face of the Doge is not a success—he looks common and supercilious; there is no distinction about him, and the head of the senator immediately following him is also too like a caricature. The picture lacks *ensemble;* there is no repose about any part, no subordination of detail for the sake of general effect.

The Dutch and Belgian artists exhibit together. Sweden, Norway, and Denmark send melancholy effects of twilight in snow and setting suns.

The sculpture is scarce and astonishingly poor. The French sculptor Frémiet sends a clown dancing, called "The Stone Age," and two small groups of extremely clever execution, St. George and his inseparable dragon, and a gorilla carrying off a woman; Ximenes, a figure of "The Renaissance." Trubetzkoy, a Russian artist who has studied at Milan, sends several clever sketches.

The building itself does credit to the painter who designed it—*Marius*, better known as "de Maria"—and is perhaps the best part of the exhibition. The façade is in the form of a classic temple, with stuccoed columns imitating red porphyry and walls of Oriental alabaster and verd-antique; it is surmounted by a Victory and eagles of bronze. M.

Correspondence.

'OUT OF INDIA.'

To the Editor of The Nation:

Sir: Will you permit me, through the medium of your columns, to warn the public against a book called 'Out of India,' recently published by a New York firm? It is put forward evidently as a new book by Rudyard Kipling. It is made up of a hash of old newspaper articles written nine or ten years ago, to which are added moral reflections by some unknown hand. It appears, of course, without my knowledge or sanction — is a common "fake"; and I must disclaim all connection with it.—Very sincerely,

Rudyard Kipling.

Waite, Windham Co., Vt., November 3, 1895.

JOHN ROBINSON'S TRACT.

To the Editor of The Nation:

Sir: You cite, in your issue of October 31, Dr. Garnett of the British Museum, respecting a copy of John Robinson's 'Manumission to a Manuduction,' 1615, which he assigns to "Leyden" as the place of publication, while a section of the catalogue of the Museum recently received assigns it to "[London]." Dr. Garnett is also quoted by you as calling this Museum copy of the tract "absolutely unique." Dr. Garnett is seldom caught napping; but he was misled by what Ashton said in his edition of Robinson in 1851, when he had not been able to find it to reprint. This omission was noted at the time by the late Dr. Charles Deane, who caused it to be printed the next year in the first volume of the fourth series of the collections of the Massachusetts Historical Society (1852) from a copy in his possession, and now in the Deane library, as kept together by his heirs. Dr. Henry M. Dexter, in his 'Bibliography of Congregationalism,' a few years ago, credited this same copy to Mr. Deane's collection. Justin Winsor.

Cambridge, Mass., November 2, 1895.

"COLLEGES" AT HARVARD AND ELSEWHERE.

To the Editor of The Nation:

Sir: The reference to the term "college" for a single building in your issue of September 24 suggests that the same word with the same sense is still used in various parts of the country. It is true that such a use is not recognized by any of the dictionaries—the Oxford, Century, International, Standard, or the dictionaries of Americanisms by Bartlett and Farmer. Yet the expression is found not only among common people, but among students as well, and in some college catalogues. Of the latter I may mention a single instance in which the names East College, Central College, and West College were given to the three buildings of an institution, doubtless without thought on the part of the trustees that the usage is not sanctioned by the lexicographers.

In the college town, common people not only use "college" in the sense referred to, but "colleges," besides the singular as a collective term. Parallel to this last usage is the expression "universities," which has been heard in a university town, although, so far as I know, "university" is never applied even dialectally to a single building. These, and other examples which might be cited, seem to indicate that common people, at least, often associate the word "college" with one of a group of buildings belonging to a collegiate institution.

In view of this similar employment of the word "college" in other parts of the country, therefore, can the quotation of your correspondent be assumed as proving even "a certain adherence to the English usage in the matter of separate colleges"? May it not be more probably—shades of Harvard Overseers pardon the suggestion!—merely a dialectal use of the word, originating in America? At any rate the usage noted is common enough to-day to deserve to be recorded in future dictionaries. Oliver Farrar Emerson.

Cornell University, Ithaca, N.Y., November 2, 1895.

CONTROL OF FICTION IN LIBRARIES.

To the Editor of The Nation:

Sir: Your comments on my note about fiction in the Brookline Public Library make it appear that a few words of explanation might profitably be added in further elucidation of a subject of real public importance. Your note as to "a full line" of trash (waiving, if you please, the question of degrees in trashiness) voices a somewhat common idea that library directors are apt to yield quite unreservedly to the public demand for unprofitable fiction. Justice to the common practice of such officers nowadays requires that the falsity of this

idea should be exposed. No more enlightened and public-spirited efforts to improve and elevate the community in its tastes and feelings are being made anywhere than those made by the persons in charge of our public libraries. In Brookline, as elsewhere, it has seemed best to cater to a small extent to low and unformed tastes, for the purpose of drawing to the library that large class (large even in Brookline, with its thousands of servants) who will not otherwise come under its influence. The inclusion, in Brookline, of Mrs. Southworth and others like her, who are excluded elsewhere, is due to the simple fact that the library was formed early, when this group of writers were taken as the best (almost the only reputable) writers who could be used as such a bait. In later years (when the Salem library was formed, for example) there was a new and better school of writers of light fiction, and there had also been progress in the public taste. The evidences of this progress, which are plainly visible in the steady improvement of the fiction called for at the libraries, is one of the most hopeful signs of the times. The Brookline library had perhaps better be "weeded" a little about this time if it would keep in the front rank in this movement. But the explanation which you think is needed is doubtless correctly given in what I have said.

Respectfully yours,

W. I. FLETCHER.

AMHERST COLLEGE LIBRARY, MASS., November 4, 1895.

Notes.

THE *Publishers' Weekly* announces an issue of the new 'American Catalogue, 1890-95,' in parts, beginning directly with A-H of the author-and-title alphabet, adding another part before the close of the year, and concluding the work as early in 1896 as possible. This for the immediate convenience of the trade and the libraries.

The same organ reports the establishment in this city of 'The Club Bindery' by thirty-eight members of the Grolier Club, which will do no work for other persons unless in default of full employment from the association. Its workshops are at 31 Broad Street.

While D. Appleton & Co. have in preparation a sumptuous illustrated edition of Hall Caine's 'Manxman,' under the author's personal supervision, with the aid of more than forty photographs—the issue being limited to 250 copies—Dodd, Mead & Co. have secured the American market for a correspondingly fine edition of J. M. Barrie's 'Auld Licht Idyls,' with eighteen etchings by William Hole, making a quarto volume limited to 100 copies (out of 550) for the United States.

Roberts Brothers announce an illustrated edition of Balzac's works as translated by Miss Wormeley. The edition will be in forty octavo volumes, limited to one thousand numbered sets, and will be illustrated with designs by prominent French artists, and reproduced in "goupilgravures." The work will be sold by subscription.

An entirely new edition of the works of Lord Byron, including his letters, public and private, under the supervision of Mr. W. E. Henley, will be brought out by Macmillan & Co. in ten volumes. They also have nearly ready Dr. George Brandes's study, 'William Shakspere,' translated from the Norwegian by William Archer. This work has already appeared in German (Leipzig: Albert Langen; New York: Westermann). Further publications of this house are to be a second, corrected, edition of Prof. Mark Baldwin's 'Mental Development in the Child and the Race,' issued only in April last; 'American Types,' essays from the *Atlantic Monthly* by Gamaliel Bradford, jr.; lectures by Prof. Arthur G. Webster of Clark University, Worcester, Mass., on 'Electricity and Magnetism'; 'The Child in Primitive Culture and Folk-Thought,' by Dr. A. F. Chamberlain of the same university; and 'In a Walled Garden,' by Mme. Belloc.

From the Cassell Publishing Co., New York, we are to have 'The History of *Punch* and its Times,' by M. H. Spielmann, with 120 illustrations of many kinds.

Anson D. F. Randolph & Co. will publish immediately 'Algerian Memoirs,' by Fanny Bullock Workman and William Hunter Workman, an account of a bicycle tour in the spring of 1894, extending the entire length of Algeria; and 'A Pocket History of the Presidents, and Information about the United States,' by Thomas Rand.

'The Evolution of Church Music,' by the Rev. Frank Landon Humphrey, is promised by James Pott & Co.

Ginn & Co., Boston, announce 'A Practical Method in the Modern Greek Language,' by Eugene Rizo-Rangabé.

'Garrison Tales from Tonquin,' by James O'Neill, will be published this month by Copeland & Day, Boston. A poster for this work, "by Jo Hing, a talented Chinese artist, is very nearly completed."

'Paderewski and his Art' is the title of a timely brochure of 44 pages by Henry T. Finck, published by Whittingham & Atherton. It is elegantly printed on thick paper, has a title-page by Mr. Kenyon Cox, two rare portraits of Paderewski, and a facsimile of the manuscript of one of his favorite pieces. The text is biographic and critical.

Smith & Elder, London, were to publish last month a new volume of essays by Vernon Lee, entitled 'Renaissance Fancies and Studies,' a sequel to 'Euphorion,' of which the third edition appeared last autumn. It contains the following essays: "The Love of the Saints" (a study of the influence of the Franciscan movement on art), "The Imaginative Art of the Renaissance," "Tuscan Sculpture," a valedictory chapter on the value of similar studies (comprising an estimate of the late Walter Pater), and a biographical romance of the fifteenth century, called "A Seeker of Pagan Perfection."

Mr. Gladstone is said to be hard at work on his edition of Bishop Butler. It will consist of three large volumes, the last of which, it is understood, will contain a collection of Mr. Gladstone's various essays on the author of the 'Analogy.'

It is announced that M. Edmond de Goncourt, after he gets his book on Hokusai well off his hands, will publish a last volume of the "Journal des Goncourt," which will be brought down to the year 1895. Thereafter he will continue to keep a journal of his life, but does not expect to print it during his lifetime. The reason for this delay on the part of the eminent diarist is not, at first sight, easy to make out. It can hardly be due to any dread of scandal, for M. de Goncourt has already shown himself impervious to that fear. Possibly he may think it well that some of his younger literary brethren, among whom he has not made himself universally beloved, should receive a gentle intimation that he has a rod in pickle.

It is a great satisfaction to have General Grant's 'Personal Memoirs,' after the unprecedented wave of popularity which the work enjoyed when first sold by subscription, at last appear in a form worthy of so important a classic. The Century Co., having taken it over from its late publishers, have clothed it in the best garb of the DeVinne Press and in a binding appropriate to the simple elegance of the typography. Col. F. D. Grant has supplemented his father's notes with a few chiefly of a biographical nature, and has freely used the broad margins partly for topical indications, and especially for precise references to books and authors relied on, or which the student may consult with profit. A new index of more than fifty pages has been provided. Finally, changes in the portraits and in the maps are to be noted. No one can reread these chapters without a sense of their having, over and above the extraordinary interest which attaches to them as a military narrative and an autobiography, a high moral usefulness in the sphere of patriotism. They will not recruit the ranks of the professional fighter or of the Jingo. The North and the South alike have salutary lessons to draw from them.

So many volumes and publishers and illustrators are attached to the name and fame of 'Uncle Remus' that we need to be reminded of the order of precedence. The Tar Baby series, as we may designate the first, was issued by the Messrs. Appleton, and it is this which, after fifteen years of undiminished popularity, they republish—'Uncle Remus: His Songs and His Sayings'; a sort of jubilee edition, adorned with 112 illustrations by A. B. Frost. Mr. Frost fully sustains his reputation for cleverness and humor in his sympathetic designs, whether on a large or a small scale. The title-page is delightfully conceived, and the artist is thoroughly at home with Brer Rabbit, Brer Possum, and that "out'nes' man," Brer Tarrypin. Mr. Frost's success with the colored type of human beings is as marked as with the animals whom he invests with a semi-human appearance and behavior. The book is beautifully printed, and will satisfy the public as it satisfies the author, Mr. Harris.

The Messrs. Putnam make their annual supreme effort in *éditions de luxe* with Irving's 'Tales of a Traveller' in two extremely attractive volumes from their Knickerbocker Press. "Buckthorne" is the brand of this edition, and it is a good name to conjure with. The beautiful letterpress is hedged in with very successful symbolic borders designed by George Wharton Edwards, and printed in pale reds and blues; Mr. Walter C. Greenough furnishes tasteful chapter initials, and a variety of artists have contributed full-page illustrations of the Tales, never falling below a respectable level if not reaching the highest, and harmonizing very well with one another and with occasional photographs from nature or from old prints. Mr. Edwards's hand is also seen in the bold decoration of the cover, rich in green and gold. Altogether we have here an admirable example of American book-making, and, as we began by saying, not the first of its kind from the publishing-house whose imprint it bears.

The same imprint is on the latest of the "Elia" series, viz., Ruskin's 'Sesame and Lilies,' of which the handy size and handsome print recommend it at once. The cover is noticeably ornamental, even if the motive—of acorns and oak leaves—has no obvious relation to the title of the book.

Dodd, Mead & Co. have done well by an excerpt from Ian Maclaren's 'Beside the Bonnie

Brier-bush,' 'A Doctor of the Old School,' which is strong enough to stand alone and will be generally welcome in holiday attire. The author maintains in his preface the existence of many such "utterly Christian" characters as William MacLure, whose goodness was "a peety" to the bigoted because he "didna mak mair profession o' releegion"; and also thanks the American public for its interest in his works. The illustrations, pen-drawings by Frederick C. Gordon, are pronounced by Mr. Maclaren to have been executed in "an admirable and understanding fashion." This, no doubt, should suffice, though, except in some landscape passages, they are rather crude. The book is prettily bound.

It cannot be said that Mr. Ralph Richardson has made a very interesting book of his 'George Morland, Painter' (London: Elliot Stock), but, as nearly half of its 166 pages are taken up with lists of Morland's paintings and of engravings after them and other such material, it should prove useful to collectors and to critics. The writer is desirous, for a future edition, of information as to the present whereabouts of any pictures by Morland which have been engraved. The size of canvas, signature, and date (if any), title, style, and engraver of the engraving, with its publisher and date, and the full name and address of the present owner of the picture should be given. Any such information may be sent to Mr. Richardson at Gattonside House, Melrose, Scotland.

The October *Portfolio* (Macmillan) is a monograph on William Blake by Richard Garnett, LL.D. Dr. Garnett gives a sufficient account of the life of that strange genius and an eminently sane judgment of his work in literature and art, recognizing without exaggerating his unique merits and his equally great shortcomings. Most of the illustrations are familiar, but there are a few which we have not before seen engraved. "The Resurrection of the Dead," from a water-color in the British Museum, is particularly welcome as showing what Blake was capable of in the way of finish. We are glad, also, of the examples of color printing, which seem to be very successful, and serve to show the kind of completion by color that the rough engravings of his "Prophetic Books" were meant to receive.

Dr. Stoddard's chatty and pleasant little volume, 'Cruising among the Caribbees' (Scribners), will be serviceable if it shall lead his readers to imitate him in visiting the Windward Islands. When so many thousands of tourists and invalids rush to Florida and southern California to escape the rigors of our winters, it is remarkable that so few should know of the terrestrial paradise lying within a few days' easy sail to the southeast, where tropical heats are tempered by the trade-winds, and land and sea and sky rival each other in the ever varying panorama that unrolls itself to the voyager, and man contributes his share in the contrasts between life in the Caribbean and at home. Without being wearisome, Dr. Stoddard conveys a good deal of information about these delightful islands, though he puzzles us a little with the sex of Santa Domingo (p. 9), and he copies, without correction, a curious illustration of Froudacity (p. 147) in the historian's account of Rodney's victory of 1782, where he describes St. Lucia as lying between St. Vincent and Dominica. If Dr. Stoddard were familiar with the description of the Caribs by the Spanish discoverers, he would scarce feel sad (p. 125) in meditating "upon the speedy destruction of such a race."

'Among Rhode Island Wild Flowers' (Providence, R. I.: Preston & Rounds) is a handy duodecimo of about a hundred pages, in which Prof. Bailey of Brown University has described, in an attractive fashion and under their common names, the more conspicuous and noteworthy plants of his State. Some of his sketches are Thoreau-like in their clearness of outline and delicacy of touch. The comparison of the purple shells of the skunk cabbage to "half-buried capuchins, or weird cobalds of German story" is a fair example of his felicity of expression. Prof. Bailey delights now and then in surprises. The wild carrot of Warwick is "a lovely nuisance." "A ballast heap for railway filling is only excelled by the delightful ash-heaps of our cities. Blessings on the conservative wealthy who leave these odd corners to offend the public and educate the botanist!" We are sure that a more comprehensive work in the same field from the hands of Prof. Bailey would be welcome.

In *Science* for October 18 appears an open letter addressed "to those interested in Quaternions and allied systems of Mathematics," and signed by P. Molenbroke, The Hague, Holland, and S. Kimura, Yale University, U. S. A. The letter calls attention to the familiar, if not fully explained, fact that, in spite of the great power and flexibility of Hamilton's quaternion calculus, and the "richness of transformations, generality of treatment, simplicity of expression and interpretation," both of this system and of Grassmann's 'Ausdehnungslehre,' these systems have failed in the half-century of their existence to receive very much attention from mathematicians in general. The writers follow up this oft told tale, however, by an expression of the conviction that, in view especially of the needs of modern electrical theory, the time is now ripe for a combined and earnest effort on the part of those who are working in these lines, to promote the progress of this branch of mathematical science. They therefore propose the formation of what they provisionally call "The International Association for Promoting the Study of Quaternions and Allied Systems of Mathematics," and ask those in sympathy with their object to communicate with one or other of the signers. It will be interesting to observe whether this appeal to the followers of Hamilton and Grassmann will meet with an adequate response.

From the press of Cohen, of Bonn, comes to us the beautifully printed 'Index Lysiacus,' which the painstaking author, Dr. David H. Holmes, has dedicated to three of his teachers, Profs. Gildersleeve, Hübner, and Usener. All students of Attic prose, for whom such indexes have answered many a hard question of usage, will welcome the book—even the English cousin who thought he detected a Western flavor in the style of Lysias, who may have been called a "dago" on the Athenian Bowery, in that part of the agora, let us say, near the shop of Lysias's cripple. While speaking of Lysias, we note with pleasure the appearance of Dr. M. H. Morgan's 'Eight Orations of Lysias' (Boston: Ginn & Co.), and while on the subject of indexes, we must express the hope that Prof. Hogue's 'Index to the Verbs and Verbforms of Isocrates' will soon find a publisher.

The Bulletin of the Geographical Club of Philadelphia, No. 5, possesses exceptional interest. It is devoted to an account of the Peary Auxiliary Expedition of 1894, prepared by a member of it, Mr. Henry G. Bryant, the Club's recording secretary, together with the scientific reports. The geological portion emanates from Prof. T. C. Chamberlain, and striking indeed are the photographic illustrations accompanying the text, which show the stratification of the Greenland glaciers, and the close analogy in their folds, faults, etc., to sedimentary rock. There are numerous portraits, and some views of natives.

The April Proceedings of the American Antiquarian Society of Worcester, Mass., is marked by three papers of unusual merit. One is Mr. S. S. Green's survey of the Scotch-Irish in America, especially useful in its Massachusetts revelations, seeing that that race cuts but a slender figure in her annals. Here the curious fact is that Scotch-Irish were among the founders of a Presbyterian church in Long Lane (afterwards and now Federal Street), which ultimately became Channing's and Unitarian. Mr. Andrew McFarland Davis, apropos of Hawthorne's 'Scarlet Letter,' discusses very thoroughly "The Law of Adultery and Ignominious Punishments," first in Massachusetts and other parts of New England, and then in the mother country, where the *continuous* wearing of a shameful badge for any offence has not been discovered in his researches. In the case of incest, Connecticut copied the Massachusetts law, and the provision "requiring the convict to wear a capital I two inches long on the outside of his upper garment" was not dropped till the revision of 1821. Mr. Lucien Carr's summary of what is known respecting "The Food of Certain American Indians [east of the Mississippi]" is as agreeable to read as it is scholarly.

Mr. Edward W. James gives in his *Lower Norfolk County Virginia Antiquary*, part 2 of No. 1, a valuable list of slave-owners in Princess Anne County in 1850 (enumerated at that time by himself, as a foot-note informs us), and the continuance of a similar list for the same county in 1860, the latter census distinguishing employers from owners, who were in 18 instances in this instalment united in one person, leaving 77 employers not owners, against 713 owners. In 1850 the largest number of slaves owned by one man was 56, the next largest 55, and only one other slaveholder owned more than 30. But a part of the records is missing. A probable incident in the life of the eccentric and versatile Englishman, James Silk Buckingham (1785 1855), not recorded in the biographical dictionaries, but not contradicted by them, or perhaps by his autobiography, is revealed on p. 55. An inventory of the estate of Col. Anthony Lawrence, 1785, runs on: "a parcel brown Sugar and 3 pair Sheets; Negroes Old peg 15£ Charity 50 young Hannah & Child John 70. . . . Dinah 30 Judah 15 2 sorrel mares 24 2 bay d° 8," in innocent confusion of chattels personal. Mr. James is his own publisher at 714 East Franklin Street, Richmond.

The October number of the *William and Mary College Quarterly Historical Magazine* is substantially filled with a great variety of valuable matter. In particular, President Tyler supplies from the records of Northumberland County a fresh batch of documents throwing light on the Washington family, connection and neighbors, and involving the names of Brodhurst, Bernard, Pope, Hardwick, Gerrard, Lee, etc.

Mountain-climbing is the subject of two of the articles in the *Geographical Journal* for October. Mr. Scott Elliot tells of his attempts to reach the summit of Ruwenzori, the snow-clad range lying in the heart of the African lake system. Though unsuccessful, through the giving out of his porters, he was able to get to a height of 12,640 feet, or about 4,000 feet below the top, and to gain some valuable information in regard to the geological structure of the mountain. His principal

object was to study its flora, and he brought back with him a large collection of plants, some of which are new to science. The forest, he found, reached to a height of 8,600 feet; then followed the bamboo zone to 10,000 feet, and above this, to 12,000 feet, a bed of sphagnum peat-moss, in which were gnarled and stunted trees of heather of enormous size, "often with a diameter of two feet!" Brambles grew to be as big as mulberries. There was very little animal life to be observed, though elephants were numerous in the forest at the foot of the range; at one time Mr. Elliot counted a hundred passing in single file. The other mountain was the Mustagh-ata, or "Father of Ice-Mountains," the highest peak of the Pamir plateau. Dr. Sven Hedin made several attempts to gain the summit, and though he climbed, with the aid of yaks, to a height of 19,500 feet, six thousand below the top, the difficulties presented by the wind, the snow, and the ice-crevasses were too great to be overcome. A successful ascent, even under the most favorable circumstances, he holds to be impossible. There is also in the *Journal* an interesting account of the Gilbert Islands, in the western Pacific, by Mr. C. M. Woodford, in the course of which he says that the natives "catch and partially tame the frigate-bird, and employ it to convey messages from island to island."

The most noteworthy article in the *Annales de Géographie* for October is a description of the physical features of parts of the basins of the Seine, Meuse, and Moselle, by Prof. W. M. Davis of Harvard University, whose letters from those basins to the *Nation* will be remembered. It is illustrated by several charts and diagrams. There is also an encouraging account of the progress of the Russian province of Samara in population and cultivation, and a sketch of recent explorations in the French Congo. From a statistical paper upon the rainfall of western Europe we learn that the English Lake District receives the greatest amount, the annual average being fifteen feet; and Almería, in Spain, the smallest, the average being only ten inches. The minimum for all Europe, however, is at Astrakhan, on the Caspian, where only seven inches falls in the course of the year. These facts, which are the results of observations made during the years 1861-90, are also graphically pictured in a colored chart. The remaining contents of this number are articles on depressions and deserts, and on the distribution of the population of Germany.

The Administrative Council of the Pasteur Institute has, in accordance with the general expectation, elected M. Duclaux and Dr. Roux to the directorship and sub directorship of the Institute; M. Vallery-Radot becomes a member of the Council as representative of the Pasteur family; and M. J. B. Pasteur is made a member of the assembly. The Institute, which was opened in 1888, will go on as before its founder's death, and will carry out his work.

A correspondent in Chicago, apropos of the recent discussion in these columns, informs us that for several years the University of Wisconsin has offered a special A. B. course which is accepted, in lieu of the first year, by three of the medical colleges in that city. Several other institutions which have followed this example, have obtained similar recognition for their graduates.

A pleasing and characteristic, but perhaps somewhat overfinished, portrait of the late Prof. Boyesen has been added by F. Gutekunst, Philadelphia, to his photographic imperial panel series.

By an unaccountable confusion, we lately made the wholly mistaken assertion that Robert Louis Stevenson was not mentioned in the new volume of 'Johnson's Cyclopædia.' The only palliation we can offer is, that the remark was incidental, and not in connection with a review of the Cyclopædia itself.

—The *Century* magazine celebrates this month its twenty-fifth anniversary by the first instalment of Mrs. Humphry Ward's new novel, "Sir George Tressady." The lines of this hero promise to be cast in politics and love, and are apparently to be crossed by the reader's old acquaintance Marcella, in her new rôle of Lady Maxwell. Besides an accompanying portrait of Mrs. Ward, there are portraits of Stevenson (from the bas-relief made in the sickroom by St. Gaudens), of Duse, and of Vibert the artist, each with letterpress to match. In "The Devotion of Enriquez" Bret Harte has had the clever idea of joining together in fiction a Californian Lothario of Castilian extraction and a Bostonian young lady of purest intellectual ray serene. The story is full of humor, but whether the net result of the cut-and-thrust gallantries of the hero is judged perfectly natural or absolutely incredible will depend on the reader's view of the relation of culture to instinct. Mr. Bryce has something of interest to say on the Armenian question; and, finally, in a symposium *à deux*, Mr. Roosevelt and ex-Gov. Russell define the political issues of 1896. Mr. Roosevelt holds that in the Republican convention the majority "may spare the minority humiliation by refraining from denouncing in so many words the free coinage of silver"; that to "violently oppose any scheme looking towards international bimetallism" is mere foolishness; that the Republican party should "make an aggressive fight on the question of America's foreign policy," and that "we should annex Hawaii immediately." Mr. Roosevelt would, in all probability, consider ex-Gov. Russell's mention of civil-service reform vague and unsatisfactory —a view from which it would not be easy to dissent.

—The current *Harper's* contains two articles which indirectly should as well serve the cause of political enlightenment as those written with direct political purpose. One of the two is Richard Harding Davis's "Out of the World at Corinto." Central American republics are not likely ever in the future to become objects of partisan furor to Mr. Davis, or his fellow-travellers, or the (it is to be hoped) large number of his convinced readers. Nicaragua and Corinto have lately fallen into the background of national consciousness, together with our sense of responsibility for the grade of consul Mr. Davis shows as representing us in certain Southern ports. Such consuls are, however, an insult to national dignity which deserves as serious consideration as possible infringements of the Monroe doctrine. The other of the two articles, "A Pilgrim on the Gila," is called by its writer, Owen Wister, a story. Nevertheless, its character, in spite of a sensational element, inclines the reader to accept it as an unvarnished picture of social and economical conditions as Mr. Wister saw them, or learned them by personal contact, in Arizona, where the balance of cleanliness appears to be on the Mormon side, but in the conduct of life and politics by theft and knavery the Gentile is able to hold his own. The next time a debate comes up in Congress on the admission of Arizona as a State, it might be helpful to members intending to vote in the negative to unearth this number of *Harper's*. Another of its best papers, "Literary Boston Thirty Years Ago," is written in Mr. Howells's mellowest and most attractively frank vein. This is not surprising in view of the pleasantness of those palmy days when our literary oracles had their shrines in New England only, when the *Atlantic Monthly* was their mouthpiece, and Mr. Howells himself its assistant editor.

—The *Atlantic* for the present month reflects, in the titles of three of its prominent articles, the changes in times and in itself. Lafcadio Hearn's "After the War" describes the Japanese celebrations of victories, and the national sentiment, as displayed in May and June last, upon the return of battleship and regiment. Prof. Woodrow Wilson prefaces his paper, "A Literary Politician," by comments on the remoter meanings of the paradoxical terms of his title. The study which follows, of the late Walter Bagehot, is not only worthy of the literary traditions of the magazine, but sets, in breadth and flexibility of view, a standard for contributors to write and readers to think up to. "The Future of Naval Warfare," by Walter Mitchell, is a paper which will certainly be *caviare* to most politicians and to all clamorous advocates of naval extension, but which deserves the more, for that reason, to be widely advertised by its thoughtful readers. A federated naval service, which, being international, would be taken out of politics and into the category of civil service, is Mr. Mitchell's ambitious idea. Its fulfilment must depend upon "the combined action of the chief maritime powers making the ocean the free common for all nations, and declaring against its use for belligerent purposes," though nothing in the terms of the league would hinder the free transportation of troops and supplies between, for instance, an empire and its colonies. The duties of an international navy would be, on an enormously enlarged scale, the duties of any navy in times of peace. Special stress is laid on the "value of a sea-patrol along the three-mile-wide track of transatlantic commerce," carrying salvage crews and "cruising with almost the precision of the life-savers of the coast-guard." The derelict would in this case disappear from the list of marine dangers, and the dread of iceberg and field-ice be greatly lessened. The starting-point of this carefully thought-out article is the contemporaneous development of fully armored ships, in which the maximum of defensive capacity is sought for, and of partly protected commerce-destroying cruisers, "fleet enough to keep out of the range of the line-of-battle craft," the qualities of each "ever leading on to vaster possibilities of ruin and expense."

—The only marked feature of *Scribner's* is a thoroughly interesting likeness of Prof. Helmholtz, taken in class-room, at the close of his last lecture but one, by one of his students. It is accompanied by some brief but acceptable remarks, by the same student, about the original, including an enumeration of his most important scientific discoveries, which, while it would no doubt be a twice-told tale to the duly crammed schoolboy, his elders may still read with profit. Apart from this, although Mr. Lang's memorial verses to Stevenson strike a pleasant chord, the number is without significance, unless it be to exemplify with emphasis the increasing tendency of the magazines to become mere picture-books for eyes of older growth. Pictures are abundantly plentiful here, and there is a plentiful lack of quality in

them, and in too much of the text that reinforces them. There is, in fact, although the magazines would too often seem to deny it, a gap between writing and having something to say which the illustrator is not always competent to bridge.

—It is now more than a year since Tolstoi's pamphlet on 'Patriotism and the Christian Spirit' formed the principal attraction in the windows of all the book-stores of Germany and France, and doubtless fell into the hands and influenced the tone of mind of a proportionately large number of readers. This pamphlet was a very moving picture of how the several nations of Europe are kept armed to the teeth in order to gratify the love of revenge and the love of aggrandizement of their rulers, while the plain people, who have the taxes to pay, have no desire whatever to spend their time in fighting. Since socialism has been such a strong power in Germany and France, the feeling of international friendliness has been growing constantly stronger. Besides the reasons for amity between nations which industrialism furnishes, the close intercourse which prevails between scientists is another bond that makes for peace; it would seem almost like a contradiction in terms for the scientific men of France and Germany to wish to go to war with each other—at least to engage in anything more than a war of arguments. And now comes a new tie which, according to M. Brunetière in the *Revue des Deux Mondes*, will do much to make France (the country most to be feared) look with more friendly eyes upon the nations of the North. This is the absorbing interest which she is taking at the present moment in the literatures of the North. When one is just awaking to the power and beauty of the life of a people as depicted by its great novelists and dramatists, one is not in the humor for taking up arms against that people.

—M. Brunetière takes occasion to defend the present movement among the literary people of France, against those who object to it on the ground that the patriotic Frenchman ought to like nothing that is not French. He grants that it is doubtless pure accident that the objectors are for the most part those who know neither English, German, Russian, nor Norwegian, and he goes on to show, as James Darmesteter has done before, that the influence of race has been very much exaggerated —that it is tradition, chance, the fashion of the moment, more than race that determines the body of opinion of a given people at a given time. Germany, he points out, has abandoned metaphysics for physio-psychology, and it is at Oxford, not at any German university, that the last remaining metaphysicians are to be found. But the great tradition of the writers who secured for France its predominating influence over other countries is faithfully carried on, not by French writers, but by those of the North. The superstition of art for art's sake, the exploiting of one's own individuality, the absorption in nauseating amorous experiences—all this, he shows, is far removed from the natural development of French race or French tradition either. It is not to be wondered at that French literature seeks a return from its present degeneracy to the ideal of its own good period by way of the sound and strenuous literature of the northern countries. Such plain speaking as this from a critic who is so much the law unto minor critics as is M. Brunetière, is as refreshing as a clear cool breeze in a sultry day of midsummer.

—Every one in his turn for the translator who goeth about roaring; and, Ibsen devoured, Echegaray was next. To make the transition as easy as possible, the latter's most Ibsenish play (so confessed by the author himself) was chosen to lead off with. This, "The Son of Don Juan," we had some time ago from Roberts Bros., translated by James Graham. Another of the Spanish dramatist's later productions, "Mariana," has also been given an English dress by the same publishers and translator. What is probably Echegaray's greatest (certainly it is his most famous) play, "El Gran Galeoto," together with a drama which has long been a popular favorite, "O Locura ó Santidad," now comes to us "done into English prose" by Hannah Lynch (London: Lane; Boston: Lamson, Wolffe & Co.). This translation cannot be highly praised. It is correct enough in general, but has no insight for the nicer dependencies, and constantly misses the connections which, in the Spanish, get you smoothly over the joltings of the version. The translator fails to see, often, how a word which may mean what she thinks, must mean something else as used. Her translation of the very title of the second play, "*Folly* or Saintliness," is a case in point. *Locura* must mean here "madness," if the whole point and a large part of the action of the play are not to be lost outright. Such a method wrongs the Spanish, and often results, of course, in choice specimens of "translation English." "El Gran Galeoto" is no doubt a difficult play to make intelligible to a septentrional, so full of southern presuppositions is it; but the puzzle is little clarified by this attempt to make the play at home in English.

EXPERIMENTAL BIBLIOGRAPHY.

A Reader's Guide to Contemporary Literature: Being the First Supplement to 'The Best Books.' By William Swan Sonnenschein. London: Swan Sonnenschein & Co.; New York: G. P. Putnam's Sons. 1895. 4to, pp. 16, lxxiv, 775.

WHAT is most puzzling in this "First Supplement" to the work reviewed in these columns four years ago is the question as to its exact scope. As regards the period of time covered (which is, in general, from 1891 to 1894), Mr. Sonnenschein states in his preface that while one portion of the present work was "at press," he has continued his "work upon the next." Thus, near the end of the book, one finds Jespersen's 'Progress in Language,' a work published in October, 1894, while the new edition of Pennell's 'Pen-Drawing,' published very nearly at the same time, is looked for in vain, since its classification would have been reached about two hundred pages earlier. While a similar reason will serve to account for the absence of numerous other publications of the year 1894, it by no means accounts for omissions in typical instances like the following, all of which antedate 1894: Séché's 'Les Derniers Jansénistes,' Ratzel's 'Politische Geographie der Vereinigten-Staaten,' Larroumet's 'Études de Littérature et d'Art,' and the 1893 translation of Compayré's 'Psychology applied to Education.' Even if we bear in mind the compiler's explanation that he has not only "used this Supplement for addenda to the main work" ("books which should have been, but were not, included in the previous volume"), but has made this new volume, so to speak, "run on at the foot of it," we are still in the dark. Neither in the original publication nor in the Supplement is there any mention of such works as Doniol's 'Histoire de la Participation de la France à l'Établissement des États-Unis d'Amérique,' or Baron Ricasoli's 'Lettere e Documenti,' both of which, covering as they do a series of volumes, lap over the periods of Mr. Sonnenschein's two compilations respectively. The same is true of serial publications, such as the *Educational Review* (New York). That there is a new edition of Johnson's Universal Cyclopædia now in progress, Mr. Sonnenschein is indeed aware, but his entry of it under "Johnson, *Edwin Rossiter*," is well fitted to produce nearly as much bewilderment in the reader's mind as the curious entries of Flint's 'Statistics of Public Libraries' at p. 547.

There are two other directions in which one naturally looks for light in regard to the scope of the work, namely, the question of language —whether in English or not; and the question of quality—whether the "best" books only or not. Not only does the present volume not confine its entries to works in English, but it includes the issues of the press in even the remoter portions of Europe, as well as contributions to the bibliography of the less known literatures of Europe. Yet under the heading "Rhæto-Romanian Philology and Literature" one fails to find Prof. Willard Fiske's catalogue of his Rhæto-Romanic Collection. As regards quality in selection, the original work's characteristic designation, 'The Best Books,' is ignored, so far as possible, in the present volume, and the preface even announces the deliberate intention of including certain "bad" books, with a view "to warn readers off them." This is a laudable intention, and yet there is a surprisingly large number of books—under such suggestive titles as, for instance, 'Tracked to Doom,' or 'Who Poisoned Hetty Duncan?' (p. 577)—which would seem to have eluded this warning off. These entries may be attributed to a not unnatural difference of opinion as to the merits of certain books, or, on the other hand, to an oversight on the part of the compiler. In either case they have helped to swell the bulk of the volume, which is by no means slight. As already stated above, the period covered is, in general, from 1891 to 1894 (subject to certain modifications); but, for the publications of these less than five years, more than 775 pages are required, while the publications of many times five years are brought within about 1,009 pages in the original work.

It is not easy to understand the compiler's attitude towards this question of bulk. Has it been his aim to reduce it to a minimum or not? If one should confine his attention to the instances of rubbish (not so characterized) above cited, one would doubtless say No. So would one if noting such instances as Farini, a work which is now not only forty years out of date, but of which the compiler remarks: "Of no particular value now" (p. 338); or Williams's 'Village Buildings,' on which his comment is: "Not much more than an architect's trade catalogue" (p. 505). But as soon as one comes in contact with the remarkable scheme of abbreviations employed throughout the book, this opinion is likely to be reversed, or at least held in abeyance. No such abandonment to the abbreviating tendency has been seen in any work intended for the public to consult, not even in the predecessor to this volume, and it is next to inexplicable except on the supposition of economizing space or economizing time.

A recent most interesting biography of a great historian is provided with a series of elaborate foot-notes; and so minutely is everything explained therein—"oligarchy," for instance, being defined as "literally, the rule of

the few"—that one is led to wonder just what age of readers the book was intended for. For a wholly opposite reason the reader's wonder is excited in the present volume. The formal "list of abbreviations" (most of which are usually met with) is supplied at the beginning of the volume, only slightly enlarged from that in its predecessor, but is followed by the remark: "Other abbreviations adopted in the book will, it is thought, be readily intelligible." The reader should feel highly flattered at this tribute to his intelligence, or, rather, power of mind reading, for it implies that he is a trained archæologist, and can not only make "inscripp." read "inscriptions" (p. 699), but even make "Mancs." read "Manchester" (p. 618). More than this, it implies that he can, so to speak, penetrate the compiler's inner consciousness, and instead of setting down as jargon such creations as "charstics." and "parly." (p. xxxvi and 550), take them at once to be "char*acteris*tics" and "par*liamentary*," and that he will see that "compreh." stands for "compre*hensive*," and nothing else (p. 128). He will not stumble over the language, "actresses ment. in the poem," and "Advents. in a Great City," but will read in full, as intended, "men*tioned*" and "Adrift" (pp. 596 and 578). He must think naught amiss in "A v. suggestive bk.," apart from the prodigal waste of letters in "suggestive" (p. 770); and if "The $1.25 Cent. Co. N. Y. 91," following the words "Squirrel Inn" (p. 583), should raise in his mind fleeting visions of a "bargain counter," he can but blush at thus betraying the confidence reposed in him. He must be able to abbreviate, as well as think, in other languages than English, and to render "Cte." by C*om*te (p. 7), "Hi." by H*enri* (p. 739); and, if the problem be a title-a-line, render "Ægyptr." by "Ægypt*er*" (p. lxvi), though the "title-a-line" scheme frequently proves a good deal of a will-o'-the-wisp. Compression is good, yet it can hardly be denied that it is gained at the expense of ambiguity in some of these instances. Only a knowledge of the book's contents, for example, will prevent one of Mr. Sonnenschein's American readers from seeing "New England" in the entry, "Folkl. of N. Engl." (p. 103), but it is the "*Northern* Counties of *England*" that the author means; and such an entry as "Early Vedic hymns to Tennyson" (p. 549) certainly requires to be preceded by "From," to obviate the amazing idea which it must convey to the uninitiated. Unusual penetration is surely required to decipher "Et." as "*Everett*" (p. xxiii), yet one can here turn from the index to the fuller form in the text. No such antidote, however, is at hand in the case of the confusion of the sexes resulting from the use of the same abbreviation—in text and index alike—for two different names. Thus, one should read "Franc*is*" in the case of "Thompson, Fcs." (p. 601), but "Franc*es*" in the case of "Lord, Prf. Fcs. E.' (p. 697). Such instances as those cited above assuredly do not save the reader's time. It may be questioned if so complicated a scheme of periods, hyphens, etc., as is represented, for instance, in "pt.-of-view" (p. 567), is a saving of the printer's time, or even of the compiler's time.

If we turn from the scope of the work to its execution, the positions and aims of the compiler are here also not always easy to comprehend. That such a scheme of annotations as the one hinted at in his preface would be of real service to the reader, it is impossible to doubt—namely, a digesting of "the verdicts of the best reviewers." But in too large a number of cases they represent nothing of the kind, but only a lengthened soliloquizing of the compiler. Some of the more astonishing of these cases, whether as reflecting a verbose, an undignified, or a jaunty mood of the annotator, are under Crawford (p. 617), Saintsbury (p. 565), North (p. 317), and Marshall (p. 132). As a "lost opportunity," in the way of anno tation, may be mentioned the omission to point out, under Prof. Joseph H. Thayer's 'Books and their Use' (whose title suggests apparently the most general scope), that it relates to theological books only (p. 541). Another omission is under "Wide-Awake Stories," by Mrs. Steel and Mr. Temple (p. 112), where the reader needs to be notified of the book's reappearance in 1894 with a changed title, 'Tales of the Punjab.' A somewhat analogous instance of omission is the failure to make some mention of Prof. A. B. Bruce's 'The Kingdom of God,' under St. Luke's Gospel, to which it very particularly relates, although the book is entered elsewhere.

This last-named instance is in reality a question of classification, and in this field also Mr. Sonnenschein leaves much to be desired. It is true that no two readers will ever be found to agree as to every detail of classification and sub classification in such a scheme as this; yet the method here employed well serves the practical uses of this kind of work of reference. It is one thing, however, to adopt a scheme of classification, and quite another thing to distribute the titles under it with perfect accuracy. Blind leadership is inevitable when this distribution is made by the compiler without making acquaintance with the book in question, as when Mrs. Seelye's work on the life of George Washington is entered with G. G. Evans's 'Washington Illustrated,' a work on the city of Washington (p. 289); the whole being still further complicated by being placed in an alphabetical order of States, between Virginia and Wisconsin, as if both books related to the State of Washington; or when Mrs. Shattuck's 'Woman's Manual of Parliamentary Law' is placed under "Constitutional and Parliamentary Law," sub heading, "Constitutional Law," with Sir William R. Anson and other authorities (p. 154); or (most unkind of all), when Miss Barlow's 'Bog-land Studies' are labelled "Prose Fiction" (p. 579). It was surely well to include Dr. Coues's laborious reissue of the Lewis and Clark narrative of ninety years ago, but not under the heading, "Recent Travel and Description" (p. 287), where it appears; and also the invaluable 'Antología de Poetas Hispano Americanos' of M. Menéndez y Pelayo, but the latter is as good as buried by being entered only under "Spanish Philology," sub heading, "Dialects" (p. 745), and not at all under "Poetry," or even "Literature."

In the compiler's own attitude towards the question of the book's faultlessness or the reverse, the present volume offers a welcome contrast to its predecessor's astonishing self-consciousness of "substantial accuracy"; and the preface does not fail to suggest that "many slight, if not misleading, errors" have crept in. But it is surprising to read, in the very next sentence, of a certain class of errors, or, indeed, of any class of errors, that "they are all rectified in the Index"; for this is a volume in which the index makes sad work of many things which had been accurately entered in the body of the work. Such instances include the entry of Horace Walpole's name with the title of Earl of Oxford; and Mr. Goodyear's 'The Grammar of the Lotus' as 'Grammar of Law.' Confusion is caused, moreover, not only by the printing of wrong page-numbers in the index-references, and by the omission of a considerable number of names from the index, but by imperfect alphabeting of some of the names. "Skertchly," for instance, is indexed on one page when its alphabetical order would have placed it on the preceding page. By a simple oversight in the employment of the inverted commas, Mr. R. G. Thwaites becomes Thwaite in the index, Miss Edith Thompson is left destitute of any Christian name, and Mr. Huxley's writings are run in with the different members of the Hutton family. There is usually an extra hazard in straying from the beaten path of official designations, if one is not "to the manner born," as where the indexer reproduces the American State, New Hampshire (used on p. 224 in connection with Dartmouth College), at p. xvii of the index as "New Hants." As showing how a volume may be heedlessly "buried" in the index, so far as the reader's search for it is concerned, it may be mentioned that a book describing the "Tsar" and his people (by various writers), is entered, incorrectly, at p. 267, as "*Is*ar and his People"; and the index accordingly reproduces it in I, instead of in T. In like manner, one of Mr. J. Walter Fewkes's descriptions of Zuñi antiquities is entered, quite inadequately, at p. 667. Since, however, the name is misprinted "*T*ewkes," its index entry is lost by being reproduced in T instead of F. Indeed, this book is doubly buried, for, instead of appearing where one would properly look for it in the text, under New Mexico, Mr. Sonnenschein enters it under Alaska.

Instances of confused identity were frequent in the index to this book's predecessor, but their reappearance in the present volume is the more surprising because of the vigorous denunciation which the compiler administers in the preface to other bibliographical authorities who have erred in this particular. Indeed, this is, according to the claim of the preface, the one class of errors fully "rectified in the index." Some of these instances are due to the mechanical reproduction of some error in the body of the book, as where Mr. E. S. Brooks is made into two persons, one having his surname correctly printed and the other incorrectly; others to a chaotic uncertainty about alphabeting English names beginning with a preposition, as where Aubrey De Vere is to be looked for partly in D and partly in V; others to carelessness in the names of married women, as where Mrs. Norman's books are partly in N, under her present name, and partly in D, under Dowie, her maiden name; or where the indexer fails to identify Mrs. H. W. Steel with Flora Annie Steel. This last cited type of error is, however, far easier to condone than its predecessors, since it is of the first importance for a bibliographer to remember that no information is preferable to misinformation. It is, indeed, very much to the indexer's credit that he has combined three different forms of Mr. Brander Matthews's name, as found in the text, into a single index-entry, "Matthews, Jas. B.," a form, however, which is decidedly open to question. But he has, in so doing, "gathered in" also a Matthews who is neither James nor Brander—Mr. Joseph Bridges Matthews, an English solicitor, whose identity is quite distinct from that of the American essayist. A still different variety of error is that of confounding the author's sex, as in the entries Ward, Juli*a* H. (p. 48), and Allen, Ja*ne* Lane (p. 288), under which feminine disguises two well-known writers masquerade—the latter both in the text and in the index.

There remains still to be mentioned one more type of errors, for the bewilderment of the reader who desires to comprehend the plan of

the book's execution. Representative instances are the entry, in the text, of the Unionist statesman's name as "Rich." Chamberlain (p. 208), in the case of a book which is published by the same firm that issues this very 'Readers' Guide.' It is, of course, inconceivable that the compiler should not have known the true name; and in the index it properly appears as "Jos." But so it is also inconceivable that the compiler should not have known the true name of the late General Charles George Gordon (here entered as "Gordon, Gen. C. J." (p. 322), but this is not corrected in the index. On the other hand, the name of Rev. Stopford A. Brooke appears in the text (p. 734) in the inverted form, "A. Stopford," but here the index supplies the correct form. In the text, moreover (p. 199), the name of Miss Elizabeth H. Botume is wrongly printed as "Elijah"; the context, however, mentioning the author as "Miss" Botume. Nevertheless, the "Elijah" is religiously reproduced in the index.

From the instances successively enumerated above, in all of which the reader's attempts to discover consistency or completeness in the compiler's aims are signally baffled, one can only infer that the volume represents an experimental attitude on the part of the compiler. A writer on the Renaissance period of architecture has well characterized it as a time at which the great masters of their art "experimented incessantly"; and surely nothing short of this description would seem to be adequate to describe Mr. Sonnenschein's bibliographical undertakings. There is very much to be thankful for in the present volume; representing, as it does, tremendous industry, almost unwearied persistence, and an exceptional command of the sources of information. Omissions have been cited which seem difficult to understand, and yet the inclusiveness of the work is so great (as certain striking instances might illustrate) that no library can dispense with it. And after all has been said, it is as a contribution to experimental bibliography that the work is chiefly to be welcomed, for the compiler, with a very unusual fertility in experimenting, has thrown light on nearly every problem of bibliography.

As regards scope, it seems plain that Mr. Sonnenschein has rightly read the need existing for a work on a large scale, international in its inclusiveness, not limiting itself to the few "best books," but supplying a comprehensive view of the world's literature as it accumulates, and appearing continuously and at regular intervals. Certain of the largest libraries will still need to send each year, as they have always sent, to every civilized country, obtaining from each its separate national bibliography; but these instances do not begin to meet the requirements of the widely distributed "student and the general reader," to cite Mr. Sonnenschein's language, whom such a compilation as this has in mind. As regards classification, the objection that the scheme on which the present volume is based is unduly minute is hardly well taken, provided that misleading individual instances like those cited in this notice be eliminated, and provided also that so practically useful an index as the present one be always supplied as a clue to the whole. To be more explicit, an index constructed like this, not confining its entries to page-numbers, and having every book represented in it, not only will invariably save the time of the reader using it as a means of turning to the text, but will itself serve as the answer to a certain percentage of demands upon it. Still further, the change made by Mr. Sonnenschein in the present volume is to be welcomed in the interest of simplicity, whereby there is substituted for the two separate indexes in the 1891 issue ("Authors and Titles Index" and "Subjects Index") the present consolidated index of all three forms of entry. Even more welcome is the restoration of a "Synopsis of Classification" (included in the 1887 publication, but omitted in that of 1891), but the reader will be still more grateful if the page-numbers shall be added, in the case of at least the chief headings of this "Synopsis." Abbreviations of some sort are an obvious necessity in a work of this nature, but one's judgment, it would seem, as well as the actual experience of the reader, will surely suggest that they be limited to such as can be interpreted by the public, instead of being recalled only by the individual memory of the compiler. Annotations such as those shadowed forth in the preface to the present work, though but inadequately supplied in the text (together with others of a still different type, represented under Forrest, p. 342, Philips, p. 250, Dutton, p. 390, Bower, p. 643, and, with some allowances, Garnier, p. 501), will add distinctly to the serviceableness of the work. The excellent feature of the present work, of supplying dates in what some would perhaps regard as a lavish profusion—dates, namely, of publication, of reissue, of period actually covered in the narrative, etc.—should emphatically not be impaired by dilution.

As regards more mechanical features, any future work may well imitate the present one in wisely placing the page-number at the bottom of the page, thus leaving space for the various running head-lines at the top. In this volume, as in its predecessor, the choice of the various fonts of type employed gives evidence of careful study and admirable judgment; and the arrangement of the type, with the exception of the cumbrous device for indicating joint authors, can be almost unreservedly praised. Not only are the proportions of the printed page satisfactory, but so also are the dimensions of the book itself; and it is one which opens easily and lies open readily. Lastly, the fact should be emphasized that future work of this kind should be more nearly free from error. It is true that even if the directory of some city should make its appearance in any given year with more than its due percentage of errors, no firm engaged in a business of any magnitude could afford to dispense with a copy, and the field covered by Mr. Sonnenschein's successive issues is such that no library feels able to dispense with them. Nevertheless, whether by resorting to a coöperative plan (instead of practically depending on "a single hand"), or by refraining from the attempt to crowd too great a mass of work into an impossibly short time, there should in future be a much nearer approach to "substantial accuracy" than has yet been attained. The present volume has perhaps a smaller percentage of error than its predecessor, yet to have had a larger would be hardly possible. Surely the almost appalling industry and extraordinary fertility of invention represented in this volume should deserve a better fate than the praise with large reservations which alone is possible in this instance.

CHILDREN'S BOOKS.

Col. T. W. Knox's 'In Wild Africa' (Boston: W. A. Wilde & Co.) is the account of a journey of two boys across the Sahara. The author endeavors to blend instruction with amusement, and is fairly successful in describing life on the oases and in the desert and some of the towns of the western Sudan; but the adventures possess little interest. The route chosen by Col. Knox for his boy travellers from Algeria through Fezzan to Lake Tchad and Timbuctoo, it may be added, is practically as impossible, at the present time, as a pleasure excursion among the Mahdists or a trip to the Pole. The book is well printed and is attractive in appearance, but it is a pity that a map of the route was not given.

An adventurous journey in Alaska is the subject of Mr. Kirk Munroe's 'Snow-shoes and Sledges' (Harpers). Two plucky boys make their way, against innumerable obstacles, up the Yukon to its headwaters and thence across the mountains to the coast. This gives an opportunity, of which the author abundantly avails himself, to describe the country, the natives, and a mining camp in winter, as well as the manner of travelling and camping in the interior. Jalap Coombs, the old sailor, is sketched with some humor, while the strange influence of a fur-seal's tooth upon the fortunes of the boys and their companions gives a certain mystery to the story not without its charm. Some excellent illustrations add to the attractiveness of a book which will hold the interest of its readers from beginning to end.

In his 'Three Colonial Boys' (Boston: W. A. Wilde & Co.) Mr. Everett T. Tomlinson conveys much information regarding the enmity between the Whigs and Tories of New Jersey and Staten Island in the early days of the Revolution, and the danger attending the attempts to carry powder to the American army at Cambridge; but the youthful actors in the scenes described lack life and reality. Still, young readers will follow the fortunes of the boys with interest, especially of the one who sailed in the privateer. The book, which is attractively got up, is the first of the "War of the Revolution" Series.

A story of Colonial Virginia is Mr. Howard Pyle's 'Jack Ballister's Fortunes' (The Century Co.). It is the boy's misfortunes, however, which make most impression upon the reader, for he is first kidnapped and sold as a servant on a Virginia plantation, and escapes only to fall into the hands of pirates, from whom he finally rescues a fair damsel (and, incidentally, himself). Then, of course, good fortune comes apace. He falls heir to some money and marries the girl. The general plan of the story is commonplace, despite its historical setting. It is, moreover, embarrassed with a style wordy almost beyond endurance; but it serves as a support to the pictures, which, as they originally appeared in *St. Nicholas*, were uncommonly interesting. Unfortunately they have suffered badly in their reduction for this volume.

'Jack Alden,' by Warren Lee Goss (T. Y. Crowell & Co.), is an unusually interesting story. Its pictures of scenes and incidents of army life, from the march of the Sixth Massachusetts regiment through Baltimore to the surrender at Appomattox, are among the best which we can remember to have read. If at first thought the horrors of the battle-field and the hospital seem to be described in needlessly minute detail, still it is well that the youth of to-day should realize what a price was paid for the preservation of the Union, as well as the nature of even the best wars. The principal characters are well conceived and life-like. Lessons of patriotism and nobility of character are skilfully inculcated, and there is a just appreciation of the valor and sincerity of the Confederates. The book is thoroughly wholesome reading.

One could not wish a child to gain his first

knowledge of Napoleon from such a one-sided book as Mr. Elbridge S. Brooks's 'A Boy of the First Empire' (The Century Co.). Here we see this most versatile man in the character of a good husband (separated from his wife, to be sure, by "the cruel necessities of state policy," etc.), an unselfish patriot, a generous conqueror, and a lively, human companion and friend—all truly edifying, but scarcely historical. Moreover, if French children a century ago were as important and bumptious as they are here represented, their manners have certainly improved. To say nothing of the forwardness of Philip, the hero, we have a young girl of fourteen supporting a salon all by herself, and also dancing at a court ball, apparently without creating the least surprise.

The Century Co. reprints from the magazine Anna Eichberg King's quaint 'Kitwyk Stories' in an appropriate cover of blue and white Dutch tiles. Human nature is pretty much the same wherever you find it, and these little stories of village life in the staid Holland of a century ago will find enough response, even in this breathless time and place, to make them amusing occupation for a stray half-hour; but, as they are love stories, the youngest readers will doubtless vote them "stupid."

'Dear Little Marchioness: the Story of a Child's Faith and Love' (T. Y. Crowell & Co.) is much the sort of book that a judicious book-taster would expect from the name. The fact of the child's being a marchioness is the only thing at all distinctive about her. The saintly old negro, her faithful attendant, explains his virtue very profitably, no doubt, when he says, "Ev'y darky on my ole mistis' place wuz baptized, an' brung up in de Lord. An' I tuck de Blessed Sacrament whene'er her an' her chillens did. How, seh, do you s'pose I kep' frum takin' dat captain's pus, what he laid on de hall table dat day, but fur dat?" This new doctrine of the efficacy of the sacraments we must leave for the bishop to explain who wrote an approving introduction to the story.

Mr. Howard Pyle reappears in 'The Garden behind the Moon' (Scribners), a fantastic, half-allegorical—shall one venture to say, altogether tiresome?—book. "I believe," says the author, "it takes more wits to cobble a pair of shoes than to write a big book, and more cleverness to make a good wax-end than to draw a picture with a lead pencil." We agree, if this is the big book; but it must be much harder to make a good wax-end than we ever supposed, if these are the pictures, for they are by no means despicable.

It is a task like those set of old by malignant stepmothers and kings with handsome daughters, to make up a fairy story in these knowing days; and, without a fairy god-mother's help, it is, like them, impossible. Yet people still keep at it. A pretty-looking book of this sort is 'Elf-Errant,' by Moira O'Neill (Dodd, Mead & Co.). It babbles of the adventures of tiny elves who live in fox-glove bells, fight bumblebees, and ride on swallows' backs; but any sensible child who has access to the real old fairy stories will not waste precious time over such insipidity.

'The Kanter Girls,' by Mary L. B. Branch (Scribners), is another superfluous book. Two real little modern girls receive the typical fairy gifts—rings of invisibility, a boat which sails of itself according to the occupant's wish, a golden chariot to fly through the air, etc. And with these aids to travel they visit distant places and see unusual things. Two little sisters might tell each other such inventions, and it would do well enough to fill up the drowsy moments before bedtime, but we hope they would know better than to write it down in the morning.

'Chris and the Wonderful Lamp,' by Albert Stearns (The Century Co.), has some resemblance to the last-named book—that is, it bestows upon an every-day child a well-known fairy gift (in this case, Aladdin's lamp) and lets him use it according to his folly. It is, however, a much more interesting book, because strictly realistic in every other point. Chris has the lamp, to be sure, with its attendant genie at his command, but the fact that he gets so little real satisfaction and has so much annoyance in connection with it might suggest, even to a young reader, that it would be better to work steadily towards some attainable object than to have every idle wish immediately gratified. All which, doubtless, was in the author's mind, and gave him excuse for writing, though he wisely refrains from pointing the moral too obviously.

From fairies and magicians it is a relief to turn to 'Paddy O'Learey and his Learned Pig,' by Elizabeth W. Champney (Dodd, Mead & Co.), one of those unpretentious tales which are often the most satisfactory. The fortunes of an Irish boy as ordinary as his name are here told in a straightforward way, with inevitable humor and unconscious pathos enough to avoid monotony. The tone is very sympathetic, only at the end the author allows herself a little fun at Uncle Barney's expense when she raises him to the very highest pinnacle of distinction, in the estimation of his Irish friends, by making him an alderman in New York city. The pig is no mere adjunct, but such an intimate friend and boon companion as only a lean Irish pig can be, and well deserves his place on the title-page.

A collection of pleasantly written stories by Margaret Benson about her various pets is rather oddly entitled 'Subject to Vanity' (Dodd, Mead & Co.). Vanity, in fact, is only one among the creatures' unexpected characteristics which the stories illustrate. It seems possible that their sympathetic friend has attributed more human feelings to birds, cats, kids, etc., than they really possessed; but, after all, she knew the individuals and we did not.

In 'The Horse Fair' (The Century Co.) Mr. James Baldwin recounts the most notable feats of our equine friends from time immemorial. Legend, history, and poetry contribute. Phaeton's impetuous team, old Rosinante, Sheridan's war-horse, and many another famous steed here course along and do their best to reawaken the enthusiasm which once greeted them. That nothing may be left out, metaphor is pressed into service to give us the "iron horse," and the dandy horse that came so near being a bicycle, besides the sailor's odd "hobby-horse" with barrel body and bottle eyes.

While the Constitutional Convention in South Carolina is endeavoring to put blacks and whites asunder, at the ballot-box and at the fireside, politically and matrimonially, Mr. Joel Chandler Harris shows how inseparably his literary reputation is bound up with the race to which his Uncle Remus belonged. His 'Little Mr. Thimblefinger and his Queer Country' of last season is now provided with a sequel, 'Mr. Rabbit at Home' (Houghton, Mifflin & Co.). The scene and the personages are the same, and again the real drollery of the conversation is confined to the colored nurse-girl Drusilla, while the animal stories surpass in humor all Mr. Harris's inventions or adaptations of older properties. The loss of the negro dialect continues to be felt—all the more because Mr. Rabbit, having taken the floor in place of Uncle Remus, spends his old age in breaking down the distinction between *shall* and *will*, not to speak of minor vulgarisms of the old plantation. Laughable enough is "Why the Bear is a Wrestler"; and fairly humorous are "The Rabbit and the Moon," "An Old-Fashioned Fuss," and "A Mountain of Gold." In the last, either Mr. Harris is obscure or he insinuates the dogma of fiat money, as would be not unlikely from his connection with the staff of the perverse Atlanta *Constitution*. Mr. Oliver Herford's illustrations are as uneven as the quality of the tales.

The Love-Letters of Mr. H. and Miss R., 1775–1779. Edited by Gilbert Burgess. Chicago: Stone & Kimball. 1895.

It was quite worth while for Mr. Gilbert Burgess to reprint the Hackman-Reay love-letters, for they are not without literary value; we wish the editor had found it equally worth his while to face fairly and discuss critically the question of authenticity that this new edition inevitably revives.

The story of the letters is briefly as follows: In 1775 James Hackman, a young British officer, fell violently in love with Martha Reay, that beautiful and accomplished mistress of Lord Sandwich, who bore to him, among nine children, Basil Montagu, the champion of Bacon's personal character. Miss Reay, whose love for her dissolute "protector" was chiefly a quite unnecessary gratitude, long reciprocated Hackman's passion, and gave him strong hopes that she would marry him. After four years, during which time Hackman had sold his commission and taken orders—to escape the fate of an army life in Ireland afar from his lady-love—Miss Reay refused to wed. Hackman conceived that he had lost her love; and in despair he sought her at the theatre to destroy himself in her presence. Here, yielding to a sudden fit of jealousy, he shot the lady dead, and, to his wrath, succeeded in inflicting but a slight wound upon himself. He was tried, sentenced to death, and hanged; behaving on his trial and at the gallows with a fine manliness that touched London to the heart.

A year later Sir Herbert Croft told the story in a thick pamphlet called 'Love and Madness,' giving what purported to be copies of a genuine correspondence between the dead lovers. Croft inserted in one letter an important biographical sketch of Chatterton, dishonestly employing for the purpose documents lent him by Chatterton's mother and sister. When the book succeeded, Croft claimed the authorship of this letter. The world immediately doubted the genuineness of the rest; Johnson was severe; and in the *Monthly Magazine* a well-informed person expressed the general sentiment thus: "Of their authenticity we can say but little; for though we profess ourselves critics, we pretend not to be conjurors." Mr. Burgess ought to have quoted this canny remark of old John Nichols, and heeded the force of it. In this new edition, however, Mr. Burgess counts as genuine all the correspondence except the Chatterton matter; he does so after "exhaustive investigation." However dull reading a really critical controversy on this subject might have made, an editor to whom such letters seemed "a veritable 'human document' of strong interest," was bound to show the process of sifting by which his conclusion was reached.

We pretend neither to have made an "exhaustive investigation" of the case nor to be in any sense "conjurors"; but we have very little doubt that much in the letters besides

the Chatterton material is forged. Apart from purely technical matters of style, which we have no space to detail, there are numerous passages which bear every mark of insertion by Croft—an immensely versatile person—for dramatic effect. Some, if not all, the artistically ominous accounts of murder, suicide, and execution are not to be disposed of by lightly talking about "a morbid vein." And what ingenuous criticism can view without lively suspicion such sentences as the following, beside which the prophecies of a Swedenborg concerning his own death, pale?

"Yet, could I believe (which I own I cannot from the evidence in this case) that the idea of destroying her never struck him till his finger was at the trigger; that his only intention was to lay the breathless body of an injured lover at her feet—had this been the fact, however I might have condemned the deed, I certainly should have wept over the momentary phrenzy which committed it" (pp. 137, 138).

Again:

"(Should the pen of fancy ever take the trouble to invent letters for me, I should not be suffered to write to you thus, because it would seem *unnatural*. Alas! they know not how gladly a wretch like me forgets himself.)" (P. 172.)

The letters upon parts of which it would seem that suspicion must rest are of the following dates: February 16, 1776; February 22, 1776; May 29, 1776; June 18, 1776; September 15, 1776; September 18, 1776; January 26, 1777; February 6, 1777; June 27, 1777; September 20, 1777; March 2, 1778; January 28, 1779; April 18, 1779 (five P. M.). We cannot say we believe that all the rest are untampered with; but nothing is easier than to doubt.

Palmyra and Zenobia: An Account of Palmyra and Zenobia, with Travels and Adventures in Bashan and the Desert. By Dr. William Wright. Thomas Nelson & Sons. 1895.

THE first part of this book is the narrative of a trip to Palmyra in 1874, with some notices of an earlier visit in 1872, and a few chapters on the history of Zenobia and her city Palmyra. The second part is the narrative of a missionary journey to the Lejah and Hauran. Both narratives are full of adventure, breezy and interesting. Dr. Wright must be a man of almost foolhardy courage and of great physical strength and endurance. He rides from Palmyra to Damascus, a five day's journey, in one stretch. Entirely alone he goes through regions swarming with brigands and marauding "bedawin," and his encounters with these gentry, from which he always emerges victorious, not infrequently making friends and adherents of his adversaries, are both exciting and entertaining. He has a keen sense of humor, which often stood him in good stead in dealing with the Arabs. He was also well acquainted with Arabic, and is able in consequence to present a far more interesting picture of the people than the ordinary traveller can do. He was a good sportsman and an indefatigable explorer, and while his narrative is thoroughly popular in its character, there is much in it of value both to the archæologist and to the Bible student. One might have expected the author of 'The Empire of the Hittites' to find traces of Hittites wherever he went, but, if we remember aright, the Hittites are mentioned only once in the whole book, and then incidentally. Outside of the history of Palmyra, which, we are sorry to say, Dr. Wright connects with Solomon, archæological information and Bible references are introduced only casually, but are in themselves apt and almost always good.

Dr. Wright made a thorough exploration of the apparently inaccessible high-tower tombs at Palmyra, taking with him ladders and grappling irons for that purpose. He also swam up and explored for some distance the warm, underground sulphur stream at Palmyra, which appears above ground in the fountain called Ephca. In his zeal for exploration he sometimes found himself in dangerous positions, as when he dropped through a small hole at the foot of a mound in the present cemetery at Palmyra. He fell into a vault seven or eight feet high, sixty feet long, and twenty-seven feet wide.

"There were nine recesses for bodies on either side, and five at the lower end. The recesses, in length and general dimensions, resembled the *loculi* in the tomb towers which we had already explored; but they were cemented down the sides, and each had five shelves of hard-baked pottery fitted and cemented into them. On these shelves the embalmed corpses of the Palmyrans were laid, the bodies having been rammed in head foremost, with the feet out."

It was a unique and most interesting discovery, and fortunately Dr. Wright had with him some magnesian wire, by means of which he was able to explore the tomb. But it was not so easy to get out as it had been to get in. The hole was out of reach in the roof above him. He tried to reach it by means of steps which he built out of the pottery tiles and mummies from the *loculi*, but in vain, and for a time it looked as though he were buried alive in an ancient Palmyran grave. Finally, some passing Palmyrans heard him singing and shouting, and reported that the dead were crying out of the bowels of the earth. This gave Dr. Wright's people a clue to his whereabouts, and he was rescued from "sheol."

On another occasion, while exploring a ruin in the Lejah, he dropped through a hole and landed in the midst of a family party of Druses at their supper. "Fancy a man dropping through your ceiling when you are all at supper, and you will not be surprised to hear that I was greeted with a stony stare. I said all the apologies that I was acquainted with in Arabic, suitable to the circumstances, and immediately they were all delighted to see me, and no excuse would save me from partaking of their food."

Dr. Wright is a missionary of the robust, burly type, carrying the repeating-rifle in one hand and the Bible in the other. But it must be said that he regarded the former as a means of defence to be shown always, but not to be used except as a last resort. He never did use it, in fact, but the threat to use it saved him from brigands more than once. On the other hand, he was evidently much in earnest in his genuine interest in the people, and willing to risk his life for their good. He even attempted to bring those shyest and most unknown of all Arabs, the Suleib, into the missionary schools. If somewhat burly, his Christianity is also affectionate and tender.

The country north and south of Damascus along the desert is at the best of times dangerous and unsettled, and at the time of the journeys described in this volume the conditions were desperate. These conditions Dr. Wright describes graphically and effectively, ascribing them to Turkish misrule. He narrates several instances of collusion between Turkish officials and Arab brigands. On one occasion he was even an eye-witness to a meeting between red-handed robbers and their ally, the Turkish Governor of Palmyra. Turkish misrule he seems to ascribe to Islam, to which religion and its founder, Mohammed, he is not altogether fair. The Druses he seems to prefer to the Moslems, and as an Englishman he finds in them natural allies, among whom he is safe even when they are at war with the Turks. Christians of the native churches do not find favor in his sight, but at the same time he observes that Christian villages are more thrifty, industrious, enterprising, and intelligent than those inhabited by Moslems.

The book is well got up and profusely illustrated, containing 381 illustrations, including three maps, in the space of 394 pages. The maps are sufficient to explain Dr. Wright's route, and the illustrations are good, and helpful, excepting a few fancy pictures, which look as if they had been made for a boys' book of adventures.

Shakespeare's Heroines on the Stage. By C. E. L. Wingate. Thomas Y. Crowell & Co.

IT seems certain that Mr. Wingate must have expended much time and labor upon this work, but unluckily the result is not correspondingly valuable. He has selected fourteen of the principal female characters of Shakspere with which to head as many chapters, and then has proceeded to group beneath them notices of the various actresses, good, bad, and indifferent, who have impersonated these parts upon the stage in this country and in England since the Restoration. Naturally he has accumulated a large quantity of information, personal, statistical, and other, but the greater and best part of it—that relating to the famous actresses of preceding generations—can be found in fuller and more convenient form elsewhere, while much of the matter referring to the exploits of modern performers is scarcely worth preservation.

Mr. Wingate's work appears to be accurate, so far as it goes, but, owing to the manner of its arrangement, is not likely to be of much use for reference. The disconnected and fragmentary style, the profusion of insignificant names, and the unavoidable confusion of dates are serious faults; but the anecdotes and the plentiful illustrations will provide casual amusement to the careless reader of gossip.

BOOKS OF THE WEEK.

Acton, Lord. A Lecture on the Study of History. Macmillan. 75 cents.

Completion of a "Monumental Work."

THE FOURTH PART OF KERNER & OLIVER'S

NATURAL HISTORY OF PLANTS

Has just been issued.

The four parts, with about 2,000 cuts and 16 plates in color, may now be had for $15 net, postage, $1. Those having purchased earlier parts may receive the concluding one upon receipt of $3.75, postage 30c.

Botanical Gazette—"Will do much toward bringing modern Botany before the intelligent public."
Prof. McFarlane of the Univ. of Pa.—"Deserves a wide circulation."
Prof. J. M. Coulter in the *Dial*—"A most fascinating book, not only for the botanist, but for the general reader also."
New York Times—"A magnificent work."

Descriptive circulars free on application.

HENRY HOLT & CO.,

29 W. 23d St., New York.

HAKLUYT SOCIETY (President C. R. MARKHAM, Esq., C.B, F R S).—The following work is now ready for issue to members: **THE VOYAGES OF PEDRO SARMIENTO TO THE STRAITS OF MAGELLAN.** Translated and edited by **Clements R. Markham, Esq.**, C.B., F.R.S., Pres. R. G. S., etc., etc.

The Annual Subscription is One Guinea, which entitles the subscriber to all the Publications of the Society. Particulars of works already issued, or in preparation, may be obtained on application. WILLIAM FOSTER, Hon. Sec,
4 Lincoln's Inn Fields, W. C.

F. W. CHRISTERN,
(DYRSEN & PFEIFFER, Suc'rs),
254 Fifth Ave., between 28th and 29th Sts., New York.
Importers of Foreign Books; Agents for the leading Paris Publishers; Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. New books received from Paris and Leipzig as soon as issued.

MAYER & MÜLLER, Booksellers.
51 Markgrafenst, Berlin (Germany).
Direct supply, at best terms, of GERMAN NEW AND SECOND-HAND BOOKS, PAMPHLETS, and PERIODICALS in any department of Learning and Literature. *Cheapest opportunity* for Libraries, Professors, and Students. Catalogues on application. Best references.

The Standard Masterpieces of Engraving and Etching, both old and modern. The best portraits of eminent persons. The works of Dürer, Rembrandt, Bartolozzi, Seymour Haden, Whistler, and other masters.

Correspondence is invited. Prints sent on approval to any address.

FREDERICK KEPPEL & Co., Paris, Chicago, and 20 East 16th St., New York.

WHY READ AT RANDOM?

Men and women of authority in the most interesting fields of literature have chosen 2,100 works for
The List of Books for Girls and Women and Their Clubs,
adding just the word of description and criticism an inquirer wishes to have. Nothing so helpful has ever been published before. Some of the departments:

Fiction, a reviewer for the *Nation*. **History**. Reuben G. Thwaites. **Natural History,** Olive Thorne Miller. **Education**. Prof. Edward R. Shaw. **Fine Art,** Russell Sturgis. **Music,** Henry E. Krehbiel. **Country Occupations**, Prof. L. H. Bailey. **Domestic Economy, Useful Arts, and Livelihoods,** Augusta H Leypoldt. **Hints for Girls' and Women's Clubs,** with Outline Constitution and By-Laws.

Cloth, $1.00; paper, 50c.
Published for the American Library Association.
Library Bureau, 146 Franklin St., Boston
Branches; 273 Stewart Building, New York; 603 Chestnut St, Philadelphia; 125 Franklin St., Chicago; 10 Bloomsbury St., London, W. C.

Do me the favor to ask your wine merchant, or Park & Tilford (wholesale agents), for my "*Picarillo*" natural sherry, and "*Manzanilla Pasada.*"
GUILLERMO DOBLACHE,
Puerto de Santa Maria.

YALE MIXTURE.

The choicest tobacco made, and pre-eminently a gentleman's smoke.

Marburg Bros., The American Tobacco Co., Successor, Baltimore, Md.

NEW PUBLICATIONS.

The Complete Poetical Works of Thomas Moore.

With biographical sketch by NATHAN HASKELL DOLE. Notes and index to first lines. Two vols., illustrated with photogravure portrait and other illustrations, 12mo, cloth, gilt top, $3.00; white back, fancy paper sides, gilt top, $3.00; half calf, gilt top, $6.00.

Tom Moore's exquisite sense of rhythm, his genuine warm Irish heart, his keen, flashing wit, all make him one of the best loved of household poets. The present edition has been carefully edited and printed from the author's own original ten-volume edition of 1841.

Keats's Poetical Works.

With biographical sketch by N. H. DOLE. Notes, appendices, index to first lines, etc. Illustrated with photogravure portraits and original drawings. Two vols., 12mo, cloth, gilt top, $3.00; white back, fancy paper sides, gilt top, $3.00; half calf, gilt top, $6.00.

The text of the present edition is a reprint of the latest Buxton-Forman edition. It contains every line of verse that, so far as is known, ever proceeded from Keats's pen. Portraits, facsimiles, and other interesting illustrations add to its value.

London Idylls.

By W. J. DAWSON. 12mo, cloth, $1.25.

Full of poetry and vivacity, very dramatic and intense. It is through such books as Mr. Dawson's that one appreciates the pathos and beauty of a great city like London, where there are more and deeper tragedies of love, heroism, sacrifice, and crime than in any other city in the world.

The Hawthorn Tree

And Other Poems. By NATHAN HASKELL DOLE. 16mo, half leather, gilt top, $1.25.

A representative collection of songs, sonnets, and more serious pieces, from contributions to the *Century, Independent,* etc.

The Making of Manhood.

By W. J. DAWSON. 12mo, $1.00.

Helpful suggestions to young men who seek to attain influence or success and have an overmastering desire to accomplish some definite end.

First Things First.

By the Rev. GEORGE JACKSON. 12mo, $1.00.

Sixteen practical addresses to young men in the very lines where they most need help and guidance. Five thousand copies of this helpful book have been sold in Great Britain.

For sale by all booksellers, or sent, postpaid, upon receipt of price by the publishers,

Thomas Y. Crowell & Co.,

New York, 46 East 14th St.
Boston, 100 Purchase St.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 14, 1895.

The Week.

REPUBLICANS cannot be blamed for saying that their sweeping victories of November 5 make their success in the next Presidential election certain. Yet even the most elate of them have a haunting recollection that they felt just as certain in 1884 and 1890. The conservative vote which their Blaine and tariff and Force Bill debauch alienated has now no doubt returned to them; but there is time for it to be alienated again before next November. Let them only give Tanner, Foraker, Chandler, and McKinley, to say nothing of Platt, Quay, and Sewell, rope enough, and the hanging of the party will be among the easy possibilities. Senator Sherman already threatens a duty on wool and a general and speedy tariff upheaval. He and too many other leaders are deceived by the idea that the country wants them to "do something." But that is precisely what the country is sick and tired of. Doing something is what has undone one party after the other. As the Antinomian hymn says: "Doing is a deadly thing, doing ends in death." The voters of the nation are prepared to hail a party which will frankly say that it proposes to legislate as little as possible; that it is not going to insist upon making everybody rich, wise, and virtuous by law. All the Republicans have to do is to stand still and see their salvation. If they are too eager to help things along by going to war with England, or ripping up the tariff, or inflating the currency again, they may easily find the disagreeable lessons of 1890 and 1892 set them once more.

Right-minded men of both parties may rejoice together over the overwhelming rejection of Jingoism in the person of the one candidate who made his campaign on that issue. That unscrupulous demagogue, Campbell of Ohio, who was willing to "chance" free coinage a few years ago, made his bid for the Ohio governorship this year on a platform, which he constructed for himself, of waving the flag on all occasions, driving Great Britain out of Venezuela, serving notice that "the people are not prepared to lie down and allow the British lion to put his paws on them," and no end of such nonsense. This was really the one national issue that he put forward, and with the hardly concealed purpose of running for President on a Jingo platform next year if he should carry Ohio this year. The result was his defeat by a majority never before equalled in any gubernatorial campaign in Ohio, save when the Democrats in the middle of the war committed the criminal folly of making the "copperhead" Vallandigham their candidate.

Among the driblets of the election are two items, not very important in themselves, but of great significance as indicating the drift of public opinion. One of these is the stunning defeat of Edward Lane, the Democratic candidate for Congress in the Eighteenth District of Illinois. Mr. Lane made his campaign on the sole issue of the free coinage of silver. Lane was a member of the last Congress, and he distinguished himself by introducing a bill to make all gold contracts payable in silver. This monstrous measure to enable all debtors to cheat their creditors was actually reported favorably by the judiciary committee of the House, although the vote in favor of it was less than a majority of the full committee. Mr. Lane was also one of the most vociferous advocates of the Illinois free-silver, separate-action convention which Gov. Altgeld and Secretary Hinrichsen engineered last spring. The district in which Lane ran for Congress is usually Democratic by a decided majority, and Lane himself was elected in 1892 by about 5,500 majority. The result this time was his defeat by an estimated majority of 3,000. In Nebraska the regular Democratic convention was controlled by ex-Congressman Bryan, who is quite as rabid on the silver question as Lane of Illinois, and a much abler man. The anti-silver Democrats refused to attend this convention. They made separate nominations on a platform reaffirming the currency plank of the Chicago convention of 1892, adding to it the words "as it has been interpreted by the present Administration." The result of the election is a majority of about 25,000 for the Republicans, but even more significant is the fact that the bolting sound-money Democrats cast more votes than the regulars. Bryan is now shelved indefinitely, but he is still a young man, and he may live down his youthful indiscretion.

The charge that President Cleveland's course and policy have caused the Democratic overthrow in the recent election has been feebly put forth in a Tammany newspaper. It is worth while, perhaps, to take some notice of it. To begin at the beginning, Mr. Cleveland was the first President the Democrats had been able to elect during a quarter of a century. He was also the second one they were able to elect. These two facts were not of accidental occurrence. He was chosen in 1884 because he had given proof, in less exalted positions, of the possession of certain qualities which the people rely upon in sunshine and in storm, in evil report and in good report. He was elected in 1892 for the same reasons, and he has vindicated the choice that was then made, and more. Now, what has the Democratic party itself done—the party as represented in Congress? With the single exception of the repeal of the Sherman act, it has thwarted and flouted the President in every possible way. It did repeal the Sherman act, but it had to be nearly strangled before it would do so. By the obstinacy and perverseness of a group of Southern Senators, who refused to allow a vote to be taken on the question, the country was brought nearly to the pitch of revolution. The point of this is, that the Democratic party had no real discipline. It could not control its own members. It was like a balky team, one horse backing while the other was pulling, and vice-versa. After the country had been convulsed nearly two months, these balky Democrats, with a bad grace, allowed a vote to be taken; that is, they allowed the will of the majority to be expressed in a constitutional manner, but with extreme reluctance.

The next thing that profoundly stirred the country was the fight in the Senate over the Wilson bill. In this case another group of rioters seized control of an important measure, the most important next to the repeal of the Sherman act, and would not allow it to pass without changes in behalf of an odious private monopoly. All the signs pointed to a corrupt bargain with the Sugar Trust. The undisciplined group that blocked the pathway this time was actually able to carry its point. The result was, that four or five Senators turned the whole party right-about-face, to its intense disappointment and its abiding shame. When Mr. Cleveland refused to sign the tariff bill that was actually passed, he expressed the disgust of nine-tenths of the members of the party. But the blundering and perverseness did not end here. The party had a clean majority in both houses of Congress. President Cleveland and Secretary Carlisle had urged Congress to give them authority to sell bonds at a low rate of interest and having a short time to run, in order to replenish the dwindling gold reserve. They treated this recommendation with absolute contempt. The reason was, that they were not willing to recognize the right of the executive branch of the Government to preserve the public credit. This was in itself a monstrous outrage on the decent sentiment of the country, but it was emphasized and burned in when the House refused to save $16,000,000 on the last issue of bonds by making them payable in gold. It is true that some of the Republicans helped to defeat this proposition, but they were the minority. They were not responsible for the public business. This was another case where the party had failed in the matter of dis-

cipline. A part of the team had kicked over the traces, and the coach had upset in consequence. The upshot of the whole matter is, that no Democrat has any just ground of complaint against Mr. Cleveland for the upsetting of the party coach. They refused to follow the lead of the only man they had been able to elect as President in thirty years, and they must now take the consequences. A party which is at war with itself is in no condition to win victories against an enemy.

The result of the election in Utah last week adds a new State to the Union, and will increase the Senate to a body of 90 members, while the next electoral college will have 447 votes, making 224 necessary to a majority. Both inside and outside of the Territory there has been considerable doubt among the opponents of polygamy as to the safety of giving the sovereignty of a State to a community in which the influence of the Mormon Church seems still very strong; but the Constitution which was ratified by the voters on November 5 contains the most solemn prohibition of plural marriages, and the general feeling has been that this institution cannot stand up against the swelling tide of Gentile influence. The Constitution gives women the right to vote on equal terms with men, and establishes the novelty in judicial methods of a jury of eight members, instead of the traditional twelve. The Republicans seem likely to elect the United States Senators, but, whether Republican or Democratic, they will be "red-hot" for free coinage.

The accession of two recruits to the Republican side of the Senate from Utah, and the already assured gain of Republican successors to Hill of New York and Gibson of Maryland at the end of their terms, render it certain that the Republicans will have a good working majority of the Senate in the Fifty-fifth Congress, which comes into existence on the 4th of March, 1897, without allowing for the chances of a Republican Senator from Kentucky or Republican gains in other States at next year's elections, which are far more likely than the change in Maryland. It is possible that the Republicans may have a bare majority in the upper branch during the Fifty-fourth Congress. When the Utah Senators take their seats, as they probably will by the end of January, the body will consist of ninety members, and forty-six will make a majority. If the controversy over the vacant seat from Delaware shall result in the admission of Du Pont, the Republican claimant, as seems not unlikely, there will be forty-five Republicans to thirty-nine Democrats and six Populists, counting both Jones and Stewart of Nevada with Peffer of Kansas, Allen of Nebraska, Kyle of South Dakota, and Butler of North Carolina. But Jones is a Republican on all issues except the financial one, and his vote may thus give the Republicans a bare majority on some party questions. The Republicans, however, will not be able to reorganize the Senate committees and seize the Senate offices at the opening of the next Congress, and the wiser among them oppose any attempt to do this until they shall come into unchallenged control of the body a year from next March.

There are numerous signs that the Republicans are bent on making a scapegoat of Mr. Roosevelt, and holding him responsible for their own egregious folly in dealing with the liquor question in their platform and in their articles and speeches. Anything more ludicrous than their own praise of their "courage" in upholding the Tammany liquor law in the convention is not often met with. They seem to have fallen into the Goo Goo error that politics is simply a place for the display of the elementary virtues, such as courage, patience, temperance, and so on; whereas the first need of the politician is wisdom, to which should be added knowledge, and then comes courage; but wisdom stands highest. Any fool can be courageous; indeed, most fools are. The Republicans are now preparing to deal with the subject in a rational spirit, and throw Roosevelt to the wolves for carrying out the programme they themselves promulgated at Saratoga. A sane plank, showing that the law was Tammany's, that it had debauched the police and should be amended by the next Legislature, would probably have saved the election in this city and put three good Republicans on the bench of the Supreme Court. To boast now of the "courage" of what they actually did is "too ridiculous."

At the same time we are far from defending all Commissioner Roosevelt's methods. There was a letter in the *Tribune* last week, from an "Old Republican," which well expresses a growing popular feeling about him, of which we trust he will take note. The sum and substance of it is that we have had far too much Roosevelt during the last six months. It is an axiom of administration that when you are enforcing an obnoxious law, the personality of the officer should be kept out of sight as much as possible, and the law, and the law only, thrust into the voter's face. Mr. Roosevelt's activity and his speeches have led the masses to suppose that he was the prime mover in the whole business, and he has described his work and his intentions and his views in highly exasperating language. He has, too, appeared as an authority on such a variety of subjects that people who were suffering from him have almost resolved to perish, sword in hand, sooner than live under the rule of such a very superior person. It would be unkind to cite illustrations of all this, and unhappily it is not necessary. But it ought to cease. A Police Commissioner in this city, facing a hostile population, ought to efface himself completely in enforcing an unpopular law. He ought to stick to his work, and ought to suspend for the time being all supervision of the foreign policy of the Government, of the administration of the navy, of the next Presidential nomination, of the policy of his party, and of the present state of international law. Any one who tries to cover all this ground in one day produces an impression of youthfulness, which has always been Mr. Roosevelt's greatest impediment. Older men know it can't be done.

Mayor Strong might well have spared us the resuscitation of Gilroy, the ex-Mayor, in order to put him on a committee to represent the city he has disgraced, at the Atlanta Exposition. Gilroy has received at the hands of an outraged community the most stinging rebuke ever inflicted on a public official of his standing in the modern world. We do not mean the defeat of his party at the end of his term, but the authority given to his successor to kick all his appointees out of office peremptorily as rogues and corruptionists; and that authority Mayor Strong has exercised. This ought to have finished Gilroy's official connection with the city of New York. While in office he did all the damage to it he could by the appointment of thieves and profligates to its leading offices, and by presiding unmoved over their criminal activity. Since he left office, which he entered a poor man, he has been travelling in Europe and living in idleness. He ought to-day to shun sedulously any position that would lead people to talk of him. He will be a grotesque figure at Atlanta for the Georgians, and an insult to those of us at home who help to pay his expenses. There is an odd idea afloat that our young people learn their public and private morality out of books. The fact is, they learn it from the way they see their elders treat the men with whom they have dealings in politics and business.

We spoke some weeks ago of the effects of the Jingo movement on the discipline of the navy, which had just resulted, at the time we wrote, in the infliction of punishment on two admirals for travelling out of their sphere, and the censure of another for open denunciation of the foreign policy of his Government. Commander Young, a very valuable officer, happening to be serving on board the *Boston*, at Honolulu, when Stevens, the United States Minister, played the dethronement trick on the Hawaiians, caught the Jingo fever. Unfortunately, just at the crisis of his malady, the Fourth of July came along, and in his delirium he delivered an oration in which he called on the Hawaiians to join the American republic. On his recovery he returned to the United States, and was near being court-martialled, but through President Cleveland's mistaken lenity he escaped, soon had another attack, and has now

written a book on Hawaii in which he gives some account of the events of the "revolution," in which Mr. Blount and the Administration fare badly. Needless to say that the publication of the book has been prohibited by the Navy Department, and that, according to the Boston *Journal*, "a national censorship over the published thoughts of American officers" has thus been established.

An authoritative statement has come from England that England is ready, and always has been ready, to submit the boundary dispute with Venezuela to arbitration. Her case is that she owns the country up to the Cuyuni River. This may or may not be true—it is the question for the arbitrators. As a matter of fact, she has acted as if she did own it by having a British police post on the southern bank, over which the British flag waved. Now early in this year the Venezuelans determined to decide the matter for themselves by force. They accordingly crossed the river, took the police prisoners and held them for eighteen days, hauled down the British flag, and wrecked the post. On the day on which they crossed the river they also seized a British subject and gave him a sound thrashing as a trespasser. These facts are not denied by the Venezuelans themselves. They are the cause of the "ultimatum," or whatever it is, which Lord Salisbury is said to have transmitted to the Venezuelan Government. Now, what we want to know of the Jingoes—not the wild fellows who want war to educate the boys and encourage trade, but the calmer ones who make some pretensions to historical and legal knowledge—is, what is a first-class power to do on receiving an insult of this sort from a petty state like Venezuela? We do not now propose to argue. We simply wish to know what would be the power and duty of the United States in such a case? Suppose Chili, or Mexico, or Guatemala, or Costa Rica did all this to us under like circumstances, what action would the more learned Jingoes call for? What would Senator Lodge say, or Don Dickinson, or Mr. Grout?

Mr. Bayard is getting a terrible castigation for his Edinburgh address, in which he affirmed that "the insatiable growth of a form of socialism styled protection" in the United States had done more than any other single cause to "corrupt public life, to banish men of independent mind from public councils," and to bring it about that "jobbers and chafferers take the place of statesmen." He has been severely rebuked, and his instant recall demanded, for thus washing the dirty linen of our politics before a foreign audience. He has been triumphantly reminded that, only two days before he spoke, the American people gave enormous majorities to the protective party; and what could be more ridiculous than a political philosopher thus confuted by a popular vote? But in all the outcry there has been a singular omission to inquire whether Mr. Bayard told the truth. His own State of Delaware is indignant, but has no explanation to offer of Higgins and Addicks, the statesmen whom, under the protective system, she delights to honor. Pennsylvania is cruelly sarcastic at the expense of our blundering Ambassador to England, but is conveniently silent about Quay and Cameron, as she is about the fact that she has not produced a single public man of even the second rank in the past forty years. Bill Chandler is the only great protective statesman who has come forward in person to maintain, to Mr. Bayard's confusion, that jobbers and chafferers are unknown in our public life; but Bill is much more impressive declaring war than embodying political purity. Mr. Bayard's fiercest castigators look coldly at Bill for rushing in to muddle the argument.

A correspondent accuses us of taking a low view of the long coquetting of the Episcopal Church with other denominations, in the matter of church unity. Our aim was but to state the facts, and the final exchange of letters between the Presbyterian and Episcopal committees on unity shows that the whole thing was an illusion from the beginning. The *Independent* calls it the ringing down of the curtain on a comedy. This appears to be also the view of the Rev. Dr. Greer, rector of St. Bartholomew's, who grew jocular over the situation in his remarks before the Baptist Social Union on Thursday last. He observed: "We Episcopalians have had a good deal to say lately about Christian unity, but if you look at us real hard you will find out that our unity means that we want you all to believe as we do." So say Presbyterians, Congregationalists, and the rest: and all the looking "real hard" at each other has made it clear that church unity is at present only a dream. This has been obvious all along to the harder heads in the various denominations, who have not been at all deceived by the solemn courtesies and brotherly correspondence which meant nothing, and of which they have grown very weary.

A French custom-house return, just published, gives some particularly hard nuts to crack to M. Méline and the French protectionists generally. It puts beyond question the steady and disastrous falling off in the foreign commerce of France since she entered upon the protectionist régime. The total of exports and imports was $1,600,000,000 in 1891, fell to $1,500,000,000 in 1892, to $1,400,000,000 in 1893, and to $1,300,000,000 in 1894. There might be cheer in these figures for the protectionist theory, provided they showed that the tariff had accomplished the great object of "preventing harmful importations and stimulating useful exports." But it appears that the wicked imports have fallen off but $650,000 in 1894, compared with 1893, while the blessed exports have dropped $1,600,000. And such deadly imports as France has had poured upon her increasingly—grain and beef and mutton! These were the very things that the protective tariff was going to keep away. In spite of the warning of a French Marshal, that the incoming of foreign cattle was more dangerous to the country than that of Cossacks, the number of head brought in in 1894 was three times that in 1893. The disappointed French farmers are asking M. Méline where their protection and profits come in. He has two answers. One is, that the devilish gold standard is doing the mischief. Hence they should join the International Bimetallic League without delay. The other is, that, by a strange oversight, he did not put his tariff rates quite high enough to do the business, and therefore they should back him up in a demand that the duties be raised instanter. All this has a familiar sound this side the Atlantic, and shows how one touch of folly makes the whole protectionist world kin.

The refusal of the Emperor to sanction the election of Dr. Lueger as Mayor of Vienna had been foreshadowed by the speech of Count Badeni in the Reichsrath outlining his policy, and by the comments of the Hungarian journals on the election. The new Premier had significantly declared that the monarchy would not "swerve from the path of civilization," and the Hungarian newspapers, including the Government organ, *Nemzet*, had said that while Lueger's anti-Semitism concerned only the Viennese, his hatred of Hungary concerned the Hungarians very deeply. The Liberal Vienna papers, headed by the *Neue Freie Presse*, refrained studiously from advising the Government on the question of confirming the election, but Lueger himself ostentatiously expressed his conviction that the Emperor, as the "first Christian of the Empire," would approve of the choice of the Municipal Council. The situation was complicated by the attitude of the various political groups to which the new ministry must look for parliamentary support. The Clerical and reactionary minority of the Conservative Hohenwart Club, which on the whole is favorable to Badeni, attempted at first to intimidate him by threatening to go over to the Opposition in case of Lueger's rejection; but the club refused its consent to such tactics. Nor were the Slovens and other southern Slavs more successful who offered Badeni their support provided he disappointed their opponents, the German Liberals. The tone of the Hungarian papers was all the more determined because of the approaching millennial celebration and their dread of seeing a man like Lueger at Budapest as the guest of the nation.

WHO WANT A WAR?

THE protest of the New York Chamber of Commerce last week against the "recent warlike utterances by men prominent in public life," suggests the question who the persons and classes are in this country really desirous of a foreign war. War talk is thick, but where are the warriors? We are assured that a foreign war would be immensely popular, but what real evidence is there—evidence as distinct from half-crazy, half-jocose mouthings—that any large body of citizens, especially any large body of taxpayers, want a war?

War hath no fury like a non-combatant, and it is chiefly among the non-fighters that the rage for fighting is most intense. Professional fighters are among the most peace-loving of men, as a rule. The testimony of nearly all the great captains of modern times, from Wellington to Grant, is that war is a shocking calamity to civilization, into which nothing but the direst necessity should ever drive a great nation. It is only a man in whom the fiendish element gets the upper hand, like Napoleon, who can ask what difference the slaughter of a million men makes to one in his position. Gen. Sherman was once introduced to a gathering of clergymen in Washington, and startled the heralds of peace present by telling them that they were the kind of men who brought about wars, while he and other soldiers were the ones who hated war, went into it reluctantly, and made an end of it as soon as possible.

Yet there is no doubt a certain desire for war among our professional fighters, especially among our naval officers. The army is quieter, because a war in which it would have any serious work to do is almost inconceivable, even to the inflamed Jingo imagination. This is what makes so deliciously absurd remarks like those of Gen. Harrison in Indianapolis the other day. He spoke of "the next war" as one of the things confidently to be counted upon, said that then Georgia and Indiana would charge side by side instead of against each other, and cried out, "Woe to the enemy who has to meet that fatal charge!" This is delightful, coming from a staid old Presbyterian elder and corporation lawyer, who knows that there is about as much chance of Georgia and Indiana charging side by side anywhere on earth as there is of the American hog and sheep challenging the boars in the Black Forest to a butting contest. But the naval officers are more serious. Their zeal for a war is partly scientific. They would like to know how the big ships would really behave in battle, not simply on dress parade; whether the guns and the armor will do as well at sea as on the proving-ground, whether the new powders and torpedoes are all that they are cracked up to be. Some of them, of course, like to think of the chance of glory and promotion which a war would bring. All doubtless think they are patriotic, and that a successful war would be a great thing for the honor of the country. How widespread in the navy the war feeling has become we have no means of accurately knowing; but we fear that, especially among the youngsters, with heads easily turned by newspaper clamor, it is so general as to be really alarming. At any rate they are the only men trained to fight who show any signs of wanting to fight.

Among the ferocious non-combatants we must place first large numbers of school-children. They live in Revolutionary times by preference. The prison-ships and the Hessians fire their young blood almost as much as the cuts of war-ships in the papers, and they wake up every morning expecting war with England to begin directly after breakfast. Mention must also be made, among non-combatant children of a larger growth, of the class which Gen. Sherman said was responsible for war. Bishop Fallows of Chicago has offered his services in raising an army to go and secure the independence of Cuba. At a meeting in Philadelphia on November 4, a prominent Baptist clergyman called on this Government "to represent to Spain that it does not approve of her course in Cuba, and if the protest be unheeded, to enforce it by arms." Especially in connection with troubles connected with missionaries in foreign lands has there been an unpleasant willingness on the part of some of the clergy to draw at once the sword of the Lord and of Gideon. Then there are, of course, the rattle-pated and loose-tongued agitators of all sorts, the irresponsible warriors of the press, the politicians and the gunmakers out of a job, who fill the land with their cries. They found a fitting spokesman at the Atlanta Exposition on Monday, when the firebrand Governor of Illinois mingled with his furious ravings against capital and corporation and the national credit wild cries for war with Spain.

Admitting the existence of considerable numbers of these champions of war, professional and civilian, how large a volume of public sentiment in this country do they represent? We venture to say, only an insignificant amount. The Chamber of Commerce protest is indicative of the attitude of disinterested business men all over the land. They are not caught in the old snare of supposing that war makes "good times." They know well that war is a most expensive as well as a most cruel affair; that taxpayers will have to foot enormous bills during its continuance and at its end; that the delicate machinery of commerce can by nothing so surely as war be thrown out of working order and into disastrous wreck; and, knowing these things, they are against war and against reckless war talk. The matter is one perfectly easy for any man to test. Let him ask his neighbors and friends. Are they fierce for war? Do they do aught but smile or groan over the newspaper alarums? It is safe to say that nine-tenths of those who have any opinions, or whose opinions are worth knowing, are utterly sick of the whole outcry. The peaceful mission of this country, her fortunate aloofness from the quarrels of the Old World, her immense industrial and civilizing opportunities, are all still too deeply cherished by the great mass of Americans to admit of their seeing these great advantages imperilled by a foreign war without disgust and indignation. Luckily, it takes two to make a war, and it is evident that no European nation proposes to gratify our Jingoes. Lord Salisbury's Mansion House speech made absolutely no reference to the bloody war which our newspapers have been waging with him over the Venezuelan controversy. He may not be able to answer our arguments; anyhow, he is not going to fight us.

A SHEPHERD OVATION.

AN enthusiastic reception, numerously attended, was given last week in Washington to Boss Shepherd. The principal speaker boasted that the guest of the evening had within four years expended $40,000,000 in street improvements, which made about $1,200 for every family in the city. The guest himself avowed his mission to "teach Congress," and to "throw the capital into the lap of the Government," with more frankness than ever before. The Washington *Post* recalls the smart device by which he got all the judges who might have issued an injunction, invited to dinner in the country when he was ready to tear down the Northern Liberty Market houses. That no one recalled the yet smarter and more dramatic safe-burglary plot laid by one of his lieutenants, is perhaps due to its having been a failure in consequence of the sound sleeping of the intended victim.

What gives interest to the affair is, that Shepherd is a man who owes his popular reputation wholly to his lawlessness. Men more or less lawless have often won public favor in spite of that quality, because of other qualities which commended them to their fellow-citizens. Others have acquired notoriety, and with it a place in the State prison, because they were law-breakers and nothing else. But it would be hard to find another who, through disregard of law, holds a high place in the estimation of many respectable citizens which he would never have gained had he done everything claimed for him in a peaceable and law-abiding way.

The case affords an instructive and interesting example of the way in which the popular mind is prone to reach conclusions and form judgments. The cause of the admiration for the former boss so freely expressed by visitors to the national capital, generally coupled with the declaration that he is entitled to a statue, is this. Every one remembers what a fearful rumpus he raised by his management of the affairs of the District. Such details as the nefarious safe-burglary plot; the destruction of private property by a hired mob; the killing of owners who

tried to save their possessions; the undermining of houses by street "improvements"; the laying of miles of costly pavements where scarcely a house existed, in order to boom real estate; the leaving of streets impassable for a whole year because the contractors were too busy with lucrative jobs elsewhere to carry on their work; the expenditure of $40,000,000, with little to show for it but pavements that began to rot almost before they were travelled upon: the carnival of corruption and inefficiency in every branch of the service—details like these, we say, are, after the lapse of twenty years, merged by the memory in the one general impression that the man showed superhuman energy in his management. Now, when the visitor sees one of the most beautiful of cities, with its squares, its pavements, and its statues, he associates everything with the supposed author of the work. If told that the work was all done by men of whom he had never heard, men who repaired the wreck which Shepherd himself had created, he listens with apathy to what seems to him a very uninteresting view of the case. If the fallacy of his claim is demonstrated by facts which he cannot gainsay, he will, as a last refuge, contend that the man himself meant well, and that his successors did nothing more than carry out his plans.

We can now see how it happens that lawlessness is so important an element in Shepherd's fame. If he had gone about his work in a peaceful and law-abiding way, respecting public opinion and the courts, creating no opposition, refraining from the destruction of property, making contracts in the usual way and seeing them enforced, he would scarcely have been heard of outside of the District of Columbia, and would long ago have taken his place in the list of authors and originators of public improvements who deserve grateful recognition, but whose names one has to look for in printed records before he can remember what they were. The name of Shepherd would to-day have been as little known as those of Phelps, Twining, Bryan, and a number of other District Commissioners, who, patiently working year after year, repaired the damage their predecessor had done, and made Washington the city that it is to-day. They are forgotten because they did their work in a peaceful and law-abiding way; few heard of them at the time or remember them now.

The really important aspect of the matter at the present moment is its bearing on public morals. There was, in much of Shepherd's madness, method of a sort which men are too apt to admire. Before his time, the cost of improving the streets had to be borne by the local taxpayers, and there was much difference of opinion among them on the question of entering upon so costly a system of public works as was in contemplation. Under these circumstances, to start the work in that slow, careful, and economical way which would have commended itself to public opinion, was fraught with a number of what to men like Shepherd seemed disadvantages. First was the prospect of the legal difficulties arising from time to time with men whose interests were affected by the improvements, with their attendant annoyances of injunctions and other court proceedings. There was also the danger that if his proceedings did not meet with public approval, a local legislature would be elected which would question the wisdom of his course, and perhaps annoy him by adverse legislation. Last, and chief of all, was the fact that, under the arrangements which then existed, the expense would have been borne by the local taxpayers. To induce Congress to bear what might well be considered its fair share of the cost of the work, some pressure was necessary. As Shepherd now says, Congress had to be taught. The local supporters of the movement wanted to wake people up, and they naturally selected as their agent the man whose general make-up and antecedents showed that he had the greatest amount of waking-up power.

A reckless and extravagant policy was thus indicated as that best fitted to attain the proposed ends and avoid the prospective difficulties. The more rapidly the work was carried through, the greater the army of contractors employed, and the more inextricable the confusion, the less opportunity the public would have to intervene effectively. The quicker any given piece of work was done, or at least the quicker any particular region of the city was made a wreck, the more effectively the danger of stoppage was guarded against. Finally, the heavier the debt, and the more unable the local government was to meet it, the greater the necessity for Congress coming to the help of the city. How effectively this policy was carried out is shown by the running up in about three years of a debt which was, per capita, nearly double that incurred by the country during the civil war. The local taxpayers could fairly claim that the government which had done this was none of their creation; that Congress had forced it upon them, and that Congress should therefore come to their aid. Congress accepted this view by becoming responsible for one-half the expenditure. At the same time the recklessness of the régime was shown in so strong a light by a committee, of which the majority was politically friendly to the administration, that the government was abolished by a vote approaching unanimity.

Is there any good reason why, at this time, the verdict thus reached should be reversed? To hold that it should, is to justify principles of action which would be destructive of all public morality. If it is justifiable to make a hesitating and unwilling legislature pursue even a correct policy, by illegally and recklessly creating a situation which will make that policy unavoidable, where shall we stop? A worse lesson could not be taught to the rising generation than that implied in the condonation of such a policy. The action of Congress in abolishing the District government and organizing a new one was justified by the fact that nothing good could possibly have been expected of the former. To say that the succeeding government simply took up Shepherd's work and carried it on is to falsify the facts of the history. The District Commissioners had to substitute order for confusion, law for irregularity, and a well-considered policy for pure recklessness. This change was necessary in every detail connected with their functions—in the acceptance of bids, in the drawing of contracts and the supervision and execution of the work. In thinking of what would have been the result had Shepherd been charged with the conduct of the new government, one really interested cannot but feel as he would in recalling a narrow escape from shipwreck.

THE FATE OF THE SULTAN.

Lord Salisbury's remarks about the Turkish complication are very satisfactory as far as they go, and the news that the six Powers are acting in close concert will remove, or abate, the widespread fear that there would be an early quarrel between them over the Turkish ruins. But complete peace of mind will not be restored in Europe until it is known what is to succeed the Sultan. Lord Salisbury has plainly intimated that he is near his end. After him what? This is really now, and has been for a century, the most terrible question of European diplomacy. It has been the settled conviction of European statesmen, ever since the Greek insurrection and the Russian attack of 1828, that he must go soon. The bad management of the Czar in 1853, in trying to make a private arrangement with England only, for his extinction, saved him in that year. He was again saved in 1878 by somewhat similar reasons, and by Lord Beaconsfield's ridiculous assertion that the Sultan was an enlightened and broad-minded sovereign, who could be trusted to reform. But there seems now to be a general consensus of opinion as to the hopelessness of the Turkish condition. The old uncertainty as to what is to follow still lasts.

When it was Turkish oppression and massacres in Europe—that is, in Greece, Macedonia, Bulgaria, and Servia—which occupied the public mind, there was a vague belief that when the time came, the Sultan could be disposed of by being relegated to Brussa, the old capital of the Ottoman Turks, and left in possession of his Asiatic dominions. But this is no longer possible. His latest "atrocities" are all Asiatic, and his Christian subjects in that quarter are showing themselves as unwilling to be massacred as the Greeks and Bulgarians. Moreover, the light which the improved means of communication are throwing on all parts of the Sultan's do-

minions has left no hole or corner in which the old régime could be maintained undisturbed. Turkish rule is to-day nearly as bad as it used to be, and the railroad and the telegraph and the newspapers have made its maintenance impossible in any part of the world, even if the subject populations were willing to put up with it. A survival of the Turkish empire in Asia is, therefore, no longer possible. The Sultan, if driven out of Constantinople, must apparently be put on a pension, like the deposed Great Mogul, and left to amuse himself with his harem. But for Great Britain to join in making any such disposition as this of the Commander of the Faithful would be a very delicate matter, in view of the effect on the Indian Mussulmans, who are a martial and fanatical body, and 57,000,000 strong. Lord Salisbury just touched on this branch of the subject, and it is for England a most important one. The European Turks have, ever since the Crimean war, been steadily moving over into Asia, in expectation of expulsion from Europe, and they have been thus reinforcing the Asiatic Moslems, who would form a large body of very troublesome customers for any Christian rule after the overthrow of the last Mohammedan government.

Who would have Constantinople? is another question which would put European diplomacy to its trumps. It is the most glorious site for a city in the Western world, and, in the hands of a power like France or Austria, with a special capacity for beautifying cities, would probably become again what it once was—one of the most splendid abodes of art and pleasure the race has ever produced. But there is not the least likelihood that Russia would ever consent to have her access to the summer seas again controlled by any foreign power. Both Bulgaria and Servia and Greece would probably unite in serious protest against the appropriation by any of the great Powers of what each of them looks forward to as its future capital. This difficulty might be met by making it a free neutral city.

On the whole, the interesting moment in Turkish history will be not so much the overthrow of the Sultan as the disposal of his estate. After the capture of Constantinople in 1453, very little was known in western Europe about the nature of Turkish rule until the Greek insurrection in 1823. The exposures then made and spread over the world were horrible and made a deep impression, but simultaneously with these revelations came the rivalry between the Powers as to the possession of Constantinople. It was the secret distrust of each other which led the Duke of Wellington to call the destruction of Ibrahim Pasha's fleet at Navarino by the combined French, Russian, and British squadrons an "untoward event." It was in reality the first effort of united Christendom to abate the dreadful Mussulman plague. The steady support of the Sultan, from that date until now, by France and England has been one of the most disreputable chapters in the history of modern diplomacy. No marked improvement in the condition of the Christian populations has taken place during all that period. The only change has been an increase in our knowledge of what is going on. Disturbance and open discontent have always been kept down by massacre and robbery, but it is only lately that we began to hear of them. In fact, it would be no great exaggeration to say that the British Government is nearly as much responsible for Turkish oppression since 1877 as the Sultan himself. It was its influence, through Lord Beaconsfield, which gave the Sultan another trial, and there was then no more reason for expecting that he would change his system of government than that he would embrace Christianity.

SOME MAGAZINE MYSTERIES.

It was said of 'The Mystery of Edwin Drood' that the real mystery was "how it sells." How it does not sell, and yet obstinately refuses to make its quietus, is the thing which puzzles observers in regard to many a modern magazine. The multiplication and cheapening of periodical literature within the past five years have been extraordinary. Hundreds of editors and publishers have set themselves, as by a common impulse, to the study of the great question: "What is the magic price which will exterminate our competitors and keep the breath of life in ourselves? What is the highest sum that the thousands who never bought a magazine before will 'give up' in order to arrive at the dignity of being our readers and subscribers?" The consensus of experts now fixes that sum at ten cents—though we believe there is a daring "Nickel Magazine" to disturb the dreams of the purse-proud ten-centers. Even among the latter, however, there are several that must reckon up their assets after the manner of a late philanthropist who, in his will, counted judgments against himself as a part of his disposable property.

But it would not be fair to assert that an indecent haste to be rich is the true cause of the high birth-rate among magazines. That they have come into the world this year in numbers to make Malthus stare and gasp, every one who keeps the run of such things must have noticed. They are of all kinds, sizes, and names, and spring up in the most unexpected places. From Cumberland, Md., we have the *Hour Book*—a name delicately preparing the reader soon to exclaim with Shakspere: "But out, alack! he was but one hour mine." San Francisco puts forth the *Lark* to startle the dull night. Cincinnati gives us the *New Bohemian;* East Aurora, N. Y., the *Philistine;* and the West a multitude whom no man can number or remember. Then there are the ephemeral or doubtfully enduring art periodicals—the *Knight-Errant*, *Modern Art*, the output of the Jenson Press, and so on—which witness, for the most part, to a taste for pretty type and paper and fads in illustration. All or nearly all these carry writ on their faces that they are but mortal, bravely as they fret their little hour. Whatever be their motives or excuse for being, we say, mercenary considerations must be ruled out. They are too consciously pressing hard on the means of subsistence to be accused of the sacred thirst for gold.

The real reasons for their existence are doubtless various. One of them appears to be the desire to cultivate the local literary field. Thousands of towns contain, and know that they contain, poets, essayists, and novelists equal to those who get into print in the great publishing centres. They cannot go to the centres; therefore, why not bring the centres to them? To be silent, to go unpublished, is too dire an alternative to be thought of. Matthew Arnold had a very inadequate conception of the power of the desire to be vocal when he wrote of truly strong souls as being "unaffrighted by the silence round them." Silence is the most frightful of all things to writers with a message. They must express themselves or burst, and the local magazines that do both express them and then burst are the frequent consequence.

To lower motives, we fear, must be attributed some of the year's ventures in periodical literature. The *Philistine*, for example, proclaims on its front that it is "A Periodical of Protest," which means that its aim in life is to make irreverent grimaces at the great names in the magazine world. Some of the fooling of *les jeunes* in these audacious skits and fleerings is admirable, and has been known to move to laughter those nearest the solemn great ones satirized; but it is only fooling, after all, and too much of it provokes the reader to quote Swift:

> "Pure, genuine dulness moved his pity
> Unless it offered to be witty."

An avowed desire for revenge, for getting even with the lordly editors who have foolishly rejected manuscripts, sometimes takes the costly form of starting a new magazine. In the first number of the *New Bohemian*, for instance, we are told by the editor that "the older magazines display an unjust discrimination in their treatment of unknown writers." He himself has known of "too many flagrant cases of such injustice." Nothing of the kind will happen in *his* office, as he will judge righteously and care nothing for "heralded names." "Newness and freshness, drawn from the fecund minds of gifted unknowns," are to be the "energizing element" of the *Bohemian*. "In how far the initial number is in keeping with promises made, its readers will be the criterion." There speaks, evidently, a writer who has learned in suffering what he teaches in song, has known in his own person the prejudice of the older magazines against his free Western way of be-

ing so breezily unintelligible and ungrammatical.

But not all the magazine mysteries are confined to the periodicals of the mute, inglorious Miltons, the audacious or the revengeful. The old, established magazines are continually plunging their readers into a brown study as to why they do various things. We are not going to expose any of our own manuscripts to rejection by hinting that the editors are not infallible, but we do assert firmly, though we thereby take our poems and our essays in our hands, that they sometimes move in mysterious ways. For our own part, we should be content to accept them as ultimate and unfathomable mysteries—like the Westminster doctrine of the damning of men by divine decree, a "high mystery," out of which comfort could be got only by handling with "special prudence and care"—had not one of them himself undertaken to explain himself. He said people needlessly perplexed themselves as to what kind of matter his magazine wanted. Look at the magazine itself, that would show them. Only, he hastened to add, of course I don't want any more of that kind. Thus, just as we thought the veil was lifting, down it went again, leaving everything darker than before. And it only mixes in a new kind of darkness to recall that these editors do, in practice, want more of the same sort of matter. But here, after all, there is a clue. They do not regard the old thing over again as matter for a magazine, but as material for a book. The way the book-making sways the magazine-making is obvious to every reader. This is no mystery; it is only a misery.

THE 1895 COPYRIGHT CONGRESS.

LONDON, October, 1895.

FOR the first time since its foundation in 1878, the Association Littéraire et Artistique Internationale has met within the limits of the German Empire—at Dresden, September 21 to 28. Naturally the Germans were ambitious to have this meeting a signal success, and extraordinary efforts were made to show a generous hospitality and to secure a friendly commingling of all elements. An exceptional interest in the proceedings was aroused, and the attendance, both local and foreign, was unusually large. There was a gain, also, in official recognition. The congress, under the patronage of Saxony, was opened in the presence of the King, and an increased number of accredited representatives were present; the administrative departments of France sending no less than five delegates, while Belgium, Denmark, Greece, Italy, Norway, and Mexico were also officially represented. As at Antwerp last year, however, we have regretfully to note the United States and Great Britain as conspicuous among the nations unrepresented.

To the foreign mind the regular recurrence in the official programme of notices of informal evening reunions in restaurants, cafés, and beer-gardens, with a list of favorite places, might suggest the convivial rather than the serious German spirit, but it is worthy of favorable comment that the literary complexion of the congress was more strongly brought out than heretofore, and this gathering of representative men was utilized to substitute on the social programme, hitherto thickly studded with public dinners, a literary and artistic form of entertainment, with a marked accession of dignity. A "Festgabe" was dedicated to the congress, entitled, "Beiträge zum Urheberrecht" (Berlin: Deutsche Schriftsteller-Genossenschaft), original monographs dealing with the legal protection of literary and artistic property, mostly by authors already well known in relation to the subject matter; special interest attaching to Dr. Osterrieth's summary of the replies received to the "question sheet" of the working committee. Mention should be made, also, of the "Fest-Nummer" (September 28, 1895) of the organ of the German booksellers, *Nachrichten aus dem Buchhandel*, containing, in addition to its usual contents, an address of welcome, a catalogue of recent German copyright contributions, and special articles relating to literary property. The bibliography of this year's congress further includes a volume of 'Rapports du Congrès de Dresde,' containing the French text of the papers laid before the conference, and a German edition of the same, sold at three marks each—a commendable precedent in making the work of the Association available.

The preparations for the congress were conducted by a working committee (Arbeits-Ausschuss), and to this body, and especially to its "Vorstand," credit is due for the intelligent methods of procedure adopted and the valuable results achieved. The printed reports were on hand at the opening of the conference (a marked improvement upon previous congresses), and a printed list of persons in attendance was initiated; while the general programme of meetings and festivities, printed in French and German, was well got up, and the "ordre du jour" of the working sessions showed admirable systematic coherence and proportion.

It is a matter of history that the Association Littéraire et Artistique Internationale organized the movement which resulted in the Berne convention of 1886 creating the International Copyright Union. This compact was, of necessity, a provisional one, such as would permit the federation of states possessing very diverse legislation; but its probable alteration in the future was recognized, and from year to year at the annual meetings of the Association the text of that treaty has been discussed with a view to its amendment. At the Dresden conference, in anticipation of the forthcoming diplomatic congress for the revision of the Berne convention, this topic was given the leading place on the programme. The executive committee presented a digest of the resolutions of the Association since 1886, setting out the directions in which amendment of the existing legislation relating to literary and artistic property was considered desirable, with a view to submitting a recommendation that the Berne treaty be revised in line with the reforms suggested. As a commentary on the report of the executive committee may be viewed the elaborate "étude" by M. Georges Maillard of Paris, 'On the Principles which should serve as a basis for the Unification of the legislation relating to Copyright in the countries of the Berne Union.' A paper of practical value, the joint work of Dr. Paul Schmidt and Prof. Ernst Röthlisberger, one of the secretaries of the Berne Bureau, points out the divergence of the existing legislation of the countries of the Copyright Union from the stipulations of the Berne convention, and, taken in connection with M. Maillard's essay, shows clearly where and how far the legislation in force falls short of the model proposed.

The discussions on these papers led to the adoption of a series of resolutions on the principles which should govern the unification of copyright legislation. Space fails for comment; summarily, it is considered that the exclusive right to publish or reproduce, by whatever process or in whatever form, a literary or artistic work, belongs to the author, independent of its merits, its use, or its destination; and that this exclusive right applies to all writings, oral addresses, dramatic and musical compositions, all productions of graphic and plastic arts, photographs, and architectural works. The right should exist for fifty years after the author's death, to the profit of his heirs or assigns. All reproduction, entire or partial, made without the author's consent, should be repressed, and should be understood to include translation, representation, or public performance, as well as adaptation, dramatization, musical arrangement, or reproduction by another art. Textual citation should be permitted only in a criticism, a polemic, or for instruction, and on condition that the author's name and the source used shall be expressly indicated. All works should be equally secured, and no particular formalities should be imposed for the protection of music, while newspaper and periodical contributions should be protected as other literary works without requiring the publication of any reservation of rights. The right of reproduction should be considered as independent of the right of property in a manuscript or work of art, and the transference of the material object should not imply the right of reproduction, and, reciprocally, the alienation of the rights pertaining to an author—publication, representation, execution, translation, etc.—should be restrictively interpreted. The author who has parted with his right of reproduction conserves the right to superintend the reproduction of his work, to prosecute piracy, and to oppose modifications made without his consent. As a means to aid in the unification of legislation, it is proposed that the Berne Bureau be authorized to produce an international vocabulary of the equivalent juridical terms used in the legislative texts of each country, and that it be confided to the Bureau to deliver official translations of the various national legislative acts.

As a rider to the report of the executive committee, the paper by M. Albert Vaunois, delegate of the Société des Études Historiques de Paris, urged the need for uniformity of legislation to the end that the sale of a work of art shall not carry with it the alienation of the right of reproduction by the artist, and contended that, so far as France and Great Britain are concerned, this could be effected by a clause in the treaty of Union. The principle advocated, endorsed by the Association, has been embodied in the laws of Germany, Belgium, Spain, Italy, and Switzerland, as well as of some of the non-Union countries; but in England the copyright in a painting ceases upon the sale of the picture, unless the artist, by a written agreement, reserves the copyright to himself, or by a similar agreement transfers it to the purchaser, and it is to be observed that the Copyright Commission of 1878 advocated that the copyright should pass to the purchaser. In France there is no explicit statute governing the case, and the judicial decisions, since 1842, have been prejudicial to the artist. Dr. Osterrieth read a paper advocating the suppression of two paragraphs in articles 2 and 11 of the Berne convention in order that international copyright protection

may become independent of the fulfilment of formalities prescribed by the legislation of the separate states of the Union, and a resolution to that effect was passed. Anent this, it may be noticed that the Institute of International Law, at its recent session at Cambridge, in a series of resolutions urging the revision of the Berne treaty, proposed an amendment of article 2 in line with Dr. Osterrieth's proposal. The careful study, by M. Alcide Darras, of the copyright conventions between France and Germany may also be considered as having a bearing upon the revision of the Berne convention.

A series of five reports was explanatory of the present status of the principal countries not yet within the Copyright Union. The first, by MM. Darras and Eisenmann, deals briefly with South America and the United States; so far as the latter is concerned, only referring to the Act of March 2, 1895, and two judicial decisions of 1894. On Austria a lengthy report was submitted by Dr. Heinrich Schuster of the University of Prague, well known by reason of former contributions concerning the proposed new Austrian copyright law. Mr. Halpérine Kaminsky reported encouragingly of Russia, and was supported by Mr. Issakoff, delegate of the Russian Literary Society, who declared that there was no lack of good will in Russia, not only to amend the present law in conformity with modern ideas, but also to enter the Berne Union. Dr. Karl Torp of Copenhagen gave the congress an insight into the present situation of Denmark and Norway, not encouraging as to the immediate admission of these two countries, while Mr. J. H. Hora-Siccama's "Étude sur les Pays-Bas" summarized public opinion in Holland as unfavorable to that country's entrance into the Berne Union.

The easily understood difficulty in the case of the smaller European countries lies in the restriction of the freedom of translation. It seems cheaper to sacrifice their native authors' interests abroad than to curtail free recourse to foreign books. But public opinion grows, and it is beginning to be realized in these countries not only that a restriction of the reproduction of foreign literature within their boundaries would bring to their own authors the power advantageously to dispose of their rights of translation in other countries, but that a more important benefit would accrue in the fresh stimulus they would receive, with the resulting development of national literature. To sum up: the larger European countries are tending towards membership in the Berne Union, and it is only a matter of time and the adjustment of the international exchange of literature so far as the minor states are concerned. The serious question remains with Canada and the United States. The former country was dragged into the Copyright Union by Great Britain, and is evidently disposed—owing to the corrupting example of the United States—to break away, while in the latter country it is difficult to detect any evidence of growth in the direction of an intelligent interest in and understanding of the question of literary property.

Next in importance to the various contributions touching upon the Berne convention were those submitted concerning the legal relations between authors and publishers. These are: a summary of the previous discussions of the Association upon this subject, by Armand Ocampo of Paris; a project for a law governing literary contracts, by Martin Hildebrandt, one of the directors of the Deutsche Schriftsteller-Genossenschaft; a presentation, by the Leipzig publisher, Robert Voigtländer, of the legal differences in the case of literary works undertaken at the initiative and request of a publisher, and a lengthy summing up by Mr. Ernst Eisenmann, who has contributed some novel ideas regarding this subject in his monograph entitled, 'Le Contrat d'édition et les autres louages d'une œuvre intellectuelle.' The debate which followed resulted in a vote of the congress that the whole matter be recommitted to an enlarged committee, with instructions to lay it before all associations likely to be interested, and to submit to the next congress a résumé of the observations which may thus have been elicited.

The project for the creation of a universal bibliographical bureau was revived by M. Jules Lermina, who submitted a paper entitled: "Rapport sur la Constitution d'un Répertoire bibliographique mensuel scientifique, littéraire et artistique." His scheme not only contemplates the establishment at Berne of an organization which shall supply the world with a monthly record of its literary production, but is intended to secure the coöperation of the nations in the compilation of a universal bibliography, to include all books that shall have been published up to the end of this century. His paper and warm advocacy caused an animated discussion, not entirely favorable; the utility of the bibliographical work suggested not being denied, however (except by M. Grand-Carteret), though the difficulty or impossibility of execution was insisted upon. A final vote declared that, in the opinion of the congress, it is of international interest to constitute a universal repertory of all the books which have appeared or are to appear in the entire world, and the question of how it can be carried out was passed to a committee to report at the next congress.

In the last working session, M. Frédéric Mettetal of Paris read two papers, one on anonymous and pseudonymous works and the other on posthumous publications, claiming for each class legal protection for a term of fifty years from first publication, which view was sustained by the congress in suitable resolutions. At the Antwerp congress M. Georges Harmand presented a paper on literary collaboration, but for want of time its consideration was postponed. This year there was a supplementary report by the same author, which also failed of discussion, but M. Maurice Maunoury of Paris took up the subject so far as encyclopædic works are concerned, and a resolution was voted to the effect that the person under whose direction the whole work was executed should be considered the legal author of it, but without prejudice to the right of each collaborator to reproduce his personal contributions in a manner not to injure the entire publication. The concluding paper, by M. Lucien Layus, representative of the "Cercle de la Librairie" of Paris, dealt with the reproduction of art works belonging to a public museum, and, despite spirited opposition upon the part of M. Grand-Carteret and others, it was voted that such reproduction should be permitted only with the consent of the artist or his legal heirs. To next year's congress (which is to meet at Berne) was relegated the presentation of a "model" copyright law which the Association is requested to formulate. S.

THE SOUVENIRS OF GENERAL LEJEUNE.

PARIS, October 21, 1895.

GENERAL LEJEUNE is better known as a painter than as a general, though he was a good soldier and a very bad painter. His pictures can be said to have but one merit—exactitude; as a painter of battles, he had the advantage of witnessing the actions which he depicted, and the scenery in which he places his combatants is always absolutely correct. He was an officer of engineers, and, as such, it was his duty to make for Gen. Berthier, the chief of staff of the Emperor Napoleon, aquarelles representing the different parts of the battlefield after each great battle. He afterwards used to enlarge these aquarelles and to place in the midst of them some of the dramatic scenes of which he had been a witness. At a time when the memoirs of the Napoleonic period were not in demand as they are now, Gen. Lejeune published his 'Souvenirs,' to the number of twenty copies only. These copies are mostly destroyed or lost, and a new edition of them has just been published under the title 'De Valmy à Wagram.'

Lejeune was at Valmy, the first victory of the Revolution. Born in Alsace, he first went to school at Versailles. As a boy he met the Queen Marie Antoinette, who showed him the Trianon; a young man, he enlisted in one of the battalions of volunteers who were to resist the invasion. His company was called the "Compagnie des Arts," and he found himself in it with Jean-Baptiste Say, with poets and philosophers who were to become generals, prefects, or senators of the Empire. He was seventeen years old, and sang gayly the "Marseillaise"; he went with his friends to the Camp de la Lune, and arrived just in time to take part in the battle of Valmy. After a time the Compagnie des Arts was disbanded. Lejeune returned to Paris, which he found in a state of consternation. The Terror was at its height; executions took place daily.

"One day, having dressed myself well, I was going quietly to breakfast with a friend when a patrol stopped me and insulted me with the name of *muscadin* [it was the insult in fashion]. I was arrested, taken all day from corps-de-garde to corps-de-garde and imprisoned with some others in the Church of St. Martin. It was only at ten o'clock at night that we were conducted before Henriot, the Commander of Paris. We had committed no other crime than wearing white linen and clean clothes. Our judges, however, hesitated long before letting us go, and it was midnight when I was at liberty to breakfast."

Some time afterwards, he found himself in a crowd in the Rue St. Honoré, near the Oratoire du Louvre (now a Protestant church).

"There were people at every window, and even on the roofs, and it was with a cruel, atrocious, and delirious joy that on all sides was sung the obscene song:

> 'Madame Veto avait promis
> De faire égorger tout Paris,' etc.

[The name of Madame Veto had been given to Marie Antoinette since she was said to have claimed for the King the right of veto.] Already were seen the squadrons escorting a cart in which a woman was seated near a priest, and the executioners stood behind them. The procession advanced with an inhuman slowness so as to prolong the agony of the victim and to satisfy the curiosity of the hundred thousand people whom this horrible spectacle had drawn together. I began to tremble violently and my heart nearly ceased to beat, when I heard whom I was going to see. . . . It was the same Marie Antoinette, in the same white costume I had seen her in when I had the honor of accompanying her to the Trianon. Her attitude was that of a saint, and the priest who exhorted her seemed more unhappy than herself. At sight of her many eyes were filled with tears. [David made from a window a sketch of Marie Antoinette in the fatal cart.]"

Lejeune was very happy to leave Paris; he enlisted in the regular army, and entered first the artillery, and, as he had special aptitudes, he was placed among the engineers. He spent

the winter of 1794 and 1795 in Holland, and in the following campaign he was employed in throwing bridges over the Rhine near Düsseldorf. He was afterwards sent to Bamberg to prepare the crossing of the Rednitz for Ney. He rapidly became a captain of engineers, and Berthier took him for his aide-de-camp. Berthier sent him to the Valais with some bags of gold destined for the countryfolk who were to help the First Consul cross the Saint Bernard with his artillery. In Italy, Lejeune was chiefly occupied with the construction of bridges on the Po. He was fortunate enough to be present at the famous battle of Marengo, and his account of it is not without interest; it made me involuntarily think of Tolstoi's theories on war in 'War and Peace.' The battle of Marengo was tactically won by four hundred men, guided by Kellermann, who charged without orders, merely following his own inspiration. What consequences did not this charge have! "The genius of the First Consul," says Lejeune, "showed him at once the consequences which he could draw from his victory, and, the same evening, he dictated his conditions to Gen. Melas, who consented to abandon Italy."

At the camp of Boulogne, Lejeune felt somewhat humiliated on receiving the order not to leave the place when the army took the road to Germany until he had expedited three thousand pairs of shoes in the direction of the Rhine. He could join the Emperor only on the day of Elchingen, and gave an account of his mission to him; he complained of having been left behind. "You are a child," said Napoleon; "shoes are necessary for marches, and it is by marches that battles are won." He proved it by forcing Gen. Mack to capitulate in Ulm. Lejeune remained with the army and saw Austerlitz. He gives a very graphic account of the disaster which befell a part of the Russian army, when it took refuge on a frozen pond which could not resist the weight of a few thousand men and their artillery. On his return to France, through Munich, he had occasion to see the brothers Senefelder, who had just discovered the method of lithographic printing, and he made a lithograph which he brought to the Emperor in Paris. He tells us that he was prevented by his occupation from giving much more attention to the new process, which was introduced in France only in 1812. The painter, by the way, never forfeits his rights in his memoirs: he interrupts, for instance, his account of the march from Ulm to Austerlitz to give a description of the forest of Amstetten under snow on a fine sunny day.

A new war was preparing, and Lejeune had to leave Paris to carry the orders of the general staff to the various corps in Bavaria and in Saxony. The battles of Jena and of Auerstaedt were fought, and the Emperor, following up his successes, entered Poland. Lejeune passes very briefly over these great events and the operations which ended at Eylau. His love of the picturesque was evidently not satisfied in the mud of Poland and amid the snows of Russia. The sufferings of the Russians as well as of the French were heartrending, and the losses of both armies at Eylau were terrible. Lejeune was evidently very humane; he never fails to deplore the spectacle of a battlefield. "The lines, the squares, the shock of the cavalry were traced on the ground by rows of corpses; the wounded, so numerous that they could not all be removed at once [this is after Eylau], crawled into heaps to warm each other. . . . I saw a horse, who had only three legs left, licking the face of his old cuirassier, who stood astonished before him. This man had hardly bread enough for himself; he gave it to his horse before leaving him." Napoleon remained three days at Eylau, seeing that the wounded were taken good care of. He had some Russians operated on by his own surgeon, Yvan.

After Eylau, the Russians retired on Koenigsberg, and Napoleon pressed the siege of the three fortresses which he had left behind him, Stralsund in Swedish Pomerania, Colberg on the Baltic, and Dantzig at the mouth of the Vistula. In his capacity of officer of engineers, Lejeune took the orders of Napoleon to the besieging generals; and he came back only on the evening of the battle of Friedland, which had lasted sixteen hours. "It was at the end of this glorious day that I arrived out of breath and happy to bring good news [the successful assault of Colberg]. . . . At the first word I said about the advanced fort of Colberg, which I had taken, the Emperor interrupted me and said gayly, with an expression of great joy: . . . 'Friedland will be worth as much as Austerlitz, Jena, and Marengo.'"

Lejeune was a witness of the famous interview at Tilsit; he made a drawing of the scene, which has since been engraved.

"My friend Bontemps," he says, "kept with religious care the two pens and the inkstand that were used for the signing of the treaty which promised Europe a series of happy and prosperous years. If a word which Talleyrand, Prince of Benevento, wrote to me one day in 1817 should be taken as true, these three objects, with which is linked such a great remembrance, must have lost much of their value. I knew what an immense fortune the Prince had acquired under the Empire; I begged him to give some encouragement to the authors of an historical work on our campaigns and our victories. The Prince answered thus: 'Victories are interesting only as long as the advantages which they may have procured last. The results of the works of the Empire exist no longer, and their memory is effacing itself as rapidly as politics change; I cannot help the persons you recommend to me.'"

After the interview of the Emperors on the Niemen, Lejeune returned to Paris with Berthier. He soon afterwards exchanged the cold regions of the North for the warm provinces of Spain. From Spain he was sent on a mission to Bernadotte:

"I know," said the Emperor to him at Bayonne, "that you stand well with Bernadotte. I have chosen you to convey to him news which will please him. In consequence of misunderstandings between Charles IV. and his son, I have accepted their abdication of the throne of Spain in favor of my brother Joseph, King of Naples; go and announce it to his brother-in-law, Bernadotte; he will be flattered. Announce it also to the Marquis de la Romana and to the Spanish troops under his orders; tell them all the good I think of my brother. Go rest for an hour and then start immediately."

An hour's repose was not much for an officer who had come without stopping from Madrid to Bayonne. Lejeune obeyed; he stopped only a moment at Hamburg, to see Bourrienne, and found Bernadotte in Schleswig. The news he brought was very coldly received by La Romana, who was at Viborg with ten thousand Spaniards. (The defection of La Romana gave Mérimée the subject of a fine drama, which has never been put on the stage, "Les Espagnols en Danemark.") Lejeune returned to Spain, and was struck by the great change which had taken place since Napoleon placed the crown of Spain on the head of his brother. The French troops, which had been received with enthusiasm the year before, were now considered as enemies; the popular rising was universal, and the clergy was everywhere exciting the patriotic passion of the multitude. The catastrophe of Baylen took place on the day when King Joseph entered Madrid, and the new King had to retire to Burgos. Marshal Moncey had to retreat with his forces into Catalonia, and Lefebvre-Desnouettes had to raise the siege of Saragossa. It became clear that if Napoleon wished to keep Spain for his brother, he must make a conquest of the Peninsula.

Correspondence.

THE VENEZUELA BOUNDARY.

To the Editor of The Nation:

Sir: Washington correspondents are so cocksure of the fraudulent character of English claims in the Venezuela dispute that any search for evidence in England's favor seems to be regarded as superfluous. Yet there must be in existence an ample store of old maps which would throw light on the question, and perhaps indicate how England may be led to regard her pretensions as moderate. Possibly Venezuela may be able to present proof of equal weight on the other side; but so far as a cursory investigation enables one to judge, this would appear doubtful. There is, for instance, a map without date, issued by the house of Homann of Vienna in the last century, copied from one by Guillaume de l'Isle, geographer royal of France, who died in 1726 and was one of the most eminent cartographers of his time. In this the whole region, from the mouth of the Amazon to that of the Orinoco, is included in Guiana. Venezuela lies entirely to the west of the latter river, and the only indication of Spanish occupation is a little town named St. Thomas, on the right bank of the Orinoco, above its delta, which is specified as "sub Hispanis," implying that it was the only spot claimed to the east of the river by Spain. This is confirmed in the very detailed description of Guiana by Bruzen de la Martinière, in his 'Dictionnaire Géographique' (Venice, 1737, vol. v., p. 334), where he says that the French possess the land from North Cape to the River Marony, and the Dutch have established themselves from that point to the Orinoco. Apparently there was no conception that Spain had any claim on the territory between the two great rivers. In this there could be no prompting of hostility to Spain, for, in the period which led to the Family Compact, French prepossessions would be wholly in her favor; nor could the region in question be regarded as too valueless for consideration, seeing that the interior of Guiana had long been known as rich in gold, and, in fact, was the residence of the fabled Dorado, or gilded man, whom Raleigh vainly sought. It is observable that these statements are long subsequent to the treaty of 1648, which is cited in support of the boundary of the Essequibo. Another treaty of 1781, which is also quoted, is not to be found in Martens, nor is there in his collection any agreement or convention between Spain and Holland bearing upon the matter.

The stolid John Bullishness with which England refuses arbitration of the whole question of course raises an adverse presumption against her in the eyes of the public; and yet, before we let Senator Chandler declare war upon her on that ground, it might be well for us to in-

vestigate what are the real rights and wrongs involved in the case.—Very respectfully,

HENRY C. LEA.

PHILADELPHIA, October 31, 1895.

[The map referred to by Mr. Lea was not mentioned in the list of documentary authorities, sustaining the English claims, submitted to the Venezuelan Minister by Lord Aberdeen in 1841. It is scarcely accurate to say that England refuses arbitration of "the whole question." Her willingness to arbitrate the title to a large part of the territory in dispute has been repeatedly expressed, and was officially reaffirmed only last month.—ED. NATION.]

"COLLEGE" ONCE MORE.

TO THE EDITOR OF THE NATION:

SIR: Prof. O. F. Emerson's remarks (*Nation* of Nov. 7) upon the (American) use of "college" = "college building" admit of abundant corroboration. In the present writer's undergraduate days the Princeton buildings were thus designated, not only by the students, but in the Princeton catalogue. Thus, in 1860, there were three dormitories, known to us as North, East, and West College. The catalogue of 1859-'60, at the end of the student-list, prints the following note: "Abbreviations: N. . . . Nassau Hall; E. . . . East College; W. . . . West College." *Theoretically* N. may have stood for Nassau Hall, but *practically* it meant to every one North, or—more familiarly—Old North, without the College. As for the "Old," that was a mere epithet of pious endearment, the building having once been the oldest. But, in fact, the building of 1860 was only four years old, having been rebuilt after a destructive fire. Thus, Old North was the counterpart, in irony, of New College, Oxford. H.

NOVEMBER 11, 1895.

TO THE EDITOR OF THE NATION:

SIR: I am not inclined to accept Prof. Emerson's suggestion, in your issue of November 7, that the application of the term "College" to a single building in the Harvard Archives is "merely a dialectal use of the word, originating in America." In College Book No. 3 there is "An Inventory of the whole Estate of Harv[d] Colledge taken by the President & Fellows as they find the same to be Decemb. 10. 1654." The first two items are as follows:

"Imp[rs]. The building called the old colledge, conteyning a Hall, Kitchen, Buttery, Cellar, Turrett & 5 Studeys & therin 7 chambers for students in them. A Pantry & small corne Chamber. A library & Books therin, vallued at 400[lb].

"It. Another house called Goffes colledge, & was purchased of Edw: Goffe. conteyning five chambers. 18 studyes. a kitchen cellar & 3 garretts."

In 1654 the institution was less than twenty years old; the building called "the old colledge" was only about twelve years old. It was the only college building in America. Its founders, and probably the majority of its governors even as late as 1654, had been born Englishmen. Some of them came directly from the atmosphere of English university life. It is hard to see how any American dialectal use of the word college could have grown up so rapidly under such conditions.

It may be worth while to add that after the building of Massachusetts Hall, in 1720, we find constant mention of "Stoughton College," and "the old college" (Harvard Hall, built in 1672), alongside of references to "Massachusetts *Hall*." Such are the names given the three buildings respectively in the faculty vote of 1725 dividing the college yard into districts for purposes of inspection and police. Later in the century the two buildings called "colleges" disappeared, and with them the use of the word in that sense seems to have disappeared also.

As to the present employment of the same word to designate one of a group of college buildings, it may or may not be properly described as dialectal; I agree with Prof. Emerson, however, that it deserves to be recorded in the dictionaries. But I am satisfied that the use of the word in that sense in the early records of Harvard, as I said in your issue of October 24, marked "a certain adherence to English usage in the matter of separate colleges." WM. G. BROWN.

HARVARD COLLEGE LIBRARY, November 9, 1895.

TO THE EDITOR OF THE NATION:

SIR: In yesterday's *Nation* Prof. Emerson pointed out that the term "college" for a single building or group of buildings is used in various parts of this country; but surely he was careless in asserting that "such a use is not recognized by any of our dictionaries—the Oxford, Century," etc. In the Century Dictionary is the following: "2 (*e*) An edifice occupied by a college"; and, in the Oxford Dictionary, definition 5 is as follows: "The building or set of buildings occupied by such society or institution."

The suggestion made by Prof. Emerson that the employment of *college* in this sense may be "merely a dialectal use of the word, originating in America," is not borne out by Dr. Murray's citations, all of which are from British writings. Nor is such use of the term of recent origin in this country. I am certain I have often met with it in books by Americans or in books on America by English travellers; but the only examples upon which I can lay my finger at the present moment are the following. It will be observed that John Harvard is spoken of not as founding, but as "building" or "erecting" a college.

"It is ordered, that the colledge agreed vpon formerly to bee built at Camtridg shalbee called Harvard Colledge." 1639, *Records of Massachusetts* (1853), i., 253.

"The scituation of this Colledg is very pleasant, . . . the building thought by some to be too gorgeous for a Wilderness, and yet too mean in others apprehensions for a Colledg." 1654, E. Johnson, *Wonderworking Providence*, 164.

"You will the less wonder, Cousin, at what I have said about this Town, when you shall know this Town, that at first was called New Town, is now made an University, and called Cambridge, there being a colledge Erected there by one Mr. John Harvard, who gave £700 for the Erecting of it, in the year 1638." 1686, J. Dunton, *Letters from New England* (1867), 156.

"It was his Custom to be somewhat *Long* in his *Daily Prayers* (which our Presidents used to make), . . . but one Day, without being able to give Reason for it, he was not so *Long*, it may be by Half as he used to be. Heaven knew the *Reason!* The Scholars returning to their Chambers, found one of them on fire, and if the Devotions had been held three Minutes longer, the Colledge had been irrecoverably laid in Ashes." 1702, C. Mather, *Magnalia*, Book iv., Part i., p. 130.

"There are two fine Publick Buildings in this Country, which are the most Magnificent of any in *America:* One of which is the College before spoken of, and the other the Capitol or State-House." 1705, R. Beverly, *History of Virginia*, Book iv., ch. xvi., p. 52.

"In the beginning of this Moneth of May, the old Brick Colledge, comonly called the *Indian* Colledge, is pull'd down to the ground, being sold to Mr. Willis the builder of Mr. Stoughtons colledge." 1698, S. Sewall, *Diary* (1878), i., 480.

"Barnard, Eustace and others view'd the Roof of the Colledge which S. Andrews built, and judg'd it necessary to be taken down." 1712, S. Sewall, *Diary* (1879), ii., 357.

"Publick Buildings here of Note, are the College, the Capitol, the Governor's House, and the Church." 1724, H. Jones, *Present State of Virginia* (1865), 26.

"At the ends of this street are two public buildings, the college and the capitol." 1775, A. Burnaby, *Travels*, 4. (Refers to Williamsburg, Va.)

"The village [of Burlington] extends nearly a mile from the water, at which distance the hill, on which the college is erected, rises 300 feet above the surface of the lake." 1808, J. Dean, *Gazetteer of Vermont*, 42.

"The friends of the aborigines were not discouraged by these unpromising appearances; and, in 1665, at an expense of between £300 and £400, a house was erected for their accommodation, which was usually called the Indian College." 1833, B. Peirce, *History of Harvard University*, 28. ALBERT MATTHEWS.

BOSTON, November 8, 1895.

RUSTICATION IN FOOTBALL.

TO THE EDITOR OF THE NATION:

SIR: The statement has been made, and not denied, that the University of Pennsylvania football team are to be sent away from their studies into the Berkshire Hills for two weeks to prepare for a football game. Could anything indicate a more depraved sense of propriety on the part of our American colleges? It may at least be presumed that these young men were sent to college to procure an education. A COLLEGE GRADUATE.

PHILADELPHIA, November 10, 1895.

Notes.

SIDNEY S. RIDER, Providence, R. I., invites subscriptions at $40 each to a facsimile reproduction of the First Digest of the Laws of the Colony of Rhode Island, made in 1705, and never printed. The text in clear type will accompany the facsimile. The form will be folio, to match the recent edition of the Digest of 1719. Only 100 copies will be issued.

D. Appleton & Co.'s November announcements include 'The Story of the Indian,' by George Bird Grinnell, the first volume in a "Story of the West" series, edited by Ripley Hitchcock; 'The Intellectual Rise in Electricity,' by Park Benjamin; and 'Annals of Westminster Abbey,' by E. T. Bradley (Mrs. A. Murray Smith).

'St. Paul, the Traveller and the Roman Citizen,' by W. M. Ramsay, LL.D., is in the press of G. P. Putnam's Sons, along with 'Poems of Pathos and Delight,' by Coventry Patmore.

'The Modern Poster,' about to be published by the Scribners, will consist of essays by H. C. Bunner and others, with more than sixty illustrations.

Forthcoming with the imprint of Edward Arnold are Milton's 'Paradise Lost,' with twelve etchings by William Strang, limited to fifty copies for American buyers, and 'Fire and Sword in the Sudan,' a personal narrative by Slatin Pasha.

'Random Sketches on Scottish Subjects,' by John D. Ross (Paisley: Alexander Gardner), will be marketed in this country by the Raeburn Book Co., 185 Grand Street, New York.

Stone & Kimball, Chicago, will place among the holiday books 'Our Lord's Coming and Childhood—Six Miracle Plays,' by Katharine Tynan Wilson, with full-page drawings by Patten Wilson. They will also bring out 'The

Father of the Forest,' poems by William Watson, and a new novel by Hamlin Garland, 'Rose of Dutcher's Coolly.'

S. C. Griggs & Co., Chicago, will soon publish 'The History of Oratory, from the Age of Pericles to the Present Time,' by Prof. Sears of Brown University.

Lamson, Wolffe & Co., Boston, have nearly ready 'Is Polite Society Polite?' by Mrs. Julia Ward Howe, and 'Behind the Arras,' a new volume of poems by Bliss Carman.

D. C. Heath & Co., Boston, will issue directly 'Selections for French Composition,' by C. H. Grandgent, Director of Modern Language Instruction in the Boston public schools.

Berkeley Updike, Boston, announces an American edition of *The Quest* for 1896, the organ of the Birmingham Guild of Handicraft; and he has arranged with Miss Mary Newell of Birmingham to illustrate Hans Christian Andersen's story of 'The Nightingale' for a holiday book.

Poems by William Butler Yates, and ('The Magic House') by Duncan Campbell Scott, will be issued immediately by Copeland & Day, Boston.

Under the title of 'Studies in the Constitutional History of Tennessee' (Cincinnati: Robert Clarke Co.), Mr. J. W. Caldwell has published the substance of some articles contributed by him early in the present year to the Knoxville *Tribune*. They were originally written "in aid of an effort for a Constitutional Convention"; and although the author claims for his work an historical and not a controversial character, the book is essentially a political pamphlet rather than an historical contribution of especial or permanent value. Mr. Caldwell lays stress upon the influence of the Scotch-Irish on the early history of Tennessee, while his earnest desire to see the township system adopted in the State has led him into a cursory and otherwise irrelevant recital of the well-worn commonplaces about Anglo-Saxon and English local government. The main feature of the book is the detailed abstracts of the articles of the Watauga Association, the Cumberland Compact, and the Constitution of Franklin, as well as of the State constitutions of 1796, 1834, and 1870; but of the constitutional and political development of the State under these different instruments of government little is said. An appendix gives the names of the officers and members of the first Franklin convention and of the Tennessee conventions. There is a good index.

To meet the desires of his publishers (the Messrs. Scribner) Mr. Edwin L. Godkin has made a selection of 'Reflections and Comments, 1865-1895' from his editorial articles in the *Nation* during the last thirty years. They are thirty-three in number, arranged chronologically, and are a distinct addition to the writer's contributions to the volume of 'Critical and Social Essays' gathered from the same source in 1867. Political topics—as in the articles on Horace Greeley, the South after the War, "The Short Hairs" and "The Swallow-Tails," Organs, Physical Force in Politics, and Rôle of the Universities in Politics—are not avoided in the present collection; but social, educational, financial, and ethical discussion predominates. Some other titles are: Culture and War, The Comparative Morality of Nations, The Odium Philologicum, Prof. Huxley's Lectures, Tyndall and the Theologians, Judges and Witnesses, Mr. Froude as a Lecturer, John Stuart Mill, Carlyle's Political Influence, The Morals and Manners of the Kitchen, The Evolution of the Summer Resort, "The Debtor Class," Panics, etc. The volume is dedicated to Charles Eliot Norton, "to whom the foundation of the *Nation* was largely due."

The Clarendon Press has just published two volumes containing 'A Selection of Passages from Plato for English Readers,' from Jowett's translation, edited with introductions by M. J. Knight (Macmillan). This collection was made in accordance with the wish of the late Dr. Jowett, who helped to choose the passages. The greater part of the preface written by Jowett for Purves's 'Selections from the Dialogues of Plato' in the original, published by the Clarendon Press in 1891, is repeated in the first volume of this work. We notice that nearly all the passages included in Mr. Purves's volume are translated here, making about half of Mr. Knight's work. The greater part of the additions come from the 'Laws' and the earlier books of the 'Republic,' with one piece of solid metaphysics from the 'Parmenides.' The brief introduction prefixed by the editor to each selection will be of great help to the "English reader" in explaining the context and giving him his bearings in the discussion. We are told that Dr. Jowett thought this work would be of value to young students and to some who might be kept from reading Plato by the size and cost of his complete translation, "while the University Extension movement, and the increasing number of Colleges for Women, both in England and in America, also seemed to offer a field for a compilation of this nature." We suspect that the good Master of Balliol had not quite taken in the full significance of women's colleges, at least in this country. If we may judge by present signs, these institutions are likely to call for quite as many complete copies of Jowett's Plato, and (what is more significant) of Plato in the original, in proportion to their size, as the men's colleges. These volumes will appeal especially to the more general reader outside of the colleges, to whom these carefully made selections will give an excellent idea of the infinite variety of Plato's speculations and of the dialectic skill of Socrates.

The "Eunuchus," though often called the best of the plays of Terence, is not often read in colleges, and hence it has been rarely edited save in a bare text. And so Prof. Philippe Fabia's edition (Paris: Colin & Cie.) really fills a gap. His text is based upon that of Dziatzko, from whom he seldom departs. The notes, on the same page with the text, are chiefly grammatical and critical, there is a full introduction, and, although the editor does not profess to offer anything particularly new in the line of criticism or interpretation of Terence, yet he is thoroughly acquainted with the literature of the subject, and has the art of stating principles in a few words. The book, which consists of about 250 pages, will be very useful to students of the Terentian comedy.

Mr. George Murray's 'Introduction to the Study of Seaweeds' (Macmillan) is not meant, as so many works of about the same title are, to serve as a handy guide to species; its task is more serious. It is designed to place the student in possession of the principal facts regarding the relationship of the orders, or major groups, of algæ, and this work has been well done. We should, however, have been better pleased to see also a coördinating synopsis of the orders, either at the beginning or the close of the book. The colored plates, eight in number, are of superior quality both as to delineation and to execution. The author has presented in the first thirty pages as clear and full an account of the history of the study of seaweeds, and of the relations of these plants to their surroundings, as we have ever seen in so small a space. This has been done with no sacrifice of necessary detail. It reminds one of the happy faculty which a few persons have of never seeming to be in a hurry, when, in fact, they are crowding an enormous amount of activity into every moment. The author's style is suggestive of that of the lamented Harvey, who invested algæ with a charm that drew to their investigation hosts of amateurs all over the world; both authors have kept accurate proportions throughout their work.

Within the narrow limits of scarce a hundred pages, Mr. William Hutchinson, too, in his 'Handbook of Grasses' (Macmillan), has packed a great amount of interesting information, chiefly about British grasses. At first one is rather repelled by the shabbiness of print and engravings, but this ought not to prejudice one against the really meritorious features of such a good handbook. The grassy carpet of meadows and pastures, uplands, heaths, and moors, of riversides and marshy places, and of the seashore, is resolved into its constituent elements, and each of the constituents is pleasantly described. Even the grasses of cultivated fields, waste places, chalky and sandy fields, and of mountains are taken in turn, and thus is made, from all the materials, a charming chatty companion for any British outing. There is just about enough given as to the ancestry of the family of grasses, and likewise as to their present distribution; then the author passes to a trustworthy presentation of the multifarious uses of the plants of the order. One lays the book down with the feeling that it should have had a better dress.

The second volume of the 'Ornithology of Illinois,' by R. Ridgway, forming a large octavo of nearly 300 pages, with 33 plates, published at Springfield by authority of the State Legislature, as one of the series of the Natural History Survey of Illinois, under the direction of S. A. Forbes of the State Laboratory, contains the gallinaceous and water-birds, which are formally treated with synonymy, diagnosis, and remarks suitable to the character of a local fauna. The work appears to have been long in preparation or course of publication, as the technicalities of the subject are identical with or but little modified from those of Baird, Brewer, and Ridgway's 'Birds of North America of 1874' and later, and the illustrations are the same.

'"Chip's" Old Woodcuts' (New York: Russell & Son) are not woodcuts, and neither is the collection of drawings called '"Chip's" Dogs' issued by the same firm. The gifted artist, the late F. P. W. Bellew, was, like his father, a designer whose humorous creations needed no legend; but he belonged to our latter age of "process," or photographic reproduction of pen-drawings, and probably not one of the pieces in these two portfolios (which represent but a tithe of his product) passed under the graver. The "old woodcuts" are simply imitations of very primitive work, and are clever in this respect as well as in the exuberant comicality of conceit and detail. Both collections will be found familiar by readers of *Life*. It was well to commemorate in this way the lamented author of them.

The gist of Wagner's reforms lies in his claiming for the poet the same importance in an opera as for the composer. But, owing to the faulty enunciation of vocalists, it is usually impossible to make out what they are singing about. His admirers must therefore familiarize themselves with the stories of his operas beforehand if they would enjoy them thoroughly. There is no lack of books for this

purpose, and every year swells the list. The latest two additions are chiefly intended for young readers. H. A. Guerber's 'Stories of the Wagner Operas' (Dodd, Mead & Co.) gives in 191 pages the themes of the eleven from "Rienzi" to "Parsifal." There are some trifling errors in the introductory remarks (*e. g.*, on p. 72, where we read that "Tristan" had its first performance at Nuremberg in 1861—instead of Munich, 1865), but the plots are fairly well told. 'Wagner's Heroes,' by Constance Maud (Edward Arnold), confines itself to four of Wagner's operas, "Parsifal," "Meistersinger," "Tannhäuser," and "Lohengrin," and has therefore more room for details and dialogue, the plots being told as prose stories. Both these books are illustrated.

From Mr. W. L. Tomlins one has a right to expect nothing but the best, and his 'Child's Garden of Song' (A. C. McClurg & Co.) is an exemplification of his good judgment and taste. It contains thirty songs, with simple accompaniment, by Foster, Root, Gilchrist, Seeboeck, Dietrich, and others, beautifully printed, with colored marginal illustrations appropriate to the subject of each song; these, as much as the music, will interest children.

The Franz Hanfstaengl fine art publishing-house has issued an English edition of 'Pictorial Wagner,' with an introductory paper by Henry T. Finck. It contains fifteen full-page photogravures by Ferdinand Leeke, illustrating some of the most striking tableaux in Wagner's operas and music-dramas. They are not photographic reproductions of scenes such as might be witnessed on the actual stage, but imaginative attempts to realize the pictures which Wagner may have had in his mind's eye when he composed for an ideal stage of the future. Mr. Finck's text appropriately dwells especially on the pictorial side of Wagner's genius, and also attempts to give a bird's eye view of the Wagnerian question in general. The progress of Wagnerism in Germany, France, Italy, England, and America is illustrated by figures, and incidentally some new light is thrown on the revolutionary (Dresden) period in Wagner's life, which heretofore has been treated inadequately by his biographers, Mr. Finck included.

Mr. Charles Henry Wyatt, the clerk of the Manchester School Board, has prepared a text-book entitled 'The English Citizen: His Life and Duties' (Macmillan), which is in many respects excellent. It is intended for the use of the higher classes in the English public schools, but it contains so much information of general interest as to make it of value to any one who desires to have some understanding of the present institutions of England. The changes made by legislation during the last few years have been revolutionary, and the differences between the Old England and the New are in the main very well set forth by Mr. Wyatt; all the better, indeed, because he makes no parade of learning and writes in a plain and unaffected style.

'The Elements of English Constitutional History,' by F. C. Montague (Longmans), is intended for the use of those who are beginning to read history. The author expresses the opinion that there is no other book aiming at precisely the same object; but the excellent little work by Mr. James Rowley, entitled 'The Settlement of the English Constitution,' is, for the period which it covers, not likely to be superseded. Prof. Montague, however, goes back to the earliest times and comes down to the present day, so that his book has the merit of completeness. The subject is so large that severe condensation is necessary, with the result that in many cases the narrative becomes a rather bald statement of facts. The condensation, however, appears to be skilfully done; and while beginners in history will find the book stiff reading, it will be acceptable to those who desire a succinct account of the development of the more important political institutions of England.

Lee & Shepard publish 'A General Outline of Civil Government in the United States, the States, Counties, Townships, Cities, and Towns,' prepared by Clinton D. Higby. The author considers that the enumeration of civil officers with their functions constitutes the science of government, and actually offers this dreary list as a text-book to be used by "that large class of students who desire to complete their school work in the shortest time possible." One term, he suggests, with two recitations a week, will be sufficient for this end. We should as soon recommend a beginner in Astronomy to commit to memory the list of the stars as advise any one to undertake the study of government after this fashion. Nevertheless, as "the subject of civil government" is compressed by Mr. Higby into 80 pages of large type, the ambitious student may well consider that matters might be worse with him. We may add that the lists of institutions and officers are not without value as illustrating the general scheme of government under which we live.

The doctor's dissertation (Chicago University) of Dr. Frederick Ives Carpenter, on 'Metaphor and Simile in the Minor Elizabethan Drama,' is a thoroughly competent and, within its range, exhaustive piece of work, with which critical students of the period will have to reckon. Selecting eight authors—Lyly, Peele, Marlowe, Greene, Tourneur, Webster, Chapman, and Jonson—the author records and classifies, not merely every metaphor and simile in the restricted sense, but every trope "in which imagination is felt to be present." Frequent intelligent summaries and a final chapter of enlightening comment protect the work from the bane of pedantry, and succeed in giving a definite and satisfying general impression of each author. The essay is full of such tersely comprehensive sentences as this: "Webster's characteristic figure is the deliberate comparison. But the emotional power of his similes, if somewhat dry, bitter, and conscious, is scarcely less than that of the deepest and most burning metaphors." The work suggests Dr. F. Klaeber's 'Das Bild bei Chaucer'; but, while not equalling that book in sheer *Sitzfleisch*, is much superior to it in critical balance and insight. In parts, moreover, it is written with a distinction of style as rare in a doctor's thesis as it is welcome.

Dr. Knoke, professor of theology in the University of Göttingen, assisted by several of his colleagues, has recently opened a so-called *Rectorseminar* for the purpose of facilitating for theologians the acquisition of the pedagogical knowledge requisite for heads of common schools, instructors in teachers' seminaries, and school inspectors. This new device of enlarging the direct influence of the clergy in school affairs, though receiving no financial aid from the Prussian Government, has at least the semi-official approval of the "Kultur- und Unterrichts-Minister," but is looked upon with disfavor by the teachers of the kingdom.

The congress of educational societies recently held at Havre was attended by four hundred delegates, each society being represented by from two to five members. Though none of the organizations represented has any official connection with the public-school system, the minister of public instruction, the vice-rector of the University of Paris, and other officials of high rank took an active part in the deliberations of the congress, and the President of the republic was present at some of the meetings. The work was distributed among four sections, as follows: Courses of instruction for adults; instruction with the aid of wall maps and the stereopticon (*enseignement par l'aspect; projections lumineuses*); public lectures; and protection and instruction of adolescents above the legal school age (*patronages scolaires*). The reports of the transactions of the meeting leave no room for doubting the earnestness and effectiveness with which these beneficent enterprises are carried on in various parts of the republic.

A new educational quarterly, *Deutsche Zeitschrift für Ausländisches Unterrichtswesen* (Leipzig: Voigtländer; New York: Westermann), bids fair to rank with the best publications of its class. Its editor, Dr. Wychgram, is well known among German educators, more especially in the field of the higher education for women. He is assisted in his new enterprise by a numerous staff of men and women, eminent in their profession and belonging to many nationalities. The initial number of the periodical contains, aside from shorter contributions and a good summary of recent events in the educational world, leading articles by well-informed writers on educational affairs in England, Switzerland, France, and the United States. Dr. Waetzhold's paper on "Coeducation" must be interesting to German readers; it is marred, however, by one or two sensational statements which would find little credence in this country, and we are not strongly impressed with the acuteness of his prognostications. Dr. Schlee, in another article on education in America, errs in supposing that, for the country at large, the public high schools are of no account as far as preparation for college is concerned; in some of the Western States they serve this purpose almost to the exclusion of private schools. It would not be surprising if the difficulties in gathering and digesting the necessary information about educational matters in this country, and especially in attaining to a right understanding of them, were to baffle even the most painstaking industry of German students for some time to come.

The art publishing house of Gerlach & Schenk, Vienna (New York: Westermann), has just initiated an enterprise that commends itself by mere description. It has undertaken to reproduce the best autographic drawings by famous artists in the Albertina collection at Vienna, and will probably extend its range so as to include many other collections. Part i. is a folio containing two drawings by Albert Dürer and one each by Rembrandt, Francesco Francia, Van Dyck, Luini, Hopfer, Hans Sebold Beham, Fréminet, and Dumonstier. In other words, the Dutch, Upper German, French, Bolognese, Milanese, and Flemish schools are here represented. There is no accompanying text. Each print observes the tint of the original, and bears the name of the artist and of the collection. Publication is monthly, at three marks the *Lieferung*, and there appears to be no limit to the ultimate size of this valuable Corpus, of which the mechanical execution is admirable.

—*La Revue Blanche* of October 15 publishes a translation of another utterance on socialistic subjects by Count L. N. Tolstoi. This brief treatise forms the introduction to a book by E. I. Popoff, recently published at Berlin,

in Russian, 'The Life and Death of E. N. Drozhzhin.' Drozhzhin was an intelligent young man of the peasant class, who received sufficient education to pass the examinations for the diploma of teacher. He settled in the country, as a schoolmaster, for the purpose of propagating socialistic and revolutionary doctrines, at the age of nineteen. At the age of twenty-three he embraced Tolstoi's doctrines in their fullest extent, with all their consequences, the love of all men, even of his bitterest enemies, absolute negation of the right to kill his fellow-men, and the equally absolute refusal to recognize any other master than "God and his Son, Christ." When summoned to do his military service he refused. He was sent, by way of punishment, to the "disciplinary battalions," where he remained steadfast in his refusal. Later on, he refused to take the oath to the new (the present) Emperor. He died at the end of four years. *La Revue Blanche* gives no details from the biography of Drozhzhin, but it would be interesting to know whether they resemble those contained in a similar biography which was being prepared under Count Tolstoi's eye several years ago, and which has not been published, it would seem. In that case, the unprejudiced reader could not help feeling that though many acts of tolerance on the part of the Government officials were twisted into constructive acts of oppression, there must be some real acts of oppression at the end of the repeated refusals to recognize authority on the part of the conscript. Only, unfortunately, Drozhzhin's counterpart was so long-winded over these preliminaries that his autobiography never got to the interesting point where he was sent to the disciplinary battalion and began to have real experiences. As Count Tolstoi has already written a good deal on the subject of resistance to government of all kinds, and of the military art of murder, it is natural that his utterances in the present work should, to a certain degree, lack freshness, as to the idea and spirit, at least. Still, his expressions are often very clear.

—The third number for 1895 of the *Archivio Storico dell'Arte* comes, as usual, months late, but is more than usually interesting. The eminent architect Camillo Boito contributes an article, as brilliant as it is convincing, on the thirty-odd works by Donatello in the Santo at Padua, their original relation to each other, and his (Signor Boito's) recent arrangement of them into a reredos. Rarely, we may add, has constructive criticism had before it a worthier task or one which has been better performed. At last, after centuries of neglect, these masterpieces of Italian sculpture can be properly seen and somewhat as Donatello meant them to be seen. To return to the *Archivio*, M. Cornelius de Fabriczy furnishes a paper on Verrocchio's relations to the Medici which considerably increases our acquaintance with the as yet too shadowy figure of Leonardo's master. In reviewing the previous number of the *Archivio* we spoke of Signor Supino's acute criticism of the marbles generally supposed to have formed part of Giovanni Pisano's pulpit for the Cathedral of Pisa, and his decision that a number of these could not have belonged to this pulpit, a much simpler structure than has been believed, but must have served as the support of Henry VII.'s tomb, the chief member of which is now in the Campo Santo. In this number Signor Supino reconstructs this tomb of "German Henry," and also discusses its author's (Tino da Camaino's) works in Florence and Naples. Finally Signor Vittadini, in an account of recent acquisitions made by that model of private artistic foundations, the Poldi Museum at Milan, throws welcome light on the three Florentine Raffaellinos, almost as indistinguishable in their style as in their names, who painted toward the turn of the fifteenth into the sixteenth century.

—The quarter's advance in 'The Oxford English Dictionary' (the shortened name for 'A New English Dictionary on Historical Principles') is marked by a section from Dr. Murray in vol. iii. (Depravative—Development) and one from Mr. Henry Bradley in vol. iv. (Fee—Field). "I understand," wrote Fénelon to the French Academy, "that the English deny themselves no word that comes handy to them. They pick it up wherever they find it among their neighbors." For example, they found the French rich in four distinct verbs *dériver;* the one meaning 'to unrivet' they neglected, the others they helped themselves to, in the verbal or in a substantive form. At a much later period they took over *dernier ressort*, but with the spelling "resort" till the general spread of knowledge of the French language restored the *s* and apparently denaturalized the phrase by putting it in italics. Still later, in 1850, Dr. Lardner borrowed *derail* and *derailment*, which Bescherelle admitted to his French Dictionary in 1845, but the Academy only in 1878, and which owed their English vogue chiefly to American usage—in happy conformity to railroad experience in this country. *Derout*, 'to put completely to flight,' was toyed with, on both sides of the water, for two centuries, from 1637 to 1839, but the French are now welcome to reclaim it. The handiness of *détour* was recognized in 1738, with liberty to drop the accent, and (as in the case of *débris*) Dr. Murray thinks this still rather to be called the English form, in spite of the scholastic tendency to replace the accent. (Compare the French preservation of the English spelling of *veto*, while pronouncing *véto*.) *Design* occurs in Hooker in 1593, and we have found this spelling sufficient for all meanings, whereas the French original has been gradually differentiated into *dessein*, 'purpose, plan,' and *dessin*, 'design in art.' But then, just to show what the makers of English speech are capable of fashioning on their own account, Mr. Bradley arrays these synonyms for "the ever-womanly": *Femality* (Richardson, 1754), *feminacy* (Lytton, 1847), *feminality* (Sir T. Brown [*sic*], 1646), *femineity* (Coleridge, 1820), *feminicity* (*Fraser's Mag.*, 1843), *femínility* (*id.*, 1838), *femininess* (*Times*, 1859), *femininism* (U. S., 1846), *femininitude* (J. Thomson, 1878), *femininity* (Chaucer, 1386), *feminism* (1851), *feminity* (Chaucer, 1386). One or two of these have a squint towards old or modern French or towards the Italian, but seem independently built.

—The good old Anglo-Saxon word *fellow*—primarily, 'one who lays down money in a joint undertaking'—has been thought to be abused when coupled with "countrymen" or "townsmen," at least when not employed in apostrophe. Stocker, however, in 1583, wrote: "They keepe their faith . . . with their fellow countrie men," and there is no question that *fellow* has in such connections a pathetic weight which relieves it of sheer redundancy. It is to be regretted that we have lost the verb *fellow-feel*, considering how much overworked *sympathize* is. It did not survive the seventeenth century, in which it appeared as a "back-formation from *fellow-feeling*." *Fence* was very early (in the fourteenth century) and fruitfully shortened from *defence*. Five phrases, "chiefly U. S.," are quoted under the substantive, but only one of these, 'to stand or sit [or be] upon [on] the fence,' is now current. Proof-readers might heed the remark, under the prefix *des-*, on the distinction between "words [like *descry*, *despair*, etc.] beginning with *des-*, in which the *s* belongs to the root-word and the prefix is *de-*," and others; this for its bearing on hyphening. They may also study the history of *fetish*, in which *sh* was first used, *ch* and *che* turning up at a much later date, and Coleridge even venturing *sch*—thus Germanizing the French. Now the pendulum has properly swung back to *sh*. Those who are curious as to what constitutes an Americanism will be surprised to find a special quotation from Mrs. Stowe's 'Uncle Tom,' under the verb *determine:* "Impersonal passive. 'It was determined to sell the place.'" Quotations which we miss are President Cleveland's proverbial "innocuous *desuetude*"; the Devil's "*Fen* miracles!" in 'Father Tom and the Pope'; and FitzGerald's "The Sultan rises, and the dark *Ferrásh* Strikes, and prepares it for another guest."

—Prof. Eugène Hubert, of the University of Liège, has made an interesting contribution to the history of humanitarian jurisprudence by printing, with an explanatory introduction, the 'Mémoires de Goswin de Fierlant' (Brussels, 1895). De Fierlant was a distinguished lawyer and member of the Privy Council of the Austrian Netherlands, who was instructed, in 1771, to report on a proposition for the abolition of torture in criminal procedure. It is this report, hitherto inedited, and a subsequent one on the substitution of houses of correction for corporal punishments, that Prof. Hubert has given to the world, and the former especially is well worth reading by all who feel an interest in the peculiar social development of modern Christendom. The Netherlands were very tardy in yielding to the impulse from Vienna for the abolition of torture; it was formally accomplished in 1787, but the practice continued, and the final abrogation did not occur until the conquest of the country by the revolutionary armies in 1794. The memoir of De Fierlant is a very clear and convincing argument, of which the reasoning is supported by a number of curious cases illustrative of the abuses to which the employment of such a means of eliciting truth must inevitably lead. No one who has not studied the criminal annals of the past can rightly appreciate the entire revolution in sentiment and practice involved in the disuse of judicial torture. Except in Great Britain, it was the main reliance of society to protect itself against crime and criminals, and, hideous as it was, one may well question whether the humanitarian pendulum has not swung too far on the other side, and view with well-grounded apprehension the increase of crime in all civilized states save England, where maudlin sympathy with evil-doers has not been permitted to relax the severity of even-handed justice. M. Hubert gives us reason to regard his present publication as merely a *prodromus* to an investigation into the history of the abolition of torture in the Low Countries, a task for which his easy command of documentary sources would show him to be peculiarly fitted. If he would add to this an examination into the influence of the change on the frequency of crime, he would have an additional claim on the gratitude of all penologists.

—So perfectly natural an appointment as that of a female physician as attendant to an

institution for women has recently been hailed in Vienna as an unprecedented triumph of woman's rights, and has become the subject of general discussion in the newspapers. Dr. Georgine von Roth, who has been appointed, with the Emperor's sanction, physician to an institution for the education of daughters of army officers in that city, is a graduate of the University of Zurich. As attendant at the clinic of Prof. Neusser of Vienna, she had given evidence of marked professional ability. The interest in her appointment has been intensified by the hostile attitude of the eminent Vienna surgeon, Prof. Albert, towards the admission of female students to medical colleges. His threadbare arguments regarding the physical inferiority of women, their intellectual unproductiveness as compared with men, their manifest destiny to be child-bearers and nothing else, etc., have given rise to a flood of replies. Perhaps the best point is made by a writer in the *Fremden-Blatt*, who, while accepting with mock-modesty the rôle of *Naturwesen* assigned to her by Prof. Albert, in contradistinction to the *Kulturwesen* which she had fondly imagined herself to be, takes exception to his remark that "anatomy may have failed to reveal any structural difference between the brain of the male and that of the female." Would it not be fairer and more scientifically precise, she asks, to say that anatomy *has* so far failed to reveal such a difference, and may it not be useful to give female investigators a chance to pursue the subject? She then goes on to say, what is every day becoming more patent both in Europe and in this country, that women are the natural physicians for young children, and she quotes male physicians to this effect. So Dr. Mae H. Cardwell of Portland, in her recent address before the Oregon State Medical Society, said that "if there is a place in medicine for the woman physician, it is in the department of pædiatrics."

WOOD-ENGRAVING VS. PROCESS.

Old Dutch and Flemish Masters. Engraved by Timothy Cole. With Critical Notes by John C. Van Dyke, and Comments by the Engraver. New York: The Century Co. 1895.

Masterpieces of the Great Artists, A.D. 1400-1700. By Mrs. Arthur Bell (N. D'Anvers). London: George Bell & Sons; New York: Macmillan. 1895.

MR. COLE'S second series of engravings after the old masters is brought out by the Century Co. in even handsomer style than was the first in 1892, and the beautiful volume raises again the question of the relative merits of engraving and mechanical process in the reproduction of paintings. Extravagant claims of superiority over any photograph have been made for Mr. Cole, and one feels impelled to test the question by actual comparison. For this purpose let us take up side by side Mr. Cole's two volumes and one that is, in many respects, very inferior to them. 'Masterpieces of the Great Artists' contains 34 not very finely executed process plates and 8 photogravures after celebrated pictures. Only the most celebrated pictures (*i. e.*, the most hackneyed) have been chosen, but in a few instances the same or very similar works have been chosen by Mr. Cole. The photogravures are left out of the count, and we have to deal only with the inferior half-tone plates. Let us compare some of these with Mr. Cole's engravings and try to decide in what particulars either are superior. Fra Angelico's "Annunciation," Botticelli's "Primavera," and Titian's "Entombment" in the 'Old Italian Masters,' and Rubens's "Chapeau de Poil," Rembrandt's "Night Watch," and Potter's "Bull" in the 'Dutch and Flemish Masters,' are paralleled by plates in the 'Masterpieces,' while pictures by De Hoogh of very similar subject are contained in both works.

In the first of these instances there is little to choose. Fra Angelico comes out nearly equally well in both cases, though Mr. Cole has attributed to him a piece of bad perspective in the base of the left-hand column of which he was not guilty, and the engraving, curiously enough, shows a lack of definition as compared with the half-tone plate. In the cases of the "Primavera" and the "Night Watch" fair comparison is impossible, as the process plates give the whole composition, while Mr. Cole has confined himself to a fragment on a much larger scale. The engraver's incontestable superiority in these instances is largely a matter of scale alone. Comparing the other plates, one finds that the points of advantage for the engraver are a richer and handsomer quality, and sometimes, not always, greater fidelity of tone. In fidelity to form the advantage is all the other way. The greater richness of color and variety of surface of wood-engraving when done by an artist like Cole are indisputable and are constant. His cuts are much pleasanter to the eye than any half-tone can be, but this is a virtue of wood-engraving *per se*, not of wood-engraving as a means of faithful reproduction.

Now compare carefully the head of St. John or that of the Magdalen in Cole's engraving of the "Entombment" with the heads in the process cut, and see how far truth of form has been sacrificed by the engraver. He has altered the shape of the latter and entirely spoiled the expression of the former and ruined its beauty. Then look at the drapery of Nicodemus, and see how its crinkly glitter is lost in the wood-engraving so that it is more like wool than silk. Even in tone the process print is really truer, for, in spite of its exaggerations, it does give an idea of the glowing light on the corpse and its winding-sheet, while the wood-engraving is all too gray. Turn now to the "Chapeau de Poil." Mr. Cole is unusually successful here, and the process plate is a poor one. Mr. Cole's plate is not only much handsomer than the process cut, but it is much truer to the original in tone and suggestion of color, but, again, it is not so true in form. Look at the way the process plate gives you the peculiar fat modelling of the hands and the very touch of Rubens, and compare the mouth in the two engravings, and you will be convinced of the greater accuracy of process. In Potter's "Bull" the superiority even of tone is with the process cut, and it is still more so in the case of the two plates after De Hoogh. Here the very circulation of the air in the room and the wonderful justness of light and value which are the essence of De Hoogh's work can be seen only in the process cut, the wood-engraving being singularly unsuccessful in this respect.

There is, indeed, another quality in good wood-engraving which is entirely absent in process work; it is that which is referred to by the editors of the *Century* when, in announcing the completion of this series of engravings, they say: "There is a distinct difference between picture-making and art." It is, in a word, the artistic personality of the engraver himself. The reason we have not referred to that quality in making these comparisons is because the artistic personality of the engraver, when it steps between us and the personality of the original artist, is a distinct intrusion. Mr. Cole is an artist, and no one places a higher value on his art than we do; but he is not Raphael or Rubens, and it is Raphael and Rubens that we want in a series of plates after the old masters, not Mr. Cole. It is just this intrusion of the personality of the copyist that makes all the old copies and engravings after the old masters entirely useless for study, and that has made the modern perfection of photography the basis of all serious comparative criticism. The personality of the engraver is legitimately employed when he is working from nature, or from what is practically the same thing, a photograph from nature, but it has no place in the reproduction of works of art. It is this fact, and not "the rage for cheap work," which accounts for the popularity of process, at least with artists. They are willing to sacrifice much of richness and beauty of surface, and all of the engraver's personality, for the sake of the impersonal fidelity of mechanical reproduction.

We hope, with the editors of the *Century*, that "the love of good wood-engraving" will never be eradicated—wood-engraving is too valuable an art to be allowed to die; but its safety is to be assured by the same means as that of any other art. Let it deal at first hand with nature as does painting; let the engravers do such original artistic work from nature or photographs of nature as some of them are already beginning to do, and it will survive. Wood-engraving as a purely reproductive art we believe to be doomed. For other and for deeper reasons than the *Century* editors give, it is true that "such an enterprise" as that of this series of copies of the Dutch Masters not only is "not likely to be done so well" again, but is not likely to be done by any one else at all.

The text of Mrs. Bell's volume may be dismissed in a few words as containing a minimum of information and no criticism at all. Not so the text of the 'Old Dutch and Flemish Masters.' Besides the pleasant "Notes by the Engraver," which are familiar to readers of the *Century Magazine*, the volume has been supplied with introductory "notes" on Dutch and Flemish art, and with short essays on each painter, by John C. Van Dyke. These are serious and able critical studies, worthy of publication for themselves, and not merely as obligato accompaniments to Mr. Cole. Mr. Van Dyke is, of all our literary critics of art, the one who most often and most surely attains to the artist's point of view; and these essays are nearly as good expositions of the beauties proper to Dutch and Flemish painting as could be asked. In only one or two points are we inclined to differ with him, and he must pardon us for singling out these for comment rather than the many in which he seems to us indisputably right. We can refer the reader to Mr. Van Dyke's own pages for the latter.

The article on Rembrandt is very good, but in the end of it there is one short sentence that we think misleading. It is this: "Doubtless his chiaroscuro came to him from Caravaggio; but how or when, no one knows." The two systems of light and shade seem to us so radically different that to join them in this way can only cause confusion. Caravaggio was fond of brutally black shadows, as were all the artists that derive from him, from Ribera and Valentin to Ribot, and Rembrandt's love of shadow makes his work seem "black" to a modern; but here the resemblance ends. The shadows of the school of Caravaggio are nar-

row black accents evenly distributed through the canvas and equally dark everywhere. The lighting is as general as with the earlier Italians, only the shadows are everywhere black, and this without regard to the colors of the objects illuminated. What really distinguishes Rembrandt's chiaroscuro, as every painter knows, is the transparence and luminosity of his shadow. He bathed in shadow, flung it over most of his canvas—his pictures exist in an atmosphere of shadow—but every inch of it is shadow filled with light, criss-crossed with hundreds of reflections. His gloom is saturated with light, and the stupid blackness of Caravaggio's shade without atmosphere was as impossible to him as it would be to the most advanced of our impressionists. From whatever source "his chiaroscuro came to him," we venture to assert that it did *not* come from Caravaggio. If he got the hint of it from any Italian source, it is more likely to have been from Correggio, with whose system his own has real analogies.

We may be influenced by a purely personal feeling in thinking that Mr. Van Dyke does not do complete justice to Ver Meer, more commonly known as Von der Meer of Delft. The work of that artist, with its Dutch sobriety and impeccability, combines a subtlety and refinement, an air of high breeding, a delicacy and a style, which are almost unique, and give him a place quite apart from any other painter. To many of us he seems an exemplar of quiet perfection and a man hardly sufficiently to be praised. It is not, however, in a question of taste, but in one of pictorial science, that Mr. Van Dyke is surely wrong. He is speaking of the blue atmosphere of some of Ver Meer's pictures, notably the little one in our own Metropolitan Museum, and says:

"Ver Meer evidently had an inkling of what the modern impressionists have discovered, namely, that there is less luminosity in white than in blue. White is dead, flat, opaque; while blue, thinly laid, is transparent, vibrant, scintillating. Claude Monet has abundantly demonstrated this in his landscapes, but Ver Meer first hinted at it in his interiors. There was certainly no painter of the time, not even Rembrandt with his sharp contrasts, who gained greater height of light than Ver Meer; and something of it was due to his use of blue."

His use of blue was not the only thing in which Ver Meer anticipated the impressionists, as those know who have studied his wonderful little "View of Delft" in The Hague Museum; but we are mistaken if Monet would not be as much surprised as Ver Meer himself to be told that blue is a "luminous" color. It is precisely the least luminous of all colors, and that is why it is, as Mr. Van Dyke says, the "most unmanageable," and why Reynolds formulated his rule, which Gainsborough defied, that it should be reserved for the shadows and never appear in the principal light of a picture. Blue is essentially shadow, and that very fact, rightly understood, is the key to the impressionists' use of it; for as never so little blue will at once produce the effect of shadow, one is enabled to paint on a much higher key with blue shadows than without. Instead of a difference in the degree of remove from white, the impressionist merely gives a difference of tint, and so gets his whole canvas into the upper register and makes it the dazzling thing we know, while his pale blues, in spite of their paleness, still look like, and are, shadows. It is in the shadow alone that Ver Meer or the modern impressionists use their blue; light they invariably render as warm in tone, yellow or even pink, either of these colors being really "more luminous than white," which partakes of the cold nature of blue. It is the non-luminous nature of blue that makes a blue sky so hard to paint, and every decorator knows how blue kills the light of a room. It is only by breaking blue with all sorts of warmer tones, as Gainsborough did, that it can be made to express light at all.

These are, after all, few and small errors in a work the bulk of which is so good, and our last word, like our first, must be one of praise. Engraver, writer, and publisher have worthily collaborated to produce a beautiful book and one which deserves the success and the praise it is sure to receive.

CONWAY'S ALP-TROTTING.

The Alps from End to End. By Sir William Martin Conway. With 100 full-page illustrations by A. D. M'Cormick. Macmillan. 1895.

We are glad to be able to tell the reader that Sir W. M. Conway's exploits in the Himalayas have not spoiled him for the Alps. Neither has he yielded to the temptation to become a "centrist." If he chose to claim the throne of the Riffel he could occupy it without a protest. But he rises superior to all allurements, and continues to traverse the great ranges from Limone to Gastein.

The tour which is described under the above comprehensive title was an attempt to go back to the original aim of English mountaineering. The founders of the Alpine Club were travellers who wished to explore new districts, find new routes, and climb new peaks. They succeeded so well that the mysteries of the Alps are now as dead as Scheuchzer's dragons. The contemporary mountaineer feels that no fresh discoveries await him, and that his best chance of sport is to attack the peaks of a chosen range from some convenient and comfortable centre. The number of errants thus tends to diminish, while the number of "centrists" is continually on the gain. Sir W. M. Conway and the Rev. W. A. B. Coolidge, who contributes an important chapter to this volume, are both free from the reproach of abandoning the primitive and orthodox traditions of their school. By combining forces they have brought out, during the last fourteen years, a series of Climbers' Guides which treats of nearly half the Alps. This series is a standing witness to the hold which Alpine scrambling has on one of the most cultivated classes in the world. Mr. Freshfield, at a dinner of the Alpine Club, once called its small but expensive volumes "the dearest little books there are." The fact is that for their purpose they are invaluable, and though they may have been the cause of localization in others, they are witnesses to the catholic taste of the compilers themselves.

We have been led to speak of the Climbers' Guides because 'The Alps from End to End' is largely topographical. In it topography is united with personal narrative, not presented in the bald style of a pocket dictionary; but it lends the book unity, and adds vastly to its interest in the eyes of those who wish to read the text as well as look at the pictures. We wish we could say that there was no need for such a *coup d'œil* of the Alpine region, but we cannot in conscience do so. The general ignorance of Alpine geography among people who ought to be well informed is equally doleful and conspicuous. Not long ago a distinguished professor in one of our leading colleges, writing at length on Swiss government, said that the Alps as contrasted with the Jura "are made up of one great ridge supported by far-reaching buttresses." And only the other day an extensive work of reference, besides putting Mont Blanc in Switzerland, involved the Great and Little St. Bernard in hopeless confusion. We doubt whether twenty people on this side of the Atlantic could enumerate off-hand the Alpine groups, from the Grande Chartreuse to the Triglav. If 'The Alps from End to End' dispels even a part of this haziness, its publication will be justified.

Sir William Conway thus states his main purposes in the introduction:

"It occurred to me that it was now possible, taking the whole range of the Alps, to devise a new route, or rather a combination of climbs, the descent from each ending at the starting-point for the next, so that a climber might begin at one extremity of the snowy range, and walk up and down through its midst to the other extremity over a continuous series of peaks and passes . . . The route selected had to be capable of execution within three months of average weather, which is a mixture of good and bad with the bad predominating. It was also essential that it should lead as continuously as possible through snowy regions, and that it should traverse as many of the more interesting and well-known groups as possible."

In pursuance of this plan, two parties met at Turin, on June 1, 1894, and proceeded to the Colle de Tenda, between Turin and Ventimiglia. Sir William Conway had with him Mattias Zurbriggen of Macugnaga, and two Gurkhas, Amar Sing and Karbir, all of whom had shared the fatigues and adventures of Karakoram exploration. Zurbriggen will perhaps be best remembered as the man who, in spite of sphygmograph revelations, managed to smoke a cigar on the summit of Pioneer Peak, altitude 23,000 feet. Mr E. A. Fitzgerald, an old climber, was Sir William Conway's companion. He brought two Valtournanche guides, J. K. Aymonod and Louis Carrel, who accompanied Mr. Whymper to the Andes. This was a party quite strong enough to attack anything which lay in its path, and it finished its tour without accident, a comforting reflection at the end of such an Alpine summer as the last has been. Twenty-one ascents were made and thirty-nine passes traversed. The large proportion of passes to peaks was due to badness of the weather. We do not trace the line of progress, partly because its details would be too minute for the non-Alpine reader, and partly because the Alpine reader will buy the book. We will say, though, that a beginner at Alpine topography will do well to follow out Sir William Conway's whole course on the largest maps he can get. One would find it hard to recommend a better *Orientierung*. A selection of six peaks and six passes will serve to show the character of the climbing done. Peaks: Monte Viso, Mont Blanc, Monte Rosa, Jungfrau, Weisskugel, Gross Glockner. Passes: Col de la Flégère, Lötschenlücke, Oberaarjoch, Ober-Vermunt, Sonklar, Venedigerscharte. The most easterly of the peaks was the Pelvo d'Elva, in the Cottians; the most westerly, the Ankogel, in the Hohe Tauern. Sixty-five days were actually spent on the march, and the distance traversed was about a thousand miles. Probably no trip of a single summer in the Alps has ever embraced so much.

Leaving topography and coming to the narrative part of the book, we are inclined to think that the Gurkhas add more life to its pages than the Europeans. Whenever they stopped of a night at an inn, the *Mädchen* lost her heart to one or both of them. We shall not attempt to conjecture whether it was strangeness of color and costume or personal charm which produced this invariable result. Their actions

on the mountain-side are a sufficient passport to the esteem of the reader. The picture of Karbir's activity in camp is very attractive. "I have never seen a more alert intelligence," says his employer, after describing his unfailing usefulness. In climbing they were best pleased when they got a taste of danger. Descending Mont Blanc, the party crossed the Glacier des Bossons. Before they were over, a discharge of ice and stones from the Aiguille du Midi nearly caught them. "Crash! came a great rock, accompanied by several large blocks of ice. We felt the wind of them as they flew by. Karbir jiggered with delight. 'It goes li, li, li,' cried he." Amar Sing's mettle was the same. Below the Schneehorn, in the Wildstrubel region, it was necessary to cross some deeply grooved snow-slopes. The further side of one of these grooves "was of soft snow and quite vertical. Amar Sing, who was leading, went for the wall as though it had been an insult. He jumped at it, and thrust his four extremities into it. The frail substance was not strong enough for such treatment, so back he fell into the groove, and down it into a crevasse, where the rope stopped him. Karbir hauled him out, and he returned to the charge, with a better understanding of what had to be done." Three weeks later, in going from the Maderanerthal to the Ruseiu Alp, Amar Sing's reckless scrambling nearly cost him his life. "This adventure occurred out of my sight. When he rejoined me, I at once perceived that something had happened to amuse him, for he was breaking out into laughter every few minutes." Dash and usefulness, however, were not the Gurkhas' only virtues. They took enthusiastic delight in the scenery of the Alps, and were the best of friends with the guides. Here is Aymonod's opinion of them: "When I heard that I was to travel with two Indians I did not know what to expect. I feared they would be savages. But these men are charming to travel with; they are so friendly and intelligent. They are quite civilized men." One of the chief aims of the expedition was to give the Gurkhas a thorough mountaineering education, in order that they might take part in Himalayan exploration. On their return to India they were at once sent to join the Wazaristan force. We sincerely hope that they have not shared Mr. Mummery's fate in the recent disaster in the Nanga Parbat region. The despatches state that two Gurkhas perished with him, but their names have not been given.

Sir William Conway's method of telling his story by transcriptions from his dairy is not a complete success. One's experiences, recorded day by day, for three months, cannot fail to be occasionally tame. But the dull pages are few in comparison with the mass of the book, and where the incident flags, an excursus on some collateral subject often comes to the rescue. The chapter on the landslip at Elm, for instance, is a skilfully managed and interesting digression. We are also glad to hear of Father Placidus a Spescha. The comparisons drawn between the Alps and Himalayas are often suggestive, and the descriptions of scenery are full of fine feeling. Whenever the author touches upon practical matters connected with mountaineering, as in his recommendation of tents, sleeping-bags, cameras, head-gear, and *pattis*, he is sure to be listened to with respectful attention. The *patti*, which bids fair to supplant gaiters, is a stout woollen bandage, five inches wide and at least three yards long. It is wound round the leg from the ankle to the knee. This contribution of India to Alpine craft so pleased the guides that Carrel is trying to introduce the industry of *patti*-weaving in Val Tournanche.

Two chapters are added to the account of the trip of 1894. The first is by Sir William Conway, on "Tirolese Scrambles in 1875"; the other, by Mr. Coolidge, is entitled "A Run through the Western and Central Alps." The latter article is a masterpiece which does credit to the "most learned expert in Alpine topography that has ever lived." To be sure, Mr. Coolidge gives us a shock of surprise by confessing his ignorance of the Disgraz a and Bernina groups, but in the same breath he announces his intention of filling up the gap. He has our best wishes for success in this undertaking, which will put the finishing touch to the vast fabric of Alpine lore which he has reared.

Sir William Conway tells many good stories, one of which we cannot refrain from repeating. During the first fortnight of the trip, while in the Maritime and Cottian Alps, he was disagreeably importuned by Italian gendarmes who mistook the Gurkhas for Tunisian natives. On arriving at Modane he found the French officials most polite and willing to assist him. While listening to the volubility of one of them, Conway "went a-dreaming, merely agreeing with him, from time to time. 'Alors,' he said, 'nous sommes des ânes.' 'Quite true,' I replied vaguely. Down came Fitzgerald's heel, hobnailed, on my slippered foot, and I perceived that I must have blundered. The official repeated his remark severely, I replied appropriately, and the matter passed." This furnishes a parallel to the "Brigadier, vous avez raison," of Gustave Nadaud's immortal *chanson*.

In conclusion, we must praise the beauty of the volume, and the many admirable illustrations made by Mr. A. D. M'Cormick from photographs taken *en route*.

English Lands, Letters, and Kings: Queen Anne and the Georges. By Donald G. Mitchell. Charles Scribner's Sons. 1895.

VERY musical is the alliterative title of the "bold scurry" series to which, after the lapse of four years, Mr. Mitchell has added a third volume; but of English lands, letters, and kings the series says less than might be expected. What these entirely delightful volumes do give is much matter of interesting inconsequence touching personal traits and habits of English writers. And they give this matter, it is fair to say, in "art of the highest gossipy kind," such as Mr. Mitchell finds in the letters of Walpole. The present volume ricochets over a period in interpreting which Mr. Mitchell is by temperament at his best. He has a sure touch when treating human nature in its genial, its gently pathetic, its cultivated, its eminently sensible and restrained aspects; and through his book the eighteenth-century worthies walk with all their native wit and vigor. There is Bentley, in extreme old age, "a gray, rugged, persistent, captious old man, with a great, full eye that looked one through and through, and with a short nose, turned up—as if he always scented a false quantity in the air"; and the fading but unquenchable Wortley Montagu, believing always in "living on cordials when one can have no other nourishment"; Pope, big-brained, weak, misshapen, "biting that thin lip of his till the blood starts"; Swift, fierce and black, but incapable of maliciously rallying any man's affections; Richardson, his books full of "pillows bedew'd with tears"; Rousseau and Diderot, "blubbering their admiring thanks for *Clarissa Harlowe*"; Walpole, pacing through "his gimcrack of a palace" "with *pétillant* small-beerish talk," "pulling out his golden snuff-box and whisking a delicate pinch into his old nostrils—then dusting his affluent shirt-frills with the tips of his dainty fingers." And so on through the long list. To our notion, the best miniatures in the collection are those of Burney, Austen, Cowper, and Lamb. The "great melancholy" of Cowper, his tenderness, his truth to English lowland physical nature, his clear force of epithet—"full of singleness of story"—are things that by his natural affinities Mr. Mitchell has been able luminously to review. Of Lamb, again, nothing more finely sympathetic has ever been written than is here set down.

The work of each writer receives but brief criticism; and, though the critic is felicitously terse in characterization, his dicta are sometimes curiously unsatisfactory. The estimate of Bentley is hardly discriminating; that of Berkeley, unappreciative; that of Pope, extravagant; those of Gray, Crabbe, Coleridge, are inadequate from the historical point of view. It seems strange that a littérateur of Mr. Mitchell's information should think it necessary so completely to neglect the course of the great movements of this period. We can endure (better, perhaps, than we formerly could have done) the hint that there are in Pope's 'Iliad' "splendid scores of Homeric lines, which blaze and palpitate with new Greek fire"; but how can we relish the failure to trace, in even the briefest outline, the changing attitude of the period towards nature and towards mediæval life?

We referred to the author's style. It is extremely engaging; but in details it is far from unimpeachable, being victimized by *and who*, *and which*, by the pitfall of mixed tenses, and by other enemies of good English, to name which were here pedantic. The book is carefully made, but there are misprints at pages 40 (line 6), 71 (headline), and 344 (line 23).

The Mogul Emperors of Hindustan. By Edward S. Holden, LL.D. Charles Scribner's Sons. 1895. Pp. xvi, 365.

THIS volume might well be entitled the Historical Recreations of an Astronomer, for Dr. Holden is better known as director of the famous Lick Observatory in California than as a student and a writer of history. His volume does not pretend to contain evidence of original research or even of a thorough knowledge of the secondary authorities upon the subject which he treats. It is rather a production of what the last century termed polite or elegant literature, and consists largely of quotations from the writings of and about the Mogul Emperors who ruled in India, and of easy narratives of the events in which they played their part, with moral comments thereon. Such a volume inevitably exasperates real students of the period of which it treats, who quickly perceive its shortcomings and resent its sketchiness; but the critic should always bear in mind the fact that the general public is not made up of advanced students, and that the very slightness which offends him is a positive merit in the eyes of the ordinary reader. It is exceedingly improbable that the vast majority of American readers have ever heard the names of the individual rulers of the Mogul dynasty, and an elaborate and scholarly book upon the subject would inevitably puzzle, by the novelty of the scenes and characters described, more readers than it would interest. A really popular book upon a subject so re-

mote from immediate knowledge can better be written by an amateur than by a professed scholar; and if the amateur be, like Dr. Holden, a man of literary tastes, a charming volume, well fitted to deserve general popularity, is the inevitable result. His book, in short, is admirably suited for the library of the general reader; it is prettily got up, and prettily illustrated with portraits of the principal Mogul Emperors and the inevitable picture of the famous Taj Mahal at Agra; but it is not intended to appeal, and will not appeal, to scholars or to advanced students of Indian history. Dr. Holden has evidently read a good number of well-known books on the subject, but he has not endeavored to go further or to spend more than the leisure allowed from the labors of a busy life devoted to the service of the noblest of sciences. In his introductory note he describes how his book came to be written. "A collection of miniatures of the Mogul Emperors," he says, "came into my hands many months ago. The accounts of these unfamiliar personages which are given in the ordinary books of reference I found to be inadequate and frequently incorrect." Hence this new volume on the Mogul Emperors for the use of the general reader.

But there is one feature of Dr. Holden's book which cannot be so lightly dismissed. Every one at all acquainted with the progress and modern condition of Indian history is well aware that Sir W. W. Hunter, one of the most scientific investigators of the primary sources of historical information, and one of the most charming of writers, has made a special study of the reign and character of the last of the great Mogul Emperors, Aurangzeb. When the series of "Rulers of India" was first conceived and placed under his editorship by the Oxford Clarendon Press, Sir William Hunter was announced as the contributor of a monograph on Aurangzeb. All who knew the pages devoted to that great ruler in his 'Indian Empire' expected a valuable and interesting biography and appreciation of the last of the great Moguls from this announcement. But Sir William Hunter eventually abandoned his intention and left the task of writing upon Aurangzeb to the competent hands of Mr. Stanley Lane-Poole. Sir William Hunter has now, however, presumably working up the material he then collected for his proposed biography, kindly contributed a few striking pages to Mr. Holden's book under the title of "The Ruin of Aurangzeb; or the History of a Reaction." It is like leaving the starlight for the sunlight to pass from the elegant moralizing of Dr. Holden to the practised hand, notable historical power, and effectively displayed and thorough knowledge of Sir William Hunter. Nothing better has been written recently upon Indian history than the all too short pages in which Sir William Hunter depicts, in masterly fashion, the inevitable approach of the ruin of the Mogul power and the character of their last great ruler. The topic, indeed, is one that lends itself readily to an eloquent writer. Both on the romantic and on the philosophical side the fall of the Mogul Empire forms a striking subject; the contrasts are so broad, and the tragic issues involved so obvious, that a skilled writer finds the interest of his subject sufficient to grasp attention without need of literary embroidery. For the sake of this one chapter, Dr. Holden's book should find its way to the hands of those experts in Indian history who may safely be recommended to neglect the greater part of the volume. The general reader, however, especially if he has no knowledge, or only a hazy knowledge, of Indian history, will find the whole book entertaining and instructive, and incidentally will have the advantage of reading an exceptionally able and eloquent account of the Mogul court from the pen of the most eminent of living writers upon the history of India.

Our Edible Toadstools and Mushrooms, and How to Distinguish Them: A selection of thirty native food varieties easily recognizable by their marked individualities, with simple rules for the identification of poisonous species. By W. Hamilton Gibson. With thirty colored plates and fifty-seven other illustrations by the author. Harper & Bros. 1895.

In this finely printed book of more than three hundred large octavo pages, Mr. Gibson keeps the promise of the title of his work. Barring some idiosyncrasies, everybody might truthfully call the thirty species selected for illustration "edible." In a few very exceptional instances, persons of extremely sensitive organization might find some of the species which Mr. Gibson describes rather difficult of digestion, and therefore might just as well leave them alone; but this reservation applies equally to many articles of food which have to be approached cautiously, at least for the first time.

Mr. Gibson writes in his well-known striking and charming style, largely disarming criticism by his frank statement as to the limitations under which he has worked. He has succeeded in preparing a safe and, we think, a useful guide, which can be made of service in attracting to the examination of these interesting plants goodly numbers of people who possess ordinary caution. Our only fear is that the equally large numbers of people who have no caution at all will compare the fungi which they find in their strolls, altogether too carelessly with these plates. People, for instance, who ask the gatekeeper at what time the five o'clock train goes out, cannot be trusted to gather mushrooms. A distinguished expert in mycology, who has lent no small amount of aid to others in popularizing a knowledge of edible fungi, has said that if the good mushrooms were painted white and the poisonous ones black, there are some people who would be sure to eat the black ones. But perhaps it is as well to let such heedless folk consume the poisonous toadstools; possibly by natural selection we might have after a while only careful people in the world.

Mr. Gibson is perfectly right in sweeping out the rubbishy rules "for detecting poisonous toadstools" which still clutter up the corners of newspapers. If we say of ordinary rules that they have exceptions, it should be said of the general run of mushroom rules that they ought to have antidotes handy. Our author lays down a few simple hints which are probably safe enough for all practical purposes, and yet the hypercritical would perhaps ask him to be in a few cases rather more specific. However, the rules as laid down in the pages of Mr. Gibson's book touching mushrooms within our geographical limits are better than any we have before seen in book form. If the reader could add to what is there given the rules laid down by Prof. Farlow and by the late Dr. Curtis of North Carolina, every step in a saunter after mushrooms could be safely taken.

The highly artistic and satisfying character of Mr. Gibson's sketches in black, which are scattered through the book, makes us feel sure that the chromolithographer has hardly done full justice to the originals which Mr. Gibson must have given in color. But the colored plates are, after all, good enough for anybody who wishes to make serious use of them for purposes of comparing with the originals in the field.

Forty Years in China. By Rev. R. H. Graves, D.D. Baltimore: R. H. Woodward Co.

The crust of Chinese conceit and conservatism is thick, but that of American perversity is thicker. As usual, the Chinese ideograms stamped on the back of the above volume are upside down, and about one half of the illustrations have nothing to do with China, but are excellent pictures of things Japanese. The sterling matter of the book, however, redeems the slips in the mechanism. Dr. Graves, who has spent forty years in the empire, writes in simple, luminous style, and yet with deepest sympathy, of the difficulties that await the Chinese patriot and reformer. With sound practical sense and with a worldly wisdom not too common among the "professional converters" of non-Christian people, he acknowledges fully the good work done by diplomatists, merchants, journalists, and travellers in awakening China. As a missionary, he gained knowledge at first hand, but he writes as one who, besides being a true friend of China, has mingled among men of all sorts. His modesty is not too common among men who, because they partially know some one uncouth language, forthwith imagine they are scholars. Dr. Graves makes no show of learning. His discussion is of China's conservatism and of destructive and reconstructive forces.

With all mental initiative lost and with faces hopelessly set to the past, it is possible for would-be native reformers to win their countrymen to new ideas only by presenting these as revived or overlooked doctrines of the ancients. This mode of procedure is not unknown among orthodoxies in the West, but in the land of Confucius it is the only way to lay either pipe or rails for safe delivery from points beyond the Chinese ken. Among forces tending to destruction, Dr. Graves enumerates and clearly discusses opium, gambling, cruelty, untruthfulness, injustice, polygamy, and the dangerous classes. Among the forces tending to recreate are diplomacy and international intercourse, the maritime customs, travel abroad, residence in the United States, the war with Japan, education, medical and Christian missions, and Western and Christian literature. A frank chapter on hindrances shows that these are not confined to the Chinese.

Candor, judicial fairness, penetrating insight, and pleasantly and abundantly given information characterize this attractive book so full of hopeful views. Nothing less like a missionary report could be imagined, but the "problem of missions" will be powerfully simplified when denominational envoys become more numerously like the author.

Studies in the Evolutionary Psychology of Feeling. By Hiram M. Stanley. London: Sonnenschein; New York: Macmillan. 1895.

Mr. Stanley, in the agreeable essays which compose his chapters (and we are not yet become so German in this country as to hold that their readableness *per se* detracts from their scientific usefulness) limits feeling to pain and pleasure. We had almost said that he limited it to pain; for he makes pain so

much the more important that but a single step remains to be taken to pronounce pleasure to be only a specially adjusted pain. The great function of knowledge, upon his theory, is to bring about pain, or its supplement, pleasure. He will have the primitive consciousness to be a "pure pain." Pure pain is not an easy phrase to apprehend; the less so that we are accustomed to expect the first emergence of a new experience that does not burst out with too sudden a shock, to be pleasurable. Throes come later. Mr. Stanley, however, reminds us that both birth and death, to judge by appearances, are states of pain, and of almost undefined pain, at that. His remarks are decidedly worth reading. For the post of primitive emotion he nominates fear, defining it as "pain at pain." Instructive evolutionary analyses of despair, anger, surprise, and disappointment, retrospective emotion, and desire, supply materials for as many chapters.

In "Some Remarks on Attention," the author limits that term to the voluntary sort, and so inevitably fails to bring out its intimate connection with emotional association. He identifies attention with the effort to attend; and when he speaks of attention as essentially painful, he even seems to have in mind a more or less *unsuccessful* effort. For vigorous, effective attention leaves, we conceive, little room in consciousness for pain. Yet here, as elsewhere, we find acute observation. Self-feeling, including pride, shame, and the like—and we cannot help thinking our author's ideas would have had more systematic unity if he had made pride a special variety of shame—is considered as the main ingredient of self-consciousness. Æsthetic activity is defined as "an independent self-activity of some sense, or of perception, or of imagination, or emotion, impelled by a pleasure; this pleasure, being a distinct and new form, we term æsthetic." The self-activity of a mental faculty! What will Herbartians say?

We are happy to find in one of the last chapters an essay at a partial analysis of literary style. Some of the shortcomings of Herbert Spencer's theory are made manifest. The author does not pretend to afford a catalogue of all the psychological factors of style. Perhaps he might simplify the problem if he would hold fast to one of Spencer's points, namely, that the purpose of style is to convey ideas. Spencer himself, alike in his theory and in his practice, whatever he explicitly says, virtually assumes that to convey an idea is nothing but to state it. But the style of a real master is one which succeeds in immersing the reader in the fleeting part of thought, the liquid menstruum which flows around its rigidly objectified conceptions; and *that*, no statement, however perspicuous, can effect.

Without any astonishing power of thought, this book will do good service for that inquiry into the feelings which now so much engages the psychologists.

BOOKS OF THE WEEK.

A Book of Tales. Franklin, O.: Editor Publishing Co. $1.
Aldrich, T. B. Later Lyrics. Boston: Houghton, Mifflin & Co. $1.
Arnold, E. L. The Story of Ulla. Longmans, Green & Co.
Baker, Prof. G. P. The Principles of Argumentation. Boston: Ginn & Co. $1.25.
Ball, Sir R. S. Great Astronomers. London: Isbister & Co.; Philadelphia: J. B. Lippincott Co.
Balzac, H. de. Eugénie Grandet. London: Dent; New York: Macmillan.
Beyle, Henri. La Chartreuse de Parme. 3 vols. G. H. Richmond & Co. $7.50.
Boulton, Helen M. Josephine Crewe: A Novel. Longmans, Green & Co. $1.25.
Bouvet, Marguerite. A Child of Tuscany. Illustrated. Chicago: A. C. McClurg & Co. $1.50.
Butterworth, Hezekiah. The Knight of Liberty: A Tale of the Fortunes of La Fayette. Appletons $1.50.
Christian Unity and the Bishops' Declaration. Church Club Lectures. 1895. E. & J. B. Young & Co. 50c.
Clement, Clara E. Constantinople, the City of the Sultans. Boston: Estes & Lauriat. $3.
Coolbrith, Ina. Songs from the Golden Gate. Boston: Houghton, Mifflin & Co. $1.50.
Culin, Stewart. K rean Games, with Notes on the Corresponding Games of China and Japan. Philadelphia: University of Pennsylvania.
Dall, Mrs. Caroline H. Margaret and Her Friends; or, Ten Conversations with Margaret Fuller. Boston: Roberts Bros. $1.
Dawson, J. W. London Idylls. T. Y. Crowell & Co. $1.25.
Deland, Ellen D. Oakleigh. Harpers. $1.25.
Dodge, Col. T. A. Gustavus Adolphus. [Great Captains.] Boston: Houghton, Mifflin & Co. $5.
Dowd, F. B. The Double Man: A Novel. Boston; *Arena* Publishing Co. $1.25.
Du Bois, Henri Pène. Princesses in Love. Brentanos. $1.50.
Dumas, A. The Three Musketeers. 2 vols. Appletons. $4.
Eastman, A. C. Poems of the Farm. Boston: Lee & Shepard.
Edwards, Prof. C. L. Bahama Songs and Stories: A Contribution to Folk-Lore. Boston: Houghton, Mifflin & Co. $3.50.
Ellis, J. H. Chess Sparks; or, Short and Bright Games of Chess. Longmans, Green & Co. $1.50.
Fields, Mrs. Annie. The Singing Shepherd, and Other Poems. Boston: Houghton, Mifflin & Co. $1.
Fontaine, C. Lectures Courantes. Boston: D. C. Heath & Co. $1.
Galdós, B. P. Doña Perfecta. Harpers. $1.
Gilberne, Agnes. A Lady of England: The Life and Letters of Charlotte Maria Tucker [A. L. O. E.]. Armstrong. $1.75.
Goddard, F. B. Giving and Getting Credit: A Book for Business Men. Baker & Taylor Co. $1.
Gollancz, Israel. King Lear. [The Temple Shakspere.] London: Dent; New York: Macmillan. 45c.
Gray, Prof. J. C. Restraints on the Alienation of Property. Boston: Boston Book Co.
Guerber, Miss H. A. Märchen und Erzählungen für Anfänger. Boston: D. C. Heath & Co. 60c.
Hampden-Cook, E. The Christ Has Come. 2d ed. London: Simpkin, Marshall, Hamilton, Kent & Co.
Harrison, Frederic. The Choice of Books. Macmillan. 25c.
Hurlbut, B. S. Defoe's History of the Great Plague in London. Boston: Ginn & Co. 85c.
Jackson, B. D. Index Kewensis Plantarum Phanerogamarum. Fasciculus IV. Oxford: Clarendon Press; New York: Macmillan. $15.
Keith, Alyn Yates. Aunt Billy, and Other Sketches. Boston: Lee & Shepard. $1.25.
Kinkead, Eleanor T. Young Greer of Kentucky. Rand, McNally & Co. $1.25.
Lang, Andrew. A Monk of Fife: A Romance of the Days of Jeanne D'Arc. Longmans. $1.25.
Leaf, Walter. Homeri Ilias. [Parnassus Library of Greek and Latin Texts.] Macmillan. $2.
Maclaren, Ian. The Days of Auld Lang Syne. Dodd, Mead & Co. $1.25.
Markham, C. R. Narratives of the Voyages of Pedro Sarmiento de Gamboa to the Straits of Magellan. London: Hakluyt Society.
Mills, Emma D. Typewriter Forms. Mills Publishing Co. $2.
Morley, Margaret W. Life and Love. Chicago: A. C. McClurg & Co. $1.25.
Osgood, W. N. Bug vs. Bug: A Brief Summary of the Principal Arguments of Silver Men and Gold Men. Boston: C. E. Brown & Co. 25c.
Otis, James. The Boys of 1745 at the Capture of Louisbourg. Boston: Estes & Lauriat. 75c.
Otis, James. Neal, the Miller: A Son of Liberty. Boston: Estes & Lauriat. 75c.
Otis, James. Jerry's Family: A Story of a Street Waif of New York. Boston: Estes & Lauriat. $1.25.
Page, T. E. P. Vergili Maronis Bucolica, Georgica, Aeneis. [Parnassus Library of Greek and Latin Texts.] Macmillan. $2.
Parsons, Alfred. Notes in Japan. Illustrated. Harpers. $3.
Perry, Harriet T. The Helen Jackson Year-Book. Boston: Roberts Bros. $1.50.
Petrie, Prof. W. M. F. Egyptian Tales: Translated from the Papyri. Second series. F. A. Stokes Co. $1.50.
Ralph, Julian. People We Pass: Stories of Life among the Masses of New York City. Harpers. $1.25.
Rhys, Ernest. The Lyric Poems of Sir Philip Sidney. London: Dent; New York: Macmillan. $1.
Richards, Mrs. Laura E. Melody. Illustrated. Boston: Estes & Lauriat. $1.25.
Richards, Mrs. Laura E. Nautilus. Boston: Estes & Lauriat.
Roosevelt, Theodore. New York. [Historic Towns.] New ed. Longmans, Green & Co. $1.25.
Saintsbury George. Marmontel's Moral Tales. London: George Allen; New York: Macmillan. $2.
Salter, W. M. Anarchy or Government? An Inquiry in Fundamental Politics. T. Y. Crowell & Co. 75c.
Setoun, Gabriel. Sunshine and Haar: Some Further Glimpses of Life at Barncraig. Harpers. $1.25.
Scott, D. C. The Magic House, and Other Poems. Boston: Copeland & Day. $1.25.
Shaw, Albert. Municipal Government in Continental Europe. Century Co. $2.
Spalding, Rev. J. Z. Means and Ends of Education. Chicago: A. C. McClurg & Co. $1.
Spanton, J. H. Science and Art Drawing. Complete Geometrical Course. Macmillan. $3.25.
Thaxter, Celia. Stories and Poems for Children. Boston: Houghton, Mifflin & Co. $1.50.
The *Yellow Book*. Vol. vii. London: John Lane; Boston: Copeland & Day. $1.50.
Thurber, Samuel. Shakspere's Julius Cæsar. Boston: Allyn & Bacon. 20c.
Van Zile, E. S. The Manhattaners: A Story of the Hour. Lovell, Coryell & Co.
Victor Hugo's Letters to his Wife and Others. Boston: Estes & Lauriat. $1.50.
Waldstein, Charles. The Study of Art in Universities. Harpers. $1.25.
Warren, Prof. F. M. Corneille's Le Cid. Boston: D. C. Heath & Co. 30c.
Watson, E. W. To-day and Yesterday. Philadelphia: H. T. Coates & Co.
Weeks, E. L. From the Black Sea through Persia and India. Harpers. $3.50.
Weitbrecht, Prof. Carl. Diesseits von Weimar. Auch ein Buch über Goethe. Stuttgart: Fromanns; New York: Westermann.
Williams, W. Personal Reminiscences of Charles Haddon Spurgeon. F. H. Revell Co. $1.50.
Workman, F. B., and W. H. Algerian Memories: A Bicycle Tour over the Atlas to the Sahara. London: T. Fisher Unwin; New York: A. D. F. Randolph & Co.
Worthington, Slack. Politics for Prudent People. Boston: *Arena* Publishing Co.
Yeats, W. B. Poems. London: Unwin; Boston: Copeland & Day. $2.25.

SIR QUIXOTE OF THE MOORS.

By JOHN BUCHAN. Buckram Series. 75c.

"A capital story. . . . I like better the episode by the unknown author John Buchan, though there is a hint of Anthony Hope's fine devil-may-care adventurousness in 'The Chronicles of Count Antonio.'"—*N. Y. Commercial Advertiser.*

HENRY HOLT & CO.,
29 W. 23d St., New York.

A DESCRIPTIVE CATALOGUE, giving Contents and Critical Opinions of the 528 books from HOUGHTON, MIFFLIN & Co.'s List included in the Model ("A. L. A.") Library exhibited at Chicago, will be sent to any address. 4 Park St., Boston.

A Treatise on Computation:

An Account of the Chief Methods for Contracting and Abbreviating Arithmetical Calculations. By EDWARD M. LANGLEY, M.A., Senior Mathematical Master, Modern School, Bedford; Joint Editor of the "Harpur Euclid"; Editor of the "Mathematical Gazette." 12mo, $1.00 *net.*

LONGMANS, GREEN, & CO.,
PUBLISHERS.
15 East 16th Street, New York.

FOR LITERARY CLUBS.—Something New! Six Readings from the Russian Dramatists. By Miss ISABEL F. HAPGOOD, author of "Russian Rambles," etc. Address at 33 East 21st St., New York City.

Yale Mixture.

A GENTLEMAN'S SMOKE.

You won't know the luxury of Pipe-Smoking until you use Yale Mixture.

A two-oz. trial package, postpaid, for 25 cents.

MARBURG BROS.,
The American Tobacco Co., Successor,
Baltimore, Md.

GOLDEN SCEPTRE.

PERFECTION FOR THE PIPE.

Send 40 cents for 4-oz. sample to

SURBRUG, 159 Fulton St., N. Y. City.

Do me the favor to ask your wine-merchant, or Park & Tilford (wholesale agents), for my "*Picarillo*" natural sherry, and "*Manzanilla Pasada.*"
GUILLERMO DOBLACHE,
Puerto de Santa Maria.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 21, 1895.

The Week.

THE proposal to have the national Democratic convention of next year held in this city, possibly in Tammany Hall, can scarcely be called a friendly one to the Democratic party. The outlook for that party at present is none too cheerful, and if it were to enter upon next year's contest with Tammany Hall as a starting-point, its fate would not be uncertain. Mr. Hill would be its logical candidate for the Presidency in that case, and Croker and Sheehan its campaign managers. We observe that Mr. Campbell, the Jingo Democrat who was defeated in Ohio by something like 100,000 majority, finds encouragement for his party next year in the fact that Tammany carried New York city. Mr. Harrity, chairman of the national Democratic committee, thinks also that holding the convention in New York would create a great deal of enthusiasm here, and have a tendency towards harmonizing the Democracy throughout the State. Both these statesmen seem to be unable to realize the meaning of the last three elections in this State, with their Republican majorities of 100,000, 156,000, and 90,000. Those were popular verdicts upon the Hill-Tammany control of the Democratic party in the State, and if the next Democratic Presidential convention were to meet under the auspices of, and "harmonious" with, that discredited gang of political freebooters, it might as well not meet at all.

Though the Republicans carried their State ticket in Kentucky by a good plurality, the control of the Legislature still remains in doubt. The two old parties elected precisely the same number of members on a joint ballot, and there are two Populists, one of whom is Republican in his political antecedents and the other Democratic. A new complication has been added to the situation by the resignation of one of the successful Democrats, Mr. A. J. Carroll, which will cause another election in his (the Louisville) district. On this may depend the seat in the United States Senate that is to be disposed of by the Legislature. If the Republicans can elect their candidate, they will have a majority on joint ballot with the help of the Republican Populist, and can send a member of their party, for the first time since its formation, to the Senate. Senator Blackburn has nothing more to gain from the success of Mr. Carroll, who resigned from a sense of honor for re-election, than from the election of a Republican, for the former announces that he is "unconditionally, unreservedly, and unqualifiedly in favor of sound money, and opposed to the free and unlimited coinage of silver, and, if elected, will bend my every effort to secure the election of a sound-money Democrat to the Senate."

Congressman Cannon of Illinois, formerly and prospectively chairman of the committee on appropriations, joins Speaker Reed in favoring a do-nothing policy for the Republicans in the next Congress. He thinks the appropriation bills should be passed and necessary business done, and then that "full power" should be waited for before the Republicans set about blessing the country with perfectly wise legislation. Differing with the impetuous *Tribune*, he says that "the people know what they want and are willing to wait for it." He probably adds to himself that they will have to wait whether they are willing or not. One thing, however, Mr. Cannon is uneasily conscious that the people are not willing to wait for indefinitely, and that is some intelligent effort to provide them with a safe and rational system of currency. He thinks the whole difficulty may be met by authorizing the Treasury to issue short-time bills to meet emergencies—like the English exchequer bills. This would undoubtedly be a help, as we have often said; and so would a law authorizing the issue, in case of need, of 3 per cent. gold bonds. Probably one or other of these measures is the utmost we can hope for from the incoming Congress. For such relief the business world would give all thanks, but would take it, however, only as a payment on account. What it is going to demand in full, all in good time, is the withdrawal of the demand notes hanging over the Treasury and the markets known as greenbacks.

But an unexpected difficulty arises here, which is pointed out by the *Tribune* with its usual philosophical acumen. There might be some hope of the Republicans calling in the greenbacks had not President Cleveland and Secretary Carlisle advised it. Of course, that prevents the Republicans from doing anything of the kind, however wise it might be, however much they might want to do it otherwise. It is really the President's fault, and he shows a selfish disregard of the interests of the country in not urging wild inflation of the currency so that then the Republicans could consistently advocate contraction. Was ever such a thing heard of, complains the *Tribune*, as a President allowing his Secretary of the Treasury to urge in public a measure of sound finance which he knows will be made, *ipso facto*, repugnant to his political opponents? All the while it is in Mr. Cleveland's power to stop Secretary Carlisle by a word, and confine him to his legitimate business of counting the pennies in the Treasury. That is the worst of it, and is what is breaking the *Tribune's* heart. To be driven into financial madness just because your opponents are in favor of financial sanity, is truly hard. We know of nothing so pitiful or so mysterious since Pascal's Jesuit, who said of Arnauld's terrible heresies: "In any other mouth these sentiments would be strictly orthodox."

There is much affectation of zeal for the wool-growers just now among Republican politicians, and some of them talk of passing a bill to restore the duties on wool this winter. If they do so, it will be with the expectation that President Cleveland will veto it—an expectation which will, no doubt, be justified. But the probability of passing it at all is considerably lessened by two circumstances. One is, that wool cannot be dealt with alone in a tariff bill. If duties are placed on wool, there must be a readjustment of the duties on woollens, and this means a pretty large tariff bill, as anybody may see by looking at the wool and woollens schedule in the present law. Then, other interests will claim equal attention and favor. The tin-plate men are growing clamorous, the rise in steel billets having proved a damper on their profits. If tin plate is admitted, what can be rejected? Then there is the great sugar question. The Republican Senators refused to consider the discriminating duties against German beet sugar last year, on the ground that tariff legislation ought not to be taken up in detail, but only in a general revision. Moreover, the silver Senators of the trans-Missouri States have declared, over and over again, that they will not vote for a protective tariff on anything until silver is remonetized, or the buying of it by the Government is resumed. This is probably the only one of their threats that they will adhere to. If they do adhere to it, there will be no tariff legislation for a long time to come on wool or anything else. The Republican politicians know all this. They know that a little affectation of sympathy for wool-growers will do no harm. They will fix things beforehand, if they are not already fixed, so that nothing will come of the agitation. New England is becoming reconciled to free wool. She dreads another ten or twenty years of tariff changes, with all the uncertainties of politics hanging over her head. She is gradually becoming convinced, also, that the threats of the wool-growers are *brutum fulmen*, and this is the fact.

The account in the *Tribune* of the terrible things Platt and Lauterbach are

going to do to the Republican organization in this city gives the impression that these persons are a mysterious power of some kind, resistance to which is going to be very difficult even under the most favorable circumstances. They are apparently, according to its account of them, inventions of some outside enemies of the Republican party, who are bent, through their instrumentality, on incapacitating the party for the great work of national, State, and municipal reform which Providence has assigned to it, and they cannot be stopped except by appeals to their pity or their shame. They have to be remonstrated with much in the terms in which Roman municipalities at the fall of the Empire may be supposed to have protested against the sacking of their city by the barbarians. But what is the fact? Why, Platt is the creation of the Republican party itself, and Lauterbach is his lieutenant. Platt was produced, educated, and exalted by the party years ago. His power is due solely to the fact that the Republican voters elect members of the Legislature under his dictation, and the legislators legislate under his dictation. This is, from the moralist's point of view, twice as bad as anything he is going to do to the New York organization, but the party has let him do it many times over, with applause. If the Republicans do not like Platt, or disapprove of him, they can end him in a week, and Lauterbach along with him.

The collapse of Populism was one feature of the recent elections that has hardly received the attention which it deserves. Both in the South and in the West the leaders of the party were sadly disappointed at the result. In Mississippi the Populists had made a strong fight in two or three of the Congressional districts last fall, and their success in polling in these cases more than half as many votes as the Democrats, encouraged them to believe that they might make a strong showing in the local and State elections this fall. But as the canvass proceeded, their hopes fell, and a solitary member of the Legislature is all that they can offer as evidence that they made any fight. In Iowa last year the Populists polled 34,907 votes, and when this year's Democratic State convention voted down free coinage by an overwhelming majority, the leaders of the third party boasted that their ranks would be swollen by tens of thousands of "friends of silver" who could not stand a sound-money platform; but instead of getting two or three times as many ballots as twelve months ago, the Populist total shows a falling off of several thousands. Indiana held no election this year, but the signs of the times are so obvious there also that the Populist organs are suspending, the party organization is dropping to pieces, and the politicians have ceased to regard it as an element to be longer reckoned with.

The State of Colorado appears to be more prosperous than ever before, and the consequence is that people have to a large extent stopped talking about silver. The *Engineering and Mining Journal* takes notice of the fact that, at the recent "Festival of Mountain and Plain" in Denver, there were no references in the banners and placards to the legend of 16 to 1, and none to any phase of the silver question as a political issue. "This," says the *Journal*, "was the more striking since the parade of the first day was intended to be an allegorical representation of the development of Colorado and its industries. The fact of the matter is that the silver question is as dead in Denver as it is in New York. We do not mean to say that the people of the Western city are no longer interested in the price of silver, for the metal is one that they produce in large quantities, but, with the exception of the demagogues, every one has come to the conclusion that the cause of independent free coinage is hopeless, and no one pays much attention to the demagogues."

The Supreme Court of New Jersey is again the subject of a good deal of local criticism, the point of which amounts to the charge that the court is lazy. Its unpopularity among the lawyers of the State is admitted, and this is due to the fact that they find it extremely difficult to get their cases argued before that court in consequence of its inclination for adjournments and recesses. The popularity of that somewhat antiquated institution, the Court of Chancery, is due to the fact that it is always ready for business. On Tuesday week the Supreme Court judges had the whole list called, and, not finding the cases ready, adjourned for the term, when an adjournment until the next day would have found business proceeding regularly. It will be recalled that when the Assembly gerrymander was argued before that court in 1892, the court withheld its decision for months until after the election, and then almost threw the State Government into chaos by holding that the Assemblymen of each county must be elected on a general ticket. Again, last summer, months after the constitutionality of the elective-judiciary act had been argued before the court, the judges gave out that they would not decide the question until after the November election. They were forced from this position by the general denunciation of the proposed delay which went up all over the State. Reforms of the courts of New Jersey are expected to receive a good deal of attention from Gov. Griggs's administration. It will not be entirely beyond his power to infuse a little activity and enterprise into the Supreme Court.

The modest and well-behaved young Englishman who married Miss Vanderbilt a few days ago, and has since left this country, could not take from us anything that we would more willingly part withal, since he thus removes the most active provocation to snobbery that we have had "in our midst" these many years. It must be of advantage, also, to himself not to remain too long in the atmosphere of New York, for if his stay were much protracted, it would be necessary, as in the case of a monarch in the ancient world, to station a servant at the back of his chair to repeat to him every fifteen minutes the words, "Remember that thou too art a mortal." For the repeated exhibitions of bad manners and want of self-respect, crowding, pushing, and staring which were seen at the Horse Show whenever the Duke of Marlborough and his bride occupied seats there, the newspapers are mainly responsible. They have published page after page of matter respecting this titled individual and his bride. They have printed their portraits innumerable times, together with larger pictures representing them with their surroundings at home, in the church, at the Madison Square Garden, driving, banqueting, doing something and doing nothing; and when these remarkable persons were about to embark, we were favored with pictures of their stateroom on the steamer, with glimpses of the furniture, curtains, napkins, rugs, glassware, etc. These same newspapers dared to ridicule the people who rushed and crushed at the Horse Show in their eagerness to see the Duke, or, failing in that, to see the chair that had been once occupied by him, when in fact they had been the main cause of the rushing and crushing. If the notices of the marriage had been limited to the measure accorded to such events in the London *Times*, *Daily News*, and *Standard*, and the pictures omitted, the exhibition of vulgarity would have been no greater than might be expected at the Sydenham Crystal Palace or any similar place in England. It is idle to expect that the masses will be wiser than their teachers.

The commission to take testimony and award damages for the capture of sealing vessels in Bering Sea has been appointed and will soon go to work. We shall then know how many of the claimants were American citizens sailing under the British flag. This is one of the points raised by ourselves for the purpose of lessening the amount of the award. What kind of a "muss" we shall be in after we have established the American citizenship of a large portion of the claimants remains to be seen, since the question will at once arise whether British subjects should be paid for the loss they incurred, while our own, who were in the same business and who had just as good rights, are refused. It is a fact, which will have to be recognized sooner or later, that there was no law on our statute-book at the time when the seizures took place to prevent anybody, either our own citizens or foreign-

ers, from taking seals beyond a marine league from the shore. Therefore all such fishermen were exercising a right common to those who take codfish or mackerel at a distance of more than three miles from the coast of Newfoundland or Nova Scotia. It is a serious pity that Congress did not appropriate the lump sum of $450,000 to settle these claims, instead of going into a long investigation where we shall endeavor to prove that a considerable number, if not a majority, of the "poachers" were our own people, and then to refuse any pay to them, although they were following a lawful vocation. This would be washing dirty linen in public with a vengeance.

Gen. Miles's annual report on our military condition devotes a large part of its space to a subject which has singularly little interest for our Jingo friends, namely, our coast defences. We think he overrates the risk we run of an attack by some foreign power, but that there is some risk, and that it ought to be provided for, there is no denying. He shows that on the Pacific Coast there is $500,000,000 worth of destructible property within the reach of a foreign navy. He says that even a million of the bravest men we have would be insufficient to protect this in the absence of coast fortifications armed with modern guns. He shows that on the Atlantic Coast ten considerable cities, all reachable by a hostile naval force, are practically undefended. New York is the only one which has any defence at all, and this is only partial. He says that the notion that our harbors can be defended by torpedoes is a "delusion," and so is the notion that our coast of 4,000 miles long can be defended by a navy. The recent manœuvres in the British waters have shown that even the British fleets could not protect the British coasts. He thinks the principal service our navy would render in a war would be as commerce-destroyers and bombarders of foreign ports, and that, in the absence of land defences, ten days would suffice for the destruction of many of our most important cities. Gen Miles does not "anticipate war in the near future," but it requires years of time to construct the modern weapons of war, and we cannot begin too soon.

The general absorption and anxiety of all European governments about the Turkish business ought to remind Americans afresh of their great advantage in being free from such entangling alliances. Both public and private finances in all Europe are, at this moment, almost at the mercy of the Sultan. If he remains pig-headed and brings on a great religious war, the loss and ruin to thousands of investors will be incalculable. Moreover, the question of increased taxation is a most vital one to governments, too many of which have now to strain every nerve to keep their heads above water. The naval estimates to be laid before the English Parliament are said to be the greatest in amount known to history. Yet this is a peace expenditure. Even if war be averted, and the Powers left to arrange among themselves what is to be done with Turkey, the chances are so great of awkward dissensions in the negotiations, of quarrelling over the division of the Empire, that the nervousness of financiers and finance ministers is likely long to continue. In all this we, by our position and our traditional policy, have no direct concern. We are most happily "out of it"; and it will take the Jingoes a long time to persuade the business men, the farmers, the laborers of this country that it would be much better for us to thrust our heads into every European scrimmage of the kind.

It is impossible at this writing to say what the outcome of the concert of the Powers in Turkish waters is likely to be. What is plain is, that the Turkish Empire in Asia is given over to anarchy, or, in other words, is practically broken up, and that there is not the smallest likelihood that the Sultan can raise any force sufficient to restore order. It is the plainness of this fact which is probably causing the hesitation and procrastination of the united Powers. They have discovered at last that the Sultan can do nothing, and therefore coercing him at Constantinople will not affect the situation in Asia Minor. And yet all that they can do with the fleets is to coerce him at Constantinople. They can seize him, lock him up, or depose him, but the chances are that the news of this would inflame the fanaticism of the Kurds and Asiatic Turks still more, and lead to fresh, or, rather, more extended, massacres. Both the British and French and Austrian Governments are, therefore, shrinking from a naval demonstration, while the massacres continue, and the near approach of winter, which in that region is extremely severe, makes the prospect appalling for the families whose homes have been destroyed. Now it so happens that the only Power which can act on the situation, and can apply force where it will do the most good, is Russia. She has a large army just across the frontier, and could get right in among the murdering Kurds and Turks within a very few days. Thus far she appears to have taken little or no part in the discussions with the Sultan, but one does not need to be a prophet to hazard the conjecture that she is waiting for a "mandate" from the powers to occupy Armenia and restore order, which she is abundantly competent to do. If such a mandate were given her, it would be a close following of the precedent set by the Congress of Berlin when it gave Austria a mandate to restore order in Bosnia and Herzegovina, where the Mussulmans were then busy cutting Christian throats in the old Turkish fashion. The job was given to Austria because she happened to be nearest the scene of action, and within a very few weeks she had converted the most murderous Turks into peaceable citizens. But—and here is the rub—she has stayed there ever since, and, in fact, has annexed the two provinces. That Russia, if she got into Armenia, would hardly get out is pretty certain, and the Powers are probably asking themselves to-day whether they are prepared for this.

The decisive rejection by the Swiss voters, in the referendum of November 3, of the law passed by the Chambers for centralizing the military power of Switzerland was of more than passing significance. The law itself was something of an innovation, depriving the cantons as it did of certain military rights and functions, and tending to reduce them, for army purposes, to a condition very like that of a French prefecture; but opposition was based not so much upon the terms of the measure itself as upon its general tendency. The *Journal de Genève* said of it the day before the vote was taken: "It is destined to make us pass gently from the federal system to the system of prefectures. These military districts will speedily become insurance districts, banking districts, railroad districts, and so on." It was doubtless such arguments as these that led the State's-right feeling of the cantons, as we should call it, to assert itself in the large majority against the proposed law.

France has a boundary dispute with Brazil similar to that of England with Venezuela, and French publicists are naturally beginning to discuss what they call "la doctrine de Monroë." They know that Monroe is the great American god Terminus, who presides over boundaries, and that he must especially be placated when, as is the case in French Guiana, gold mines are said to exist in the disputed territory. But we are sorry to see that French jurists do not take Lodge's reverent view of the Monroe Doctrine. One of them, writing in the *Débats*, affirms that it "simply does not exist from the point of view of international law, or, rather, it exists only so far as it agrees with international law, but is justly ignored when it conflicts therewith." He adds that it is merely an interesting "historic document" of which some of the assertions "cannot be sustained." That is enough. We may not know what the Monroe Doctrine is, but we will sustain it in the teeth of the world. Wait till Congress produces that joint resolution "affirming" the Monroe Doctrine, which some of its leading intellects are now framing. Then this flippant Frenchman will see how proudly our country will rank itself alongside the old Scotchwoman who admitted that she did not know what the Solemn League and Covenant was, but defiantly exclaimed, "I'll mainteen 't!"

"POLICY" AND "HOLLER."

THE last news from Senator Lodge in London is more pacific, but is as obscure as ever. He now admits that the Monroe Doctrine is "not a proposition of international law, but a declaration of policy"; but he still refrains, as do all Jingoes, from saying exactly what the Monroe Doctrine is. The nearest approach to its meaning he allows us to make is contained in his assertion that for a European Power "to desire to acquire any additional territory in Central or South America would fatally infringe on the Monroe Doctrine." But, if this be true, it at once suggests the question, What Power is now desiring additional territory in Central or South America? Lodge declared war three weeks ago against some Power which, he said, was doing this. What Power is it?

"The question is now," in Lodge's language, "what was the true boundary between the Dutch and Spanish possessions? That question can be properly settled by arbitration." Well, the British Government has always expressed its willingness to settle it by arbitration. It says it is ready now to settle it by arbitration. This makes the recent Jingo uproar about Venezuela incomprehensible, unless we examine it on the theory that any dispute about a boundary line on the part of England is to be treated as a desire for more territory. All disputes about a boundary line arise out of a desire on the part of one of the parties to make it include more territory than the other thinks it entitled to. This really would seem to be the explanation of Lodge's mad career. You may submit your boundary dispute to arbitration, he says, but if it appears that you maintain that your line ought to run further north or west than the Venezuelans say it ought, you come under the Monroe Doctrine, and you must prepare for war.

Great Britain has from the beginning declared her willingness to arbitrate on the boundary line, but if the mere submission of a boundary line which Lodge dislikes will constitute a claim for more territory, of course she will not arbitrate. But while expressing her willingness to arbitrate, she has also said she must have reparation for the insult to the flag, and the injury to her officers, recently offered by the Venezuelans. We were under the impression that Lodge, while allowing that such reparation was due, would not permit Great Britain to exact it by force; that is, she might have reparation if the Venezuelans chose to make it, but if she sent her fleet to threaten them, or bombard them, or seize their custom-house, he would, under the Monroe Doctrine, declare war. But it appears that if he ever took this position he has backed out of it, for he says now:

> "The Monroe Doctrine, it should be remembered, is quite distinct from any question of reparation for injuries received by the subjects of foreign Powers at the hands of the governments or the peoples of Central or South American republics. With such questions we have nothing to do, but we cannot permit, under cover of a demand for reparation, or in any other way, new territory to be acquired by any European Power."

It does not appear that Great Britain ever desired compensation in land. She has always demanded it in cash. The notion that she was going to take it in land was a Jingo invention. The question of compensation for insults or injuries she will probably consent to arbitrate when we set her the example.

The great difficulty of all these international questions is, that the open discussion of them on our side is not carried on by men who are sincerely desirous either of settling them or of informing the public judgment about them; that is, as a rule, they do not talk international law, but politics. There has been a prodigious hubbub raging about Venezuela for several weeks, without the smallest foundation. Great Britain has never shown any desire to take more territory than fair arbitration would allot her. She has never said that the Venezuelans would have to make reparation in land for the insult to her flag. Both stories were invented by Jingo politicians, as a peg on which to hang inflammatory speeches. Not one man in public life has had the courage and patriotism to get up and state the naked facts of the case. Not the smallest contribution has one of them made towards the formal application of the Monroe Doctrine to the relations of the South American States to other Powers than the United States. We have made several appeals to the Jingoes to do so, but we get nothing in reply but attempts to show that the British are wrong in the boundary dispute. Lodge now substantially admits that he has been "hollering" for weeks about nothing. If the boundary dispute be capable of settlement by arbitration, and he, and Grout, and Bill Chandler "have nothing to do" with reparation for injuries inflicted by South American States on foreigners, there has not been the slightest excuse for the noise they have been making for some weeks.

The Monroe Doctrine ought to be formulated in some way which will make known to the European Powers the precise things they may do or not do to the South American States, and the exact nature of our relations to them. Lodge evidently thinks that it will do if we embody it in a congressional resolution, and that it need not be worked into international law at all. But this is part of the childishness which he occasionally affects. We cannot, for instance, carry it into practice without *pro tanto* diminishing the sovereignty and independence of the Central and South American States. Have they consented, or will they consent, to this? For instance, it would take away from them the power of ceding a port or island or patch of territory to any European Power. It leaves them the power to go to war with England, or France, or Germany, but would take away from them their power of making peace by a cession of territory or by a mortgage to secure a payment of money. It leaves quite vague the extent and manner in which we should protect them from aggression, or be answerable for their errors, and yet leaves European Powers in contact with them in Central America. All these things should be settled in consultation with the Central and South Americans. They should accept our protection, and submit to the conditions we should have to attach to it. It is far more injurious to our good name and influence to go "hollering" round the world about these things than to have a small navy.

THE LAW OF THE VENEZUELAN CASE.

A CAREFUL study of executive document No. 226 of the Fiftieth Congress, first session, wherein the President transmits to Congress the correspondence relating to the pending boundary dispute between Venezuela and British Guiana, discloses only a single issue; and this, in the clear light of international law, proves to be a very simple one, upon which no two intelligent arbitrators will be likely to disagree. The single issue is whether Spain, by merely discovering, without settling or occupying, the disputed Guiana coast, acquired such a title to the back-lying territory that every subsequent actual settlement of such territory by the Dutch became wrongful, and that only occasional armed protests by Spain, at intervals of years or centuries, were necessary to maintain her title, without any interval of permanent occupation by the Spanish from 1531 until to-day. In short, does discovery without occupation give title against those who permanently occupy, but had not the good fortune originally to discover?

In order to be assured that this is all there is of the Venezuelan question, it is to be observed that the diplomats who have at various times had charge of the case of Venezuela, do not deny the continuous possession of the disputed territory by the Dutch alone for three centuries, but actually charge it upon them as part of their fault, under the names of usurpation, intrusions, and aggressions. Nor do the Venezuelan diplomatists allege, except in the case of a few missionaries to the Indians between 1531 and 1580, that any Spanish residents or persons rendering allegiance to Spain have ever gone into the disputed territory, except as small armed expeditions coming by land or sea merely to drive out or capture the Dutch. The sole tendency towards settlement of the country in dispute has been from the direction of Georgetown and the Essequibo River. The historians, geographers, mapmakers, and publicists, from Raleigh to Humboldt, if they have carried the Dutch boundary westward to the Orinoco, the Moroco, or the Barima, have talked about the Dutch possession or occupation; if they have carried the Span-

ish line eastward to the Essequibo, have in no case declared it to be a Spanish occupation, but only a domain or sovereignty or supposed abstract right. And when (Ex. Doc. 226, p. 34) Lord Salisbury in 1880 writes to Señor Rojas that to recognize Venezuelan "proprietorship to the Essequibo would involve the abandonment of a province inhabited in 1880 by 40,000 British subjects, and which has been in the uninterrupted possession of Holland and Great Britain successively for two centuries"—we find Venezuela replying in 1882, through Señor Seigas (p. 32), that "to deliver up territories in which populations have been founded cannot help producing grievances; in that, all the world is in accord. But the convenient is not the right, neither can it be confounded with it. He who has occupied a thing not his own, remains with the obligation to restitute it whenever it is demanded of him, and to indemnify all the damages consequent upon the illicit act."

Inasmuch as the Venezuelan lawyers do not instance the building of a single town, or fort, or trade agency, or the occupancy by any Spanish settlers of the territory in dispute at any point, but confine themselves to recounting the encroachments and intrusions of the Dutch, the inference from the record is that no Spanish settlements occurred, and hence that the question is one between occupancy by one nation and naked claim of right to occupy without actual occupancy by another. The Venezuelan lawyers show that they cannot fortify their case by actual acts of occupancy, for they make a strained citation of Vattel, to the point that a country need not occupy the whole of its own territory, but can suit itself as to how much of it it will use. But this text (Vattel, Book II., ch. vii.) clearly refers to the case of a country having a master or government and established boundaries, within which some places are left unoccupied. Vattel places in another category a newly discovered continent in which rival countries are obtaining title by occupancy. Of such a country he says (Book II., ch. vii):

"If two or many nations discover and possess at the same time an island, or any other desert land, without a master, they ought to agree between themselves and make an equitable partition; but if they cannot agree, each will have the right of empire and domain of the parts in which they first settled. It may happen that a nation may be contented with possessing only certain places, or appropriating to itself certain rights, in a country that has not a master, and be little desirous of possessing the whole country. In this case another may take what the first has neglected," etc.

The Venezuelan lawyers declare that what is expedient is not necessarily just, and plead that the Spanish could, without occupancy themselves, treat the occupancy by the Dutch as usurpation for an indefinite period. Vattel, on the contrary, expressly bases the doctrine that territorial titles between nations can arise by prescription—*i. e.*, by lapse of time with possession adverse to the right—on the inexpediency of allowing old possessions to be ripped up, and settled populations to be compelled either to give up their settled homes or to come under a new allegiance. He says (p. 289):

"Nature has not herself established property, and in particular with regard to lands. She only approves this introduction for the advantage of the human race. It would be absurd, then, to say that, domain and property being once established, the law of nature can secure to a proprietor any right capable of introducing disorder into human society. Such would be the right of entirely neglecting the thing that belongs to him, of leaving it during a long space of time, under all the appearances of being property abandoned, or that does not belong to him, and of coming at length to deprive an honest possessor of it, who has perhaps acquired a title to it by burdensome conditions. . . . Were it permitted to have constantly recourse to ancient times, there are very few sovereigns who would enjoy their rights in security, and there would be no peace to be hoped for on earth."

What Vattel here condemns, namely, having recourse to ancient times to upset the effect of centuries of possession adverse to their claim of sovereignty, is exactly the case of the Venezuelans. During all the reigns from Philip II. to Philip V. of Spain, the Netherlands, which owned Dutch Guiana, were themselves under Spanish domination, as was also the present Venezuelan dependency. If Spain, when in full control of both parties to the contention, did not think it worth while to require the Dutch to retire behind the Essequibo, it would be a marvellous stretch of authority for the United States to disturb three centuries of possession, by the Dutch and their successors, at this late day.

THE SOLID SOUTH BROKEN.

THE full returns of the Kentucky election render the result even more significant than the earliest reports. They show that the Republicans carried the State on November 5 by a substantial plurality on by far the largest vote ever polled, even in a Presidential election, and that at least 20,000 former Democrats must have supported Bradley for Governor. We append the figures for this election, in connection with those for the last two Presidential elections:

	Rep.	Dem.	Pop.	Pro.	Total.
1888.....	155,134	183,800	622	5,552	345,108
1892.....	135,441	175,461	23,500	6,442	340,844
1895.....	172,436	163,962	16,911	4,162	357,471

Cases have not been infrequent in our political history where a party which has long controlled a State has finally lost an election in an "off year," through the disaffection of members who would not go to the polls, and allowed it to be beaten by the minority on a small vote. But it is almost without precedent for a State to cast a larger vote in a local than in a Presidential election; and, so far as we can recall, quite unparalleled for a State long dominated by one party to be captured by the other in a gubernatorial election that called out more men than were ever brought to the polls in a Presidential contest.

It will be seen that the Presidential vote of Kentucky aggregated nearly the same in 1888 and 1892, though quite differently apportioned between the parties, and that the total on November 5 was greater by nearly 13,000 than the largest previous record. The closeness of the contest caused a shrinkage of about a third in both the Populist and Prohibition vote, and the Democratic total sank nearly 20,000 below high-water mark, while the Republican was more than 17,000 greater than had ever before been secured. As the rise of the Populists in 1892 evidently injured the Republicans far more than the Democrats in that year, and as the free-coinage views of the Democratic candidate for Governor this year were calculated to draw back Populists of Democratic antecedents, it seems clear that 20,000 is a small estimate of the men who had supported Cleveland for President and yet voted for a Republican Governor on Nov. 5. It was, therefore, no "snap judgment" in an election which commanded small interest that gave Bradley his victory, but a clear expression of the popular will after a contest that had stirred the commonwealth like no previous campaign since the ante-bellum period.

The revolution in Kentucky was directly due to the treachery of the Democratic candidate for Governor, who received the nomination upon his distinct pledge that he would accept the verdict of the convention on the financial question, and then, after a sound-money platform had been adopted, went upon the stump to preach the free coinage of silver. But a greater cause was at work than the well-founded disgust of right-minded Democrats at such a breach of trust. This was the elimination of the sectional issue from our politics, and the consequent freedom of men who have long felt constrained to support Democratic candidates in the South, to vote as independently as men vote in the North. This same cause was also the fundamental one that operated in Maryland. Gorman's despotic bossism was the immediate reason for the recent election of a Republican Governor and Legislature, but it might have failed again, as so often before, if the removal of the sectional issue had not given voters in that State also a new sense of political freedom.

The course of the canvass in both Kentucky and Maryland showed conclusively the potency of this influence. When Hardin found that Bradley was pressing him to the wall on the silver question, he made desperate efforts to substitute the "nigger" as the issue, and tried to hold Democrats from supporting the Republican ticket by terrible pictures of the "negro domination" that would be involved in a Republican victory. The Gormanites resorted to the same policy in Maryland, and tried to frighten independent Democrats back into the ranks by pretending that the election of the Republican candidate for Governor would mean the appointment of a lot of "nig-

gers" to rule over white men. But in each State such appeals fell flat. Indeed, they provoked so much ridicule that the Democratic campaigners felt almost ashamed to keep up the talk before the end of the canvass. The repeal by the last Congress of the federal election laws had removed the one phase of the old sectional argument that was really powerful. So long as the Government at Washington could legally interfere with an election in a Southern State, and so long as one of the great political parties was committed to the policy of making this interference more intolerable, Democratic campaigners could successfully appeal to discontented members of their organization to stand by it as the only way of saving their State. But when the obnoxious laws were repealed by a Democratic Congress, and when the Republican party endorsed the repeal by summarily dropping further agitation of the subject, political campaigns were at once put on the same plane in the South as in the North.

Prominent Democrats in Maryland express the opinion that the Republicans may retain control of that State. They ought to if they give the people good government, and no reason appears why they should not. The Republicans will make a hopeful contest next year in Tennessee and Missouri, two other Southern States which they carried in 1894, for the first time in many years, as soon as the federal election laws were repealed. Even Kentucky, which forty years ago was a Whig State, can no longer be set down in the Democratic column as sure in a Presidential contest without a struggle. The solidity of the South is at last broken, and the gain from the elimination of the sectional issue will grow more plain every year.

MISSIONARY TEMPTATIONS.

Last Friday's meeting in the interest of Presbyterian foreign missions was the most impressive gathering of the kind seen in this city for several years. It recalled to many the enthusiasm of the old-time "May anniversaries," and the thrilling interest which multitudes used to find in the meetings of the American Board in the heroic age of foreign missions, when pioneers and scholars and saintly men like Calhoun and Goodell and Schauffler and Coan were present to report on distant and unknown lands. The world (and the church, too) has greatly changed since then, both in itself and in its way of looking at things; and the strong temptation of missionaries and advocates of missions to speak and act as if there had been no change at all, is one of the serious hindrances they encounter in their attempts to influence public opinion. Some of the forms of this temptation it is a good time frankly to point out.

One of them is the practice of holding one kind of language in public, and another in private, about the condition and fate of the heathen. The old phrases about "a lost world," and about the millions of pagans going annually to perdition because of never having heard the Gospel, are still used in missionary appeals and addresses, though they no longer represent the real beliefs of the church or of the very men who use them. They are inherited phrases, which our grandfathers made believe they believed, but which theologians nowadays do not believe, or else take in a non-natural sense. No great knowledge of the teaching and private conversation of eminent Presbyterian divines is needed to convince one that the doctrine of the damnation of the heathen is no longer held by them. Some of the stiffest and most orthodox of their thelogians, even of their theological professors, have been known, when pressed by troubled inquirers, to fall back on a pious willingness to "leave the heathen in God's hands," to trust in "the uncovenanted mercies," and so on. Of course, the Westminster creed teaches most explicitly the damnation of the heathen, but expert theologians can easily enough get around those clauses by appealing to the others which magnify the divine power to save men "when and where and how he pleaseth."

The truth is, the age makes men tolerant in spite of themselves, in spite of their protests that they are not. All churches have their form of the Catholic doctrine of salvation by belonging to the pale of "the invisible Church," and from that pale it is almost impossible to get a theologian, on cross-examination, to maintain that any particular person, savage or civilized, is hopelessly excluded. It may fearlessly be asserted that, even where the doctrine of heathen damnation is still preached, ignorantly or perfunctorily, it is no longer received by congregations, and no longer figures among the really powerful motives that lead people to contribute to missions. Those motives are now almost purely humanitarian. The educational, the medical, the civilizing work of missionaries, which in many countries has undoubtedly been wonderfully beneficent and fruitful—this is the great argument for missions. It is on this that the emphasis should be put, and we are sure that it would mean dollars in the mission treasuries if a franker stand were taken upon this rational and practical basis. Missions would get on better, as most people do, by taking one world at a time.

Another temptation of missionary orators is to ignore the strong light which travel and commerce and the study of comparative religion have cast upon the question of the condition in this world of non-Christian peoples. The missionaries used to have a monopoly of knowledge on this subject, but they have it no longer. The traveller, the resident merchant, the scholar, the educated native, have come into the field in increasing numbers, and their testimony must not be overlooked by honest men. We have learned not to smile so superciliously when we hear of Japanese contempt for our inferior civilization; if we are open-eyed, we must admit that it is inferior in many ways. Authentic accounts of the Chinese of inland and northern China—of their splendid fibre, physical and intellectual, of their wonderful civil and social virtues—make the despatching of emissaries of our civilization to them seem more than ever bizarre. And comparative religion, if it leaves the superiority of ideal Christianity incontestable, makes men very shy about affirming that actual Christianity is the best thing to be given at once to all races, and strongly reinforces the belief in the essential identity of religious instinct and aspiration the world over. If we have anything to give to the heathen, it is the things in which we are superior to them. These are not metaphysics, not always and altogether morals, but are the enlightenment, the amelioration of life, the higher development of the individual which that great complex called the progress of civilization has brought to us in larger measure than to them. It is these things that, having freely received, we are freely to give.

Exaggeration of results achieved, and "writing up" missionary experiences so that they will read well, are an old temptation of missionary reports and addresses. Passing these, we will refer to one other danger which besets missionaries and those who direct their operations. That is the danger lest, in unselfishly trying to do the greatest possible good, the good itself be made hateful and an evil in the process. If charity is hard to dispense so as not to do more harm than good, religion is doubly so. There are some things in this world that are better than abstract religion, such as courtesy, mutual respect and tolerance, delicacy of feeling, sympathy. To sacrifice these in the interests of abstract religious doctrine not only is a bad thing in itself, but is to make the doctrine repulsive and powerless. Wholesale abuse of the heathen is not a wise preparation of the Gospel—of this we have seen too much in recent months. But there is also a woful lack of the finer sentiments often to be found in the personal dealings of missionaries with the people they are laboring to convert. Years ago a missionary in Brazil was caught out on a tour and entertained by a Brazilian gentleman. He at once broached the subject of his host's religious errors. The latter courteously suggested that it was better to choose some other topic of conversation, but the missionary was inexorable, harangued and rebuked his entertainer, and wrote up a long and edifying account of his determined labors for home consumption. This is like the Duke of Argyll's adventure, when he was "snowed up" with Sir George Trevelyan on his Scottish estate for three days, and paid for his hos-

pitality with a six-column letter to the *Scotsman* denouncing Sir George's scandalous way of administering his property. We call that pure boorishness, and there is far too much of it in those who wish to ingratiate themselves with the heathen for their own good, and begin by accusing them of the gravest immoralities and crimes and threatening them with the direst punishments.

CARDUCCI'S READINGS FROM THE ITALIAN RENAISSANCE.

ITALY, November 6, 1895.

THE well-known firm of publishers Cesare & Nicola Zanichelli of Bologna have just issued the first volume of a new work by Italy's greatest poet and prose-writer, who deems that the best education for the youth of the present generation is a study of the writings and actions of the real makers of Italy—a study much neglected hitherto, but which bids fair to be thoroughly undertaken in the future. Some extracts from the author's preface may prove interesting to American readers, who have always sympathized with the Italian struggles, and who prove, by their translations and writings, that the literature of Italy is understood and appreciated by them even more than in the mother country:

"The history of the ideas and literature of our Renaissance consists in research into and exposition of the accords and discords between innovating initiatives and conservative traditions, tending to inaugurate and renovate the modern spirit and the national instinct in the products of sentiment and imagination; a history that is contemporary and in accordance with a similar inauguration or renovation of moral and philosophical doctrines, as well as political institutions and orders. This history commences in 1749 and ends in 1870.

"Italy, at the close of the Middle Ages, found no one capable of constraining her to a strong unity. A federal nation, she could not hold her own against the monarchical unities which surrounded her on every side, and which were compelled to expand themselves by conquest in order to make liberty forgotten. Hence, for a series of years (1494-1559) dominion was divided between France and Spain; from 1559 to 1700 Spain predominated. The times between 1700 and 1748 resemble those from 1494 to 1559. They commenced with the war for the Spanish succession, ended by the treaties of Utrecht and Rastadt (1713-14), which excluded the Spaniards from the Italian peninsula, gave Naples, Sardinia, and Milan to the house of Austria, diminished the petty states, augmented the possessions and title of the House of Savoy. The war reopened by Spain, and the opposition of the quadruple alliance of France, England, Holland, and Austria in 1720, led to other changes. It left the Bourbons of Spain a footing in Italy, Don Carlos being invested with the imperial feudal territories of Tuscany, Parma, and Piacenza. It left Austria reinforced by the addition of Sicily to the kingdom of Naples, while Sardinia was given to the house of Savoy.

"Between 1730 and 1738, Austrian jealousies and the personal interests of Charles VI. produced fresh disturbances in Italy. Austria, by siding against France, Spain, and Sardinia for the succession of Poland, brought war into Italy, a war ended by the peace of Vienna (1736-38). Austria lost a portion of her Italian possessions; a Spanish Bourbon obtained Naples and Sicily; the King of Sardinia obtained Novara and Tortona from the Milanese territory. Austria, however, was 'compensated' with Parma and Piacenza, while Tuscany was given to Francis of Lorraine, husband of Maria Theresa, the future Empress of Austria. After the death of Charles VI. (October 20, 1740) the war for the Austrian succession was fought out in Italy, ending with the treaty of Aix-la-Chapelle in October, 1748, carried out in February, 1749—which is a sort of compendium and concordat of the struggles between Spain, Austria, and France for the dominion over Italy during the 16th and 18th centuries. To each and all a portion. . . . Of the ancient States one, Piedmont, was powerful and young; all the others, the Holy See and the republics, old and decaying."

This "instantaneous photograph" of Italy during these centuries, plundered and bartered among all the nations of the earth, who parted her garments among themselves without a "by your leave" to the rightful owners, Carducci gives us without a comment or lament. "Italy had found no one to unite her. *Voilà tout.*" Was this such a very lamentable fact? Her future, now that she is united, will alone furnish the answer.

"The history of the first half of the eighteenth century somewhat resembles the fourth act of a drama: all that has been announced, prepared, and developed in the preceding acts is re-enacted, entangled, and mingled. In the fifth act (metaphor apart), during the second half of the eighteenth century, all that remains of the old political system, of the old society, drifts, dwindles, crumbles, or shows that it is at death's door, and that a new order of things is at hand.

"Not that the spirit or thought of Italy has retrograded or been eclipsed. Her manners and customs are, alas, degraded; base and depraved her sentiments; but the genius of the land of Dante, of Michelangelo, of Galileo (more truly than the sun on the possessions of Charles V.), never sets. In the 14th century her artistic work was Tuscan, and when, in the 15th and 16th centuries, spread over the peninsula, it became Italian, the motive-power, the form, still remained Tuscan, or was at any rate consecrated by the great Tuscan writers. To the work of the Renaissance the other Italian populations contributed with the Latin and with the vulgar element, yet preserving in the form and soul of literature almost always the Tuscan sign and seal. In the 17th century, Italian prose, owing to the infusion of Galilean science and to the habitual and always better regulated classical imitation, still remains Tuscan; but poetry, starting with Tasso and meandering with Marino, takes its color from the South, and southern is the Arcady during the first half of the 18th century, whose sole true poet—the greatest poet of Italy and of Europe in those years after Tasso—is Peter Metastasio. This was because, by his æsthetic representation, he raised art. Obeying a necessary condition, foreseen and foretold at the close of the 16th century, he produced the idealization of poetry by music in the melodrama."

This was the typical work of the 17th century, the last poetic form of Italian invention, ending in perfection with the "Attilio Regolo," performed at the imperial theatre in Vienna in 1750. But the first half of the 18th century, unrecognized by the superficial explorers of literary history, who see only the Arcadians, was also occupied in the important work of critically examining the doctrines of history, the origin of institutions, laws, customs, and languages. These researches, promoted in the 16th century by Sigonio and by Vincenzo Borghini, were transferred in the 18th to Germany and Holland, thence returned home, and, in a truly Italian and original fashion, were carried on by Gravina (1664-1718), G. B. Vico (1668-1744), L. A. Muratori (1672-1750), S. Maffei (1675-1755), P. Giannone (1676-1748). What men, and how immortally modern!

"Vico revealed the science, the method of divining history to Germany through Herder, to France through Michelet, and is linked to our Renaissance by Giuseppe Ferrari's most homogeneous work.* Gravina transmitted to Montesquieu the fundamental maxim that 'The reunion of all the separate particular forces constitutes the political state of a nation.' Maffei, . . . a fierce iconoclast, . . . dared to present to the Council of Ten a plan of reform which perchance might have saved the Senate of Venice, but all in vain; and Muratori not only by his history set Italy on her future path, but gave serious admonitions to the Roman hierarchy anent its rapacities and iniquities, while also tendering wise advice to his Duke concerning good government and economy. Finally, Giannone, the champion of civil power, victim of two despotisms, ended with words and mind worthy of old Rome, by prophesying to the house of Savoy (which held him prisoner) its future destinies in virtue of discipline and warlike traditions."

With these preliminaries our author continues the history of the Renaissance, whose literature may be divided into three equal periods, from 1749 to 1789—forty years of peace, of reforms, of preparation; from 1789 to 1830—forty years of struggle, of confusion, of expectation; from 1830 to 1870—forty years of commingling, of development, of evolution. Here Carducci analyzes the conditions of the peninsula, setting forth the size and population of the several states and the influence of their respective writers, and dwelling on the power of the Jesuits, "who, up to the time when Pope Ganganelli expelled the company, had invaded all the fields of thought, all the forms of Italian literature. Nor did they confine themselves to sacred eloquence, to sacred writings, to philosophy and philology; they wrote tragedies, comedies, novels, romances, lyrics, satires, fables, criticisms, histories; they made and did everything." The literary product of all these priests and friars throughout the eighteenth century was as prodigious as it was increasingly degrading and degenerate. Meanwhile, lay thought was advancing: "a warning, this, that where lay civilization is attained, the clergy ought to quit the field of literature which, by their own declaring it profane, does not belong to them." Tuscany, Lucca, the Venetian republic are all passed in review; then Genoa, Naples, and Sicily, their writers and their writings being defined rapidly and clearly. Bologna, Ferrara, Modena, Reggio, Lombardy, and Piedmont follow. The student has here a chronological critical vade-mecum to aid him in his researches.

The second division of the preface thus concludes:

"Vittorio Alfieri (may his name be glorified immortally!) had, by his culture and education, felt Rousseau; he had read Montesquieu; but, by intuition and inherited consciousness, he faces with level front Dante, Petrarch, and Macchiavelli; renovates by his genius and passion a poetry for his country; conceives, imagines, follows up with burning thoughts, and thus virtually creates, Italy, one and free."

The French Revolution finds Italy with economic, legislative, and social reforms in progress, though not completed, with the avowed or tacit consent of new princes and an enlightened middle class, which kept in check the encroachments of a feudal aristocracy and the interference of the ecclesiastical order.

"The needs of the times were practical; jurisprudence and political economy were studied, and the so called philosophers were occupied in informing the princes of the wants of their people, in proposing innovations and ameliorations in civil and penal legislation, in the administration of public revenue, in commerce and public instruction. Thus poets and littérateurs were not in such high favor as in former centuries. Nor was this an evil: they became more independent and practical, feeding upon real thoughts and sentiments, and were transformed from courtiers and academicians into teachers of the people,

*Carducci alludes to Ferarri, the great historian and philosopher who wrote 'The Revolutions of Italy,' 'The Mind of Vico.' A Federalist and Republican, deeming France the teacher and leader of the world in all times and in all seasons, he was looked upon askance by the Monarchists on the one hand and the Republican Unitarians on the other. Member of the Italian Chamber of Deputies, his speeches from the extreme benches of the Left were paradoxical but powerful. He died a Senator in 1880, and now his works are coming into vogue, owing to the increasing abhorrence of centralization.

whom they inspired with lofty and noble sentiments."

Next follows a short, swift sketch of events —no tender lingering over the new kingdom of Italy, as with Cattaneo; just a thankful word that the "revolution came in time to save Italy from being absorbed by Austria." The Venetian, Ligurian, Etruscan, Roman, Neapolitan republics vanished like wind-driven leaves. Piedmont is annexed to France, and the unhonored exile of the Savoy Kings Charles Emanuel IV. and Victor Emanuel I. is prolonged (1799-1821). Not uselessly do French Kings Joseph and Murat reign in Naples, while the Bourbons, exiled to Sicily, learn there how to take oaths to the Constitution. "True it is that Bonaparte, Consul and Emperor, barters and rebarters other states as though they were his private farms, and ends by annexing to the French empire Genoa and Liguria (1805), Parma and Placenza (1808), Lucca (1806), and Tuscany (1807), even Rome (1809). What of it all? Moving from the foot of the Apeninnes down through the fertile plains, up towards the Alps between two seas, the seed is scattered, the flower buds, the harvest ripens, the forest rises."

Four more pages of pictorial history end thus: "So much Italianhood permeated the soil and the people that in regions called French, and hence French subjects, were born in those years the supreme athletes of the Renaissance—April 5, 1801, Vincenzo Gioberti in Turin; June 22, 1805, Joseph Mazzini in Genoa; July 4, 1807, Joseph Garibaldi in Nice; August 1, 1810, Camillo Cavour in Turin." Space prevents us from following the poet in the enchanting years between the proclamation of independence and its downfall, the next years of struggle when hope alternates with despair, the will of the few compelling the many to rise up and walk until Rome is entered and unity proclaimed. "Never was the unity of a nation wrought by the aspirations of grander or purer intellects, by sacrifice of nobler or holier souls, nor by fuller, freer assent on the part of the healthy portions of a people."

The writings chosen to illustrate the period commence with Pietro Giannone's address to the Italians, inciting them to virtue and to military discipline—that same Giannone who, after writing the history of Naples, was compelled to flee from province to province, and confined by the King of Piedmont in the Castle of Ceva at the instigation of the court of Rome, where he wrote his 'Discourses, Political and Historical, on Livy's Annals,' in 1739. Carducci rejoices that this first extract comes from a southern Italian, and also that Antonio Genovesi, also a southerner, first showed the necessity of Italian unity. The anti Papal literature is largely represented. Alfieri, Parini, Carlo Botta, Ugo Foscolo, are pressed into the service; Silvio Pellico, Atto Vannuci, Pietro Giordani, bring up the rear. Each of the sixty-six articles has a brief preliminary heading explanatory of the times and events in which the writers participated. This first volume ends in 1830, and next we shall have Joseph Mazzini and Young Italy on the scene.

Correspondence.

A PLEA FOR THE STUDY OF LATIN GRAMMAR.

To the Editor of The Nation:

Sir: A survey of the methods of teaching Latin which have been in use in this country during the past fifty years is most instructive. Scarcely anywhere has "the folly of extremes" been so conspicuously shown; nowhere have the results of that folly been more lamentable.

Many readers of the *Nation* can well remember a time when too much attention was given to the study of the Latin grammar. The pupil was forced to commit to memory a great number of rules, although he often had but little conception of their meaning, and would have been quite at a loss if asked to illustrate them by concrete examples. In fact, as has often been remarked, the study of grammar was elevated into a kind of fetish, and everything else was made subservient to it. In some schools the grammatical discipline was so thorough that, as the writer can testify, the better students were expected to remember, not only the rules themselves, but even the *numbers of the sections* in the grammar where they were to be found! The teacher devoted his attention, not to the explanation of points of literary or historical interest, nor to the discussion of the public and private life of the Roman people as illustrated by the lesson of the day, but to propounding as many grammatical questions as the time would permit. A good example of the extent to which this was sometimes carried is given by the little book entitled 'A Method of Classical Study,' by Dr. Samuel Taylor of Andover. The most unhappy legacy which our ancestors received from the English schools—the study of grammar for grammar's sake—was thus perpetuated.

But this state of things could not long continue. The means could not long be suffered to obscure the end. The inevitable reaction came; grammar fell, and great was the fall thereof. Men justly asked: "What is the use of classical study if, after four or five years of training, a student cannot read a page of simple Latin or Greek without the aid of grammar and dictionary?" The immense importance of understanding an author in the original was pointed out, and the utility of reading at sight was strongly emphasized. The great preparatory schools quickly fell into line, and reading at sight became a regular part of the curriculum. This reform was largely brought about by changes in the admission requirements of Harvard and other colleges.

The reaction of which I speak has now been in progress for a number of years. Is it not time for us to halt and ask whether (like most other reactions) it is not going too far? Is there not danger that, as the dictionary and grammar become more and more neglected, all feeling for the finer shades of meaning will be lost —that the student will no longer be able to appreciate the subtle distinctions to which the Greek and Latin owe so much of their beauty and expressiveness?

Some facts which have come under the writer's observation may serve to illustrate this point. It will doubtless be admitted that a reasonable knowledge of the declensions and conjugations is essential to every one who would read Latin with ease and accuracy. Yet the ignorance of these displayed by the graduates of some of our most noted preparatory schools is simply appalling. In one of the Harvard entrance examination papers of last year occurred a simple imperfect indicative. This was translated in *nine* different ways, not including the right one. The number of men coming from our most distinguished schools who do not know the principal parts of common verbs, like *venio* and *audeo*, is considerable. I am not speaking of the dullards only. The freshmen who elect Latin composition at Harvard are presumably picked men, who have a special liking and aptitude for the study of Latin; yet mistakes like *ventus* for 'having come,' *curri* for the genitive of *currus*, *ut* introducing *oratio obliqua* after a verb of saying, *incepuerunt* as perfect of *incipio*, etc., etc., abound in their exercises. The result is, that the instructor has to do over again much of the work which should have been done in the preparatory schools.

Many men enter college every year who have never owned grammar or dictionary. Such students cannot, of course, do thorough and accurate work. Many of them have not even a conception of what accurate work means. They have obtained by practice a kind of knack of guessing at the meaning of a sentence; but in most cases they see it "through a glass darkly," often *very* darkly. This habit of "reading" (call it "guessing") at sight has, in the writer's opinion, done much to bring about that lamentable state of things which was described by Prof. Goodwin in a recent number of the *Nation*. The English which the students use is inexact and inelegant largely because they have no clear idea of what they want to say. Translation cannot become what it should be—an exercise in the use of English as well as in rendering the thought of the original—until more accurate methods of work are introduced. I do not wish to belittle the importance of reading at sight, which is a most useful exercise; I only desire to protest against the slipshod method of sight-reading which has become too common in our schools.

What is the remedy for this condition of things? Opinions may differ widely; but at least the grammar and dictionary must be rescued from the undeserved oblivion into which they have fallen; the student must be taught that, in the language of one of my colleagues, "reading at sight does not mean *guessing*"; above all we must inculcate the necessity of honest, thorough, and accurate work.

X.

November 15, 1895.

HALL AND COLLEGE.

To the Editor of The Nation:

Sir: The use of the words *hall* and *college* in America cannot, it seems to me, be quite understood without a definite understanding as to their use in England at the time of the founding of Harvard. And this, in turn, necessitates a clear conception as to the development of the English college system. The hall was the characteristic unit of university life in the middle ages: it was a democratic banding together of students for the purposes of residence merely—*i. e.*, food, lodging, and companionship. To certain of these halls were added, in the course of time, fellowships and professorships, and, presto! the modern English college. The terms *hall* and *college*, however, were never clearly distinguished. This was especially the case at Cambridge, where to this day two of the colleges are called halls—Clare Hall and Trinity Hall. If, now, a banding together of students for the combined purposes of study and residence could be called a hall, there is no good reason why a banding together of students for the purposes of residence should not have been called a college. I have not the slightest doubt that a reference to the archives at Cambridge will show that *hall* and *college* were at first used with little reference to the presence or absence of endowment and instruction.

In America, now, as is evident from Mr.

Brown's discoveries, the buildings in question were used for all purposes of residence. "Old College" contained "a Hall, Kitchen, Buttery, Cellar, Turrett [whatever that may have been] & five Studeys, & therein 7 chambers for students in them." Obviously this was a residential hall or college.

It is interesting to note that the final substitution of the word hall for such buildings as Hollis and Stoughton coincides roughly with the elimination of the kitchen and buttery. Those of us who are most eager to attempt to solve the residential problem in American Universities by adopting the English *College* system, ask no more than that we should revert to the original type of residential *halls*.

JOHN CORBIN.

36 GARDEN ST., CAMBRIDGE, MASS., Nov. 15, 1895.

FOOTBALL AT THE UNIVERSITY OF PENNSYLVANIA.

TO THE EDITOR OF THE NATION:

SIR: Will you kindly allow me a few words in answer to a communication in your last issue entitled "College Rustication"? The writer was in error in supposing that the football team of the University of Pennsylvania was to be allowed an absence of two weeks to prepare for a game. The team has asked for leave of absence for four days—not two weeks—and the authorities have granted leave for but three days. This has been done, not because it is thought well that students should be allowed such absences on general principles, but because a precedent was urged, and it was desired to avoid the appearance of harshness by the compromise indicated.—Respectfully,

GEORGE STUART FULLERTON,
Vice Provost.

UNIVERSITY OF PENNSYLVANIA,
PHILADELPHIA, PA., Nov. 18, 1895.

COUNTING THE COST.

TO THE EDITOR OF THE NATION:

SIR: There seems to be some haziness still in the minds of many Democrats as to the profit that can be realized in carrying the group of anti-Administration Democrats. For such the account might be stated approximately as follows:

Cleveland majorities in 1892:		
Kentucky		40,020
Maryland		21,130
New Jersey		14,974
New York		45,518
Ohio (adverse)		—1,072
Net majority for Cleveland		120,570
Republican majorities, 1895:		
Kentucky	12,000	
Maryland	15,000	
New Jersey	22,000	
New York	90 000	
Ohio	114,000	
Total		253,000
Cost of carrying Harris, Gorman, Smith, Bill, and Brice, to balance account		373,570

F. W. L.

BOSTON, November 14, 1895.

"SEVERAL."

TO THE EDITOR OF THE NATION:

SIR: By way of defining this word in its numerical acceptations, Dr. Johnson has: "Divers; many. It is used in [*sic*] any number not large, and more than two." Among Dr. Johnson's editors, Archdeacon Todd simply repeats this, as does Dr. Latham, also, except that he omits the introductory "It is used." Dr. Richardson recognizes nothing of the kind; and, so far as appears, he would have cashiered "*several* persons were present," however intended, as illegitimate English.

Agreeably to Dr. Johnson and his aforesaid editors, *divers* signifies "several; sundry; more than one"; *many* signifies "consisting of a great number; numerous; more than few"; and *sundry* signifies "several; more than one."

Several is, thus, assigned two senses, and these, for all Dr. Johnson's discrepancies and contradictions, occasionally wide asunder. The first need not detain us; but the second, whether strict or loose, which recent dictionaries mostly ignore, as if it were unprecedented, is observable. Though no explicit authority for it has been brought forward by lexicographers, it has warrant in literature, as is witnessed by the following quotations:

"This plain Narration of Calista's cruel, inhuman Usage will, I hope, prove effectual to set *several* fond Maids upon their Guard, who perhaps even now stand upon the Brink of Ruin." "I have lately received a Letter which I take to be very impertinent, and question not but *several* of my Readers will be of my Opinion." "There have, in all times, and in all Countries, been *several* Persons whom the Merit of their Learning has advanced to the highest Stations, without the assistance of other Friends than those their established Reputation had procured them." "I have conversed with Persons who, from a good choice of English Authors, with the Assistance of their own Natural Parts, reason and discourse more pertinently, on many weighty Topicks, than *several* pompous Scholars who are Masters of the learned Languages and have read over many bulky Folios of Science." *Free-Thinker* (1718–19), Nos. 13, 74, 87, 115. Similar instances of *several* occur in Nos. 23, 66, 86, also.

"The doctrine of absolute predestination is utterly subversive of all true religion and virtue; and yet it was a received doctrine among the heathen, the Mahometans embrace it universally, *several* Christians do the same, and you will meet with something akin to it in the Nine and Thirty Articles." George Jeffreys (1748-'9), in the Rev. John Duncombe's *Letters by Several Eminent Persons Deceased* (ed. 1773), vol. ii., p. 199.

"After all, we must not be surpris'd that this passion [ambition] hath so great influence on the mind of *several* women." "*Several* women . . . seem almost always excessive when they love and when they hate." L. M., Translation of Du Boscq's *Accomplish'd Woman* (1753), vol. ii., p. 26, 235.

"This excellent statute served to repress the desire of civil war; as *several* would naturally take arms in defence of that side on which they were certain of losing nothing by a defeat; and their numbers would intimidate insurgents." Oliver Goldsmith, *History of England in a Series of Letters* (1764), vol. i, p. 227 (ed. 1772). This is verbally repeated in Goldsmith's larger *History of England* (1771), vol. ii., p. 311, barring the substitution, at the end, of: "and numbers would thus serve to intimidate rebellion."

A generation earlier than the date of the first of the foregoing quotations, Guy Miege, in his *Great French Dictionary*, rendered, on his own authority, *beaucoup de fois* by "many a time, *several* times." Further research may establish that, in so doing, he represented the English of his contemporaries.

Formerly, as is now made obvious, *several* was, at least here and there, the equivalent of "many," and likewise of "not a few," "some considerable number."

Not unfrequently, as cases before me bear evidence, it is impossible to say whether *several* stands for "numerous, more or less," or for "different."

Very likely the usage which has been illustrated is a good deal older than I have shown it to be. But the time at or about which it first came up remains to be ascertained. At present, indeed, the age of *several*, as we employ it with reference to numbers, is, as well, a matter of uncertainty.

In the course of its history *several* has, then, had all the latitude of import attaching to *nonnulli* or *complures*. When importing more than "a few," but fewer than "many," it supplies us with a nicety of expression which may be peculiar to English; 'from four or five to ten or thereabouts, according to circumstances,' serving, perhaps, as its definition.

I have only to add that here in Suffolk, as in Great Britain generally, the obsolete literary signification of *several* still survives among the vulgar. Twelve or fifteen children of the same parents, a phenomenon of no remarkably uncommon occurrence in East Anglian families, one will hear spoken of as *several*; so, in the mouth of my gardener, are a hundred apples or pears; and so, in the dialect of a local shepherd, are five or six score sheep, or any tale short of what he calls "a great lot." *Several*, as practically made one with "many," or "not a few," must have been laid aside, by the educated, for its superfluousness—a defect with which the term, as they now accept it, is not chargeable.

F. H.

MARLESFORD, ENGLAND, October 20, 1895.

Notes.

HENRY HOLT & CO. issue directly 'Some Memories of Paris,' from *Blackwood's*.

G. P. Putnam's Sons will publish immediately, in coöperation with the London publishers, the 21st edition of Haydn's 'Dictionary of Dates,' containing the history of the world to the autumn of 1895. The editor is Benjamin Vincent.

Additional announcements by Macmillan are 'Nineteenth Century Literature,' by George Saintsbury, newly made Professor of Rhetoric and English Literature at the University of Edinburgh, and 'Computation Rules and Logarithms,' by Prof. Silas W. Holman of the Massachusetts Institute of Technology.

J. Selwin Tait & Sons announce a new series of volumes of American verse, to be called "The Fleur-de-lis Poets," beginning with 'The Leaves of the Lotos,' by Col. David Banks Sickels, 'A Woman's Love Letters,' by Sophie M. Almon Hensley, and 'An Oaten Pipe,' by the Rev. James B. Kenyon; also, 'Scottish Folk-lore, or, Chronicles of Aberdeenshire from Pinafore to Gown,' by the Rev. Duncan Anderson.

Since our last note upon the Selden Society their edition of the 'Mirror of the Justices,' and their parallel texts of Bracton and Azo, edited by Prof. F. W. Maitland, have been distributed to subscribers. Members of the Society who have not received their copies, or persons wishing to become subscribers, and so to contribute towards the expense of the Society's endeavors to make the sources of the law available for scientific study, are requested to communicate with the Secretary and Treasurer for the United States, Mr. Richard W. Hale, 10 Tremont Street, Boston.

Those who last year found Dumas's 'Three Musketeers' too costly in the limited *édition de luxe* of Messrs. Appleton, may comfort themselves with the unlimited edition now put on the market by the same publishers with the same embellishments by Maurice Leloir. These are very handsome volumes at a moderate price, and, except for hoarding, as good a possession as their predecessors.

From the same house comes a fresh edition of 'White's Selborne' in two handy and very tasteful volumes, prefaced by John Burroughs,

and illustrated in a most interesting and exemplary fashion, by Clifton Johnson, as the title-page states. He may be not only the designer of the charming bird-drawings, but also the not less artistic photographer whose views of White's haunts are so admirably chosen and form such a mirror of rural England in its best estate. The total illustration is unusually harmonious, in perfect keeping with author and text.

It was well to gather together 'Dog Stories from the *Spectator*' during the past twenty years (Macmillan). The medium and the narrators (even when their names are not given) are a guarantee of more than usual authenticity for the tales. But many are signed, and such names as Colenso, Tait, De Morgan, Maxwell, Sturge, Alfred Ainger, Frances Power Cobbe, Hain Friswell, William Wallace, Sir John Lubbock, etc., carry conviction. One of the American contributors also belongs to a well-known family. Mr. J. St. Loe Strachey furnishes a lively introduction, summing up the mass of testimony to the intelligence, affection, humor, fidelity, etc., of the canine species as here presented. The dogs who do their own marketing selectively with coins whose relative purchasing power they understand, are perhaps the most striking, though the wonder may not be as great as it seems. Sir John Lubbock's experiments in teaching dogs to read by the word-method surpass all others in interest, but he did not carry them very far.

Dodd, Mead & Co. have brought out an American edition of 'Battles of English History,' by H. B. George, Fellow of New College, Oxford. The book is based on a course of lectures on history, in which, as the author says, "the informal division of labor which comes to pass in a university has led me to pay special attention to the military side of it." He has given us a series of compact and clear narratives of a long series of battles, from Hastings (1066) to Delhi (1857), in Europe, Asia, and America. These are interspersed with instructive brief essays on the progress of the art of war. Mr. George modestly disclaims writing for experts, but his book is one no expert would be ashamed of, and is additional evidence of the noticeable work in this line at Oxford.

The third and concluding volume of Dr. Sharpe's 'London and the Kingdom' (Longmans) covers the period from the accession of George I. to the passage of the first Reform Bill. The limitations of the work become only the more evident as it reaches modern times. It is not a history of the growth and development of the great social phenomenon known as "London"; it is but a record, by an official panegyrist, of the formal action of the "Corporation of the City of London." "The city of London," we are told in the concluding "Retrospect," "possesses a record *equal, if not indeed superior, to that of any other city in the universe, ancient or modern*, and its wealth and influence have *ever* been devoted to the cause of religious, social, and political freedom." This self-laudation is not only vulgar, it is misleading. If this is true, how comes it that the Corporation has failed to remain the real centre of London life, and that its place has been taken by the County Council? On the whole, Dr. Sharpe's work is carefully done; and the book will be of some use, especially on account of the appendix of hitherto unprinted letters belonging to the fifteenth and sixteenth centuries. But we must repeat what we remarked on reviewing the earlier volumes, that in our judgment the Corporation of London and the great companies would consult alike their dignity and their interest if they regarded the documents under their charge less as ammunition against radical innovators, and more as material for the scientific historian.

The friends of the late Mr. William Dalton Babington have been well advised in publishing the papers, fragmentary and sketchy though they are, that make up the little volume entitled 'Fallacies of Race Theories as applied to National Characteristics' (Longmans). Mr. Babington sets the good example of subjecting to the criticism of common sense some loose ideas that have become widely current in modern historical writing under the influence of German teaching. That the Roman Empire fell because society was corrupt and needed to be rejuvenated by the rude virtues of the Teutonic invaders, is a proposition gratifying to Teutonic pride and furnishing a beautifully simple justification for the ways of Providence—as Kingsley has set forth. But Mr. Babington shows how remarkably scanty is the evidence adduced for it, and how susceptible that evidence is of another interpretation. To this he adds a very satisfactory examination of the well-known passage wherein Mommsen, apropos of Cæsar's conquest of Gaul, passes contemptuous judgment on the Celtic character in all ages. Most of the traits that Mommsen, with slight evidence, finds in the Celt, Mr. Babington with better reason finds in the Teuton of Tacitus. The last quarter of the book is rather thin in substance, and might well have been allowed to remain in manuscript; but the rest, if it does not go deeply into the subject, is at any rate adequate for its immediate purpose.

Mr. W. M. Griswold, Cambridge, Mass., whose latest index was the volume in his eminently helpful series of 'Descriptive Lists of Novels and Tales' dealing with the history of North America, was not satisfied with this labor. He has now completed on the same principle a 'Descriptive List of Books for the Young,' which, if it does not surpass all others, will supplement all. It is classified and minutely indexed, eighty pages being given to history, and thirty (with much discrimination) to fiction. The poetry section proper is meagre, and contains only one title, Sherman's 'Little-Folk Lyrics,' which deserves the name of poetry. Senator Lodge's present occupation of twisting the tail of the British lion ought not to have banished his excellent anthology of 'Ballads and Lyrics' to an appendix.

After a long wait, the Harpers add a volume to their "Odd Number" series of translations from contemporary novelists. Galdós's 'Doña Perfecta' is the work chosen this time, and its version by Mrs. Serrano is able to stand thorough testing as to both accuracy and adequacy. Mr. Howells furnishes an introduction, in which his account of Galdós's literary development is frankly confessed (as it should be) to be mostly guesswork.

Part four of the great list of plants and their countries, published under the name of 'Index Kewensis' (Oxford: Clarendon Press; New York: Macmillan) completes the work. As we have more than once stated, this work had its origin in a wish expressed by Charles Darwin, shortly before his death, that some of the difficulties which had beset his path in studying plants should be removed from the pathway of others. He had experienced great embarrassment in accurately designating the many plants which he had taken under consideration and in ascertaining their native countries. It appeared to him, therefore, that an index which should give the names and authorities of all known flowering plants, and their countries, would be of service to biologists everywhere. To carry out this wish, he devoted a considerable sum to be expended under the direction of Sir Joseph Hooker. The task of compilation was committed to Mr. B. Daydon Jackson, and carried on at the Kew Herbarium. It is now finished, and the results are embodied in the 2,500 large quarto pages of the Kew Index. In the present chaotic condition of botanical nomenclature, such an index is a conservative factor of some importance, but its special value is found in the use which can be made of it by serious students in all fields of applied botany, such as economic and geographical. We can imagine that it made little difference to Mr. Darwin whether a plant was called by this name or that, provided it whispered to him its secrets of life; but he was anxious that some means of ready reference should be at hand for those who cared to repeat his experiments and observations, or who would enter on new ones. In this index, with its possible shortcomings inseparable from the magnitude and character of the work, such means of ready reference have been afforded, and by the generosity of the master himself.

The first number of an illustrated quarterly entitled *Bismarck*, and devoted to "Bismarck biography, German history, art, and life," has just been issued by Heuer & Kirmse in Berlin. The leading contribution to the present number is Hans Hoffmann's "Die grosse Woche von Friedrichsruhe," descriptive of the celebration of Bismarck's eightieth birthday. There are also poems by Wilhelm Jordan, Rudolf Genée, and Felix Dahn, called forth by the same anniversary and glorifying the octogenarian statesman.

A biographer of Bismarck, Karl Strecker, has been given the editorial charge of a curious enterprise, called 'Das Bismarck-Museum,' being no less than a legible reproduction of the honorary addresses and gifts of all descriptions showered upon the statesman not only for his birthday festival, but during his long career. The form will be folio, and the artistic execution sumptuous. The publisher is H. Jerosch, Berlin (New York: Westermann).

In the report for 1894–95 of the Observatory of Yale University, the chief point of interest is Dr. Elkin's account of work with the heliometer. He has closed his series of observations on the parallaxes of first-magnitude stars, and the series on distances of large proper-motion stars now comprises 99, practically all of which have been observed at two parallax maximum epochs, and in general upon three nights. To insure still greater accuracy, it is proposed to secure two farther epochs for each star. A series of observations upon Iris, one of the small planets, for a new determination of the sun's distance, has been forwarded to Dr. Gill at the Cape of Good Hope, for inclusion with his like investigations upon Victoria and Sappho. A new equatorial mounting, arranged for carrying four cameras, was used in August of 1894 for recording meteors. Prof. Barnard, Mr. Lewis, and Prof. Pickering have sent photographs of meteor trails to Dr. Elkin, who has already discussed them with interesting results, chief among which is the exceeding accuracy of these novel records.

The report of the Astronomer Royal to the Board of Visitors at Greenwich shows that, in spite of much unfavorable weather during the year, the staff was unusually active; the sun, moon, planets, and fundamental stars having been regularly observed on the meridian. The

annual catalogue of stars observed in 1894 contains no less than 3,057 stars. Additions to the buildings give greater space and freedom for work, a new shutter with more efficient wind-guards has been put upon the astrographic dome, the new altazimuth has been practically completed by Troughton & Simms, a new photographic telescope of 26 inches aperture (the gift of Sir Henry Thompson) is progressing, as also a spectroscope especially adapted to photography for the 28-inch refractor. Observations of certain double stars have been made at the request of Dr. See, measures of the planetary diameters and satellites, and of the rings of Saturn also, as well as the usual ones upon star occultations and comets, together with many photographic plates of the heavens. A fine record is shown in physical astronomy, as regards the sun in particular, nor are the elements in meteorology and magnetism neglected.

The Quarterly Statement of the Palestine Exploration Fund for October contains a report on the excavations at Jerusalem by Dr. Bliss, and the conclusion of the Rev. W. Ewing's account of his journey in the Hauran. A railway is being constructed from Damascus through this district, apparently along the old Roman road, now the "Haj" road of the Mecca pilgrims. Some twenty-five miles are in running order, so that the traveller can now go by rail from Beirut via Damascus into the heart of the till lately inaccessible trans-Jordanic region. The subject of the stoppage of the Jordan is continued from the previous number. That contained a passage from the life of Sultan Beybars I. of Egypt by the Arab chronicler Nowairi, to the effect that in the night of December 8th, 1267, at a certain place, "the waters of the river ceased to flow so that none remained in its bed." Riders sent up the stream found "that a lofty mound which overlooked the river on the west had fallen into it and dammed it up." "The water was arrested from midnight until the fourth hour of the day." The place where the landslip occurred has been located with great probability at a spot some fifty miles above Jericho.

The American Ornithologists' Union held its thirteenth annual congress in Washington last week, with about the average attendance, both of members and of the public. A new feature was a special memorial session, at which the late G. N. Lawrence of New York was eulogized by Mr. D. G. Elliot, and the late Thomas Henry Huxley by Dr. Elliott Coues. The regular scientific sessions were opened by an exhibition of unpublished water-color paintings by Mr. Louis Agassiz Fuertes, a student of Cornell, on whom some of the members seemed to think that the mantle of Audubon himself had fallen. W. T. Blanford of England was promoted from corresponding to honorary membership, and W. H. Hudson was admitted to the former. The only person elected to active membership was Mr. A. W. Anthony of California, but a batch of about ninety associate members was admitted. Mr. William Brewster of Cambridge succeeded Dr. Coues in the presidency, and the Union goes to Cambridge next year.

Mr. W. P. W. Phillimore of London concludes his notes on the English Garfields in the October number of the *New England Historical and Genealogical Register*, but without success in discovering the connecting link between the mother country and the Massachusetts Colony. He shows that Garle and Garfield are identical names. Mr. Henry F. Waters, in his "Genealogical Gleanings from England," in the same number, prints a will of John Borrodale of London (proved Nov. 18, 1667), in which his sister Mrs. Margaret Mitchell figures as a legatee. From her is descended President Cleveland in the eighth generation. Other wills possess exceptional interest for the well-known families involved, but we cannot dwell on them. Incidentally Mr. Waters says (p. 483) that in his extensive researches among the probate inventories of Essex, Middlesex, and Suffolk Counties (Mass.), he has found the word *salver* almost invariably spelt "server" or "sarver." "In fact, I am not sure that, down to the period of our Revolution, I have ever seen the modern spelling 'salver.'" Hence he infers the ordinary pronunciation of the vowel of the first syllable to have been like that of the present English pronunciation of *e* in Derby; a subsequent change in the spelling without change of pronunciation to "salver"; and finally a change of pronunciation, *i. e.*, to "sal-ver." Some letters of Elbridge Gerry, edited by Mr. W. C. Ford, should not be overlooked.

M. Gaston Deschamps, who takes a somewhat despondent view of the decadence of reading in France—a sad state of things, which, oddly enough, he seems half inclined to attribute to the present rage for bicycling—is able to find a little satisfaction, as well as much chagrin, in some statistics of the circulation of certain periodicals published beyond the Rhine. The *Gartenlaube* has 250,000 subscribers, he says, *Ueber Land und Meer* more than 100,000, *Zur guten Stunde* more than 100,000, *Daheim* more than 100,000—that is to say, about 600,000 subscribers for what he calls the "Revues Protestantes." To these must be added the more than 60,000 subscribers to the Catholic reviews, *Deutscher Hausschatz* and *Die Alte und Neue Welt*. One factor in the problem, which may be either a cause or a result, seems to have escaped the notice of M. Gaston Deschamps: there is a great dearth in France of periodicals which are both good and cheap. The great reviews are admirable but costly. The periodicals sold at a lower price are, for the most part (like the various organs of "Les Jeunes"), dear at any price. The *Revue Encyclopédique* is not dear, but then it is not always of thrilling interest. Many learned reviews, in themselves of the greatest value, appeal to scholars only. Still, there are the *Revue Rose* and the admirable *Revue Bleue*, which may serve as exceptions to this general remark.

If M. Gustave Droz had passed over to the majority twenty years ago, the space devoted to his memory in the obituary columns of the newspapers would doubtless have been much greater than it now is. At that time he was perhaps the most in view of all the writers of light fiction in Paris. His books ran through ten, fifteen, twenty editions. He seemed almost to have discovered a new *genre;* at least he had a new touch. Now he is half forgotten. Droz was born at Paris in 1832, and began life as a painter. When Marcellin, the friend of Taine, founded the *Vie Parisienne*, he divined that Droz could write as well as draw, and obtained from him some light articles for his new venture. These were afterwards published under the title of 'Monsieur, Madame et Bébé,' and, both in the paper and as a volume, had an astonishing vogue. Then came 'Entre Nous,' the 'Cahier Bleu de Mlle. Cibot,' 'Babolain,' 'Un Paquet de Lettres,' and other books less well known. Droz offered himself as a candidate for the Academy in 1886, after the death of Edmond About, but failed of an election. He died, very suddenly, at Paris on the 22d of October last.

Prof. Heinrich von Treitschke has accepted the place of editor-in-chief of the *Historische Zeitschrift* (Munich: Oldenbourg), recently made vacant by the death of Prof. Heinrich von Sybel. He has also been elected to Sybel's seat in the Berlin Academy of Sciences, a rather tardy recognition of the merits of the distinguished historian, who has held a professorship in the Berlin University since 1874. In strict justice, this honor should have been conferred upon him after the death of Max Duncker, or of Ranke, or of Weizsäcker; but each time it was prevented by political antagonisms and intrigues which have now happily yielded to higher considerations. His election has been confirmed by the King of Prussia.

—The leading contribution to the October number of the *Preussische Jahrbücher* is an interesting article of fifty-five pages by the editor, Hans Delbrück, entitled "Das Geheimniss der Napoleonischen Politik im Jahre 1870," in which he takes direct issue with Sybel on the vexed question of the French Emperor's responsibility for the Franco-German war. According to Sybel, Napoleon was inveigled and finally forced into the declaration of hostilities, much against his will, by the machinations of Gramont and Ollivier, incited and sustained by the clamors of the Parisian populace. Delbrück maintains that the distinguished historian, now deceased, was in this respect "wofully deceived," and that this deception arose from placing too implicit reliance on the Memoirs of Count Vitzthum, a Saxon diplomat and confidential agent of Beust in the service of Austria. A still greater surprise for the reader is Delbrück's statement that the candidature of Prince Leopold of Hohenzollern-Sigmaringen for the Spanish throne was the work of Bismarck. This view has been always entertained by the French, but rejected by the Germans, and Delbrück, although hitherto strongly opposed to it, now admits that it is correct. In the notes from the diary of the present King Charles of Rumania, the secret, so carefully guarded by the Foreign Office at Berlin, is revealed. We there learn that when, in March, 1870, Gen. Prim, the head of the provisional Government at Madrid, offered the crown of Spain to Prince Leopold, the acceptance of it was most warmly advocated by Bismarck, who, in a memorial addressed to King William, urged the many political and commercial advantages which would accrue to Germany from the occupancy of the throne of Charles V. by a prince of the house of Hohenzollern. These views were approved by a Hohenzollern "family council," which was convened on March 15, 1870, by King William, and at which Bismarck, Roon, Moltke, and other representatives of the Government were present. In the discussion which took place no one even suggested that the proposed measure might provoke the hostility of France. It was only afterwards, at the dinner in the royal palace, that one of the members of the council, who sat next to Moltke, remarked: "Suppose Napoleon should feel affronted, are we ready?" To which Moltke replied with a calm and confident "Yes." There is, however, no reason to suppose that Bismarck either sought or thought to give offence to France by this proposal, since Prince Leopold was a personal friend of the French Emperor, who ought to have preferred him to his rival candidate, the Duke of Montpensier, against whom Napoleon was known to entertain a strong antipathy.

—Fouillée, who is one of the best of the French psychologists—not the so-called psy-

chologists, like Paul Bourget, who pick up a sufficient smattering of psychological terms for literary purposes—has an article in the *Revue des Deux Mondes* on the degeneration which not Nordau only, but Féré, Janet, Sollier, and other recent writers find to be characteristic of the present race of Frenchmen. It is a degeneration, Fouillée thinks, which other nations are in danger of falling into as well, and which the French have become a prey to first only on account of their extreme nervous development and consequent susceptibility to the unfavorable influences (as well as others) of modern civilization. He does not take an altogether hopeless view of the situation, but thinks there is still sufficient energy and intelligence in the country to effect a change—that the destruction or the salvation of the nation is still in its own hands. The causes of this state of things he finds to be some of them inseparable from a high state of civilization, as the extreme tension of modern life, and especially of life in cities; and others dependent upon the stationary population of France (for the last three years there has been an actual excess of deaths over births among the native French), which has the effect of interfering with a natural selection, and even, since it is the lower classes who are chiefly prolific, to cause an inverted Darwinism—a "darwinisme à rebours." But the chief cause of the unsatisfactory physical condition of the race this keen and fearless critic finds to be the extreme relaxation of morals which prevails in France; there is nothing which is a more fatal source of deterioration in the nervous and also in the muscular system of mankind. And for the low state of morals he blames in great part a licentious press, demoralizing plays, the indecent *café chantant*, the open exhibition of vice in all its forms; and he urges an immediate and rigid repression by law of all these open incentives to loose manners with which Paris abounds. All those who appreciate the unique quality of the French character when at its best, will hope that the warning of this and of other prophets who have lately spoken with great freedom, will not have come too late.

—The third and fourth volumes of the co-operative history edited by Mr. H. D. Traill ('Social England,' New York: G. P. Putnam's Sons) have recently appeared, and cover the periods 1509–1603 and 1603 to 1714 respectively. They carry out with unflagging steadiness the plan the editor has set before himself, and of the merits and demerits of which we have already more than once spoken. The contents of these, as of the previous volumes, may be described as the work of conscientious historical journeymen, writing to order; and if it seldom rises above mediocrity, it seldom falls below it. Original investigation is, however, not altogether unrepresented; for Mr. Traill has had the wisdom and courage to intrust the "Dissolution of the Monasteries" to Father Gasquet. Moreover, he has been fortunate enough to induce Mr. George Saintsbury—whom we take this opportunity of congratulating upon his recent appointment at Edinburgh—to undertake the Elizabethan and Stuart literature; and the too few pages from his pen stand out from among the rest with a charm and distinction all their own. Impartiality has been aimed at in dealing with the religious dissensions of the seventeenth century, and has taken the form of allowing both sides a hearing in the persons of learned and moderate representatives. Their very different utterances on the same themes will afford matter for consideration to the young student. We should like to suggest that, as the book is likely to be used for a good many years to come, the page that gives an account of the contributors might profitably be revised. The information is in some instances just a little lacking in proportion. We confess it does not commend a contributor's pages to us to be told that he has edited a play of Shakspere—"(for schools)," as is carefully added.

—Readers of Macaulay's well-known essay on Warren Hastings should welcome the appearance of 'The Private Life of Warren Hastings' (Macmillan). The volume is written by Sir Charles Lawson, for many years editor of the Madras *Mail*, and contains an anecdotic biography of the Governor-General, with notices of his friends, his enemies, his trial in Westminster Hall, and his later years. It is admirably illustrated with portraits and views and reproductions of contemporary caricatures, and forms a dainty and gossipy little book. The author is more deeply interested in the personality than in the achievements of his hero. He does not attempt to deal with the administration of Hastings in India or with his career as a public man. He holds, and rightly, that Sir James Stephen and Sir John Strachey have completely cleared Hastings from the worst accusations brought against him, and refers with justice to the recent volume by Col. Malleson as containing the most accurate and trustworthy account of Hastings's administration yet published. Sir Charles Lawson prefers rather to deal with personal details and to leave the higher flights of history to others. The pictures he presents of the neglected childhood of the future Governor-General, of the uxorious proconsul who sighed for his Marian at the height of his power, of the badly used saviour of India on his trial before the House of Lords, and of the Anglo-Indian recluse in his final home at Daylesford, supplement the account of the great man's government contained in the pages of the historian. Against one thing only is it necessary to protest. Sir Charles Lawson devotes a chapter to Philip Francis, the inveterate enemy of Hastings, and persists in regarding him as the proved author of the letters of Junius. Though he is still the favorite candidate for the doubtful honor, it has not yet been proved that Francis was Junius; it is even safer to say that it has been disproved.

—The next generation can scarcely have the good fortune of possessing many pleasant letter-writers. The charm of a letter lies in its *personalness*, in its unconsciously expressing the personality of the writer to the personality of his friend. A letter that could have been written by any other person, or addressed to any other person, is, just in so far, a less "good" letter than it might be, and the most delightful letters are written in a language intelligible to only two souls in all the world. Meantime, everything is being done to make men (and in this case "men" unfortunately includes women) address their letters to the public instead of to individuals. The hand that has held the pen is scarcely cold before the tenderest feelings of the heart and the shyest thoughts of the brain may be read in all the newspapers, and may be commented on by careless strangers. And as a consequence (a consequence that foreruns the cause) these tenderest feelings and shyest thoughts, when committed nowadays to the keeping of a letter, are too apt to have a note of artificiality produced by possible publicity. A somewhat similar injurious influence comes from considering excellence in letter-writing too much as an accomplishment—as something external. An excellent letter can come only from an excellent mind. Flaubert's saying, "I try to think well in order to write well," is an admirable formula of the art of writing. Miss Callaway, the compiler of a volume just published, entitled 'Charm and Courtesy in Letter-writing' (Dodd, Mead & Co.), has echoed this truth, but has failed to exemplify it. Her selections have an eccentric heterogeneousness which gives the book a character of kaleidoscopic puerility, and her own observations are flavored with the very artificiality we deplore in nineteenth-century letters.

—M. André Hallays only the other day—it was on the 19th of October—was complaining, as a hundred critics before him have done, of the ravages wrought, under the name of restorations, by Viollet-le-Duc and others upon some of the noblest works of mediæval architecture. On the very same day a cantata was performed at the annual public séance of the Académie des Beaux-Arts which presented a restoration of 'Clarissa Harlowe' quite as astonishing as anything ever seen in architecture. A French roof and at least half-a-dozen tourelles were put upon the simple construction of Richardson. The three scenes of the piece pass in the neighborhood of London, around a pavilion wherein *Clarissa*, shut up by her family, bewails the treason of *Lovelace*. *Lovelace* appears and calls to her. At first she rejects him, but soon softens and, yielding to his words of love, prepares to fly with him:

"Ah! malgré moi je cède au charme qui m'enivre.
Si ta bouche dit vrai, si ton cœur ne ment pas,
Emporte moi!—je suis à toi—je ne veux vivre
Que pour aimer et mourir en tes bras."

At this point *Col. Morden* appears at the threshold of the pavilion and provokes *Lovelace; Clarissa*, exhausted by this last emotion, dies in the arms of her seducer, invoking the clemency of her family for herself and for him. *Morden* does not at all agree with her view of the situation, and the duel with *Lovelace* follows. It is, as will be noted, a much restored, or even a quite new, Clarissa which has been prepared *in usum Delphini*—for the heirs of the republic.

ARISTOTLE'S 'POLITICS.'

The Politics of Aristotle: A Revised Text, with Introductory Analysis and Commentary, by Franz Susemihl, Professor in Greifswald, and R. D. Hicks, Fellow of Trinity College, Cambridge. Vol. I. Books I.—V. Macmillan & Co. Pp. 689.

THIS is the first instalment of a new edition of Aristotle's 'Politics,' containing five of the eight books, with valuable introductory matter. A new edition of the 'Politics,' especially one bearing the name of Susemihl, was sure to be hailed with delight by all classical scholars. Susemihl had already connected his name closely with the 'Politics' by his three standard editions published in Germany. In 1872 appeared his elaborate critical edition, based on a complete collation of the most important manuscripts, and containing a revised text of the Latin version made by William of Moerbeke in the thirteenth century, which is older than any complete Greek manuscript of the 'Politics' now extant. In 1879 he published the Greek text with critical notes, and a German translation on the opposite page; and a second volume contained explanatory notes. He also edited the text for the Teubner collection, and a revised edition of this was published

in 1894. In the present edition the English editor, Mr. Hicks, has undertaken (as he tells us in his preface) to reproduce in an English dress Susemihl's edition of 1879. It is, however, by no means a mere reproduction. The text has been carefully revised by Susemihl, who has further made "comprehensive changes" in his notes: these notes all bear Susemihl's signature. Large and valuable additions have been made to the commentary by Mr. Hicks, who has had the help of various Cambridge scholars, especially that of Dr. Henry Jackson, who, since the death of W. H. Thompson, has been the chief representative of Greek philosophy at Cambridge. The announcement of a new edition of the 'Politics' thus equipped was especially welcome at this time, when the discovery of Aristotle's long-lost work on 'The Constitution of Athens,' the chief chapter in his monumental work entitled 'The Constitutions of 158 States, Democratic, Oligarchic, Aristocratic, and Tyrannic,' has interested all scholars in the Stagirite's doctrines of government. Two large volumes of F. W. Newman's elaborate work on the 'Politics,' one containing the Introduction, the other Essays and the text of Books I. and II. with critical and explanatory notes, were published in 1887, offering much matter for thoughtful consideration. On all this new material the mature judgment of a veteran like Susemihl was awaited with deep interest.

Under these circumstances, it can hardly be expected that scholars should conceal their disappointment when they find that 460 pages, or two-thirds of the present volume, were printed at least eight years before the volume was published—that is, before the discovery of Aristotle's 'Constitution of Athens,' before the publication of Newman's volumes, and before Susemihl's final revision of the text. Almost all that the volume has drawn from these three sources must be found in the *Addenda* and *Corrigenda;* and everybody knows too well what this means. The apologies of both the publishers and the English editor in the preface deplore, but in no way explain, this most unexpected disappointment which awaits the reader. We must therefore accept this volume as in great part an English reproduction of Susemihl's edition of 1879, with careful revision and correction, with supplementary notes and essays, with the notes beneath the text, and without the translation, brought down to the year 1886 (or earlier), with additional matter added in an appendix. For this we should be exceedingly grateful if our expectations of something far better had never been roused; and with these qualifications we may allow the work to be what its preface claims, "more adequate than any of its predecessors to our existing material and means of information." There is certainly no other edition of the 'Politics' which can be compared with this for comprehensive thoroughness, or which will be so useful to the general student. Nevertheless, there still remains a rich harvest for its successor.

The indiscriminate enthusiasm sometimes lavished on Aristotle's 'Politics,' and its high position at the English universities, are apt to mislead students as to its character and its peculiar merits. It is in no sense a systematic or complete treatise on government. It is not even complete in itself, but has come down to us in a very unfinished state. No ancient work bears more plainly on its face the marks of ancient editing. The scientific works of Aristotle stand in a peculiar position in this respect, compared with other classic writings. However sceptical we may be about the editorial revision of other works of ancient literature, there can be no doubt here. The well-known story, that the library of Aristotle, bequeathed by him to Theophrastus, descended to a family which kept the manuscripts buried in a cellar in the Troad about a century and a half, that they were restored to Athens just in time to be carried to Rome by Sulla with the booty of Athens in 86 B. C., that in Rome they fell into the hands of Andronicus of Rhodes, is the basis of the early history of our text of Aristotle. The distinction, based upon this story as told by Strabo, between the scientific works, which alone have come down to us through Andronicus Rhodius, and the popular works, which were best known to the two centuries before Christ, is strongly and unexpectedly confirmed by the newly found 'Constitution of Athens,' which is the only work of Aristotle known to us which undoubtedly belonged to the popular class and was found in the ancient libraries. The style of this new comer is as simple as that of the 'Anabasis,' and as different from the hard, technical style of the scientific works as it is possible to conceive. While this difference in style at first inclined some to doubt the genuineness of the new book, it appeared to others one of the strongest proofs that at last we had a real "exoteric" work of Aristotle.

Andronicus undertook the difficult task of arranging and editing the mass of manuscripts which came to him at Rome. The moths and worms of the Troad had done a work almost as effective as that of some modern expungers in destroying or obliterating the words of the philosopher. The writings were also in great confusion, so that much skill and learning were needed to restore them to anything like their pristine form. The different state of preservation of different works still testifies to their long burial. While some favored works, like the 'Ethics,' are almost faultless in their text, showing that they had a safe inside place in the pile, others, like the 'Poetics,' show equal traces of an exposed outside place. The 'Politics' had a moderately exposed place, not out of reach of the worms. This treatise, moreover, was left by the author in an unfinished state; and some of it still remains in the form of material which was collected but never worked into shape. We can see this, for example, in chapters 4, 5, and 6 of Book vi. (iv. of the old order), where we have first an enumeration of five kinds of democracy and four of oligarchy, immediately followed by another of four kinds of each, with enough of repetition to show that the two schemes are based on the same general principle, and enough of difference to show that the second is not (as it is sometimes called) a mere "recapitulation" of the first. Both were evidently made by Aristotle at different times; both were found among his papers on politics, and both were allowed to stand. Other cases show similar want of consistency in different parts of the treatise, indicating that the work as a whole was never finally revised by the author.

The most serious gap in the work is the want of Aristotle's account of the constitution of his ideal state. Internal evidence shows that the last two books of the traditional order belong directly after the third, and they are so placed in all modern editions. We thus have, after three introductory books, the beginning of the development of the ideal state and its constitution. After discussing the size and position of an ideal city, which is his limit of an ideal state, the nature of its citizens, the tenure of land, the supply of water, and other matters of this class, he provides for the most careful rearing and training of the youth, and then begins to treat of the best education. After briefly stating the regular subjects of public education—reading and writing, gymnastics, music, and perhaps drawing—he enters unexpectedly on a detailed account of the uses and value of musical training, in the midst of which the fifth (formerly the eighth) book suddenly breaks off, and we have no more of the ideal state or its constitution. Andronicus probably assumed that this obvious break marked the end of the portion of the treatise which was preserved, and arranged the books accordingly. Following this fragment on the ideal state, which was a mere introduction to the real subject, we have two books (now numbered vi. and vii.) of rather loosely connected discussions, and finally in the eighth book a connected essay on the various dangers to which different forms of government are liable and the means of protection against them. The work comes to no natural end here, but there is no reason for thinking that Aristotle ever extended it further. Susemihl ends his Analysis, which fills 37 pages, with the remark: "The third main division of the work, treating of Legislation, is entirely wanting." If the account of the ideal state had been finished on the scale on which it was begun, it would have filled at least four or five books.

The chief value of the 'Politics' to modern students is to be found not in the work viewed as a connected whole, but rather in the general good sense and sound judgment which pervade the discussions, even those which lead nowhere, and in the pithy and often humorous remarks which enliven every part. Of no book is it more true that we are often most instructed by arguments which lead to no practical result or end in absurdity. It may be interesting to trace Aristotle's view of slavery as it appears in various discussions in different parts of the 'Politics.' He accepts slavery as an "institution"; but when he attempts to defend it by arguments which would appeal not merely to the fourth century B. C., but also to the nineteenth century A. D., he tackles a problem to which even the father of logic was not equal. He evolves the state from the family through the village community, and he bases the family on two natural relations, that of male and female and that of ruler and subject. The state, being thus evolved from natural relations, is itself a natural product, so that man is a "political animal," and "an ἄπολις ['a man without a country'] would be either a beast or a God." This is in opposition to Plato's theory of a social compact, made by four or five men, who were not members of a state, for their mutual advantage. The relation of ruler and subject he sees in men and animals, in soul and body, in the higher and lower parts of the soul (*i. e.*, in intellect and appetite), in male and female; in fact, it pervades all animate (to say nothing of inanimate) nature, and whenever there is a reversal of this relation, the plan of nature is frustrated and calamity ensues. "Now," he says, "whenever any men are so far inferior to others as body is to soul and beast to man, these are natural slaves, and it is for their good to be slaves." "A natural slave is one who is by nature not his own but another's, and is still a man; and he belongs to another because nature has made him capable of belonging to another." He illustrates his idea of a "superior race" by an interesting remark, which shows how the youth from Stagira was impressed by the wealth of art in Athens:

"This is plain, that if men should be found as superior to common men merely in body as

are the statues of the Gods, all would agree that their inferiors ought to be their slaves. And if this is true of the body, all the more just is it to make this distinction in the soul; only, beauty of soul is not so easily seen as beauty of body."

He would not allow Greeks, but only "barbarians," to be slaves; Greek birth being a patent of nobility "everywhere recognized." He quotes Helen's proud claim to unconditional freedom in the tragedy of Theodectes: "Sprung as I am from a double race divine, who will dare to call me a slave?"

The weakest point in the whole argument is the want of a tribunal to decide whether a given man is or is not a natural slave. "Nature," he says, "intends to distinguish the bodies of freemen from those of slaves; but sometimes the bodies and the souls of freemen are found in different persons." Aristotle says of a tendency of nature which is not always effective, that "Nature wants to do this, but sometimes she cannot." No higher court of appeal than Nature is even suggested. He mentions a man who once opened a school in Syracuse to teach slaves their duties (or "the art of slavery"); and he suggests cooking-schools and similar institutions as likely to be useful. He adds that there is also a "master's art," which few learn; for most slaveholders who have the means hire an overseer to manage their slaves, "while they go into politics or philosophy."

Though the discussion of slavery in the 'Politics' leads to nothing tangible, at least for us, it is yet obvious that Aristotle looks upon slavery rather as a necessity in Greek society than as a good. This appears when he bases his grand distinction between good and bad governments on his doctrine of slavery. When he founds the household on the two natural relations of male and female, ruler and subject, he calls the rule of the head of the family over his wife and children, "a household government" (οἰκονομικη); he rules his wife like a statesman (πολιτικῶς), and his children like a good king (βασιλικῶς). On the other hand, he governs his slave by "a slave master's rule (δεσποτικῆ)." The intellect governs the appetites by "household" rule; the soul governs the body by "slave-master's" rule. The former aims at the common interest of the ruler and the subjects; the latter at the interest of the ruler alone. On this principle he recognizes three forms of household government (all good) which are administered in the common interest of the whole state and only incidentally in the interest of the rulers (in so far as the ruler is one of the state), and three forms of slaveholding governments (all bad), which are administered in the special interest of the rulers and only incidentally in the interest of the subjects. The three former are the good monarchy (βασιλεία), aristocracy (government of the few best men), and polity (government by the whole people for the common good). The three latter are tyranny, oligarchy (government by the rich), and democracy (the rule of the lower classes in their own interest).

Aristotle's "despotism" is therefore nothing but government administered on the slaveholding principle, either by one man, by a few, or by the multitude. There is no more instructive passage in the 'Politics' than that in which he shows how the rule of an irresponsible majority can be just as despotic as that of a single tyrant. He defines this extreme democracy as that "in which the majority, and not the law, is supreme"—in other words, "when decrees of the people, and not the law, govern." By "law" is meant a fixed code of statutes, which cannot be changed or repealed by the ordinary legislative power. The latter can pass only decrees in conformity to the fixed code, which thus corresponds to our written constitutions. Such absolute power, Aristotle says, makes the people a monarch (ἕνα ἐκ πολλῶν, *e pluribus unum*), and finally a despot refusing to be subject to law; and "such a democracy is analogous to tyranny." Both have the same character, for "both exercise a slaveholder's rule over the better citizens"; in one we have decrees, in the other edicts; in one demagogues are in authority, in the other flatterers. When a dispute arises, the cry always is, "The people must settle it," and everything is determined by the momentary will of the supreme multitude. From this state of things the wisdom of our fathers has saved us, and the Supreme Court of the United States decides questions of constitutional law with far more wisdom and dignity than its predecessor, the popular court of Athens. It is not strange, however, that our English friends feel anxious when it is proposed to remove the protection which the House of Lords now affords against what Aristotle calls "the rule of the majority without law." For England has no "law," in Aristotle's sense, which its legislature cannot repeal or change.

In the absence of Aristotle's direct treatment of the constitution of the ideal state, we must base our judgment of what this would have been upon his incidental remarks. Of these none is more significant than the saying that "the government which is administered by the best men is best," which seems to mean that under different circumstances any one of the good governments—a wise monarchy, an aristocracy, or a constitutional government of the people—might be best for a state. Nevertheless, the experience of his life and the tendencies of his age made him look with more hope to some form of true aristocracy, or government of the few best men, varied occasionally by the single rule of an exceptionally wise and good man, whom all would agree to obey and who would be "like a God among men." To such rare men Aristotle applies words which St. Paul gives us in two separate passages: "As regards such men there is no law, for they are a law unto themselves." Such men may be made kings for life, but on no account must they transmit their power to their descendants. In discussing oligarchy, Aristotle refers to the common argument, that a man who brings only one-hundredth of the capital into a partnership should not have the same voice in managing the business as one who furnishes all the rest; and he remarks that this would be a sound argument if the state were a business partnership, but as its real object is to change mere existence into a better life, the man who brings the most capital into this firm should have the chief voice in its management.

We must refer, finally, to Aristotle's brief statement of the origin and the true function of money, which contains in a nutshell all that now passes for sound doctrine on this subject. Mill's elaborate account of money, in his 'Political Economy,' contains little which Aristotle does not say or imply. Especially distinct is the principle that money must be a "commodity," something useful, which has a value in itself that makes it universally desirable. It must also be portable, for convenience, that it may save the transportation of bulky commodities for purposes of exchange. This needs nothing but a few obvious corollaries to adapt it to the soundest doctrine of a convertible paper currency. Nothing can be a stronger protest against such wild dreams as those of the late B. F. Butler on the "American dollar," for example: "I want that dollar stamped upon some convenient and cheap material *of the least possible intrinsic value*." "I desire the dollar so issued shall never be redeemed." But it is again depressing, after reading these sound views of Aristotle, to find him unable to grapple with further questions which are equally simple to us, and objecting to lending money on interest and to the accumulation of wealth by trade.

If the new edition of the 'Politics' calls new attention to the valuable lessons for our own day which the work contains, it will not have been published in vain.

THE LITERATURE OF THE KITCHEN.

The Spirit of Cooking. By J. L. W. Thudichum, M.D., F.R.C.P.Lond. New York: Frederick Warne & Co.

The Century Cook Book. By Mary Ronald. The Century Co.

European and American Cuisine. By Gesine Lemcke. D. Appleton & Co.

The Murrey Collection of Cook Books. By Thomas J. Murrey. Frederick A. Stokes Co.

Francatelli's Modern Cook. By Charles E. Francatelli. Philadelphia: David McKay.

THE attention now accorded in this country to cookery is emphasized by the great quantity of literature devoted to the subject. Hardly a year elapses without the appearance of many treatises relating to it; moreover, almost all the daily and weekly journals, secular and religious, conduct departments that treat of it either exclusively or incidentally. Then, again, many educational institutions maintain cookery schools; and finally, in most of the larger towns, such schools are established for the training of women, who, taught by means of lectures and practical demonstrations of culinary processes, learn to steer clear of the perils that hover over a household where badly cooked food may well arouse latent antagonisms.

Dr. Thudichum, in the preface to his 'Spirit of Cookery,' says with much truth that culinary literature attained its highest excellence about the middle of the last century; but since then a distinct retrogression is perceptible, "as shown by compromises with the demand for excellence in all its branches, and diagnosed at once by humanists accustomed to what one of its greatest exponents has termed the manly and elegant style of magiric art." Dr. Thudichum asserts that, in the manuals of cookery that have appeared during the present century, there is no systematic attempt to express the acquired knowledge in the shape of general rules such as would result from a codification of principles. The great mass of detail seems to have stood in the way. Dr. Thudichum has sought to overcome this obstacle in his 'Spirit of Cookery.' He treats of the culinary art in the light of history, science, practice, ethical and medical import, and of the objects, results, and evolution of cookery. Under the last-named heading he advances the novel theory that it is through native confectionery that the state of culture of any nation may be estimated, even when little is known of its cookery, inasmuch as confectionery is the most advanced and refined part of cookery, and thus "enables the expert to draw a conclusion backwards regarding the kind of cookery out of which it originated." He applies this test to the natives of India, and concludes that they possess no proofs of ancient civilization, as the so-called confectioneries made by native Hindus in the Indian and Colonial Exhibition in

London, were either indifferent to flatness, or simply repulsive. English proficiency is exemplified by Dr. Thudichum from 'The Complete Housekeeper,' by Mary Smith, printed in England in 1772, in which she speaks of Sauce Robert as "Roe-boat-Sauce," of an omelet as "A Hamlet," and of a Queen Soup as "Soupe à la Rain." His chapter on the "Historic Literature of Cookery" is most interesting. It calls up the early Greek, Roman, French, Spanish, Italian, German, and English writers on cookery as well as those of modern times. He by no means accepts these authors at their own valuation. In his notice of Brillat-Savarin, author of 'Physiologie du Goût,' he states that Savarin's qualities "were generally constructed by biographers out of this book, but were very different according to the testimony of contemporaries." Dr. Thudichum quotes Carême, who, in his Memoirs, says: "Neither M. Cambacérès nor Brillat-Savarin has ever known how to eat properly. Both liked strong, vulgar things and simply filled their stomachs." Dumas says: "Savarin was neither a gastronomer nor a gourmet, but simply a vigorous eater." An intimate friend, M. Pages, says: "One nowhere heard better talk and nowhere ate worse dinners than at Brillat Savarin's table." Possibly, the by no means classical gastronomic methods of Savarin were the outcome of a three-years' residence in this country, partly in Boston and in Hartford, Conn., where he earned a livelihood by teaching French and playing the violin in orchestras.

The remaining chapters of Dr. Thudichum's 'Spirit of Cookery' are devoted to an analysis of all culinary processes. He gives recipes, or what he calls "prescriptions," only when they are necessary to elucidate his meaning or emphasize his statements. A complete and valuable dictionary of culinary terms forms part of the volume, from which we take in parting one more quotation, namely, from the chapter on the "Qualifications of Authorship in Cookery." Our author says, speaking of women, that they "can cook very well, and ought to do so, and actually do so all over the world, but that the greatest amount of practice is not capable by itself to produce the truly philosophical qualifications which are essential to effectual authorship. A collection of recipes, even such as that of Cato of Utica, has no philosophical character, however meritorious it may be as a means of conservation, and however useful it may be in the limited circles to which it appeals."

To criticise 'The Century Cook Book,' by Mrs. Ronald, as a mere collection of recipes, would not be wholly just. It is more than that. Typographically and pictorially it is the most attractive book on cookery so far published in this country. In these directions it marks an immense advance upon its predecessors. The merit of the illustrations resides in the fact that they are process reproductions of photographs of the dishes, utensils, and table decorations described in the text. Apart from the recipes, which are lucidly explained, the book contains much other matter that will prove invaluable to inexperienced housekeepers unexpectedly confronted with problems inseparable from modern social functions. The "New England Recipes" and "Distinctively Southern Dishes," however, are disappointing.

Mrs. Gesine Lemcke, author of 'European and American Cuisine,' is known as a very competent and successful teacher of cookery. This should inspire confidence in the collection of recipes of which her book is composed. The day for absolutely original formulas in the preparation of aliments is passed. All that can be hoped for is that conservatism will not be abandoned in the search for the unattainable. Mrs. Lemcke is to be commended in that she has strictly adhered to classical traditions, and an intelligent and exact interpretation of her recipes can hardly fail to be productive of satisfactory results.

Mr. Murrey's cookery books, now gathered into one volume, have from time to time appeared in separate covers. Their success may doubtless be attributed to the simplicity of the recipes and the ease with which they may be concocted. His collection is one that appeals especially to amateurs.

'Francatelli's Modern Cook,' of which we have the twenty-sixth edition, is a standard work of recognized value. It is more suitable, however, for use in large establishments than in private houses, except such as are provided with exceptional culinary equipments and in which cost of material need not be considered.

British Birds. By W. H. Hudson, C. M. Z. S. With a Chapter on Structure and Classification by Frank E. Beddard, F.R.S. Longmans, Green & Co. 1895. Crown 8vo, pp. xxii, 363, with 8 colored and 8 plain plates, 100 figures in text, and 3 photographs.

Wild England of To-day and the Wild Life in It. By C. J. Cornish. Macmillan. 1895. 8vo, pp. xvi, 310, with 16 plain plates from drawings and photographs.

Books on British birds are extremely numerous, British ornithologists are sharp critics of one another, and one who now adds to the number of systematic treatises must compete with such standard works as Newton's fourth edition of Yarrell, and those of Henry Seebohm, R. B. Sharpe, J. E. Harting, and Howard Saunders, unless he is content to occupy a more distinctively popular field. Mr. Hudson's work is systematic, in a proper sense, having the merit of simplicity and directness in treating the life-histories of all the species which are residents or regular visitants in the British Islands, with entire subordination of the technicalities to the main object he has in view, viz., of furnishing readable and reliable biographies. The book is compact, of convenient size, handsomely printed, very fully illustrated with neat and telling pictures, and thus well suited to the requirements of most readers. Beddard's excellent preliminary chapter furnishes all that they need to know of structure and classification in order to use the work with profit and pleasure. Mr. Hudson writes well, and there is every probability that the struggle for existence in this case will not be a hard one.

The qualifications of a bird to be considered "British" seem to be peculiarly subtle and delicate, if we may judge by the ardor and even acrimony with which they have been discussed in many cases, to an extent of controversial writing which seems to us out of all due proportion to the importance of the point at issue. The theory or unwritten law would seem to be that every known bird must be either a British bird or some other sort of a bird; woe to the impious author who fails to admit every one of the former to full communion, and out upon him whose fellowship is with any one of the latter! Mr. Hudson must have felt the full force of this dilemma, as he adjusts his introduction to the seriousness of the case. The British Ornithologists' Union's List, whose canonical character is indisputable, enumerates 376 "British" species, of which 211 are residents or regular visitants, and 165 are qualified as "occasional visitants." Mr. Hudson thinks that of these 165 about 55 or 60 "deserve that description," since they actually visit the British Islands at irregular intervals, but that "all the others are accidental stragglers." Referring to Seebohm's total of 222 species, as the number "fairly entitled to be considered British," he demurs a little, and would say that "in round numbers there are 200; at the very outside, 210." His criticism of what may be called the ragged edge of British ornithology is couched in the following terms:

> "It has long been the practice of our ornithologists to regard as 'British' any species of which one specimen has been found in a wild state within the limits of the United Kingdom. As a result of this excessive hospitality we find in the list about 43 species of which not more than three specimens have been obtained; in a majority of cases only one. We also find that there are not fewer than 45 exclusively American species in the list. . . . It is highly probable that some of the American, Asiatic, and European waifs that have been picked up in these islands were birds that had escaped from confinement; but whether brought by man or borne on the wings of the tempest to our shores, the fact remains that they are not members of our avifauna, and the young reader should clearly understand that only by a pleasing fiction are they called 'British.'"

On this understanding Mr. Hudson proceeds with his biographical sketches of some few more than 200 species he considers indisputably British, while his conscience allows him to mention but not describe the irregulars and even the tramps or ticket-of-leave birds. Perhaps some future author will discover or invent a means of alleviating the distress of these unfortunates. The worst of them might be gazetted as incorrigible, and the best of them brevetted as British, or invested with that sort of "honorary citizenship" which Gätke has conferred upon so many of his feathered friends in Heligoland.

Mr. Cornish's handsome volume consists mainly of papers which appeared first in the *Spectator;* but they have been rewritten to some extent, and others have been added to the original series. It belongs to the large class of "outing" books which, when well written, are sure to find many interested readers, for whom the aspects of nature, and especially of animated nature, have irresistible attractions. The chapters are grouped in what seems to the author to be their natural order, "as they deal with larger or smaller areas of wild England of the same type," but have no necessary sequence, each being a picture in itself. Bird life is prominent in most of these scenes, and forms the subject of most of the illustrations. "'Kiting' on the Downs" introduces something so novel, to an American at least, that one must read the chapter so headed to discover that it is a method of shooting partridges when the birds rise so wildly, and are likely to fly so far, that an artificial kite, resembling a bird of prey, is flown over them to scare them into lying close, or make them drop into the nearest cover.

A main motive for the book appears to have been the question how wildness of scene and wild life have been so generally preserved in such a densely populated country as England. Some places seem to be self-protective in their ruggedness; others are preserved from change in the possession of great landed proprietors; but the conditions of the problem are almost as various as the localities themselves. Some tracts seem likely long to endure as they are now; but many others must, before a great while, be surrendered by nature into the hands

of art for eminently utilitarian purposes. Meanwhile, it is well that books like this one should portray so well, for a given period, the aspects of incessantly shifting scenes.

A School History of the United States. By Susan Pendleton Lee. Richmond, Va.: B. F. Johnson Publishing Co. 1895.

MRS. LEE does not flatter herself that her history will be adopted in Northern schools, but she hopes that it may not elicit "harsh criticism" from Northern readers. It will at least cause them no astonishment. A second and yet a third generation since the close of the rebellion may not reasonably expect a Southern text-book of American history to have any other motive than to justify American slavery, and secession and civil war in defence of slavery. The most that Mrs. Lee will commit herself to, respecting the "peculiar institution," is to say (p. 30) that when the United States came into existence, as afterwards, "the difficulty was to know how to get rid of it without perpetrating equal if not greater wrong.' These two "wrongs"—of slavery and emancipation—presently make a "right." On page 315 she wonders "that men so noble and chivalrous and women so pure and gentle and true as were those of the Southern States did not see more clearly the evils inherent in their system"; but adds that when these evils were pointed out by the abolitionists, "self-respect seemed to require that they [the Southern States] should insist on maintaining a right so constantly assailed," while the knotty problem of emancipation "made them more resolute to claim their constitutional right to continue and extend their domestic institutions in the southern part at least of all the new territory."

The rest may be easily imagined. All the old arguments, from Scripture and history, are adduced to divert the pupil's mind from the inherent sinfulness of slavery; the old blasphemy of evangelizing the victims of the slave-trade is again pressed into service, in spite of Mr. Bryce's pronouncing the evangelized blacks "in their notions and habits much what their ancestors were in the forests of the Niger and the Congo," and scarcely more fit for citizenship. The old euphemism glozes over the iniquitous and barbarous incidents of the long struggle for slaveholding ascendancy. Brooks's "chastising" of Sumner "was a most unfortunate affair," not in itself, but because it "stimulated evil passions everywhere" (p. 327). Throughout, it is the Northern wolf and the Southern lamb. The author's candor, which we will not dispute, cannot be relied on to tell the truth of history. The passage of the Nebraska bill is made to appear to have a national sanction because "at this time the Southern States were largely outnumbered in both houses" (p. 326); but the *Slave Power* was not outnumbered then nor so long as the Democratic party kept up the supply of Northern doughfaces—John Randolph's "white slaves." Helper's 'Impending Crisis' did not "threaten the Southern people with fierce punishment" (p. 336); it threatened only Southern *slaveholders*, in behalf of the far more numerous non-slaveholders, the class to which Mr. Helper himself belonged, and to which he especially appealed.

We shall say no more except by way of protest against the cant of charging 'Uncle Tom's Cabin' with being the medium of "slanders," "caricatures of Southern life," and "overdrawn statements" (p. 336). It is high time that this were stopped. Mrs. Lee is a Virginian, but she would not dare to print in an appendix Jefferson's arraignment of slavery in his 'Notes on Virginia.' Still less would she make room for the following authentic narrative of the awful atrocity perpetrated by one Lilburn Lewis, a son of Jefferson's sister. The place was Livingston County, Ky., near the mouth of the Cumberland; the date, December 16, 1811; the narrator, a clergyman who related the story to the Rev. John Rankin, a native of Tennessee, who published it, in his 'Letters' addressed to a slaveholding brother, in 1824. Lewis was a hard master, whose slaves frequently ran away. One, "an ill-grown boy about seventeen," "just returned from a skulking spell," had the misfortune to break a valuable pitcher at the spring. His master thereupon at night summoned all the slaves into the most roomy negro house, built a rousing fire and barred the door. Then, calling up George—

"He bound him with cords, and, by the assistance of his younger brother, laid him on a broad bench, or meat block. He now proceeded to whang off George by the ankles. It was with the broad-axe! In vain did the unhappy victim scream and roar. He was completely in his master's power. Not a hand amongst so many durst interfere. Casting the feet into the fire, he lectured them at some length. He whacked him off below the knees, George roaring out, and praying his master to begin at the other end! He admonished them again, tossing the joints into the fire. He again lectured them at leisure. . . . And so off the arms, head, and trunk, until all was in the fire. Still protracting the intervals with lectures, and threatenings of like punishment in case of disobedience, and running away, or disclosure of this tragedy."

Incredible? slander? caricature? Well, here is confirmation of it in two recent events at the South, in the same month, but in two widely separated regions. On October 16, 1895, while the South Carolina Constitutional Convention was wrangling over the amount of negro blood—whether less than one-eighth or none at all—that should be allowed to intermarry with pure evangelized white, this was what was going on in Braden, Tenn. One Jeff Ellis, a black man who had assaulted, without killing, a seventeen-year-old white girl, was snatched from the authorities by a white mob. We quote the New York *Herald's* despatch (issue of October 17):

"Ellis was . . . taken to a point about 150 yards from the . . . house [of his victim], where a huge fire had been built, and told to prepare for death. A . . . man pushed through the crowd, brandishing a knife, and yelled, 'Kneel down and pray, you dog; I'm going to cut off your ears.' The negro knelt, but did not pray, and the man began cutting off his right ear. . . . Then members of the mob yelled, 'Give me his other ear!' 'I want a finger!' The negro's other ear was severed from his head, after which each of his fingers was cut off. He was then mutilated in a horrible and unmentionable manner. A member of the mob favored roasting the negro alive. . . . He was strung up to the telegraph-pole, . . . and while his pulse still faintly beat, he was lowered to the ground and decapitated with a pen knife. . . . The bloody head was placed in a sack . . . [and] sent to the family of a little girl living in Mississippi, whom Ellis [had] attempted to assault."

On October 29, 1895, at Tyler, Texas, Henry Hillard, a black man, assaulted and then murdered a white married woman, and a mob took him likewise out of the hands of the officers of the law. We quote again from the *Herald* (issue of October 30):

"It was unanimously decided to burn Hillard, and it was agreed that he should suffer his penalty in the public square in this city. Twelve thousand persons were assembled there. Large crowds of women and children were spectators. A scaffold was erected in the centre of the square, and kindling-wood, coal-oil, and straw were placed in position. The negro was lashed to an iron rail that extended through the platform, and Mr. Bell, the husband of the murdered woman, applied the match. The flames shot upward, enveloping the man in sheets of fire. He begged for mercy, but was not permitted to burn at once. The fire was frequently quenched, and, after the lapse of a few minutes, started again. From the time the match was applied until his death, was fifty minutes."

We owe an apology to our readers for printing, even with omissions, such horrible and sickening details. The collocation of these examples of the unchanged spirit of slavery will, we fear, appear to Mrs. Lee to be "harsh criticism." But—with a new application of Helper's flout at 'Uncle Tom's Cabin'—"it is all well enough for women to give the fiction of slavery; men should give the facts."

Die Moderne Oper. Von Ferdinand Pfohl. Leipzig: Carl Reissner.

HERR PFOHL, one of the best-known and most talented of the younger German writers on musical topics, has chosen for his latest volume the title of Dr. Hanslick's most popular book; but that, apart from the clear and vigorous style, is the only thing the two works have in common. Whereas Hanslick discusses the famous operas written between the time of Gluck and Wagner, Pfohl devotes most of his four hundred pages to operas composed since Wagner's death. From one point of view, accordingly, the operas which he discusses are more modern than those analyzed by his predecessor; yet it is safe to say that ten years hence Pfohl's volume will have a merely historic value, as an instantaneous photograph of transient phenomena, whereas Hanslick's will remain useful as a guide to operas which, as works of genius, will continue to be "modern." Pfohl's list includes the names of Nessler, Brüll, Abert, Heuberger, Meyer-Helmund, Kaskel, Reinecke, Arensen, Erlanger, Ritter, H. Hofmann, Neitzel, Chabrier, Messager, Mascagni, Leoncavallo, Franchetti, Tasca, Puccini, Catalani, Goldmark, Tchaikovski, Smetana, Cornelius. Of all these, it is to be feared that only the last four have been able to endow some of their works with the quality of "immortality," even in the ephemeral operatic sense of that word.

Our author is under no illusions regarding the transitoriness of the fame which he is chronicling; nor, perhaps, would he contend that the remaining modern opera-writers whom he has reserved for a second volume—Rubinstein, Draeseke, D'Albert, R. Strauss, F. Weingartner, etc.—would materially modify the general verdict. Indeed, he distinctly admits that "the music drama of Wagner constitutes modern opera," and that in Germany, at any rate, there is no modern opera apart from Wagner. Nessler, Brüll, Reinecke, and others have indeed attempted, not without transient popular success, to write non-Wagnerian operas, but Herr Pfohl cannot, with the kindest of intentions, find much besides melodic commonplace and cheap sentimentality in their works: "The German composers who undertook to write popular operas were either wrecked in the shallows of triviality (like Nessler) or they were dashed to pieces against Wagner, like ships whose bolts and nails were drawn out by the terrible attraction of the magnetic mountain."

There is hardly a page of Pfohl's book in which this fatal power of the Wagnerian magnet is not brought to mind. "Wagner," he

declares, "is the oxygen, the atmosphere in which modern opera breathes." Goldmark's "Queen of Sheba," for instance, "succumbs to the powerful Wagnerian attraction," while on his "Merlin" "Wagner's style has exerted a positively fatal influence." In Messager's "Two Kings" the whole first act "stands in the constellation of 'Die Meistersinger.'" In Chabrier's "Gwendoline" "whole passages from 'Tristan' and 'Götterdämmerung' could be easily pointed out." Indeed, of all the French composers "Bizet alone speaks his own language." In Tchaikovsky's operas, too, we meet friends from Bayreuth. As for the "young Italian school" and its German imitators, their operas simply bristle with Wagnerisms. Even Verdi, whom Pfohl considers, next to Wagner, the greatest and most interesting dramatic composer of this century, has had to pay his tribute to Wagner. In his early operas the drama was a mere side-show and the aria was everything. No matter what the hero and heroine do—whether they make love, or quarrel, or die, or polish their finger-nails—they always do it to the tune of an aria. Far otherwise the later Verdi, after he had learned from Wagner that "the play's the thing." In his "Otello" and "Falstaff" the music follows the words and the action as conscientiously as it does in Wagner's last dramas. "Verdi," exclaims Pfohl, "understands the art of ever learning without ever being a pupil. He has learned much of Wagner; the freer treatment of discords, the richer harmony, the glowing orchestral coloring, the modern melodic style of his 'Aïda'—all these he owes to Wagner. And yet, in thus learning, he did not give up his individuality: for that his personality is too strong."

In saying that "among the younger composers of Italy Verdi stands like a giant among pigmies, like a musician among music-makers, like an artist among artisans," Herr Pfohl tersely sums up his opinion of the new Italian "school" of opera concerning which there was so much ado a year or two ago. If he devotes his longest chapter to this so-called "Veristic" school, it is only because of the great vogue which these trivial and vulgar little operas had for two or three seasons, eclipsing for a time even the standard favorites, Wagner included. Pfohl does not attempt to belittle what was really good in this alleged new operatic movement, especially in Mascagni, its originator. This composer's merits are brevity, a disregard of conventionality, eclectic ingenuity in appropriating the effective elements of various national styles (*à la* Meyerbeer), and an undeniable dramatic *verve* in some situations. But these are more than counterbalanced by his shortcomings and vices. He has little melodic originality, but attempts to secure the appearance of it by means of odd, ungrammatical harmonies. He is ignorant of the art of symphonically developing a theme, and called his most popular piece an "Intermezzo sinfonico" without a shadow of justification, since there is absolutely nothing symphonic about its style. Though pretending to write operas, he indulges in trivialities which the popular operetta composers would be ashamed of, and there is something comically hysterical in his fondness for superlatives and unexpected explosives, "like bombs bursting in a bed of flowers." Though not without talent in instrumentation, his treatment of the brass is brutal and ignorant. His second opera, "Amico Fritz," is somewhat more refined than the "Cavalleria," but his third, "I Rantzau," is devoid of all originality.

The greatest harm done by Mascagni was this, that the extraordinary success of his first opera called into being a host of imitators in Italy and Germany — composers eager to "write after recipes of success." All their operas seemed to be "written with a dagger." Their eternal theme is adultery, jealousy, and murder, and their music is equally brutal. The writers of these operas called themselves the "Veristic School," under the ludicrous delusion that only vulgar, coarse feelings are true to life. Possibly these writers were aware that to refined people refined emotions are as "veristic" as coarse feelings are to the vulgar; but the latter happening to be more merchantable, they took only peasants, clowns, assassins, and libertines for their operatic heroes. Probably the most detestable of all these works is the one which ranked in popularity second only to "Cavalleria"—Leoncavallo's "Pagliacci," the extraordinary success of which Herr Pfohl justly characterizes as a disgrace to Germany. Not only is it essentially vulgar and disagreeable, but there is not a single original musical idea in the whole score.

Summing up his conclusions on the "Veristic School," our author declares it to be "a degenerate form of modern art," and prophesies its speedy disappearance—a prophecy which is already practically fulfilled. Again Herr Pfohl exclaims, "Modern opera, apart from Wagner's art, is an empty word, a phantom. It does not exist." He excepts, however, in other chapters, the works of the German Cornelius and the Bohemian Smetana. Both these masters were ignored during their lifetime, but now their operas are coming forward more and more. The chapters on these two masters, with that on Verdi, are the most valuable ones in Pfohl's book, the chief lesson of which, however, lies in its demonstration of the extent to which all modern operatic art is saturated with Wagnerism. He aptly points out that if Wagner's imitators have failed to achieve success, this does not prove the incorrectness of his principles any more than the inferiority of a new kind of rifle would be proved by the failure of a blind man to hit a mark with it.

It must be said that Herr Pfohl wastes rather too much space on operas which never had the faintest chance of living more than a season. He apologizes for this on the ground that to young composers the failures of others are quite as instructive and suggestive as their successes. Young composers will also find a number of useful miscellaneous hints scattered through these pages. Attention may be called especially to page 9, where our author discourses on the folly of supposing that the sonata form is eternal, and to page 156, where the translators of opera texts are belabored for their extraordinary folly in habitually sacrificing sense, accent, and rhythm to the silly kling-klang of rhyme, which is utterly useless in music. "A rhythmically arranged, poetically inspired prose is and remains the best working material for a composer."

Our Western Archipelago. By Henry M. Field. Charles Scribner's Sons. 1895. 8vo, pp. xii, 250. Illustrated.

Alaska: Its History and Resources, Gold Fields, Routes, and Scenery. By Miner W. Bruce. Seattle: Lowman & Hanford Co. 1895. 8vo, pp. 129. Ills. and map.

Dr. Field is a veteran traveller whose letters to a well-known religious weekly, from all parts of the world, have filled nearly a dozen little volumes and given pleasure to many readers. In the present instance the author made the widely advertised journey by the Canadian Pacific Railway to Vancouver, the round trip on the Alaska tourist steamer, and came home by the Northern Pacific, making a brief visit to the Yellowstone Park on the way. The book records his impressions of travel and personal experiences in a pleasant and readable fashion, though it contains nothing to detain a geographer, and is too subjective to serve as a guide-book. It is probable that the audience originally addressed by the papers now gathered into a volume, is not familiar with the numerous "tourist books" which have covered the same ground so many times in the last few years, and may have found profit as well as pleasure in the reading; but for most people the value of the book resides in the manner rather than the matter of the story and in the excellent illustrations.

The first impression of the reader who opens Mr. Bruce's book at the frontispiece, where a Samoan girl hugging a palm-tree is labelled "An Alaska Indian Girl," is decidedly uncomplimentary to the author. So transparent a trick can deceive only the most inexperienced, and the only mitigation resides in the fact that the Samoan girl is undoubtedly prettier than any Alaskan is likely to be. An examination of the text, however, shows that this may be useful in its way if due allowance is made for a "reportorial" tendency to overestimate and exaggerate. Mr. Bruce has spent several years in Alaska, and is an enthusiast who takes the most optimistic view of everything in the Territory. The book is intended apparently for sale to tourists and as a guide to parties bound for the Yukon placers. There is a fairly good account of the route, with some excellent "process" reproductions of photographs and sketches of the portage, and a useful map. A chapter is given to the introduction of reindeer, with which enterprise the author has been personally connected, and another to the boundary dispute. Although Mr. Bruce is decidedly over-sanguine in many matters, and neither his history nor his ethnology is above severe criticism, it may at least be said that his book is measurably free from the errors into which some others of its kind have fallen as to recent matters of fact. The illustrations, from a variety of sources, are very good, and the book is well brought out, though it would be the better for an index.

Patriotic Citizenship. By Thomas J. Morgan, LL.D. American Book Company.

The object of this book, as the author declares, is to stimulate patriotism and promote good citizenship. Probably he regards these phrases as synonymous; but, taking his definition of patriotism, it is impossible to accept this view. It is one thing to awake and strengthen a love of country in the sense of "an enthusiastic devotion to American institutions"; it is quite another thing to stimulate citizens to discriminate between good and bad institutions and laws. So far as we have been able to discover, Mr. Morgan is prepared to accept the motto, "My country, right or wrong," as containing the whole duty of the citizen. It is true that he says that "patriotism, to be fruitful, must be intelligent," and adds some platitudes of similar purport; but the body of his work is composed of incitements to emotion at the sight of the American flag, at the report of military achievements, and at the contemplation of the magnitude of our land. Patriotism,

he tells us, is to be cultivated by visiting the national capital, Niagara Falls, and noted battlefields; by the singing of national songs and the reading of patriotic utterances. Americans have especial reasons for loving their country because "the territory occupied by the United States is continental; its shores are washed by the two great oceans; its mountains, plains, lakes, and rivers are among the most magnificent in the world; it has great diversity of scenery and climate, has boundless resources, and can support in comfort, even luxury, a population of many hundred millions."

It is impossible not to ask, upon reading such precepts in a book intended for the young, "What shall it profit a man if he gain the whole world and lose his own soul?" If the private morals of a people are dissolute and their government corrupt, it matters little that every prospect pleases. The only legitimate ground for patriotic pride is to be found in character. If the American people are virtuous in their lives, if they select upright rulers, and maintain justice between man and man and between their own and other governments, then we may heartily thank God, and sing patriotic hymns, and listen to patriotic utterances; otherwise, fasting and humiliation more become the good citizen. So with devotion to American institutions. We have some good ones and some bad ones. Some of the good ones are perverted, and all of them tend to be unless they are incessantly defended. It is essential to good citizenship—to true patriotism as distinguished from false—that the moral standard in national feeling should be supreme. We need apprehend no foreign attack upon our government, no outside interference with our institutions. No stain will spot our flag unless put there by our own hands. It will never lack defenders in any cause, whether honorable or dishonorable, and if it is exalted into a sacred emblem, it is thereby degraded into a fetish. The notion that the national welfare is promoted by encouraging blind enthusiasm at the sight of the flag, and by penal laws compelling its display on every school-house and public building, is nothing but mischievous humbug. It is a device of the politicians to distract attention from the need of reform. It serves the same purpose that a foreign war has often served in the case of despotic misgovernment. No one can seriously maintain that boys taught in school-houses over which a flag waves will make better citizens than those elsewhere instructed. We doubt if even Mr. Morgan believes that the character of the legislators of New York, for instance, is perceptibly improved by hoisting the American flag over the Capitol at Albany.

As to the method in which Mr. Morgan inculcates patriotism a word may be added. His book is in the form of a catechism, the questions and answers being of his own writing, but supplemented by voluminous quotations from a large number of writers, some of whom must be surprised to find themselves in such company. Many of these quotations are excellent, in both sentiment and expression; many are commonplace and without literary quality. Mr. Morgan attempts, in addition to teaching patriotism, to present the leading facts in American history, as well as much other information on social topics, in this catechetical form; but we do not think that he has succeeded well. He has tried to do too much, and he does not appear to us to be qualified to discuss in an edifying manner the subjects with which he deals. Upon the whole, we must say that we are altogether unable to share the author's opinion that his book is adapted for use in public and private schools, in families, and in reading circles, and that it "may be studied profitably by any person, native or foreign-born, who wishes to know the significance of the flag and to understand the privileges and responsibilities of American citizenship." We should regret to see it employed for any such use, and should regard it as a waste of time for any person to study it at all.

Hedonistic Theories, from Aristippus to Spencer. By John Watson, LL.D. Macmillan. 1895.

Dr. Watson has a swift pen. It is not many weeks since we were studying an abstruse treatise by him; and now, almost upon the heels of it, comes another. Are they turned out by machinery? He should remember that there are other philosophers to whom a student must allot some portion of his attention. In its general method this work is precisely like that of a hundred other products of the Hegelian and semi-Hegelian schools—namely, it examines what has been said by writers with scientific affiliations, and, by successive modifications, made separately, each one slight, endeavors to show that those writers have conceded the essential point in the idealistic contention.

Hedonism, the doctrine that pleasure is the sole motive to human action, is one of the old sects of metaphysics, as unscientific in the grounds of it as all the rest. Two features, however, recommend it as a scientific hypothesis. The first is its simplicity. The maxim called Ockham's razor, that a theory ought not to suppose the existence of things of a radically different kind from any that, upon other grounds, must be admitted to exist, if such a supposition can possibly be avoided, is not exclusively a nominalistic doctrine, but must be accepted by every scientific logician, be he nominalist or realist. Theories so suggested have a claim to be the first provisionally adopted; for should they not prove sufficient to explain the phenomena, the sincere endeavor to make them do so will, at any rate, bring to light the pathway to be pursued in modifying them. The other scientific virtue of hedonism is that its solutions of ethical problems are definite and can be compared with facts. It has, indeed, already been applied to many questions, public and private, and its practical effects have been uniformly salutary. Practically, then, it proved itself better than the legislation and conduct, based on mediæval and older ideas, that it replaced. But an hypothesis may be, as a matter of scientific method, proper to be adopted provisionally, without being in itself probably true; and there never was but one brief period, some forty years ago, when there seemed to be a fair prospect that rational thinkers might unite in the definitive acceptance of hedonism. At present the outlook is quite unfavorable for it.

Dr. Watson's arguments have a pretty uniform, machine-made character. Any one will serve as a specimen of all. When Bentham remarks that the intensity of a pleasure depends upon the special susceptibility of the subject, Dr. Watson argues that this is to admit that pleasure is relative to *the idea of* self, although Bentham would not seem necessarily to admit that there was any quite unitary self, and still less that *the idea* of such a self was an ingredient of pleasure. But, after allowing a few sentences to pass by, during which the last formula is allowed to simmer, the critic takes it up again, and now maintains that the virtual admission is that pleasure is the satisfaction of an *ideal self;* and presently urges that we act for self-realization. With this summary method of criticism one can conceive that a book may be written with speed.

Whether or not there is any contradiction between saying that man's motive is pleasure and saying that he acts for the sake of realizing his ideal self, is not made clear to us. The latter phrase seems to be vague, especially in reference to any calculation of precisely how a given neighbor of mine will act in a given contingency. We will not deny to it a certain value; but its value seems to be of so different a kind from that of the hedonistic formula that it is irrelevant to criticise the one from the standpoint of the other.

Dr. Watson does not seem to have received all the laudation he expected from critics of his former works; for, speaking of the Sophists, he says that they were not so bad as the modern reviewer, who, after a glance at the preface and table of contents, blames without stint a book which has cost its author years of labor. But, in fact, those who notice a book without much examination are apt to write favorably of it. What often happens is, that a reviewer, who has probably burnt as much oil as the author over the subject of the book, spends much more time over it than can bring any recompense in instruction (and *a fortiori* more than he can otherwise be remunerated for) in his desire to treat a fellow-worker with generously measured equity; and if he blames it, he only does so in fulfilment of his fiduciary relation to his readers. He is not surprised to meet from the author, instead of acknowledgment, only petulance, exaggeration, insensibility to the requirements of justice, and naïve self-betrayal.

Two Seasons in Switzerland. By Dr. Herbert Marsh, R.N. With Illustrations from Photographs by O. Williamson. Dodd, Mead & Company. 1895.

People have written about the Alps in a great variety of manner, but we venture to state that Dr. Marsh has struck out a new line. As it is not likely that he will find many imitators, we may as well indicate the nature of his individuality. It consists in a frank disregard of the restraints which most authors put upon themselves in matters of style. Dr. Marsh takes the public into his confidence as though it were his bosom friend. If he wishes to write a paragraph of slang, he writes it without stopping to reflect that he is doing anything unusual. And such slang! On every page he speaks in two voices. One is of the sea, and with it he talks quarter-deck slang; one is of the mountains, and with it he talks mountaineering slang. Furthermore, he is a grammatical sinner. Like Robert Montgomery, his genius is too free and aspiring to be shackled by the rules of syntax. We wonder, as we pass from chapter to chapter, whether he will not tire of this unchartered freedom and condescend to write like other people. But the book closes without any tribute whatever to conventionality.

We subjoin a few passages which are neither better nor worse than the rest:

"This proved my last expedition at Zermatt, for next day I found I must give my foot a rest, and so became a fixture in the garden until the raising of the tariff on the 1st of July caused my sister and I to beat a retreat to Zinal."

"Immediately after leaving the shoulder we passed another party, though not until we had asked permission, of course, for the same etiquette prevails, or should do so, on a mountain as at golf, and presently stopped for a tot of wine and a biscuit, and by Führer's advice

left our axes, though I noticed he stuck to his own."

"At first we thought of descending on to the Col du Mont Rouge, but the rocks seemed very rotten, so we skirted along on the edge searching for a feasible route, and at last on reaching a tiny stream found a practicable gully, down which we slithered at a deuce of a pace, frightening a small herd of chamois feeding just below nearly out of their senses."

And yet Dr. Marsh, by reason of his enthusiasm—though not by reason of the looseness which he seems to consider a virtue—has succeeded in writing a book which is readable. An invalid lady once said to Augustine Birrell on laying down the 'Bible in Spain,' "I feel as if I had been gesticulating violently for the space of two hours." One need not be an invalid to feel out of breath after chasing Dr. Marsh over the Alps. We should never think of comparing him with Borrow in any respect save energy, but his energy is unexcelled. He rushes from one big mountain to another, scurries up, "cols" it, and so on to the next. We follow as fast as we can, but only to find that he is always in advance and singing that scornful refrain of the guides—

"Langsam voran! Langsam voran!
Damit der letzte Mann nachkommen kann!"

Dr. Marsh has the good taste not to apologize for his performance. It is the record of two summers' hard climbing and thorough enjoyment. Both the exercise and the enjoyment make themselves felt in spite of the untutored style to which we have referred. A few names will show that the mountains ascended were of the first class: Matterhorn, Weisshorn, Dom, Zinal Rothhorn, Dent Blanche, Bietschhorn, Grand Combin. Dr. Marsh is evidently fond of racing, and tells us what he can do. Four thousand feet in an hour and twenty-five minutes is a record which will stand a deal of beating. Athletically this may be a feat to boast of, but the true mountaineer—*e. g.*, Mr. Dent—is not so precipitate. Mr. Ruskin's charge against climbers, that they view the mountains in the light of greased poles, is not altogether untenable when restricted to such a particular case as the above. Yet Dr. Marsh survived, and was preparing to return to the Alps in the spring of 1894, when his plans "were completely upset by the following paragraph among the naval appointments: 'Staff-Surgeon H. E. Marsh to the *Northampton*.' So with a heavy heart I stowed away my axe, rope, and sack, and returned to duty."

Thus ends the book. It will never be placed on the same shelf with 'Peaks, Passes, and Glaciers,' 'The Playground of Europe,' and 'Scrambles among the Alps,' but it deserves to find readers among those who regard the Alps as the best open-air gymnasium in the world.

Das Liederbuch des Königs Denis von Portugal. Herausgegeben von Henry R. Lang. Halle a. S.: Max Niemeyer.

We cannot but lament that we must welcome this work of a Yale professor in German garb from the press of a German publisher. We should have been glad to think that at last the conditions of scholarship in America were such as to justify one of our own publishers in issuing a production of so true learning and so real value. Unhappily, our body-politic of scholars is still comparatively limited, both in numbers and in the variety of its interests. In only a few fields can we count upon a quick appreciation of the importance of every real contribution to knowledge that may appear. The Germans still have an immeasurable advantage over us in the range, if no longer in the thoroughness of their studies; and, despite our outcry against Germanism, it is hard to to see how we shall avoid going long to school to a people that can so truly say that its motto in scholarship has been and is, "Humani nil a me alienum puto."

The task which Prof. Lang has set himself is of decidedly greater significance than the title of his book would give us to understand. His main purpose was, indeed, to collect from the great Portuguese *cancioneiros*, in which the earliest lyric poetry of Portugal is preserved to us, the poems of the famous patron of poets, a poet himself, King Dionysius (r. 1279–1325), and to edit these with the care that modern scholarship demands. In accomplishing this the editor has fully justified his reputation as one of the most competent of living students of Romance philology. His text everywhere shows the exactness and range of his acquaintance with early Portuguese; and the philological apparatus which he subjoins is marked by entire competency. This is not the place for a minute study of this part of his work, or for a discussion of the many interesting questions he raises. Suffice it to say that he has given us a very valuable contribution to philological science. What we should like, however, briefly to bring out is that in this book and in these studies there is an interest beyond the mere specialist's in clearing up an obscure corner of his subject.

We must admit at the start that as poetry the verses of King Dionysius and of his fellow-lyrists are not very interesting. They sin above all in having for the most part but little to do with reality. To such an extent are they deliberate works of conscious art that they leave upon us the general impression of monotonous artificiality. Love is here, as in all lyric poetry, the chief theme, but love on such terms as to seem to us hardly love at all. We cannot avoid the suspicion that in reality these courtly versifiers differed little in practice from the slightly earlier Frederick II. in Italy, whose Sicilian harem did not prevent him from composing amorous appeals to an unnamed and misty *madonna*. Some feeling of resentment inevitably rises in us as we see the most interesting of the passions thus played with, used as a mere *corpus vile* for artistic experiments.

It is not, then, as being the adequate expression of certain human emotions and experiences that this early Portuguese verse is significant. Another source of interest must be sought in it; and this will be found in the fact that we can obtain from it most valuable evidence as to the manner in which the modern European world became the cosmopolitan world it is, and in which that body of sentiments, ideals of conduct, and imaginative forms out of which modern poetry as a whole has been largely made, came to be for all Europe essentially the same. The Portuguese lyric poets did not invent, they did not draw much upon their own experience; but all the more clearly for this very reason do they show us the influences that were at work upon them and their art. We are able to determine with exactness the sources of their ideas and of the diversities of the forms they employed for the expression of these ideas. And as students of the evolution of the material upon which the imaginative life of modern times has subsisted, we can find in them much of value, even where æsthetic enjoyment is reduced to a very low point.

There is no more interesting study, nor any more essential to a real understanding of the nature and value of all poetry, than this of the imaginative formulation of sentiment and conduct, which is the stuff of poetry. And it cannot be too insistently declared that for us moderns this formulation took place in the period of the Middle Ages. By this fact alone we are sharply parted from previous periods of the world—the classical, for example. Mill's famous statement that three-fourths of what is valuable in modern culture comes from the Greeks is of doubtful interpretation; but if Mill meant that the best of the moral and imaginative life of the modern world comes to us either through unbroken, though devious, descent from the Greeks, or from the study of the classics during the Renaissance, he was assuredly mistaken. In both these ways we undoubtedly have received much from the Greeks; but the fact still remains that in what is most fundamental in our imaginative lives—the forms of our feeling, the models which unconsciously we set for our emotions and our conduct, the modes of our expression—we are children of the Middle Ages, and not of Periclean Athens.

The beginnings of the evolution of the new forms of feeling and expression are naturally very obscure. They were certainly considerably later than the Germanic invasions of the Roman Empire, but also considerably earlier than the first signs of them we can discern. One thing is certain, that it was in France, north and south, that the first expression of them in art was attained. From the troubadours of Provence we get the first clear and conscious utterance of those ideals of life which distinguish the modern world, as well as the first settled models of modern poetic art. Northern France, however, quickly took up the cry; and during the twelfth and thirteenth centuries these countries set the pattern in these matters for the rest of Europe. Hence the supreme interest of Provençal and Old French literature for all those who would rightly understand the phenomena of modern society and modern literature. Innumerable traits in both are intelligible only to him who has gone to this period of origins; and any assessment of the value of these traits is impossible without this preliminary study.

Here, then, is a process every step in which is instructive. It is important for us to know both the history and character of Provençal and Old French poetry, and also the exact manner in which each of the other European nations received this poetry and adapted it to its own use. How much of it could each assimilate? How completely did each fall under the spell of it? What modifications of it did local traditions and conditions produce in each? These are all questions of moment. And it is in answering these and similar questions for Portugal that Prof. Lang has done us the greatest service. In his admirable introduction he has studied with fine and accurate scholarship the essential elements of the Provençal and Old French lyric poetry, and has shown to how great an extent these reappear in the verse of the Portuguese troubadours. He has noted both the characteristics and the deficiencies of the latter that seem to be due to the peculiar and national influences under which they wrote. The task was in some ways not so extensive as the application of the same method to literatures ampler and richer than that of Portugal. Nevertheless, Prof. Lang deserves the credit of having accomplished it with greater clearness and precision than any scholar has yet succeeded in attaining for any other portion of this great and interesting field.

College Sermons. By the late Benjamin Jowett, M A., Master of Balliol College. Edited by the Very Rev. the Hon. W. H. Fremantle, M.A., Dean of Ripon. Macmillan & Co. 1895.

THOSE who have followed Jowett as the interpreter of Plato and Thucydides, as the expositor of St. Paul's letters to the Romans and the Thessalonians, and as the writer of occasional essays, including one of the most famous of the century (in 'Essays and Reviews'), will be glad to go with him along this bypath of his mind. Indeed, there is attraction here for many who have not been drawn to him by the energy of his severer tasks. Those who like sermons generally may find these little to their taste, they are so different from the common run of sermons. They are literary products, which sermons seldom are, and they deal with the realities of experience, which sermons frequently do not. So much would probably have been true of them under whatever circumstances they had been produced, but the actual circumstances of their production were extremely favorable to the qualities which they possess, namely, reality, simplicity, straightforwardness; good, honest dealing with the problems which were peculiar to the men addressed. For these were college men, Jowett's pupils at Balliol. No audience could be better calculated to force a preacher back on his reserves of absolute sincerity. It will stand no nonsense, no sentimentalism, no rhetorical effusion. Jowett recognized the situation, and adapted himself to it the more easily because he was to its manner born. "The language is as direct and simple as possible. Where a plain, short word will serve to express his thought it is always used. His only rhetoric lies in taking the shortest way possible to reach the understanding and the heart. . . . The peculiar charm and force were always the same, . . . the consciousness that each sentence expressed a genuine and original conviction." It is no wonder that the men who heard these sermons were urgent for their publication. It would seem that many other college men and young men generally, however indifferent to sermons ordinarily, must find something here to which their better natures will respond.

The absence of rhetorical effusion does not imply the lack of careful writing. "He was extremely careful, even fastidious, in the expression of his thoughts; and in this, as in every other part of his work, he gave himself incredible pains." To bring his manuscript to a perfection that would justify its publication was a painful business, and he shrank from the labor of revision. On one manuscript he wrote: "This is the eighth time I have tried to rewrite this sermon and failed." In the sermons as they stand, there are probably many expressions which did not satisfy his exigent ideal. Only those preached at Balliol are included. Others dealing with theological or more general questions and the characters of eminent men are reserved for another volume, but a foretaste of their quality is given here in every kind.

The Broad Churchman is particularly evident in the critical introductions to the sermons, which are so pleasant that wherever one is wanting it is distinctly missed. If much in these is from the common stock of modern criticism, all of them have the accent of the writer's individuality. They use without restraint the liberty demanded for the scholar in the celebrated essay of 1860 on the Interpretation of Scripture. Some of them, where the subject is peculiarly tempting, as when a text from Ecclesiastes opens into a general consideration of the book, are quite elaborate. There is no waste of time in wilful obfuscation, no putting of new wine into old bottles, or plastering of the new bottles with old labels, or disguising of their newness with ingenious dust and mould. The majority of the sermons are purely ethical, and their homely prudence may to some people seem lacking in elevation. There are sermons on "The Husbanding and Use of Money," "Study," "Conversation," "Eating and Drinking," "Going to Church." There can be no doubt that often the preacher looks into his own heart and writes. His sympathy with shyness and his returns to this subject impress us with the feeling that he must have suffered from this habit. There are generous tributes to Lewis Nettleship, John Addington Symonds, and others. He speaks of Symonds as one of the kindest men he ever knew. There are noble sermons on the history and function of the college. Sometimes, where theological questions are touched, we feel that Jowett is using language more symbolical from his side than from his hearers'. But in general the dealing with religious matters is extremely frank. In one sermon he exhibits what is defective in the liturgy of the Church of England in the clearest light, and has, moreover, a good word for "thoughts unruly" wandering from the service into private paths. Everywhere the tone is genial, kindly, earnest, sympathetic with real troubles and anxieties, and there have been few volumes of sermons published since Bishop Butler's that may be read with more pleasure and advantage.

The Beginnings of Writing. By Walter James Hoffman, M. D., of the Bureau of American Ethnology, Smithsonian Institution. With an introduction by Prof. Frederick Starr. D. Appleton & Co. 1895. 12mo, pp. xiv, 209. $1.50.

UNDER such a title as this, one might naturally expect to find a treatment of the earliest known vestiges of the graphic systems of the various languages whose sounds have been symbolized in written characters, or at least of the incipient steps in a process which has known many varieties. Undeniably the field is one of great difficulty as well as of great interest, and the number of those thoroughly qualified to accomplish the task of setting forth the matter in detail is exceedingly small. In many cases the "beginnings" are lost, and scarcely a hint of the course of previous development is given by that which has survived from a later period. In the case of the Egyptian hieroglyphs it is a curious fact that the earliest known writing of long texts in the pyramids of the fifth and sixth dynasties was more purely phonetic than at any later time, but the first steps of the development are lost or not yet discovered. The case is somewhat different with the Babylonian wedge-writing, since its seemingly arbitrary signs can be traced back to prototypes which are more or less clearly instances of picture-writing. The same is also true of the Chinese. We are not yet come to an understanding of the significance of the Hittite signs, but their form is certainly as pictorial as that of Egypt. The derivation of the graphic systems of the Hebrews is a matter of much uncertainty, and there are many and ominous gaps in the theory propounded by De Rougé of an Egyptian origin for the Phœnician characters. The ultimate derivation of the forms of Greek and Latin letters presents some serious difficulties.

But with these problems Dr. Hoffman deals only incidentally or in most meagre fashion. The little that is said is derived almost exclusively from Taylor's work on 'The Alphabet.' His interest is American ethnology, and his book deals principally with the pictured remains left by the Indian tribes of North America. Occasionally he illustrates his meaning or his thesis by an example taken from Oriental systems of writing, but, strangely enough, when he cites the hieroglyphs of Egypt, he has had the ill fortune to happen almost invariably upon signs which did not by any means belong to the period which for us constitutes the "beginning." His remarks, too, upon the significance of Egyptian signs are sometimes ludicrously mistaken or antiquated, and it would have been as well to omit them entirely.

The author's mistake was in giving his book a misleading and a too sweeping name. He might better have clung closely to the true theme of his volume, and then dealt, as he has done, with pictographs and their interpretation, with symbols, gesture-signs, and attitudes, with mnemonic signs and the growth of conventional signs, with comparisons and with phonograms, as these illustrate the subject announced in the title, without subjecting himself to needless criticism. At the same time he might have made a volume which would have constituted a distinct contribution to a dark subject. As it is, one feels that only the edge of the matter has been touched, and that even here the treatment is unsatisfactory. The transitions are violent, and the reader is jostled about from Alaska to Peru and from tribe to tribe in most unceremonious and uncomfortable manner. This results from an apparent lack of system, which leaves the reader without any very distinct impression as to the whole, but with a variety of sensations about the particulars. There is also a sort of cocksureness as to the meanings of collections of signs which provokes the question as to how the author knows so much, since he does not deign to explain himself. He evidently has a large fund of information, but he has failed to put it in a shape most available to others.

Life in the Tuileries under the Second Empire. By Anna L. Bicknell. The Century Co. 1895. 8vo, pp. 279.

Le Journal de la Belle Meunière. Le Général Boulanger et son Amie. Paris: E. Dentu; New York: Brentanos. 12mo, pp. 525.

THE Napoleon fever would seem to have reached its last stages in recent publications concerning the Second Empire, and to have gone even a step lower when the reading public has thrust upon it a book about so grotesque a failure as Boulanger. Miss Bicknell's recollections of Napoleon III. and the Empress Eugénie have already made their appearance in the *Century Magazine*, and are quite up to the standard of current popular magazine literature. They are written in a flowing, easy style, and make the agreeable impression that one receives from the conversation of a well-bred person who knows the value of discretion. The view they present of the Emperor and of the Empress is the favorable one that would naturally be entertained by a loyal-minded inmate of the palace, who had daily occasion to observe their kind and considerate bearing to those about them, rather than their conduct as important public personages. That the book makes no pretensions to serious value may be inferred from the fact that the publishers, although fitting it out in a sufficiently sumptuous garb so far as paper, printing, and

binding go, have not thought it worth an index.

The little book about Boulanger is something of a literary curiosity. It purports to be an extract from the diary kept by the landlady of a small summer hotel at Royat, where Boulanger and his well-beloved made their home at various times between 1887 and 1891. It bears every evidence, however, of being what our newspaper slang denominates a "fake." A great part of it is taken up with descriptions of the love-making going on between a married man of fifty and a woman of thirty-two who is not his wife, but has a husband of her own somewhere. The descriptions might be in place in a French novel of the *fin de-siècle* type, but seem to an American reader in bad taste, especially when we are asked to accept them as emanating from a peasant woman who can hardly be supposed to entertain the emancipated views of a *boulevardier* or a dweller in the Latin Quarter. The book has neither a literary nor an historical value, although it is distended by the insertion of puerile extracts from French newspapers of the time. It is not even entertaining, and it is hard to guess for what purpose it was printed.

BOOKS OF THE WEEK.

FOSTER ON THE CONSTITUTION

Commentaries, Historical and Judicial, on the Constitution of the United States. By Roger Foster.

Vol. I. nearly ready. For circulars, address THE BOSTON BOOK CO., 1572 Beacon St., Boston, Mass.

LEE AND SHEPARD'S

NEW BOOKS.

ESSIE.

A Romance in Rhyme, by LAURA DAYTON FESSENDEN. Illustrated by J. H. VANDERPOEL. Cloth, $1.50.

This stirring love story is told in pleasing rhyme, the action being lively and the plot developing rapidly. Its attractiveness has been enhanced by sixteen illustrations by Vanderpoel. It will make a very pleasing holiday gift.

POEMS OF THE FARM.

Collected and illustrated by ALFRED R. EASTMAN. Over 80 illustrations. Size, 7¼x9½ inches. Cloth, gilt edges, boxed, $2.50.

Mr. Eastman shows his poetic judgment in the selection of the poems as well as in his choice of subject for illustration, the many drawings giving new force and beauty to the verse.

ON WINDS OF FANCY BLOWN.

Original verse and illustrations by MARY YALE SHAPLEIGH. Elegantly illustrated in half-tone with facsimile lettering. Size, 7x9 inches. Cloth, gilt edges, boxed, $2.00.

"A unique and attractive production. With its dainty illustrations and its magical verse, the true spirit of poesy harmoniously blends with the lofty imagery of most beautiful nature."

OLD BOSTON.

Reproductions of Etchings in half-tones. Old Boston Buildings with Descriptive Text. By HENRY R. BLANEY. Size, 7½x9½ inches. Cloth, gilt edges, boxed, $2.50.

The subjects include many of the historical landmarks which remain to the present day, as well as many which have been swept away by the march of progress, and will be a perpetual reminder to all of that older Boston which they have known and loved.

WHIFFS FROM WILD MEADOWS.

By SAM WALTER FOSS, author of "Back Country Poems." Cloth, illustrated, $1.50.

"There is a rich and absorbing delight in these 'whiffs from Wild Meadows,' and their close kinship to nature and human life will appeal to even the most time-worn souls." This volume, which contains much of Mr. Foss's best work, is elegantly bound and illustrated by many attractive drawings.

AUNT BILLY.

By ALYN YATES KEITH, author of "A Spinster's Leaflets." Cloth, $1.25.

Readers who are familiar with "A Hilltop Summer" will find in these sketches the characteristic qualities of the author's previous work.

NOTES FROM A GRAY NUNNERY.

By Mrs. J. S. HALLOCK. Illustrated with many half-tone vignettes. Cloth, $1.25.

These notes do not emanate from a convent of cloistered nuns, but from a pleasant old country house where the author resides. Here this bright student of nature passed a happy year, which is described in an elegant and charming style.

JUVENILES.

A LIEUTENANT AT EIGHTEEN.

By OLIVER OPTIC. Blue and Gray Cloth, gold dies, illustrated, $1.50.

Being the Third Volume of "The Blue and the Gray—on Land."

New "Optic" Books.

HALF ROUND THE WORLD.

By OLIVER OPTIC. Cloth, illustrated, $1.25.

Being the Tenth Volume of "All-Over-the-World Library."

New Volume in the "Start in Life Series."

THE LOTTERY TICKET.

By J. T. TROWBRIDGE. Eight full page illustrations. $1.00.

War of 1812 Series.

THE BOY OFFICERS OF 1812.

By EVERETT T. TOMLINSON. Illustrated, $1.50.

KYZEE DUNLIE—A GOLDEN GIRL.

Illustrated. 75c.

Making the Third Volume of "Little Prudy's Children," by SOPHIE MAY.

The Silver Gate Series.

YOUNG MASTER KIRKE,

By PENN SHIRLEY, author of "Little Miss Weezy" Series. Illustrated. 75 cents.

New Volume in the Hazelwood Stories.

LITTLE DAUGHTER.

By GRACE LE BARON, author of "Little Miss Faith." Cloth, illustrated, 75 cents.

Our Illustrated Catalogue Free.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 28, 1895.

The Week.

A FRIEND of General Harrison's has explained why the ex-President was not able to give us a war with England in 1890. Such an explanation is, of course, intended to show that Mr. Harrison presides over foreign-missionary assemblies and conducts prayer-meetings only as a bit of by-play, and that he is really just the warlike and death-dealing candidate for the Presidency that the times require. If he is, why did he not jump at the chance of killing thousands of men, for the sake of thousands of seals, when it was so temptingly offered him five years ago? Well, says Gen. Harrison's friend, he was ready to jump; he was fairly aching for a war with Great Britain; and had fully made up his mind to have one, but he sounded the Senate first and found, to his deep disgust, that it would not back him up. So he had to retreat the best way he could, consent to arbitration, with its humiliating results, and sadly resign all the carnage and glory. This may be true, but the Bering Sea correspondence of 1889-'90 easily lends itself to another interpretation. On September 12, 1889, the British Government wanted to know if any more British ships were to be seized in Bering Sea. Two days later Mr. Blaine defiantly refused to give "a categorical response," and, by January 22, 1890, had worked himself up to a point where he spoke openly of "forcible resistance," to which the President felt "constrained." In due time came a notice that England would protest against any more seizures of her vessels on the high seas. This instantly changed matters, and Lord Salisbury was urgently besought to agree to a single closed season, and informed that the United States Government was most anxious to negotiate, and deprecated "untoward events." But Sir Julian Pauncefote insisted upon getting a "categorical response" about the seizures, and, when it was not forthcoming, left with the State Department on June 14, 1890, a formal notification that "her Britannic Majesty's Government must hold the Government of the United States responsible for the consequences that may ensue from acts which are contrary to the established principles of international law." After that all was peace and politeness, and arbitration was speedily arranged. On this war record we do not see how Mr. Harrison can hope to be elected President. Mr. Roosevelt would have had a war on the spot, Senate or no Senate, and international law be hanged.

Gen. Alger's reply to Senator Sherman's charge that he had bought the "poor negroes" in the Republican convention of 1888 may lack something of conclusiveness as to the main issue, but it shuts, or ought to shut, the Senator's mouth completely. Whatever may have been the facts, and whatever Senator Sherman may have thought about them at the time, he wrote a letter to Gen. Alger four years later in which he said: "I assure you that, since our interview on the cars last summer, I cherish no prejudice or unkindness for the incident of the national convention of 1888." He must have forgotten the existence of this letter when he wrote in his book in 1895: "I believe, and had (as I thought) conclusive proof, that the friends of Gen. Alger substantially purchased the votes of many of the delegates from the Southern States who had been instructed by their conventions to vote for me." How could he still "believe" this in 1895 of a man to whom he had written in 1892 that he cherished no prejudice or unkindness on account of this charge, which he then must have thought unfounded? The inference most flattering to Senator Sherman which people will draw is, that his powers are failing, and that he is a fresh illustration of what Rochefort says, at the beginning of his own recently published memoirs, that a man does not undertake to write his reminiscences until it is certain that he is good for nothing else. Meanwhile, the ease with which Gen. Alger spikes the gun aimed at him ought to encourage Gen. Harrison to come forward and refute the charge that he became President by signing himself away in advance as Platt's man.

The *Tribune's* citations of history are occasionally as peculiar as its political economy. It is deep in the mire on both at present, through its pathetically urgent efforts to prove that currency inflation has nothing to do with our present monetary complications. "The national policy of protection," the *Tribune* observed on Thursday, "kept the Treasury fortified with an adequate revenue and reserve down to the hour of President Cleveland's election." Did it? What, then, was the meaning of Secretary Foster's apologies, in his Treasury report covering the year ending June 30, 1892, for his failure to fulfil by $9,000,000 the annual requirements under the sinking-fund law? So far were the revenue and reserve from being "adequately fortified" in this period, before the nomination of Mr. Cleveland, that even the deficient payment of $40,570,000 for the sinking-fund was provided, not from the surplus of the year—this was only $9,914,000—but from $16,200,000 appropriated from a trust fund in the Treasury, and $14,400,000 taken from the surplus of other years. "If this demand [for gold]," wrote Secretary Foster again in his report for the year ending June 30, 1892, "should prove to be as large the coming year *as it has been for the past two years*, the gold in the Treasury would be diminished to or below the reserve line." "The past two years," it will be observed, exactly cover the period following the enactment of the silver-purchase law of 1890, "fortified" by the "national policy of protection" as embodied in the McKinley tariff act.

The simple truth is—and Senator Sherman understands it, whether his feeble echo in the *Tribune* does or not—that the financial ruin of the past five years is traceable unmistakably to the performances of that astonishing Congress. McKinley, Reed, and Harrison came into office with an overflowing treasury, inherited from the first Cleveland Administration. For a year before their accession, the Government had paid out $32,000,000 surplus in redemption of bonds not required by the sinking fund. What did the McKinley Congress do? It found the Government a great banking institution, dependent for its credit on limited outstanding obligations as well as on a sufficient revenue. It deliberately went to work, and by 1892 had cut down the federal revenue 13 per cent., increased expenses 23 per cent., and expanded demand obligations 20 per cent., imposing at the same time an annual increase, in the floating debt, of $50,000,000. The strongest private corporation would have gone to wreck under such amazingly reckless policy; it is hardly surprising that the Treasury was forced to ask the aid of bankers. In Government finance nothing parallel to this has been witnessed since the financiering of the French Revolution. The *Tribune* and Senator Sherman coöperated to encourage and applaud this labor of destruction. And yet to-day both have the audacity to affirm that "the intelligent national policy" which "fortified the Treasury," was reversed only by the election of 1892. A more monstrous piece of political hypocrisy our national history fails to show.

Touching the renewal of work on the Panama Canal, some facts were recently published showing that the French company in charge of it has 1,800 men now actively engaged, and is collecting 2,000 more from Jamaica and other West Indian islands, intending eventually to increase its force to 6,000 men. Information which we consider trustworthy is to the effect that the money to finish the work on the present plan has all been pledged, and that nothing can prevent the opening of the canal at the appointed time except accidents or obstacles not now an-

ticipated. The expectation of the managers is that the work can be completed in six years, *i. e.*, some time during the year 1901. This announcement has staggered the promoters of a Government subsidy for the Nicaragua Canal not a little, and their spirits will not be raised by the report of the Nicaragua Canal Commission. That document had been heralded in advance as an invincible argument for the subsidy. The *Herald's* telegraphed synopsis of it says that it points out "that it is neither practicable nor advisable to attempt the construction of the Nicaragua Canal upon the data at present available, and that the undertaking would be fraught with hazards too obvious to disregard."

The heads of the report are these: There ought to be a survey much more complete and thorough than any now existing, before the work is seriously taken in hand. Such a survey will cost $350,000 and will require eighteen months' time. With the data already in hand the Commission makes a provisional estimate of cost of $133,500,000, which is nearly double that made by the canal company itself. One of the differences of detail between the company's estimates and those of the Commission relates to the "rock-fill dam" on the San Juan to hold the lake and river of that name at a navigable elevation. The company estimated the cost of this dam at $977,273. The Commission puts it at $4,000,000, and says that the feasibility of it at any cost has not yet been demonstrated, since there have been no borings made of sufficient depth to show what kind of foundation the dam would rest on. This dam, it should be remarked, is the key to the whole enterprise. Until the feasibility of this dam is proved, the Commission would not advise the doing of any work other than that of survey. The Commission also finds that the entrance to the harbor at Greytown as proposed by the company is in the wrong place. It should be moved eastward a mile and a half, and the whole harbor should be dredged to a depth of thirty feet below low water. The entrance to the harbor at Brito, on the Pacific side, should be changed also. There is a lamentable want of detailed information all along the line, and particularly in reference to the rainfall and its effects upon earth-work, the height of rivers and lakes at particular seasons, etc. It appears that all plans have been based mainly on the Childs report of 1852, even the reports of the present Maritime Canal Company being in line with that of Childs, whose maps have been accepted without revision and published as those of 1885.

The Boston Home Market Club's dinner last week was attended by 500 strong and enthusiastic protectionists. Such were needed to sit through Warner Miller and Charles Emory Smith, and to live to tell the tale. While those sons of wind were speaking, Senator Frye was telling the York Club at Biddeford, Me., that he thought the woollen mills would hardly survive two years longer, but that they could not get any tariff relief within that period in any case. This makes it all the stranger that the Home Market Club did not have a lot of New England woollen-manufacturers present to demand a duty on wool at once. If what we hear is true, some such manufacturers were invited, but replied that they were quite willing to risk surviving two years, or even longer, under free wool. Many of them, moreover, are saying openly that if the Republicans want to cut their own throats, the most expeditious way to do it will be to go to ripping up the wool and woollens duties again. The business world cannot and will not stand it, they say. Senator Frye must have heard talk of this kind, and hence have refused to locate the Republican millennium anywhere within the "next fifteen years." But a millennium fifteen years off cannot prove a very powerful political motive with voters who know that half their number will be dead by that time. All true millenniums are due just after the next election. Ask Mr. Chauncey Depew about that.

The most encouraging thing about the recent municipal election in Baltimore is not the fact that a Republican was elected Mayor. There would be little gain to the people in the substitution of one party for the other if the new Mayor intended to run the government for the benefit of the Republican machine. The promising feature of the change is the apparent mastering, by the successful candidate, of the idea that the administration of public affairs in a great city is properly not a matter of party politics at all. In his inaugural address Mr. Hooper laid down these sound principles:

> "In my letter of acceptance I stated that my conception of the corporation known as the Mayor and City Council of Baltimore is that it is a corporation chartered by the Legislature of the State of Maryland for the purpose of conducting the municipal affairs of the citizens of Baltimore. I stated then, and I say now, that the Mayor of this corporation has duties similar to those of the president of any other corporation; that the members of the City Council bear a relation similar to that of directors in other corporations, and that the citizens are the stockholders. If this conception is a correct one, and I believe it is, then the affairs of the Mayor and City Council of Baltimore must be conducted on principles similar to those of any other business corporation. I know that this position has been and will be criticised adversely by many who do not take this view of municipal government, and yet I have at this time reiterated it, so that my platform will be clearly understood and my actions in the future be interpreted upon this basis."

Of course it remains to be seen how nearly Mr. Hooper will live up to this platform. But it is an immense gain to find a candidate for Mayor of a large city laying down such excellent principles in his letter of acceptance, and then emphatically reiterating these doctrines as the ones by which he will be bound, when he takes the oath of office.

The official canvass of the vote for this city shows that the first estimate, made immediately after election, as to the number of men who stayed away from the polls after registering was a great deal too high. Instead of being nearly 40,000, the actual number was only about 20,000. There were about 10,000 blank and defective ballots cast, and this fact was not disclosed till the official canvass was made. This accounts mainly for the mistake in the early estimate. As a matter of fact, the difference between the total vote and the registration was unusually small, showing that the interest in the election was maintained till the last. We shall have to admit, therefore, that Tammany carried the city on a square stand-up fight, and that they won because the respectable people of the city did not care to make the necessary effort to defeat them. The registration this year was 27,000 less than that of last year, and was fully 40,000 less than what it would be if the entire voting population were to register. Tammany always gets its full strength out, but even then it never musters much over a third of the voters of the city. This third wins because the two-thirds are too indifferent, or too partisan, or too lazy to combine in the interest of decent government and the good name of the city.

Mayor Strong revealed one of the chief beauties of Tammany government, in his speech at the Chamber of Commerce banquet last week, when he described the condition of our municipal buildings as disgraceful to our civilization and in many instances "detestable." That is the simple truth about them. As the Mayor said, the Tammany policy of Grant and Gilroy was to keep down the tax-rate in order to make the people content with Tammany rule. Accordingly all repairs were voted down, and the public buildings were allowed to go to ruin, until, as the Mayor said, "there is not a building in the city of any public nature that has not been neglected, reduced almost to absurdity." Not only have we a Hall of Records which is in danger of tumbling down, but we have our police and firemen lodged in buildings nearly all of which are literal death-traps, many of them being actually without fire-escapes; several of our court-rooms in which the City Magistrates sit are totally unfit for human habitation; of our charitable buildings on Hart's, Ward's, and Riker's Islands, as the Mayor said, "just one is fit to have a human being in it"; and the Tombs and Ludlow Street jail are in like condition. The Mayor estimates the necessary outlay in this direction alone at $3,000,000.

Some of the features of legislative reform reported to have received favorable consideration by the commission appointed by Gov. Morton are in successful operation in Connecticut legislative practice. It is the rule in that State that newspa-

per publication must be made, in advance of the assembling of the Legislature, of an intention to introduce any measure which might affect a particular interest, such, for instance, as a bill for a street-railroad franchise. During the legislative session advance notices of committee hearings on all measures are printed in a legislative bulletin, copies of which are accessible to all parties in interest. A further obstacle to snap-judgment is the legislative rule that all bills, public or private, which are favorably reported, must be printed, and that final action on any such measure cannot be had, except with unanimous consent, until a printed copy of the measure has been on the desks of the members for at least one legislative day. In addition, there is a printed daily legislative calendar, giving a list of bills and resolutions reported from committees, with the nature of the report, and with an announcement whether the bill is ready for action; and, finally, there is no way in Connecticut legislative practice to smother a measure in committee, as all matters, no matter how insignificant or foolish, must be reported by the committees in some form at some time. While these Connecticut legislative practices by no means prevent legislative evils, they are efficient, in the hands of vigilant observers of legislative procedure, to prevent snap-judgment.

There is nothing odder "in our midst" to-day than "the Woman's International Maybrick Association." Mrs. Maybrick, who gives her name to it, is confined in an English jail on a conviction for murdering her husband. The sentence was commuted, Judge Fitzjames Stephen (who tried the case) says in the recently published life of him by his brother, to imprisonment for life, on account of his opinion that it was not clear that the husband died of the poison the wife administered to him; but die he did. A number of women in this country have heard an appeal from the conviction, and have overruled the Judge, the jury, and the English Home Secretary, and have pronounced her innocent, and have now been laboring for years to procure her release. She has some connection with the United States, through her mother or other relatives. Therefore they say she ought to be released on the demand of a properly constituted American Association. But trouble has now arisen in the association itself. Unfortunately Mrs. Maybrick had a lover, and some of the stricter members of the association are unwilling on this account to testify in one of their resolutions to her "womanly integrity." The controversy on this subject is fierce and interesting. One of her champions insists that she might have a lover and "yet be in thought and purpose a clean-souled woman, and therefore possessed of the same womanly integrity common to the best women of the world." How is this? Until it is settled by the society one way or the other, we predict that the brutal English will never let Mrs. Maybrick out of jail. It is very foolish to complicate the question of her guilt or innocence of murder with the other question of the "cleanness" of her wifely soul. But truth will win in the end.

The Canadian copyright muddle is straightening out, if we may trust Mr. Hall Caine's assurances. He asserted on Monday night at Ottawa that he, in his capacity as envoy extraordinary of the English Authors' Society, had succeeded in persuading the Canadian Government to withdraw the obnoxious act of 1889, still awaiting imperial sanction. That law, compelling, like our own, simultaneous and separate publication in order to secure copyright, will not again, Mr. Caine says, be offered to the Canadian Parliament or sent to England for approval. In its stead a new measure is to be introduced, allowing foreign authors to secure copyright in Canada at any time within sixty, or, in the discretion of the authorities, ninety days after publication. Moreover, the right to publish a non-copyright book can be exercised only under a Government license, such license to be given to but a single firm, while, pending its issuance, the author is to have yet another chance to apply for copyright. It does not appear whether separate publication is to be required, but this seems probable, as Mr. Caine speaks of "concessions" which had to be made on both sides. Even so, the compromise bill will be a distinct advance over the old one in the recognition of literary property, and will probably suffice to keep Canada within the terms of the Berne convention.

One of the most remarkable events ever known in the financial centres of Europe was the tumble in stocks in the Berlin and Vienna Bourses on the 8th and 9th of November. It came like thunder out of a clear sky, the very best dividend-paying securities falling from 5 to 20 points, with few buyers even at the decline. The panic was caused by the political crisis in Turkey. It began on the Vienna Bourse, which, being the nearest to the scene of the expected conflict, would suffer most in the event of a general reopening of the Eastern question. Austria is now next neighbor to Macedonia by virtue of her suzerainty of Bosnia and Herzegovina, and there is no knowing what might happen there or in Servia and Bulgaria, which are also her near neighbors. When the panic struck Vienna, she sought to unload on Berlin. The two bourses are in such close touch that any breath of excitement in the one is communicated to the other immediately. The fall in prices was not restricted to the securities common to both, but ranged over the entire list in varying degrees. After scenes of excitement during these two days unparalleled during the past twenty years, the two bourses righted themselves and found that there was no harm done except a rather reckless transfer of property between individuals, where the losses and gains were presumably equal. The affair shows faintly what would be the consequences of a real European conflict. It must make a profound impression on the capitalist class, prompting them to use their influence more than ever to preserve the peace. War means the ruin of thousands and tens of thousands of men before the armies are mobilized, and even before a formal declaration is made.

The Sultan's letter to Lord Salisbury was somewhat pathetic, as coming from probably the last ruler of a race which has made a great figure in the world. But it indicates absolute helplessness and despair. Of course his "word of honor" to carry out the reforms is of no value, as he has not the power, even if he has the will. Turkey is perishing for want of a decent official class more than anything else. The Mussulman peasantry are a stalwart, honest, simple-minded race, who make some of the best troops in the world when well led, but the supply of respectable officers for the army as well as for the civil service has been steadily declining for two centuries, and, as it declined, the boundaries of the empire have receded. The truth is, that the class from which public servants are usually drawn is in Turkey ruined by the harem. Its men are worn out or have their characters wrecked before they are twenty-five, and the sovereign is seldom much better than they are. Mahmud II., who exterminated the janizaries, is the only man of real vigor the Turks have had since they were defeated before Vienna. The others have been feeble and suspicious tyrants. Of late years, since Europe began to meddle in their affairs with a strong hand, they have been gentle, capricious, childish, and delicate. The present one is no better than his predecessors, in spite of Lord Beaconsfield's ludicrous eulogy on him after he brought back "peace with honor" from Berlin. Lord Salisbury made some remarks after reading the letter, which, however, held out no hope of an immediate interference. In the meantime there is but cold comfort for the Armenians who are being massacred, in the reflection that their fate is likely, in the long run, to bring down the vengeance of heaven on their oppressors. Lord Salisbury's philosophic observations on this subject at the Lord Mayor's dinner must have sounded humorous even to a man whom the Kurds were preparing for death. Considering the accounts which are coming in from Armenia, the general accuracy of which is not denied, the remedial movements of the fleets about Salonica are really droll. But the truth is, no power can do anything but threaten the wretched Sultan except Russia, and she is doubtless biding her time.

THE COMING SESSION.

Gen. Henderson, the veteran Republican ex-Congressman from Illinois, is reported as saying that if any financial recommendations should be made by the President in his coming message, they ought to receive prompt consideration and action, even if they do not altogether correspond with Republican ideas of currency reform. "The country," he thought, "should be regarded first and the party afterwards." He thought, also, that it would be unwise and a mere waste of time to attempt tariff revision during this Congress.

In the same tone and temper as Mr. Henderson's remarks is an editorial article in the leading Republican organ of Iowa, the *State Register*, which says:

> "The Republicans will have a large majority in the House, where legislation of the most vital character must originate. The Senate is neither Republican nor Democratic. The Populists hold the balance of power there, and above either house of Congress stands a hostile President. Under the circumstances the Republican members must carefully guard their legislation. They must show to the country that they are wise, conservative, constructive, and patriotic in their legislation. . . . Republicans will serve their party best by serving their country first and above all."

These words of caution are directed against the tariff extremists and also against those who would precipitate the country into needless foreign complications. What the Republican party needs now is to avoid anything that can disturb the *status quo* as regards the tariff. If they are content to drift with the tide, their prospects of reaching the haven of their desires are bright.

There is one question, however, referred to by Gen. Henderson that will not wait for solution. It is the question of currency reform. The gold reserve is again running down, and it may soon reach a point where another bond issue will be necessary. To stand back and rail at the bankers, and shout that something else ought to be done, is of no more avail than to push with one's hands against a glacier or to blow with one's breath against a tornado. The Secretary of the Treasury has no option to do this thing or that thing. The claims upon him are various and imperative and ceaseless. They roll and beat against him like the waves on the shore, and they will continue to roll and beat against his successor, whoever he may be and whatever party he may belong to. The first and most important of these is the payment of the Government's demand notes. Other claims may be postponed for a little; these cannot wait at all. Failure to meet them is bankruptcy.

No political party and no public man dares to face national bankruptcy. If the Republicans expect to elect the President next year and to take the responsibility of the national finances, they are more concerned in an early adjustment of them on a sound basis than the Democrats are. Mr. Cleveland and Mr. Carlisle can go on as they have done. They can sell more bonds, they can offer a higher rate of interest, or they can sell bonds below par. The only thing they cannot do is to allow the Government to go to protest. The law under which the last bond sale was made is ample for the purpose, so long as the Government has any credit at all, and the President will surely execute it to the last day of his official term, the objurgations of blatherskite newspapers and Congressmen to the contrary notwithstanding. These will pass by him like the idle wind which he regards not.

The export of gold from New York last week aggregated about $7,500,000. It is worth while to note that this heavy movement is going on in the face of the most strenuous efforts of the exporting bankers to avert it. The syndicate-bond contract expired nearly three months ago, and with its expiration ended all obligation on the part of the contractors to continue lart summer's expedients and "protect the Treasury of the United States against the withdrawal of gold." Yet the contractors have voluntarily united, ever since October, in continuing exactly the policy of last summer, and straining their foreign credit to postpone actual gold shipments. To this there had to be some end, as to all artificial expedients based on credit, and within the last week several firms have been compelled to satisfy their requirements in the London discount markets by gold remittances. As to the cause of this situation, nobody has now any excuse for doubt. Mr. Harrison's Secretary of the Treasury saw and officially described this working of currency inflation, as far back as 1891; the business community had it forced on their attention in 1892, in 1893, and in 1894; and the most powerful financial combination ever formed to withstand a law of nature failed, in 1895, to stem the current. There is not to-day even the somewhat confusing factor of a European demand for gold, which intervened in 1892. Last week's shipments went out at the normal export level of exchange. The business men, the bankers, and the administration have alike done all that human power can do to avert or palliate the mischief. To-day the logic of the situation points inexorably to the law-making branch of Government.

To argue, as some people do, for "voluntary resumption of gold payments" by both the banks and the Treasury, is as visionary as the meaningless aphorism of Horace Greeley in the older greenback days, that "the way to resume is to resume." The banks have at intervals, during the last three years, coöperated to supply the Treasury with gold in exchange for notes, and the Treasury's own balances of to-day show how little use there was in such "reimbursement." We have no wish, however, to indulge in further controversy on the subject. Our regret is that anybody should turn aside from the serious problem of the hour to deal with makeshifts and nostrums which are utterly impracticable in the eyes of all experienced bankers, and which would not constitute a permanent remedy even if they were practicable.

The real question, and the one which ought to be taken up at the coming session, is how to get the Government out of the banking business altogether. It is now evident that a shortage of revenue is not the whole of the difficulty which confronts us. The Treasury has a very large cash balance—much larger than its average of the years preceding the passage of the Sherman act of 1890—yet that does not prevent the drain of gold. The element of distrust is still active. Want of confidence still shows its paralyzing effect, notwithstanding good crops, increased railroad earnings, and all the usual elements and factors of prosperous times. It cannot be too strongly impressed upon the Republican leaders in Congress that if they expect to win next year, they ought to do something now to restore confidence in the currency. If they do not, their victory will turn to ashes very soon thereafter.

SECRETARY CARLISLE'S SPEECH.

Gratifying as it was, of course, in our present extremity to have such a speech as Mr. Carlisle's before the New York Chamber of Commerce last week, from such a source, it is impossible, from one point of view, to read it without a certain honest shame. That a Secretary of the Treasury, not in Carácas or in Managua, but in the second greatest commercial city in the world, should have to gather its leading merchants around him and lay before them, with earnestness and eloquence, a string of elementary truths which in all other great commercial cities are as familiar and as well established as A B C, is surely a little humiliating. If Sir M. Hicks-Beach were to get the London merchants together and say, "My friends, the Government ought not to try to do a banking business; it ought not to keep a large body of demand notes afloat as legal tender in time of peace, because such notes drive away the gold in which they are payable; it is ridiculous to be borrowing gold in order to redeem them and then issue them again; it is ridiculous to call them money when they are really only promises to pay money; bankers are not public enemies, but necessary agents in the distribution and exchange of products; they are dependent for their prosperity on that of the community; it is the stability of our currency which makes London the financial centre of the world; the nature of the currency should not be settled at each election, and there should not be one kind when the Liberals are in office and another when the Tories are in office; 'cheap money' is a ridiculous phrase, and financial 'crazes' unsettle business"—how long would the audience listen to such preaching? About ten minutes. What would they say to the

orator? They would say, "Sir Michael, we are astonished that you should summon us from our business to listen to such platitudes. You are anything but complimentary to our intelligence. Bye, bye."

Of course Mr. Carlisle's audience at the Chamber of Commerce dinner knew the speech was really not addressed to them, but to that immense public whose habitation begins about one hundred miles back from the coast and runs nearly to the Pacific, which pays so little attention to human experience that each generation has to learn everything about finance from the very foundations. A large portion of it never learn it without passing through two or three "crazes." In fact, to some of our people, "crazes" are nearly as necessary as measles or whooping-cough to children. They can never grasp financial principles till they have had one or two. And yet the leading and fundamental doctrines of finance are accessible to nearly every man, by merely questioning himself. Nearly all financial errors are based on the notion that the "other fellows" will be the easy victims of some sort of humbug. If a man will only ask himself, and answer honestly, the questions, "Which would I sooner have—gold or silver, or paper, for myself? Do I like to lend money without security that I can readily turn into money? Do I like to lend money without knowing exactly in what way my debt will be paid? Should I like to work for a salary the exact value of which at the end of a year would be uncertain?" a great deal of financial light will get into even the most darkened mind.

Secretary Carlisle exhibited a complete theoretical mastery of the subject he was called upon to discuss, and a facility of treatment which could not possibly be surpassed. It is seldom that those who have sat at dinner at Delmonico's for two hours, and have then listened to a speaker for half an hour, ask him to go on when he shows an inclination to stop, especially if the subject is the currency question. No tribute to the speaker's powers could be higher. Yet this is what happened when Mr. Carlisle was near the end of his discourse. Not only was the applause of the listeners hearty, but the demand that he should go on was nearly unanimous. It was possible to see, also, what chords struck by the speaker were most in unison with the thoughts of those whom he addressed.

First of all was the demand that the gold standard be preserved at all hazards, and that there be no more dodging and ducking, no more double-dealing in platforms and public speeches. Upon this point there was no dissent, but, on the contrary, an outburst of applause that was really vociferous. Not less hearty was the assent given to Mr. Carlisle's proposition that the Government was never intended to do a banking business, and has no machinery for doing it; that consequently it ought to abandon it at the first possible moment. Of course this means that the Government's legal-tender notes ought to be withdrawn, and that when once redeemed they ought to be cancelled and burned. That this was Mr. Carlisle's meaning he affirmed repeatedly and emphatically, and this opinion was emphatically approved by the audience. No particular method of accomplishing this result was sketched, but the general plan of leaving to the banks the business of furnishing a paper currency to the community was indicated, and this too met the views of the great majority of those present.

Now the question that comes to the mind of every thoughtful person, in view of what occurred at this notable dinner, is this: How will political parties divide on the question of taking the Government out of the banking business? Will the Republicans go one way and the Democrats another way, or will the line of cleavage run through both of them nearly in the centre? As there will certainly be differences of opinion, as there have been on the silver question during nearly twenty years, it is desirable that the division should run through both parties, so that neither of them should consider that its existence or its success depends upon the support of one or the other policy. The question ought to be treated as a business proposition in which Republicans and Democrats and men of no party are equally interested. There is nothing in the question which is necessarily more the concern of one party than of the other. It is a question of how the exchanges of the country, domestic and foreign, can be carried on with the least friction. It is hard to see how one party can have an interest in it different from that of the other, or how one can get the advantage of the other in dealing with it.

Yet it is to be apprehended that the Republicans will look upon the greenback as a "war measure," and will be inclined to resent any attempt to retire it as an attack upon one of the policies of the party. Senator Sherman must have thought that he was "striking the keynote" when he made his speech at Massillon a few weeks ago. Yet it is a fact in our history that the first vote taken by the Republicans after the close of the war on a financial question (December 18, 1865) was a vote to retire the greenbacks, and that it was nearly unanimous in Congress. It is a fact, also, that Secretary Chase, who has been called the Father of the Greenbacks, condemned them in the severest terms from the bench of the Supreme Court. His successors in office, Fessenden and McCulloch, were equally opposed to them, the former having voted against the legal-tender act in the first instance, and the latter having repeatedly urged their retirement after the close of the war. In short, more Republican authority can be found in opposition to Government legal-tender notes as an instrumentality of peace than in favor of them. The ground is open to any member of the party to take either side, and it is much to be hoped that reason and not war-cries may decide the question. It should be borne in mind, too, that whatever sacredness attaches to the greenback as a battle-scarred and blood-stained relic, no such reverence belongs to the later device called Sherman notes based on silver bullion, and likewise endowed with the legal-tender property. Nobody is committed in any way to that illegitimate brood whose issuance was the undoubted cause of the panic of 1893.

THE CONFIDENCES OF SENATOR SHERMAN.

THE morning newspapers of Thursday last contained interviews with Senator Sherman which are rather interesting by reason of his frank expression of opinion concerning contemporary statesmen. Among the persons thus favored are Garfield, Blaine, Harrison, Platt, Alger, and Elkins. These interviews read as though they had all been prepared from one copy, and had been afterwards trimmed by the editors to suit the columns of their respective newspapers. Thus, the stab under the fifth rib by which Blaine kept Sherman out of Garfield's cabinet is published in the *World* and *Tribune* in very nearly the same words, but the latter omits an unfavorable comment on Garfield that he had "a lack of moral steadfastness and depth of conviction." The essential facts in this matter, as stated in the interview, are that Mr. Sherman was Secretary of the Treasury under President Hayes, and was then engaged in refunding the national debt, and would have preferred to remain in that position until this work was finished, if not longer, and that Garfield was inclined to keep him there, but that Blaine made the suggestion to the new President that "it might be regarded as bad taste to select one of the Hayes cabinet without taking them all." Then the interview, as printed in the *Tribune*, continues:

> "This struck Garfield's plastic mind as right, and he spoke to me about it. I told him that I was not a candidate for the place of Secretary of the Treasury, and was perfectly satisfied to go to the Senate. This relieved him, but many people thought I ought to have remained at the head of the Treasury Department, at least until the refunding operation was finished. My election to the Senate was unanimous, but it was generally thought among influential Republicans until that time that I should remain at the Treasury, and that Charles Foster would have Garfield's seat in the Senate."

It was a matter of general surprise at the time that Mr. Sherman was not retained in the Treasury Department. So far from being a matter of embarrassment to Garfield to take one member of the Hayes cabinet and not to take all, it would have been the most natural thing in the world, because Garfield had headed the Sherman forces at the Chicago convention and had carried away the nomination for himself. This was an un-

expected result to both of them. It led to some feeling or belief that Garfield had intrigued against Sherman—which was not true. Garfield was not an intriguing man. He was morally weak and unsteady, but he was not a plotter and schemer. Under the circumstances he was bound by the rules of comity and good taste, if nothing else, to offer Mr. Sherman the best place in his gift, which was the one he already occupied. No other member of the retiring cabinet had any such claim, or any claim at all. Instead of being an embarrassment to retain Mr. Sherman and not to retain the others, the embarrassment was all the other way. It was awkward to dispense with Mr. Sherman's services. It was very hard to find a man to take his place. This difficulty was finally solved by choosing Mr. Windom.

The plasticity of Garfield in this matter was not more characteristic than the adroitness of Blaine. The latter had been a candidate for the nomination which fell to Garfield, and "once a candidate always a candidate." This was true of both Blaine and Sherman. Blaine thought his future prospects would be improved by keeping Sherman out of the cabinet. Hence the cunning suggestion to Garfield that he might avoid embarrassment by not retaining Sherman as Secretary of the Treasury.

Among other confidences imparted by the Senator in his interview we are told that, at the convention of 1888, Steve Elkins "had in his pocket a written promise from Mr. Harrison engaging that ex-Senator Platt should control the federal patronage of New York State in case of his nomination and election. That may have had something to do with it [meaning the sudden turning of the vote of New York to Harrison]." How this came about is stated in the interview as follows:

> "I was in close touch with everything that happened during the convention of 1888. The famous dinner of the New York delegation was given Saturday night, and the delegation then voted to swing their strength to my column. It is Mr. Miller's recollection that there was no change in this attitude until after the diners had separated. Some time during Sunday, Elkins and other of Harrison's friends persuaded ex-Senator Platt and other men of influence in the New York delegation to go to Harrison for one ballot only. No one thought that this would be the decisive ballot. After it they were to join my column, and this would have nominated me. Gen. Harrison's friends did such efficient work with other delegations that the convention took the matter into its own hands and nominated Harrison Monday morning."

It is a pretty serious charge to make against a public man of Mr. Harrison's prominence and dignity that he gave a promise in writing beforehand that certain offices should be bestowed in exchange for certain votes. We think that unless some denial of this charge is forthcoming, there will be an unsettling of public opinion in reference to Elder Harrison—more especially since the public offices in New York *were* bestowed in exactly the way that such a bargain implied. The interview goes on to say that it was Platt's ambition to be Secretary of the Treasury (horrible thought!), but "I do not believe that the convention engagement carried any explicit promise as to a cabinet place. It undoubtedly went no further than the distribution of federal places in New York, and in that respect President Harrison stood to his bargain. He never seriously considered Mr. Platt's demand for the cabinet place."

INTEROCEANIC CANALS.

THE college magazines are performing valuable service in affording the men who can speak with authority opportunities for correcting the insanities of a portion of the daily press. The premonitory symptoms of one of these insanities, known as the canal insanity (*furor canaliensis*), are already making their appearance, and they find the patient in a very weakened condition, owing to three previous attacks of a somewhat similar malady. An article, therefore, in the last *Yale Review*, from the pen of Prof. Theodore S. Woolsey, on precedents relating to interoceanic canals, will do much good, not only in clearing the brains of our own people, but in showing foreigners that we still keep the lamp of civilization trimmed and burning. He anticipates a canal or canals across the Central American Isthmus as a certainty in the near future, and the problem he treats in his article is how to make it "a sure passage-way for the flags of all nations, unblocked in war, secure from the vicissitudes of semi-tropical politics." What he undertakes to show is, that "the neutralization of such a canal, under the guarantee of the chief commercial Powers, is the status most in accordance with precedent and history and our own policy."

We have ourselves dealt with this question in three treaties, one with New Granada, in which we guarantee perfect neutrality to a line of railroad across the Isthmus; a second with Great Britain, in which we guarantee the neutrality of any Nicaragua canal that may hereafter be constructed; and a third with Nicaragua, guaranteeing the same thing. In all of these we commit ourselves unreservedly to the principle of neutrality to be guaranteed by all nations. Now, this principle happens to rest on the reason of the thing. A waterway furnishing communication between two oceans or great seas, like the French canal connecting the Atlantic and the Mediterranean, may run through the territory of a Power like France, which owns both ends of it and also the banks; and the right of such a Power to control it—that is, to open or close it, and impose conditions on the foreign use of it—cannot be contested. But when it runs through the territory of a Power like Egypt, or Nicaragua, which could not itself construct it, and could not keep it open for a week against any leading nation interested in obstructing it, it can obviously be made of use to the world at large only by a general agreement not to obstruct it or allow it to be obstructed; and it is only by being of use to the world at large that it can be made to pay for its construction, or pay its expenses, or prove a contribution to civilization.

A canal which would be exposed to attack in time of war not only would be a poor investment, but might be closed for years or totally destroyed. Hostile fleets might block either end—for the blockade of one end would close it—and obstructions might be sunk at its mouth, and in either case its usefulness would cease. It would take two enormous fleets to keep it open against any considerable hostile force; and, even if thus kept open, merchant vessels would not risk becoming objects of contention between men-of-war in narrow waters. These things were all considered when the Suez Canal was constructed through the territory of the Khedive, who was notoriously unable to protect it. Accordingly, in 1873 it was agreed between the European Powers that the canal should be open to all transports and ships of war. This agreement was embodied in a more amplified and detailed convention at Constantinople in 1887. The neutrality of the canal in peace and war is now absolutely guaranteed by all the great Powers.

There is a party among us which proposes that we shall depart from all these precedents and principles, first by constructing a canal in foreign territory with our own money; then by ousting the jurisdiction over it of the local sovereign, not for the purpose of placing it under the protection of the civilized world, but for the purpose of "controlling" it ourselves—that is, closing it when we please to all other nations, either by obstructing it or having fights about it at its termini. There are various influences behind this programme. One is mere Jingoism—that is, a vague desire that any interoceanic canal on this continent shall be our private property, even though running through foreign soil, as a contribution to national "greatness," as Jingoes understand the term, and as affording use for a large navy, which would have to do some fighting about it with foreigners. With this class the canal would serve its purpose, even though blocked to commerce, if it led to naval battles and newspaper "extras." Another is the commercial consideration, that it would call for such large expenditures as to make a high tariff seem reasonable and even necessary, and, though last not least, that it would be the beginning of a process of annexation of the "Dago" countries.

It is safe to take for granted, however, that no such programme will ever be carried out. In our day reasonableness generally triumphs in the long run, and a canal as something to fight about is not likely to stand discussion in a commercial community. No matter who constructs it, the desire to make it pay by means of tolls will be overwhelming, and this will be impossible unless it is secured against the risks of war. Nothing can be more

vulnerable than a canal. If we were at war with any naval Power, and the canal were our property, we should never be able to send a ship or a man through it. A large load of stones would block it, and a large fleet at the eastern end would keep all ships out of it unless we conquered in a great naval fight, for which we are not likely to have sufficient force for twenty years. Moreover, even if we had as large a navy as the wildest Jingo dreams of, it would not be more than sufficient to watch and protect both ends of the canal against the fleets of a single European Power; and we should then have no ships left with which either to protect our own ports and coasts, or to do any bombarding in foreign parts. In truth, it is only the training we have had in debating with silver-men and Populists which enables us to argue about canals with Jingoes with even a semblance of seriousness. Their state of mind is not a new one, and, no matter what subject it plays round, it exhibits the same characteristics, and we can hardly better describe it than by calling it a mixture of childishness and unsoundness. When Mr. Crisp said that a nation of 70,000,000 could surely make silver circulate all over the world at 16 to 1 in gold, he displayed exactly the same mental peculiarities which make other men want a hundred-million-dollar canal in a foreign country, as a kind of national ornament, to be used solely to tempt the cupidity of foreigners, and thus form an excuse for giving them a sound thrashing.

"*HEALERS*" *IN AN AGE OF SCIENCE.*

"We love to deceive ourselves," said Goldsmith, and self-deception, resolute, invincible credulity, will seem to many the only words to be applied to the remarkable occurrences at Denver during the past few weeks. The personality of the "healer," Schlatter, appears to be unique, but his performances belong to a class of phenomena that have been often and thoroughly studied. No charge of fraud or imposture has been made against him; certainly his refusal of a $5,000 offer to go to St. Louis, in the interest of a real-estate speculation in that city, speaks loudly for his sincerity and purity of motive. His cures, however (many of which we suppose are indisputable), are of the well-known kind wrought by Lourdes water, the knuckle-bones of St. Anne, Christian Science, Voudouism, or Indian "big medicine" indifferently. How are we to account for the persistence of such cures and crazes in an age which we proudly call the age of science?

We think, to begin with, that the medical profession is in part at fault for not more frankly recognizing and publicly admitting the extraordinary influence of mental and spiritual states upon bodily conditions. If the common people were taught to consider and look for this influence in ordinary medical practice, they would not so often run agape after some quack or mystic who takes advantage of it, consciously or unconsciously, fraudulently or in good faith. Privately, of course, there is no lack, among well-educated physicians, of knowledge on this subject. They are eager to array on their side every occult, psychological ally in a fight with disease. Even if they are the blankest sceptics, they welcome prayer for a patient critically ill when they think it may serve, by his knowing of it, to rouse the desire or the will to live which may of itself mean life. They are willing to use quietly what may be called the humbug of their profession. When Fitzjames Stephen was vacillating in his choice of a calling in life, his bluff uncle told him that he would never succeed as a doctor because he had not enough humbug about him. A great deal of the kind of humbug meant is necessary to physicians treating neurotics and hypochondriacs, and the best of them often hit upon cures indistinguishable in essence from Schlatter's. But they ought, it seems to us, to preach it as well as practise it, and let their patients know that it is not all a question of drug and tissue, but of mysterious causes and effects in the borderland between mind and body.

Even were they to do so, however, we do not imagine for a moment that they could really touch the main difficulty, which is the inevitable slowness and distortion with which scientific ideas make their way into the popular mind. An English librarian some time ago made a rough sort of census among his readers and their neighbors, to try to find out how firm a grasp they had upon the leading conceptions of science. The result was rather appalling, but only what might have been expected. The practical results of science everybody complacently accepts, but its methods and presuppositions are quite another affair. Cross-examine a hundred men taken at random on the subject of the uniformity of nature, verification of a natural law, evidence and proof, and you would get very much the same kind of ideas that you would from a hundred children caught up out of their nurseries. Such difficulty in making a lodgment in the general mind is not confined to scientific ideas; religious ideas, for example, suffer from it as well. Christian theology has been battering away at the intellect of Europe for eighteen centuries, and in what a twisted shape for the most part has it got inside! Thomas Hardy asserts, and certainly has some evidence to show for it, that the peasantry of England are still rather pantheists or polytheists than Christians. If Christianity has thus been long on the way, and has been constantly surprised and baffled to find how much astray the popular understanding of it has gone, later-born science can scarce expect to have done more than scratch the surface as yet.

It might be thought that science would have a great advantage in being capable of clear and simple explanation. A very few experiments in physical causation ought, it may be said, to fix the idea of law beyond the possibility of removal. But this is doubtful. It is highly probable that clearness and simplicity are no recommendation to the average intelligence of mankind. It prefers the complex and mysterious. The doctrine that is clear and simple becomes at once suspect. There must be more in it than just *that*. Certainly, it is so with religious doctrine. A creed is never in so much danger as when it has just been made perfectly clear and reasonable. Look out then for what Leslie Stephen has called the process of death by explanation. Dr. Leonard W. Bacon made a wise remark when he said, in opposition to those who objected to the New Theology as a concession to the unregenerate heart, that precisely what the ungenerate heart liked best was doctrine that was old and tough. The simplicity and clearness of scientific notions, then, may not really help them to a general conquest. A love of mystery and confusion, a feeling that a great many strange things do happen, that you never can exactly tell, are among the dearest possessions of the race, and they will not be given up without a hard and long struggle.

The philosophically minded will be unable to resist the reflection that the "resolute credulity" (to adopt a phrase of Mr. Myers's) displayed so strikingly at Denver, casts a light backward upon many a puzzling page of history. What ecclesiastical miracle, for example, has such an overwhelming body of evidence for its genuineness as exists for Schlatter's cures? Yet the entire religious press, we believe, much to the credit of its good sense, says that his cures have nothing whatever miraculous or supernatural about them—this in spite of the fact that, on their face and in accordance with Schlatter's own belief and profession, they are miracles and nothing else. So much depends upon the seeing eye, upon the narrator's conception of what a natural law is, what evidence is. St. Francis Xavier wrote home in amazement of a natural wonder he saw in the island of Amboyna—a he-goat giving suck. He would never have believed it, he said, if he had not seen it with his own eyes. Yet the good saint was every day seeing and performing miracles of the most stupendous kind, and was writing about them in the utmost simplicity and good faith. At a violation, or apparent violation, of what even he saw to be a natural law, he balked; but disease and life and death were still, for him, the playthings of supernatural powers. So they doubtless are for the mass of people now in the world, though we are glad to say that St. Francis's successors put themselves, for the most part, on the side of those who would have been called in his century the sceptics and the heretics.

RATIONAL SYMPATHY.

THE more rational sympathy is, the more effective it is. The sympathy of hysterical persons is seldom welcome and never useful to anybody. Therefore, in all our talk about the Armenian horrors, we should take pains to show that it emanates from sober-minded and well-informed people. Rationality, even in sorrow, is what distinguishes man from the animals, and one of the marks of rationality is a just estimate of the possible. Children never know what is possible, and one of the first signs of insanity is an ignoring of the limits of human powers. Some of our Jingo friends forgot all this some weeks ago when they wailed over the want of a navy to protect the Asiatic Christians against the Kurds and Turks, and there is still a loud call on our Government to do something or other in that direction. What this thing should be, no one seems exactly to know. The *Tribune* comes as near telling us as anybody, when it says that the President should show "genuine American feeling" and "should have something to say about the perils of our American missionaries in Turkey," and "give forth an American voice from the White House."

What would be the effect of any of these processes on the Turks, it is impossible to say without knowing more about their exact nature. As described here they simply mean more noise, whereas what we want is plans and specifications. If the Turk were frightened by infidel denunciations of him, he would long ago have taken refuge in the inner recesses of Tartary from which he issued a thousand years ago. The documents which the Armenians circulate among us here are so highly colored, vague, and extravagant in their diction that they fail of their purpose. We have always felt reluctant to quote them lest they should prejudice sober-minded people against a good cause. The horrors in Armenia have been so great that they will not bear rhetorical embellishment. Plain narrative, fortified if possible with proof, is all they call for. Senator Hoar, in a despatch to the President which the *Tribune* printed on Monday, offered to stand by the President in the Senate if he should go so far as "to determine to treat the persons who massacre the Armenians as pirates and common enemies of the human race." The Senator would relieve the anxiety of many persons about his mental condition if he would explain how the President is to "treat" persons in the interior of Asia Minor as ruffians of this description. To "treat" anybody as a "pirate" I must have some means, or a fair prospect, of getting at him. As long as he knows I cannot reach him, my epithets are wasted on him, and we fear all that the Kurds know of President Cleveland is that he is a noted Western robber, who is dissatisfied because he cannot "take a hand in the racket." The Senator's remedy is therefore clearly inadequate. The measure he suggests to the President is only seemingly desperate. In reality it would be quite harmless.

There are only two things which we can do with effect. One is what Mr. Terrell is doing, to address vigorous remonstrances to the Porte about the safety of our own citizens. These have apparently been effective thus far, but more by good luck than anything else. Threatening the Porte with our navy would be bad policy, because he knows that our navy cannot do anything more to him than the combined navies of Europe which are threatening him already. The Armenian trouble is hundreds of miles from the sea, in a roadless region, and his difficulty is that he has neither the money nor the men to restore permanent order—a fact which the Powers have probably already found out and are much puzzled by. The only one which can reach the scene of disorder with a land force is Russia, and she has apparently reasons of her own for refraining from interference at present. It would be far more rational for our Government and people to urge on Russia to march an army corps or even a division into Armenia, than to threaten the Porte or call the Kurds names. That would be the use of means adapted to the end in view, and, therefore, a human and rational process. Austria might intervene also by marching an army into Macedonia, but this would simply exert pressure on the wretched Sultan, who, as we have shown, is in Armenia powerless for all practical purposes. No one has yet suggested the despatch of our little army or of the Seventh Regiment to occupy Armenia and fight the Turks in the snow. When that proposal is made, we shall discuss it with the gravity which it merits.

The other thing we might do, and ought to do, is to send money, provisions, and clothing for the thousands of unhappy people, mainly, in all probability, women and children, who will have to face the terrible winter of Asia Minor without any protection against weather and hunger. If there were more of this going on, we could do with very much less "voicing" of indignation and less vituperation of the Turk. It is a feasible work and ought to be actively prosecuted. A fighting rôle on the Turkish question is not open to us. The humane rôle is. Jingoes ought to reconcile themselves to the fact that Providence has clearly not intended that we should have a hand in *all* fights, or it wonld have made all parts of the globe accessible to our navy. The ruffians and oppressors who carry on their atrocities in the interior of large continents are clearly meant to be chastised by other hands than ours.

THE GRIEVANCES OF IRELAND.

DUBLIN, November 12, 1895.

IN the *Nation* of October 17 "An Observer" exhibits a strange misconception of the Irish problem, a misconception which is common enough among both Englishmen and Irish Unionists who have paid little attention to the history of Irish affairs during this century.

The dead opposition of the English to all innovation in Ireland has certainly checked reforms and changes which would have been made in Ireland long ago in conformity with the wishes of the vast majority of the residents in Ireland. It has not, however, checked the desire for reform, and the statement that the opposition of English statesmen broke the power of O'Connell and terminated the Repeal agitation, if literally true, is strangely at variance with real facts. Every few years, since O'Connell's withdrawal from Irish politics and his death, have seen a renewal of the Repeal agitation in one form or another: the abortive rebellion of 1848, the Phœnix conspiracy, the Fenian movement, the Land League, the National Federation, have been agitations for Repeal under other names. In Parliament the Nationalist party, though shaken with internal divisions, is numerically as strong as ever. It votes and will vote solid for home rule, land reform, and financial justice between Great Britain and Ireland.

Ireland, no doubt, is weaker than she was, with a vastly diminished population, by her retrogression in wealth and prosperity compared with Great Britain; but the statement that Englishmen view Irish discontent with deep regret, and would make heavy sacrifices to render Irishmen loyal citizens of the empire, is contradicted both by the past and the present policy of the imperial Parliament. It is as difficult now as ever to get the attention of that assembly, overburdened as it is with imperial affairs, to Irish wants, grievances, and complaints; and but for the persistency, diligence, and close attendance of the Irish members, in spite of financial and other difficulties, Ireland would seldom be heard of in Parliament, much less would her wants receive attention. Promises of much needed reforms, of measures passed long since in Great Britain, made during the last forty years, remain unfulfilled and unlikely to be fulfilled. One illustration will suffice: the assimilation of the municipal franchise to that established in England. Successive governments have promised to deal with this matter for years; it would involve no sacrifices to Englishmen, yet a bill carried last session through three readings in the House of Commons was thrown out by the House of Lords on the entry of the present Tory Government into office. Our local governing bodies are consequently not on the democratic basis that "Observer" suggests for our parliamentary representation. The first remedy he proposes is the reduction of the number of Irish members, inasmuch as they are now in excess of the proportion Ireland is entitled to in respect of her diminished and Great Britain's increased population; but he omits to state that for the first seventy years of the century Ireland was under-represented on this principle.

"Observer's" second remedy is to extend the system of local government established in Great Britain to Ireland. This has long been asked for, and in 1891 the Conservatives took office pledged to pass such a measure for Ireland. They produced a bill, but one so unlike the English and Scotch acts, so limited in its scope and absurdly insufficient, that it was laughed out of the House of Commons, and has never been heard of since. An essential accompaniment of any local-government act for Ireland should be, according to "Observer," the "retention of power to check the aberra-

tions of local authorities." To the English mind, all acts of administration by a popularly elected body, carrying out the wishes of its electors, are "aberrations" if not in accordance with English opinion. The first principle of democratic government, that the majority are to rule, cannot be allowed in Ireland. There, in politics as well as in local matters, the minority still rule. Only yesterday the present Chief Secretary, replying to a trades deputation, said he saw no reason why there should be any difference between the franchise law in England and Ireland, but he could not promise that the Government would bring in a bill to assimilate them.

As a solution of the education question, "Observer" would leave the system to be settled in accordance with the wishes of the Irish people; but this is just what successive British governments have consistently refused to do, with the result that in Ireland we are far behind the rest of the civilized world in our educational appliances, facilities, and teaching. The state of education in Ireland is a remarkable instance of the incompetence of the British Government in this country, and of its neglect of the primary wants of the people. In every civilized country, including Great Britain, primary education has long been compulsory, and supplied at the cost of the state, not of the individuals. It was only last year that a limited system of compulsion was introduced into Ireland, and the whole system of education, the books prescribed, and methods of training and paying teachers, are antiquated. Other governments have been able to compose or quench religious differences that presented obstacles to free and universal education, and have recognized, as one of the first duties of the state, the obligation of giving its citizens the elements of knowledge. But the British Government would neither grant the kind of education demanded by the Irish people nor enforce any other. The effect of the penal and disabling laws which made education by Catholics impossible has not yet disappeared, and though Great Britain has had absolute power for nearly a century to provide an efficient system of education in Ireland, she has not done so; and yet we find British statesmen, notably Mr. Chamberlain, reproaching this country for the number of illiterate voters on the franchise lists.

As to secondary and university education: confiscations, spoliation, and diversion of Catholic endowments, as well as the operation of the penal laws, have prevented the growth of such a system of schools and colleges as exists in England; but instead of liberally supplying a manifest want, grants of scanty funds, wrung from time to time from the British Parliament by Irish persistence, have been accompanied by conditions which robbed them of both grace and efficiency. The endowment of a Catholic University in a way to put Catholics on an equality with the Protestant community, which has had the rich endowments of Trinity College as its exclusive possession since the reign of Elizabeth, has been refused so often that there would be little grace in granting it now. Trinity College is now theoretically open to Catholics, but they are as unwilling to make use of an institution saturated with Protestantism, under Protestant government and teaching, as Protestants would be to send their sons to a college where Catholicism prevailed to the same extent.

"Observer" truly maintains that the root of Irish discontent is dissatisfaction with the system of land tenure which has lasted for centuries, and his remedy for this is that the tenants shall purchase the lands by means of loans from the state. Well, on the occasion of Mr. Gladstone's first land act of 1870, before the franchise was broadened in Ireland, this was a measure pressed upon Parliament by representative Irishmen, and opposed by the landlord class; it was one of the planks in the Land League platform in 1881, and was urged on the English Government by two landlord members of a royal commission appointed to inquire into Irish land tenure; the principle was at last adopted in 1885 in a tentative form, accompanied by the retention of so many legal difficulties that at the rate at which it has operated for the last eight years, it would take a century to transform the tenant farmers of Ireland into owners.

"Observer" thinks the British electors would approve of a bold and liberal scheme of land purchase even if it involved considerable expense. The British electorate and the Irish landlords combined in 1891 in refusing to accept a bold scheme proposed by Mr. Gladstone, and one that would have been so liberal to the landlords that it would have pressed both hardly and ruinously on the tenant purchasers who might have been compelled to avail of it. Between 1870 and 1880 the Irish landlords opposed every legislative proposal to facilitate the purchase of land by the tenant farmers; and so late as the session of 1894 they defeated the motion for a committee of inquiry into the working of the purchase acts. The landlord party are now engaged in passing resolutions deprecating any further land legislation, and in fact the only thing that they will agree to is the provision of ample public funds for the purchase of their estates when they wish to sell, but not for compulsory expropriations on terms that would be fair to the purchasers and safe to the state. At present they can practically name their own price, for Government provides them with a market by loans to the tenants; but instead of this involving any expense to the British taxpayer, every possible precaution has been taken to place any loss that may occur on the shoulders of the Irish taxpayers alone.

One of the most urgent questions affecting the welfare of Ireland is the adjustment of her financial relations with Great Britain. A Royal Commission inquiring into the subject has now been sitting for a year; it has taken a great deal of evidence, and collected a vast mass of figures and information. The claim of Ireland that she is overtaxed has been very fully established, not only by the figures collected by the Commission, but by the evidence of Dr. Giffen, one of the principal secretaries of the Board of Trade, an economist and statistician of the highest repute in England. His official position has given him unique advantages for studying the comparative wealth of different classes and groups of persons in the United Kingdom; his official reports and periodical addresses to the Statistical Society have long marked him out as the first authority on questions of finance, social and political economy. His evidence astounded and gave great offence to the English Treasury officials. So far from the English taxpayer making sacrifices or going to considerable expense for the purpose of quieting Irish discontent, the reverse has been the case. Ireland's discontent or disloyalty is largely due to her poverty, and one cause of that poverty has been excessive taxation. Ireland now contributes about one-twelfth of the imperial revenue. Dr. Giffen showed that vital statistics indicate (1) a general inferior condition of the inhabitants of Ireland; (2) a larger proportion of old and feeble persons, and a smaller proportion of persons in the prime of life. Labor statistics show (3) that, man for man, the incomes of the wage-earning classes in Ireland are little more than half of those in Great Britain, for there are comparatively few of the highly paid artisan class, and there is a great preponderance of the employments paid at a lower rate than others. (4.) As indicated by the income tax, Ireland's proportion of wealth is is about one-twenty fourth that of the United Kingdom, but, allowing for the stricter assessment prevalent in Ireland, and for a very considerable amount of property taxed in Ireland but owned and the income spent in England, Ireland's real resources are very much less than the income-tax figures show. (5.) Taking the death duties as a standard, Ireland's proportion is about the same as that shown by the income tax, but this requires adjustment for absentee property, for successions being more frequent in Ireland owing to the greater number of aged persons, and for the fact that, property in Ireland selling for a less number of years' purchase than in Great Britain, the succession duty, levied heretofore on the annual value, is a larger part of the capital value than in Great Britain. (6.) Ireland is rapidly losing ground as compared with Great Britain in wealth and prosperity. (7.) A very large amount of British wealth engaged in commerce escapes taxation, but this is not the case in Ireland. In these circumstances the resources of Ireland as compared with those of Great Britain would be denoted by a fraction between one-fortieth and one fiftieth—that is, Ireland's contribution to the imperial revenue should be about two instead of eight millions.

In view of these facts and figures it is highly absurd to speak of Great Britain's liberality or generosity to Ireland. The excess of Irish taxation over what would be fair between the two countries, and the absentee rental remitted annually from Ireland, have the same financial effect as a perpetual bad harvest, or as if the entire potato crop were lost, or the whole salable produce of the live stock of the country were carried away without return. Ireland, a purely agricultural and pastoral country, without foreign commerce, and without industries and manufactures, has to contribute to the protection and extension of Great Britain's vast commercial system and to her costly foreign policy, and she gets no return for her contributions. Her own struggle is against want, periodical famines, and chronic distress; her interests lie in the development of her own resources. In 1886 Dr. Giffen stated that "the whole taxable income of Ireland was absorbed by the state, and that under such conditions there could be little accumulation in Ireland." The removal of the causes of poverty in Ireland and the development of her internal resources are as legitimate purposes for imperial expenditure without charge as the development of the empire and the many wars in which England engages for commercial reasons. Ireland's needs are, however, dealt with by loans on which interest is charged at rates that clearly give a profit to the British Treasury. During the last fifty years loans have been made, almost annually, at one time to keep the Irish quiet, at another to keep them alive, with the result that the local loans from the imperial exchequer to Ireland amount to twenty millions sterling, on which about 3½ per cent. interest is paid. A large part of this money has been unremuneratively spent, and it has added very much to the burden of taxation in Ire-

land. The relief of famine and distress by means of loans is like charging a starving man interest on the breakfast that charity supplies him with. The breakfast eaten, he is poorer than ever, for he is in debt. Yet these annual famine and distress loans made from funds supplied by Ireland to the imperial Treasury are paraded as instances of British liberality to Ireland.

In some cases they are secured to the British Treasury on the local rates, in others on the property of the disestablished Episcopal Church—advantage was taken of the disestablishment act to place on the Church property a number of charges that had before been paid out of the imperial revenue, and to add from time to time other charges for famine, relief of distress, and education that would otherwise have fallen on the imperial revenue. The result has been that since 1870 the entire revenue of the Church fund, about half a million sterling, has been remitted to the British Treasury. Other loans, amounting to over eight millions sterling, bring in interest to the Treasury at a rate somewhat over 3½ per cent., and, with 2½ per cent. consols at 105, are a very profitable investment for the Treasury.

The financial relations between the two countries are those rather of a usurer and a needy borrower than of a mother or a sister country. Irish deposits in the savings banks amount to about £7,000,000; the depositors receive 2½ per cent. interest, and the funds are lent back to Ireland by the Treasury at not less than 3½ per cent. Ireland is reproached by the British Pharisee with want of self-reliance, with expecting Government to do everything; but her entire taxable revenue is captured by the imperial Government, and cannot be spent except by permission of Parliament. The waste and misapplication of public money could not be worse under the most corrupt Irish Government conceivable. Municipal and local enterprise is practically impossible, for every scheme must pass through Parliament at Westminster, where the expenses of passing an Irish "private bill" are so great as to be prohibitive.

The Unionist party, with their enormous majority, have now an unexampled chance of showing whether they have any policy beyond that of instituting a royal residence in Ireland and endowing a Catholic university—two favorite panaceas of the Conservatives. It is the wants of the masses, not of the classes, that require attention, and a royal residence will not put an end to famine, poverty, and emigration, nor secure to the Irish peasants the fruits of their expenditure on their farms, nor lighten the burden of taxation. Many Nationalists are ready to hope for wiser and better measures from a strong Conservative than a weak Liberal Government.

AN IRISHMAN.

THE SOUVENIRS OF GENERAL LEJEUNE.—II.

PARIS, November 7, 1895.

THE Memoirs of General Lejeune will have a special interest for the historians of the war of the Spanish Peninsula. He enters, concerning Spain, into more minute details than he did in the first part of his work. We left him at the time when Napoleon, having himself conducted a victorious campaign, and having heard at Valladolid of the departure of the English, who had embarked at Corunna, left his orders with the army and returned to Paris. Before leaving Valladolid, Lejeune received from the hands of the Emperor a duplicate of the orders which he was sending to Marshal Lannes. He gave Lannes the command of the army which was besieging Saragossa, and placed Lejeune momentarily under his orders as officer of engineers, with General Lacoste, also an engineer. Lejeune went through Burgos, crossed the Ebro at Miranda, and arrived before Saragossa. The famous siege was beginning, and Lejeune gives us an almost daily account of the investment, which will always be remembered among the most extraordinary feats of Spanish patriotism. The chapter on the siege and capture of Saragossa would alone secure the success of the Memoirs, ill-composed as they are in many parts, ill-written, incomplete, and sometimes inaccurate. It is clear that Lejeune took more pains with this chapter than he did with the others; he remembered the "quorum pars magna fui." As an officer of engineers, he was always in the forefront of the attack and in perpetual danger.

Command of the operations of the siege was taken on the 29th of December by Junot, Duke of Abrantès, but the effective command was in the hands of the general of engineers, Lacoste, who opened the first parallel in the night of December 29–30. On the 1st of January, 1809, the batteries of the town began to play on the French works, which were vigorously pushed forward by 3,000 men. As is well known, Palafox commanded in the town, but he was obliged to follow the dictates of a junta composed of the most energetic inhabitants. There were two monks in this junta, Father Basilio and Father Consolacion, and all over the town the priests and the monks were in the first ranks of the combatants. "Few days passed," says Lejeune, "that the junta did not order those who were accused of weakness and of a desire to capitulate to be hanged. Palafox, who was as humane as he was brave, disliked this system of terror, but he was obliged to follow the law of these bloodthirsty monks." During the whole siege the women were organized in battalions; they carried food and munitions, took care of the wounded, made cartridges, and finally fought on the ramparts and in the convents (which were taken one by one, by assault) like men. Among the women who set an example of devotion and courage was the young and handsome Countess Burida. This valiant Amazon made all the women swear that they would rather die with their children than surrender. The 'Maid of Saragossa' did not exist merely in the imagination of Byron. Lejeune speaks of her with admiration.

Marshal Lannes came to take the place of Junot on the 22d of January. He sent a young officer, Saint-Marc, to parley with Palafox, and offer him honorable terms of capitulation. Saint-Marc was conducted to the palace of the Inquisition, and left for an hour in a room where there was nothing on black walls but a Christ painted by Velasquez. Palafox received the letter of Lannes, and told Saint-Marc that the population had resolved to be buried under the ruins of the city. The siege was continued with much vigor on both sides; mines and countermines were made under the walls, under the houses, the streets, the great convents, which became so many fortresses. After the assault on the convent of the Trinitarians, "a priest vaunted himself on having killed with his own hand seventeen Frenchmen. It was this same San-Jago Saas, a Carmelite. Now again, sword in hand, with bare arms and his shirt up to his shoulders, his gown covered with blood from head to foot, this fanatic went among the ranks and said to each: 'Follow my example, and not one of them will remain.'" On this same day, the "Maid of Saragossa," Agustina, fought among the gunners and fired guns. This assault cost the French only three hundred men. Lejeune pays a high tribute of admiration to our *soldats du génie*, a reputation which was well sustained afterwards at Sebastopol. These soldiers form only two regiments, but receive a special instruction in mining and in the construction of bridges. The regiments of the *génie* have very glorious traditions.

"The miner," says Lejeune, "is admirable for the resignation and coolness with which he faces fatigue and dangers. While he quietly makes a tomb for the miners of the enemy, he is often separated from them by only a short interval. When he hears the faint noise, or feels the slight movement which tells him that by his side somebody is working for his destruction, he is not then standing upright, he cannot defy his adversary with a proud look, the eyes of the army are not fixed on him, they do not animate his courage or double his power; he is alone, often flat on the earth, or doubled up, and often he succumbs to asphyxia. What Bayard, what Murat would not feel his courage cool down if he had, for whole days, to subject it to contact with these cold subterranean galleries? . . . The disinterestedness of these soldiers is equal to their bravery. I saw some in this memorable siege who, having worked their way under the earth, happened to break with their picks antique vases full of gold, silver, bronze coin, which the Carthaginians, the Romans, the Arabs had buried in calamitous times. The sight of the metal, shining in the light of the miner's lamp, did not stop his work or excite his cupidity; he contented himself with handing the coin to the miner who was behind him, saying simply: 'Take this; hand the Peru ["Pérou," the bonanza] to the captain; it will interest him.' The captain was a numismatist."

One day the convent of the Daughters of Jerusalem was taken by assault after the explosion of a mine.

"I cannot forget," writes Lejeune, "the effect produced on me by the interior of this convent, which I saw through a cloud of dust and smoke. The cells of the nuns, those asylums of peace and of prayer, had become the theatre of war. The assailants rushed among the symbols of piety, the amulets, the enormous chaplets, the straw carpets which were the only beds of those austere women. On the pavement of their oratories I met everywhere under my feet the instruments of flagellation, iron scourges with points, which testified to their severe habits, or needlework which they were making for the poor, and which testified to the charity of their order. Some of them, surprised in their flight or kept among the fighting women of the town, remained with them. At our approach, we saw them taken on the altars, the objects of their adoration, to save them from profanation; and these holy women bore in their arms only the crucifixes and the images of the Saviour. . . . They had in their little chapels pretty figures of the infant Jesus, with snow-white lambs, adorned with ribbons. . . . On these flowers, this moss, of the cradles of Jesus, wounded soldiers were falling, and the blood of the dying ran on the immortelles, the crowns of roses, and the azure ribbons."

The courage of the populace never wavered, but the day came when starvation did its work and resistance became impossible. The scenes described by Lejeune are truly terrific. Typhus was raging in the city. After a short armistice, a capitulation was signed; on the 21st of February all the exterior posts of the town were occupied by the French, and, in accordance with the terms of the capitulation, the Spanish troops with their arms and flags came out and marched in order before the French army, which was in battle array along the Ebro. Marshal Lannes had allowed the garrison the honors of war. Thirteen thousand Spaniards gave up their arms in front of

the French army; the officers kept their arms and the soldiers their knapsacks. Though the Spaniards were in rags and looked worn with hunger and fatigue, they kept a proud look; and Lejeune, who was an artist, admired their attitude. They wore colored sashes round their waists; their large sombreros had plumes of black cock or of vulture; a brown mantle was thrown picturesquely over the varied costumes of the men of Aragon, of Catalonia, of Valencia, and gave an air of grace and almost of elegance to the torn and tattered clothes which covered so many living spectres.

Lejeune took to Napoleon the news of the surrender of Saragossa. He started on horseback alone for Bayonne, crossing a country full of guerillas, and arrived at the Tuileries in six days.

"I found the Emperor sitting with a child three years old on his knees, near a table, and eating the same breakfast as the child. . . . The Emperor asked many questions, and expressed the most complimentary regrets at the death of his aide de-camp, Gen. Lacoste. He even charged me to carry words of consolation to his widow, and to let her know that she would continue to receive the allowance of 50,000 francs a year which he gave to her husband. During our conversation, the Emperor freely caressed the child, who was the eldest son of his brother Louis, King of Holland, the husband of Hortense de Beauharnais, daughter of the Empress Josephine. . . . After his frugal repast, the Emperor, as was usual with him, took some coffee without sugar, and the child, who, with his pretty little arms, had taken the cup and drunk some coffee, was astonished at the bitterness of the liquor, made a grimace, and pushed away the cup. The Emperor laughed and said these words, which have remained in my memory: 'Ah! your education is not yet complete, since you cannot dissimulate.'"

The Emperor made Lejeune Colonel of Engineers, and Lejeune, who was on Napoleon's staff, spent some time enjoying the pleasures of the Court. But he had soon to prepare himself for another campaign. War with Austria was imminent, and Lejeune was occupied in the cabinet of Prince Berthier in marking on maps with pins all the positions of the French troops in Germany, the future positions of the troops and magazines in Tyrol, in Italy, in Bavaria. He seems to have had a great taste for what the Germans now call "Kriegsspiel." Lejeune followed Berthier to Metz and Strasbourg, and to Bavaria; the Emperor arrived on the 18th of April at Donauwerth, and the campaign of 1809 began. The details of this campaign are given at some length by Lejeune, and sometimes the reader wishes that the horrors of war were not so minutely described. I would not recommend a highly nervous person to read how Ebersberg was stormed, and how through narrow streets the soldiers of Masséna had to go with horses and guns over hundreds of wounded Frenchmen and Austrians lying on the pavement. The horrors of the battle of Ebersberg were such that "it was with a broken heart that the Emperor spent the night, in gardens on the heights of Ebersberg, in the midst of his soldiers, like a father who, in his trouble, can find no solace but in his family."

Here is, however, a curious account, which shows that the Emperor preserved all his coolness. In the evening of this bloody fight,

"Napoleon sent for Count Daru, and Maret, Duke of Bassano, secretaries of state, who had followed him from the beginning of the campaign. The Emperor and these two gentlemen were sitting on woodpiles, with a few candles placed on drums, and writing on their knees. The secretaries offered for the signature of the Emperor decrees which interested the whole of Europe, for the construction of road, canals, hospitals, etc. It was eleven o'clock when Napoleon, after having given his orders for the next day to the Prince major-general, told Daru and Bassano to open their portfolios, and at two o'clock in the morning they were still at work."

Lejeune's volume closes with the operations which ended in the taking of Vienna and the great battles of Essling and Wagram. Lejeune, as officer of engineers, played a great part in the construction of the bridges which connected the two banks of the Danube. Will there be a second volume of these memoirs, which, as they are imperfect, will take a secondary place in the Napoleonic literature of the day? The editor has not chosen to inform us. The memoirs, I know for certain, do not end at Wagram, and it is to be hoped that their publication will be continued.

Correspondence.

THE VENEZUELAN CONTROVERSY.

To the Editor of The Nation:

Sir: As pertinent to the discussion of "The Law of the Venezuelan Case," I send you the following extract from Creasy's 'First Platform of International Law,' pp. 216–218:

"Questions as to the extent of territory which is gained by the occupation of a part thereof have often arisen and have proved sometimes hard of solution. . . . Three rules on this subject were propounded and maintained by the Commissioners of the United States in the negotiations conducted by them in 1817 with the Commissioners of Spain in regard to the western boundary of Louisiana. These principles, say the Commissioners, have been adopted in practice by the European Powers as applicable to the discoveries and acquisitions made in the New World. They are few, simple, and intelligible, and at the same time are founded in strict justice.

"(1.) When any European nation takes possession of any extent of seacoast, that possession is understood as extending into the interior country to the sources of the rivers emptying themselves within that coast, to all their branches and to the country they cover, and to give it a right in exclusion of all other nations to the same.

"(2.) Whenever one European nation makes a discovery and takes possession of any part of that continent, and another afterwards does the same at some distance from it, where the boundary between them is not determined by the principle above mentioned the middle distance becomes such of course."

Of like tenor are Secretary Calhoun's words to Mr. Pakenham (Wharton's Digest, vol. i., p. 6): ". . . So likewise, in the case of a river, it has been usual to extend the claim of territory to the entire region drained by it; more especially in the case of a discovery and settlement at the river's mouth." Moreover, in 1872, Secretary Fish wrote to Mr. Preston: "Discovery alone is not enough to give dominion and jurisdiction. . . . Such discovery must be followed by possession." Now if it be true, as alleged, that for more than two centuries the Dutch and British have had permanent settlements at the mouth of the Essequibo, and that in the region drained by that stream the Venezuelans have had no such settlements, there would seem to be very little room for contention. J.

Fort Wayne, Ind., November 23, 1895.

THE GETTYSBURG SPEECH.

To the Editor of The Nation:

Sir: Mr. H. Sidney Everett's recent publication in the N. Y. *Tribune* of a copy, from Mr. Edward Everett's autograph letter-book, of a note written under date of November 20, 1863, to Mr. Lincoln, expressing admiration of the thoughts uttered "with such eloquence and simplicity" at Gettysburg, brings to my mind a conversation I held with Vice President Wilson, with whom I enjoyed an intimate acquaintance at Natick, Mass., where I resided nine years. As we rode on the railway train to Boston, one day, Mr. Wilson told me with enthusiasm that Mr. Everett at Gettysburg gave his hand to Mr. Lincoln at the conclusion of the speech of the latter, saying, "Mr. President, you have said more in a few minutes than I have in my whole oration." I distinctly understood Mr. Wilson to say that he was at Gettysburg on that occasion, and that he sat near Mr. Everett and Mr. Lincoln, and heard the remarks of the former addressed to the President. Mr. Wilson's intimacy with Mr. Lincoln at that period makes it impossible for me to regard his statement to me as mere hearsay, or the fact itself as unhistoric.

The letter of Mr. Edward Everett to Mr. Lincoln which Mr. H. Sidney Everett has published, confirmed by the statement made to me by Mr. Wilson, would seem to render Mr. Lamon's declaration that Mr. Everett and Mr. Seward expressed disappointment after Mr. Lincoln's speech, not easy to explain. The impression derived by Marshal Lamon, who was also present on that day, remains for me, at least, an insoluble enigma.

Yours truly, Charles Mellen Tyler.

Cornell University,
Ithaca, N. Y., November 20, 1895.

"COLLEGE" AGAIN.

To the Editor of The Nation:

Sir: Mr. Matthews (*Nation*, Nov. 14) might rightly attribute carelessness to any one who should assert that the word college for a "single building or group of buildings," in the sense of his article and of all but one of his quotations, is not recognized by the dictionaries. This meaning of the word has been recorded since Johnson's time at least. I referred to the use mentioned in Mr. Brown's first letter (*Nation*, Oct. 24) as a name in early times for separate buildings at Harvard College. Besides, Mr. Matthews will surely do me the justice to believe that, with an American's inbred reverence for the dictionary, I had at least examined each of the works to which I referred. But I more gladly return to the discussion, because the quotations which Mr. Matthews makes might seem to overthrow both the statement which he attributes to me and that which I wish to enforce.

The word college, as applied in any way to college buildings, has at least three distinct senses. These are:

(1.) The building occupied by a college.

(2.) The group of buildings so occupied.

(3.) One of a group of buildings used by a college or university.

The meanings under one and two are common to England and America. The third meaning is the one I suggested as probably American, though not recognized by lexicographers.

My reason for believing this use of "college" an Americanism is, that it is not recorded by Johnson, writing a century and more ago, nor by the 'Oxford Dictionary' now under way. Johnson's definition is, "3. The house in which the collegians reside," and that of the 'Oxford Dictionary,' "5. The building, or set of buildings, occupied by such a society or institution." Of course it is dangerous for an American to say that a particular word, or meaning of a word, which seems to be used in this country exclu-

sively, may not be found in England. But in addition to the testimony of the dictionaries, Oxford and Cambridge men have assured me that they have never heard the word so used in the mother country. The English term is "hall," which is also common in America.

As to our own lexicographers, they might seem at first to recognize the use in question, and I thought of referring more explicitly to them in my first communication. The definitions of "college," so far as they relate to buildings, are as follows:

Worcester (1846): "A house or edifice appropriated to the use of a college or literary institution."

Webster (1847): "3. An establishment or edifice for students who are acquiring the languages and sciences."

International: 3. "A building, or number of buildings, used by a college."

Century: 2 (a). "The institution, or house, founded for the accommodation of such an association. . . . (e). an edifice occupied by a college."

These definitions, it will be seen, cover meanings 1 and 2 above. It may be said that the words "a building" in the 'International' cover at the same time meanings 1 and 3, but I am not willing to infer that the expression is used in this double sense. Nor can I believe, in the light of the other definitions, that 'Century' 2 (e) is intended to cover this distinctly American usage. It seems reasonable to suppose that, if the lexicographer had intended the latter meaning, he would probably have indicated the American, as distinct from British, usage.

As to Mr. Brown's demurrer to my suggestion of American and dialectal origin, let me say that I used the word "dialectal" with no sense of opprobrium. The change in usage was quite natural, and was made easier, doubtless, by the fact that early Harvard resembled an English college in many ways. Yet, when the word "college" was applied at Harvard or elsewhere to a second building, not a "college" in the English sense, the usage seems to me for the time dialectal. Later it was generally adopted in America, so that "college" may now be applied to almost any building belonging to an educational institution, from a dormitory to a recitation hall or laboratory.

There is only one other possibility, so far as I can see. It may be found that the particular use of "college" to which I have called attention is owing, like so many other so-called Americanisms, to the retention of an older usage, since lost in England. If this can be shown, it will be in itself an important contribution to lexicography.

Whether this use of "college" has been felt to be dialectal or not, the word has been displaced in many institutions by the word "hall." Mr. Brown has shown that the change took place at Harvard in the latter part of the last century. A similar change has been made, within fifteen years, at the college to which I referred in my first communication. At other institutions the word "college" in the American sense remains in excellent use, as it bids fair to do for many years to come. OLIVER FARRAR EMERSON.

CORNELL UNIVERSITY, November 23, 1895.

"OLD NORTH" AT PRINCETON.

TO THE EDITOR OF THE NATION:

SIR: "H.," in his note on "College" (*Nation*, p. 346), errs in saying that the Old North (officially Nassau Hall) of 1860 at Princeton "was only four years old, having been rebuilt after a destructive fire." Old North was gutted by fire March 6, 1803, and again March 10, 1855; but the walls that were erected in 1754–'55, and withstood Revolutionary cannon, are intact. The reconstruction of 1855–'56 involved a new cupola, terminal stairways in exterior towers, an enlargement of what had been the original chapel, and of course a new roof. But the student of 1760 could have identified his unaltered window in 1860, and the gray stones of the middle of the eighteenth century remain in place at the close of the nineteenth.

W.

DENVER, November 18, 1895.

Notes.

HOUGHTON, MIFFLIN & Co. take a forward step in adding 'Robinson Crusoe' and 'Uncle Tom's Cabin' to their Riverside Literature Series (Nos. 87, 88). This means that school libraries and classes may be equipped at a small cost with these two works, which are fitly bracketed together as among the most widely read and translated in the whole range of literature. A Swedish translation of 'Uncle Tom' ('Onkel Toms Stuga'), by the way, has just begun publication in parts at Göteborg by Torsten Hedlund. There will be more than 100 original illustrations.

Lamson, Wolfe & Co., Boston, have in press 'Ralph Waldo Emerson'—two unpublished essays, with an introduction by Edward Everett Hale; 'A Man without a City,' by the author of 'A Man without a Country'; 'Earth's Enigmas, and Other Stories' and 'A History of Canada,' by C. G. D. Roberts; 'The Goldfish of Gran Chimu, and Other Peruvian Tales,' by Charles F. Lummis; and a translation, by Charles Edward Amory Winslow, of Sudermann's four-act play, "Magda."

Lee & Shepard are to publish 'Old Boston,' reproductions in half-tone of Henry R. Blaney's etchings of Boston buildings, with descriptive text; and 'The History of the Hutchinson Family [of Singers],' by the sole survivor, John Wallace Hutchinson, with a preface by Frederick Douglass, written just before his death.

Montague Marks will publish early in December, from the office of the *Art Amateur*, No. 23 Union Square, New York, the first of a series of "Art Amateur Handbooks," namely, the 'Book of the China Painter,' by Mrs. L. Vance-Phillips, illustrated with 150 black-and-white drawings in the text and six colored plates. We understand that Mr. Marks purposes in the course of next year very considerably to extend his operations in the book-publishing line, especially in the direction of works on art and cognate subjects.

Charles Scribner's Sons have in hand a new 'Cyclopædia of Architecture in Italy, Greece, and the Levant'; 'The Mediterranean Trip,' a guide-book by Noah Brooks; Dr. Corrado Ricci's 'Correggio; his Life, his Friends, and his Time'; 'Domesticated Animals,' by Prof. N. S. Shaler; 'The Poor in the Great Cities,' by a variety of authors; and 'Window and Parlor-Gardening,' by N. Jönssen Rose.

'The Elements of Physics,' in three small volumes, by Edward L. Nichols and William S. Franklin, will begin to be issued in January by Macmillan & Co.

D. Appleton & Co. will publish immediately 'Annals of Westminster Abbey,' by E. T. Bradley (Mrs. Murray Smith), with an introduction by her father, Dean Bradley. It will contain nearly two hundred illustrations by W. Hatherell, R.I., and H. M. Paget.

A. C. McClurg & Co., Chicago, announce 'A Scientific Demonstration of the Future Life,' by Thomson Jay Hudson; and 'Songs, Chiefly from the German,' by Bishop Spalding.

Mr. J. E. P. Wallis, barrister-at-law, England, is engaged upon a 'History of Parliamentary Government in the British Colonies.' Beginning with the infant Legislature of the old colony of Virginia, the author will work down to the colonial constitutions of the Victorian era. Mr. Wallis edits the State Trials published by the British Government, and is a lecturer at the Inns of Court, London. He will shortly read a paper before the Royal Historical Society upon "The Origins of Parliamentary Institutions in America," one of a series of papers apropos of the 600th anniversary of the meeting of Parliament on the 27th of November, 1295, which historians concur in regarding as the foundation of the regularized representation of the Commons of England in Parliament.

The authorities of the British Museum have decided to commemorate the 300th anniversary of Sir Walter Raleigh's voyage to Guiana in 1595. To that end an exhibition will be held in the King's Library (where the Gibbon commemoration took place) of books, maps, portraits, and prints relating to the voyage and those who took part in it, as well as to the voyages of Leigh, Harcourt, and other early English colonizers of Guiana.

The Council of the Royal Historical Society of England have nominated for election at the next general meeting of the Society, as corresponding members, the following residents of the New World: Prof. J. F. Jameson (Providence), Prof. W. J. Ashley (Harvard), Dr. C. Gross (Harvard), and the Hon. N. Darnell Davis, C.M.G., of British Guiana.

Harper & Bros. publish, in a small volume, Dr. Charles Waldstein's inaugural lecture as Slade Professor at Cambridge on 'The Study of Art in Universities.' This lecture, delivered on June 10 last, is a strong plea for the fuller study of the theory and history of art, not with any practical end of producing artists or even amateurs of art, but in the true university spirit of pure love of knowledge and as an important branch of general philosophy and history. Incidentally, Dr. Waldstein also maintains that, while universities should encourage the study of art, artists should study in universities. On this latter question there is a great deal to be said. There is doubtless often a lamentable lack of general culture in the artist, and it is a fair subject of discussion how far this lack affects the quality of his art. But, as it is said that no one ever mastered the violin who began to play it after his seventh year, so it is doubtful if any one ever mastered painting who began the serious study of his profession so late as would be implied in having first taken a university course. Art study is in itself a means of culture, and perhaps that study and what he can gather by general reading must remain the education of the average artist.

'Picture Posters,' by Charles Hiatt (London: George Bell & Sons; New York: Macmillan), is, as the title-page describes it, "a short history of the illustrated placard, with many reproductions of the most artistic examples in all countries." It gives all the essential facts as to the development of this form of decorative art and its present wonderful vogue, and a marvellously complete set of illustrations (over a hundred and fifty in num-

ber), which seem to represent almost every artist who has done anything notable in that line, and to contain almost every specially notable example. The book should be a treasure to the devotees of the latest collecting fad. The last chapter even gives the latest "quotations" of certain rarities or desirabilities.

From the same London firm we have 'A Guide to the Paintings of Venice,' by Karl Károly, similar in plan to the same author's 'Guide to the Paintings of Florence.' It is of a handy size to fit the traveller's pocket, and contains a vast deal of information about the pictures themselves as well as chronological tables, an outline of Venetian history, lives of the principal painters, etc., etc. Many and opposing criticisms are quoted from various sources, and occasionally the author gives his own opinion, which is frequently saner than that of the eminent writers he quotes. There are also a few fairly well-executed illustrations. It is a pity that an alphabetical list of painters, with the whereabouts of all their works in Venice, is not given for the assistance of those desiring to make a special study of any one artist. It is impossible to examine into the accuracy of so many detailed statements as a work of this kind contains, but, in a somewhat cursory perusal, we have noticed only one error. It is stated on page 112 that the St. Christopher "is the only remaining fresco by Titian." If this statement were qualified by the words "in Venice," it would be true, but Mr. Károly must have forgotten the frescoes by Titian in the Scuola del Santo at Padua. Or has recent criticism changed the attribution of these pictures as it has that of so many others? In that case it would have been well to note the fact.

To the question occasionally asked, What book should one give an English friend that he may have a picture of some transatlantic conditions? a true and complete reply is 'Pony Tracks,' written and illustrated by Frederic Remington (Harpers). It is a vivid account of actual life that cannot possibly be duplicated elsewhere under the canopy, ranging from Dakota to Chihuahua, and from fighting Sioux to rounding up cattle and shooting grouse. Remington shows himself here an artist in words, as he has long been recognized to be with the pencil. His descriptions, like his pictures, represent the essence of things in a realistic way. Whether one goes with him "Policing the Yellowstone," "Bear-chasing in the Rocky Mountains," on "Casey's Last Scout," or to "A Rodeo at Los Ojos," he will have all the characteristics of the life before him and will breathe its very breath. Remington's familiarity with army ways, due to the education of long association engrafted upon true military instinct, leads him to depict that life in the field as no civilian has ever done. He could not do it if he did not love the soldiers and their career, and they are indeed ungrateful if they do not reciprocate his regard and esteem. But it does not require the hypothetical Englishman of our first sentence to open his eyes and enjoy this book. To most Americans it will be a revelation; and any man who has not been a part of what he tells will have his blood run faster for the reading, while even the participants will be made happier over the retrospect by this free handed description, in which rifle and spur are in such accord. Barring a rather sensational frontispiece, the illustrations are true to nature as well as spirited in execution.

T. Y. Crowell & Co. have published a charming little volume (one of the Faience Series), chock full of charming little illustrations, of a translation of Daudet's charming little story 'La Belle Nivernaise' and the four others that always accompany it. The anonymous translation is as lively and idiomatic in style as the original, and has only the defects of its good qualities. It sounds like the work of a clever boy, and that is just as it should be, since the original was the play of a clever boy-man. There is an odd sentence on p. 174. It reads: "Some one proposed to me that I should take in Augustine's reception." We have not the original at hand, but it should surely be: "Some one proposed to me that I should go to [or proposed to take me to] Augustine's reception." The illustrations are so good in character, so pleasantly illustrative, that the artist's name should not be withheld. There is even no mention of them on the title-page.

Mr. Arthur Irwin Dasent may "fairly claim to have broken new ground" in his 'History of St. James's Square and the Foundation of the West End of London' (Macmillan). It is, as he remarks, the first attempt at a systematic visitation from house to house of any particular street or square in London. We would fain hope that the example will not be too catching; for the amount of library space that will be called for if every well-known London street or square has to have its own separate volume, is a thing "imagination boggles at." However, Mr. Dasent has not only come first, but has also appropriated for himself the area most suitable for treatment of the kind he proposes. The building of St. James's Square, soon after the Restoration, by the shrewd Henry Jermyn, Earl of St. Albans, was practically the creation of the West End of London; and the five-and-twenty houses which formed three of its sides remained for a century and a half the town abodes of the leaders of English political and fashionable life. Mr. Dasent chats about their occupants in a pleasant and not too critical strain; his book will while away many an indolent hour in clubland; and the appendix, with its comparative table of rates levied on each house between 1676 and 1876, may be grist for the mill of some more philosophic historian.

Messrs. Crowell & Co. have thought it worth their while to issue in two small and comely volumes a cheap reprint of Dodd's 'Beauties of Shakspere.' It is difficult to see what class of readers is to reap a benefit, for such anthologies, once so popular, would seem, at least in the case of Shakspere, to have outlived their usefulness. But some tribute is due to the venerable work which, during the latter half of the eighteenth century, exerted so wide an influence in spreading the knowledge of Shakspere both in England and in Germany. Through these extracts Goethe gained his first impressions of the English dramatist, and in his autobiography he makes this graceful acknowledgment: "Whatever may be said against such collections, which give authors in a fragmentary form, they nevertheless produce many good effects. We are not always so collected and so ready that we can take in a whole work according to its merits. Do we not in a book mark passages which have a particular reference to ourselves? Young people especially, who are wanting in a thorough cultivation, are laudably excited by brilliant passages; and thus I myself remember, as one of the most beautiful epochs of my life, that which is associated with the above-mentioned work." But is it not preferable, after all, that young people should do their own marking? We notice that in the preface the Rev. Mr. Dodd apologizes for having occupied himself with profane literature: "This work was begun and finished before I entered upon the sacred function in which I am now happily employed." When we recall the reverend gentleman's discreditable career, which ended by his being hanged at Tyburn for forgery, these pious excuses elicit a sad smile. He would better have apologized for presuming to write commentaries on the Old and New Testaments.

Extremes meet when the first two calendars to reach us are the "Equal Suffrage Calendar" (New York: E. Scott Co., 146 West Twenty-third Street) and the "Trilby Calendar" (Brentano's). The former is businesslike, with its pad of sentiments pinned against a modestly floriated wall-card. To Trilby are given twelve sheets, the varying borders in varied tints enclosing one of Du Maurier's designs for each month. The authorship of the doggerel thought appropriate to the month is wisely not disclosed.

Seasonable also are 'The Mary Lyon Year-Book,' edited by Helen Marshall North (Boston: Congregational Sunday-School and Publishing Co.); 'The Helen Jackson Year-Book,' edited by Harriet T. Perry (Boston: Roberts Bros.), and 'The Canon Farrar Year-Book,' edited by W. M. L. Jay (E. P. Dutton & Co.). As mere book-making, the first of these is the comeliest. All have portraits, and the Mary Lyon volume contains views of her foundation, Mount Holyoke College—now very little a seminary for missionaries, we believe—while the Helen Jackson volume is embellished with French symbolism of the calendar in some vignettes by E. H. Garrett.

The *Book-Lovers' Almanac* for 1896 (New York: Duprat & Co.) is fourth and best in the series, with not a weak spot in it. The ornamental borders of the text are deftly composed of printers' marks. The text itself consists of an historical sketch, by Clarence Cook, of "Illustrated Posters," all the illustrations being French, and all but one being drawn from the product of the reign of Louis Philippe; an account, by O. A. Bierstadt, of "Books of Emblems," with facsimiles from De Bry and from Gravelot and Cochin; and "The Old and the New," in which Mr. De Vinne carries on a really candid dialogue between Juvenis and Senex, leading to the conclusion that the modern letter is inferior to that of earlier typefounders, as Boldoni is inferior to Jenson. Here again are helpful illustrations in support of the thesis. We have mentioned only the leading articles, but the lighter filling is excellent of its kind. A bibliography of Frederick Locker-Lampson concludes the *Almanac*.

While the Dent-Macmillan "Temple Shakspere" is proceeding with "Othello" and "King Lear," a larger form—perhaps to be described as small quarto—has been selected for "A Midsummer Night's Dream." Mr. Israel Gollancz contributes an introduction, partly historic and partly fantastic, with diagrams as in a Logic, for young folks, who are especially addressed with this handsome edition. The letterpress is beautifully clear and elegant. The illustrations, in what we may call the manner of Walter Crane, are by Robert Anning Bell. As interpretation they are not remarkable, but as decoration they are uniformly successful, and the smaller bits, like initial letters and head and tail-pieces, are often charming. The binding, too, is tasteful, in buff and gold. In short, any young person must be grateful for such an addition to his choicer library.

A "Geschenkausgabe" of Prof. Max Koch's admirable 'Geschichte der Deutschen Litteratur,' published by Göschen in Stuttgart, and

already noticed in these columns, has just been issued. The text has been revised and slightly enlarged and the typography considerably improved.

Dr. Cyrus Adler has made an interesting contribution to the history of the persecution of Judaism by translating and publishing in full, as No. 4 of the Publications of the American Jewish Historical Society, the proceedings of the trial of Jorge de Almeida by the Inquisition of Mexico in 1607-9. There is nothing in the case to remove it from the regular routine of such prosecutions, but this renders it all the more valuable to those who are not familiar with the procedure of the Holy Office. The two points which will especially impress the reader are the effectiveness of the use of torture, as exhibited in its application to a witness who was tortured *in caput alienum* to make him accuse others, and the fact that the whole proceeding is conducted against a fugitive. Almeida's wife had been burnt some years previous, when he fled to Spain, yet still the Inquisition continued to gather testimony against him, tried him *in absentia*, and burnt him in effigy in the *auto de fé* of March, 1609.

A most interesting and stimulating paper is Mr. O. H. Howarth's account of the Sierra Madre of Mexico in the *Geographical Journal* for November. He describes with great felicity the geographical features of the range, its strikingly beautiful scenery—there is a waterfall with a "clear perpendicular drop of 948 feet"—the great silver veins, and, though briefly, the various local tribes. These are remarkable for diversities of language, life, and character, though living in close contact. The incorrigibly hostile Apaches, for instance, are neighbors to the timid race of cave-dwellers, "whose only anxiety is to hide from even the friendly stranger." These latter are trained to run down the deer on the plains "by a game somewhat allied to our golf, in which they are required, before qualifying for the deer-hunt, to drive a wooden ball over the level plains for 100 miles without a halt. I am able to quote an instance in which a youth of twenty years pursued a deer on foot for a distance of 135 miles before he exhausted and killed it, and within two days carried it back to the point of starting." A remarkable characteristic of this mountain population is the abject poverty in which they apparently prefer to live, due to actual heredity, the author suggests, in the absence of other sufficient reasons. They suffer keenly from cold, though there is fuel in abundance around their huts, because "it has never been the custom to use heat for any purpose but cookery." A strong appeal is made for the scientific study of these peoples, among whom Mr. Howarth believes are to be found a large though scattered contingent of ancient Asiatic races. This must be done speedily, however, as their probable extinction or fusion with the predominant race cannot be far distant. An account by J. B. Tyrrell of another adventurous expedition in the Barren Lands of Canada to the west of Hudson Bay, and an appreciative notice, by M. É. Reclus, of some recent books on the United States, particularly those of Profs. Whitney and Shaler, are among the other contents of what might be regarded as an American number of the *Journal*.

A practical bulletin issued by the Weather Bureau has reference to temperatures injurious to food products in storage and during transportation, suggesting at the same time methods of protection. In sending perishable freight, not only should there be protection from excessive cold, but from great heat as well; and not less important is the certainty that plenty of air shall circulate through the car, to diffuse and carry off gases always generated. Of course the temperatures at which perishable goods are liable to damage vary considerably, with their condition when shipped, the length of time in transit, and their intermittent or continual motion. Also, both the duration and intensity of the heat and cold to which they are subjected must always be considered. Interesting figures are given with reference to special articles; oysters, beer, potatoes, roses or other cut flowers, early vegetables, olives, and meats being among those specified as liable to injury at definite temperatures.

We are informed by Prof. Zuntz of Berlin that the proposed "frigotherapeutic" establishment in that city is by no means an accomplished fact, nor are the plans so near completion as the statements in the press would imply. Prof. Pictet's system of healing is still in an experimental stage. The experiments made by Prof. Zuntz and two of his pupils in order to determine the physiological effect of the radiation of heat from the body at a very low temperature had to be suspended, owing to the imperfection of the apparatus for reducing the temperature below —70 C. The founding of a "Kälteklinik" will depend upon the results of more thorough experiments in confirmation or refutation of the "frigotherapeutic" theory.

We learn from *Science* that the University of St. Andrews is building a hall of residence for its women students on the lines of the Girton and Newnham Colleges at Cambridge and the Oxford Halls for Women. The fee for residence and board for six months will be £40, each student having a separate room. There will be fifteen scholarships, all tenable for three years.

—In this age of "examinations" it is highly important to make sure what a *wise* examination is, that they may be rendered as little injurious as possible. There are two extremes in the present methods of "examining" the youth of both sexes, and a juxtaposition of illustrations of these extremes may suggest some conclusions worth reaching. At the great English school of Rugby, the boys are required to read the newspapers for the purpose of becoming familiar with modern geographical relations and with the historical conditions of the day. The following examination paper was used recently in the school:

"Describe the east and west-coast routes to Scotland. Give an account of the 'Race for the North.'—Where are the following places, and with what recent events are they connected: Foo Chow, Madagascar, Sofia, Cuba, Congo?—What do you know of the following: Khama, Colonel Shervington, Nasrullah Khan, Sher. Afzul?—Explain the Cabinet, Privy Council, Spiritual Peer.—What was the business done in the last session of Parliament? Who are at present Speaker, Colonial Secretary, Foreign Secretary? What offices are held by Mr. Goschen, Lord Lansdowne, Mr. Long?—An account of the races for the America's Cup?—What are the present difficulties in Armenia? Describe the situation."

In the sharpest possible contrast with this—a contrast much greater than is demanded by any difference of result aimed at in the respective education of boys and of girls—are the following subjects for composition given out last May and June in Paris in the examination of girls (generally from fifteen to seventeen years old) for an elementary diploma—that is, as part of a test of their acquirements to which a large proportion of the girl students in Paris subject themselves, and which gives the tone to their previous instruction:

"Enlarge upon (*développez*) this advice which Mme. de Maintenon used to give to all the young girls at Saint-Cyr on their departure: 'Be always and everywhere sincere and kind (*simples et bonnes*); sincerity and kindness are the two most beautiful ornaments of women.'—Enlarge upon this saying of Jean Jacques Rousseau: 'Everything which impedes and constrains nature has a character of bad taste. This is true both of fine garments for the body and of adornings for the intelligence.'—Laziness makes everything difficult, work makes everything easy.—Comment upon this maxim of La Fontaine: 'To be kind to the bad is to be unwise.'—'Think, speak, write as if you had a thousand witnesses.' Enlarge upon this thought.—Enlarge upon this one: 'Adversity is the touchstone of friendship.' The swallows stay with us in the summer, the cold makes them fly away; so is it with false friends."

—M. Ernest Lavisse of the French Academy makes some excellent remarks on these selections and directions, observing justly that it would be far better to teach the art of condensation than skill in dilution. He notes, also, the truth that words mean different things according to the person who uses them and the epoch at which they are used, and that a young girl who knows Mme. de Maintenon only by name, and is ignorant of the language of the seventeenth century, is necessarily unaware that her "simple" meant "sincere," and she is consequently absolutely misled by the phrase. Just so, no one but a student of Rousseau knows what "nature" meant in his mouth, and it is doing ill by a young girl to let her fancy her composition has been based on "a saying of Mme. de Maintenon," "a saying of Jean Jacques Rousseau." "Poor child!" exclaims M. Lavisse, "she easily learns to believe that she knows about things of which she knows nothing." Almost more to be regretted, as M. Lavisse suggests, is the appeal, and sometimes the sentimental appeal, made in the choice of such subjects to the experience of life—an experience the poor little writers must, perforce, factitiously assume to have had. The passage here dwelt on is only a small part of an interesting article in the first November number of the *Revue de Paris*—a plea for instruction that shall be more instructive than that now given to these young girls. Some ground for hope in this direction is afforded by a ministerial circular lately issued (October 12) suggesting some changes.

—In 'Washington in his Library and Life' (E. & J. B. Young & Co.), President Potter of Hobart College has gathered what he could learn of Washington's library at Mt. Vernon, and in a chatty way has told much that is true—and not a little that is untrue. Indeed, Washington was not at all what President Potter conceives him to have been. He was not bookish; he was not a reader of books; he was not a student of books; he was not "religious." He learned in life's experience, and his strength lay in his use of that experience in judging men's capacity. He rarely made a mistake in choosing his advisers; but from the beginning of the Revolution an adviser he always had. To represent him as a scholar and a lover of books is to give him a character which he never claimed, and which even a superficial examination of his writings would disprove. Such a statement as this—"He marshalled the people by his pen, for, back of his potent presence, books, reading, carefully prepared statements founded on solid information, were the grounds, long overlooked, of his great influence"—has no basis in fact. The account of confederacies in Washington's manuscript was merely a transcript of a paper by Madison, interesting as showing the painstaking of

the man, but not proving book knowledge. Incidentally, Dr. Potter tells us that the spurious MS. "Prayers of Washington" has been purchased by Dr. Hoffman, who intends to distribute pages among certain educational institutions. The mythical aide, "Col. Temple," is again brought forward. The best part of this book is the partial list of the library, together with the chapter on the volumes presented to Washington, as some of the dedications are curious.

—Singular it is that, after so many centuries of writing, it is but just beginning to be discovered that no quantity and no quality of mere chronicle or exposition will convey to the reader a writer's impression of a place. How many have attempted Italy, but a "sampler" of that land of inexhaustible beauty feels justified in declaring that a poignant "sensation of Italy" has been conveyed to him neither by De Brosses nor by Goethe, neither by Gregorovius nor by Symonds, neither by "Vernon Lee" nor (least of all) by M. Bourget. Only in a small volume of sketches recently published (London: Dent; New York: Putnams), under the fanciful title of 'Earthwork out of Tuscany: Impressions and Translations,' written by Mr. Maurice Hewlett, has the miracle been accomplished. Mr. Hewlett is the first writer who, saturated through and through with all that is most artistic in Tuscany, has had the wit to know that he can communicate his sensations only by reincarnating them in readily appealing imaginative form. Happily he has not only the wit, but the skill also. English more colored and pungent will not easily be discovered. We greet in Mr. Hewlett the accomplished artist in what practically is a new art. His incidental translations, whether in prose or in verse, are alike notable. The range of his impressions is masked by his allusive chapter-titles, such as, "Of Poets and Needlework," "The Soul of a Fact," "Quattrocentisteria," etc. The volume is a gem of bookmaking.

—The study of Venetian painting has been greatly enriched of late by the publication of two fascicules of documents bearing vitally upon its history. The patient collector of these documents, Prof. P. P. di Osvaldo, is to be thanked, not only for gathering them out from the chaos of an archive, but also for giving a rare example of abstaining from comments and statements of a kind which not the archivist but the connoisseur only can give. In the first fascicule of his 'Raccolto di Documenti per servire alla Storia della Pittura Veneziana nei Secoli XV. e XVI.,' Signor di Osvaldo publishes all the notices that bear upon the Bellini—one of the most striking instances of transmitted genius in history, for the father, by mere accident less famous than his sons, was no less an artist, and perhaps even more creative. Hitherto, information regarding the father has been of the scantiest. Now we know that he spent most of his life at Venice itself, and not, as has always been supposed, at Padua; that he was a member of various *scuole*, or Mutual Aid Societies, and that he was kept busy. He was still alive and working on August 26, 1470. On November 25 of the following year his *widow* made a will, curiously enough making no mention of Giovanni, but leaving all her belongings to Gentile and another son named Niccolò. An item regarding Giovanni, extracted from a letter written in 1470 by a Venetian merchant at Pera, is decidedly amusing. This merchant begs his correspondent to send him a Christ painted by Lazzaro Sebastiani (one of the most wretched but most popular painters in Venice), but, if he be unwilling to paint it, or dead, then, as a *pis-aller*, to send him a Christ by Giovanni Bellini!

—The second fascicule is of even greater importance, for it throws much needed light upon the careers and reciprocal relations of various painters, some of them mere names, such as Jacobello Cataino, Jacobello Buleghela, Jacobello della Chiesa, and Alberegno, and others better known and even important, such as Dal Fiore, Bono, and the Vivarini. It appears that Antonio Vivarini, known as Antonio da Murano, was, in 1446, living not at Murano, but in the parish of Santa Maria Formosa in Venice. It is definitely established, furthermore, that he was the father of Alvise. Of the latter we learn that he was expelled from the Scuola della Carità in 1488 for non-attendance during many years, and that in 1492 he became a member of the Scuola Grande di San Marco, of which his uncle Bartolommeo was already a member. The recent attempts to vindicate the position of Bartolommeo Montagna as an important artist, and to connect him more closely with Venice and with the school of the Vivarini, are more than confirmed by the document stating that in 1482, while still a young man, he was employed to paint two pictures for the greatest of the Mutual Aid Societies, this same Scuola Grande di San Marco. Another painter whose style of work clearly connected him with the Vivarini, Girolamo Mocetto, is now proved to have been not a Veronese, as has been supposed, but a pure Venetian, and the son of an older painter of the Muranese school, Andrea da Murano.

—Paul Verlaine has just accomplished the pious work of gathering, arranging, and at last publishing in full the poems of his friend—some said his *âme damnée*—Arthur Rimbaud. Rimbaud was, in the completest sense, what Verlaine himself calls a "poëte maudit." If Verlaine were his master, it must be said that the disciple surpassed the master in all his maddest characteristics. There was something almost insane in his excesses. He was more a vagabond than Verlaine, even more at odds with the world, a more stupefying blasphemer, and, at the end, more passionately devout. In his verse he was more an innovator than Verlaine has ever been, and it may be doubted whether he did not himself influence Verlaine more than he was swayed by him. It was Rimbaud whom Verlaine attempted to shoot in a drunken quarrel in Belgium—an act which cost him many months of imprisonment. All of a sudden Rimbaud disappeared, like "Waring." All sorts of stories about him went the rounds of the newspapers: he was dead; he had gone to the far East; he had become a Trappist. At last it came to be asserted that he never had existed, and that the poems published under his name were mystifications. All the while, however, he was in South Africa, hunting for gold, or trafficking in ivory, spices, and gums. At last he returned to France, but too late, for his strength was shattered. He died in a hospital the death of a saint, full of the raptures of mysticism. His poems were scattered in all sorts of places among the reviews of the Jeunes. The best known of all of them, unhappily for him, is the somewhat absurd sonnet on the colors of the vowels:

> "A noir, E blanc, I rouge, U vert, O bleu, voyelles,
> Je dirai quelque jour vos naissances latentes."

It may well be doubted whether this sonnet was ever seriously meant; it is quite as likely to have been thrown out as a stumbling-block for critics to fall over, and to make talk. Rimbaud's serious work was of much greater value. It has been, and may properly be, compared to that of Poe. At any rate, Rimbaud, more than any other, influenced Verlaine, and Verlaine is the acknowledged master and leader of the younger French poets of our time.

COUES'S EXPEDITIONS OF PIKE.

The Expeditions of Zebulon Montgomery Pike to Head-Waters of the Mississippi River, through Louisiana Territory, and in New Spain, during the years 1805-6-7. A new edition, now first reprinted in full from the original of 1810. With copious commentary, memoir of Pike, new map and other illustrations, and complete index. By Elliott Coues, late Captain and Assistant Surgeon U. S. A., etc., etc. 3 vols. New York: Francis P. Harper. 1895.

THIS edition of Pike's explorations is only second in value to the annotated edition of the Journal of Lewis and Clark, by the same editor. Few men have made so deep an impress on the development of their country as did Zebulon M. Pike, who fell at York, Canada, in 1813, at the early age of thirty-four years. Through his individual efforts the Government of the United States initiated its show of authority and interest in the great Northwest, which for nearly a quarter of a century had belonged to it in name but not in fact. He first made known the physical characteristics of the unknown and debatable territory which separated the eastern inhabited parts of the newly acquired Louisiana from the northwestern domains of New Spain. Pike's career in the United States Army was unexampled. He rose in fourteen years through all the intermediate grades from a cadet in the ranks to be a brigadier-general, and died in one of the few successful battles of our second war with Great Britain. In Dr. Coues's memoir of Pike has been gathered much new and hitherto scattered information, especially as to his professional career, methods of work, and as to his death. Whiting's error that Pike was a cadet in his father's regiment, Second Infantry, is perpetuated in this volume; in fact, the law permitted cadets only in the regiments of artillerists and engineers. The U. S. M. P. S. (United States Military and Philosophical Society), to which Pike dedicates his book, and of which Coues gives no account, had among its members the distinguished Fulton, who published one of his remarkable books, 'Torpedoes in Warfare,' as a member of this society. The temper, honor, and ideals of Pike appear in his refusal to employ L'Rone, who proposed to desert from the N.W. (British) Company (p. 174); in his uncomplaining endurance of cold and discomfort (p. 144); in his declaration that in "war the field of action is the sphere of young men, where they aspire to gather laurels or renown to smooth the decline of age, or a glorious death" (p. 225); in his description of Frazer as a man possessing "that without which an education serves but to add to frivolity of character—candor, bravery, and that *amor patriæ* which distinguish the good of every nation"; and finally in his last published orders that any pillaging soldier "shall, if convicted, suffer death. Courage and bravery in the field do not more distinguish the soldier than humanity after victory." His last letter runs: "Should I be the happy mortal destined to turn the scale of war, will you not rejoice, oh my father? May heaven be propitious and smile

on the cause of my country. But if I am destined to fall, may my fall be like Wolfe's, to sleep in the arms of victory." The next day, April 27, Pike, while awaiting a white flag and succoring a wounded foe, was mortally wounded by the explosion of the enemy's magazine. Dr. Coues gives an excellent account of the battle of York, and, among other original information, prints the official reports of Gen. Sheaffe (xci–xciii), in which the following extracts show that the main magazine was exploded by his orders: "I caused our grand magazine to be blown up," and, "The troops were withdrawn towards the town, and the grand magazine was at the same time blown up."

Pike's first expedition, 1805, was made from St. Louis by flatboat up the Mississippi, under orders of Gen. Wilkinson to ascertain the conditions of British trade within the limits of the United States, and to draw the Indian tribes to their allegiance to the Government. He built winter quarters four miles below Little Falls, Minn., and, with a small field force, explored in the very dead of winter the head-waters of the Mississippi, and visited the various posts of the Northwest Company (British). He made a treaty with the Indians for cession of land near Fort Snelling to the United States—much like other Indian treaties of that period—whose legality his editor amusingly questions, and brought the traders under control. Pike's dealings with the traders were decisive, forcible, and fair; he forgave the past, remedied existing conditions, imposed proper restrictions for the future, and returned in triumph and safety to St. Louis. The most important geographical information under this section contributed by Dr. Coues is the full elucidation of the original discovery or determination of the true source of the Mississippi River, in which the repeated efforts from Pike to Schoolcraft are set forth. Then follows the success of Nicollet, 1836, in discovering "the several Nicollet Springs [which] issue from the ground and form a rill whose waters (through Middle Nicollet Lake and Lake Itasca) are continuous to the Gulf of Mexico" (p. 167). It may be here added that, although the index is unusually full, yet omissions occur, and the source of the Mississippi, to which ten pages of text are given, is not indexed under that river. The five original charts of Pike are reproduced quite satisfactorily, and in passing let it be said that it is a relief to find Pike's plagiarism of Humboldt's map of 1804 frankly acknowledged. The new, additional map, a historico-geographical chart of the upper Mississippi, is, over and above its illustrative value, a most welcome contribution for historical students. It is based on the best maps of the Corps of Engineers, United States Army, and bears a large amount of historical information judiciously selected and carefully compiled.

In June, 1806, less than two months after his return from the upper Mississippi, Pike started on his expedition to New Spain. His ostensible object was to restore freed captives to the Osage Nation, to establish friendly relations with the Comanches at the head waters of the Arkansas and Red Rivers near New Mexico, to explore these rivers—one party to return by the Arkansas and the other by the Red River—and to acquire such geographical knowledge as would insure a definitive determination of the boundary line between Louisiana and north Mexico. Dr. Coues has been at very great pains to outline definitely Pike's route to New Mexico through Missouri, Colorado, and Kansas. In the last named State he followed to the southwest the broad trail made by a Spanish force from Santa Fé under Malgares, who had invaded the United States and tampered with the Indian tribes in an effort to forestall Pike's efforts. From near Great Bend, Kansas, Pike sent his lieutenant (Wilkinson) with seven men down the Arkansas, while he, with Dr. Robinson, started westward. It should be borne in mind that this country was absolutely unknown to Americans. Pike's discovery of the Rocky or "Mexican" Mountains, as he called them; his unsuccessful efforts to ascend the great peak which bears his name; his sufferings in exploring the valley of the upper Arkansas, and the heroic though rash determination with which he crossed the maze of unexplored mountains into the valley of the upper Rio Grande, merit the attention of every American interested in the exploration and development of his country.

Leaving two men in a block-house at the present site of Cañon City, Ark., January 14, 1807, he followed up Grape Creek, passed through the Sand Hill pass of the Sangre de Cristo range, and, entering the San Luis valley, reached the Rio Grande near the present site of Alamosa. Believing this to be the Red River, Pike crossed it, and, camping on the south bank of the Conejos, here constructed a stockade. This mid-winter journey was made in extremely cold weather through snow, in summer clothing, with insufficient food. Nine men were frozen, two (Sparks and Dougherty) suffering to such an extent that they were necessarily left in a mountain camp with meat and ammunition. From the stockade a party was sent back across the range to bring in the baggage and the frozen men, if they could travel, but, the soldiers being still helpless, the party returned, and later the sufferers were succored by Sergeant Meek and Private Miller. This story of the courage and steadfastness of American soldiers should be read in its plain and simple recitation in detail of the most extreme sufferings and hardships, which were considered as a matter of course.

After the strengthening of the stockade, Dr. Robinson was sent to Santa Fé for the ostensible purpose of presenting a Spanish claim, but in reality to spy out the trade prospects, military force, etc. As a final result, Pike was visited by a Spanish officer of dragoons, escorted to Santa Fé, examined by Gov. Allencaster and sent to Chihuahua, Robinson rejoining the command at Albuquerque. Escorted from Chihuahua across the Rio Grande, they passed through Texas by the way of San Antonio, and on July 1, 1807, reached the United States at Natchitoches. Dr. Robinson, it may be added, was never commissioned in the army, despite Pike's recommendation. The fate of the men left in New Spain remains unsettled, both in Pike's narrative and in Coues's notes, except as regards Vasquez. It might be said, however, that probably all returned to the United States, the army records showing that Corporal Jackson reënlisted in the Second Infantry in 1809.

As to Wilkinson's object in sending Pike into New Spain, it is useless to surmise, but doubtless it was in furtherance of the ambitious schemes of that unscrupulous officer. Pike knowingly entered with an armed force the limits of a friendly country (for, even if he mistook the Rio Grande for the Red River, he was fortified on the Spanish side of it), detached his surgeon from his command, concealed his connection with his doctor, and secretly obtained all possible information concerning the physical and military conditions of New Spain; all of which indicates that he acted with method, under secret orders, and for a definite purpose. His whole career shows that he was a loyal subordinate and a man of a high sense of honor, who would not, without orders from his superiors, have acted as a spy while being escorted with courtesy and consideration through the country. Doubtless he considered that he was patriotically paying the Spanish in their own coin for Malgares's invasion of American territory the year previous.

Dr. Coues has brought together many valuable bits of information regarding the journey to New Spain, notably the extract from Meline giving the Spanish view of Pike's invasion. Governor Allencaster looked on it as preliminary to permanent occupation of contiguous territory, and, in his official report, says:

"From what I gathered from Robinson and from the above named officer [Pike], I conclude distinctly that the expedition of July [1806] was specially designed to conciliate two Indian tribes in behalf of the United States Government. . . . Furthermore, that the Anglo-American Government considers as included within the boundaries of Louisiana all the rivers that empty into the Mississippi, and all the territories that extend to the headwaters of the Rio Colorado [Canadian River]; . . . that it is their intention this year or next to establish forts or settlements on all these rivers, in order to monopolize all the trade and commerce."

Among many valuable notes, those on pp. 639-47, 654, 747, and 764 elucidate the geographic and military history of localities which were not specially dwelt upon by Pike, but have become memorable since his time. The ethnological notes are specially interesting in connection with New Mexico, pp. 727-48; they bear on the Pueblo and Apache Indians, whose relations with the United States form a not unimportant chapter of American history. Dr. Coues appears at his best in dealing with the Indian tribes that have occupied New Mexico and Arizona. Other notes, too numerous to mention, are of varied importance and interest. The rearrangement by Dr. Coues of the appendices and other extraneous matter adds very greatly to the value of this edition, since in all others even the experienced reader has found it difficult to collate complete information on many important topics. It is unfortunate that the editorial comments are not always pertinent and dignified. Slang terms are used, remarks reflecting upon brother officers appear, and the notes are occasionally obtrusive, if not offensive, as regards religious topics. The remarks (p. 158) on Schoolcraft's invention of new words are in very questionable taste. In many instances the notes are chargeable with prolixity. If the scope of them was to pass beyond illustrations of the men and places named in Pike's narrative, it would have seemed advisable to devote time and attention to historical comments upon existing conditions of affairs in the Northwest Territory and in New Spain.

Despite these minor defects, the volumes are an important contribution to geographical and historical literature.

CHILDREN'S BOOKS.—II.

'Children's Stories in American Literature,' by Henrietta G. Wright (Charles Scribner's Sons), does not make the most of a good opportunity. After a general chapter on "the early literature," there are sixteen chapters on as many American authors, beginning with Audubon and ending with Holmes. The emphasis is much more on their books than on their characters and lives, and the account of their books is as mechanical as the details of a publisher's catalogue, with

something of the manner of the notices furnished by publishers to editors for their "indolent reviewers." The praise is here and there too patriotic to be just, as where Cooper's place in American literature is said to be similar to that of Scott in England. There is not a word of Cooper's ebullient temper and his stubborn battle with a libellous press. But for a passing allusion to his college pranks, Poe appears quite as immaculate as Emerson, who has the briefest chapter in the book. On the other hand, as little as possible is made of Parkman's heroic struggle against fearful odds. Prescott's disabilities receive somewhat more attention, but not much. The young reader is not permitted to know that there was anything painful in Motley's ministerial career. The birthplace of Bryant is assigned to the Berkshire Hills, and the assertion that "Green River" was a poem of his manhood, retrospective of his boyhood, is without any justification. It will be a bright boy who does not carry away from the high-flown account of "Yankee Doodle" in the first chapter an impression of his historical reality.

Among the recent boys' stories of the civil war 'Jack Benson's Log,' by Col. Charles Ledyard Norton (Boston: W. A. Wilde & Co), will take a high rank. The hero is a New England boy who goes from a quaint boarding-school to the Naval Academy at Annapolis, and from thence to one of the blockading squadron off the Carolina coast. The incidents, such as the attempted capture of "Old Ironsides" and the night expedition on the Santee River, are well chosen, and are described with much spirit and a realistic sea-flavor. Our only criticism would be that the author at times sacrifices his story to an endeavor to write history which most boys may be fairly presumed to know. The book, which is well illustrated, covers only the first year of the war, and its readers will look with interest for the promised sequel.

'In the Okefenokee,' by Louis Pendleton (Boston: Roberts Brothers), is also a story of war time, but the fighting is with wildcats and bears. Two lads wander into a camp of deserters in the heart of the great Georgia swamp and are detained by them for several weeks. Their adventures in their futile attempts to escape cannot fail to interest even older readers than those for whom the book was written, so novel are the scenes and so well described are the principal characters, especially the manly and patriotic little hero. The story, in a much abbreviated form, originally appeared in the *Youth's Companion*.

A gratuitous excellence of workmanship, not common in children's stories, and a leaning to theatrical effect emphasize the French origin of 'The Three Apprentices of Moon Street,' by Georges Montorgueil (T. Y. Crowell & Co.). The three boys, John, Johnnie, and Jack, are too strictly typical of the three grades of character inferable from their names to be natural. Unfortunately, perverse human nature likes best to see in books a reflection of familiar objects. Hence the boys are interesting in inverse ratio to their virtue, and the very end for which we may suppose them to have been made thus typical is defeated. The best one is monstrously unnatural, the middling one is vague, and only the "dreadful warning" seems like a boy at all.

Criticism is somewhat disarmed when Mrs. Burnett announces that they were by no means ordinary children whose journey to the Chicago Fair she narrates in 'Two Little Pilgrims' Progress' (Scribners). Perhaps a twelve-year-old boy and girl might have planned such an expedition a year ahead, and have worked hard and constantly to earn money for it, but it passes belief that they could have done all this without a hint to any one, and actually have carried out their purpose unsuspected. That they should have attracted a rich man, who finally adopted them, is natural enough: it is what always happens to poor orphans who are too young to get married. The book is brightly written, as was to be expected, with many pleasant touches; but it would be better if addressed more squarely and directly to children. The side glances at the "grown up" gallery are too frequent to escape notice from the real audience, and are likely to make it uneasy.

The reappearance of Mowgli and other friends in Mr. Kipling's 'Second Jungle Book' (The Century Co.) will be hailed with pleasure by many young readers whom the original 'Jungle Book' delighted last year. Mowgli has grown in size, but is still uncorrupted and simple. Hathi and Bagheera and the other agreeable, dignified, and witty beasts are the same as ever. The book deepens and amplifies the vivid impression of life in India which Mr. Kipling has already given, and carries one into the very heart of a new and strange world as only a master's work could do.

It was evidently a struggle against nature to subdue the fascinating city of Florence to a mere background in 'A Child of Tuscany,' by Marguerite Bouvet (Chicago: A. C. McClurg & Co.). It seems a useless struggle, too, since the characters have so little substance and reality that they hardly deserve any background at all. The phantom people might better retire and let Florence assert itself.

Full of the life of sea and shore about her island of Appledore are Mrs. Celia Thaxter's 'Stories and Poems for Children' (Houghton, Mifflin & Co.). The flowers in her garden, the sandpipers on the beach, the robin's nest in the lilac bush, and the circling gulls overhead —such are the simple things which filled her soul with delight and overflowed in graceful verse. The stories are very slight, the merest thread of incident, but so pleasantly told that they should find favor.

The excessive exuberance which has marked some of Mrs. Laura E. Richards's former stories seems to have broken out on the cover of her latest book, 'Nautilus' (Estes & Lauriat). Here a black and white square-rigged "schooner" sails with jibboom pointing skyward across a white and yellow sea, driven by a wind as violent as the brilliant chrome sky. Such a remarkable design may be imagined to have absorbed a good deal of superfluous color from the pages. Whatever the cause of improvement, we have, this time, a fairly straightforward tale of a boy, unspoiled by much ill-treatment, who was rescued from a miserable life by a good, undreamt-of uncle. Perhaps to children, used as they are to believe "six impossible things before breakfast," it will not seem too unlikely that a foreign uncle should first have made known his existence by sailing up the river and, with little ceremony, carrying off the boy in his schooner *Nautilus*.

'The Rabbit Witch, and Other Tales,' by Katharine Pyle (E. P. Dutton & Co.), revives both the pantalettes and the very moral verses which go with them to make what an original child called a "pantaletty" book. Here is set forth the warning fate of children who were "far from good," who "liked to make a noise"; of the girl who would "shout and play with boys," and the boy who "would not eat his bread and milk"—the latter in contrast to the antique greedy boy, whom no one ever saw. There is something engaging about the frankness of these little moralities, and at the early age when children like them they may help to formulate notions of propriety. The illustrations are excellent.

The Century Co. publish Mr. Palmer Cox's fifth Brownie book, 'The Brownies through the Union.' It might be more of a geography lesson than would go down even with the appetizing Brownie sauce if every State were visited, so the Brownies wisely content themselves with fourteen, well scattered, and manage to find something interesting in each. The youngsters will enjoy picking out their old favorites in the pictures to see what new antics they are up to.

Having gone pretty much through the spectrum with his successive fairy books, Mr. Andrew Lang now has a series of "True Story Books" well going, the blue one of last year being succeeded by the red one which the Longmans have just brought out. Here we have Rider Haggard's story of Major Wilson's last fight on the Shangani; Mr. Lang himself on the Maid of France, and Mrs. Lang in several adaptations from Froissart and others; tales by Mr. Crockett, Miss Repplier, and others, with generous extracts from Marbot and Prescott. Not to let the fairies entirely escape him in this sober light of day, Mr. Lang also publishes 'My Own Fairy Book' (Longmans). It is addressed, apparently, to readers who have become well sophisticated if not a little blasé by a long course in the author's collections of fairy stories, since he now plays openly whimsical tricks with the solemn old stage properties of fairyland—the magic carpet, the cap of darkness, etc. Yet we doubt not that many a modern child will find amusement in seeing the heads of his former idols knocked together in this way.

Many hands of varying skill have written the dozen or so of stories which make up 'The Silver Fairy Book' (Putnams). From the French, German, Spanish, Swedish, Servian, etc., they come, all fitted to amuse some child's empty moments, and guiltless of more serious intention.

Again that exhaustless treasury of the marvellous, the 'Arabian Nights,' has furnished a handsome gift book. 'More Fairy Tales from the Arabian Nights' (Putnams) includes several of the most famous stories, edited by E. Dixon and finely illustrated by J. B. Batten. It seems better worth while so to enrich these older tales than to strive after mere novelty.

"Cinderella," "Ali Baba," "Aladdin," "Bluebeard," Mother Goose, and Aesop are mustered familiarly in twelve charmingly printed, illustrated, and bound little volumes issued by Dent-Macmillan. They come in a neat box, and are a desirable gift if only to acquaint the youngest with the art of fine book-making. "Banbury Cross" is the name bestowed on the series.

A Victorian Anthology, 1837-'95. Edited by Edmund Clarence Stedman. Selections illustrating the editor's critical review of British poetry in the reign of Victoria. Boston: Houghton, Mifflin & Co.

THE mere announcement of a Victorian Anthology by so well-appointed a critic as Mr. Stedman has doubtless given pleasure, not alone to a great many readers of his 'Victorian Poets,' but to a larger circle beyond. They will find nothing to disappoint them in the general arrangement of the book, the prevailing good taste of the selections, or the

thoroughness of the critical apparatus. If any disappointment should arise, it will be founded mainly on the fact that this book follows a little too closely on the lines of its predecessor, reflects too fully its estimates, and goes too little beyond its list of authors. When it is considered that the 'Victorian Poets' appeared originally in 1875, and was not essentially modified in the revision of 1887, and that the outburst of new rhymers has been only less remarkable, even since this last date, than that of new novelists, it is probable that this latest anthology will be most eagerly sought, by many, as a means of getting at these latest candidates for fame. In this respect there will be, we fancy, some occasional disappointment. The author himself would admit, probably, that had his book been created *de novo*, and not been, in a manner, the second part of a class-book, his heroes and heroines might have been somewhat different. Landor, Hood, Peacock, Procter, and Montgomery undoubtedly survived into the Victorian epoch, but they seem much remoter figures in 1895 than in 1875; and in some cases their fame can scarcely be said to have survived at all. At any rate, their works have been sifted and resifted for anthologies; and there is far less probability that any ingenuous reader will look for some information about them in this anthology than that he will consult it for some knowledge of Henley or Grant Allen, for instance, who are not to be found here at all. So the young enthusiast who hears of the "poets of the Bodley Head" or of the "Rhymers' Club," will find only about half the tuneful chorus under the latter name here recognized, while the other half is ignored. Nor is there any clear principle of selection among these. Yeats, for instance, is *facile princeps* among them all; and Le Gallienne is at least well advertised; but there seems no reason why Rhys and Symons and Todhunter should be "personally conducted" across the Atlantic to the exclusion of such other *dii minores* as Dawson, Ellis, Hillier, Lionel Johnson, Plarr, Radford, and Rolleston. Indeed, no other writer in the club has given us so much of the bewitching Yeats flavor as Lionel Johnson in his verses "To Morfydd."

Of course, no anthologist is expected to include all the poetlings, but compilers should at least give us the more noticeable. Bennoch has a claim upon Americans as the friend of Hawthorne; Auberon Herbert has interest for us as a patrician radical; the French and English poems of Raffalovich have a grace of their own; Gascoigne Mackie's 'Poems Dramatic and Democratic' have much vigor, and so has Edward Carpenter's 'Towards Democracy,' whose Whitmanesque flavor will form, in Mr. Stedman's eyes, no objection. We cannot but think that poets like these, and others who might easily be added, would have been included in the 'Victorian Anthology' if it could have been entirely detached from the work to which it is a sequel; if, in other words, the editor could have begun at 1895 and worked backwards, instead of having begun in 1875 and worked forwards.

As to the selections from the better known poets, this must always be largely a matter of what astronomers call the personal equation; and every editor must judge for himself. Yet one rule seems simple, that where there is a pretty general consensus of readers as to a poet's high-water mark in his art, every selection, however limited, should include this, if nothing else. No one would think of making a selection from Holmes, for instance, without putting in "The Chambered Nautilus." All recognize that in this, if anywhere, lies his bid for permanent fame. Now it seems to us clear that Meredith's "Nuptials of Attila," Sir Samuel Ferguson's "The Building of the Ship," Isa Craig-Knox's "The Brides of Quair," Hartley Coleridge's "She was a queen of noble Nature's crowning," Elliott's "Of Mary, by heaven lent," and Montgomery's "Evening among the Alps" and "There lived a man" are in just this category. To our thinking, and by the general recognition, these particular poems are so superior to the rest of their respective authors' work as to leave little room for selection: "Eclipse" is ahead and the rest nowhere. Yet none of these is included by Mr. Stedman. Again, we think it a serious omission to have dismissed Tennyson with no extract from "In Memoriam," and Browning with no example of the noble blank-verse soliloquies in his dramas—for instance, that in "Colombe's Birthday," beginning,

"When is man strong until he feels alone?"

We are surprised, also, that Mr. Stedman has omitted in his selections from Rossetti—too short at best, only six pages being given to him and twelve to William Morris—his finest example of lyrical cadence, "The Song of the Bower." The same might be said as to the omission of Swinburne's heroic "Song in Time of Order." Even with our editor's selections from Kipling, evidently a favorite of his, we are not quite satisfied. Nowhere has this poet shown such a grip of iron as in the "Ballad of Bolivar," if indeed it is surpassed in English literature for that quality; and certainly never such a haunting charm as in his "Mandalay," a poem which cannot be read aloud so prosaically as not to furnish its own guitar accompaniment. But Mr. Stedman might say, perhaps justly, that we are here reverting too much to the personal equation.

The Bibliographical Notes are, as was to be expected from Mr. Stedman, full and careful, though they are here attributed to Miss Vernetta E. Coleman, with an occasional intercalation by the senior editor. Possibly they include a little too much criticism, unless there were more; it is so hard to sum up in a word. We should not, for instance, call Mr. Lang an "authoritative" author—he is much too hasty and whimsical for such a phrase; his London sobriquet of "The Amateur Genius" is far better. As to accuracy, we have found few slips. The impression is given (p. 707) that Charles Tennyson Turner's Sonnets were not collected until after his death, but a small volume of them appeared, in 1830, before he took the name of Turner. Fitzgerald's "Euphranor" and "Polonius" are not translations (p. 689), nor do they purport to be, but are fragmentary original compositions. It might have been well to say that Clough's hexameter poem, "The Bothie of Tober-na-Vuolich," was originally called "The Bothie of Toper-na-Fuosich," since it became best known in this country under the latter name, through Emerson's zealous praises. The triviality of these criticisms is our best tribute to the excellence of these Bibliographical Notes; and as for typographical errors, the whole handsome volume does not seem to afford one.

Icebound on Kolguev. By Aubyn Trevor-Battye. Macmillan. 1895. 8vo, pp. xxviii, 458. Ills. and maps.

NORTH of Tcheskaia Bay, and a little less than half way between the entrance to the White Sea and Novaia Zemlia, lies the low rounded alluvial island of Kolguev (pronounced *Kol-goo-yeff*). Surrounded by ice during a large part of the year, without harborage for anything larger than a small schooner, it is rarely visited and is hardly known except to a few Russian traders from the adjacent mainland. Its name was first recorded by Stephen Burrough in 1556. For three hundred years it was practically unexplored, and the first scientific examination of it was made by Savelieff and Ruprecht in the summer of 1841. They spent but six days on the island, much of which was stormy weather. The shores are comparatively low, and the island is ovoid in shape, about 52 miles north and south and 37 miles east and west, rising towards the centre into a few low hills, the highest being about 150 feet above the sea. These summits are holy places to the Samoyeds, and are marked by rude wooden fetishes, or sticks set in the soil, with a roughly carved face on the upper end and a few transverse grooves, representing ribs, just below it. These sticks are supposed to represent a deity, called Num, to whom sacrifices were made on the hill-tops, where, on the death of a member of the tribe, some of his personal belongings were carried and deposited as a propitiatory rite. The fetishes are called by the Russians "bolvani," and by the Samoyeds "shaiadeh."

The island has been inhabited by Samoyeds from time immemorial, and, owing to their isolation, the sparse population of the island has retained its primitive customs to a greater extent than is the case among the Samoyeds of the mainland. Half a century ago the island was the seat of a considerable traffic in the skins of the polar bear, seal, and walrus, down, and reindeer products. The number of deer is stated to have reached 25,000, of which part were the property of the natives and part belonged to Russian traders, who visited the island annually to take away the skins, salt meat, and tallow. The herds were attacked by a pestilence which destroyed the deer by thousands, a blow from which the island has never recovered. At the present time there seem to be but a few thousand deer, and the trade attracts but two or three tiny vessels once a year. The island is a breeding-ground for multitudes of arctic water-fowl, especially geese, and a very important part of the subsistence of the inhabitants is derived from the annual trapping of the geese while moulting—a practice which has been carried on from ancient times. As many as 100,000 geese are said to have been taken in a single season.

Mr. Trevor-Battye is an enthusiastic ornithologist, and his attention had been called to Kolguev as a promising spot for collecting specimens and data in regard to the breeding habits of northern birds. With a friend he proceeded to charter a small steam yacht, and in June, 1894, with a single companion, succeeded in making a landing on the northern end of the island. Here, after wandering about for some time, he reached a Samoyed camp, and afterward a point on the south coast where the yacht was expected to call in July. This plan was frustrated by the presence of ice, and the explorers were forced to remain on the island until September, finally escaping to the mainland on the barkass of the Russian trader. During his enforced stay the author was often the guest of the Samoyeds, and found much to admire in the character of these simple, honest, primitive folk, from whom he parted with regret. Although far from being a trained ethnologist, his notes and observations will have permanent value for the anthropologist. Satisfactory collections of birds and plants were made, which are treated of in an appendix.

The book is almost a direct transcript of the author's journal, and its faults are those common to such documents. While one cannot but recognize that a better trained observer might have brought back a richer harvest in lines not ornithological or botanical, and that the relation of adventure is somewhat diffuse, yet the unpretentious manner in which the author recounts his experiences disarms criticism on this score. There are many excellent illustrations and three good maps. The book is handsomely printed, and has a good index.

The Psychology of Number, and its Applications to Methods of Teaching Arithmetic. By James A. McLellan and John Dewey. [International Educational Series.] D. Appleton & Co. 1895.

THE two respected scholars whose names appear upon the title-page of this work, in their eagerness to illustrate the important truth that the teaching of arithmetic ought to be based upon a thorough acquaintance with psychology, seem to have clean forgotten that there are two other legs to the tripod on which it should rest, viz., an exact logical analysis, and a lively appreciation and comprehension of the nature of mathematics in general. As long as nothing but psychology is called for, what they say is admirable—this, for example:

"There are but few children who do not at first delight in number. Counting (the fundamental process of arithmetic) is a thing of joy to them. . . . When, under the formal teaching of number, that interest, instead of being quickened and strengthened, actually dies out, the method of teaching must be seriously at fault. . . . The native aptitude for number is continually baffled. . . . The child is adjudged to have no interest in number and no taste for mathematics; and to nature is ascribed an incapacity due to irrational instruction. . . . It is perhaps not too much to say that nine-tenths of those who feel that they have no aptitude for mathematics owe this misfortune to wrong teaching at first."

Excellent; and even more true of geometry than of arithmetic. Again, the authors are admirably alive to the futility of any attempt to teach any branch of mathematics until the scholar has been made to feel with some accuracy what the use of it is. Of course, you cannot convey to young children your own meaning when you say, what all grown people discover, that the happiness of life very greatly depends upon facility in ciphering. Yet you must try to cast some adumbration of the distinction between happiness and misery upon their poor little hearts, and make them associate the one with arithmetical expertness and the other with neglect of numbers. That should be Lesson I. in arithmetic.

Upon such generalities of the art of teaching, too usually neglected, Profs. McLellan and Dewey are perfect. But these things have been said before. When we come down to details, depending upon the nature of mathematical thought, they are more often wrong than right. They have allowed secondary truths and half-truths to run away with them. For instance, their own conception of the purpose and end of numbers is not true either in scientific mathematics or in life. They tell us that numbers are for measurement, for valuation. This is not accurate; but, waiving that for a moment, we ask what measurement and valuation are for? Though we are not explicitly told, we gather that they are supposed to be mainly useful to improve our general conceptions. But that may be disputed. Except casually and secondarily, numbers—arithmetical numbers—do not contribute to our conceptions. Their greatest utility by far—a utility more fundamental than that of all the constants of physics or the tables of the statisticians—is to keep our daily accounts, and so continually to check up our conduct without imparting any definite ideas. For 999 school-children out of a thousand this is destined to be the chief manner in which a knowledge of arithmetic will further their welfare. The corollary is, that the casting up of columns of figures easily, and swiftness in making those mental calculations which will enable them to overreach others in bargaining, are the bull's-eyes to be aimed at. True, man does not live by bread alone; but it must be the chief of his diet, so far as his nutriment is to come from arithmetic. If the Theory of Numbers were studied, that undoubtedly would afford a valuable training in logic, and impart some little exercise in mathematical generalization and even in mathematical imagination. But there is very, very little of all that in Vulgar Arithmetic.

It is a capital error, leading to the worst pedagogical blunders, to suppose that numbers have any significations whatever. Are "Eeny, meeny, mony, mi," etc, significant words? Charles Leland says they are Gipsy numerals. At any rate, they have precisely the force, use, and sense of primitive numbers. The essential use of numbers is that which the tourist in Italy has to put them to when he lugs about with him some baker's dozen of hand-packages, big and little, of all shapes and sorts, with no semblance of equality, but so many detached things, liable to be separately lost, and requiring to be incessantly counted. He might just as well use the words, "Eeny, meeny, mony, mi," etc., as "One, two, three, four," etc. Or he might use the syllables of "Ein feste Burg ist unser Gott," etc. In fact, the system of cardinal numbers may be defined as a scale of vocables, used as intermediary, for the establishment of one-to-one correspondences between different collections. To say, as our authors do, that the idea of measurement enters into the idea of all number, and should never be lost sight of in teaching, is on its theoretical side to confound things usefully distinguished, and on its practical side to fly in the face of the embryological maxim that the development of individual thought must follow the course of the development of thought in history. After we have once got the idea of metrical equality, we can perceive that it is verbally applicable (with little or no meaning) to the units of numeration. But that reflection does not help us to count. Who can doubt that man counted for ages before he began to measure, in the proper sense, and therefore before he had the conception of metrical equality?

It is useful to distinguish the different purposes of numbers, because a distinct system of numbers, each with its distinct modification of logic, is used for each purpose. For *counting*, we must use cardinal numbers; for the *assignment of places in cycles*, we use limited series (the names of the days of the week is such a system of numbers); for *dating* in series running indefinitely both ways (like the years B.C. and A.D.), we require negative as well as positive integers; for *measurement*, we need rational fractions; for *reasonings about continua*, where first the idea of a limit comes in, we need surds; for *comparing functions*, we need imaginaries; for *four-dimensional continuous numerations*, quaternions. It is a truism to say that, in teaching, one idea should be inculcated at a time, and the most rudimentary first. But above all in arithmetic, which, in its most practically important aspect, is a question of physiological habit of rapid, accurate ciphering, the less the operation is interfered with by superfluous reflections, the better. No doubt it is necessary to teach certain simple methods of reasoning; but they must be performed in an instinctive, quasi-mechanical way, without philosophizing. One can, with a microscope, detect traces of mathematics in vulgar arithmetic, but there is so little intellectual value in it, while it is so stupendously important as a practical skill, that it is better to sacrifice the former utility to the latter. To evaluate this work from the former point of view we should need no monstrous number, while from the latter standpoint we fear the datary system of numeration would have to be drawn upon.

Indian Polity: A View of the System of Administration in India. By Gen. Sir George Chesney, K. C. B., M.P. 3d edition. Longmans. Pp. xx, 400.

THE British administration of India is one of the most remarkable existing systems of government. A great empire, containing three hundred millions of people of different races and religions and in various stages of civilization, is administered by about a thousand English covenanted civil servants, assisted by a few thousand white subordinates and supported by about seventy thousand white soldiers. This fact is of itself such an astounding proof of the governing ability of the Anglo-Saxon race that it gives cause for surprise to find the general ignorance prevailing as to the methods and success of the British administration in India. Nothing like it has been seen in the world since the days when the Romans dominated Europe, Western Asia, and Northern Africa, bringing to tribes hardly more diverse than the peoples of India the material benefits of roads and bridges with the moral supremacy of law and order. Nothing could be more interesting than to compare the Roman government of the provinces during the golden days of the Roman domination with the administrative system established in India; and the chief difficulty in the way of such a study has hitherto been the absence of authoritative works describing either the Roman or the Anglo-Indian system. Within recent years, however, the works of Mommsen and others have done much to elucidate the Roman administrative system, while Sir George Chesney has, in the volume under review, arrayed the facts and principles of Indian administration in an orderly fashion. A comparative study, only less interesting than the one just suggested, might also be made of the methods adopted by three of the European Powers in ruling subject races, if there were in existence books as clear and complete as Sir George Chesney's, upon the Dutch administration of Java and the Spice Islands and the French administration of Algeria. The problem of the best method of governing alien races situated at a distance from the centre of rule does not, and is never likely to, confront the American people. But, since systems of government should interest thoughtful minds in spite of the absence of the probability of practical application, students of politics would do well to turn their attention at times to India as affording an object-lesson for the successful surmounting of the peculiar difficulties inherent in alien rule in distant provinces.

Sir George Chesney, whose lamented death last year closed a career in which he won distinction as a soldier, a politician, an administrator, and a man of letters, was well qualified to undertake the task of clearly describing

the system which he himself knew well from practical experience. Though a clever writer, as his pamphlet 'The Battle of Dorking' clearly showed, and an able novelist, as his romance 'The Dilemma,' the best story ever written with its scene laid in the stirring days of the Indian Mutiny, fully proved, Chesney's fame will undoubtedly rest upon his 'Indian Polity.' The first edition appeared as far back as 1868, when the young officer of engineers was at home on a furlough, after having distinguished himself as a soldier at the siege of Delhi and exhibited his abilities as a subordinate administrator in many public offices. The success of his book, perhaps even more than his services, brought him the appointment of President of the Indian Civil Engineering College at Cooper's Hill in 1870, when it fell to him to organize from the beginning the great institution which has sent forth its crowds of graduates to develop the resources of India by means of railways, roads, and great engineering works. From 1880 to 1886 Chesney served as Military Secretary to the Government of India, and from 1886 until 1891 as a member of the Viceroy's Council. These offices enabled him to observe the workings of the Indian administration from a different point of view, and his more recent experience is shown in the careful revision which his book has undergone, and which has vastly improved it from the original text published when he was but a young officer. The arrangement of chapters, however, remains practically the same.

The introductory outline of Indian history is too short to be satisfactory, but it lays the foundation for the subsequent pages. In different chapters the author treats of the Supreme Government, the provincial governments, the legislative councils, the great departments, the district organization, the army, the different branches of public works, and finance. His chapters are descriptive, not controversial, and form incontestably the best source from which to obtain an accurate knowledge of the whole system of Indian administration. The only thing that can be compared with them is the chapters in Sir W. W. Hunter's encyclopædic work, 'The Indian Empire,' but Sir William had so much to include in his bulky volume that he was not able to give the same space to administrative questions as Sir George Chesney has done. It is a pity, however, that this new edition of Chesney's work was brought out before the amalgamation of the Bengal, Madras, and Bombay armies in the present year, and the substitution, for the antiquated presidential armies, of four army corps directly under the superintendence of the Commander-in-Chief, and that this great improvement, which Chesney himself had much at heart, should therefore remain unchronicled. With a knowledge of Hunter's chapters and Chesney's book, the student of administrative systems can obtain a fair working knowledge of the India which Mr. Kipling has made familiar to us all; and if further information is desired, several excellent books might be mentioned which have appeared during the last few months dealing with specific branches, notably Mr. Macgeorge's 'Ways and Works in India,' describing the manifold labors of the public-works department, and Mr. Tupper's 'Our Indian Protectorate,' classifying the relations between the Supreme Government and the various grades and types of native Indian princes. Such books as these might well be studied in classes and courses of lectures dealing with administrative systems; and in such classes and courses no better text-book could be adopted than the immediate subject of these remarks.

Goethe und die Brüder Grimm. Von Reinhold Steig. Berlin: Wilhelm Hertz. Pp 245.

GOETHE's personal influence was enormous. In the most widely separated fields of intellectual activity men turned to him for encouragement and sought the meed of his approval; public opinion was often formed by a word spoken in Weimar or by a page printed in *Kunst und Alterthum;* and doubtless many a man besides Savigny chose his career under the inspiration of some pregnant thought of Goethe's. There is therefore no line of investigation more helpful to the student than that which presents Goethe in his relations to eminent contemporaries. This service Mr. Steig has rendered in the case of the brothers Grimm.

The Grimms were identified with the so-called Romantic School, and Goethe was the bond by which the representatives of that school were united. It was he who had made the German past to live again in "Götz," he who had glorified the Gothic, and he who, in collaboration with Herder, had pointed to the folk-lore of nations as the truest expression of the people's inner life. In the meantime the sojourn in Italy had changed the direction of his endeavors. Towards the somewhat turbulent manifestations of the Old-German movement he maintained a cold reserve. What he had sought in the folk songs was the poetry, but the work of the Romanticists took on a political and patriotic character; moreover, it was tending rapidly to Roman Catholicism. Goethe was repelled. Tempted for a moment into unguarded praise of 'Des Knaben Wunderhorn,' he feared lest his name should be made the watchword of a party. He was in this frame of mind when Wilhelm Grimm sent him the 'Old Danish Songs.' The chilling politeness of his acknowledgments disappointed Grimm, who, however, correctly divined the cause. Indeed, Goethe approached all such collections with caution, for the Germans, he said, "do not always know exactly whether they are bringing in full sheaves of wheat or only bundles of straw." But he was soon to discover that the rich harvest of the Grimms contained nothing but grain.

In 1816 Goethe received the second volume of the 'Fairy Tales.' He was delighted, and the brothers soon had the satisfaction of hearing that Goethe had sent the book to Frau von Stein with words of affectionate praise. We owe it to Wilhelm Grimm that these tales took the popular form in which we read them. Jacob would have treated them from the strictly scientific standpoint, but Wilhelm, acting in the spirit of Goethe, to whom he was spiritually more closely related than his brother, insisted upon the poetic contents. Thus, although the work is but one of the stones in the colossal structure of Germanic philology which the Grimms were building, they made it at the same time, to use Wilhelm's words, "a reading-book for the edification of the German people." The absence of didactic purpose attracted Goethe. Speaking of the poetry of such tales, he said: "Instead of turning a man back upon himself, it lifts him up and bears him forth into regions where he is untrammelled and free."

But from the gloomy cloud-land of the 'Nibelungen' and the Eddas, Goethe always returned to the serene skies and plastic forms of Homer. Old-German literature never excited his lasting sympathy. "One reads it," he said to Eckermann, "and is interested in it for a time, but only in order to have done with it and leave it behind"; and in the second part of "Faust" he treats it as a stage of transition. He was too clear-sighted, however, not to recognize the permanent value of the achievements of the two brothers. He was pleased to see them steadfastly "a-katholisch." Moreover, they opened up for him the rich stores of Servian poetry, and as the astounding range of their learning was revealed and the monumental greatness of their work began to loom before him, he was eager to acknowledge their supremacy in the realms they had made their own. When the Freiherr von Stein unfolded to Goethe the famous Berlin Plan for historical societies in Germany, the latter appealed at once to the Grimms. Wilhelm prepared a valuable memorandum in reply, in which he defined the principles upon which the huge enterprise must be conducted. The object of the Plan was the unification of Germany in the realm of intellect, without which the political unity must remain a patriot's dream. In a period of general gloom these societies were to serve for the deepening of the national consciousness and for the strengthening of hearts. At the very inception of this great undertaking it was to the Grimms that Goethe as a matter of course turned. And yet again in a letter which Goethe wrote to Jacob in 1824 we find: "Let me feel from time to time that I have some share in your labors, which I know how to value, though at a little distance, and for which, so far as I am capable of comprehending them, I am glad to profess my genuine admiration." Thus the stamp of the highest approval had been placed upon the work of the brothers Grimm, even before they had begun to unfold their vaster designs at the Prussian capital.

To trace the causes of this gradual change in Goethe's attitude from benevolent reserve to full, admiring recognition is the task which Mr. Steig set himself; and with a wealth of interesting and instructive material, much of which has been placed at his disposal by Prof. Herman Grimm, he has accomplished his task in this entertaining volume. It will be welcome to every student of that brilliant age when the greatest scholars were poets and the greatest poet was a scholar.

There are a few misprints: Schaper's statue of Goethe in Berlin was unveiled, not in 1887, but in 1880. The book is furnished with an index, which, although it is not full enough, is yet a gratifying sign of better times.

Sacred and Legendary Art. By Anna Jameson. Edited, with additional notes, by Estelle M. Hurll, and abundantly illustrated with designs from ancient and modern art. 2 vols. Boston: Houghton, Mifflin & Co. 1895.

THE first instalment of Mrs. Jameson's proposed exhaustive treatise on the Legends of the Christian Church as represented in art, originally appeared in 1848. This book was called 'Sacred and Legendary Art,' a title which it would have been better to reserve for the whole series. 'Legends of the Monastic Orders' appeared in 1850, and 'Legends of the Madonna' in 1852; and after her death the notes she had prepared for a continuation of her work were brought into shape and added to by Lady Eastlake, and published as the 'History of Our Lord.' As the present publication has on the false title the words "The Writings on Art of Anna Jameson, in five volumes," one may infer that the present publishers intend issuing all the works cited

above. The volumes before us correspond to the two volumes of 1848, and deal with the angelic host, the evangelists, the apostles, the doctors of the Church, the patron saints, the martyrs, etc., thus including the larger part of the subjects of legendary painting, except always the persons of the Trinity and the Madonna. Nine times out of ten the questions that arise in regard to an early picture of angels and saints can be answered from the pages of these two volumes, if at all by Mrs. Jameson. The saintly subjects treated in the 'Legends of Monastic Orders' are of much less frequent occurrence as themes for painting and sculpture than the subjects connected with Bible History and the earlier church. The student goes to Mrs. Jameson's books to ask one of two questions: Who is the saint represented with certain attributes? and, What are the attributes with which a certain saint is represented? Beyond this, her pages are interesting reading, and are of valuable assistance in the study of early mediæval history and sociology. In the way of discussion and criticism of Fine Art they are not of great importance.

The original volumes were illustrated by many wood-cuts in the text, single figures for the most part selected from paintings and prints, and also by etchings printed separately and rendering sometimes the whole of a painted composition. The present edition omits the etchings and many, perhaps more than half, of the original text illustrations. To replace these, it gives some new text illustrations at least equal in number to those removed, and about eighteen full page half-tones from famous pictures, including one from Dürer's print of St. Hubert. The editor's changes in the text are chiefly in the verification of statements about works of art. In some cases this amounts to nothing more than a record of the present location of the picture; in some it consists of a change or a questioning of the attribution to a certain master, in some of a correction where it appears that no such picture as mentioned by Mrs. Jameson is known to exist; and in some it involves additional information as to facts connected with the picture or as to works of art not mentioned in the text.

Little Rivers: A Book of Essays in Profitable Idleness. By Henry Van Dyke. Charles Scribner's Sons. 1895.

ANGLING literature owes to clergymen some of its best known works, as the Rev. Josiah Frampton's 'Amusements of Clergymen,' the later delightful book of the Rev. Mr. Newland on 'The Erne: its Legends and its Salmon-fishing,' and the great work of Dr. Bethune, too modestly called the Bibliographical Preface to the Wiley edition of Walton. Dr. Van Dyke has well upheld the high reputation of the cloth in 'Little Rivers,' which is a series of angling sketches on a more serious background, worked into a combination so simple and charming, and so full of the spirit of pastoral and woodland scenes, as to make it sure to become a classic on its subject. With ostensible prominence, though perhaps to introduce and lighten the deeper vein of the book, the angling features are made to appear the most important to the casual reader; but each chapter shows a knowledge and study of the details of nature which could not exist were not Dr. Van Dyke a true and sympathetic lover of the woods and waters he so well describes.

As its title indicates, the volume treats of the various rivers visited and fished by its author in this country and in Canada, with three chapters from his transatlantic experiences. When all are so good it is hard to make a choice, but perhaps the introductory essay, "Little Rivers," and "At the Sign of the Balsam Bough" show most plainly the range of Dr. Van Dyke's powers as revealed in this publication. With a few exceptions the descriptions are accurate. The author has adopted the modern spelling of Ristigouche, changing the "i" in the first syllable to an "e." The Micmac word is "Mith-ti-gouth," 'the river spreading out like a hand,' and the early Government patents call it "Ristigouche." This older spelling has been adopted by the Ristigouche Salmon Club, which, by the way, did not, as is stated on p. 122, "at one time lease the whole river from the Canadian Government." The illustrations are on the whole good, though in some instances lacking in relevancy to the text of the pages near them; and in one case, on p. 139, certain of the Ristigouche settlers are depicted as on the way to Sunday-morning service *poling* down stream. Canoes are always paddled down and poled up stream, and, besides, those in the picture are not of a kind found in any salmon river known in Canada, and are as different from those in use on the Ristigouche as is a dray-horse from a thoroughbred. It is to be hoped that these and a few other superficial flaws may be mended in the future editions of 'Little Rivers,' which even with them is substantially perfect.

The Higher Criticism of the Pentateuch. By W. H. Green. Scribners. 1895.

FOR more than thirty years, since he wrote 'The Pentateuch vindicated from the Aspersions of Bishop Colenso' (1863), Prof. Green of Princeton has combated every phase of the modern criticism of the Old Testament. In a half-dozen volumes, the most important of which is 'The Hebrew Feasts' (1885), and in a multitude of articles in various periodicals—notably in a recent discussion in *Hebraica*—he has stanchly defended the unity and the Mosaic authorship of the entire Pentateuch. There is nothing, therefore, in his latest work which he has not repeatedly said before; but he has put together in small compass the best that can be said in support of the traditional opinion by its ablest surviving defender.

In the first two chapters, on "The Old Testament and its Structure," and on "The Plan and Contents of the Pentateuch," he endeavors to show that the Pentateuch exhibits such a marvellous unity, and is constructed upon so definite and well-conceived a plan, as to create the strong presumption that it is the product of one mind. The next chapter sets forth briefly and clearly the familiar arguments to prove that Moses was the author of the whole. The rest of the book is taken up with the refutation of opposing views. The history of the critical analysis is rehearsed at disproportionate length; the argument deals largely with a bygone stage of controversy, in the reign of Hengstenberg. The positions of the modern historical school, on the other hand, are very shortly disposed of under the head of the "Genuineness of the Laws": the three codes of law in the Pentateuch are in complete harmony, and there is nothing in them or in the subsequent history of Israel to justify a doubt that they were all given by Moses just as they profess to have been; the contrary opinion originates in the unwarranted assumptions of a theory of natural development. In conclusion, Prof. Green considers "The Bearing of the Divisive Criticism on the Credibility of the Pentateuch and on Supernatural Religion." He sees very clearly that if the oldest parts of the Pentateuch were written centuries after the events they relate, we have no historical sources at all for the Mosaic age; and that if the name "supernatural religion" is still to be applied to the religion of Israel as reconstructed by modern historians, it must be in a sense wholly different from that in which it has hitherto been understood.

Prof. Green pointedly addresses this warning to certain "evangelical" critics who think that they can accept the modern criticism without its consequences. He exhorts them, in view of these consequences, to draw back from their "ill-advised alliance." More wholesome counsel would be to think through.

Westminster Abbey and the Cathedrals of England. By Dean Farrar, Dean Milman, Dean Stanley, and other Clergymen. Edited by William Ellis Scull. Philadelphia: J. C. Winston & Co. 1895.

THIS is one of those illustrated books made possible by modern photographic processes. The illustrations are assuredly of great interest; they are half-tone prints of good quality and of well-selected subjects. If, for instance, we take the chapter entitled Durham, we find, first, a full-page picture of the cathedral on its height, with the river sweeping beneath the bank; then, as a head-piece, a very charming view of Lindisfarne Abbey—and the page is large enough to allow even a head-piece six inches in width, the size of a very respectable picture. Following these is a representation of that curious piece of sculpture the "Dun Cow," which, as a paragraph of the text explains, has to do with the legend of St. Cuthbert. There are five views more of the cathedral of Durham, general views and details, and a capital instantaneous picture from life of two Holy Island fisherwomen. Finally, a photographic portrait of Dr. Lightfoot, the late Bishop, and one of the present incumbent, Bishop Westcott, each accompanied by a brief biographical notice, complete the illustration of this chapter, the text of which has been furnished by Canon Talbot of Durham. A similar chapter is devoted to Lincoln Cathedral, one to Salisbury, and others to Chester, Winchester, etc.; nine chapters in all. Each is completely illustrated, and a considerable body of architectural detail is thus brought together. It will be seen that this book offers a great deal of interest and of information, but the arrangement is wholly for those who care for the episcopal sees as such; all other readers must arrange and assimilate this information for themselves. It should be mentioned that the notices of "the dignitaries," one of which accompanies each chapter, have been written by the Rev. L. B. Thomas of St. Peter's Church, Philadelphia.

BOOKS OF THE WEEK.

Allen, J. L. Aftermath. Harpers. $1.
Amicis, Edmondo de. Spain and the Spaniards. 2 vols. Philadelphia: H. T. Coates & Co. $5.

The Nation.

NEW YORK, THURSDAY, DECEMBER 5, 1895.

The Week.

ABOUT two-thirds of the President's message relates to the financial situation and the other third to foreign affairs. There is nothing of an exciting character in our foreign relations, and the only thing certain to attract much attention here is the chapter relating to the Venezuelan boundary dispute. On that subject he upholds the Monroe Doctrine, and says that the Government of the United States has represented to both of the governments concerned that the dispute ought to be settled by friendly and impartial arbitration, and that this should include the whole controversy. The answer of Great Britain to this proposal has not been received, but is expected shortly. It is mentioned also that diplomatic relations between Venezuela, on the one hand, and France and Belgium, on the other, have been suspended, and that our good offices have been tendered to secure a restoration of the same, but thus far without result.

The President's discussion of the national finances, and of business interests connected therewith, is comprehensive and cogent to the last degree. It begins with a plain recital of facts. All the events of importance, from the passage of the specie-resumption act in 1875 to the present time, are passed in review. The extraordinary difference between our experience in the eleven years before 1890 and in the five years subsequent thereto the President ascribes to our silver legislation, and especially to the Sherman act of 1890 and to the distrust consequent thereupon. He holds that it could not have been in consequence of a deficiency of general revenue, because the Treasury on each occasion when bond issues were necessary, had a sufficient surplus to meet all current expenses, and generally a very large one. Its present surplus is enormous, being no less than $98,000,000, yet the demand on the Treasury for the redemption of legal-tender notes continues, and the gold reserve is down to $79,000,000. "I am convinced," says the President, "that the only thorough and practicable remedy for our troubles is found in the retirement and cancellation of our United States notes, commonly called greenbacks, and the outstanding Treasury notes issued by the Government in payment of silver purchases under the act of 1890." The reasons for this are presented with great force, and in language so simple that anybody can understand it. They may be summed up in a word. If these mischief-making notes were out of the way, the whole problem of redeeming them would vanish, and the business of the people would right itself by a perfectly natural process. Of course the question will be asked, What will take the place of the legal-tender notes? The suggestion is made that the notes should be made exchangeable for bonds bearing a low rate of interest, but a sufficient rate to secure the object, and that then the national banks should have an opportunity of filling the vacuum with their notes, by reducing the tax on them to a rate just sufficient to pay the expenses of the system, and by allowing them to issue such notes to the par value of the bonds deposited. If, however, this should not be a sufficient inducement to them to fill the vacuum, he ventures to think that gold would answer the purpose as well as notes, and he is well convinced that it would flow in. To insure this he would give the Secretary of the Treasury discretionary power to sell a portion of the bonds abroad for gold. The message concludes with an unanswerable argument against the free coinage of silver.

The annual report of the Comptroller of the Currency, in addition to the usual statistical matter, contains a number of specific recommendations besides the general one that the Government's legal-tender notes be retired and cancelled. The latter recommendation was embraced in his last annual report, together with a plan for filling the vacuum with national bank-notes. The Comptroller's plan differed in some of its details from that of Secretary Carlisle, and also from the one proposed by the American Bankers' Association and known as the Baltimore plan. All three, however, had at bottom the "banking principle," which makes the assets of the bank the security and basis of the circulating notes, instead of a special deposit in the hands of a public officer. No particular plan is referred to in the present report, but the expediency of taking the Government out of the banking business is strongly enforced, in the interest of both the business community and the Government itself. Two important investigations were made by the Comptroller's office during the year, one being the collection of facts in reference to the banking systems of other countries, and the other in reference to those of the several States of the Union. There is much to be learned from this report, and Mr. Eckels is to be congratulated on the amount of new information he has made available to Congressmen and to students of the science of banking.

Ex-Senator Edmunds continues to render the nation service in his retirement by improving every occasion that offers to denounce the Jingoes, and their policy of annexing Hawaii, Cuba, etc. At the annual dinner of the Philadelphia Board of Trade last week he responded to the toast of "The United States of America," and, after speaking in a somewhat conventional strain, concluded with an earnest protest against the idea of bringing into the Union all sorts of heterogeneous elements. Upon this point he said:

> "It is one people which goes by the name of the United States of America, and long will it continue to be that if we continue to remain homogeneous. If we take into it unassimilable elements, if we make into citizens great numbers of persons who have no understanding of things which we have for a hundred years studied and wrought for and inherited to be of us, we shall then make a great mistake."

Mr. Edmunds closed by saying that he did not fear this result, because he had confidence in "the strong sense" of our people. Confirmation of this confidence was furnished by the hearty cheers from the solid men of Philadelphia that greeted his condemnation of the annexationists.

The difficulty of getting things exactly right in this world is well exemplified in an article in the last number of the *Forum*, by Mr. Cassatt of the Cincinnati bar, on the Monroe Doctrine. He shows easily enough that it was a doctrine produced for purposes of defence under circumstances which have totally changed, and that no contemporary expositor thought of giving it the offensive, aggressive character which some of our present preachers claim for it, and that the Congress to which Monroe presented it, as a suggestion of his own, never acted on it, nor took any notice of it; so that, in fact, it has no legal status and is no part of American polity. In tracing the history of it, however, he says that "the general principles of the Holy Alliance were in harmony with the monarchical institutions and ideas of Great Britain, but the possession of Central America by Spain would have been injurious to the commercial interests of Great Britain," and therefore she joined us in the protest known as the "Monroe Doctrine." It would be difficult to give a more misleading account of the whole transaction. England refused to admit that the Alliance after the Congress of Vienna meant anything more than the maintenance of the territorial divisions then made. She denied by formal circular the right of interference in the internal affairs of the states then carved out. She refused to enter into the Holy Alliance, and when, in pursuance of the policy of interference the Alliance traced out, the French entered Spain to put down the revolution there, Canning declared he would "call the New World into existence to redress the balance of the Old" by acknowledging the independence of the Spanish colonies then in revolt. But this famous saying was anticipated by Lord Castlereagh in his instructions to the Duke of Wellington when, going as a delegate to the

Congress, he said, "it was evident from the course which events have taken that their recognition [of the revolted colonies] as independent states was merely a question of time." But Canning's action in this hemisphere was really taken in furtherance of a European policy, and was intended as a counterstroke against the Holy Allies. The view that it was due to a desire to get the Spanish-American commerce away from Spain is original with Mr. Cassatt, as is also the view that "the general principles of the Holy Alliance were in harmony with the monarchical institutions and ideas of Great Britain." It was because the contrary was true that Great Britain refused to enter into the Alliance, although Castlereagh and Wellington would probably have liked to do so.

Mr. Chauncey Depew has been moved to reply in the *Tribune* to that part of Senator Sherman's autobiography which tells how he failed to receive the Republican nomination for the Presidency in 1888, but he is drawn from his main purpose to a more interesting discussion of the reasons why Mr. Depew himself failed to receive it. It was all due to the delegations of Iowa, Nebraska, and Kansas, who came to him and made a very earnest appeal that he would sacrifice himself for the good of the party. They said that although he (Depew), with the preponderating vote of New York, might be elected, yet the nomination of a railroad man would disrupt the party in those States and lose the legislatures and the representation in the United States Senate. On the other hand, they said that if they could go home and say that they had defeated the railway candidate presented by "the capitalistic and monopolistic State of New York," they could keep their States in the Republican column for the next fifty years. "I yielded to that appeal," says Mr. Depew, "and retired from the canvass, but all three of the States were lost to the Republican party in the following three years—which shows the value of predictions made at a national convention, and having the double object of getting rid of one candidate and nominating another."

At the very moment when these Granger politicians were making their appeal to him to withdraw, Col. Elliott Shepard, "who, though an eccentric man, was an able one," was gathering in delegates for Depew by the score, and turned in fifty-six new ones at the very meeting of the New Yorkers where Depew announced his determination to sacrifice himself for the sake of harmony in the Granger States. Naturally, there was much bitterness in the New York delegation when Mr. Depew made the announcement, which could be soothed only by a dinner at Kinsley's. This was given by Mr. Depew, and so good was it that the delegates and alternates present swore fidelity to Depew for ever after. The sequel is no less interesting. After the dinner was finished, the "Big Four," viz., Depew, Platt, Hiscock, and Miller, retired to see what was best to be done. Platt and Hiscock favored the nomination of Allison, Miller advocated the claims of Sherman, Depew alone proposed Harrison. Platt's opposition to Sherman was so strong that the other three were convinced that Sherman could not carry New York even if he should be nominated. This fact conveys the gloomy suggestion that Platt was capable of betraying his party in a Presidential election if the nominee was not satisfactory to him. After a time Depew's arguments prevailed, and his three colleagues agreed to support Harrison, who was accordingly nominated. This disposes of another statement or insinuation in Senator Sherman's book, that Platt had in his pocket a written promise from Harrison that he should control the patronage in New York, and that this was the reason why the vote of New York went to Harrison.

The necessity of arousing public sentiment against lynch law is coming to be recognized by thoughtful people in all parts of the land. The frequency and horror of these outrages are causing genuine apprehension as to the future of this country among the friends of republican institutions in Europe. The Rev. Dr. Washington Gladden says that he has been in England three times during the last ten years, has met each time Mr. Bryce, and has been questioned by the author of 'The American Commonwealth' with increasing anxiety each time as to the explanation of the growing frequency of these breaches of the law, both North and South. The American Missionary Association took up this subject at its recent annual meeting, and adopted a report "bearing testimony against that form of lawlessness which has become alarmingly prevalent in many sections of our country, by which mobs of infuriated men usurp the functions of judge and jury, and put to death, often with cruelty and torture, persons suspected of crime who have never been proved to be guilty, and who, in some cases, are undoubtedly innocent." This deliverance frankly admitted that such crimes are not peculiar to any section of the country, and declared that "some of the most flagrant outbreaks of this nature have recently occurred in Northern States." Specific attention was called to the case of a brave colonel of militia in Ohio, who protected a negro from a raging mob that was battering down the doors of a court-house, and, for doing his plain duty in ordering the troops to shoot, was placed on trial for his life.

Dr. Gladden, who preaches in Columbus, was chairman of the committee that reported this resolution, and he supported it in a speech that brought out the demoralization of public sentiment on this question in Ohio very clearly. It appears that the sheriff who had the colored prisoner in charge, and who succeeded in saving him from the mob until the troops came to the rescue, was renominated for his office by the Republicans, who have a majority of a thousand in the county, and, simply because he had thus done his duty, he was repudiated by so many of his own party that he was overwhelmingly defeated. Worse still, his successful opponent was questioned during the canvass as to whether he would protect a prisoner in his hands against a mob, if such an incident should occur, and he refused to answer the inquiry. As Dr. Gladden put it, "because he refused to answer he was elected overwhelmingly." And all this in a county not far from the capital of the State of Ohio, which has so often lectured the South on its lack of respect for the law. Evidently there is real danger for the perpetuity of our institutions when such a state of public sentiment is disclosed in the heart of one of our most intelligent commonwealths.

Col. Ingersoll has too often experienced that form of studied insult known as public and concerted prayer for his conversion, to mind the repetition of it on a large scale by the Christian Endeavorers at Cleveland, on Thursday. Both sides get a good advertisement out of it, and so both ought to be, and doubtless are, satisfied. With this aspect of the matter we have little concern; but it is pleasant to note the amelioration of manners implied in the forms and tenor of the prayers. All is gentleness and good will and a sincere desire for the Colonel's weal here and hereafter. Compared with Calvin's eager desire to get his hands on Servetus, or Luther's amiable wish that a hook might be put in the snouts of his enemies, this implies a change to call for Col. Newcome's single and gratified Latin quotation about "emollit mores." Indeed, the change seems greatest of all when one goes back only forty years to the time when the prayers for Theodore Parker delicately hinted that his "removal" would please as well as his conversion to the truth. His biographer records that Parker's early death was considered an answer to these petitions.

We hope we shall not be accused of "going down to the tavern to swear at the court" if we say, apropos of the recent decision of the Court of Appeals in the case of the attempt to erect a monument to the memory of the late Mrs. Schuyler against the wishes of her family, that Mr. Schuyler did not, as Judge Peckham assumed, bring the suit to establish a principle—he brought it to prevent what the family deemed an outrage on them and an act of disrespect to Mrs. Schuyler's memory; that, as Judge Gray well exhibited in the dissenting opinion, Judge

Ingraham's finding, as fact, in the court below, that Mr. Schuyler had been injured, ought not to have been overturned by Judge Peckham's finding that the injury was "fanciful"; that, on the trial, Judge Ingraham excluded, as unnecessary, evidence which would have shown the whole enterprise of the defendant to be fraudulent, inasmuch as the General Term had admitted the plaintiff's "right of privacy," whereas Judge Peckham assumes that the enterprise was laudable and carried on in good faith. The inconveniences which may arise under the decisions are, that any man's enemies or blackmailers may annoy his family with perfect impunity, or extort money from them by proposing to build, and by collecting money for, a monument calculated to make a deceased person's memory odious or ridiculous, or to drag it into a kind of publicity which he when living would have loathed. The decision, in fact, is in entire harmony with the state of public feeling which has given us a sensational and scandalous press, by treating the individual's dislike of notoriety as of no consequence, so long as it amuses or entertains the majority. In truth, we do not see that it would not authorize a monument to a living man in spite of his protest or prohibition, and make his opposition to it "fanciful," although it brought into prominence a defect, or an eccentricity, or a deplored and recanted opinion.

We trust it is not merely a rumor that the Judges of the Appellate Division of the Supreme Court are to wear gowns in their new courts, and we wish we could hope that *all* the Judges of the Supreme Court would follow their example. The small amount of pains we take to give our administration of justice an air of dignity is one of the serious defects of our system. Every one of us recognizes the importance of clothes nearly every day of his life, as a means of giving to others an impression of his character and position. He dresses to go to a dinner or a ball, in order to show the host that he appreciates the invitation, and that it has been bestowed on a suitable person, and to make himself agreeable to the other guests. He dresses to go to church, in order to show his reverence for the place and to humor the prejudices of the other worshippers. We are all impressed by dress, even the most philosophic of us. When a complete stranger approaches us, almost our whole estimate of him rests on his clothes. If he is well dressed, we treat him with courtesy or even deference, and a whole host of presumptions in his favor rise up in our minds. If he is badly dressed, we are either indifferent, careless, or rude to him. If he is dirty and ragged like a tramp, our first impulse is to "bounce" him. The power of dress in making certain impressions on observers is, in fact, one of the most familiar phenomena of civilization, and yet we have never tried to make use of it in aid of administration. Judges mount the bench every day in costumes which make them to the audience in court appear to be among "the boys," and their authority and dignity undoubtedly suffer from it. Judge Barnard used to sit in a velvet jacket, and he was right, for this was a good dress to curse and sell justice in. We do not mean to say that gowns are the best costume that could be devised, but they are the traditional judicial costume of the Anglo-Saxon race, and they have the advantage of covering up the other clothes. We are quite sure it is harder to be a fraud or an ignoramus in a gown than in a cheap ready-made suit of many colors. Nobody who has ever assisted at the robing of an English judge, for instance, can deny that the process seemed to transform him, and make him seem for the moment something more and other than a familiar friend.

Senator Hill has made a curious blunder in starting out as a lecturer. His main object being, of course, to make money, he should have selected as his subject a topic of the very first "drawing" power. He found out at his first appearance in Milwaukee with it that "Liberty" was not this kind of a subject, for only about 150 people assembled to hear him. He has a subject with which he could fill a large hall anywhere in the country, and that is, "How I Ran the Machine." If he will treat that fully and honestly, people will flock to hear him by thousands, for everybody knows that he is fully competent to speak about that, while nobody believes that he has anything to say about "Liberty" that is worth hearing. It is very strange that statesmen of the Hill kind never talk about those things of which they are most competent to speak. Gilroy, when he was Mayor, actually wrote a series of articles on the "Wealth of New York," about which he had nothing to say that any one cared a button to read, while it would have been the making of any magazine to have got from him a series of articles on the "Wealth of Gilroy, Croker, and other Tammany Statesmen," with specifications of the way in which they obtained it.

There has been no odder result of the Conservative reaction in England than the election of peers as Mayors of various large lands. Lord Lonsdale has just been elected Mayor of White Haven, Lord Derby of Liverpool, the Duke of Norfolk of Sheffield, Lord Zetland of Richmond, Lord Ripon of Ripon, and Lord Hothfield of Appleby. The Mayors in all these cases are chosen by the Common Councils, which are usually filled by successful business men of more or less prominence, and the selection of peers is a striking illustration of the increasing fondness of the middle class for the peerage. It is met half way, too, by the increasing desire of such peers as are serious and like work, for greater participation in public business than is afforded by a seat in the House of Lords. Many of them are very good administrators, as is shown by the successful management of large properties, and they are exceedingly well fitted to take part in municipal administration. Then, too, acquaintance and intercourse with them are among the sweetest pleasures of English middle-class life. This passage of reverence for the aristocracy out of politics into social life is one of the most interesting phenomena of modern English politics. We are bound to say, however, that were a peer eligible, he would carry the "brown-stone" or "Tenderloin" vote of this city also with a rush.

The Turkish crisis continues to grow more and more grave, and the demand of the Ambassadors for additional guardships at Constantinople shows that they appreciate it. But probably nothing so serious has happened or is likely to happen as the reinforcement of the fleet. For the horrible truth is, that the more completely the Sultan is overawed by the naval demonstration, the greater the danger is of massacres on a larger scale than ever by the excited Mussulmans in the interior. There is little doubt that when the news spreads that the Sultan is overawed in his palace by the guns of the allied fleet, the fury of the Mohammedan population throughout the empire will be intense, and will express itself in the slaughter of Christians on a greater scale than ever. This form of consolation in the face of great public disasters has been customary with the Turks ever since they made their appearance in Europe. Down to a very recent period even the foreign instructors in the Turkish army were by no means sure of their safety in case of a defeat. Moltke, foreseeing the overthrow of the Turkish army, to which he was attached, by the Egyptians under Ibrahim Pasha, took care to get well in the rear before the fight began, so as to be clear of the enraged fugitives. This is now the great danger of the situation. So long as the Sultan had power it was reasonable enough to threaten him at Constantinople, but woe to the unhappy Christians in the provinces when the news comes that he has been dethroned or is dominated by fleets. The truth is, that he ought not to be bullied at Constantinople unless there is a military force ready to maintain order in the interior—a fact which the powers probably begin to perceive, but do not know what to do beyond protecting Christian life and property at the capital; and probably none of them perceives it more clearly than Russia. A single division of cavalry in Asia Minor would be worth more to the Christians than all the fleets put together. Failing this, every effort should be made to supply the Armenians with arms and ammunition.

SPEAKER REED IN 1890.

MR. THEODORE ROOSEVELT has in the last *Forum* an article, on "Thomas B. Reed and the Fifty-first Congress," which we hope Mr. Reed did not see or revise, because if he did, it would discredit him somewhat as a dialectician. It is an elaborate eulogy on him and defence of his action as Speaker of that Congress, which conveniently confines itself to generalities, overlooks the facts of the case, and produces for the purposes of the occasion an absolutely new view both of Speakers and legislative bodies.

One of Speaker Reed's utterances when enforcing his rules in that Congress was, that "he thanked God that this was not a deliberative body." History, both ancient and profane, parliamentary and other, may be searched in vain for this view of legislative assemblies. It is absolutely original with Mr. Reed to say that any body (which decides by a majority vote) can be assembled on American soil whose chief function is not deliberation. Deliberation is its first duty; legislation only the second. Representatives deliberate to say whether they will legislate, to consider whether the thousand proposals to legislate which come before every Legislature have any value. The Democrats in the Fifty-first Congress fought for deliberation and delay because the McKinley bill was sprung upon them without any notice, in press, platform or speech, and contained unusually obnoxious features, and because, in their belief, it had been corruptly paid for by manufacturers. There never has come before the Americans since the war a measure which called for more deliberation. We are not endorsing all the modes by which the Democrats fought it; but that the country was behind them, believed in their view and approved their course, and condemned Mr. Reed's political philosophy, was shown by the elections which followed, which made a clean sweep both of the Republican majority and of the President who signed the bill.

Secondly, Mr. Reed fell into the grievous error which Mr. Roosevelt, with his usual ebullient patriotism, naturally swallows, of putting the American Speaker into the position which Mr. Gladstone or Mr. Balfour would occupy if he sat in the chair of the House, and pushed his own measures through by all the means at his disposal. This is really a *reductio ad absurdum*. It is quite true that the position of the American Speaker differs from that of the English Speaker in that he appoints the committees, and is elected by a party vote at every session. But these facts no more take away his judicial quality than they take away that of our State judges, whom we also elect by a party vote. They arm him with no discretion in the use of his powers which is not given him by the rules. All his authority is derived from the rules. He is bound to be just in his decisions, and impartial as between the parties on the floor.

Mr. Reed assumed in the Fifty-first Congress that he was responsible to the country not simply for the orderly despatch of business, but for certain legislation, as Mr. Gladstone or Mr. Balfour would be on the floor of the House of Commons; and that Congressmen were responsible to him for their behavior. His error, which is reproduced in Mr. Roosevelt's article with youthful crudeness, lay in supposing that he was bound to see that the House legislated about any particular thing or made a particular use of its time. This was an invention of his own. His duty was to see that whatever the House did (whether it legislated or refused to legislate) was done decently and in order. For the things it does or leaves undone, Congress is responsible to the country, not to any particular man, and the country enforced this rule almost with ferocity in 1892 by kicking most of the Republicans out of office. The notion that the Speaker can prescribe legislation and use the rules to carry it through was a monstrous contrivance, and that a man of Mr. Reed's experience should ever have made himself responsible for it, shows the kind of drunkenness which had overtaken the protectionists through thirty years' possession of power. The Speaker remains a judge, in spite of himself, through the very nature of man. In presiding over a body composed of men of various ways of thinking, he has to be governed, not by either the English view or the American view, but by the ancient human rule that "no man can be judge in his own cause." He must not vote for things in which he has a personal interest. He must not sit *in judgment* to help his own family, or his own company, or his own party. If a Speaker is so interested in legislation of any kind that he feels that he cannot give fair play to its opponents, he ought to acknowledge his infirmity and leave the chair.

Mr. Reed sought to make quorums by counting as present for business everybody whom he saw in the House. If we remember rightly, he tried to justify this by showing that it was done by other legislative bodies. But he produced no body in which it was done by the presiding officer, much less by an avowed partisan such as he was. Several of his mistakes about seeing members were exposed, and he had to acknowledge them, which showed that he was physically unfit for the work, even if it had been morally justifiable. Counting, through his eyes, was partisan work, for which he, as a quasi-judicial officer, was disqualified. It was work which should be done either by tellers from both sides, or by some indifferent officer not charged with the passage of legislation. To crown all, we believe Mr. Reed is now urging on the present Congress the duty of doing nothing—which is a remarkable piece of self-stultification, for this is the very thing the Fifty-first Congress ought to have done. There was no popular demand for the McKinley bill, as the subsequent election showed. Its necessity was a figment of Mr. Reed's imagination. To sit still, and let the private business of the voters alone, was far more emphatically the duty of that Congree than of this one.

The country was not in 1890 calling for any particular measure. The McKinley bill had not been foreshadowed, produced, or discussed in any quarter before Mr. Reed took charge of it. On the contrary, there is to-day a question before the country of commanding importance, on which men of all classes and shades of opinion are demanding legislation in some direction, and that is the currency. For the gentleman who felt that public sentiment, the law of the land, and American usage required him to convert the McKinley bill into a statute, to proclaim now the policy of simple deliberation, to try to make Congress a talking body, looks as if the gods had got angry with him. For we venture to predict that by the time Mr. Reed comes again to give an account of his stewardship to the voters, inaction, if he persists in it, will bring down on him still sterner judgment than overtook the McKinleyites. Now is the time for this new variety of Speaker to play his part. If he is wise, he will chastise his followers into legislative activity, not about the tariff—he has had his warning about that—but about what everybody is talking of and meditating on with anxiety.

FINANCIAL TROUBLE BEFORE THE ELECTION OF 1892.

WE have been requested to set forth more in detail than has yet been done the history of our currency disorder prior to the close of 1892. The statement that the trouble in the public finances began only contemporaneously with Mr. Cleveland's second election is made, undoubtedly, by many partisan speakers and writers who know it to be untrue. But it is accepted by hundreds of readers and listeners as a fact. The distinct assertion has been made that everything went well in American public and private finance while Republican policy was in the ascendant—"down to the hour of Mr. Cleveland's election," as the party organ in this city defines it. The hour of Mr. Cleveland's election fell on Tuesday, November 8, 1892. The challenge of these writers and speakers, therefore, is for the production of any evidence of financial demoralization before that date.

The task is not difficult. Naturally, the annual reports of the Secretary of the Treasury and of the Treasurer of the United States provide the best reflection of official feeling at headquarters. All the officials at that time were Republicans. All presumably accepted office in sympathy with the party's public policy. Yet the last report with any strain of cheerfulness issued by the Treasury was the one put forth at the close of 1890 by Secretary Windom. We quote his concluding

ing words by way of contrast with the dismal comments of his successor. Mr. Windom criticised the silver-purchase law of 1890 merely because it provided for the purchase of only 4,500,000 ounces monthly. He and Mr. Harrison had urged a law for the purchase of "the entire silver bullion product of the United States" (Report of 1890, page xlviii). In spite of this reprehensible conservatism on the part of Congress, the Secretary was of the opinion (in December, 1890) that the silver act of July 14 would "enhance the value of that metal until a point were reached where we could with safety open our mints to the free coinage of both metals at a fixed ratio." The law's "beneficial results," Mr. Windom prophetically concluded, "will eventually commend it to general approval."

"General approval" came into evidence rather slowly. Secretary Foster, Mr. Windom's successor in the Treasury, has been called the Mark Tapley of Government finance. If there was a bright side visible, to the most painstaking scrutiny, in the Government's situation, he could be trusted to discern it. The reader will therefore be astonished to learn that the Secretary's report of 1891 contains not one word about the prospects of the currency. He is forced to record the decline in the price of silver from $1.21 to 96 cents per ounce, and the failure of the year's revenue to meet the annual sinking-fund appropriation, even after the national bank-note fund had been seized to swell the balance. But he refrains from discussion of these awkward facts, leaving his subordinates, as the head of many an institution has done before, to wrestle with unpleasant details.

But the subordinates wrestled to some purpose, so far as concerns the statement of the truth. Let it be noticed that it was exactly one year after Mr. Windom's promise of "beneficial results" and "general approval" that the Treasurer of the United States, in December, 1891, made the following comments on the situation:

> "Such heavy exports of gold as signalized the last six months of the year, *the heaviest recorded in the history of the nation*, naturally excited profound interest, not only at home, but throughout the whole world. To the Treasury this outflow was particularly significant, since the Treasury was obliged to furnish all the material. . . . *These movements were the result, apparently, of the operation of natural laws.* . . . The condition of things which has made it possible, whether due to domestic or foreign causes, *to financial legislation*, or to the state of trade, . . . would seem to be worthy of the most careful study."

With this eminently prudent conclusion, and with the precautionary remark that "no attempt is here made to throw any light upon the subject, further than to state the facts," Mr. Nebeker dismissed the matter. But we doubt if ever before in the history of Government finance has a bureau officer offered as a possible explanation of trade demoralization a law passed by his own party, and officially described by his own chief, twelve months before, as a statute assuring "beneficial results" and certain of "general approval."

Events, however, moved faster than official inquiries. The progress of disease, in the average man, may safely be traced by the attention paid by him, in his thoughts and conversation, to his liver, his stomach, his lungs. The man in health neither talks nor thinks of such things. The Treasury report for the fiscal year ending June 30, 1892, has pages on the gold reserve, and all in a doleful and apprehensive tone. Secretary Foster's cheerfulness has now forsaken him utterly. Far from pointing out "beneficial results" or appealing for "general approval," he pleads with Congress to increase the gold reserve to provide for redemption of the Treasury notes of 1890, and begs for additional revenue. "One of the embarrassments of the Treasury" is "the inability . . . to keep up a sufficient gold supply." Mark Tapley has so far taken up the rôle of Cassandra that he foresees gloomily the exhaustion of the surplus gold reserve (Report of 1892, page xxix). He has not been able to meet the annual sinking-fund requirements, even with the help of the surplus inherited from a Democratic administration, and thinks it "hardly probable that more than about $7,000,000 can be credited to the fund during the present fiscal year, as against a legal requirement of $48,000,000." The Treasurer, as in 1891, is more gloomy and more specific. He points out that heavy pressure of legal tenders for redemption began in July, 1892, that "gold exports, commonly ceasing in July, continued until September, while the return shipments, usually commencing early in the autumn, have not occurred at all"—this, by the way, at the time when McKinley was moving triumphantly from town to town, telling enthusiastic Republican audiences of the $200,000,000 European gold (in buckram) brought here under the operations of his tariff law. Only 3⅔ per cent. of customs receipts at New York city, the Treasurer's tables of 1892 point out, were being paid in gold, against 11 per cent. in the same month of 1891, and 85½ per cent. in 1890. The percentage of payment in Treasury notes had risen from 3½ in 1890 to 28.4 in 1891 and 51 9 in August, 1892. The Treasury gold reserve had fallen, since the passage of the silver-purchase law, $79,788,013, and had approached within $10,000,000 of the official danger-line. The Government's ordinary revenue had decreased $48,143,198 since 1890; its expenditures, with Harrison in the White House, Reed in the Speaker's chair, and McKinley leader of Congress, had increased $60,008,012—a net difference of $108,000,000 to the bad in two short years of Republican administration. And all this for the fiscal year which ended in the week of Mr. Cleveland's nomination at Chicago.

In the face of these documentary records and official statistics, the *Tribune* calmly affirms that "the national policy of protection kept the Treasury fortified with an adequate revenue and reserve down to the hour of President Cleveland's election."

A NOTABLE ARTICLE ON AMERICAN FINANCE.

THE article by Paul Leroy-Beaulieu in the December *Forum* entitled "Conditions for American Commercial and Financial Supremacy" is one of the most powerful arguments that have been presented to our people at any time in behalf of a sound financial policy. Two things, and only two, are necessary, according to this impartial foreign observer, to insure American commercial and financial supremacy. These are the withdrawal of the Government from the banking business—*i. e.*, the retirement of the legal-tender notes—and the quietus of the silver craze. These are not new arguments, but they come with peculiar force from a writer of Leroy-Beaulieu's reputation and clearness of vision. Leave your banks to deal with the gold problem (as they must when the greenbacks are retired), and you will have no more trouble, he says. When any serious or harmful exportation of gold takes place, the banks will raise the rate of discount as the European banks do in similar emergencies, and the exportation will stop. It will stop just as soon as it becomes harmful. When the gold movement is controlled in this way, it produces "only a light and momentary embarrassment, not to be compared with the shock and the discredit resulting from an outgo of gold the end of which cannot be calculated." We ask our readers to contrast these views with the following comment made by Senator Sherman on Secretary Carlisle's Chamber of Commerce speech:

> "Suppose the burden of maintaining the reserve for greenback redemption should be shifted to the banks, as seems to be the present policy, what would the result be? Instead of one great solid reserve protecting every holder of a greenback, the banks themselves would have to carry that gold. There are 3,000 of them. What sum would be necessary to keep them ever ready for any possible gold demand? The scheme is impracticable."

If any excuse but senility can be offered for such a saying as this, we cannot conceive what it is. The banks hold more than double the amount of gold that the Government does all the time. Therefore, the objection which Mr. Sherman advances, implying that they are unable to perform this function, is a coinage of his own overwrought brain. They are able to perform it now, but if they were not they would have to make themselves so at once. How was this function performed before we had any greenbacks?

The other half of Leroy-Beaulieu's article relates to the silver question. This has been so well threshed out in the political arena that we need consider only that part of his argument which refers to

the attitude of Europe toward bimetallism. Upon this point he says:

"There is not a single European country, in a normal financial condition, that attaches the slightest importance to bimetallism. From time to time some Minister utters in Parliament a few equivocal words on the subject, seeking to avoid stripping the bimetallists absolutely of all hope. But America must not be duped by these ambiguous expressions. At bottom, not a country, not a government, of Europe has the least wish to make the least change in the established monetary system—that is, in the preëminence of gold and the secondary and circumscribed function of silver. If from time to time the bimetallists obtain some vague ministerial promises to study the monetary problem, it is due to the habit, common to all European statesmen, of avoiding offending or definitely estranging any group of voters, even one of slight importance."

That this is the attitude of Germany, upon whom our bimetallists have built so many hopes, there is no room to doubt. Last spring the Reichstag yielded to the solicitations of the Agrarian party so far as to vote in favor of a new international monetary conference, secretly hoping, however, that the Government would not comply with the request. The Government made some vague promises to consult the federal States on the subject, secretly hoping that the federal States would not consent. The federal States have not consented, and apparently the end has been reached. The agitation has been slowly strangled, and there is not the least prospect of a new international conference to be held at the instigation of Germany.

It would be a mistake, also, says M. Leroy-Beaulieu, to count on France for official support of the bimetallic movement. The agitation in favor of it is almost exclusively among the agriculturists and is only skin-deep. The great body of the people "are absolutely ignorant of the very meaning of the words monometallism and bimetallism." (That is true of this country also.) The only people in France who understand the subject are almost unanimously for the single gold standard. It is true that M. Magnin, the Governor of the Bank of France, is an exception, but the Governor of the Bank of France is not necessarily a financier. He is not chosen by the bank directors, but is appointed by the chief of state, *i. e.*, the President of the republic. The office is merely nominal and the incumbent of it is a politician. So his views do not count any more than those of an ordinary citizen. "All that can be expected from France in such a matter," says M. Leroy-Beaulieu, "is a passive attitude." He adds in conclusion:

"So soon as the capitalists, small and great, of Europe shall know that the United States have definitively adopted the gold standard and relegated silver to a subordinate monetary rôle, the savings of western Europe will flow towards that country. Freed from the fear that he may some day be repaid in depreciated money, every person with savings in all Europe will be happy to find a return of 3½ to 4 per cent. in good American securities, and of 5 to 5½ per cent. in the shares of well-established American enterprises. Then the immense territory of the United States will find its vast resources rapidly and completely put in the way of exploitation. The abandonment of notes or paper money issued by the state; the definitive adoption of gold as the sole standard—these are the two necessary conditions on which the United States can secure a financial position as important as that they now hold in agriculture and in industry. On these two conditions they can some day approach and equal Great Britain as a financial power. If, on the contrary, they persist in their system of Government paper money and in the 'rehabilitation' of silver, their industrial and commercial development alike will be trammelled, and they will undergo marked and permanent experiences of financial weakness."

THE LATEST SCOTCH FORAY.

"LET me tell you, sir," roared Dr. Johnson to the unlucky Reverend Mr. John Ogilvie, amiably discoursing on the "many noble wild prospects" of Scotland, "let me tell you, the noblest prospect which a Scotchman ever sees is the high road that leads him to England!" That was in 1763, and the complaint has been made many times since. A political successor of Dr. Johnson's said only a few weeks ago in the London *Times*, writing of the demands of the Scotch members for local self-government, that he wished to heaven they *would* govern themselves and let England alone. To him a perfervid Scot made the swift retort that, if all Scottish talent and genius were to be withdrawn from English life at a stroke, nothing would be left but a honeycombed and crumbling mass of mediocrity. Certain it is that Scottish facility and coolness in appropriating the prizes of England have long been an offence; and when Canon Liddon said he never could think of Archbishop Tait as anything but a "Scotch lawyer," it is doubtful whether the phrase spoke of outrage more to the High-Churchman than to the Englishman.

The latest Scotch foray, however, is literary. "The Caledonians be upon thee!" is the alarm cry lifted by more than one watchman on the walls of English literature. Especially the Caledonian novelist is meant. Stevenson was all very fine as long as he was alone; it was always possible to assert that he was more cosmopolitan than Scotch, and perhaps more truly Bohemian than anything else. But when Barrie and Crockett came along, with Ian Maclaren close after them, and plenty of others visible and making good time on the high road to England, the thing was really getting absurd. Must every writer of fiction, then, learn broad Scotch or starve? Or should there be a call to arms to beat back the raiders from over the border?

Just here, however, a new difficulty arises. The natural defenders of the English novelist have gone over to the Scotch invader—have, in fact, welcomed him to the spoil, opened the gates of the city to him. We refer, of course, to the editors of some of the leading publishers' organs and literary journals. They are themselves Scotch. We infer this from general repute, from the names they bear, and from the way their speech bewrayeth them. They are continually falling off that *pons asinorum* of the dwellers beyond the Tweed—the distinction between shall and will. "Do you think you will ever learn it?" asked Barrie's editor, in 'When a Man's Single,' of his Scotch subordinate. "I'm afraid I never will," was the discouraged reply. It is obvious that, with friends thus on the critical ramparts, the moss-trooping Scots have a great advantage. Their works are heralded from afar, their intentions, their movements, their compliments, their sales are duly and impartially chronicled.

But the worst remains to be told. The beggars can write. They have a good style and have something to say. This is not usually heard among the audible complaints against the Scotch school of fiction, but one who listens closely to the mutterings under the breath will discover that it is really at the bottom of all. We could stand all these Hielan' airs and impudence if there were not so much to show for them. How Stevenson hammered out the instrument of his style he himself has told us. That he seldom found material worthy of its temper and edge was cause of regret to his fondest admirers in Scotland, who used to say openly to him, after each brilliant performance, "Yes, but when are you going to give us *the* book?" Barrie surprised the world with an original revelation of the humor and tenderness hidden away under the dourest Scotch exterior, and no one smiles more good-naturedly than he, we suspect, at the way Crockett and Watson have followed where he led. They carry into their books some of the tricks they learned in the pulpit—forcing the pathetic note, nudging the reader a little unnecessarily lest he lose the point—but, on the whole, they, like the others, know how to write well enough to justify the deep offence caused by their style in a sloppy and slovenly age.

Various are the hypotheses advanced (not by envious rivals, but by delighted readers) to account for the sudden and great popularity of the Scotch story-tellers. A favorite one is that their writings are like "a breath from the heather." This theory seems a little endangered by the fact that its principal supporters never saw or smelt heather, and wouldn't recognize it if they did. Moreover, there is, perhaps oftenest, a breath of a great many other odors in the pages of our Scotchmen. The breath of the slaughter-house is a savory thing in the nostrils of Stevenson and Crockett, on occasion, and the whiff of the kailyard, the smell of the stuffy room and of the unaired kirk, are too frequent and too powerful in them all to bear out the heather theory.

It is, in fact, too much to ask us to accept that theory in the case of a weary and fiction-worn generation. To suppose it eager for simple nature, for brooks and rocks and heather and haggis, and to account for the popularity of a new school of writers on the ground that they carry their readers into longed-for contact with

Mother Earth, is to go back to the ghastly artificialities of the court of Marie Antoinette. No, we doubt if the ablest critic will be able to make much more out of it than a love of constant change in the novel-consuming public. We admit that, a few years ago, it was all nicely settled. It was carefully explained to us by conscientious philosophers that the classic school had, in the nature of the case, and by an inner necessity of the evolution of fiction, to give way to the romantic novel, and that then that, in its turn, had to go to the lumber-room to be succeeded by the realistic novel. Exactly what might come in the future was a little doubtful, but it was certain that we should never go backwards. So we all thought, till one fine day we woke up to find ourselves in the midst of dungeons and moats and scaling-ladders and love-philters, and gentlemen and maids of France, and plots and villains and murders in all countries and ages—all wildly popular, all dramatized, all thrilled over by a rising generation which knows not Zola and regards not Howells. Fickleness of taste that can thus confound the historical lecturers is surely enough, taken together with freshness of theme and style, to account for the vogue of the Scotch invaders. We observe that the canniest of them are themselves persuaded that their day of grace may soon be written away, and are thriftily gathering together every available bit of plunder before being compelled to retreat to their fastnesses beyond the border.

OCTAVIUS BROOKS FROTHINGHAM.

THIS early friend and contributor, editorial and literary, to the *Nation* died in his native city last week, the day after his seventy-third birthday. He was born in Boston, November 26, 1822. His father was Nathaniel Langdon Frothingham, whose biography he published in 1890, with the title 'Boston Unitarianism, 1820–1850'—a title justified by the depiction of Dr. Frothingham as one of a class of Boston Unitarian preachers whose culture, urbanity, elegance, and cautious rationalism strongly marked the type, and in some respects differentiated it widely from that of Channing and Parker. Dr. Frothingham was one of the first German scholars in this country, and he translated many German hymns with great felicity. He was the minister of the First Church in Boston from 1815 to 1850, and his son's earliest ecclesiastical function was to blow the organ at the famous Thursday lecture, which committed hara-kiri to prevent the further use of it by Theodore Parker for the promulgation of his heretical opinions. The mother was Ann Gorham Brooks, a daughter of Peter C. Brooks and a sister of Mrs. Edward Everett and Mrs. Charles Francis Adams. Mr. Frothingham delineated the character of his grandfather Brooks in his 'Boston Unitarianism' with that frank sincerity which was a necessity to his intellectual ethics. To his father he credited his own idealism, fondness for literature, fastidiousness in regard to persons and books, conservatism of sentiment, and intellectual freedom, and to his mother his simplicity of purpose, directness of aim, and frank outspokenness. On his mother's side he was allied to Phillips Brooks, to whom bonds of admiration drew him closer than those of kinship.

He was educated at the Boston Latin School and Harvard College, graduating from the latter in 1843 and from the Divinity School in 1846. Among his companions in the Divinity School were Samuel Johnson, Samuel Longfellow, and T. W. Higginson, but he did not sympathize with the early radicalism of these men with whom he was intimately associated in his maturity—in his thinking and his reformatory spirit as well as in the admiration and affection of many followers and friends. His first settlement was in Salem, and it came to grief in precisely the same manner as the first settlement of Higginson and Johnson. It split upon the anti-slavery rock. His sympathy with the abolitionists was as pronounced as it was clear and strong, and it brought him into collision with the conservative and pro-slavery people of his congregation. He was in Salem from 1847 until 1855, and the coincidence of this period with the passage of the Fugitive Slave Law and the renditions of Sims and Burns made it impossible for him to withhold his warning and rebuke. Remembering how effective in the middle ages was the denial of the sacraments to contumacious persons, or regarding the Lord's Supper as a privilege which he must not confer on evil men, he refused to administer it because there were those in his church who applauded the infamous renditions. This course precipitated his departure, and in 1855 he took charge of a new church which had been formed in Jersey City. Meantime his anti-slavery liberalism had been, as it was with many, a solvent for his conservative theology. From a defender of his father's compromising obscurantism he had become a Transcendentalist in his philosophy, and an enthusiastic follower of the Tübingen criticism of F. C. Bauer, of which he wrote in the *Christian Examiner* with great fulness and contagious admiration.

The New Jersey pastorate was up-hill work, but it did not deter Mr. Frothingham from the charge of another new society which was formed in New York city in 1860, the Third Unitarian Society. In Jersey City he had entirely discontinued the use of the Lord's Supper, but for reasons quite different from Emerson's in 1832, conceiving that it bred self-righteousness. He finally came round to the opinion that it could be shorn of all its doubtful attributes and made a means of spiritual cultivation; but this was when he had long ceased to be a settled minister. Drs. Bellows and Osgood were the other Unitarian preachers in New York when he came here, and in his 'Recollections and Impressions' (1891) he has made pen-and-ink portraits of those clergymen which are remarkable for sympathetic appreciation and for their absolute sincerity. They at first received him graciously, but his ways were very different from theirs, especially from Dr. Osgood's, and at the dedication of his new church in 1863, though cordially invited, they were conspicuously absent from the scene, and his relations with them and with conservative Unitarians generally became more and more strained from this time forward. Meanwhile many younger men were looking to him with admiration and eagerly following his lead. When, in 1864, Dr. Hedge preached to the graduating divinity students upon "Anti-Supernaturalism in the Pulpit," Mr. Frothingham a few days later, in an address to the alumni of the Divinity School, met his positions with a force and candor that made the younger clergyman then and for the remainder of his active ministry the unmistakable leader of the radical party in the Unitarian body. When the National Conference of Unitarian and Other Christian Churches was formed in 1865, the terms of its fellowship were so little agreeable to Mr. Frothingham that, by his advice, his society, which soon after sold its church building and went to Lyric Hall, dropped the Unitarian name and called itself The Independent Liberal Church. The congregation steadily increased until in 1875 it removed to the Masonic Temple, where it habitually numbered nearly or quite a thousand persons, eventful seasons bringing many more.

No one was ever fonder of understatement than Mr. Frothingham, or applied it to himself more freely. From the minimizing account of his preaching in Lyric Hall and the Masonic Temple which he gave in his 'Recollections,' no stranger to the facts would derive any just conception of the force and beauty and nobility of his pulpit ministration, or of the profound impression it made upon a congregation, then the largest in the city, which, ranging through every grade of culture, had a solid centre of intelligence and character not to be excelled. The printing of his sermons every week gave an indefinite extension to his influence. They contain the substance of his message, but give no idea of the fascinating grace and beauty of the spoken word, which hardly Curtis could surpass, though something of apparent coldness, foreign to the man's private character, made him less attractive and engaging than he would otherwise have been. After a time he brought no manuscript to his desk. His range was wide, including fundamental problems of theology and ethics and philosophy, and equally the pressing social and political problems of the time. The society was an aggregation of individuals, defective on the side of organization and common practical activity. The preacher's serious eloquence was well-nigh the only bond of its coherency.

In 1867 the Free Religious Association was organized, mainly by Unitarians who were dissatisfied with the controlling temper of the Unitarian organization. On this association also, and particularly on his part in it, Mr. Frothingham turned an inverted opera-glass when he wrote of it in his 'Recollections and Impressions.' His stern self-criticism will not be accepted by those who remember him as the President of this association, the perfect art with which he presided over the great assemblages gathered in its earlier years and at the banquet-table, and the remarkable brilliancy and beauty which were married to the breadth and liberality of his annual addresses that reviewed the situation of the religious world from year to year.

Not only was Mr. Frothingham later than his friends Johnson, Longfellow, and Higginson in arriving at the Transcendentalist position, but he abandoned it about 1865, while their confidence in it remained unshaken. A review of Mill's 'Examination of Sir William Hamilton's Philosophy' marked his recession from the intuitionalist doctrine. Darwin's theory of the descent of man and Spencer's general doctrine of evolution found him an early friend, and science rather than philosophy was henceforth his guide of life. But whatever his position, he could do better justice to that which he opposed than could any of its friends except the best instructed of them all.

In 1879 Mr. Frothingham resigned the charge of his society and went abroad for a protracted period of residence and travel. Ill health, with worse threatening, was the sole cause of his retirement from the ministry. Incipient pa-

ralysis had made known its presence before he dropped the oar which he was never to resume. His last preaching was to his own people—his farewell discourse. After his arrival in Europe the trouble grew, spoiling his beautiful handwriting and affecting his speech (though not much) sufficiently to make preaching impossible for him after his return. Immediately upon this there was a flurry of excitement over his talk with a reporter for the *Evening Post*, in which he seemed to bring an unfriendly criticism to bear upon the work that he had done in New York, and the opinions he had held. But the talk was only the exaggeration of the mood of a depressed condition of his mind and body. He was always subject to reaction from the strain of mental effort—an optimist on Saturday night, a pessimist on Monday morning. He took pains to make it clear that he had made no recantation, that his position was more radical as time went on. But at the same time it was more liberal and sympathetic. Taking up his residence in Boston, he was seldom absent from the public meetings of the Unitarians, and often spoke at them; never without holding the attention of his hearers and winning their applause, if not for his opinions, for the fine audacity with which they were expressed. That the Unitarians were advancing rapidly from the position that he criticised in 1865, made it much easier for him to feel at home with them.

Before leaving the ministry, he had published, besides several volumes of sermons, two or three books of religious instruction for children—'The Child's Book of Religion,' 'Stories from the Patriarchs,' etc.—which had a wide circulation. He had also written an elaborate 'Life of Theodore Parker,' a 'History of New England Transcendentalism,' and a 'Life of Gerrit Smith.' The last-named book wounded the friends of Mr. Smith by its frank allowance (afterwards slightly modified) of his indirection in the John Brown affair, though Mr. Frothingham had strained a point to put a more favorable construction on the facts at his command than they obviously suggested. Delightful reading, all of these books—the 'Parker,' 'Smith,' and 'Transcendentalism'—were too hastily prepared, and were frequently inaccurate in minute particulars, with some serious omissions of important matters. His books written after his return from Europe were much better done, especially the 'George Ripley' in the "American Men of Letters," and the 'Memoir of William Henry Channing.' He also wrote a brief Life of his friend David A. Wasson, a thinker and poet of high character and genius and much sad experience. The 'Boston Unitarianism' and 'Recollections and Impressions' were singularly communicative for a man who had seemed thoroughly exclusive and reserved. He was not so in fact. The appearance was a misfortune related to the self-depreciating habit of his life. Sympathy and friendship he very greatly prized, but too hastily assumed that they were not for him. He described himself as yearning for people who were separated from him by some temperamental partition of translucent ice.

Mr. Frothingham's circumstances were always affluent, and his manners were of that dignity and grace which made his beautiful surroundings seem an inevitable environment. Aristocratic in his tastes, he was democratic in his principles, and whenever there was a conflict the former had to yield. For all that he accomplished he was still to those who knew him best a "spirit in prison," the elements so mixing in him that he never put forth all his strength.

RECOLLECTIONS OF BARTHÉLEMY-SAINT-HILAIRE.

NEW YORK, November 26, 1895.

WHEN Barthélemy-Saint-Hilaire, who died last Monday in Paris, was born in that same city over ninety years ago, his health was so delicate that the family physician ordered the baby to the country for better air. So he was sent to the neighboring town of Sceaux and placed in a peasant family, where the wife, a sturdy woman with four children, nursed him and performed all the duties of a mother. "She was so vigorous," St.-Hilaire used to say of her, "that she was the only woman in the region round about Sceaux who earned men's wages—thirty sous instead of one franc. She could pitch up hay from the ground to the lofty cart from sunrise to sunset during the long summer days without getting weary." The young St.-Hilaire was treated by her exactly as if he were one of her own children. He ate what they did and slept where they did. It was the rough life of the ordinary peasantry. He remembered accompanying her in winter to the Meudon forest not very far away, where they would collect dead wood and then trudge home again in the snow and ice and cold, she bearing on her back a great bundle of branches, which protruded far over her head, while the little boy at her side carried a smaller one on his own back. St.-Hilaire always preserved a strong affection for this woman, and never lost sight of her when, in after-years, he rose to prominence; and when she died, he kept up his intercourse with her husband. "Though she could neither read nor write," he would say of her, "and was quite ignorant, I don't believe she had a single false idea in her head."

After this hardening process of his early childhood, nothing on the material side of existence ever tried him. On leaving Sceaux, strong and tough as a knot, Jules was sent to the Lycée Louis-le-Grand at Paris, whose severe régime was Paradise to him. But all through life his body demanded vigorous physical exercise. During the Restoration he began to frequent a gymnasium, though it was not till a later period that he became an enthusiastic and expert gymnast. He was an early adept of Laisné, the best-known gymnastic teacher of Paris during the reign of Louis Philippe and the Second Empire, "whose body was that of a gladiator." St.-Hilaire was so pleased with this instructor's methods that he suggested one day that Laisné write them out and put them in book form; and when Laisné pleaded ignorance of composition as his excuse for not doing so, his admiring pupil agreed to act as his amanuensis and editor. The result of this collaboration was a good-sized volume of three or four hundred pages, with the names of the two authors on the title-page, and though never given in the catalogue of works in the biographical sketches of Barthélemy-Saint-Hilaire, who, at the time it was published, was a member of the Institute and professor of Greek and Latin philosophy at the College of France, still it can be found on the shelves of the National Library of Paris.

Barthélemy-Saint-Hilaire loved to talk about his bodily strength, which was remarkable to the very end of his life. When a boy of fifteen or sixteen he and Littré, who was one of his earliest companions, and with whom he remained on the friendliest terms up to the day of the latter's death, though he did not share Littré's materialistic views, got up at four one morning in order to be at Vincennes in time to witness the practice-firing of the artillery. During the cannonading a big ball glanced off from the target and fell into the woods, where the boys found it. Thereupon Jules was seized with the desire to carry it back to Paris, notwithstanding its weight and the distance to the city. But his companions ridiculed the idea, and pronounced it impossible. This only emboldened Jules, who then and there made a bet with them that he could carry the ball from Paris to Versailles and back without ever letting it touch the ground. And he was as good as his word. Supporting it first in one hand and then in the other, or in both, and then resting it on the right and left shoulders successively, he reached Versailles with his charge, rested for a half-hour on one of the stone seats in the park, holding the ball on his feet so that it should not touch the ground, while he refreshed himself with a piece of bread and one nut—St.-Hilaire laid stress on the scantiness of his meal—and then trudged back to the capital in triumph, having covered some twenty miles. "Well," Littré used to say in recalling this boyish feat, "if you had not had the persistency to win that bet, you would never have translated the whole of Aristotle."

St.-Hilaire's gymnastic tastes brought him into relations with Prince Napoleon ("Plon Plon"), who was also a frequenter of Laisné's establishment, the teacher often going into raptures over this pupil's muscles. And St.-Hilaire would talk by the hour about this erratic Bonaparte.

"He was a monster," he used to say; "one of the worst men I ever encountered throughout my long career. But he was physically handsome. He had the striking physiognomy of the first Napoleon in the middle period of the Emperor's life. I say the middle period, for in his early manhood Napoleon was too thin, and toward his end too stout and puffed out; but in middle life his face possessed remarkable outlines, the very lineaments for a superb medallion. Prince Napoleon's features bore this stamp. He had a good intellect, too; was quick to grasp the salient points of a subject; was a ready speaker, and, though not a first-rate writer, wielded no ordinary pen. He had also a magnificently developed body and was a fine gymnast. He was exceedingly stingy, in which respect he differed completely from his father, King Jerome, who was so free with money as to be always in debt, a perfect *panier percé*."

Saint-Hilaire gave these two examples of Prince Napoleon's niggardliness. While Baron Heckeren, a Legitimist member of the Assembly during the republic of 1848, was speaking one day, he was interrupted by Napoleon, who sat on the Extreme Left. Turning on him, he said contemptuously, "Oh, it's only the Prince of the Mountain," and then went on to the end of his speech. But, having regained his seat, he sent seconds to the Prince, who, proverbial for his cowardice, had the matter amicably arranged, and invited the Baron and the four seconds to a love-feast, which came off at one of the leading restaurants. When the waiter brought the bill, Prince Napoleon glanced at the total and then remarked placidly, "Well, gentlemen, it's twenty-six francs apiece." Again, when the Prince's famous Pompeiian house in the Avenue Montaigne, which was torn down unfortunately two or three years ago, was being decorated, the architect suggested that one of the bare walls be set off by a well-known picture then on exhibition. The Prince asked how much the canvas would cost, and when informed that the price would probably be some 25,000 francs, he answered: "Wait till the Salon closes; if the picture is not then sold, the artist will be glad to get four or five thousand for it." And this at a time when his cousin, the Emperor, was

striving to associate the art world of France with the fortunes of the Empire.

Ferdinand de Lesseps was another famous Frenchman about whom Barthélemy Saint-Hilaire could recount many interesting facts. They were closely associated during the early stages of the Suez Canal enterprise, and St.-Hilaire acted as general secretary of the preliminary company, his chief work being to "write it up." This was during the years 1856-'7 and '8, when St.-Hilaire edited and wrote most of the contents of a weekly sixty-column quarto journal run in the interest of the canal. The two men then lived on the same floor of a house in the Rue Richepanse, their front doors being opposite one another and on the same landing. They were so intimate that St.-Hilaire used to address De Lesseps as "Ferdinand," and though they afterwards broke, on account of differences concerning the policy to be pursued in the final organization of the company, they separated with the highest respect and even affection for one another, so that later De Lesseps sent St.-Hilaire a "founder's share," which is to-day worth over 100,000 francs, I believe, but which St.-Hilaire declined with thanks. "He was utterly without personal cupidity," St.-Hilaire used to say of De Lesseps; "he would use money lavishly, too lavishly—not on himself, however, but to promote schemes which were to be a benefit to the whole human family. He was energetic, indefatigable, and bold even to rashness."

But the greatest incident of a personal nature in Barthélemy-Saint-Hilaire's career was his connection with Thiers. He got into confidential secretarial relations with Thiers much before 1871. He was undoubtedly one of the many collaborators on the Histories, though when I once asked him if this were so, he avoided answering my question. He stated of his own accord, however, that in 1864 he made researches concerning Mexico which Thiers utilized in powerful speeches on this subject delivered in the Corps Législatif. When Thiers went down to Bordeaux in February, 1871, everybody knew that he was the coming man. He was accompanied by his wife and sister-in-law; and St.-Hilaire, who was, like Thiers, a Deputy, was invited to stay with them. Then occurred the first decisive step in that political copartnership which had such a strong influence on French politics. "Noticing the heap of mail matter which arrived for Thiers daily," said St.-Hilaire, "I offered to attend to it for him. He gladly acceded to my request, remarking: 'Vous me sauvez la vie.'" And when, a few days later, Thiers became the Chief Executive of the republic, Barthélemy-Saint-Hilaire was given the title of General Secretary of the Presidency. This was the third instance of his having held the post of secretary under very different and very important circumstances. I have already mentioned his connection with the Suez Canal Company. He was also Secretary of the provisional Republican Government of 1848, when he performed useful public services which are recorded in the official papers of that time.

Barthélemy-Saint-Hilaire was invaluable to Thiers during the latter's Presidency. They used to begin work together every morning at 5:30, and continue thus till 6:30, when each went to his own desk. "The labor was incessant and terribly fatiguing," to use St.-Hilaire's words, which he illustrated by telling this anecdote:

"On one occasion when I was called in to a sitting of the ministers to explain an affair with which I was more *au courant* than Thiers, I was placed on his right in order that we might consult together. Having answered the questions put to me by the ministers, a discussion followed, during which my head dropped on my breast and I fell fast asleep. When further questions were asked me, Thiers had to shake me, while he remarked: 'Excuse him, gentlemen; he is worn out in aiding me, for without his help I could not accomplish the quarter of what I do.' Coming from such a man as Thiers and in such a cause, I felt that this recognition fully repaid me for all my labor."

When it is known that St.-Hilaire would accept no salary for this arduous work either from Thiers or from the state, his conduct becomes all the more exemplary.

At this time the monarchical faction and the republican faction in the National Assembly were both straining every nerve to "capture" Thiers. The Right was most eager to separate the two men because it was believed that St.-Hilaire was influencing Thiers in favor of the republic. "When I left the lycée," said the former, "I was a republican. I don't know exactly how I became one, but at that age one is ardent and goes to extremes; so I found myself a republican although the atmosphere was then thoroughly impregnated with constitutional monarchy. My friends and associates under Louis Philippe—Thiers, De Rémusat, Duvergier de Hauranne, etc.—were almost all monarchists, and they used to smile at my republican ideas." And then, coming down to 1871, and taking up the complaint of the Right, he added: "I never did anything of the kind. Thiers was not the sort of man to be affected in that way. Of course his close daily relations with an old and pronounced republican like myself doubtless had a certain moral influence on him. But Thiers was too much of a statesman not to see that the republic was the only government possible under the circumstances." Notwithstanding St.-Hilaire's modest disclaimer, there can be no doubt that his intimacy with the President at this critical moment in the history of the Third Republic had not a little to do with keeping Thiers in line with the republican movement, and thus greatly aiding in the final foundation of the republic.

This retiring disposition in Barthélemy-St.-Hilaire's character is well brought out in his statement of the line of conduct which he early laid down for himself, and which he always followed as regards the world's honors. "Don't ask for anything, don't strive for laurels," he would say to the young men who went to consult him; "do the best you can to make yourselves indispensable to man and society about you, and they will be only too glad to offer you honors. At the very start in life I was convinced that this was the best course to pursue." Then, to illustrate the correctness of this policy by examples from his own public and literary career, he would relate how when, as an obscure young clerk in the Treasury Department, he decided to offer his country a complete translation of Aristotle's works, Victor Cousin, then all-powerful, heard of this grand undertaking and became interested in the author of it, and thence came St.-Hilaire's chair in the College of France and his membership in the Institute; how he became President of the College of France because, as a Deputy, he had defended some of the professors against unjust treatment on the part of the Government, these professors afterwards securing his nomination to that high post; how he was selected as a candidate for the National Assembly in 1848 because he had always been a republican, the committee coming to him and not he going to the committee in order to secure the nomination, etc.

Barthélemy-St.-Hilaire's translation of Aristotle into French was his *magnum opus*. He estimated that it had cost him from eighty to ninety thousand hours of labor to accomplish this task, during a period extending from 1832 to 1892. He was thus sixty years on this work, and was eighty-seven years old when it was completed. Yet this translation was not the only *tour de force*—I am told that classical scholars do not consider it much else than this—of this wonderful old man. He was occupied twenty-two years on a rhymed metrical translation of the 'Iliad.' "I always carried a Homer with me and would translate it in train or omnibus, whenever I could find a free moment. I did not have the time to go over my manuscript with care and to polish the verses. The chief merit of my version is found in the fact that I have succeeded in making a verse-for-verse rendering. I may have forced and distorted now and then the meaning of my French, but I have carried my point—a verse-for-verse translation." And not less remarkable than the two foregoing examples of literary indefatigableness was the production of his 'Life of Cousin,' which I noticed in these columns last winter. In fact, still another wonder attaches to this work—its having been accomplished by a man who had almost reached four score and ten, for when these three big volumes of nearly seven hundred pages each were issued last spring, their author was within a few weeks of the anniversary of his ninetieth birthday. And last August, just three days before he celebrated that event, he wrote me: "I am busy at this moment on the second edition of Cousin's 'Plato,' and I hope to publish the first volume towards the end of the year."

SOUTHERN LYNCHINGS.

TO THE EDITOR OF THE NATION:

SIR: Scarcely had Massachusetts uttered an indignant protest against a species of anarchy which the South has countenanced too long, before another lynching of a negro took place, this time at Frederick, Maryland. The victim deserved his fate, for he abused the hospitality of a servant girl who gave him food, and then he committed fiendish rape upon her. The leader of the mob which soon afterwards hung him, justified their conduct by saying that they wanted to make an example and warn all blacks that they must let white women alone.

The mischief is that these *examples*, whether they be like the comparatively mild retribution which has just occurred in Maryland, or a revolting, brutalizing, slow burning at the stake, such as happened not long ago in Texas, instead of lessening, increase the evil they seek to suppress. For thirty years lynch law has prevailed in many parts of the South, and, unfortunately, of late years, has also gained a foothold in some Northern localities. Almost as soon as one mob has wreaked summary vengeance upon one trembling wretch, another negro must be taken in hand.

What is the reason that the American nation has not stamped out lynch law? Are not public sentiment and false reasoning at fault? Do not even intelligent people complacently accept the plea that all courts, juries, and judges are so incompetent that mobs must, like savages, take the law into their own hands? Is it not time that such childish apologies should no

longer be taken in extenuation of lawlessness and anarchy?

Eight years ago, in Chicago, certain headstrong anarchists, who had good cause to be enraged at the manner in which the laboring classes had been oppressed, engaged in a riot, hurled dynamite bombs, and destroyed much life and valuable property. Eight men were tried, convicted of treason, and executed. The whole country, from Maine to California and from Massachusetts to Texas, stood as a unit, and approved of the principle that anarchists who broke the laws and resisted government must be punished as traitors. Why ought not the same stern justice to be meted out to those other anarchists who are known as lynchers? Why not consider lynching as a form of high treason? If, in answer, it be said that often the best portion of a community has led in a lynching, so much the worse. The more aristocratic the lynchers, the swifter ought to be their conviction. Indeed, it is a question whether every place in which a lynching happens ought not to be placed under military law, and the perpetrators tried by court-martial. But more important than all legal restraint is it that people should be taught to hold sacred the principle that even the vilest criminal must be treated justly, is entitled to "the equal protection of the laws," and must be tried, convicted, and punished only after a fair trial and by an impartial tribunal. Until this principle is recognized, lynching and all its attendant horrors will continue to stifle American civilization. F. M. Noa.

Briar Bend Seminary, Mt. Lake Park, Md., November 25, 1895.

AN APPEAL FOR THE DICTIONARY.

To the Editor of The Nation:

Sir: Your correspondent "X.," in his "Plea for the Study of Latin Grammar" (*Nation*, November 21), sounds a note of warning which is needed, and should be heeded, in these days, far beyond the limits of his own special theme. I was brought up in the good old times when the method was to go (straight) through the Latin grammar once, learning by heart the "big print"; then again, learning the "little print"; and then a third time, learning all, "big and little print." This was doubtless a dire method; but then at least we learned and knew something at school, and were qualified, under better teaching afterwards, to learn to read or to write Latin. Now, under the modern method, I see students who have not only come to college, but even graduated from college, without knowing their nouns or verbs, and are therefore apt to make the gravest mistakes in either writing or reading. But so far I only repeat what "X." has so well said. My true object is to make another protest against some present methods and tendencies in the teaching (?) of language.

"X." says truly: "Many men enter college every year who have never owned grammar or dictionary." Leaving the question of grammar where he has put it, I wish to make my appeal for the dictionary. It is true that students now come to college—may, indeed, even go through college—without either owning or knowing how to use a dictionary (I speak of my own department of modern languages). The pernicious habit of editing and publishing texts, by no means elementary, "with vocabulary," tends not only to the disuse of the dictionary, but directly also to a shallow and superficial scholarship. A student fed on such spoon-victuals does not know how even to use a dictionary, and is left helpless for any higher literary study. The number of such "vocabulary" editions is great and ever growing. From a single list before me, of a most reputable house, I count (outside of readers and other elementary books) about twenty such titles. We cannot blame the publishers, who naturally print what will sell; but we may make protest against such editions, and to the teachers who use and create the demand for them. Such hand-to mouth vocabularies should not be tolerated by any teacher, whether of ancient or modern languages, beyond the limit of purely elementary or introductory reading.

Y.

November, 1895.

"SEVERAL."

To the Editor of The Nation:

Sir: With regard to the use of *several* in the sense of 'many' or 'not a few,' of which mention is made in your issue of this week, it may interest some of your readers to know that this use of the word survives in this country all through western North Carolina, and probably in other remote portions of the South. For instance, on asking a native of the Toe River region if there were many fish in the river, I received the reply: "Oh, yes; there's several of them." H. G.

Omaha, November 23, 1895.

Notes.

E. P. Dutton & Co. have nearly ready a 'History of the Church Catholic,' by the Rev. A. H. Hore, a companion volume to the same author's 'History of the Church of England.'

Macmillan & Co. announce a new edition of 'The Marvellous Adventures of Sir John Maundeville, Knt.,' with designs by Arthur Layard; and 'Experimental Morphology,' by Charles B. Adams, Ph.D.

Dodd, Mead & Co. offer a limited edition in several styles, all elegant, of Austin Dobson's Poems, revised, enlarged and complete, with etched portrait by William Strang, and seven full-page etchings by Ad. Lalauze; in two volumes, 16mo. The enterprise will be wholly American.

Mr. Frederic Harrison is working away upon his 'Life of William the Silent.' He recently visited Holland in search of materials for his *magnum opus*, when the object of his visit was much advanced by the friendly offices of Sir Horace Rumbold, the British Minister at The Hague.

'British Guiana and its Resources' is the name of a book shortly to be published in London, of which the author is Mr. Tennant, formerly M. P. for Leeds on the Conservative side. As Mr. Tennant spent some time in British Guiana, in 1892-'93, and during his stay there visited several of the outlying districts, he will write with some personal knowledge of his subject. The question of the boundaries of British Guiana is, notoriously, the cause of the existing difficulties between Great Britain and Venezuela.

Mr. Fortescue, who has succeeded the late Mr. Noel Sainsbury at the Public Record Office, London, in the function of calendaring the papers of the Colonial Series, is now passing through the press a fresh volume, the materials of which have been prepared in part by himself and in part by Mr. Sainsbury. Many papers among those thus calendared relate to the founding of Pennsylvania. There is also a statement, written by Roger Williams when an old man, containing one or two facts pertaining to the early history of Rhode Island. There are many documents concerning the grant of a constitution to Jamaica, and the resistance made by the colonists to the attempt of the home authorities to impose upon that island a form of government which would have subjected them to the operation of Poynings' Law as applied to Ireland. The Memoir of Mr. Sainsbury for the English 'Dictionary of National Biography,' by the way, is being written by Mr. C. Alexander Harris of the Colonial Office, London, who has already contributed several "lives" of persons who had been connected with the Colonies to that monumental work.

Mr. Alfred Parsons's trip to Japan in 1892 was prolific in the products of his brush, and a generous selection of some 125 of these is reproduced, in small octavo form, with a running accompaniment from his journal ('Notes in Japan,' Harpers). Most of the material, both pictures and text, seems to be identical with that which he has already published in *Harper's Magazine*. The Notes are chiefly descriptive of the scenery, and have the special interest which attaches to an artist's impressions. Of his exquisite landscapes nothing need here be said. They have already been seen and praised in this country, and their accuracy and naturalness make them delightful mementos for the returned traveller. They have, of course, lost incomparably in reproduction without color; no one who has not seen, for example, the "Bamboo Grove" (p. 70) or the "Field of Lilies" (p. 82), can imagine the original.

Probably the most widely read of contemporary Italian writers—certainly of travel-writers—is Edmondo de Amicis. The Henry T. Coates Co., Philadelphia, has issued for the holidays an edition of his 'Spain and the Spaniards,' in two volumes newly translated from the tenth edition of the Italian by Stanley Rhoads Yarnall, adorned with forty-seven full-page illustrations of scenery, cities, genre pictures and reproductions of famous paintings, bound in white and gold, and protected by stiff red covers. A comparison of the text with the translation by Wilhelmina W. Cady, which was printed in 1881, shows that on the whole the new version is the more compact and idiomatic. Next to Gautier's graphic volume, De Amicis's remains to this day the most entertaining of all tourist books on Spain.

Macmillan is the American agent for R. A. M. Stevenson's 'Art of Velasquez,' of which George Bell & Sons, London, are the publishers. It is a sumptuous quarto volume illustrated with twenty photogravures of the great Spaniard's best and best-known works, besides forty-three "supplementary illustrations" in half-tone placed together at the end. Mr. Stevenson, who has himself had the training of an artist, makes an intelligent analysis of Velasquez's aims and methods from the point of view of an ultra-modern critic, who sees in his subject the forerunner of Manet and Whistler and the real founder of impressionism. It is perhaps natural that he should be oblivious of the fact that Velasquez's few attempts at the decorative and religious types of art are uninteresting, not merely because they are not modern, but because they are distinctly failures in what he attempts, and show that he was as inferior to the elder painters on their ground as he was superior to them on his own. The photogravures are somewhat black and spotty, and fail to do invariable and complete justice to the magnificent tone of the

originals, but they give enough of authentic fact in other particulars to be very valuable. The frontispiece, after the "Venus" belonging to Mrs. Morritt of Rokeby Park, is especially successful, and is the more welcome as the picture has been seldom and inadequately reproduced.

Mr. John Kendrick Bangs's *jeu d'esprit*, 'A House-Boat on the Styx: Being some account of the divers doings of the Associated Shades' (Harpers), made its hit in the *Weekly*, and will bear rereading once in book form. The humor of the conception perhaps surpasses that of any part of the execution, unless we except the very natural drollery of the debate between Noah and Barnum on the resolution, "The Animals of the Antediluvian Periods were Far More Attractive for Show Purposes than those of Modern Make." Pretty certainly, too, it may be affirmed that the comicality of Mr. Bangs's dialogues is largely indebted to Mr. Peter Newell's inimitable portrait-group illustrations. But here we have a grievance against the publishers, who have reduced the scale of the pictures to suit the book, thus forfeiting half their effectiveness in the *Weekly*. In humor and imagination they rank high, but of pure art also there is no mean evidence in them. The representation of the Styx in the Captain Kidd design would not disgrace the Scandinavian Thaulow, first of painters of freezing streams.

Messrs. Stone & Kimball, Chicago, publish in one dainty volume the five biographies known as 'Walton's Lives,' viz., of Doctor John Donne, Sir Henry Wotton, Mr. Richard Hooker, Mr. George Herbert, and Doctor Robert Sanderson. The whole volume, in paper, typography, and binding, has been designed to preserve something of the quaint flavor of antiquity which clings about the charming text of the genial author. If our literary knowledge is not thereby increased, we may at least be grateful for a book which helps us to gain the right impression from an author whom to enjoy is rather an æsthetic than a learned pleasure.

A. C. McClurg & Co., Chicago, publish 'Recollections of Lincoln,' by Ward H. Lamon. These are based on papers, more or less complete, left by Mr. Lamon, who was close to Mr. Lincoln from 1847 onward, being Marshal of the District of Columbia during the war period. His daughter, Miss Dorothy Lamon, edits them, but we are not told how extensive the work of revision and compilation has been. Every detail of Mr. Lincoln's life, saved by those who were near to him, is eagerly received, and the sifting process, to eliminate the bias of the narrators, must come later.

The Massachusetts Military Historical Society have published a new volume of papers, under title of 'Campaigns in Virginia, 1861-1862' (Houghton, Mifflin & Co.). It is a revised and enlarged edition of their former volume, printed in 1881, entitled 'The Peninsular Campaign of McClellan in 1862.' The book consists mostly of a series of exceptionally valuable papers by the late Gen. John C. Palfrey, in which he criticised the campaign in the light of his personal experience as an officer in it. The new papers added are Colonel Thos. L. Livermore's on Patterson's Shenandoah campaign, and Major Jas. F. Huntington's on operations in the same valley under Shields in 1862. Colonel Livermore's paper is an admirable specimen of calm and clear-cut military analysis. Major Huntington's is a living presentation of an artilleryman's experience in a rough campaign. Four large, well-engraved maps illustrate the text. The volume is edited by Theodore F. Dwight.

A 'History of the 17th Lancers [Duke of Cambridge's Own],' published by Macmillan & Co., is an interesting proof of the pride English officers feel in their old regiments. A sumptuous royal octavo, with tinted illustrations of uniforms and equipments—several of them beautiful reproductions from water-color drawings—makes an attractive book for the library table. The text, by the Hon. J. W. Fortescue, is a lively narrative of the regiment's service from 1760 downward. It was with Tarleton in South Carolina in our Revolutionary war. It had a rough experience in the West Indies in the Maroon war, where it was decimated by yellow fever. It served in Buenos Ayres in 1807. It had several years' service in India, including the Pindari war, in the twenties. Its glory culminated in the Charge of the Light Brigade at Balaklava in 1854. Then came more Indian experience in the Sepoy mutiny, and finally the Zulu war in Africa in 1879. No wonder its members rally to its grim emblem of the skull and cross-bones, with its motto "or glory" beneath. Reading the book, one can easily understand how the fame of the regiment compels its new men to become good soldiers.

The recent visit of the Bechuana chiefs to England is the occasion of the Rev. E. Lloyd's 'Three Great African Chiefs' (London: T. Fisher Unwin; New York: Putnams). It is a very crude sketch of the history of this South-African tribe, in addition to an account of its principal chiefs. The only one of their number who has any claim to be called "great" is Khama, perhaps the most enlightened African ruler of this day, whose principal aim is to prevent the sale of liquor to his people. Something is shown of the customs and religion of the natives, together with three specimens of their folk-lore, which bear a striking resemblance to other African tales, the hare being represented as having the mastery over the other animals through his cunning.

A second edition of Prof. John S. Mackenzie's 'Introduction to Social Philosophy' is published by Macmillan & Co. The changes introduced in this edition are, on the whole, slight, consisting chiefly of references to the recent literature of the subject, and of occasional footnotes. While Prof. Mackenzie's results are not, perhaps, very definite in character, the spirit of his book is philosophical, and his method of treating social problems is critical and suggestive.

'The Book of Athletics,' published by the Lothrop Publishing Co. of Boston, is edited by Norman W. Bingham, Jr., a distinguished college athlete. It is an ambitious effort to cover the whole athletic field in twenty-four short chapters, and the verdict must be that the effort is not a successful one. The subject has been pretty thoroughly threshed out of late years on both sides of the Atlantic, with perhaps excessive elaboration, and it is not easy to imagine a *raison d'être* for this sketchy volume. The print is good, but the illustrations uneven, and some of them preposterous—especially those at page 30 and page 48. In the latter case, four gentlemen of normal size are represented as playing lawn tennis in a court about 10 feet long by 5 feet wide.

It was a good thought to offer new editions of the great classics in a handy form, with introductions by eminent scholars. Mr. Page's to Virgil, in Macmillan's "Parnassus Series," is chiefly literary, including Tennyson's well-known ode; Mr. Leaf's to Homer is critical. But it is obvious that whatever merit the contents have, it is the form to which the publishers chiefly mean our attention to be directed. The volumes are in glazed boards, emblazoned with classic designs in dull Pompeian red, and wrapped in covers like the case of a caramel. The paper is very white and very rough; uncut in every sense of the word, with ragged edges, and a top that needs a paper-cutter; the type very black and rather pretty in the Virgil, very fantastic in the Homer, meant to imitate a diminutive uncial MS., and giving all scholars past fifty very distinctly to know that the end of the century outstrips them even in its Greek alphabet. It is well to have pretty pocket editions; but Virgil and Homer are the last books to have *fin-de-siècle* elegances thrust upon them.

A little work, 'Unsere Muttersprache, ihr Werden und ihr Wesen,' by Prof. Dr. O. Weise (Leipzig: Teubner), deserves the special attention of that vast majority of students and teachers of German who, from choice or necessity, are devoting themselves to the literary rather than the philological side of the study. The essay, which was awarded a prize by the Allgemeiner Deutscher Sprachverein, is designed for cultured readers who are not specialists; even a knowledge of Old and Middle-High German is not requisite for its comprehension. On the other hand, the author has kept abreast of modern scholarship, and references to the works of most of the leading specialists are abundant. The intimate relation between the language and the genius and life of the people is kept before the reader throughout the book, a feature which distinguishes it from Behaghel's well-known work on the same subject. Commendable care has been bestowed upon the style, which is as easy as comports with the nature of the work.

Klee's 'Grundzüge der Deutschen Litteraturgeschichte,' although about the size of Kluge's 'Nationallitteratur' or König's 'Abriss,' is quite different from these, and might serve as a good companion-book for either. While these two aim to give the reader a brief account of the lives of the great writers and the contents of their works, Klee endeavors to show the rise and development of the literature and its factors. Instead of analyzing the great classics, he shows how they were influenced by previous productions, and how they in turn influenced subsequent ones. The biographical portions of the book are frequently in the form of a syllabus, merely giving topics for the teacher to enlarge upon or for the reader to look up elsewhere. The treatment of contemporary writers is even far more meagre than that in Wells's recent 'History of German Literature'; the writers of the seventies and eighties are discussed in about two pages, while the radical leaders of the present decade are spoken of as the naturalistic school, but Sudermann and Hauptmann are the only ones mentioned.

Siberia is the subject of the two articles of most general interest in *Petermann's Mitteilungen* for October. The first is a description of its navigable streams and their relations to each other. The writer shows that it would not be difficult so to connect them with a few canals and roads as to make a complete system of water communication throughout the country from the mouth of the Amur to Archangel. By this means the development of the land would be hastened. The other article is a statistical account of the province of Yeniseisk, from which we learn that the population in 1891 was 461,000, of whom 4,050 were Armenians. The population is slowly increasing, though the death-rate of the towns is greater than the birth-rate. Scarcely a tenth of the arable land is cultivated, the principal products being corn and potatoes.

Ten thousand people are occupied in washing gold, the product for 1891 being 6,878 pounds, or less than half the amount obtained twenty years ago. There are a few manufactories, tanneries, and breweries, the entire annual business of the province amounting to about eight million rubles.

The principal article in the *Scottish Geographical Magazine* for November is by Mr. J. Dodd, a resident of the island of Formosa for twenty-five years. Referring to the great decline of the trade in camphor, once the principal export, and the reckless destruction by the Chinese of the camphor forests, he expresses the hope that since there is an increased demand for the gum in the manufacture of smokeless powder, the Japanese will take immediate measures to replant the waste lands. Tea is now by far the most important article of export, Tamsui alone shipping annually about twenty million pounds. The mineral wealth, especially in gold and iron, is known to be considerable, though a large part of the island is still unexplored. Coal and sulphur are found in large quantities, and in several places in the interior there are flowing springs of petroleum which are unworked because of obstructions on the part of the mandarins. In another article Mr. Healtey urges the claims of Akik, a port on the Red Sea south of Suakin, to be the terminus of the proposed railroad to Khartum on the upper Nile.

Sun and Shade (New York Photogravure Co.) continues in its last three monthly issues its examples of color printing, which still show a want of complete control of the primary colors employed in the three or more impressions. In the November issue the view from nature of Prospect Park is more interesting than its predecessors from pigments, because more difficult from the conditions of the process; but it leaves something to be desired.

The *Photographic Times* for January not only will be profusely illustrated, but will begin the serial publication of an 'Encyclopædic Dictionary of Photography' on a scale not yet attempted.

A new mode of producing alcohol, by which its price will be reduced by four-fifths or nine-tenths, must revolutionize many arts. Carbide of calcium and zinc-scraps mixed are acted on by dilute sulphuric acid. Ethylene results. This gas, led over hot sulphuric acid, makes ethyl-sulphuric acid, now used to make ether. From ethyl-sulphuric acid alcohol can be directly distilled. In this way, the promoters promise to produce 96 per cent. alcohol needing no rectification for something like 25 cents a gallon; but it is impossible to verify this figure. Still, something like that may be hoped for. When, thirty or forty years ago, Berthelot made his first announcement of the production of an "organic" body by synthesis—it was, by the way, the same acetylene which is now influential in producing the ethylene for the first step of the above process—nobody dreamed that it meant anything more than the overthrow of the theory that "organic" compounds can be produced only by vital processes. To-day it has become an economic truth. The maxim is: Do not make high products merely to break them down to obtain low products. Do not resort to the agencies of growth to make celluloid and starch, when all you want is the far lower compound, alcohol.

The Prussian Minister of Education, Dr. Julius Bosse, has given yet another proof of his liberal attitude towards students regardless of sex, by granting permission to a contingent of sixty seven American women to attend certain winter lectures at the University of Berlin. This apparent "favoritism" to our countrywomen has drawn forth a protest from German women, many of whom have been excluded from the same courses. There seems little doubt that German women who desire university instruction meet with every obstacle that custom and law permit from the hands of German professors.

What might seem like a temporary check to the movement for the higher education of women in Great Britain has been given by the Royal Colleges of Physicians and Surgeons, London, in refusing the petition of the London School of Medicine for Women for the admission of its students to the examinations and diplomas of these professional colleges. While it is true that the students of the London School of Medicine for Women may obtain legal status by passing the examinations of London University or the Society of Apothecaries, they are still so far handicapped by ancient prejudice and the privileges of vested rights that, if they desire a diploma from a college of physicians or surgeons, they must go to Ireland or Scotland or the Continent to procure one, thus increasing needlessly the expense and fatigue of their examinations. It is interesting, therefore, to find that, in spite of small adverse majorities, the debates and divisions of these autocratic bodies register a real advance in general professional opinion as to the right and fitness of women to become medical practitioners. Of the 109 fellows present at the Comitia of the Royal College of Physicians, 50 voted in favor of the women's petition.

—An interesting point in the law of literary property is raised by the correspondence in the *Critic* of October 26 and November 2, concerning the reprinting of a story by Mrs. R. H. Davis without her permission. The publisher, it seems, claims that, having bought certain property—apparently the good will of a defunct periodical—he acquired the right to republish any contribution thereto. He did this in the case of Mrs. Davis's story without even mentioning that it had been previously printed. Now this is a matter not provided for by our statutes, nor has such a case, to our knowledge, come to trial in this country; but, in default of specific statutory provision, our courts usually follow English precedents, and we have one applicable in the case of the Bishop of Hereford vs. Griffin, in 1848. The Bishop had written an article for an encyclopædia, and some years later the defendant, having bought the copyright of this, reissued the plaintiff's article in another form. He was, however, enjoined from continuing the publication, the judge holding that the copyright rests in the author except in so far as he specifically parts with it, and that the right to publish in one form did not authorize the use of the same matter in another form. The opinion is given at length in the *Literary World* of March 25, 1848. As Miss Mary E. Wilkins made a similar complaint a year or two since, it would appear that American authors are not aware of their rights in the premises.

—The placing in the Public Library of Boston of the new decoration by Puvis de Chavannes has stimulated an interest in that eminent painter, and L. Prang & Co. publish in pamphlet form a sketch of him by Lily Lewis Rood. The summer number of *Modern Art*, from the same publishers, is also largely devoted to the great modern decorator and to his virulent critic, Dr. Max Nordau. Neither Miss Rood's pamphlet nor the translation from Roger Ballu in *Modern Art* can be said to give much in the way of illuminating criticism or of interesting fact, both being attempts at saying, in more or less eloquent language, that the writers find Puvis's work very beautiful. How and why it is beautiful they help one little to discern. One of the illustrations in the pamphlet, a female head, will give a new view of Puvis's art to many. Mr. G. Bernard Shaw's letter on Nordau is another exposure of that bumptious person's entire ignorance of art. Mr. Shaw characterizes Nordau's art criticism as "the work of a pretentious ignoramus, instantly recognizable as such by any expert," adding, "I copy his bluntness of speech as a matter of courtesy to him." But although Mr. Shaw gives many instances of Nordau's blundering, he does not succeed in showing that writer's radical misconception of art so thoroughly as does Nordau himself in a criticism of Puvis de Chavannes's Boston decoration, which the editor of *Modern Art* reproduces in the same number from a Vienna newspaper. This, while more violent, is in the vein of his remarks in the *Century* on the same artist. Puvis is "affected" and "insincere" because his color is non-natural. If not insincere, he must be diseased. All this is, of course, the result of a failure to understand that the end of Puvis's art is not representation, but decoration, and that the actual truth of nature is neither here nor there. Fact, both of form and color, has been purposely sacrificed to the flatness and simplicity desirable in mural painting, and the critic who fails to understand this, and finds fault with a decoration for not being realistic or for lack of fulness and richness of color, merely condemns himself.

—The London Bibliographical Society does much good work in a quiet way, and its publications, though not apt to be advertised or boomed, are always well worth having. The latest is an 'Iconography of Don Quixote, 1605–1895,' by Mr. H. S. Ashbee. The list he gives of pictures of every kind, paintings, engravings, and drawings, done to illustrate the work of Cervantes will, however, interest the bibliophile rather than the artist. Mr. Ashbee himself laments, in his preface, that these have been, as a rule, unimportant. "It must be owned, I fear," he writes, "that no work of art emanating from Spain's most famous literary production can be placed in the very foremost rank." This is in a large measure true. From Coypel downward to Doré, few of 'Don Quixote's' illustrators produced work that from the artistic standpoint is worth preserving. This is all the more curious because the subject seems ever to have attracted, and one finds artists as different as Chodowiecki and Stothard and Bonington and Devéria, all making an attempt to treat it pictorially. It was natural that so picturesque a figure as the Knight of La Mancha should have appealed to the men of 1830. *L'Artiste*, the organ of the Romanticists, published numerous illustrations of the story. Daumier made it the motive for more than one painting. Mr. Ashbee mentions his "Don Quixote et Sancho se rendant aux noces de Gamache," exhibited in the Salon of 1850; and we have seen a couple of large oil studies by him which were so beautiful in color, so poetic in feeling, that we have always wondered why Daumier should be best remembered as a caricaturist. There is not, it must be confessed, much effort to tell the story, but one of these studies, which shows Don Quixote a strange, gaunt, but majestic figure, with Sancho Panza in a wild, rocky pass of the Sierra Morena, seems to us, vague impres-

sion as it is, to possess more of the sentiment of Cervantes than any of the elaborate illustrations, full of all sorts of correct detail. Of the illustrated editions, one of the most interesting belongs to the same period. This is the volume illustrated by Tony Johannot, whose drawings for it were engraved on wood by some of the best French and English wood-engravers of the day, among others the Thompsons, Williamses, and Orrin Smith, who were all pupils of Bewick and Clennell. It is a book now sought by the collectors because of these engravings. Quite as interesting, and really more successful artistically, is the English edition with drawings by A. Boyd Houghton and engravings by the Dalziels, published in 1866 by Frederick Warne. Houghton is one of the greatest illustrators who ever worked in England, and if Daumier was the most satisfactory painter of Don Quixote, Houghton must be said to have been the most sympathetic and vigorous interpreter in black and white. Little else is of special note in the long list. Mr. Ashbee has done his work most thoroughly. He gives at the end a good index and useful tables of editions and authorities consulted. His monograph has been admirably printed at the University Press of Aberdeen.

—The Society of Illustrators in London is but a comparatively youthful organization, not quite two years old; but it has not been idle, and already it is prepared to give its first public exhibition, as is appropriate, in an illustrated volume to be published shortly by Messrs. Macmillan in New York and London. This is called 'The London Garland,' and the wonder is that, without waiting for the Society of Illustrators, the book was not made long ago. London is, for the artist, the most picturesque place in the world, and it is one where many poets have sung; an illustrated anthology seems, therefore, almost inevitable. The Illustrators have secured the best of literary editors in Mr. W. E. Henley, whose knowledge may be relied upon and whose own "Voluntaries" gives the true spirit and beauty of London, in its fogs and in its sunshine, on its river and in its parks and streets, more truly, probably, than any verses ever yet written. He begins the collection with Chaucer and Lydgate; he includes, of course, Drayton, the Thames of whose 'Polyolbion' flows through London, and Ben Jonson and Herrick and Suckling; Pope and Gay and Carey, among others, represent the eighteenth century; while, from the time of Keats and Praed and Hood to the present, there is almost too much to choose from. All the great poets of later generations, Tennyson, Rossetti, Matthew Arnold, as well as a host of the lesser, have had their songs to sing of London town. The illustrations are as varied as the verse. Mr. Whistler and Sir Seymour Haden contribute, Mr. Whistler illustrating Mr. Henley's "Old Chelsea Bridge," so that here will be had the happy combination of the two men who, above all others, have known how to express the mystery and poetry of the Thames in paint and in words. There is work from draughtsmen as opposed in their manner and methods as Mr. Abbey and Mr. Beardsley, Sir James D. Linton and Mr. Anning Bell. There is a design by Mr. Frederick Sandys, who, it has been suggested, was not included among the pre-Raphaelites, though their contemporary and in close sympathy with their methods, because he was a more accomplished artist than any of them, and who, after having been forgotten for many years, is now beginning to receive the recognition he deserves. There are drawings by Mr. Parsons, Mr. Macbeth, Mr. Pennell, Mr. Partridge, Mr. Phil May, and Mr. Hatherell, and but few of the younger men of note have allowed themselves to be omitted from a really distinguished list. The chief interest, however, lies in the fact that never before, probably, has a book been produced on quite the same principles. Artists are accused of never being able to hold together, but here is a notable proof that they can. The drawings number almost a hundred, and all have been done by the Illustrators solely for the love of their profession. Whatever profits there may be, and, judging from advance sheets, these should not be small, will go, not to the artists themselves, but to their society.

—M. Henri Fazy is well known to historians for his numerous careful and valuable works upon the history of Geneva. As director of the archives of the city and canton, he has brought to light many valuable documents concerning the Republic of Geneva, the importance of which, both in political and religious history, cannot be overestimated. M. Fazy's last work, 'Les Suisses et la Neutralité de la Savoie, 1703–1704' (Geneva: W. Kündig & Fils), throws light on a little-known episode of the War of the Spanish Succession. Among the enemies whom Louis XIV. had aroused by his ambitious policy, was Victor Amadeus II., Duke of Savoy. This able and ambitious prince, afraid of having to bear the brunt of the attack of the French armies, entered into negotiations with the Swiss Republic, offering to incorporate his ancestral duchy of Savoy in the Confederation if the Swiss Diet would guarantee its neutrality and thus protect his Italian possessions from invasion on that side. Louis XIV. soon heard of the offer of his enemy, and proceeded on his part to offer the Swiss strong inducements to refuse the tempting bait which Victor Amadeus held out. Both sovereigns were represented in Switzerland by diplomatists of the very first order, and the despatches which M. Fazy publishes reveal a campaign of diplomacy of the very highest interest. At one moment, the French envoy, the Marquis de Puisieux, at another the Savoyard envoy, M. de Mellarède, got the best of the struggle, and the different parties in the Swiss Diet were handled by them with the skill of accomplished chess-players. The question of the neutrality of Savoy lost its importance in 1704 after the Duke of Marlborough's crushing defeat of the French army at Blenheim, but, at the time, it was of really European importance, and it quite deserves to be drawn from the oblivion in which it has hitherto lain.

—For the first time in the history of total eclipses of the sun, a popular excursion has been organized to witness an impressive phenomenon of this character. Heretofore confined solely to scientific men and such natives as may chance to be along the line of the lunar shadow, this most spectacular of natural events will now be witnessed by a party of tourists in Lapland. The Orient Steam Navigation Company of London propose to send one of their steamships to Vadsö in the Varanger Fiord, about 30 degrees east longitude, in order to convey any travellers who may wish, to this point in the path of totality. Leaving London on July 21, the party will visit Odde, Bergen, Naes, Molde, Trondhjem, Hammerfest, and the North Cape, reaching Vadsö on August 3. The eclipse occurring the 9th, the steamer will leave August 10, and arrive in London by the 17th. The round-trip fare for this unique journey will be 40 guineas, and it is suggested as especially desirable that early booking be made, since the excursion promises to be very popular. Parties of astronomers from France, England, and other European countries will establish observing stations at or near Vadsö, whence the line of totality runs across Nova Zembla, northern and eastern Siberia, and the Hokkaido or Yezo, the northernmost of the large islands of Japan. The astronomer royal of England, Mr. W. H. M. Christie, will go to Yezo with an observing party, travelling by way of America and the Pacific Ocean; and an American party, under Prof. Todd of Amherst, will also establish itself in the north of Japan. The yacht *Coronet* has been generously placed at the disposal of this last expedition by its owners, Mr. D. Willis James and his son Mr. Arthur Curtiss James of the New York Yacht Club, who also defray the other expenses of the trip. The *Coronet*, carrying the heavier and more bulky instruments, left New York a few days since for its long passage round Cape Horn, in order to be in time to meet the party at San Francisco when they shall have crossed the continent in the late spring. Thence the expedition in the *Coronet* will cross the Pacific, stopping at Honolulu for a week or two, and proceeding from there to Yezo by July 1, it is expected, so as to afford ample time for all preparations for the sun's total obscuration on August 9.

GRIFFIS'S TOWNSEND HARRIS.

Townsend Harris, First American Envoy in Japan. By Wiliam Elliot Griffis. Boston: Houghton, Mifflin & Co. 1895. Pp. viii, 351.

JAPAN did not want to make the Treaties. That much is clear, and always has been. They were treaties of fear—not the gross fear of the Perry or the Elgin cannon, but of the speedy possibilities of countless future cannon and of war. But what has seldom been recognized is that this supplies a simple explanation of all the diplomatic delays, twistings, hindrances, "lies," which are so frequently chronicled in the Harris journal and elsewhere. If a waylaid traveller could persuade the robber to let him pass, by pleading his haste to his father's deathbed and by promising to return the next day with bountiful ransom, he would chuckle at the success of his diplomacy—his only available weapon—and would properly protest against imputations upon the morality of his trick or of his failure to keep his promise. No other was the condition of the Japanese, in their view, and even Sir Rutherford Alcock (p. xiv) has admitted that their dissimulation was a natural expedient of self-defence in the hour of danger.

Whether they ought to have opened their country to us, and whether we had a right to demand this by force, is not so clear, and perhaps never will be. Sydney Smith said: "I am for bombarding all the exclusive Asiatics, who shut up the earth and will not let me walk civilly through it, doing no harm and paying for what I want." But a larger view, in the light of Mr. Hearn's analysis of Japanese life and Miss Simcox's portrayal of Chinese civilization, may leave us in doubt whether these peoples, after all, will gain in what makes life worth living by their entrance into the "comity" of Western nations. That the latter have gained is beyond doubt.

Another thing which has been supposed not to be clear is, whether, assuming that gunboat treaties are of a shady morality, our own na-

tion, through its representative, shared in that reproach, or whether its commercial treaty of 1858 was secured by pure diplomacy and voluntarily given by Japan. This it is which was to be cleared up once for all by the present volume. What are the facts? By 1850, England, France, Russia, Holland, and ourselves were all casting eyes towards Japan. In 1854 Commodore Perry had exacted the promise of a commercial treaty, and in 1857 Townsend Harris, with full diplomatic powers, arrived to negotiate it. After months of arduous work he had by March 8, 1858, secured the draft, together with a promise pledging the imperial signature by April 21. Among his strongest arguments had been the lesson of "contemporaneous events in India and China [forcing China to fight or make treaties], and the presence of large British and French fleets in neighboring waters [China]," and the great importance of averting disadvantageous gunboat treaties or even war by arranging without delay a satisfactory treaty which should serve as a sample for the other nations then on the way (Harris, pp. 238, 314; Alcock, p. 196). By June 18 he had agreed to postpone the date of signing to September 4, owing to difficulty in getting the imperial signature; and on that day he returned from Yedo to Shimoda to wait for September. Late in June the British and French fleets took the Peiho forts, and China's fate was sealed. On July 23 the *Mississippi* arrived at Shimoda with the news of this event and of the approaching departure of the foreign fleets for Japan on gunboat-treaty errands. Immediately Mr. Harris wrote to the Shogunate of "the very great importance of having the treaty signed without the loss of a single day." On July 27 he went up to Yokohama, on the 28th the Japanese commissioners came down with the treaty, and on the 29th it was executed. Before the end of the autumn the gunboat-treaty fleet appeared, and similar treaties were added.

What is there new in this? Absolutely nothing, except a few circumstantial dates. The whole story, as told by Mr. Harris himself to Sir Rutherford Alcock, first British Minister to Japan, has been before the world for nearly thirty years, in the latter's book, 'Three Years in Japan' (pp. 193-200). There are two questions, to be sure, that arise. One is, would Mr. Harris have succeeded if the fleet had never left China? Sir Rutherford thinks it doubtful, but Mr. Harris's journal makes the contrary nearly certain. The other and more important question is, Did Mr. Harris, though using no force himself, utilize the force of others as the lever for his demands? On this question there can be but one answer—that of Sir Rutherford Alcock, that, "while demonstrating the 'peaceful and friendly' policy of his own Government, he was really invoking the effective aid of the belligerent resources and prestige which were the objects of reprobation" (p. 199); and his editor's efforts (Harris, p. 318) to convey the contrary impression cannot avail. Nor is the impression, also conveyed by the editor (pp. vi, 317), that to European historians "his work and his moral influence are alike unknown" and "the historic page has a blank," in accord with the facts; for though the editor limits this charge to "most" historians, Sir Rutherford's treatment of the subject (pp. 33, 193) gives Mr. Harris full credit in perhaps the most popular book ever written on Japan short of Miss Bird's and the 'Mikado's Empire.'

This is detracting nothing from Mr. Harris's talents as a diplomatist. In Oriental intercourse there has been no diplomatic passage of such keen and admirable skill, apart from the labors of Anson Burlingame shortly afterwards, and the negotiations of the Pekin Diplomatic Corps on the audience question in 1891. Mr. Schuyler would surely have taken pleasure in naming Townsend Harris among the greatest American diplomats. The difference between his successful way and Sir Rutherford's unsuccessful way may be seen by comparing the former's methods on p. 246 and elsewhere with the latter's letter at p. 215 of his book.

Nor could a better editor have been found for these journals than the writer whose study of Perry's life and authorship of the 'Mikado's Empire,' together with the fullest acquaintance with Japanese affairs, had pointed him out as the person peculiarly fitted for this editorship. There is one article, however, of Dr. Griffis's creed, often to the front in this volume, but now and ever to be dissented from. This is that the Shogunate Government, the supreme political force and the agent of foreign intercourse until 1868, was a "sham," a "fraud," "built on lies" (pp. 25, 115), and so on. If we could imagine that the next Guelph should be forced to live in retirement at Balmoral, surrounded by Scottish nobles but bereft of all but that pomp and name of sovereignty which is instinctively sacred even to English radicals, the situation would be similar enough to that which Harris found. But this actual supremacy of the Cabinet and Prime Minister holding the Great Seals would be beyond doubt a constitutional and orthodox fact, affirmed by public will and custom; and if a traveller should inquire who had the power to make treaties or appoint a poet laureate, the sham and the lie would consist rather in naming the Guelph at Balmoral than in pointing out the Cabinet at London. The Shogun of Japan had for two centuries possessed constitutional power to make treaties, and he made both the Perry and the Harris treaties. It was only as a means of coercing the minority in the Government in an unprecedented emergency that the Emperor's seal was sought (though in vain) at Kyoto; and this situation appears to have been fully explained to Mr. Harris (pp. 121, 288, 300). It is unjust to apply such unfounded epithets to a Government which for two centuries kept feudal Japan in such a state of peace and plenty ("more like the golden age of simplicity and honesty," "security for person and property, universal frugality and contentment," says Mr. Harris, p. 198) as Europe would have been glad to see in any like period since the Christian era.

A more important matter is the apparent omission of one-half of the Harris material. Mr. Harris arrived in Japan in August, 1856, and left in April, 1862. His journal, here given, goes to February, 1858; and a short chapter fills in from other sources his doings till August, 1858. But of the remaining period (for full three years of which he was Minister Resident), including the time of Elgin's negotiations and the important three years at Yedo of which Alcock has given us a partisan account from the English side—of this period of Mr. Harris's great successes, there is practically nothing in this volume. Even the year of his departure from Japan is not given. If there were a total lack of letters, we ought to know it (yet the State Department has printed several); but it is unfortunate that no explanation is made of this gap covering one-half of the whole six years for which alone Harris is famous. A similar criticism must be made of the mode of dealing with the opinion of Mr. Harris, quoted without a reference, on p. 332, that "the extra-territoriality given to the people of the United States who are in Japan is against my conscience." This was a weighty word in its day, and helped Japan out on a crucial occasion. It occurred in a letter to Mr. E. H. House, now in Japan, and has been widely published. But there is no clue here to its origin or to the context.

WATTS'S DON QUIXOTE.

The Ingenious Gentleman Don Quixote of La Mancha. By Miguel de Cervantes Saavedra. Done into English by Henry Edward Watts. A new edition, with notes, original and selected. London: Adam & Charles Black; New York: Macmillan. 4 vols., 8vo. 1895.

THERE is a mediæval French formula, which was sometimes used by poets as a phrase of promise to their hearers, indicating the best thing to be obtained from their songs—*Joie et soulaz*, joy and solace. Perhaps the promise was not always fulfilled, and yet the phrase remains one of the most adequate statements we have of the true literary purpose. In our realistic and pessimistic days we have largely forgotten it; but we shall return to it, and Time will have accomplished one of his best strokes in consigning to oblivion those self-styled works of literature that do not give us this reward for our pains in reading them.

Of modern books few have succeeded in giving generations of readers this reward so abundantly as has 'The Ingenious Gentleman Don Quixote of La Mancha.' We shall not dwell anew upon its qualities—neither its lesser purpose as a destroyer of idle tales of chivalry, nor its larger human intentions, its humor, its pathos. All the world knows its wit and its eloquence, and has tasted the savor of its *españolismo*, perceiving how this yet manages to blend itself with a certain quintessential flavor of universal human emotion and experience. The man who has read it will not endure an exposition of it in terms of subjective and objective, or other jargon of fashionable criticism; and he who has not read it had best read nothing of ours till he has done so.

It is a pleasure to think that nowhere, except in his own country, has Cervantes found a more steadfast admiration than in England. If a knowledge of Spanish has failed him, as has too often been the case, the Englishman has not refused to put up with translations. When the First Part of 'Don Quixote' had been in print but seven years, and still three years before the author had published his Second Part, Thomas Shelton issued his hasty yet Elizabethan version of what had appeared (1612); and eight years later he had Englished the Second Part, completing the first translation of the book into a foreign tongue. Since Shelton the English public has never lacked translators of 'Don Quixote.' Through the seventeenth and eighteenth and nineteenth centuries they stretch, a long line, most of them mediocre, several of them abominably bad. It were an ungrateful task to resurrect them—Phillips, Motteux, Jarvis, Smollett, and the rest—though a patient public still has their wares offered it by the guileful modern publisher. We, too, have our translators, and better than these. Within fifteen years no less than three new English versions of 'Don Quixote' have appeared, and a fourth has already been announced. The first of the three was by Mr. A. J. Duffield (3 vols., London, 1881); the second was by Mr. John Ormsby, whose death is just announced (4 vols., London, 1885); the third, by Mr. Watts, appeared in an *édition de luxe*

in 1888, and has just been reissued, rearranged and revised, in a cheaper, though still very elegant, form. It is with these three versions, and particularly the last, that we shall here mainly concern ourselves.

Translating 'Don Quixote' is not a task that the literary tyro, eager to soar to fame on another man's Pegasus, or the literary dilettante, *homo unius libri*, can safely undertake. Not even a knowledge of Spanish gained by assiduous reading, or by actual familiarity with contemporary Sancho Panzas, will carry such to their goal. For the first need of the successful translator is style, and style of a kind that the modern man, from the nature of the case, is very unlikely to possess. It would almost seem as if Cervantes had here set a trap for the unwary. There is ever something so easy and apparently negligent about his manner, he gives so little sign of research and care, he seems so ready to say plainly and simply whatever the occasion demands, that the rare and precious quality of his language reveals itself only to him who is able to analyze the effects of words upon the emotions and the imagination, as well as upon the intelligence. This prose, that seems so unemphatic, so straightforward, and so clear, is also buoyant, is noble, is eloquent. This plain statement of fact is something more than statement of fact: it is fact so presented as never to intrude itself as such, and yet always to give a body of flesh and blood to thought. These general reflections are not the abstract formulas by which pure reason sums up the results of its processes; they are rather life and action mirroring themselves for a moment upon the brain. This humor of Sancho Panza, grotesque or coarse though it appear at times, is no more the mere natural untutored wit and wisdom of the gross Manchegan peasant realistically rendered than it is the jocosity of the courtier travestied in rustic garb. Cervantes has not several manners, adapted one to narration, another to eloquent moralizing, a third to vulgar wit, and so forth. On the contrary, he is a supreme artist, with a single style, ever the same in tone, yet capable of conveying the most various matters. Whether his story rise to the noblest meditations or decline to the most ludicrous adventures, he is never untrue to himself; he speaks always with the same air of indefinable courtesy and good breeding, with the same sure and tactful phrase, with the same just blending of fact and reflection. And such a style, we say, is the despair of the modern man. He who attempts to reproduce it finds pitfalls on every side. If he would give its buoyant gayety, he becomes jaunty; if he would retain its freshness and directness, he becomes colloquial, or even slangy; if he would render its fine seriousness, he grows rhetorical; and if he would preserve its well-bred air, he takes refuge in vagueness and generality of phrase. In truth, the art of this prose has been understood but for a brief time among Englishmen. The Elizabethans knew the secret of it, though they did not always practise it; and with them the secret died.

There is, then, but one safe course for the modern translator of 'Don Quixote' to take. He must turn to the single Elizabethan translation of the book we have, and must make that the basis of his work. There will, of course, be much to change. Shelton was far from sound in his Spanish, and he wrought with unpardonable haste; but his manner is right, the true manner of Cervantes in 'Don Quixote.' Subsequent translators have now and then hit upon a happy rendering, and all such must be culled and saved; but Shelton alone has found the style that is the style of the original.

It is to the credit of the first of our recent translators, Mr. Duffield, that he should have seen this, and so initiated the proper treatment of 'Don Quixote' in modern English. Furthermore, long years of study (twenty, he tells us) had enabled him to straighten out many a tangle that had baffled his predecessors. And yet, with all its many excellences, his translation was not a final and adequate one, for it had two qualities that are not qualities of 'Don Quixote'—it was quaint and it was jaunty. Picturesque, accordingly, it constantly was, but it rarely had the simple and noble ease of the style of Cervantes. It abounded, moreover, in curious renderings, justifiable, perhaps, by isolated examples, but improbable in the connection in which they stand. The field, then, was fairly open for another competitor, and none more worthy could have appeared than Mr. Ormsby. Already vouched for by an interesting version of the Poem of the Cid, and equipped with a knowledge of Spanish derived from long wandering in the peninsula itself, he succeeded in giving us a rendering whose fidelity and whose dignity are alike deserving of high praise. Here, too, however, there was a defect—in a sense, the defect of these qualities. Mr. Ormsby's prose is the prose of the modern Englishman, of all of us of the post Dryden time—a prose clear and sound, but also, by reason of its very decorousness, somewhat colorless and vague. And this is not the prose of Cervantes, for that is still the prose of the Renaissance, of the Elizabethans, not yet quite disengaged from poetry, still tinted with the flushings of the imagination.

And now comes Mr. Watts—he, too, with more than twenty years of study of 'Don Quixote' behind him, and with an at times excessive assurance of the defects of his predecessors. His method, furthermore, is the true one. He reverts to Shelton, and uses him wherever he can. When he must abandon him, he strives to keep to his manner, happily pillaging the other Elizabethans for locutions that will serve his turn. In his hands, then, Don Quixote appears once more garbed in the true fashion; and on the whole, beyond a doubt, his version deserves the palm over the other two. Yet not even here, alas! can we praise without but or if. This style, in the main so happy, has at times strange lapses both in taste and in idiom. Rarely does the reader finish a page without regrets over at least one locution, and there are certain recurrent forms that at last give positive torture.

But these may seem trivial complainings; and since in such matters example is better than precept, we shall perhaps do well to let the reader compare for himself the methods of our three translators. We will use for this purpose a passage chosen by Mr. Duffield to illustrate his own predecessors, namely, Don Quixote's brief eulogy of poetry (Part II. chapter 16), though the nature of it is such as to show each scholar in his best rather than in his worst or even average manner. And first Mr. Duffield:

"Poetry, noble sir, to my seeming, is like unto a gentle maiden, young in years, and of extreme beauty, whom to enrich, beautify, and adorn is the care of the many maidens who attend her—which be the other sciences—and she must be served of all, while to all these she must lend her lustre. But this same maiden will brook no handling, nor be haled through the streets, nor be published at the corners of the market-place, nor in the palace woods. She is made of an alchemy of such virtue that he who knoweth how to treat her may change her to purest gold of greatest price. He who enjoyeth her must keep her within due bounds, not allowing her to run into unchaste satires or impious sonnets. She must by no means be vendible, unless for heroical poems, or woeful tragedies, or for pleasant and artful comedies; she must not be left to the touch of jesters, nor of the ignorant vulgar, incapable of knowing and esteeming the treasures which she holds enshrined within her. Nor think, sir, that I mean here by the 'vulgar' merely plebeian and humble people, but rather that all who are ignorant, whether lord or prince, must be reckoned among that crew. Thus, he who with the requisites I have mentioned holds commerce with Poetry, shall become famous, and his name be honored among all the polite nations of the world."

And next Mr. Ormsby:

"Poetry, gentle sir, is, as I take it, like a tender young maiden of supreme beauty, to array, bedeck, and adorn whom is the task of several other maidens, who are all the rest of the sciences; and she must avail herself of the help of all; and all derive their lustre from her. But this maiden will not bear to be handled, nor dragged through the streets, or in the closets of palaces. She is the product of an alchemy of such virtue that he who is able to practise it will turn her into pure gold of inestimable worth. He that possesses her must keep her within bounds, not permitting her to break out in ribald satires or soulless sonnets. She must on no account be offered for sale, unless, indeed, it be in heroic poems, moving tragedies, or sprightly and ingenious comedies. She must not be touched by the buffoons, nor by the ignorant vulgar, incapable of comprehending or appreciating her hidden treasures And do not suppose, señor, that I apply the term vulgar here merely to plebeians and the lower orders; for every one who is ignorant, be he lord or prince, may and should be included among the vulgar. He, then, who shall embrace and cultivate poetry under the conditions I have named, shall become famous, and his name honored throughout all the civilized nations of the earth."

Finally, let us hear Mr. Watts:

"Poetry, gentle sir, I may liken, methinks, to a maiden, tender and of few years, and of all perfect beauty, whom it is the study of many other maidens—to wit, all the other sciences—to enrich, polish, and endow; and she has to be served of all, and all have to exalt her lustre. But this maiden cares not to be handled nor trailed about the streets, nor be made public in the market corners, nor in the purlieus of palaces. She is formed of an alchemy of such virtue that he who knows how to treat her will transmute her into purest gold of inestimable price. He who possesses her must keep her within bounds, not letting her run into base lampoons or impious sonnets; she must be in no wise vendible, unless it be in heroic poems, in doleful tragedies, or in merry and artful comedies. She must not suffer herself to be handled by mountebanks, nor by the ignorant vulgar, incapable of comprehending or of valuing the treasures which in her are enshrined. And think not, sir, that I call the vulgar here only plebeian and humble people, for every one who is ignorant, let him be lord or prince, can and should be included in the category of the vulgar; so he who, with the qualifications I have named, shall take up and treat poetry, shall become famous, and his name be held in esteem among all the polite nations of the world."

Assuredly, the superiority here does not lie with Mr. Watts at every point. In view of the figure, his 'polish' is less good as a rendering of the Spanish *pulir* than Mr. Ormsby's 'bedeck' or Mr. Duffield's 'beautify.' 'Impious' can hardly be the meaning of *desalmados*, applied to sonnets. 'Which in her are enshrined' is a bit of prettiness not to be found in the Spanish; and Mr. Watts would have been wise had he kept to Shelton's version of *no quiere ser manoseada*, she 'will not be handled.' Still, as it seems to us, his style has an imaginative color that Mr. Ormsby's lacks; while at the same time it is mainly free from extravagances like Mr. Duffield's 'haled through the streets' and 'reckoned among that

crew.' And, in general, these excellences characterize his translation as a whole.

We have left ourselves no space for the discussion of Mr. Watts's numerous notes and appendices. His Life of Cervantes, which really forms the fifth volume of this edition, we shall discuss in another article. We can only say here that as a commentator he shows wide but far from systematic or sure learning. He is not at all infallible in his linguistic remarks, and he occasionally commits an astounding blunder, as when (vol. iii., p. 417) he speaks of "the Latin tongue which had been imposed on Gothic Spain by the Romans," and says that "it is probable that Latin never was a spoken language in the Peninsula." His classification of the romances of chivalry is unsound; and his discussion of the difficult Amadis question shows no acquaintance with the results of modern investigators like Braga and Carolina Michaelis de Vasconcellos. Still, a translation of Don Quixote must be judged mainly by literary rather than philological canons; and such a judgment will be in the main not unfavorable to Mr. Watts. Yet we do not think Mr. Santayana need give up his projected version by reason of the unapproachable excellence of this latest adventurer in the field.

The Adventures of Hajji Baba of Ispahan. By James Morier. With an introduction by E. G. Browne. Chicago: Stone & Kimball. —Also, with an introduction by the Hon. George Curzon, M.P., New York: Macmillan.

Mr. E. G. Browne, in his biographical and descriptive introduction to 'Hajji Baba,' expresses a doubt whether any Englishman who has not read Mr. Morier's once famous book can, "in the full meaning of the word, be described as cultivated." If this reproach may be so freely construed as to include Americans, an opportunity for wiping it out immediately is afforded by this fine Chicago edition in two volumes, as well as by the handsome if less pretentious one-volume edition in Macmillan's series. Barbarians, indifferent to the seal of cultivation, are also put in the way of filling several hours with delightful entertainment.

"The art of a story-teller," said the dervish Kessehgou, one of Hajji's associates in crime, "is to make his story interminable, and still to interest his audience, and it is that which marks the man of genius." Accepting the dervish's definition, Mr. Morier was unquestionably a man of genius, for the interest in the adventures of Hajji is so well kept up, with so little appearance of effort, that it seems as if the recital might go on for ever providing distraction for dull moments. During the first quarter of this century, Mr. Morier was an attaché of English missions to Persia, and for six years had charge of the English embassy in Teheran. In these years he published some volumes of travel in the East which he felt to be so defective in spirit and vividness that he resolved "to collect so many facts and anecdotes of actual life as would illustrate the different stations and ranks of a Mussulman community, and then to work them into a connected narrative." It is interesting to observe one who was first a man of action, not of letters, falling instinctively upon the method in fiction best fitted to reproduce and explain life, and achieving such good results long before that method had been given a name and made to serve as a battle-cry. This is not to say that he originated his method, for he acknowledges a suggestion from 'Gil Blas,' and Hajji's personal place in Western fiction is in the picaresque division, in the ranks of the astute and irreclaimable rogues.

Hajji tells the tale in the first person, and his manner is purely Oriental—grave, deliberate, ironical, approximating most closely to story-telling in the living voice, and farthest from that technically informed construction which aims at literary and dramatic effect. The Persian point of view is so consistently maintained that the foreign observer is revealed only occasionally by severity of satire, while the Englishman appears aggressively but once, when the Shah is made to remark: "A Russian puts on a hat, a tight coat, and tight breeches, shaves his beard, and then calls himself a European. You might just as well tie the wings of a goose to your back and call yourself an angel."

The success of Mr. Morier's assumption of Persian character may be largely attributed to the fact that he was not a professional *littérateur*, and thus escaped betrayal by European traditions, conventions, theories, and prepossessions. Hajji's revelations are not hampered by any suspicion of responsibility to a Christian conscience. He knows there are such abstract qualities as sincerity and truthfulness, but they appear to him ludicrous and silly, positive indications of madness when displayed in practice, as by "a certain tribe of infidels called Ingliz, the most unaccountable people on earth, who live in an island and make penknives." Lies, treachery, hypocrisy, cruelty to inferiors, and cringing before the mighty, have for him no immoral or base significance. These are everybody's weapons, and to use them perfectly is to be an object for public worship and private envy and despair. Therefore, when Hajji comes in collision with a more subtle deceiver than himself, and is completely overreached, he wastes no time in reflection on the futility of evil courses, but scornfully asks his victorious antagonist whose dog he is, declares fervently that God is great and Fate implacable, and directs his energies elsewhere, feeling chiefly that he has learned a thing or two from a more accomplished player in the game of life. Life, indeed, presents no other aspect to him than that of a game in which each man's wit plays for his fortune, and his spontaneous, impregnable cynicism makes Rochefoucauld appear a superficial dilettante, if not an ingenuous child of nature. From the day he leaves the house of his father, Kerbelai Hassan, one of the most celebrated barbers of Ispahan, until the day of his return to that city, a splendid personage in the confidence of the Grand Vizier, he is a magnificent example of devotion to self-interest.

His vicissitudes are extreme, and his adventures of every variety, comic, tragic, melodramatic, and astonishing. He is by turns merchant and pilgrim; a prisoner with Turcomans, and an assistant to the court physician; a water-carrier and street-vender; a dervish and companion of dervishes; a soldier and a saint. He bastinadoes as an official and is bastinadoed as a fakir. He invades a harem and leads an expedition against invading Russians. He journeys to Constantinople, a ragged seller of pipe-sticks, and, pretending to be a rich merchant of Bagdad, marries the widow of an Emir. But his fraud is discovered, and he is cast out from luxury, pursued by the imprecations of enraged relations-in-law. It is after this unhappy episode, when, far from home, depressed in spirits, and very hungry, he appeals for justice to his country's ambassador, that his great talents are recognized, and he becomes important in international affairs. All the scenes through which he passes, and his accompanying procession of strange and picturesque figures, are described with extraordinary minuteness and clearness. The description is not limited to externals, but involves a disclosure of dominant characteristics, motives, and passions. Seemingly innocent of any desire to inform, Hajji depicts his countrymen in their homes, streets, and bazaars, serving at court and dwelling in tents, fighting, trading, praying, marrying, burying, and bribing—the last named occupation being a recognized industry, very important and highly considered.

To the accuracy of these descriptions travellers, diplomatists, and scholars have for half a century given willing testimony, and the traditional advice to those who would see Persia aright still is: Take an English saddle and a copy of 'Hajji Baba.' For those who would spare themselves discomfort and expense, an easy chair and 'Hajji Baba' will do as well, if not better, for they can contemplate the amusing rascal undisturbed by the suspicion that he is lying in wait for them at every turn, and that neither foresight nor preparation can avail them for salvation from his incalculable duplicity.

The Comedies of William Shakespeare. With many Drawings by Edwin A. Abbey. Harper & Brothers. 1896.

It was inevitable that Mr. Abbey should sooner or later undertake the illustration of Shakspere. His production has been so enormous that the books specially fitted for his style of illustration were fast being used up, and here was the greatest of them all waiting at his hand. And yet we imagine that it was not without trepidation that he began the task, as it certainly was not without fear that the announcement of it was received. Could even Mr. Abbey do justice to Shakspere, or could he even do justice to himself in so difficult an enterprise? The work is at last completed, and the drawings, most of which have appeared from time to time in *Harper's Magazine*, are now gathered, with the text of the plays, into four noble volumes.

That the illustrations are beautiful in themselves it is unnecessary to say. Mr. Abbey has lost none of his skill with the pen or his hardly lesser skill with the brush, and he has never done anything technically better than these 131 drawings. All of his charm of touch and grace of style are here, and all of his feeling for beauty and knowledge of form. His backgrounds are admirably invented, his costumes are carefully studied and delightfully rendered, his women are as lovely and as graceful as ever and his men as well drawn. Taken as merely fine examples of the modern art of book illustration, nothing could be better, and perhaps nothing by any one else could be so good. But do they adequately illustrate Shakspere? There's the rub. In many cases they undoubtedly do so as nearly as might be expected of human powers. In the forest of Arden Mr. Abbey is at home, and those which may be called the pastoral comedies of Shakspere he is admirably fitted to interpret. *Rosalind* and *Viola* and *Perdita* are exquisite creations, and *Touchstone* and *Sir Andrew* and *Sir Toby* are thoroughly delightful. With these people he is on as intimate a footing as with Sally in our Alley or Miss Hardcastle, and we are delighted to have his aid in furthering our own acquaintance with them. With *Isabella* and *Beatrice* we feel that his intercourse has been something less friendly, while *Titania* and *Ariel* he can know only to bow to. As for the person he introduces to us

under the name of *Jack Falstaff*, we take him for an arrant impostor. The real *Jack* was not fat only as to the waist, nor did he have this weazened, baked-apple face. He had a leg of goodly girth, and a jolly, noble countenance adorned with a "great peard," and was altogether another man.

In other words, the range of Shakspere's imagination is too great for Mr. Abbey's, and he cannot follow everywhere, even in the comedies alone. There is a passion too deep, and a humor too broad, and a fancy too high, for him. Mr. Abbey is but a man, and but one man, and we may not fairly expect of him the performance of a task that were too hard for an army of illustrators. What he has produced is the best set of illustrations to the comedies of Shakspere yet seen, and a gallery of drawings the beauty and merit of which it would be impossible for another than himself to equal; and this is enough in all conscience.

Considerations on Painting: Lectures given in the year 1893 at the Metropolitan Museum of New York. By John La Farge. Macmillan & Co. 1895.

THIS is one of those all too rare books on art written by an artist of standing who knows whereof he speaks, and who is also possessed of a fascinating literary style which lends a charm even to the discussion of dry and technical matters. Of Mr. La Farge's position as a creative artist in paint it is unnecessary to speak, and those who have read his charming Letters from Japan which were published in the *Century Magazine* will be apt to think him almost as admirable and subtle an artist in words. That such a man should be induced to lecture on painting and to publish his lectures in book form, was every way desirable; yet many who went to be instructed from his lips must have been puzzled and disappointed, as will be many who now read him in print, to find how little that is definite and peremptory he has to tell them. Surely, a practitioner of Mr. La Farge's eminence must have strong opinions and strong feelings about the art he practises—must think this right and that wrong, this good and the other bad; but such feelings and opinions, if he has them, he has here carefully suppressed, and there is not a peep of them between the covers of his volume. Dogmatism he abhors, and those who want an authoritative settling of vexed questions and a body of doctrine ready prepared for their swallowing, may go elsewhere with their money. Rather the tone of the book is one of gentle scepticism and of humorous doubt of the validity of any or all doctrine, or of there being any possible final settlement of any question whatever. "I might, perhaps, have shown you more distinctly," he says, "that a white thing is white, and that a black thing is black; nor do I object to doing so in a proper place and time, for, of all things, what we begin to doubt of is the well known, and we can never be too sure that twice one is two—only, what is one and what is two?"

The "place and time" have undoubtedly much to do with this inconclusiveness. Mr. La Farge was lecturing in a museum and to art students, and he may well have felt that the most important lesson of a museum is the lesson of catholicity, and that the art student, generally a very positive person, needs to be taught nothing so much as that there are many kinds of good art, and that all methods are good which express the mind and the vision of a sincere artist. These, too, are the lessons that the lecturer's own habit of thought peculiarly fitted him to teach. So he has produced a series of lectures that can have had only a broadening influence upon the minds of those who heard them; lectures full of suggestion and of thought, full, too, of wit and of delightful anecdote and of charming expression, but of which the final end and result is somewhat elusive. One must often read between the lines and seize upon fleeting hints and half-suggested meanings to perceive that, even with Mr. La Farge, black is after all black, if not so black as it is painted, and that twice one is still two, in spite of unresolved doubts as to the essential nature of one and of two.

Marmontel's Moral Tales. Selected by George Saintsbury. London: George Allen; New York: Macmillan. 1895.

MR. SAINTSBURY has perhaps done wisely, not in editing a translation of a Selection of Marmontel's 'Contes Moraux,' but, if he must edit them, in choosing a "bookseller's version" made a hundred years ago, rather than a bookseller's version of to-day. But even a hundred years ago they should have known better than to translate 'Contes Moraux' by "Moral Tales"—a title which would be a little ludicrous if given to the contents of the original volumes. There is nothing *im*moral in them, but they are as little moral as Marmontel's 'Mémoires' or as Marmontel himself. Mr. Saintsbury has weeded out all but the strictly proper, even excluding the one ("Heureusement") which Sainte-Beuve especially commends; and one would have thought this weeding would have put him on his guard about the title, and would have suggested to him that the true rendering of 'Contes Moraux' would rather be something akin to 'Sketches of Society,' since the French *moral* is scarcely ever translatable by the English 'moral.' The two words are among those pseudo-synonyms of the two languages that are wholly different in meaning—words between which it is most important always to feel the distinction. It is therefore droll to find Mr. Saintsbury saying that Miss Edgeworth took the title of *her* 'Moral Tales' from Marmontel. She (who knew French *intelligently*) would have been aware that, if there was any borrowing, it was rather in the title of her other volumes, 'Tales of Fashionable Life.' Marmontel's stories are tales of fashionable life—the fashionable life of his own day and also of the days of Alcibiades and Solyman, of the Samnites and the Sylphs. He says himself (in the interesting original preface, not given by Mr. Saintsbury): "I have endeavored throughout to paint either social conditions (*les mœurs de la société*) or unsophisticated emotions (*les sentiments de la nature*), and this it is which leads me to give this collection the title of '*Contes Moraux.*'"

The charm of these little stories, and a charm that does not wholly vanish in a translation, is in the vivacity with which they depict the mutual relations of French men and women in the eighteenth century. The frequent dialogues, though occasionally extraordinarily dull (as dull even as the plots), are often extraordinarily lively, and Marmontel justly prided himself on being the first modern author to do away with the "he said" and "she said" of written dialogue, at the same time rendering it impossible to mistake the speaker. Even when fairies become interlocutors, they are full of wit; and a fairy was needed (for neither man nor woman could have dared) to utter the famous saying, that bears repetition yesterday, to-day, and to-morrow, "Rien ne ressemble tant aux hommes que les femmes."

Of the volume before us there is no occasion to say more than that it is prettily illustrated. "Chris. Hammond" must be short for Christina, not Christopher, Hammond. The little drawings have the grace and delicacy of a woman's pencil, and one tries to forget that the originals were illustrated by Moreau *jeune*. A translation a hundred years old is not worth criticising, and Mr. Saintsbury's editing still less so; so we seem to have only commendation to bestow. Yet there is a confusing misprint on p. 378 of "days" for *months*.

Margaret and her Friends; or, Ten Conversations with Margaret Fuller upon the Mythology of the Greeks and its Expression in Art. Reported by Caroline Healey Dall. Boston: Roberts Bros. 1895.

THESE ten conversations were held by Margaret Fuller at the house of the Rev. George Ripley in Boston in 1841. The other end of the conversation was sustained by Emerson, Alcott, Elizabeth Peabody, the Ripleys, and others of the coterie—twenty-odd in all; and Caroline Healey, considerably younger than the others, was the chiel that took the notes. The book will not edify the classical student. Even after allowance is made for the growth since that day of philological science, Miss Fuller's inspiration, if we may rely on the present document, was remarkably untrammelled by knowledge. Her notions of Greek mythology, as here reported, were based on local collections of casts, gems, etc., interpreted chiefly by the light of Ovid's poems! She apparently held that the myths originated in the age of Plato (see page 29); she thought "the 'Odyssey' was written when Homer was young and romantic," and she used interchangeably the Greek and Latin names of the gods.

With such data as these, Margaret and her friends sat themselves cheerfully down to "spiritualize" the myths. A familiar event is thus described: "The Indomitable Will had dethroned Time, and, acting with Productive Energy, . . . had driven back the sensual passions to the bowels of the earth, while it produced Perfect Wisdom, Genius, Beauty, and Love; results which were more excellent if not more powerful than their Cause." Frank Shaw felt a not ungrounded misgiving as to how these personifications "suggested themselves in that barbarous age," and "it was acknowledged, as a matter of course, that only a few preserved any consciousness of the original significance of the mythology." In fact, the book serves as a mile-stone to show how the penchant for facts has advanced in the last half-century. There is a very wide conviction to day, among women as well as men, that, before speaking *ex cathedra* on any subject, it is better to burden one's self with the facts. The magazines are inclined to think that, by her pursuit of information, the college woman has choked the muse; at all events, she and all of us hold with him who sings that "parting with knowledge we have not got is the hardest parting of all."

It is a far cry from Margaret Fuller to Jane Harrison. But the student of psychology will be interested in the effect of a little acquaintance with ancient art on a fine and impressionable mind, and to note how nearly Miss Fuller possessed the gifts that Rousseau bestowed on his ideal woman: "du goût sans étude, des talents sans art, du jugement sans connoissances."

BOOKS OF THE WEEK.

Banks, Rev. L. A. The Christ Dream. Hunt & Eaton. $1.20.
Biddle, J. A. Social Regeneration. Hartford: Student Publishing Co. $1.50.
Bird, Robert. Joseph, the Dreamer. Scribners. $1.50.
Blaney, H. R. Old Boston. Illustrated. Boston: Lee & Shepard. $2.50.

BIOLOGY.

Williams' Geological Biology.

An Introduction to the geological history of organisms. By Prof. HENRY S. WILLIAMS of Yale College. 8vo, 395 pp., $2.80 *net.*

This book endeavors to make intelligible and interesting to ordinary college students the problems of paleontology, and to open the way for a scientific study of the history of organisms. Speculative controversies in the biological camp have already made it clear that the last word upon organic evolution must come from the geological record itself. The present volume is written to show how to interpret this record. The strata are discussed as elements of a time-scale; and attention is given to their mode of formation, and to both their reliability and their degree of inadequacy as measures of geological time. The main part of the book is, however, devoted to organisms, particularly animals. In their analysis, classification, and description those characteristics are sought which are expressive of the relation of the individual to the outside world—to its fellows, its environments, and its ancestors, rather than those which have relation to the internal adjustment of its various functions for their own sake. A few typical series are selected for special elaboration. In the interest of the geologist, the kinds of characters expressed by fossils, their relative importance in time-relations, and kindred subjects are presented.

Sedgewick & Wilson's General Biology.

A new edition from new plates, entirely rewritten and now making a complete book in itself and including chapters on the lower plant forms, introductory to bacteriology. Fully illustrated. 231 pp., 8vo, $1.75 *net.*

GERMAN.

Scheffel's Ekkehard. An unabridged edition, with introduction and notes, by Professor W. H. CARRUTH of the University of Kansas. With map and five illustrations from photographs and rare prints. xxviii.+493 pp. 16mo. $1.25 *net.*

Schoenfeld's German Historical Prose. Edited by Dr. HERMANN SCHOENFELD of the Columbian University. CONTENTS—LINDNER, Abriss der deutschen Historiographie—VON GIESEBRECHT, Deutschland unter den Ottonen, etc.—JANSSEN, Deutschlands auswärtige Lage und Maximilian I.—VON RANKE, Reichstag zu Augsburg (1530).—DROYSEN, Friederich der Grosse, etc.—VON TREITSCHKE, Preussens Erhebung.—VON SYBEL, Preussen nach Osterreichs Niederlage (1866). 213 pp. 12mo. 80c. *net.*

Wichert's an der Majorsecke. Curtain-raiser (*men 2, women 2*). Edited by Prof. CHAS. HARRIS of Adelbert. 41 pp. 16mo. 20c. *net.*

Zschokke's Neujahrsnacht: der Zerbrochene Krug. Edited by Dr. A. B. FAUST of Johns Hopkins. Two easy humorous stories for rapid reading, suitable as a basis for conversational drill. 110 pp. 16mo. 25c. *net.*

German and French Poems. (Required by New York Regents for Memorizing.) Thirty of the best in each language with the music for voice and piano to eight of the German Poems. 92 pp. 20c. *net.*

Thomas's German Grammar. Conspicuous for human and interesting exercises, scientific treatment, and full material for conversational drill. 12mo. 411 pp. $1.12 *net.*

Harris's German Reader. Very easy selections in prose and verse, that are both interesting and continuous. It is designed that the pupils' lessons shall increase in length rather than in difficulty. 220 pp. (text)+108 pp. (vocabulary). 12mo. $1.00 *net.*

Lessing's Nathan der Weise. Edited by Prof. H. C. G. BRANDT of Hamilton College. *An entirely new edition from new plates.* xiv+227 pp. 16mo. 60c. *net.*

Postage 10 per cent. additional. Descriptive Educational Catalogue or Miscellaneous List free.

Puerto de Santa Maria.

FOSTER ON THE CONSTITUTION

Commentaries, Historical and Juridical, on the Constitution of the United States. By Roger Foster.

Vol. I. nearly ready. For circulars, address THE BOSTON BOOK CO., 15½ Beacon St., Boston, Mass.

The Nation.

NEW YORK, THURSDAY, DECEMBER 12, 1895.

The Week.

THE President's choice of a Supreme Court Judge is an admirable one. Judge Peckham is well qualified by character, ability, and temper for service on the bench, and he has now the added advantage of many years' experience as a judge, first of the Supreme Court of this State and later of the Court of Appeals, in which he now sits. His training has thus been of the very best, and he will enter our highest tribunal with every promise of rendering effective service for a good many years. The only criticism that can be passed upon the selection is a tribute to Judge Peckham, that his promotion to the federal bench weakens the highest court of his own State, and leaves a vacancy that it will be hard to fill.

We are sorry to record another "insult" on the part of Great Britain to this our nation, viz., the slowness of Lord Salisbury in answering the President's "definite inquiry." Lord Salisbury well knew that Congress met on the first Monday of December, and that the President had to compose his message during the previous fortnight, and that numerous Congressmen were waiting to offer warlike resolutions based on the British despatch. Were the British Premier really friendly to us, he would have seen to it that his answer got here in time to be of use in stirring up hostile feeling to his own grasping country. Yet he let Secretary Olney's communication lie unnoticed for nearly six months. What this artful peer will probably say in excuse when he is brought to book, is, that during this period he has had pressing on him affairs of vast moment in Turkey and the far East, requiring daily, nay hourly, attention, and involving tremendous responsibilities; that this he has considered real business, while, as the Venezuela trouble has now lasted for forty or fifty years, he thought that six months' more delay in settling it would make no difference, particularly as no action on it was contemplated by any one; and that, as its main use was as a topic for American Jingoes, they would not be sorry to be able to thunder about it for half a year longer. He will doubtless add, that President Cleveland could very well simply say in his message, after the manner of European diplomatists, that "Lord Salisbury had not yet been heard from." But there are few among us, except the hired Cuckoos of Great Britain, who will be deceived by these crafty excuses. That he meant by his delay to insult us, and to withhold from our legislators material for their speeches to which they were entitled, and which, under the Monroe Doctrine, he was bound to furnish, only the Cuckoos will deny. This ignoring of the exigencies of our politics, we may be sure, would never be dreamed of had we a navy commensurate with our population and resources. British sympathizers will do well not to trespass too far on the patience of our people. Mr. Cleveland did well, we think, to show his contempt for his Lordship's petty malignity by going off to shoot ducks before the despatch arrived. There is something about ducks which makes them peculiarly appropriate instruments of scorn.

There was an almost unbroken series of civil wars and revolutions in Venezuela from 1846 to 1870. In 1870 the country became peaceful for a while under Don Guzman Blanco. There were several small rebellions between 1870 and 1888. In this year Crespo, the present President, was engaged in the fighting. But the most furious and largest revolution came off in 1891, over an amendment to the Constitution. It began April 6, and continued with many pitched battles till October, with the usual accompaniments of wholesale imprisonments, massacres, executions, and confiscations. Crespo then got into power, and is there now, but the news of Saturday seems to indicate that another rising against him has begun. Now, this has a good deal of bearing, doubtless, on Lord Salisbury's unwillingness to arbitrate about the settled portion of the disputed territory. It has on it 40,000 British subjects, and the settlers enjoy under British rule permanent peace, security for life and property, and good courts and British criminal law, and appeals in civil cases to the judicial committee of the Privy Council. What the Venezuelans propose—we are not now discussing the right or wrong of the matter—is that all these people should become Venezuelans, and fight for their lives, and be overrun by revolutionary armies about once in three years. They naturally would bitterly protest, if there were any probability of such a thing, and in all likelihood abandon their possessions and move over the line. They have settled where they are, in full confidence that they were on British soil. If Lord Salisbury were to hand them over to Venezuela, he would do what we believe no civilized state has ever done—transfer a portion of its population, against their will, to the rule of a semi-barbarous and unsettled government. No men can understand the feelings of these people better than the Jingoes themselves. There is not one of them who would not treat a proposal that he should become a "Dago" as an insult. We went to war with Mexico and took Texas from her for the avowed purpose of saving the American portion of the population from Dagoism If Lord Salisbury followed our example, he would fight for the settled portion of the disputed territory, and say the Venezuelans forced it on him. Of course, all these considerations will seem childishness to the Jingoes, if not insulting to this our nation.

The *Économiste Français*, after publishing a table showing that the exportations of the United States to Great Britain in 1894-5 amounted to $387,170,000, while their exportations to all the rest of the world put together amounted only to about $400,000,000, asks "how it is to explain the persistence with which Americans give themselves the pleasure of teasing their principal customer, notably at this moment about Venezuela." "For a long while," it says, "there has existed between England on the subject of British Guiana and Venezuela a dispute about territory called Pomaron, just as there exists another of the same sort between Brazil and France, and it would be easy to raise many others like it between the various American nations." The explanation is not very far to seek. The rational, sober-minded people remain silent on foreign questions to avoid abuse by the newspapers and being suspected of "un-Americanism," and they let the half crazy, the grossly ignorant, and the scheming, rave unchecked, and hurl defiance not only at England, but the whole human race outside this continent. It would be difficult to find a noisy Jingo who knows anything about foreign commerce or its importance.

The Alaskan boundary line is to be settled shortly by British and American commissioners in Washington, after the surveyors have made their report on the verbal description in the Russian treaty of cession. If they are unable to agree, the matter is to be referred to an international commission of arbitration. But, pending the decision, the Canadians cunningly determined to insult our nation by establishing a mail route on our territory. They have "organized" a district on their side of the line, at the request of the local traders, put a police station on it, and set up a custom-house, which is all very well. But they have also made a contract with somebody to carry the mails from Juneau in this district to Yukon, on our side of the line, and, as we hold, in the disputed territory. Their mail line will thus run over forty miles of our soil. But better no mail and no letters, every good American will say, than a foreign mail of this description. The contract has undoubtedly a "string to it." It means a sort of preemption of the territory in question. Our mail-carriers, the Canadians will say, have been on this route for a year. Do you

mean to say we would run mails on foreign territory? No; the country through which these mails run unmolested is ours. The answer to this from a people 70,000,000 strong is obvious. We must fight; we must stop these mails; we must avenge this insult. We must call home our President from his duck-shooting, and make him attend to this more serious business; trifling as he may think it, Congress is in no mood for delay. Every letter delivered at Juneau deepens the man's infamy—if, indeed, this be possible.

Mr. L. E. Chittenden, in a letter to the *Tribune*, admits that "the President is partly right when he attributes the [financial] difficulty to the outstanding $356,000,000 of legal-tender notes redeemable in gold." But Mr. Cleveland, it seems, "forgets to mention that as early as April, 1866, his own party, aided by a few greenbackers and weak Republicans, tied the hands of Secretary McCulloch so that he could retire only $4,000,000 per month, and in February, 1868, wholly suspended his power of redemption or retirement." What Mr. Cleveland "forgets" is certainly cast into the shade by the achievements in the same direction of Mr. Chittenden and the *Tribune*. The amendment which "tied the hands of Secretary McCulloch" was insisted on by a House of Representatives chosen when the Republicans swept the country by a majority of 406,000. It was submitted by a ways and means committee made up of the select financial authorities of the House. It was adopted without dispute in the Senate, the only serious opposition coming from a Senator of high standing in the Republican party, who objected, not to the restrictions of the amendment—he himself had proposed a similar restriction—but to any law giving the Secretary power to retire the greenbacks. "There is no necessity," Mr. Sherman remarked, in April, 1866, "for this bill for funding the debt. . . . In my judgment, the amount of legal tenders now outstanding is not too much for the present condition of the country. . . . I do not wish now to cripple the industry of the country by adopting the policy of the Secretary of the Treasury, by reducing the currency."

Senator Chandler must have had a keen eye for a coincidence in introducing a bill for international bimetallism just one day after the German Chancellor had opened the Reichstag without a syllable about the subject. The omission must appear ominous to those who were so sure last March that Germany was coming to the help of silver against the mighty. Even the Boston bimetallists, even President Andrews, must now see that international bimetallism has gone oblivion-wards during the past eight months at an accelerated rate of speed. The Balfour bubble burst last September, and now comes Hohenlohe with a long account of Germany's evils and dangers and their suitable remedies, but not a word about bimetallism. How high and dry that Boston bimetallic circular of February, '94, has been left by the stream of time, and how glad most of its signers would be now to get their names off it!

Speaker Reed has announced that this is to be an economical Congress. There is to be no "cheese-paring," after the vicious Democratic method, but rational and well-considered economy. This will be among Mr. Reed's toughest jobs, if he seriously undertakes it. Already the public-building bills are flowing in like a tidal wave, and propositions for coast-defences, costing $75,000,000, are appearing in either house. The truth is, nothing is so unpopular in Congress, or, apparently, in the country, as economy in public expenditures. This is especially the case when economy means retrenchment. Secretary Morton is finding this out. He is about the only administrative officer who took the situation seriously, and, hearing that the Government's revenue was running low, resolutely set about cutting down expenses. In his own department he has saved many thousands of dollars, particularly in the matter of suppressing the seed-distributing nuisance. But already angry Congressmen are inquiring what he means by such impudence, and are proposing to have him investigated or impeached. So hard is it to distinguish between wicked "cheese-paring" and virtuous economy.

Among the financial nostrums of the day none has more adherents than the policy of requiring customs duties to be paid in gold. This requirement, it is said, would furnish all the gold the Government needs for the redemption of greenbacks and for every other purpose. It has a very plausible look, but what does it imply? It implies, first, a premium on gold, since it discriminates against all other forms of money for this particular purpose, and fixes in the public mind a preference for gold. It involves also a repudiation of one of the promises made when the Government began to issue silver dollars, namely, that they should be legal tender for all debts and dues, public and private, "except where otherwise expressly stipulated in the contract." It involves also repudiation of the promise that silver certificates and Treasury notes of 1890 "shall be receivable for customs, taxes, and all public dues." Moreover, no advantage to the Treasury would be gained by it except by ignoring (that is, repudiating) the "parity clause" of the act of July 14, 1890, commonly called the Sherman act; for if gold dollars and silver dollars are to be kept at par with each other, nothing would be gained by requiring customs duties to be paid in gold exclusively. It may be assumed, without going into the subject further, that these several promises are not going to be repudiated. The whole financial strength of the Government has been, and will continue to be, directed to the end of keeping all kinds of money at par with gold. Nothing less than this will save us from a panic much worse than that of 1893. The opinion prevails on the other side of the water that we are destined to see a premium on gold before we reach the end of our financial misbehavior. This is an error, although a very natural one. The powers of the Secretary of the Treasury under the coin-purchase act are practically unlimited. Under this act he could sell bonds at 50 cents on the dollar if necessary, and we have had the repeated assurance that all lawful means to preserve the public credit will be employed.

The *Tribune* is naturally gratified at having won over Stove-Polish Morse to its tariff views. Speaker Reed may remain obdurate for a time, but in the end he will have to bow before the combination of the Congressman and the newspaper most laughed at. The *Tribune*-Morse bill is a little one, of only "twelve lines," not meant as "a permanent measure," but "obviously intended as a bridge," and avoiding the "mass of details" so awkward to statesmen parting the protectionist spoil. As it simply revives the more flagrant schedules of the McKinley bill, it is clear that there can be no question at all of bothersome details. Revived schedule G covers only 81 sections and ten octavo pages; schedule J, 18 sections and four pages; schedule K, 33 sections and twelve pages, and so on. These are not details, they are only a "little bill of twelve lines," statesmanship reduced to its lowest and simplest terms. We say simplest advisedly, for if there is anybody but the *Tribune* and Stove-Polish Morse so simple as to suppose such a bill could be passed without months of ruinous agitation and intrigue and corruption, he has not yet been heard of. The *Tribune* itself does not really suppose it, but only takes this way of venting its spite on Speaker Reed.

Fifty years ago this month Simon Cameron took his seat in the United States Senate. On Monday his son and successor in the Senate, Don Cameron, announced his intention to retire at the end of his present term. The father served in all eighteen years in the body, and the son has now sat there for eighteen years. Each held for a brief period the office of Secretary of War, and the father was also for a brief period Minister to Russia. In office or out, Simon Cameron was the chief figure in Pennsylvania politics for a long period before he turned over the senatorship to his son in 1877, and the machine which the father had built up during this long period served to keep his weaker successor the practical dictator of the com-

monwealth for many years afterwards. The history of American politics records no other case where father and son have wielded such despotic power over two generations of voters, nor is there any parallel for such disgraceful abuse of power as under this long Cameron dynasty. Thomas F. Bayard entered the United States Senate in 1869 as a representative of Delaware on the same day that his father retired after having been elected for three terms, and the grandfather had served eight years in the same body, after several years in the House, early in the century. Each of the three had been a potent force in the politics of the commonwealth throughout his life, and the Bayard family has thus been longer conspicuous in Delaware than the Cameron in Pennsylvania; but in the smaller State each son came to his place by virtue of ability rather than birth, and no Bayard ever rendered the name of his house a synonym for political tyranny and corruption.

In New York city, Croker has for years received the "campaign funds" and the blackmail money for Tammany, and has never made any report as to the amount he got or what he did with it. In Chicago such funds have been turned over to the Democratic county committee, which also has made no report. At last a protest has been raised against this way of doing business. M. C. McDonald, a prominent member of the party, at the meeting of the county committee last week, charged that during the past two years there had been turned into the party treasury $300,000 from assessments levied on city employees, $100,000 from assessments on disreputable houses, $300,000 from forced contributions made by gamblers, and $50,000 from prominent Democratic candidates for office; that most of this money was not devoted to party purposes, but was used for trips to pleasure resorts in this country, European tours, and the building of expensive houses by the men who handled it; and that even the funds expressly contributed by honest Democrats for honest purposes were not generally so used, and that, when they were so disposed of, no account of expenditures was ever made. Startling as these charges are—or would be if such things had not long been suspected—McDonald's charges are not denied, and their truth is universally accepted. The story affords an interesting glimpse into the profits of the occupation of "politician" in a large city.

South Carolina has a new constitution, the convention which has been in session at Columbia for a number of weeks having adjourned on Wednesday week. Like the convention of five years ago in Mississippi, this body assumed the power to declare the instrument which it had framed operative without ratification by the people. There are precedents for this course in the early history of the country, the first constitution of New York, among others, having gone into effect without submission to the voters. At present, however, there is not a State in the North where such a thing would be thought of, because the people would not endure what would now be considered a usurpation of power by their servants. The feeling would undoubtedly be the same among the whites of the South if new constitutions were summarily declared in operation which took the suffrage from a large proportion of the white voters. As the new qualifications, however, are not designed or expected to disfranchise whites, but only blacks, this method of accomplishing the desired result provokes but little protest from among those who have the means of affecting public opinion. Apparently most of the whites are satisfied to live under a constitution which they have never endorsed, but which accomplishes the main purpose for which a new constitution was desired.

The whites of South Carolina, like their brethren in Mississippi five years ago, think that they have practically eliminated the black vote. Undoubtedly they have adopted measures that will keep that vote small for some time; but nobody who has watched the surprising developments as to negro suffrage during the past quarter of a century, will feel any assurance that this result is going to be permanent. Twenty-five years ago another set of politicians figured out conclusively on paper that the party supported by the negroes would control such States as South Carolina and Mississippi with ease, because a large majority of the adult males were negroes, and the negroes had been given the right to vote. But within ten years the white minority had secured control of both of these States, although theoretically the negroes were allowed to vote. Qualifications for the suffrage have now been adopted, in each State, which theoretically disfranchise most of the blacks, but it would not be surprising if the practical result should be such a stimulation of education that within ten years almost every colored man, when he became old enough to vote, would know enough to pass the educational test. It is a fact of no little significance that the number of negroes who got their names on the registration list in Mississippi rose from 9,036 in 1892 to 16,965 in 1895, thus almost doubling within three years. Nobody can tell in advance how any constitution is going to work.

The *Investors' Review* hits off Mr. Chamberlain rather neatly when it remarks that people who charge him with political inconsistency do not take sufficient account of the commercial form of his intellect. It says: "We never read any of Mr. Chamberlain's speeches without thinking what a splendid commercial traveller he must have been. The last article he takes in hand is always the finest he ever had to vend, and now he vends 'imperialism' better than any." Old-age pensions and the other social reforms which were the burden of his speeches six months ago, are now laid aside like so many unsalable goods, and the "federation" of the empire dangled before the bulging eyes of the people who gather before his counter. The description of the goods, moreover, is always able, if a little shaky as to facts, and the air of sincerity about the whole performance is fine. But what need Mr. Chamberlain care for such nagging criticisms when the despatches tell of his dining twice in one week at Windsor, and of the old Birmingham Radical and his family now being in high favor at court? Political consistency has no such charming results to point to.

In presence of the complications in the Orient, the annexation of Madagascar by France has almost been lost sight of. On November 27 the new Minister of Foreign Affairs, M. Berthelot, read a statement in the Chamber affirming that Madagascar was not simply under a French protectorate, but was henceforth a French possession. Ex-Premier Ribot naturally wanted to know what had become of his treaty with the Queen; had that been repudiated? Not at all, rejoined Berthelot, it had only been "modified." Madagascar was a French possession, that was the main thing; and the Chamber, madly applauding, approved by a vote of 426 to 56. Details of administration of this new French territory were left conveniently vague, though it was said that all contracts and engagements made by the Hova Government would be sacredly respected. As the territory thus quietly, not to say cynically, taken over is considerably greater in area than all France, it seems as if a well-considered plan of government were desirable before annexation: as if the blunder of trying the prefecture system in Tonkin should be guarded against; as if the question of necessary ships and army, and their cost, should be carefully weighed, and the general colonial policy of France soberly discussed. But that is not the way territorial acquisitions are made nowadays. Make haste to grab your nettle, and fix up your hand the best way you can afterwards. Doubtless one motive of the French colonial madness, attaining its very pitch in this Madagascar business, is to show the Germans that other people can annex and colonize and expand as well as they. But the dearest foe of France, supposing Germany to be such, could ask for no harder blow to French power than such dissipation of military strength, such new burdens of taxation, such new opportunities for political intrigue and corruption, as are certain to result from these wild colonial ventures of France.

THE PRESIDENT ON VENEZUELA.

THE President's observations, in his message, on the Venezuela matter were of a nature to satisfy neither our own Jingoes nor the British. He leaves the main points of the controversy in obscurity. He "protests against the enlargement of the area of British Guiana in derogation of the rights and against the will of Venezuela." But this is begging the question. It is taking the side of Venezuela in the controversy, and thus disqualifying ourselves for acting as arbitrators should we be asked to do so. It assumes gross wrongdoing on the part of Great Britain before her side of the case has been heard. If Great Britain is really seeking to extend her territory "in derogation of the rights and against the will of Venezuela," there is nothing to arbitrate. We have only to consider whether or not we will take up arms in behalf of Venezuela.

Nor does the President throw any light on the nature of the controversy. He proposes to submit "the whole controversy" to arbitration. But what is "the whole controversy"? As we understand it, Great Britain is willing to arbitrate as to the boundary line through unoccupied territory, but declines to do so as to territory of which she has long had undisputed possession, and which is now settled by 40,000 British subjects, who do not desire to become Venezuelans, and have invested their capital without anticipating any such contingency. This territory the Venezuelans now claim because it has recently become a gold field. But if they may call on Great Britain to arbitrate her title to this, may they not call on her to arbitrate her title to other and more populous districts of Guiana, and in fact to the whole of Guiana? It must be remembered that Venezuela is a semi-barbarous state, not in the least governed by our notions of diplomatic reasonableness and courtesy, and would just as soon claim the whole of Guiana as not, if she thought there was a chance of our supporting her contention. She does not belong to "the family of civilized nations," properly so called, and we are just as much interested as Great Britain, in fact more interested than Great Britain, in repressing the extravagances and absurdities of these protégés of ours. To ask Great Britain to arbitrate any and every claim such a state may make is an absurdity which, if presented to us, we should promptly resent.

Moreover, the doctrine that all claims of a weak state on a strong one ought to be arbitrated because of its weakness, is a novelty in international law and morals. There are no warmer friends of arbitration than we are, but we have always supposed that the reason for arbitration was to be found in the nature of the case and not in the comparative strength of the parties. If I am a very strong man and have a dispute with a very small and weak one, I cannot, because of my physical superiority, let him slap my face when he pleases, and then propose to arbitrate on the nature, extent, and gravity of the insult. We should not think of accepting such a doctrine for our own use. When we were on the point of going to war with Chili in 1891, we should have scouted the idea of such a thing. Its general acceptance by strong Powers would in truth put a very powerful weapon of injury and arrogance into the hands of weak and semi-civilized ones. We must remember that, in meddling in other people's quarrels, we are making precedents by which we must be bound ourselves, unless we mean to part company with the rest of the civilized world and throw in our lot with Debs, Coxey, and Altgeld.

The question, too, what we should do if Venezuela were to yield voluntarily to Great Britain, by way of "a trade," the territory which the President says Great Britain is now wrongfully claiming, is one on which the President should have thrown some light, for his remarks inevitably suggest it. Should we be compelled to forbid the settlement of the controversy in this way? And if we did forbid it, what would become of Venezuela's sovereignty? Any such interference with her discretion would be tantamount to the assumption of a protectorate, which would inevitably carry with it responsibility in general for the acts of her Government and citizens in their foreign relations. The rest of the civilized world would never tolerate our protection of the whole of the Spanish-American States against the legitimate consequences of their own wrongdoing. There is a dispute, leading to a suspension of diplomatic relations, now pending between Venezuela and France and Belgium. Are we in that also? Must we settle it, or approve of the settlement? The crop of quarrels which might grow out of this would speedily change the character of our own Government and the course of our own political development. The experience of mankind thus far shows that a fighting, aggressive republic never remains a real republic very long.

Lastly, let us say that it is a cardinal rule of international intercourse to carry on negotiations on such terms as shall make it easy for your adversary to yield your point; and the more difficult your point is, the more careful should you be in putting it to him. The "mise en demeure," which is the French term for asking for a categorical, or, as Mr. Cleveland calls it, a "definite," answer, is something which diplomatists usually avoid unless they are prepared for the contingency of a refusal. Are we prepared for a refusal on the part of Lord Salisbury to litigate the title of England to territory of which she has long held adverse possession, and which is now settled by a large body of her subjects? Have we considered what we shall do if he says, "No, I won't"? There are two ways out of the embarrassment in which this answer would place us. One is to fight; the other is to submit to the imputation of negotiating in brave words which have no meaning—which is not pleasant for a first-class Power. Mr. Cleveland has doubtless considered, that, besides the dangerous element among us which would rejoice in a war as a period of confusion and turmoil and lawlessness, there is a strong political element which, like its predecessors in all ages, would rejoice in it as a means of diverting attention from troublesome domestic questions, such as the currency and the tariff, and as an excuse for enormous taxation. What these mischief-makers desire is something which every American statesman should consider in his foreign policy, for they, no less than the foreigners, are enemies of our institutions and traitors to popular government. Every despatch he writes on foreign matters is, and ought to be, in reality also addressed to the Jingo element among ourselves.

AN ILLUMINATING PRAYER.

THE prayer of the chaplain, at the opening session of the House of Representatives, is of considerable value as illustrating the effect of Jingoism, not only on our morals but on our religion. Here it is:

> "Heavenly Father, let peace reign throughout our borders. Yet may we be quick to resent anything like an insult to this our nation. May prosperity smile upon our land, and peace and happiness come into every home. So may Thy kingdom come, Thy will be done on earth as it is in Heaven, through Christ our Lord. Amen."

We do not believe there is any record of the offering of another petition of this sort by a Christian minister. In the Middle Ages, and even in our day, Christian ministers have prayed freely for the victory of their nation in time of war, and they pray freely in time of peace that the enemies of their nation may be confounded. But even Bossuet, who had to make Louis XIV. acceptable to the Almighty, and even Joseph de Maistre, who treated war as a divine institution, would have recoiled from praying for war as a blessing. We pointed out very recently that we were the only nominally Christian people, and in fact the only civilized people, that produced public men who were not ashamed to call for war as a means of educating the young or making trade brisk, or as a means of gratifying the national pride; and not for war, either, with any particular Power or in any particular quarrel, but for war generally with anybody who could be fastened on as an enemy—in fact, war for fun. This shocking spectacle has been reserved for our country in the 107th year of the republic of Washington and Franklin.

In fact, we have an increasing body of politicians among us who talk of it, and teach our children to talk of it, as if it were a game of football, with a large list of casualties; and yet when we think of the floods of misery which pour over the length and breadth of a country from even one battlefield, the savage contempt for

humanity with which every victor gazes on his dead and wounded, one can hardly help feeling that the prayer for the coming of God's kingdom which rises every day from millions of lips, is the most frightful mockery of which the Christian world is guilty. Among even the most military of European states, war is treated to-day as a deplorable but inevitable mode of settling disputes. It has been reserved for American statesmen to treat it as a useful national tonic, to be sought after, and not simply accepted. The great national advantage of being out of the way of fighting and slaughter, in which the founders of the republic rejoiced, we treat as a calamity, and reach for quarrels or seeds of quarrels as eagerly as a toper seeks his bottle.

But the Washington chaplain goes one step further than the politicians. For some Congressmen we do not think there is much use in praying. But the one proper prayer for those whose case is not hopeless, is, that they may be endued with grace, wisdom, and understanding. These are the only things a Christian people can ask for their legislators either from the God of peace or from the God of battles. This is the only prayer appropriate to the work they have to do. What the chaplain prays for is that they may be endowed with a resentful, vengeful spirit, and cultivate readiness to take offence. If duellists and swashbucklers were praying men, which they hardly ever are or were, this is exactly what they would pray for. We have made much fun of the Southerners for the readiness to stab and shoot which this quickness to resent insults has produced among them. We have shown them a thousand times that readiness to take offence is the mark of either an uncivilized man or a fool; that the more eager you are to resent insults, the more insults you are sure to receive. But real Jingoes pass most of their time looking out for them and calling attention to them. In their eyes the whole world is constantly trying to insult or "put upon" the United States, and it is mainly to chastise these people that they want a large navy.

No wonder, therefore, that Chaplain Couden took it into his head to pray for an increase of the swashbuckler spirit, for Congress to be made more quarrelsome, more vindictive, more ready to make widows and orphans, to blow human bodies into small pieces, to burn towns, and lay waste farms, and ruin trade, and issue greenbacks, and cheat creditors, and turn the thoughts of young men away from industry and charity, and to fill their hearts with hatred of their fellow-men and joy over their misery, and generally to roll back the tide of civilization. We hope we shall not be considered irreverent when we speak of the astonishment with which the Author of the Sermon on the Mount must have received this petition from one of his own ministers, above all when he learned that the minister was praying for the Legislature which is charged with the superintendence of the latest effort of men to make reason and the will of God prevail in the conduct of human affairs.

THE BERING SEA AWARD.

It is earnestly to be hoped that the present Congress will dispose of the award of damages under the Bering Sea arbitration in a manner creditable to the national dignity. That the last Congress should have left the matter as it did was not surprising, considering what the character of that body was. From this one, Republican though it be, one expects better things. The question is one which could arise only between civilized peoples. The whole machinery of arbitration bespeaks a high degree of civilization, and to allow its working to be arrested and nullified by semi-barbarians like Senator Morgan would be distinct retrogression. Sending him abroad as one of our jurists to sit on a really august international tribunal was bad enough. To allow him to undo its work after he got home would be still worse. If we were to adopt the Jingo theory of international respectability, it would be safe to say that we should have to bombard two flourishing European cities in order to wipe out the discredit which the employment of such men as Senator Morgan in responsible places abroad brings upon us. It is such agents as he, and not our failure to kill people and destroy property, that diminish our weight and influence in the civilized world.

The treaty under which the Paris tribunal sat, agreed by article 14 to "consider the result of the proceedings of the tribunal of arbitration as a full, perfect, and final settlement of all the questions referred to the arbitrators." The arbitrators found that the United States had no jurisdiction in Bering Sea outside the three-mile limit. It followed from this that all the seizures of British ships made by the American cruisers were illegal, and that the United States were liable in damages. The questions as to "the value of the said vessels and their contents or either of them," and the question whether they were "wholly or in part" the property of Americans, were left "to future determination." The determination was to be reached by a "mixed commission" on the facts.

The total of the British claims for damages, including compensation to British subjects imprisoned by the American courts, with interest, was $780,000. In the course of the negotiations for this mixed commission, to use Mr. Gresham's language, "these claims were subjected by both governments to a thorough examination both upon the principles and facts which they involve." He—that is, we, the United States—therefore suggested (August 21, 1894) that in order to save the expense, trouble, and tedium of a commission, the matter should be settled by the payment of a lump sum of $425,000. His first offer was $400,000. The British asked $450,000. They "split the difference" and settled on $425,000. It now looked as if the matter was arranged, barring the inquiry as to the ownership of the vessels. When the appropriation of the money came before Congress it was opposed by Mr. Cannon on the ground that the majority of the vessels were owned by Americans, and that only $103,000 was due. To this was added the statement by Mr. Hitt that not only were "the real owners" Americans, but they "were engaged in an occupation forbidden by the laws of their own country," and were entitled not to compensation, but to fine and imprisonment. As to the unlawfulness of the occupation, Mr. Hitt was mistaken. The original bill which made it a criminal offence to kill seal in Bering Sea made the American dominion cover the whole sea. This was amended by the Senate, and the amendment accepted by the House, after conference; and the effect of the amendment, reported the managers on behalf of the House (March 2, 1889), was "to leave out of the House amendment the words that are descriptive of the waters of Alaska." This restored the waters of Alaska to the domain of international law, and made seal-killing outside the three-mile limit a lawful occupation. Therefore, whatever the nationality of the owners, they were not debarred from compensation on the ground of nationality

Now comes the question, what is their nationality? There does not seem to be any full evidence on this point. Nor does it appear on what grounds Senator Morgan's assumption rests, that they were "rascally and recalcitrant Americans who hired themselves out to the British flag to rob the Government of the United States, violate its laws, and dishonor the country." All this appears to be the product of a half-savage imagination. Morgan's language cannot be approached from the civilized point of view. It would be as much a waste of time to examine his argumentation in detail as that of King Kaffee Kalkalli.

The British answer to this is, that any British vessel seized under the British flag must, by the British law, belong to a British subject. A foreigner cannot own her. But the owner may borrow of a foreigner by mortgage on the ship. There appears to be no doubt that many, or some, of the ships seized in Bering Sea were so mortgaged to Americans, who had advanced money to the Canadian owner to enable him to engage in the season's sealing. This is all that can have possibly made such mortgagee "a rascally and recalcitrant American." Under the Morgan system of jurisprudence his making such a loan entitles his own Government, without a shadow of legal authority, to seize the ship, which was his only security, and lock up the owner so as to make such security worthless. We do not believe a

more remarkable debate than that in which Morgan produced these juridical flowers, was ever heard in the history of either witenagemots or parliaments.

It will be easily seen, from this brief sketch of the facts, that the whole affair is a national scandal. That such a scandal should have arisen in such an assemblage of wild men as the last Congress, is not to be wondered at. This one plumes itself on coming from the ranks of the intelligent and really patriotic portion of the population. Our liability has arisen under a judgment by which we solemnly agreed to abide. The amount has been settled by our lawfully constituted representatives. The opponents of its payment are, therefore, "rascally and recalcitrant Americans" who are doing all they can to dishonor our flag and to bring arbitration into disrepute. In money matters nations should always be gentlemen and pay what they promise. When the bargain is struck, the time for haggling is over.

FALSE PRETENCES ABOUT REVENUE.

GREAT indignation exists among certain chronically indignant Republicans over President Cleveland's references in his message to the relation of deficient revenue to the Treasury embarrassments. He falsely pretends, they say, that money had to be borrowed solely to protect the gold reserve, not to pay current expenses, and that the root of the trouble is in a vicious currency, not in insufficient revenue. We are not set for the defence of the message in this particular. Mr. Cleveland frankly admits that the money obtained by bond sales was used in part to meet current demands on the Treasury; and the inference is, of course, unmistakable that the Treasury could not have met its obligations otherwise. But, technically, it is strictly true, as he says, that bonds were issued to maintain gold payments; and it is also strictly true that, taking the condition of the Treasury as it is to-day, the difficulty is not in the amount of money, but the kind of money, on hand. We are perfectly willing to concede, however, as we have many times conceded, that the element of distrust caused by visibly dwindling revenues should enter into any broad discussion of the financial troubles of 1893–'94.

But allowing the worst charges of insincerity against the President to be true, what is to be said of the logic and the sincerity of the present Republican or, rather, protectionist contention? That contention is, that a surplus revenue will at once and of itself cure the currency sore. The way to get a surplus revenue is to clap on higher duties. Hence the cry for a speedy reënactment of the McKinley tariff, and the protectionist rage at Speaker Reed for declaring that nothing of the kind ought to be or can be done.

Now, there is a fine incoherency in the very terms in which this ultra-protectionist demand is couched. We must stop these "vast importations," which are crushing us to the earth and taking all our gold from us, the *Tribune* tells us. Precisely so, echo Judge Lawrence and the Ohio wool-growers; give us a tariff on wool with steadily rising rates that shall shut out *all* foreign wool. That is what all the protected industries want—a tariff which will stop or reduce to the minimum all importations. That is simon-pure protectionism, and that we can understand. But that it should be urged in the same breath with a demand for a greater revenue out of customs duties—that this exclusive, Chinese-wall protectionism should now be put forward under the guise of a tariff for revenue—is too sharp a corner for the average slow-moving mind to turn. A high tariff was never before defended as a revenue measure. Nothing is so disgusting or irrelevant to a good protectionist as to talk to him of a revenue in connection with a tariff. Revenue means importations, and to stop importations is the very end and aim and natural working of a protective tariff. To pretend anything else is to be guilty of false pretences.

The insincerity of the present demand for high duties as a means of filling up the Treasury with gold will appear doubly flagrant to any one who stops to note the effect on Government revenue of prolonged tariff discussion and the enactment of new tariffs. Irregularity, vitiated estimates, spasmodic ups and downs in receipts, with resulting uncertainty at Washington and anxiety in business circles all over the country, are the invariable accompaniments of such discussion and such laws. It was so with the McKinley tariff, it was so, to a considerable extent, with the Wilson tariff. The income of the Treasury depends in a peculiar degree upon the stability of trade and the permanence of fiscal laws. Nothing throws the Treasury upon its beam-ends more quickly than the unsettling of business conditions. Let a tariff bill be now precipitated and drag along for six months (the very shortest time, certainly, in which it could be passed, if at all), and the Treasury deficit to be provided for would be doubled or trebled in the act. A new high-tariff bill might be entitled an act to disorganize and derange public finance, but never one to come to the rescue of an embarrassed Treasury.

How was it with the McKinley bill? Did it stop the "vast importations"? Did it increase the revenue? Did it come within miles of producing the revenue predicted? All these questions must be answered in the negative. Importations were enormous during the pendency of the bill—so enormous that the enraged McKinley threatened, at one time, to make them pay the higher duties by way of anticipation. This is the normal course of business in passing from a low to a high tariff. It would be the course now if a new McKinley bill were visible on the horizon. The bonded warehouses would be stuffed with foreign goods, and the maddened protectionists would be helpless. Then when the higher duties went into effect, where would the increased revenue come in? Just where it did in the first months under the McKinley bill, or at the rate of nearly $8,000,000 a month decrease. The estimates made by Senators Allison and Aldrich for the first year's operation of the McKinley tariff were $40,000,000 out of the way. This shows how safe a thing it would be now to reënact such a law as a revenue measure. The revenue might prove as delusive as the pretensions with which the bill is urged.

This being so, the country ought to rejoice at the *Tribune's* moderation in not taking the direction of Congress out of Speaker Reed's hands. It might dictate the policy to be pursued, it says, but it refrains. This is really wise, as the Speaker has an unfair advantage in appointing the committees which the *Tribune* might not be able to overcome without a hard fight, dangerous to party harmony. Mr. Reed has unmistakably said (representing, we may add, the evident and overwhelming opinion of manufacturers and business men the country over) that there must be no tariff agitation this winter. This makes it practically certain that there will be none, and that when the next protectionist tariff comes up, if it ever does, it will have to be defended on some other ground than the false pretence that it is necessary for revenue.

SPEAKER AND CANDIDATE.

WE have had one President who had previously been Speaker of the House of Representatives. James K. Polk presided over the lower branch of Congress from 1835 to 1839, and in 1844 was elected to the higher office. We have had two men who were nominated by their party for the Presidency some years after they had served in the speakership—Henry Clay, as the candidate of the Whigs, in 1844, and James G. Blaine, as the candidate of the Republicans, in 1884; while John Bell, who had preceded Polk as Speaker, was the candidate of the Constitutional Union party for President in 1860. We have had one case where a man who was at the time Speaker received a number of electoral votes, but Clay's candidacy in 1824 was before the introduction of the modern system by which each party holds a national convention to name its choice, and the contest of that year between Jackson, Adams, Crawford, and Clay was in every way outside of the methods that now prevail. It is, therefore, an unprecedented spectacle which we are to watch for the next few months, while Thomas B. Reed will be at once Speaker of the House and an open candidate for the Presidential nomination of the Republican party. Under these conditions Mr. Reed may easily be the most picturesque per-

sonage in public affairs for the next half year.

Mr. Reed gained his first prominence in Congress as a critic. Coming into the House in 1877, while the Democrats controlled that body, he attracted notice for his success in "nagging" his opponents during the next four years, and he maintained his reputation in this regard when, after the single Republican House of 1881-83, his party again went into the minority for six years. A somewhat indolent disposition made him too easily satisfied with performances that rendered him conspicuous without much demand upon his powers, and he left no such record for effective service in the work of legislation as was made in a much briefer period by his New England colleague, George D. Robinson of Massachusetts, for example. But long service and prominence as a leader of the minority entitled him to aspire to the speakership when the Republicans returned to power in 1889, and he secured the nomination in the party caucus without much difficulty.

In the opening session of the Fifty-first Congress Mr. Reed for the first time exhibited his constructive and positive powers. Chosen Speaker of a House in which his party had a very narrow margin, he introduced new and unheard-of methods for ruling the body, pushed through schemes for unseating Democrats until the Republicans secured a working majority, and had rules adopted under which the McKinley bill and the Force bill were railroaded through the House; the tariff measure being also approved by the Senate and made a law before the elections of November, 1890. The victorious Speaker left Washington for a stumping tour through the North that seemed to him one continuous series of triumphs, and returned to his home in Portland full of cheerful confidence, only to find that the nation had repudiated his work by an overwhelming majority, and that his party had secured scarcely a quarter of the next House of Representatives.

Mr. Reed's previous incumbency of the office showed his conviction that the Speaker should be the leader of his party and the dictator of its policy. His record in the First-first Congress would prevent his sinking in the Fifty-fourth into the position of a mere judicial official, bound simply to hold the scales even and do justice to all parties. Moreover, as a Presidential candidate, least of all men could he afford now to seem to shirk responsibility. He must frame a definite policy and carry it out. The Speaker's situation, however, is very different now from what it was six years ago. There was then no Presidency in sight, and no clash of rival ambitions for an impending nomination prevented his rallying a united party to his support. Now he presides over a body of Republicans many of whom oppose his own aspirations and would like to thwart them. The press of his party is equally divided as to the matter of candidates. Moreover, neither in Congress nor outside is there anything like unanimity of opinion as to the proper course for the Republicans to pursue in the House. Mr. Reed's suggestion of a do-nothing policy has already provoked indignant condemnation from party organs of prominence. The *Iowa State Register*, for example, immediately published an editorial article on the "First Duty of the New Congress," which said, among other things:

> "There is no doubt as to the demand for prompt action by the new Congress, and it should at once proceed to revive American labor and American business in the only way by which they can be revived, by increasing the duties on competing foreign goods to a sufficient degree to provide ample revenues for the Government, and to protect American labor and business from competition in American markets with foreign labor. All Republican Senators and Representatives who work and vote on any other lines, will be traitors to their party and to the interests of the American people. The *Register* has no faith in any Congressman who does not stand 'first, last, and all the time' for an American government."

The public seems inclined nowadays not to take its politics very seriously. The popular desire to be amused promises to be gratified by the spectacle of a man who attained fame as the Speaker of "a Congress that did something," and who thereby landed his party in the ditch, trying to evolve a policy of doing practically nothing so as not to offend the country, while making noise enough to head off rival candidates for the Presidential nomination who can talk without his sense of responsibility.

GOLDWIN SMITH ON THE OLD TESTAMENT.

THE appearance of Mr. Goldwin Smith's article on "Christianity's Millstone," in the current *North American Review*, is a sign of the times. It is a striking thing that such a man as he should have written such an article; more striking still that it should have been published in a magazine of general circulation; most striking of all that its author should not have been immediately and bitterly assailed. Where are the polemics, where the religious passions and prejudices, of thirty years ago? What Mr. Smith has done is, to test some parts of the Old Testament by modern standards of historical credibility and modern standards of morality, and to declare, with great frankness, that he finds on every hand evidences of myth and fable as well as low and barbarous morality. In a style which, by its point and pungency, reminds one of the similar writings of Thomas Paine, he puts together some of the harder things to believe, and the still harder things to practise, in the Old Testament, and urges that it be cast off as "a millstone on the neck of Christianity." For such an article by such a man, so meekly received by the general public and the religious world, it would be hard to find a parallel.

Mr. Smith has, however, inevitably the air of a man not entirely at home in Biblical criticism. He seems to have taken up the subject where he dropped it more than thirty years ago, in the 'Essays and Reviews' epoch. But those thirty years, in the theological world, have meant more for light and liberality than the cycles of Cathay that preceded them. Of what has been done within the church and by professors of Christian theology, in that time, to promote a rational and historic estimate of the Old Testament, Mr. Smith appears, if not ignorant, at least too little regardful. To mention only English names, what Robertson Smith and Canon Driver and Prof. Cheyne have done in England, and men like Prof. Briggs and Prof. Moore in this country, to set forth the natural history, so to speak, of the Hebrew Bible, is too important to be ignored in any such general discussion as Mr. Smith's. Yet he does not so much as hint at it, or at the most fruitful hypothesis of Biblical criticism—the documentary theory—which is doing for criticism what Darwin's 'Origin of Species' did for natural science. One can but admire, too, the serenity and security with which Mr. Smith turns from the Old Testament to the New. We fear his own tests of credibility would, if rigidly applied to the latter, land him in as serious difficulties as those he enumerates respecting the former; and he makes no allusion to the fact that the great critical battle-field is now precisely in the New Testament; that the methods and theories which have wrought such sweeping changes in our way of looking at the Old Testament, are now being applied, with illuminating results, to the New.

And if Mr. Smith thus shows himself apparently out of touch with the critical conception of the Old Testament, we think he is also somewhat out of touch with the popular conception of it. This is a question, we know, on which there is room for great difference of opinion. What the great mass of people in the churches really think about the Old Testament, he would be a bold man who should undertake positively to say. Probably the great mass do not think about it at all. They feel compelled to have no theory whatever on the subject. But the significant thing is, that they remain singularly unaffected by other people's theories. One theory of inspiration or another may be preached to them, one explanation or another of moral and historical difficulties, and either is almost certain to be, with the great majority, like Carlyle's favorite "blessings that pass over our heads." A remark of Matthew Arnold's, in his recently published 'Letters,' is very much to the point. He said that Mr. Greg had an idea that some theory or other about the Bible prevented people from taking to the Bible. Then he added, "That is stuff. The mass of people take from the Bible what suits them, and quietly leave on one side all that does not."

The real grounds which ordinary Chris-

tians have for valuing the Old Testament it would be difficult or impossible for any one exactly to ascertain. A religious census on that subject would be more untrustworthy than Porter's national census. But in general it may be said that the lyric and prophetic books would stand first, for their beauty, their spirituality, their power over the universal imagination and heart; that then would come the more interesting biographical portions, then the racy stories, made as if for the delight of children, of which the oldest narrative is full, while the history, the theological doctrine, the surface morality, would be far down the list, if not wholly disregarded.

For pulpit use the Old Testament has become, we should judge, mainly a sort of homiletic treasury of curious texts, inviting to ingenious handling. Some sermons actually preached may illustrate this. "There is death in the pot" served as a text for a discourse on the wickedness of the human heart—that was the "pot," and "death" was in it in the shape of evil desires and sin. "Butter and honey shall he eat" was a distinct prophecy of Christ, according to one preacher—butter the product of the "sacrificial animal," and honey suggesting bees, and bees those stinging troubles of life which the Saviour was to experience. These examples are far down the scale, it must be admitted, but at the other end one can hear most original and edifying sermons, preached to cultured audiences, and got out of such texts as: "Behold, a smoking furnace and a flaming torch." This fantastic use of the Old Testament is not fitted to enforce an idea of it as an inspired document which its official expounders are to handle with reverence.

But how about the creeds and formularies of the church? Do they express the actual state of knowledge about the Old Testament, the common conception and use of it, not to say the ideas of it which are inevitable in an acute and trained mind like Mr. Smith's? That is another question. It is with the creeds that Mr. Smith has his quarrel, and as against the creeds—the official opinions of the church about the Old Testament—his assault is overwhelming. Of them, and of their mistaken assertions about the Old Testament, it may fairly be said, in his own words: "We do but tamper with our own understandings and conscience by such attempts at once to hold on and let go, to retain the shadow of a belief when the substance has passed away." It is not the Old Testament, but what the church, sinning against light, continues to assert about it, that is the millstone.

THE EASTERN QUESTION AGAIN.

ROME, November 22, 1895.

A WEEK ago the Eastern question seemed about to receive an answer, but it is like Brahma, "I keep, and pass, and turn again"—and no one is wiser as to the final solution. The strong and militant note sounded by Lord Salisbury in his Mansion House speech seemed the precursor of decisive action, and Italy, which is (after England) the Power most interested in the eastern Mediterranean, took up the note, and signified officially her intention of adhering to the policy of the English ministry. Letters from England say that the Government was (I say *was*) decided to go ahead even if alone, and force a solution securing the reforms and the safety of the Christians of Turkey. Of the outburst of public indignation in England you are probably better informed than I am here, but we have heard from the most authoritative sources that the nation, without distinction, was with the Prime Minister. The position so created was one which must have compelled a solution. Italy would have sent a fleet of ten or twelve ironclads, England twenty, and, between them, troops enough for the purpose intended. This was all that was needed, for the first entry of European troops into action would have led to the dissolution of the Ottoman Empire, and nobody knows this better than the pashas. The entry of England and Italy would have compelled Austria to move, and if then Russia attacked Austria, the *casus fœderis* of the Triple Alliance would have arisen, and Germany must have moved. The perception of this alarmed Austria, which is just now in the condition more or less of a lobster that has cast his shell, and, either under this or some foreign pressure, she proposed a plan for the joint action of all the Powers, but it is difficult to think that this plan was believed to offer any chance of efficacy by the Minister who proposed it. It had, however, one immediate success—it stopped the Anglo-Italian movement, which at once lost all its *élan*.

Austria's proposition was in the concrete satisfactory enough, but behind it lay all the practical difficulties which had beset the original English plan—it did not, and could not, as Austrian Ministers must have known from the first, command unanimity of the Powers. It was as follows: The united fleets were to rendezvous at Besika Bay to await the moment of action, which would have been when it was seen that the Sultan would not, or could not, effect the reforms demanded of him by the Powers—in the latter case from his being overawed by the fanatical element of his own people. In either case the fleets were to force their way to Constantinople, and, occupying the Bosphorus, put the Sultan in the necessity of abdicating or effecting the reforms; and in the case of his accepting the latter alternative, of supporting him against any Mussulman rising caused by his execution of the reforms. This programme was accepted by England and Italy, but, as was to be expected and must have been foreseen, Russia refused to accept any proposition which involved the application of coercion to the Turkish Government. The accord on the Austrian basis was at an end at once, and, as we are assured that an accord is arrived at between all the Powers, including Russia, we have the right to conclude that it excludes compulsion. This can be interpreted only as a momentary defeat for Salisbury. The Russians have scored a point in revenge for that made by England at Port Arthur, and we must wait for the disclosure of the new plan on which the Powers shall be agreed to know if England has gained any compensation. The *Corriere della Sera*, a leading journal of Milan, furnishes me with the details of the transaction thus far, and, from my own information, I am inclined to accept that of the *Corriere* as on excellent authority.

The situation *au fond* is very simple. England desires the reformation and solidification, under civilized administration, of the Turkish Empire, and the protection of all the races from the fanaticism of the others, not to speak of the financial and social development which might be attained under the auspices of an administration similar to that of Egypt. This would be a permanent barrier to the plans of Russia, whose persistent policy is to sustain the Turkish Empire as a whole till it is no longer coherent, and, when the end comes, to seize all that she can; and of course the longer this solution is delayed the more she hopes to get. Both plans look to the maintenance of the integrity of the Empire, but one for a distinct development in the future and the other for home consumption. The pretended accord between the six Powers is a fiction as respects compelling Turkey to keep her engagements. If it means that the Powers will go together as far as they are agreed, and that, when this is seen to be ineffective, those most resolute for reform will go on without the others, all one can say is that it is only an accord *pro tanto*, and leaves things just where they were, and the point of separation becomes the point of hostilities. The *Tribuna*, one of the best-informed papers in Italy, and an independent supporter of the Ministry, has the following statement of the position:

"What is the real signification of the rebus proposed by the head of the Foreign Office to the wits of his hearers? It seems this: The situation is so difficult and dangerous that there is need of doing everything to keep the Powers together confronting Turkey, and no Power intends to avoid this duty. To the good will and good intentions of yesterday has there succeeded to-day that complete accord of the Powers for a coercive action without which the situation has no apparent issue? Many telegrams of yesterday and to-day affirm it, and there is an air of optimism stirring to day. But if they speak for the hundredth time of the complete accord of the Powers, nobody shows how and on what proposal it shall be established, and in view of such a reserve the new assurances must have the effect of the melancholy refrain of an old song. The fear of a European conflict prevents this or that Power from taking any initiative against Turkey; the fear of remaining discredited before the Turkish Empire and the Mussulman element will probably induce Europe to take some steps if the Turkish Government does not succeed in restoring peace to the Empire. Still, the situation at present must be considered in the light of the negative reply given by Russia to the Austrian initiative—a negation which no interested denial serves to destroy.

"What did the Austro-Hungarian chancellery propose, in substance? To pledge the Powers to pass the Dardanelles in case the impotence of Turkey to reëstablish internal order became evident. Russia replies: 'I am convinced that something must be done, but I do not wish to engage in advance in any form of intervention.' She may have so replied to create a claim on the gratitude of the Sultan (who, by the way, contrary to current rumors, is very well); she may have done so with a desire to prolong, as far as possible, a situation full of uncertainties. But in any case she has declined an invitation which had the inestimable merit of making Abdul Hamid feel a decided will, and one determined to resolve, *sic et simpliciter*, the complex question of a substantial accord. Now it is clear that the accord which is under discussion—which was so praised by Berthelot in the ministerial council held yesterday in Paris, by Banffy in the Chamber of Deputies in Hungary—can be established only on bases different from those already indicated by Golutchovsky, and we may therefore hold that it is only formal; in other words, that the Powers are agreed to pray the good God that he will condescend to reëstablish order in the Turkish Empire to free them from a preoccupation which troubles them so much."

This seems to me to put the question in as simple terms as need be. I do not see how,

supposing the Powers have concluded to accept the Russian conditions of accord, they can accomplish anything. When this appears to the satisfaction of Europe, will England, whose premier has committed himself to the reform, *bon gré mal gré*, of Turkey, be satisfied to pocket the check? It is impossible to believe this. The position seems to me to be clearly indicated as one of delay, with the necessity of action intensified thereby. The intentions of England and of Russia are so radically opposed in all that concerns the treatment of the Sick Man that I cannot believe that either is willing that he should be treated by the other for a day. England, Italy, and reluctant Austria-Hungary are committed to the effective pressure for reform, Russia is committed against it. Conceding that Russia's objections have stopped the movement of the others for the moment, it appears impossible that it should not be resumed as soon as Russia's object becomes evident. The *Tribuna* concludes thus: "The question, however, which appears subject to an adjournment, is one of those which must inevitably be answered. The Turks of to day must expiate the victories of their fathers and restore to Christian Europe what the fathers took from it; so decides historical justice, and we believe that Turkey will for no long time sign protocols as a European Power." X.

GENERAL THIÉBAULT ONCE MORE.

PARIS, November 20, 1895.

A PROTEST must be made against the new fashion of publishing memoirs piecemeal, one volume after another, at intervals often so long that the reader has some difficulty in finding the thread which he was obliged to abandon. This method may be advantageous to the publisher, but it is rather irritating to the reader. Who would have thought, when the first volume of the memoirs of General Thiébault appeared, that it would be followed by so many others? I have now before me the fifth volume, which covers the period extending from 1813 to 1820. It contains so much that is interesting that it will certainly find as many readers as its predecessors. General Thiébault, who, it must be confessed, was quite unknown to our generation, is taking in our historical literature a place which is becoming by degrees more and more important. He gives us himself the means of judging him. With many faults, he has one virtue which is essential in history—he is perfectly candid, and he does not disguise the truth, or what appears to him the truth. He is passionate, irrational, he has many ill-founded likes and dislikes, but he has a decided personality, which, on the whole, becomes sympathetic to the reader. Shall I add that he was very handsome, if we may judge by the portraits which illustrate his memoirs, and that his personal charms had evidently much to do with the incidents of his career?

Volume V. begins after the great disaster of Napoleon's Russian campaign. Thiébault was coming back from Spain, a country which in five years had devoured as many men as Russia had in five weeks. He found in France universal anxiety. The army of Russia had disappeared as an army, but Alexander had a great reputation for generosity, and it was hoped that many prisoners would come back. These hopes were disappointed. Thiébault gives a terrible account of the treatment to which the French were subjected in Russia.

"I have," he says, "under my eyes the relations, one of an officer, the other of a high functionary; the first was in a column of 1,800 prisoners, the second in a column of 3,200. . . . Of these 5,000 unfortunate prisoners, only thirty saw France again, thanks to some worthy Russians who, at the risk of compromising themselves, took care of them and helped them. . . . Two hundred brave men, worthy of a better fate, perished in real torture, victims of infamous thefts and of barbarous speculations, while the Russian prisoners in France were treated with a solicitude which we were credulous enough to consider reciprocity. . . . Napoleons were taken for eight francs only; the inhabitants sold food to the prisoners at ten times its value; so the napoleon was really worth only 88 centimes."

When Thiébault saw the Emperor he found him much altered and very serious. "What a difference between his reception now and the last reception I had seen at Compiègne! What had become of those kings, archdukes, foreign princes, ambassadors, even of the Austrian ambassador? . . . All that glory, that pomp, those tributes had disappeared." Thiébault was placed under the orders of Davout and left for Wesel. He arrived just in time to take part in a council of war which had to judge Count Bentinck, accused of rebellion. He had great difficulty in saving the life of Bentinck, and his conduct on this occasion was as honorable as it was courageous, seeing that he made an enemy of General Lemarois, who had convoked the council, and of Marshal Davout. Thiébault had the command of the division of Hamburg, and he is very eloquent on the subject of the infatuation of the Emperor, who wanted to keep all his fortresses in Germany while he had to dispute French soil with the Coalition. "When he was fighting like a lion on the hills of Champagne, he was deprived of the 36,000 men left at Dantzig, of the garrisons of Stettin, Wittenberg, and Potsdam, of the 22,000 men of the garrison of Glogau, of the 32,000 men sacrificed in Dresden, of the 18,000 men shut up in Magdeburg, of the 36,000 men who went to Hamburg, and of the 80,000 conscripts who were called out in the countries which we should have gone through if we had retreated to Lille—a formidable total of 200,000 men, who, by annulling the efforts of the Coalition, might have saved France."

It would be tedious to speak of the daily difficulties which Thiébault encountered in Hamburg. His chief was more than usually out of humor, and in the best of times Marshal Davout was very severe, and left no repose or peace of mind to his subordinates. After the battles of Leipzig, Hamburg was blockaded; the Thirteenth Corps remained in it with Davout, who was soon cut off from all communication with Napoleon and the remainder of the French army. After a long period of isolation, he received a despatch from the Minister of War, ordering him to retreat: "What are you doing in Hamburg, Monsieur le Maréchal, when the enemy is at the gates of Paris?" It was too late now, and Davout could no longer escape. Thiébault would have us believe that Bernadotte entertained for a moment the idea of uniting his army with that of Davout and the French garrisons left in Germany. His own army was no longer in line, though he gained the victories of Gross-Beeren and of Dennewitz, and took a decisive part in the battles of Leipzig. He was not well satisfied with the allied kings and princes. He chose as an intermediary with Davout a former aide-de-camp of Dumouriez, who kept a hotel at Altona.

"Rainville appeared before the Marshal. He began with what was to serve him as an introduction, but when he came to approach the true object of his mission, he remembered suddenly the way in which the Marshal dealt with people and had them executed, the fondness he had for this sort of executions, his terrible provost, and even I do not know how many examples of people executed without a trial. Frightened by the idea that his fate depended on a moment of bile, caprice, or calculation, and trembling at the very thought of his having dreamed of playing for his life with such an adversary, this diplomat, less audacious as a diplomat than clever as an innkeeper, ran away from the Marshal rather than took leave of him, ran away from Hamburg rather than left the place, taking hardly the time to say to his introducer, who was waiting to hear the result of the conference, that the Marshal's character and reputation had not allowed him to break the silence. Thus vanished . . . the last way that remained of hindering the Calmucks, the Gascons of the north, treacherous Austria, arrogant England, and the allied mob, from defiling the soil of France."

Thiébault is, a moment afterwards, obliged to confess that the junction of Davout and Bernadotte could have been effected only too late. The tide was too strong and could no longer be resisted. Bernadotte remained with the Allies, consoling himself as he did at Leipzig, when he ordered some batteries to continue their fire: "A little more grape for those Frenchmen I love so much."

On the 9th of May, 1814, the French, blockaded at Hamburg, saw in the enemy's line the white flag, the flag of the Bourbons. Davout received a messenger, one of his own relations, who had been sent to him by the Provisional Government established in Paris. He summoned all his generals and told them that Napoleon had abdicated, and that the Bourbons had returned; he had received orders to give the white cockade to his troops and to proclaim Louis XVIII. He showed them a bundle of *Moniteurs* which he had received, and which gave all the details of the latest events. He retired, leaving his generals to confer on the situation. The result was an address [illegible] acceptance of the new order of things, [illegible]eived in a dignified tone, which was written [illegible] Thiébault. Between Hamburg and Düsseldorf, Thiébault found nothing but strangers and enemies, [illegible]here he had seen before soldiers and subjects of the [illegible] Empero The Rhine was not now guarded by Prussi[illegible] When he found himself in France, it seem[illegible] to him that he was "sur une terre d'aumône When he again saw French troops, they had no longer their tricolor flags and cockades. He had never been a courtier; he had won every grade by brilliant actions and hard work. He felt that, after so many struggles, France needed peace; but he felt as if the honor of the "grande armée" was his own honor, and he deeply resented the treatment which the remains of this army received from the Bourbons and the *émigrés*. His judgment on Louis XVIII., and especially on his brother, who became Charles X., and his sons, is severe, even to injustice. He is cruel to all those men who, for twenty-five years, had learned nothing and forgotten nothing. He shows us the Duke de Berry, passing in review a few regiments of the former imperial guard, and saying: "The English troops are finer"; the Count d'Artois saying that nothing was needed in France but Jesuits for gentlemen and Capuchins for the *canaille;* his wife speaking of the wives of the marshal and Napoleon's Duchesses as "Bonaparte's cooks."

Thiébault had to go to the Tuileries to be presented to the King, the princes and their wives, and he gives a curious account of the receptions of the new court. Louis XVIII. was very witty and fond of an ironical joke.

Napoleon's generals came before him in the midst of the *émigrés* who had been made generals. Some of the former, such as Lauriston, were noblemen by birth, but had dropped their titles under the Empire. One day, Lauriston arrived before Louis XVIII. with La Roche-Aymon, one of the new generals. The King said to the Marquis of La Roche-Aymon, "Good morning, General La Roche-Aymon"; and, turning to Lauriston, who had been aide-de-camp of Napoleon, he said, "Good morning, Marquis." If Thiébault is excessive in his dislike for the Bourbons, and draws too dark a picture of them all, his tone is quite altered when he speaks of the Duke of Orleans.

"When the Duke of Orleans," he says, "in 1793 was obliged to abandon France, he had already fought under its flag with as much success as valor, and in a few months he had seen fourteen combats, a siege, and battles marked by various acts of prowess; he had not yet attained his twentieth year. Out of France, he refused to fight against his country, though his death-warrant had been prepared in it, the death of his father was imminent, his brothers were in dungeons where they acquired the germ of maladies to which they succumbed, his whole family was banished and its immense property confiscated. Proscribed, abandoned, poor, left alone with his thoughts, even obliged to conceal his name and his rank, so as not to be turned out of Switzerland, where his sister had taken refuge, he bore his fate with stoical resignation."

After a long account of the life of Louis Philippe, Thiébault shows him on his return. He asked to be presented to the Duke at the Palais-Royal. The Duke received him with the greatest kindness, recalled to him circumstances which had brought General Thiébault in relations with his sister, and finally asked him if he wished to take service or not. Thiébault was always persuaded that the Duke of Orleans would have taken him on his personal staff if he had expressed such a desire, and was angry with himself for not having done so. The Duke of Orleans during the Restoration always surrounded himself with [illegible] generals of the Empire; he liked to have his sons take from them lessons in the art of war; he knew that the French people placed such men as Marbot (who became his aide-de-camp) above titled *gentilshommes de la chambre*. In fact, though he was one of the highest representatives of old France, he understood the new France better than anybody. Thiébault became one of the *assidus* at the receptions at the Palais Royal, which already contrasted much with those at the Tuileries. He went also often to Neuilly, which was the favorite residence of the Duke of Orleans and of his children. He saw there the Legitimists—the ultras, as they were called—mixing freely with the generals of the Revolution and the Empire. Louis Philippe tried to bring them together, but he understood the difficulty of a perfect fusion, and one day, in a moment of discouragement, he said to Thiébault, "What is white will remain white, what is blue will remain blue."

We come now to Napoleon's return from Elba, and to the part which Thiébault had to play in the extraordinary events that followed it.

Correspondence.

LYNCHING AND THE LAW'S DELAYS.

To the Editor of The Nation:

Sir: Your correspondent Mr. F. M. Noa, in his discussion of "Southern Lynchings," asks the question, "Do not even intelligent people complacently accept the plea that all courts, juries, and judges are so incompetent that mobs must, like savages, take the law into their own hands?"

This question can readily and truthfully be answered in the negative. It is not reasonable to believe that the average intelligence and competence of the legal profession in America is greatly inferior to that of the same profession in England or continental Europe. But in this free country, where we frown upon all forms of arbitrary power except that of the political boss, the right of appeal from one court to another is interpreted so liberally, one might almost say so anomalously, that the public has naturally lost all confidence in the administration of justice in criminal cases. When a fiendish murder is committed by one who has money enough to pay lawyers' fees, or who is in a position to secure help for this purpose, however notorious his guilt may be, there is rarely any ground for hope that justice will be rendered with an approach to promptitude, and the chances are greatly in favor of the escape of the criminal. Human nature is neither better nor worse at the North than at the South, but the South has unfortunately a much larger proportion of ignorant and brutal population. It is scarcely more than a truism to say that the average negro is far less capable of civilization than the average white man. The South therefore cannot indulge the hope of escaping the many provocations which have brought upon its people the disgrace of frequent lynching. By all means let every obstacle be opposed to lynch-law in all sections of the nation, and let the county where the lynching occurs be made pecuniarily responsible, as has been wisely recommended recently by the Governor of Virginia. But much more important is it that the right of appeal should be curtailed. Curtailment does not mean abolition; it means that the opportunity for appeal shall be granted only when phenomenal ignorance on the part of the judge, or flagrant dishonesty on the part of a jury, can be promptly and overwhelmingly proved. Let the Governor of each State be freed from the necessity of entertaining pleas for executive clemency, and let the interval between the conviction and execution of the criminal be reduced to a minimum, a few days at farthest. If such changes in court procedure were established, we should hear much less of lynching, whether at the North or at the South.

One of the most conspicuous cases of leniency, carried out to a dangerous extreme, has been dragging along for nearly eighteen months in connection with the political ruffian and murderer, Bartholomew Shea, who in March, 1894, deliberately shot down Robert Ross at the polls in Troy. The case was one of the plainest on record, but, by the use of the right of appeal, the murderer still lives, though more than a year has elapsed since the date first assigned for his execution. He has been backed by a political machine, and, since the renewal of the sentence of death, the most shameless use of threats and intimidation has been applied to compel signatures to a plea for executive clemency. Happily the Governor's chair is occupied by one who cannot be expected to grant such a plea; but, in Germany or France, Bartholomew Shea would have received his deserts before an American court was even ready to begin the investigation of his case.

W. Le Conte Stevens.

Troy, N. Y., December 6, 1895.

EDUCATION IN NORTH CAROLINA.

To the Editor of The Nation:

Sir: In justice to North Carolina, and particularly to the white population of the State, I think it right that attention be called to certain statistics bearing upon education in the State. Prominence has recently been given in certain periodicals published in the North to the defects of education in North Carolina as compared with other States. The comparison is based upon data that are far from agreeing with the report of the Superintendent of Public Instruction in North Carolina.

The census of school-children for 1894 shows an enrolment of 235,486 white and 123,899 colored; the average length of school term, for white, 64 days; colored, 60 days; amount expended for education, white, $587,522; colored, $265,131; amount received for education in taxes from whites, $747,843, colored, $105,210. From this it appears that the whites of North Carolina give for the education of the colored race $159,921 over and above the amount of taxes received from that race—a rather heavy tax upon a State that is not very wealthy. There are a few schools in the State for colored people endowed by Northern friends, and these are doing a good work; but it seems never to have occurred to these philanthropists that an endowed school for white boys is as much needed in the State as for colored, if not more so. The whites of North Carolina give more than a million dollars every six or seven years for the education of the negro race. If the rich North, while expending her many millions yearly in the education of her children, would only help out this State, by refunding in endowments the amount spent by the State upon the colored race, perhaps it would not be necessary so often to call attention to educational diagrams showing North Carolina at the bottom of the scale and Rhode Island at the top.

Junius M. Horner.

[At the North, too, the well-to-do classes are disproportionately taxed for the schooling of the poorer, but this is not regarded as anything extraordinary or particularly meritorious, since the welfare of all classes is seen to depend upon the widest diffusion of education. We apprehend that the philanthropists referred to would be inclined to think the overcharge to the whites in North Carolina, as in the South generally, a very moderate "refunding" to the blacks of what slavery robbed them of in property and intelligence.—Ed. Nation.]

Notes.

Mr. Edward Roth, 1135 Pine St., Philadelphia, announces that his 'Complete Index to Littell's Living Age' down to 1895 will be resumed in February, 1896, with the first part of vol. ii., which may be wholly issued in the course of the year if the requisite support is given to his enterprise.

The Open Court Publishing Co., Chicago, will publish this month 'Karma,' a tale by Dr. Paul Carus, illustrated by Japanese artists and printed on Japanese crêpe paper; and 'Lovers Three Thousand Years Ago,' as indicated by the Song of Solomon, by the Rev. T. A. Goodwin, D.D.

A sumptuous limited edition of Edmund

Spenser's 'Epithalamion' has been undertaken by Dodd, Mead & Co., with the aid of George Wharton Edwards, who frames each stanza in an ornamental border and gives it a full-page design. In hand, also, is 'Rip Van Winkle as Played by Joseph Jefferson,' now for the first time published, with illustrations, in three editions, of which two will be limited, and one signed in each copy by Mr. Jefferson.

The late "Felix Oldboy's" 'Walks in Our Churchyards: Old New York—Trinity Parish,' recovered from the *Trinity Record*, is about to be issued as a book by George Gottsberger Peck, 11 Murray Street.

'Movement,' by that great student of motion Prof. E. J. Marey, is in the press of D. Appleton & Co. It will contain more than 200 illustrations.

Macmillan & Co. will publish for the American Economic Association 'Letters of Ricardo to McCulloch,' edited by their discoverer, Dr. J. H. Hollander of Johns Hopkins University, and 'Race Traits and Tendencies of the American Negro,' by F. L. Hoffman; also, 'A Breath from the Veldt,' by John Guille Millais, F.Z.S., an illustrated volume supplementary to the same author's 'Game Birds and Shooting Sketches.'

The Burrows Brothers Co., Cleveland, have nearly ready 'Fringilla,' a first volume of poems by Richard Doddridge Blackmore, author of 'Lorna Doone,' with decorative and other designs in the mode of the hour by Will H. Bradley.

The Roycroft Printing Shop, East Aurora, N. Y., is about to issue for the holidays 'The Song of Songs,' a reprint of the text of Solomon with a study by Elbert Hubbard. The type was expressly cut after one of the earliest Roman faces; the initials will be rubricated, and the book handprinted on Ruisdael handmade paper.

The turning out of reprints and brand-new editions continues without abatement. As we anticipated, Houghton, Mifflin & Co. have followed up their modified reissue of Mrs. Jameson's 'Sacred and Legendary Art' with her 'Legends of the Madonna,' 'Legends of the Monastic Orders,' and 'Memoirs of the Italian Painters,' each in one volume, the last-named being in part rewritten by the editor, Estelle M. Hurll, and the illustrations wholly new. We need not repeat our commendation of this laborious enterprise. The same firm have just added Holmes's Poems to the one-volume Cambridge Edition in which Longfellow, Whittier, and Browning already figure, for the benefit of prudent buyers and hasty consulters. It is handsome without and within, and offered at a low price. They have given a new dress of much elegance to the late Mrs. Jane G. Austin's 'Standish of Standish,' in two volumes, with etched illustrations, worthy of praise, by Frank T. Merrill. Finally, we may mention a plain and unpretentious edition of Tennyson's 'In Memoriam,' copiously annotated by Dr. W. J. Rolfe for their "Students' Series of Standard English Poems for Schools and Colleges."

Tennyson is also being published piecemeal, but in a dainty manner and without note or comment, by Macmillan & Co.: the 'Juvenilia' and 'The Lady of Shalott, and Other Poems' have reached us. The pocket edition of Charles Kingsley's novels proceeds with 'Hereward the Wake,' and is still marked by great compression and small type and thin (though not too thin) paper. Maria Edgeworth's 'Popular Tales' and Jane Austen's 'Pride and Prejudice' swell that unnamed series in which forgotten and unforgotten classics are given fresh currency, and which in its manufacture has all the good qualities that one calls for in a popular edition. We mount several stages higher in Miss Mitford's 'Country Stories,' agreeably if not powerfully illustrated by George Morrow, and fashioned in letter-press and binding after 'Cranford' and the other classics which Hugh Thomson has embellished. Even more attractive typographically, and particularly well bound, is Hamerton's 'Imagination in Landscape Painting,' with twenty-four full-page illustrations. Of the several Macmillan serials we have from time to time noticed, the Dickens arrives at 'Our Mutual Friend,' from the author's corrected edition of 1869, with Marcus Stone's illustrations, and a briefer introduction than usual by the younger Dickens; the Balzac, edited by Prof. Saintsbury, arrives at 'Eugénie Grandet'; Mr. Aitken's Defoe adds 'A New Voyage round the World,' and, in two volumes, 'The Fortunate Mistress (Roxana).' The Balzac and Defoe are among the most charming of J. M. Dent's tasteful productions.

Charles Scribner's Sons have brought out in a uniform neat style the companion compilations, by L. B. Seeley, known as 'Horace Walpole and his World' and 'Fanny Burney and her Friends,' each with its portrait; and, following up the 'Munchausen' of a year ago, have printed in large type in one volume 'Sindbad and Ali Baba,' with illustrations by William Strang and J. B. Clark. The designs would not of themselves warrant a reprinting of Lane's translation in the one case and Scott's in the other, but they have at least an individual character. The Cairo text of the seventh voyage of Sindbad is given in an appendix, and this variant enhances the value of an edition that will be welcome to young eyes or old.

Besides a new "Students'" edition of Irving's 'Sketch Book,' with notes explanatory and critical by William Lyon Phelps, G. P. Putnam's Sons continue their "Fly-Leaves Series" (the name derives from Calverley) with Thackeray's 'Novels by Eminent Hands,' and, as a proper fellow to it, Bayard Taylor's 'Echo Club,' with a prologue by Richard Henry Stoddard. Taylor's talent for parody was exceptional, and it is well to have it recalled. Mr. Stoddard tells the story of his early acquaintance with Taylor, and of their poetic communings, aspirations, and friendly rivalries. These are pretty books, but all may not like the feel of the covers.

Stone & Kimball, Chicago, have joined their imprint to that of Methuen & Co. in the beautiful London-made edition of Southey's 'English Seamen,' or the Lives of Howard, Clifford, Hawkins, Drake, and Cavendish, those bold sea-rovers. Southey's prose, stirring adventure, and fine book-making form a combination hard to resist.

Tammany's overthrow a year ago is the excuse for a new edition of Mr. Roosevelt's 'New York' in the "Historic Towns" series of the Messrs. Longman. The author tells briefly the story of the late revolt against Tammany, with what we must characterize as only half-candor regarding Republican responsibility for Tammany, but paying a deserved tribute to Dr. Parkhurst's initiative in bringing about the measure of victory achieved and already partly undone.

Dodd, Mead & Co. publish in handy form 'Abraham Lincoln's Speeches,' a selection made by L. E. Chittenden, ex-Register of the Treasury, with excellent judgment. It will serve as a vade-mecum in reading the history of the rebellion and of the antecedent period of preparation and agitation. The frontispiece portrait is reduced from F. B. Carpenter's well-known engraving.

"Thirty-first edition, revised and enlarged," is written on the title-page of Henry T. Coates's 'Fireside Encyclopædia of Poetry' (Philadelphia: Porter & Coates), yet the earliest copyright dates back only to 1878. Comparison with the twenty-seventh edition of 1888 shows changes which were certainly worth while, as they take in Coleridge's "Dejection" and "Æolian Harp," Wordsworth's sonnet, "Sleep," and "Solitary Reaper," and Matthew Arnold's "Forsaken Mermaid," to mention only a part of the best. Changes are noticeable also in the illustrations; but no one will turn to this anthology for them.

Mr. Henry R. Blaney, an antiquarian who also handles the etcher's needle, shares with the public his etchings of 'Old Boston' (Lee & Shepard). They are reproduced, often on a diminished scale, by "process," which naturally does not improve them, but in the main they are vivid memorials of streets and buildings of many degrees of antiquity and curiosity. They are best justified when they are based on sketches by the author, and least when they attempt to translate prints (like Paul Revere's plate of Boston in 1768) so much better reproducible in facsimile. The few photographs intercalated with the etchings prove their superiority as historical documents when available. Mr. Blaney furnishes some account of each subject, with more or less particularity as to dates and authorities.

The art of etching seems to be wonderfully provocative of humbug. A few lines which, were they drawn on paper with pencil or pen, would escape comment, become invested with a wonderful interest when they are scratched on copper. Time was when Mr. Hamerton had to complain that the public knew nothing of etching; but that time is long past, and to-day an artist who fails as painter and draughtsman has but to publish his feebleness in several "states" to become a considerable personage. Something of this tendency to overrate the etcher is discoverable in Mr. Frederick Wedmore's 'Etching in England' (London: George Bell & Sons; New York: Macmillan), and the fifty process plates he gives us include reproductions of a good many things that are important only because they are etched. Of course this is by no means true of all of them, and, beside the work of recognized masters like Whistler and Haden, we have that of more than one true artist. Most interesting of all, perhaps, is the exquisite drypoint "Étude de Jeune Fille" by M. Paul Helleu, a gentleman whose work can only by a stretch of courtesy be included in a book on English etching, but an artist we are delighted to be made better acquainted with. Mr. Wedmore's writing has a ponderous slightness and a solemnity of disguised commonplace which go far to explain Mr. Whistler's mischievous baiting of one who is nevertheless a great admirer of that sprightly artist.

Mr. Pennell will not add to his reputation as a writer on art by his latest book on 'Modern Illustration' in the Ex-Libris Series (George Bell & Sons; New York: Macmillan). It is formless and inconclusive, and is marked by faults of style and taste, not to say of temper. An instance in point is the following: "I have done what I could to make a start; I only hope some one will carry it on; certainly I am sure some of my sincere flatterers will imitate me, as they always do." An invitation to carry on the work, coupled with the assurance that whoever does so will be called an imitator, can hardly be termed

cordial. The book is disappointing even in the matter of the selection of characteristic illustrations and their reproduction, in which matter we might expect to find Mr. Pennell at his best. We hope some one may take him at his word, and risk his displeasure by producing a better book on the subject.

Henri Beyle's 'Chartreuse de Parme' has just been made accessible to those who cannot read French, in an excellent translation in three volumes by E. P. Robins (New York: George H. Richmond & Co.). The publishers have accompanied the beautifully printed text with thirty-five illustrations by V. Foulquier, etched by G. Mercier. Of the tale itself, which is concerned with the intriguing life of a petty Italian court during the days that succeeded the overthrow of Napoleon, nothing need be said here. There are some who consider the 'Chartreuse de Parme' the greatest romance ever written in the French language, but they will always form a minority. Philistines—and admirers of Beyle are particularly apt to dub those who do not agree with them Philistines—may be referred, perhaps with some chance of converting them, to the passage in which Fabrice's experiences of the battle of Waterloo are described, and which deserves to be compared with the better known chapters in Thackeray's 'Vanity Fair' and in Victor Hugo's 'Les Misérables,' dealing with the same famous battle from a not altogether dissimilar point of view.

'Old World Japan: Legends of the Land of the Gods,' by Frank Rinder (London: George Allen; New York: Macmillan), contains twenty stories from the wonder-lore of the people of that country. The illustrations, which are by far the best part of the handsome book, are by T. H. Robinson. This artist has excellently preserved the essential features of the Far-Oriental legends, while yet blending the methods of both Japanese and European art. The stories are too short to contain the important elements of the Japanese originals, and some of the author's foreign additions mar their beauty and simplicity. In the descent of Izanagi into the "shadowy kingdom," for example, we read in these English pages that "Sounds as of lost souls struck his ear," etc.—all of which is decidedly un-Japanese. Only here and there can it be said that Mr. Rinder has improved upon the versions of Mitford, Chamberlain, Hearn, and Brauns. He says in his preface: "The sources from which I have drawn are too numerous to particularize." This, however, does not excuse the transfer out of Griffis's 'Japanese Fairy World' of two whole stories, and numerous hints and suggestions in other 'Old World Japan' legends. "Rai-Taro, the Sun of the Thunder-God" and "Princess Fire-Fly" not only were first printed in 'Japanese Fairy World,' but exist in no Japanese text, having been spun out of the author's own brain. Possibly "The Star Lovers" and "The Moon Maiden" in this volume might have been cast in their present form without consulting Mr. Griffis's book, but it is not at all likely. Yet there is no hint in the volume as to Mr. Rinder's indebtedness to the American author.

In 'Modern Battles of Trenton,' a history of New Jersey's politics and legislation from the year 1868 to the year 1894 (Trenton: J. L. Murphy), Mr. William Edgar Sackett conveys, in a sketchy and press-gallery style, a great deal of valuable political information. To no more compact and trustworthy source should we be able to send any one ignorant of the vital part played in New Jersey politics by railroad and water-front legislation, or of the way rival "rings" in either party have successively risen and fallen. Mr. Sackett's records of legislative votes, senatorial contests, and nominating conventions make his book of especial value for office reference.

Harper's Round Table (of the title-page, *Harper's Young People* of the running-title) for 1895 opens with a serial story, "Afloat with the Flag," and there is no lack of militarism between the two covers. Not only are such eminent Jingoists as Messrs. Lodge and Roosevelt among the contributors—the latter supplying a number of battle sketches—but a boys' company of Knickerbocker Grays is pictured, and the lady who furnishes the text prefixes the Jingo motto, "In time of peace, prepare for war." The climax is reached in a fictitious account of the bombardment of the Golden Gate—unless we find it in a portrait gallery of the officers of the infant National Society of Children of the American Revolution! The semi adult audience chiefly addressed is, however, treated to serious articles by Professors Shaler and Davis on the earth, moon, and stars, by Mr. Gibson on mushrooms, by Mr. Maxim on his flying-machine, etc., etc. A weekly bicycle route in the vicinity of New York has been a useful feature of the volume. Some colored cuts in the text are noticeable, and, as usual, Mr. Peter Newell's drollery of the pencil surpasses all.

No authentic portrait of Joan of Arc has up to the present time been known in France, all the representations of her being of a much later date than the epoch at which she lived. But the *Débats* of November 22 calls attention to the statement of a German pastor, Herr Gatrio, to the effect that there exist in Alsace two miniatures which reproduce the features of Joan, and which are very probably the work of a contemporary artist. The first represents the Pucelle in armor going into battle. She has helmet and cuirass on, and carries a banner on which is represented God the Father holding in his hand the terrestrial globe. The second miniature represents the same figure, save that Joan wears no helmet: her long locks float freely over her shoulders, and her head is encircled by the aureole of a saint. These miniatures are found in the collection of M. Georges Spetz at Isenheim.

In the last fascicule of the *Congo Belge*, M. A. J. Wauters tells the story of the singular discovery of a Flemish picture in the heart of Africa. It is a little panel, about eleven by thirteen inches in size, representing Christ, dressed in a red robe, in the act of giving a benediction. The figure shows against a green background. It appears that this picture was found in the palace of King Theodore at Magdala at the time when the English expedition to Abyssinia captured that town—that is, on April 13, 1868. One naturally wonders what curious chance should have carried a Flemish religious picture, dating from the first years of the sixteenth century, into the wild country around the sources of the Blue Nile. M. Wauters, in explanation, recalls the fact that the first embassy sent by the King of Portugal to the Christian ruler of Abyssinia was in the year 1520. It seems not unlikely that this object of devotion was among the presents then sent from Europe. M. Wauters suggests that it was meant for an altar picture. At first thought it seems, at least according to Western notions, somewhat small for this use, but it is of about the same size as the icons which are offered for the veneration of the faithful at the time of Mass in some of the Oriental churches.

Messrs. Alinari Bros. of Florence have completed their labors at Venice by the publication of their photographs of the mosaics in St. Mark's and the pictures in the Layard Collection. The mosaics should have special interest for Americans at present. The rage for elaborate and expensive decoration seems to have set in strong, and buildings almost beyond reproach architecturally are in danger of being spoiled artistically by paintings that may be pictures, but are not certainly fine decorations. Let our architects and library committees procure complete sets of photographs after the mosaics at St. Mark's, and note how they lose in value as decoration in proportion as they gain in pictorial skill. The earliest emaciated Byzantine figures, which, from the point of view of painting, have no existence to speak of, are essentially decorative, because they enhance the functions of the structure by calling our attention to the vital elements of the building. As the mosaics become more and more elaborate, gaining in arrangement, in spacing, in everything that would make them fine pictures, they become gross impertinences in the interior of the church; having, in fact, no closer connection with the building they disfigure than stick-fast can supply. The *facilis descensus* begins with the mosaics for which the elder Michele Giambono gave the cartoons.

L. Prang & Co., Boston, send us a great variety of calendars for the year 1896 in their excellent style of color printing, some in sheets knotted together with silk ribbon, some on single or folded cards. Christmas cards accompany these, and more ribboned booklets—of verse ornamented with violets or sweet peas, and "Six British Authors," all poets, showing on one sheet the man, a selection from his verse, and perhaps his home.

—In the December *Harper's*, Mr. Howells, in his farce, "A Previous Engagement," again employs is familiar method of occasionally opening up to the reader, through the bewilderingly intricate mazes of his dialogue, clear perceptions of the true values of his characters, imitating thus the actual trick of life, which can safely be depended on to now and then expose meanings that words have cleverly served the purpose of concealing. Richard Harding Davis and Caspar W. Whitney each supply, in a different way, an element of the healthy sensationalism that is founded on reality; the former by making known with an enthusiasm that is contagious the generally unsuspected attractions, natural and civil, of Carácas as a fresh place of resort for the unresting tourist; the latter in the spirit of adventure that animates this first part of "On Snow-Shoes to the Barren Grounds," a region which, though not to be recommended to the tourist at large, promises to yield a narrative full of excitement and novelty. Parallel to this last article in agreeable directness of narration is the one entitled "Wild Beasts as They Live," which, in *Scribner's*, also goes to correct the impression that nerve is not a product of the century. Here the illustrations, admirably reproduced from the etchings of Evert Van Muyden, and the text, which is by Capt. C. J. Melliss of the Bombay Infantry, are each of sufficient excellence to exist independently of the other, though their combination has brought out and intensified the best qualities of both. Another article, due to the pictorial and literary collaboration of Oliver Herford and Brander Matthews, gives scant room for hope that in partnerships of this kind joint weakness can be relied on to produce strength. Mr. Matthews employs—under a new name, "The Kinetoscope of Time"—the old device

of putting into word pictures his visions, or dreams, of scenes that are among the household words of literature the world over. The experiment of superimposing the text upon full-page outline illustrations, or of interlacing the text through them, although in vogue at the moment among some French draughtsmen of originality and talent, is one that always has the primary merits of clearness and legibility in the scales against it. Here the scales incline in favor of the primitive virtues. While even Dr. Van Dyke's admirers will be inclined to deny the complete success of his experiment in *Scribner's* in the line of ghostly fiction, those whose taste leans to detective stories will find in "The River Syndicate," by Charles E. Carryl, a capital tale of Scotland Yard and its personnel.

—A Christmas air is imparted to the *Century* by accounts of last summer's Passion Play at Vorder-Thiersee in Tyrol, and of Tissot's "Life of Christ." The illustrations to the latter are profuse. The two performances, of the peasants and of the artist, who is an Oriental traveller, are at the opposite extremes of sophistication; but of neither does the account rise above the level which, though it is painstaking, editors unfortunately are confirmed in finding good enough for magazine readers. A Christmas story by Frank R. Stockton has the requisite merry note, and contains its complement of the writer's humorous inventions and oddities. Another story by Rudyard Kipling, of which part of the action takes place in dreams, will inevitably invite comparison with 'Peter Ibbetson,' after which the most favorable verdict likely to be found will be that there are here passages of Mr. Kipling's individual charm. Mr. Riis's account of the farm-school experiment in Westchester County will be of interest to all students of social problems; and a paper describing a pleasant phase of Lincoln's character, from autograph notes of his own, relating to prisoners of war, should not be overlooked. But variety of topic rather than eminence in any is the pervading characteristic of this issue of the *Century*.

—The *Atlantic* again this month seems to give a basis for the optimistic conclusion that quality and not selling power may be the reason of a magazine's existence. Between John Fiske's "Starving Time in Old Virginia," "The End of the *Terror*," by Robert Wilson, and "The Defeat of the Spanish Armada," by W. F. Tilton, there is a certain nexus in picturing to the mind the manner of men our forefathers were, and what were their prowess and endurance during the century and a half in which they respectively conquered a new soil, exterminated piracy in New World waters, and drove an invading enemy from their shores in the Old World. A full nautical vocabulary at his fingers' ends will greatly add to the reader's appreciation of both the last, but in particular of the second of these papers, which recalls the style of Stevenson when dealing with similar themes, and which aims to supply the lack of a complete and accurate picture of the battles that preceded the flight of the Armada into the North Sea. Of lighter nature is Harriet Lewis Bradley's "Dorothy." This charming little paper is neither story, essay, nor sketch of travel, but contains a mingling of the attractions of all. Both Florence and Venice contribute a share in making the delicately drawn portrait of a child a small poem in prose. "A New England Woodpile," by Rowland E. Robinson, is another paper that faithfully and pleasantly presents the poetry and sentiment of its subject.

—It is difficult to say in two words what it is that makes a book of travels "old-fashioned," with that oldness of fashion that is uninteresting; but perhaps it is not cant to suggest that it is a want of sincerity. A book—and especially a book of travels—that is not spontaneous, that is written because the author, already famous, wishes to utilize his fame, is, of necessity, a lifeless book, and consequently a dull book, and therefore a book to be suppressed, not to be translated. Mr. Nathan Haskell Dole has not passed this judgment on Victor Hugo's 'Letters to his Wife,' and he has found a publisher (Boston: Estes & Lauriat) to print his translation. A translator is at least expected not to add to the difficulties of his author, but on p. 267 there is this note of three lines which occasions three questions: "I presume Victor Hugo meant this couplet, quoted in Littré:

> 'A ces mots il saisit un vieux infortiat
> Grossi des visions d'accurse et d'alciat.'"

(1.) Why remark that this is "quoted in Littré" rather than that its source is Boileau's 'Lutrin' (chant 5)? (2.) Why not translate the unusual word "infortiat"? (3.) Why print the names of two distinguished jurists of the thirteenth and sixteenth centuries, Accurse and Alciat, without capitals?—The title of this volume is entirely misleading. Its contents are 300 octavo pages of notes of travel in the Alps in 1839, in the Pyrenees in 1843. Of these 300 pages, 70 are nominally addressed to Victor Hugo's wife, in which there are, in different passages, exactly thirty "domestic" lines which would give the reader this information from within. All the rest (even of his letters to her) is addressed to the public—and the garrulousness of the great man in his note-books is surprising! These notes are advertised as not being included in any edition of Victor Hugo's works. We are left in the dark as to what this means. Mr. Dole should have stated if the book has appeared in France, and when.

—Francesco Bertolini, professor of history in the University of Bologna, has recently printed 'Letture Popolari di Storia del Risorgimento Italiano' (Milan: Hoepli), which treats in the form of popular lectures the chief topics in the making of Italy from 1814 to 1870. He gives also some interesting details concerning minor actors in the great drama, men like Zambeccari, Masina, and the Bronzetti brothers, whom the formal historians pass over with slight notice. The most important suggestion in the book, however, refers to Cavour's famous formula, "A free Church in a free State." This has usually been interpreted to mean that all reciprocally hampering bonds between Church and State should be abolished, and that the Church should pursue its spiritual mission without interference from the State. Prof. Bertolini argues that by "free" Cavour implied that the Catholic Church itself should be reformed, that the growth of papal and dogmatic restraints which have been imposed on its adherents should be abolished, and that liberty of conscience should prevail. Our purpose in this note is neither to accept nor reject Prof. Bertolini's conclusions—for that would require a careful examination of his arguments—but to call attention to his theory as indicative of the drift of opinion among Italian Liberals to-day. Such a theory may also be regarded as an answer to the extreme Clericals, who have, on the surface at least, become more aggressive during the last few years. Their recent attempt to regain control of popular education shows, for instance, that they believe public opinion more favorable to them than it was ten years ago. In point of fact, nine-tenths of the educated opinion in Italy is uncompromisingly opposed to any reaction; and when so eminent a professor as Signor Bertolini teaches his students at Bologna, and, through the publication of his lectures, teaches a wider circle of readers, that Cavour's principle means not only that the Church should be allowed to fulfil her spiritual duties untrammelled by the State, but also that the Church should reform herself according to the model of early Christianity, we have a noteworthy example of the attitude of Liberals towards recrudescent Clericalism.

—The Western churches have found the difficulties of missionary work among Mohammedans so great and the results so excessively small that they have almost ceased to labor among them. This failure has been generally ascribed to the peculiar rigidity and strength of Moslem religious tenets and to the penalty attached to conversion in most Mohammedan countries. Recent successful work among the Mohammedan Tartars of Southeastern Russia would seem to indicate that the failure might be largely due to the inability of the Western mind to understand and influence the mind of the follower of the Prophet. The centre and starting-point of all mission work in Eastern Europe and Asiatic Russia is the University of Kazan. Connected with it is a seminary for the preparation of missionaries to the Mohammedans and of native Tartars for the priesthood, and a school in which Tartar boys and girls are educated to be teachers. The head of this school is a professor of the Tartar languages in the University, and is himself a Tartar and a convert. The extent of the work may be realized from the fact that the seminary has sent out sixty-five native priests, and all the teachers are provided for one hundred and fifty schools. In a description of a recent journey in the Province of Kazan, Mr. W. J. Birkbeck, from whose account in the *Guardian* we have taken these facts, says that in one village where, thirty years ago, there were no native Christians, he found a church with 350 members and a school with 92 pupils. In another village all but two families had become Christians. Notwithstanding this successful propagandism, the Moslems and Christians live in perfect amity; the *mir*, or village governing body, frequently containing men of both religions. It should be added that the Government has no connection with the work, which springs entirely from spontaneous individual effort, the mission being one of the results of the awakening of Russia after the Crimean war.

RECENT POETRY.

THE almost simultaneous publication of new volumes by Eric Mackay, Alfred Austin, and Sir Edwin Arnold suggests the perhaps irreverent thought that the Laureateship is still open; and that a boom, so to speak, for any of these three candidates is at any time in order. Their claims all seem so slight that the mere consideration of either would suggest one of the very best of the *Punch* pictures, that in which the Queen, being in need of a new footman, anxiously inspects the dapper little figure of Earl Russell, eager and alert, in a page's buttons, with the doubtful conclusion, "I'm

afraid you are not large enough for the place, John!" No such doubt haunts the minds of these candidates, least of all Mr. Mackay, who, in his 'A Song of the Sea, and Other Poems' (Chicago: Stone & Kimball), flings out half-a-dozen full-fledged Occasional Odes, making the most of all recent events—each ode more turgid and sonorous than the other—as a sort of foretaste of what might be expected of him. Surely it would not be easy to outstrip a candidate who could extract the picturesque on this scale from that not very eminent personage the Duke of York, on his marriage (p. 109):

"The Captain of the Comrades of the Flag,
A captain of such fame
As should be talked of on the loftiest crag
Of proud and prompt ambition, as of yore,
For there's no heart that's English to the core
But loves him well and beats for joy of him;
And youthful eyes grow dim
As men rehearse the perils he has passed,
When, out upon the tearing, shudd'ring blast,
He has fulfilled new duties, not set down,
But done for pride of Country and of Crown!"

While Mr. Mackay thus elevates into sublimity the rather commonplace function of going to sea, Sir Edwin Arnold chooses rather to bring home the fruits of many voyages, and to test the literatures of many tongues. In 'The Tenth Muse, and Other Poems' (Longmans) the tenth muse is the Press; but the rest of the volume is given mainly to translations from the Persian, the Japanese, and so on. Then he cruelly checkmates Mr. Mackay's Duke of York poem by dedicating his book to the Duchess of York, inserting eight lines written in her album, and throwing in a longer poem written "by request of H. R. H. the Princess Beatrice." But Mr. Alfred Austin, the candidate now most conspicuously before the public, has a method still different from either of these—that of striking a wholly new and most fortunate vein. Dr. Johnson said of the traveller Jonas Hanway, who had written a successful book, followed by an unsuccessful one, that he had made a reputation by travelling abroad and then lost it by travelling at home. Mr. Austin has reversed this; and, after writing eight or more volumes of poetry so mediocre that they have not attained the small honor of an American reprint, he has now achieved, in 'Veronica's Garden' (Macmillan), a prose book, only here and there interspersed with verse, and giving us the very freshness and fragrance of an old-fashioned English garden. It has, moreover, a series of illustrations so charming that they would redeem a poorer book. Decidedly we give our vote for Mr. Austin as Laureate—at least if he will pledge himself to put his prose into prose hereafter, and not to present it in the form of verse.

Mr. William B. Yeats is perhaps the most interesting figure in English contemporary poetry, as he, with his following—Lionel Johnson, Katharine Tynan Hinkson, and the like—afford, with their Celtic fantasy and purity, the best antidote to that now besmirched Oscar Wilde spirit which still asserts itself sometimes in the 'Yellow Book' and even in the "Rhymers' Club." His new volume of Poems (London: Unwin) includes most of what was contained in the volume, 'The Wanderings of Oisin,' published in 1889, and some other fragments; but the name of the wanderer is now given as Usheen. There are also included his two exquisite fairy dramas, "The Countess Cathleen" and "The Land of Heart's Desire," productions so fanciful and so plaintive that they seem to create a world of their own. Aubrey de Vere and Sir Samuel Ferguson had already opened the doors of the old Irish literature, and its charm is such that it makes the visitor to Dublin University Library look with envy on its great roomful of untranslated Erse books. The rough and grim Norse legends look almost brutal beside these flowers of fable. Mr. Yeats does not explain why he omits from this collection some of his charming verses from the 'Rhymers' Book' (second series) about those people of the air who seem to have given him the freedom of the city. To him Ireland is "a Druid land, a Druid tune," and the simplicity of its old-time peasant life, the quaint kindliness of its old priests, have an ever-new existence. Some of his very songs are half folk-songs; thus, the following (p. 267) was called originally "An Old Song Resung," and was founded on three lines sung by an old woman in Sligo. "Salley" means "willow."

DOWN BY THE SALLEY GARDENS.

Down by the salley gardens my love and I did meet;
She passed the salley gardens with little snow-white feet.
She bid me take love easy, as the leaves grow on the tree;
But I, being young and foolish, with her would not agree.

In a field by the river my love and I did stand,
And on my leaning shoulder she laid her snow-white hand.
She bid me take life easy, as the grass grows on the weirs;
But I was young and foolish, and now am full of tears.

A wholly new edition of 'Skeleton Leaves' has appeared (Longmans), with a preface from which it appears that the author's real name is not, as heretofore announced, Frank Leyton, but Hedley Peek. We have heretofore noticed this volume, and now note with a certain reverence the statement in the preface that the author has read with attention more than a hundred reviews of his book "from all parts of the English-speaking world" and has carefully weighed them all. Another reappearance is that of 'The Magic House, and Other Poems,' by Duncan C. Scott (Boston: Copeland & Day), who is on the whole the best of the new brood of Canadian poets; but it is new only in the title-page, on which the former place of publication was Ottawa. It certainly looks a little like "annexation," in literature at least, when Mr. Scott removes his publication office to Boston, and Mr. Roberts and Mr. Lampman their residence to the United States. But they have all derived a certain flavor of mountain and salt air from Blomidon and Grand Pré which they will retain, it is to be hoped, when transplanted.

The Rev. H. C. Beeching adds another to the library of Christmas selections under the name of 'Christmas Verse' (London: Methuen). To those not surfeited with Walter Crane's mannerisms, it will be a recommendation that this artist illustrates the book. Of the collection it is difficult for the critic to think quite so well as the editor does, and it would be impossible to think much better, judging by his preface. The Christmas compiler who discards "God rest ye, merry gentlemen," as inappropriate, and Domett's noble hymn, "It was the Calm and Silent Night," as forgotten (p. ix), may naturally be found complimenting Drummond of Hawthornden in the notes as being "the Lord De Tabley of the seventeenth century" (p. 171). The remark forcibly suggests that rustic critic who observed to the late Edwin P. Whipple that, as he looked at it, "Go-ethe was the N. P. Willis of Germany." It is fair to say, however, that Mr. Beeching has gleaned a few new pieces not included in the better compilation of a previous year, 'Carols and Poems,' by Mr. A. H. Bullen.

Mr. Ernest Rhys's edition of 'The Lyrical Poems of Sir Philip Sidney' (London: Dent; New York: Macmillan) is not to be compared in attractiveness or in annotation to Mr. Pollard's edition (1888) of the 'Astrophel and Stella' series of poems; and as these comprise more than half the book, the consideration is of some importance. But he adds also the scattered poems from the 'Arcadia' and others from various quarters; and this, with the compactness and cheapness of the little volume, must justify its existence. Mr. Ernest Chambers has achieved a more difficult editorial task in his admirable volume of 'English Pastorals' (Scribners), with a preface which really adds to our thought and knowledge on the subject.

It is perhaps unfortunate that in Mrs. Annie Field's new volume, 'The Singing Shepherd, and Other Poems' (Houghton, Mifflin & Co.), she unconsciously borrowed for herself the title assumed by the young Australian poet, Miss Eleanor Montgomery. But it is the only thing about the book which is not felicitous, and it stands as the fit, crowning memorial of an eminently gracious and beneficent life. Ever since, during the civil war, she struck its poetic note more finely and sensitively than any one else in 'The Future Summer,' she has produced at intervals a series of poems more marked than those of any other American woman by evenness of texture and elevation of tone. Mrs. Moulton alone equals her in habitual execution, but is shallower in thought and emotion; Helen Jackson and Emily Dickinson are beyond her in passion and originality, but the former of these was often uneven in execution, and the latter had no conception of any such quality as evenness. In this little volume alone we have page after page of calm thought, always fitly clothed, and almost never disappointing. Few women in America have been brought personally in contact with so many fine minds—through her life-long hospitality to the cultivated men and women of two hemispheres—and yet there is no trace here of the undue influence of any one of these; the personal note being just the same as it was thirty years ago, only attuned to a finer expression as the years go on. We take one extract to show the fearless elevation of her thought (p. 60):

ON WAKING FROM A DREAMLESS SLEEP.

I waked: the sun was in the sky,
The face of heaven was fair;
The silence all about me lay
Of morning in the air.

I said, Where hast thou been, my soul,
Since the moon set in the west?
I know not where thy feet have trod,
Nor what has been thy quest.

Where wast thou when Orion past
Below the dark blue sea?
His glittering, silent stars are gone,
Didst follow them for me?

Where wast thou in that awful hour
When first the night wind heard
The faint breath of the coming dawn
And fled before the word?

Where hast thou been, my spirit,
Since the long wave on the shore
Tenderly rocked my sense asleep
And I heard thee no more?

My limbs like breathing marble
Have lain in the warm down;
No heavenly chant, no earthly care
Have stirred a smile or frown.

I wake: thy kiss is on my lips:
Thou art my day, my sun!
But where, O spirit, where wast thou
While the sands of night have run?

Miss Gertrude Hall's translation of 'Poems of Paul Verlaine' (Chicago: Stone & Kimball, "Green Tree Library") is an unusually good piece of work. Verlaine is the most conspicuous figure among the later French poets, and though his personal traits are not in all respects pleasing, he has brought a new element of melody into French verse as distinctly as Swinburne did into English. Both of them may "trench more than needs on the nauseous," in Browning's phrase; but their contributions, apart from that, are not to be ignored. Verlaine's feeling for nature is far be-

yond the customary conventionalism of French verse; and though his sentiment is usually sentimentality, and of that short-lived quality which recalls the *mot* current, even in Diderot's day, that the Methusaleh among Paris love-affairs died at six days old, yet Miss Hall has bravely ignored this, and even the sentiment seems almost genuine in her hands. She has not yet mastered the art, which almost died with Longfellow, of making a version literal and graceful at the same time. For instance, in the "Colloque Sentimental" she says (p. 13):

"In the deserted park, silent and vast,
Erewhile two shadowy glimmering figures passed.
Their lips were colorless, and dead their eyes;
Their words were scarce more audible than sighs."

But see how much simpler and brighter are the successive touches in the original:

"Dans le vieux parc solitaire, glacé,
Deux formes ont tout à l'heure passé.
Leurs yeux sont morts et leurs lèvres sont molles,
Et l'on entend à peine leurs paroles."

Not that the translation, for a rhymed one, is not passable, but how many phrases and images enter into it, beyond the Dantesque directness of the original! Most of the poems translated by Miss Hall may be found in Carrière's 'Choix de Poésies' of this author; while even that contains some which she has discreetly avoided, and which might well, combined with his sentimentality, have led to the application to Verlaine of the phrase given in his day to Rétif de la Bretonne—*le Rousseau du ruisseau*. It was all the more needful to rescue the best of this soiled man of genius from his worst, and Miss Hall has done it with rare grace and expression.

It seems quite superfluous to complain of the decline of this nation—or even of the city of Boston—in poetry, when Boston still holds a poet who, like Aldrich, has only to stretch his fingers carelessly through his volumes already printed and bring forth a cluster of pearls like his 'Later Lyrics' (Houghton, Mifflin & Co.). Who else is there living—and how many dead—who has attained such perfection, not in *vers de société* alone, but in fine and terse utterance? No single poem here can claim to equal Aldrich's noble "Fredericksburg" sonnet, but this comes very near it—the tragedy, not of a nation, but of a soul (p. 68):

ANDROMEDA.

The smooth-worn coin and threadbare classic phrase
Of Grecian myths that did beguile my youth,
Beguile me not as in the olden days:
I think more grief and beauty dwell with truth.
Andromeda, in fetters by the sea,
Star-pale with anguish till young Perseus came,
Less moves me with her suffering than she,
The slim girl figure fettered to dark shames
That nightly haunts the park there, like a shade,
Trailing her wretchedness from street to street.
See where she passes—neither wife nor maid.
How all mere fiction crumbles at her feet!
Here is woe's self, and not the mask of woe;
A legend's shadow shall not move you so!

This seems to us incomparably finer and more powerful, we must own, than the cruder tragedies of Mr. Howells's poems, which have not equally passed through the alembic of the muse, and hence seem not merely more distasteful but less effective. It is hard to say what inherited quality, or what doom of early theology, was upon him when he wrote the series of painful pictures which fill the misnamed pages of 'Stops of Various Quills' (Harpers)—misnamed, because they offer only a monotone of sadness. Rejoicing in the enlarged human interest which has done so much for his fiction, we can only mark with pain the morbidness which the same influence seems to have laid upon his verse. Men of all ways of thinking in this age are generally agreeing that all is not dark, that there is light somewhere; but in Mr. Howells's poetic pages there is none—neither the hope of religion nor the cheerfulness of agnosticism lights them up. Even the genial Mr. Pyle, in his illustrations, lavishes "Melancholia" or "Janua Mortis" on page after page, and sometimes makes even his skeletons grotesque, as where (over poem xv.) one is running and fiddling in pursuit of a plump little boy who is running away and visibly roaring. This occasionally ludicrous effect is the only relief from the more than sombreness of the book, which may easily cast a shadow over the whole lives of many impressible young people who happen to receive it for a Christmas present.

When a man who has been modestly writing patriotic and domestic verses all his life abstains until he is nearly eighty from publishing a volume, he is to be praised at least for the abstinence and congratulated on his life's fulfilment. Mr. Henry Stevenson Washburn's 'The Vacant Chair, and Other Poems' (Silver, Burdett & Co) contains at least one piece, the title poem, which had a wider circulation during the war than its purely poetic merits would justify. In this he was only linked with another author of much wider fame, the Rev. S. F. Smith, D.D., whose thick volume of quite mediocre poetry, 'Poems of Home and Country and Sacred and Miscellaneous Verse' (Silver, Burdett & Co) makes the reader wonder more than ever how fame is won. The immense popularity of "My Country, 'tis of Thee" was grudged by no one to the kindly author who lived long enough to reap his reward of fame almost in one harvesting; yet it is impossible to find the secret of its success in the poem itself. But, as the French saying is, it is not enough to be a great man; one must come *à propos*. Dr. Smith's brief fragment of autobiography and General Carrington's sketch of him are of real value, as showing a simple, wholesome, and stainless life prolonged in years and reaching its fit climax at last. It is pleasant, in our complex and changing civilization, to think that such lives can yet be lived.

Mr. Nathan Haskell Dole, who has made himself known in various ways as translator and editor, now issues a small volume of various poems under the name of 'The Hawthorn Tree' (Crowell). Without marked or varied originality, they have an agreeable flavor of cultivation, and the very titles and mottoes are suggestive of choice lore. From his favorite Russian literature he draws this pretty fancy (p. 109):

"O'er the yellow crocus on the lawn
Floats a light white butterfly.
Breezes waft it! See, 'tis gone!
Dushka, little soul, when didst thou die?"

'Poets' Dogs,' collected and arranged by Elizabeth Richardson (Putnams), is a delightfully miscellaneous compilation of poetry about dogs, ranging from Homer and Virgil to Gilder's fine poem of 'Leo.' The plan is well executed, and is so good in itself that one wonders why it never was tried before—if it never has been. 'In Camphor' (Putnams) would be stronger if concentrated into one or two poems. A monotone of grief, however simple and tender, forfeits its effect upon the mind.

Mr. Alfred C. Eastman issues a collection, 'Poems of the Fair' (Boston: Lee & Shepard), whose conception is excellent and its selection good; and while the illustrations (his own) are of a somewhat rough and-ready description, the showy book may well lie on many a farmhouse table and give pleasure. Mr. James Jeffrey Roche, who has succeeded not merely to the editorship left vacant by Boyle O'Reilly, but to his remarkable gift of writing true American lays with an Irish quill, gives us some ringing and graphic 'Ballads of Blue Water' (Houghton, Mifflin & Co.).

Miss Ina Coolbrith, in her 'Songs from the Golden Gate' (Houghton, Mifflin & Co.), will retain her old readers from the *Overland Monthly* and many who have since known her well-modulated and sometimes unusual and suggestive verse; and Grace Denio Litchfield also issues a volume, 'Mimosa Leaves,' gracefully illustrated by Helen and Margaret Armstrong (Putnams).

Mrs. Elizabeth Stoddard, who is not merely a poet's wife, but in her own right a poet, issues her scattered Poems in a volume (Houghton, Mifflin & Co.) full of strong conception and vigorous expression, as are her novels, and, like them, sometimes over-condensed and almost always sombre. No one of these poems, perhaps, surpasses in execution her "Mercedes" (p. 90), which appeared many years ago in the *Atlantic Monthly*.

MERCEDES.

Under a sultry, yellow sky,
On the yellow sand I lie;
The crinkled vapors smite my brain,
I smoulder in a fiery pain.

Above the crags the condor flies,
He knows where the red gold lies;
He knows where the diamonds shine.
If I knew, would she be mine?

Mercedes in her hammock swings;
In her court a palm-tree flings
Its slender shadow on the ground.
The fountain falls with silver sound.

Her lips are like this cactus cup;
With my hand I crush it up,
I tear its flaming leaves apart;
Would that I could tear her heart!

Last night a man was at her gate,
In the hedge I lay in wait:
I saw Mercedes meet him there,
By the fireflies in her hair.

I waited till the break of day;
Then I rose and stole away,
But left my dagger in the gate,
Now she knows her lover's fate!

AN ESSAY ON TRUSTS.

Trusts; or, Industrial Combinations and Coalitions in the United States. By Ernst von Halle. Macmillan & Co. 1895.

THE author of this hand-book was requested in 1893, by the Verein für Social-Politik, to make a report on industrial combinations in the United States, and the present volume is one of the results of his report. One is not a mere translation of the other; a great deal of the report has been omitted, and much has been rewritten and rearranged. The appendices contain a collection of valuable legal documents. It should be said that the author was in Chicago in 1893, and his essay shows not only a careful study of the subject, but a very considerable familiarity with the law and institutions, as well as the habits and manners of this country. It should be said, also, that the Verein für Social-Politik is, as its name implies, an organization formed for the purpose of investigating economic and legal questions as they concern society rather than the individual; the author evidently being one of that large number of people who have been infected with the idea that the old "individualistic" political economy is a thing of the past, and that we stand upon the threshold of a new era, in which we are to have a brand-new science, based on a broad view of what society at large wants, fears, and hopes. Whether Herr von Halle is still steadfast in the faith, however, we have grave doubts.

His report, carefully examined, amounts to this: That whatever Trusts may be, or whatever the future of Trusts may have in store for us, thus far they have not produced, nor have

they shown themselves capable of producing, any of the extraordinary economic effects which their enemies charged them with designing. Summed up in one word, the charge was that Trusts were designed to introduce monopolies; that is, they were to control the markets, to fix prices, and to enjoy as a result what revenues they pleased. Now, as a matter of fact, there is no evidence that they do control markets, they have not been able to regulate prices, and, so far from making what dividends they please, they seem to be able to do so no more than railroads—monsters against whom precisely the same charges were as persistently brought not so many years ago.

On the latter point the proof is overwhelming. At p. 81 is given a table showing the dividends paid by fifteen Trusts on their preferred and common stock; the organizations selected appear to be simply those best known and most assailed on account of their monopolistic tendencies. It may be assumed, therefore, that, to use the language of the late Mr. Gould, they did not go into business for "missionary" purposes, but are just as greedy and eager for dividends as any other corporations in this wicked, weary world. Strange to say, they seem to have had great difficulty in earning money. In these industrial organizations there are usually two classes of stock, common and preferred, besides some bonded indebtedness. As the money which must be provided for interest on the bonds, and to a certain extent the preferred stock, constitute a first charge, in order to get at the actual power to earn profits, whether legitimately, or by fixing prices, or controlling markets, or "squeezing" the public in any other way, we must look at the common stock. If common report, or Herr von Halle, is to be relied upon, the anticipations of those in control of these organizations must have been of wealth beyond the dreams of avarice. To the mind of Col. Mulberry Sellers, when he reflected that there are just twice as many eyes in the world as there are people in it, what a fortune there was in store for any one who controlled the patent for his invaluable eye-cure! How much more, then, for him who controls any one of the articles of prime necessity—sugar, cotton, leather, etc. If the astute men of business who organized the great Trusts believed, not a half but a hundredth part of what they were told about their own powers, they showed the most commendable moderation in over-capitalizing the stock of these fifteen concerns, as we are assured they did (p. 80), by from 200 to 500 per cent.

It was a brilliant dream, but the awakening has certainly been rude. Of the fifteen Trusts given, the first has paid no dividends whatever on its common stock; the second none since June, 1893; the fifth none; the seventh none since January, 1893; the ninth none since 1891; the tenth none since March, 1891; the eleventh none since April, 1893; the twelfth none since June, 1893; the thirteenth none since January, 1893; the fourteenth and fifteenth none whatever. Of the remainder, one has paid 2 per cent., one 10, and one 12. One (the Sugar Trust) has paid more, and we all know how. Now for monsters and octopi and Briareuses, it must be said that this is a pretty poor showing. It may, and very likely will, be said, that the explanation is that the officers have stolen all the money. But besides there being no proof of this (except in one or two cases where the extent of the dishonesty is pretty well known), it would prove altogether too much, for capital would no longer seek employment under such conditions. What the table really shows, and what the author himself seems to perceive, is, that the Trusts do not differ from corporations and other aggregations of capital, except in the fact that they are called by a different name; they neither fix prices, nor control markets, nor make what money they please, no matter how much they "overcapitalize" themselves; and, after a panic, they suffer in the same way that all other concerns do.

Most people, from hearing Trusts spoken of as gigantic combinations of capital, which, through their control of the markets of the world, threaten to swallow up everything else, have been led to think of them as overtopping all other corporations. In fact, they do not compare in importance with railroads. The bonded indebtedness of the fifteen concerns referred to above amounts (in round numbers) to $65,000,000, with common and preferred stock in proportion. Any one of a dozen "trunk lines" owes more. To compare such a corporation as the Pennsylvania Railroad or the Chicago, Burlington, and Quincy with the notorious Distilling and Cattle Feeding Co., with its beggarly $11,500,000 of debt and $35,000,000 of stock (we take the figures from the table), is to compare a giant with a pigmy. It is hardly necessary to say that, for the control of markets, a railroad has a power compared with which that of a Trust is mere impotence. It is between all "non-competing points" apparently complete master of the field. And yet railroad rates continually go down.

So do all prices. Herr von Halle has no proof to offer that the creation of Trusts has had any appreciable effect in putting prices up or keeping them up; but so far as he offers any evidence it is the other way. A table (p. 73) gives the price of crude and refined petroleum for twenty-four years. The price of the former has sunk with great steadiness from 9.19 in 1870 to 1.50 in 1893; of the latter from 26.35 in 1870 to 5.22 in 1893. Stranger still, a diagram of the prices of sugar for the last fourteen years shows a reasonably steady decline.

"Experience has taught, and probably will make it more and more apparent, that, in the long run, only those Trusts are successful which succeed in steadily cheapening and improving their product. Whenever they have raised prices unwisely, competition, allured by the prospect of great gains, has arisen at once to such an extent as to endanger the very existence of the undertaking. The Starch Trust has attempted for a while to keep prices unreasonably high, and, in consequence of the enormously increased competition, was at one time believed to be on the verge of ruin" (p. 70).

If it be asked why, unless to control prices, Trusts should be formed, the answer is, in order to reduce the expenses of management, and to avoid perpetual underselling for the purpose of gaining control of the market—in other words, ruinous competition. What has made them possible is the telegraph and telephone, and, so far as the consumer is concerned, they come into existence to aid in the process, so important to him, of cheapening production and steadying prices.

Of course, there is no convincing a true "anti-monopolist." But what is meant by a monopoly? A Trust certainly enjoys no legal powers that the companies of which it is composed did not enjoy before. The only difference is that it is a larger concern than any one or more of them. It has no right to prevent any competitor from entering the field and competing with it in production and sale. But this is what a true monopoly would be. The French Government has, for instance, a true monopoly of the sale of tobacco. No one can sell without its permission. When the Standard Oil Company obtains the right to prevent others from producing and selling oil, then it will be a monopoly. The notion of a Trust being a monopoly comes, in the last analysis, from the delusion that it controls prices. Of course, if it could fix a price so *low* as to crush any competitor who appeared, the result would be the same as if it had authority by law to prevent competition; and the argument apparently is that it first fixes prices as low as it pleases to crush out competition, and then as high as it pleases to make dividends. But the fact is that it does neither.

That there are great abuses connected with Trusts is not to be disputed, and of these some striking instances may be found in Herr von Halle's pages. But at the present moment the important question seems to be, as in the case of the anti-pooling railroad law, whether our anti-Trust legislation has not been wholly founded upon a delusion. Those who examine the facts and arguments presented by our author will probably conclude with him that the repeal of the present anti-Trust laws is desirable.

"Passed, as they were, merely for political purposes, even those politicians who sought by their passage to soothe popular feeling do not expect them to be complied with. And the multiplicity of laws of such a character is a great danger to the community. It explains to a large extent the astonishing immorality in politics and in the political thought of large classes. The necessity of circumventing so many laws because they prescribe things simply impossible, must in the long run undermine the sense of legality and respect for law" (p. 147).

As an instance of this sort of circumvention, the following is curious: One of the participants in a pool makes a contract with a mill in Maryland for the delivery of 300,000 tons of rails. This, however, is a mere form; it is not intended that the rails shall be delivered. The important clause in the contract is one which binds the purchaser to pay the seller (in case he does not take the rails) one dollar per ton as a penalty. No rails are made or delivered, but the purchaser refuses to receive any, pays the $300,000 penalty, and the mill goes out of business. Such, at least, is the transaction (p. 62) as we understand it.

RECENT FICTION.

The Amazing Marriage. By George Meredith. 2 vols. Scribners.

The Front Yard, and Other Italian Stories. By Constance Fenimore Woolson. Harper & Bros.

The Red Cockade: A Novel. By Stanley J. Weyman. Harper & Bros. 1895.

"STYLE," Mr. Meredith assures us, "is the mantle of greatness; and say that the greatness is beyond our reach, we may at least pray to have the mantle." But it is almost a Joseph's coat in which he has wrapped 'The Amazing Marriage.' A certain "Dame Gossip" of his has the reader's ear in the first three chapters, and a fine, loosely hung tongue she proves hers to be. Then Mr. Meredith abruptly claps an extinguisher upon her, and takes the floor in his own person, sparing of explanatory words though affluent in symbolic short cuts of speech. The obscurity and difficulty often charged upon his writing—cut down as many of his sentences are to the bareness of an algebraic formula—seem beside the mark to the present reviewer. True, you sometimes have to read a line twice to see ex-

actly what it means; but what other novelist would you read twice without feeling imposed upon—what other would you think it worth an effort to understand? Ideas make a crabbed style tolerable, and Mr. Meredith's are more numerous to the square inch than you often find in fiction. Far deadlier as a defect than his short-hand style is a certain whimsicality and grotesqueness of execution which marks and mars his latest novel. The "Dame" is for ever bursting in, and his struggles with her loquacity cease to be even amusing after a time, and from the first destroy all sense of artistic repose and finish. It is exasperating to run upon this grimacing just as some passage has almost persuaded you that Meredith was never greater.

As to the substance of his tale, he intimates at the end that his effort has been "to render events as consequent to your understanding as a piece of logic, through an exposure of character." But we are bound to agree with him in thinking this effort "vain." He elaborately provides a parentage for his Carinthia which has passion and reckless impulse for its dominant note, and then flouts heredity by making her a creature of cold tenacity and pulse never off the regular. Her brother is like unto her, and why the pleasure-loving Henrietta should have flung over the Earl of Fleetwood for his penniless self is explained only on the ground that he had a "splendid figure." Fleetwood himself seems a being made up of mutually and violently repellent qualities, though in the great crisis when he could not quite humble himself enough to win back his estranged wife, finding it easier to renounce wealth and rank and turn monk, he almost wears an air of humanity and consistency. His marriage is truly amazing, though not for the reasons intimated in the book—its suddenness and whim, that is, the grotesque circumstances of it, the wife's placid acquiescence in insult and abandonment. These things might have overcome us without our special wonder, but that a loveless union should have developed in the deserted wife an ideal worship of her husband which outlasted ill treatment of all kinds and endured every form of profligacy except tricking her brother out of a wager (this was what destroyed the last trace of wifely devotion); that Fleetwood himself should have come, too late, to love madly an unseen wife whom, seeing, he had loathed—this surely is amazing to the point of flat incredibility. Perhaps Mr. Meredith is most of all contemptuous of his reader's understanding, however, in his treatment of his young cynic and philosopher, Gower Woodseer. Brought early and ostentatiously under Carinthia's spell, only to cheat reasonable expectation, he is sent off cheerfully to marry a prize-fighter's buxom and tender-hearted leaving. He might at least have stopped making epigrams after that. Disappointed as we must feel, therefore, with 'The Amazing Marriage' as an "exposure of character," we yet cannot deny it that distinction of style, that lavishness in ideas—there are enough in these two volumes to equip a smaller novelist for life—and that constant striking at big game, which have given Mr. Meredith his place.

The volume of Italian tales by the late Miss Woolson displays her amiability and grace more abundantly than her stronger qualities. All the stories are about Americans long domiciled in Italy, pursuing art, society, and climate, and enjoying that idleness which is cheaper and less invidious in Europe than at home. They are easy-going, pleasant people, their national traits surviving exile, and their ridiculous or contemptible aspects so softened by the author's kindliness and humor that the absurd appears a little pathetic and the ignoble not altogether base. Only one incident, "Neptune's Shore," weighs heavily on the spirits. The tragic moment here comes too suddenly and harshly. It may be doubted whether the satisfactory portrayal of a man of Byronic moods came within Miss Woolson's scope; at all events, the sketch of John Ash strikes us as the least spontaneous and natural she ever made. Her competent grasp of American character and the American point of view is finely illustrated in the story of "The Front Yard." The incongruity between Prudence Wilkins of Ledham, New Hampshire, and the Guadagnis of Assisi is obviously provocative of laughter; any one might see the fun, but few are those who could observe so nicely and depict so truthfully the tearful side of Prudence's attitude towards the awful family imposed on her by marriage with the fascinating Tonio. Her lifelong toleration of the termagant grandmother, the disreputable uncle, the handsome, worthless stepchildren, and the accumulated dirt of centuries, is a touching example of Puritan principles triumphing over the world, the flesh, and a family of devils incarnate. The stories turning on social complications are more commonplace than "The Front Yard," yet in all of them we feel "the touch of a vanished hand" and hear "the sound of a voice that is still."

Every one who has read Mr. Stanley Weyman's books and followed his meteoric career as an historical novelist, must have felt morally certain that, sooner or later, he would write a novel or series of novels of which the scene would be laid in France during the period of the Revolution. Where Dumas and Dickens and scores of others have failed, Mr. Weyman has not succeeded. He has had the wisdom, indeed, in 'The Red Cockade,' to lay his scene in the French provinces during the early months of the Revolution, and not in Paris during the Reign of Terror; but this is not because he feels himself incompetent to deal with that difficult period, for he threatens, towards the end of 'The Red Cockade,' to carry the history of his characters further into the days when the guillotine bore sway. It need hardly be said that he treats the French Revolution after the usual conventional English fashion. He represents the peasants as a set of brutish and savage beasts, though it has been proved to demonstration by recent French writers that the French peasants were much better educated under the *ancien régime* than they were for the half century that succeeded the Revolution, while the haughty nobleman of fiction, striking people with his cane, defying the *canaille*, and dying at their hands, plays his usual part. As a novel, 'The Red Cockade' does not deserve criticism, but it may be worth while to point out at least one of its most glaring errors. A Protestant nobleman is introduced who declares (p. 266) that he is excluded from all office, that he cannot appear at court, and that in the eyes of the law he does not exist. Now the most cursory knowledge of French history would have shown Mr. Weyman that the French Protestants had been by no means badly treated during the reign of Louis XVI., and that full civil rights were granted to them by royal edict in 1787. But it is not so much in his actual facts as in the general tone of his novel that Mr. Weyman exhibits his ignorance of the history of the period with which he deals.

A Literary Pilgrimage among the Haunts of Famous British Authors. By Theodore F. Wolfe, M.D., Ph.D. Philadelphia: J. B. Lippincott Co. 1895.

Literary Shrines: The Haunts of Some Famous Americans. By Theodore F. Wolfe, M.D., Ph.D. Philadelphia: J. B. Lippincott Co.

Little Journeys to the Homes of Good Men and Great. By Elbert Hubbard. G. P. Putnam's Sons. 1895.

So far as the outward appearance of Mr. Wolfe's books is concerned, it is only their color which confesses their close relationship to the guide-book family, and this may be an accidental trait. They are as pretty specimens of book-making as one could wish to see. The method is not to take up an author and follow him topically through the successive stages of his life, but to go from place to place, and, emphasizing the associations of each in turn with the most celebrated person of its vicinity, then proceed to gather up the minor associations of the locality; consequently we find ourselves returning to one author after another time and time again. Dealing with literary celebrities, the books nevertheless fail of being literary productions. Their rhetoric inclines to that of the panoramic delineator, while the poets, and especially the poetesses, are too uniformly "sweet." But evidently the author has been a diligent traveller, and he has been to many places that are rich in literary associations. He depends, however, much more upon his reading than on his personal observation for his matter, and he interlards his sentences with a multitude of quoted words and phrases that make his style a kind of frosty stubble, possibly justified by the necessity thus laid upon us of hearing the celebrity speak for himself of his beloved haunts.

Sometimes the writer's own description, where we can check him, is infelicitous. "Sumptuous" is certainly not the right word for the home of the Sargents where the Boston Radical Club held its meetings. The geography of the coast of Massachusetts in the vicinity of Salem is not a little mixed (p. 139), and mention is made of Celia Thaxter's "gifted poet-brother" (p. 140), where the relationship was not so close. There is no attempt to make the emphasis proportionate to the celebrity of the personal subjects. No friend of Robert Collyer will object to the half-dozen pages accorded him in the Yorkshire chapter (in which Haworth's "pavement of rude stones" does not tally with our recollection of their precarious smoothness); but why should the mention of Bryant be merely casual, and, although so brief, incorrect in some particulars? The statement connecting "Thanatopsis" with Williamstown can hardly be made good, and Hampshire, not Berkshire, furnished the material of his happiest woodland inspirations. The statement about Lowell's grave is certainly open to the construction that his headstone bears the motto, "Good Night, Sweet Prince!" A few things of this sort which one stumbles on in the most casual reading, breed a fear of wider haste and carelessness; but much patient grubbing must have gone to the amassing of so many local and personal details, and the connection established between an author's work and his surroundings is often interesting.

Mr. Hubbard's 'Little Journeys' is very differently conceived from Mr. Wolfe's two volumes. Like those, it is extremely pleasant to the eye, but it touches only a dozen people of reputation where Mr. Wolfe's volumes deal with

as many score, and is much less specific in its descriptions of localities. Either Mr. Hubbard's acquaintance with them is as casual as that of the average tourist, or he is indifferent to them except as points of departure for his discursive comments. Once on the spot, he cares more for some incident, personal to himself, reflecting the provincial inappreciation of a world-wide fame, than for any physical details. Moreover, he is sparing of such facts as the encyclopædias furnish, preferring to give us something of his own. The quality of this is mixed, but, with much that is the overflow of mere animal spirits, there is much of happy characterization and genuine appreciation. The parallel between our ignorance of Shakspere and George Eliot is worse than silly, it is so recklessly untrue. And, however ignorant we may be of George Eliot's beginnings, Mr. Hubbard has done nothing to enlighten us. If anything can be gathered from his inarticulate statement, it is that she was born at Nuneaton, as she was not, and that she spent her childhood in the house where she was born, whereas in fact she left it for Griff House when she was but four months old, and at Griff House, of which Mr. Hubbard has not a word, she spent the first twenty-one years of her life.

For the sake of readers who will certainly be discouraged by the thinness of the initial sketch, it should be said that the others are much better. But Mr. Hubbard does not tell us from what private sources he got his impression of Mrs. Carlyle as a gentle, patient woman, content to be a worm beneath her husband's grinding heel. All the sources heretofore made public suggest a different opinion, and one entirely favorable to Mrs. Carlyle's ability to take care of herself in an interchange of domestic incivilities. The Ruskin paper has the advantage of reporting a visit to its hero, but at Hawarden Mr. Gladstone was not at home. All the other papers deal with people who are dead and gone, the last with Shakspere; its conclusion being a plea for a Shakspere monument in England, not for his glory, but for her honor.

This Goodly Frame, the Earth: Stray Impressions of Scenes, Incidents, and Persons in a Journey touching Japan, China, Egypt, Palestine, and Greece. By Francis Tiffany. Boston: Houghton, Mifflin & Co. 1895. Pp. 364.

THE word "touching" on Mr. Tiffany's title-page is appropriate in more than one sense. His motto, everywhere save in Japan, was "Touch and go." His days on Chinese ground were about five. He escaped the leading-strings in which personally conducted Innocents are led captive, except on the Nile, where Thomas Cook was sovereign, and yet he seldom got out of the rut worn by Cook's tourists. In fact, many of the wonders which these pilgrims often behold were beyond his tether. Such were the Inland Sea of Japan; Fateh-pur, that grander Pompeii; and all India south of Pondicherry; above all, ten days up the Yang-tse to Han-kow, and as many on horseback from Jerusalem to Damascus. When Mr. Tiffany bade adieu to Egypt he had already supped full of globe-trotting, and the hungry edge of his appetite was dulled. "Constantinople" figures as a heading in his table of contents, but he confesses that he did not go there at all. Though he did turn aside for a day at Baalbec, rain appears to have prevented his inspecting its quarry and Trilithon. To Greece, though it shows five titles in the list of topics, he said Hail!—and, in some five days, Farewell! But scarcely any world-circler has surpassed our traveller in discerning and describing the salient points in all the mighty maze through which he wandered at will. In gazing on the Taj Mahal, Sir Edwin Arnold overflowed with a no more superfusive rhapsody of words. The multitudinous flies settling undisturbed on a naked Egyptian infant he constrains to contribute to the interpretation of Egyptian character and history. In India he deduces a characteristic proof of predestination from a baby monkey clinging with all four hands to the belly of its acrobatic mother. Not a few such trifles are turned to account so cunningly that to us they are no longer trifles.

Not many pages can one read in these "Stray Impressions" before the Scriptural flavor and aroma betray a minister, and that one who understands better than most of his order, or of any order, how to use the best words of the best of books without abusing them. Ere long it is borne in upon the reader more and more that he has to do with a volume of sermons, if not in form yet in fact; and one that would have been published under that name, had not sermons, for obvious reasons, become a tainted word. Though the reader, like the present writer, live a thousand miles from Boston, he is sure that every experience of the minister abroad first turned out a song and then turned out a sermon. And he is glad of it: each exalts the other. The Scriptural illustrations and accommodations are pat and apposite. A faulty word now and then (as "*later* rain" for latter) should probably be laid to the printer's charge. This, however, is more than can be said of "vultures" for eagles (p. 317). Much less can such a defence be made—not even through appeal to the Revised Version—for the phrase, "Now lettest thou thy servant die," put into the mouth of Elijah (I. Kings xix, 4), which not only is a misquotation, but mars and even contradicts the meaning. But our preacher wrests a certain Moslem legend more than Scripture. That myth, as he gives it, holds that, "after their expulsion from the garden of Eden, Adam and Eve were penally transported to Ceylon" (p. 149). But, according to Moslem books, the orthodox view is that Adam only and alone was penally transported to Ceylon; that he built to the mainland the bridge which still bears his name, and went in search of his wife, who had been penally transported to Arabia, where she was found at the end of 200 years. (See Hughes, 'Moslem Dictionary.')

In supposing that, previous to the Cook invasion, all tourists ascended the Nile by dahabiyeh, our recent voyager is somewhat mistaken. Long before, when the Khedive bought a new steamer for the delectation of his harem, his habit was to present the old one to some minion. Such a vessel was offered to strangers for a voyage to the Cataract, and afforded the present writer, among others, nearly thirty years ago, much more comfort than he obtained in 1891 from the navy that Cook had built. At Jeypore an elephant belonging to the Maharajah was sent for Mr. Tiffany and his friend to ride up and down a mountain. This is dilated on as a mark of special favor, the crowning mercy in an *itinerarium ecstaticum*. But such elephants are as plentiful as blackberries. They are never refused to any Cook tourist. One was sent to the present writer, though he was not of that crowd. The mahout gets a rupee, his master gets glory, the elephant exercise, and the rider adds several cubits to his stature.

Modern travellers, affecting a sort of incognito, refuse to disclose the year of their peregrination. Nor is our author above this infirmity, but his chronicle at last proves a tell-tale. His adventures were after the locomotive had reached Jerusalem and before the Japanese invaded China; that is, he rounded the world during the last lustrum.

Impressions and Memories. By James Ashcroft Noble. London: Dent; New York: Putnams. 1895. 12mo, pp. 173.

MR. NOBLE, known to Americans as the author of an interesting, if not indispensable, book on the sonnet, has collected in a pretty volume various fugitive essays with a wide variety of titles. The introductory disquisition inveighs against the heresy of scientific criticism so called, and somewhat mistily extols criticism as "persuasion—the justification of impressions." So far as a solution of the familiar vexed question is concerned, the discussion does not much help us on. Mr. Noble's own Impressions, however, are distinctly readable, and are sometimes characterized by a quality which, unless too rudely examined, passes agreeably for subtlety. Thus, in fruitful vein the writer essays an elaboration of Hawthorne's paradox that a selfish person may be lovable. Later there is a suggestive scrap about the relation of music and form—with never a word, however, concerning the symbolists or the apposite speculations of various musicians. Elsewhere we have a blithe contention that the hypocrites of fiction—the Pecksniffs and Blifils—are monsters unknown in real life; that Bulstrode is your real hypocrite—a man under the sway of a double set of impulses, which by sophisms he makes to harmonize. So the author flits on from one ingenuity to another, warily avoiding all tedious stays.

Mr. Noble's applied criticism is sympathetic and careful, but it is not learned. He writes, for instance, with delicate appreciation of Holmes, and, again, he succeeds in lauding Du Maurier's pictures without reminding us of Mr. James's more pretentious tribute. But when he comes to discuss the music of prose, he makes the surprising assertion that not until recently has the doctrine gained general assent that metre is inadmissible in good prose. If we err not, that doctrine has been a commonplace of critics from Aristotle to Dryden and from Dryden to Prof. Saintsbury. Again, most appraisers of literature would shrink, we dare say, from concurring in Mr. Noble's notion that "true simplicity is a grace of instinct given in our century to but two singers—William Blake and Christina Rossetti." A rash dictum surely from any point of view, recalling Swinburne by its extravagance. There are other minor matters in which Mr. Noble's care relaxes, as when (p. 13) he gives Mr. Lang, rather than Arnold, first credit for the happy phrase, prose "of the centre."

After all, the most likable thing about these varied and versatile sketches is not the general fairness of their criticism, nor the obvious excellence of their flexible English, but a certain tone of humanity and modest manliness. A writer must possess something better than mere skill with words or mere feeling for literature if he is to rehearse with Mr. Noble's fitness the goodness of an Annie Keary—that brightest friend of children—or the spiritual tenderness of a Christina Rossetti. The author's fineness of nature is visible from the first, in the very dedication to his children—quite a flawless thing in its way.

The Journal of Countess Françoise Krasinska, great-grandmother of Victor Emmanuel. Chicago: A. C. McClurg & Co.

NOT for a long time have we seen so entertaining a book as this. It gives, with charming naïveté, a picturesque account of high life in Poland at the middle of the last century—a life still pervaded by feudal traditions and customs. Countess Krasinska's father lived in a great château where retainers of all degrees, from the sons of barons to the peasant serfs, surrounded him. Knights trooped after him when he went to visit his neighbors; the seneschal looked to the portcullis; a dwarf played the buffoon to amuse him. In brief, one sees such a social environment as belongs to one of Shakspere's comedies, only in this case the list of *dramatis personæ* is composed of real personages—Czartoryskis, Poniatowskis, Lubomirskis, and many others familiar, by name at least, to the student of Polish history. As an historical document, therefore, these journals of the precocious sixteen-year-old Countess have great value, as has, for a view of the same feudal life at the bottom of society, the autobiography of Solomon Maimon. The Countess writes with all the vivacity of a girl who does not suspect that the glamour will pass, but withal she has very keen eyes, that see just those details which posterity is most interested in and rarely finds in formal histories. *Weltschmerz* has not yet invaded the neighborhood of Fanny Krasinska. She is as innocently vain, as easily delighted by simple customs, her heart throbs as gayly when this or that nobleman condescends to speak to her, as if she were a heroine in an old romance. And then she, too, learns the human lesson of sorrow, through her secret marriage with the king's son, and his long neglect of her. As one reads, there comes the vision of her daughter, married to Charles of Savoy, dancing the *carmagnole* for the delectation of French Republican soldiers, and one reflects how soon that old feudal society was shattered for ever.

So far as we are aware, this journal has not been published in Poland, but the translation which Countess Kasimir Dziekonska has made is almost uniformly excellent. The pretty little book has illustrations—a process reproduction of Angelica Kauffmann's portrait of Françoise Krasinska, a view of the ruined castle of Maleszow, etc.—which add to its interest.

North American Shore Birds: A History of the Snipes, Sandpipers, Plovers and their Allies, etc., etc. A Reference Book for the Naturalist, Sportsman, and Lover of Birds. By Daniel Giraud Elliot. 8vo, pp. 268, with 75 plates. New York: Francis P. Harper. 1895.

MR. ELLIOT'S work is designed especially for sportsmen and bird-lovers, and is hence written in non-technical language. Scientific phraseology has, as far as possible, been carefully avoided, and the few scientific terms it has been found necessary to use are carefully explained at the outset. The birds treated in this volume all belong to the order Limicolæ, and include the phalaropes, plovers, turnstones, oystercatchers, and all the numerous species known as snipes and sandpipers. Many of them, as their ordinal name implies, are literally "dwellers in the mud," in that they frequent the beaches of the lake and sea, the banks of streams, and muddy flats; some, however, are upland birds, inhabiting dry prairies and pastures, though in general more or less partial to moist situations. The distinction between snipes and sandpipers is not easily drawn, and in popular use the terms are often rather loosely applied; nor is there in reality a very sharp boundary between the two groups. The plovers, however, form a well-marked family, differing markedly in various points of structure, and generally in style of coloration, from the great snipe-sandpiper group. While the various species of plovers are as a rule easily discriminated, the case is quite different among the snipes and sandpipers, where the expert is often at a loss to classify specimens in immature or winter plumages. Mr. Elliot's book, with its detailed, non-technical descriptions, its helpful illustrations (each species being figured), and its very carefully prepared keys and analytical tables, will be a most welcome aid to hosts of sportsmen and bird-lovers in determining and duly discriminating the many puzzling forms among the seventy-five species here treated.

For the most part the birds of this order occur merely as spring and fall migrants in the middle and lower latitudes, their breeding-grounds being the colder parts of the northern hemisphere, often within the arctic circle. Except during the short breeding season, they are great wanderers, many passing in winter far beyond the equator into the southern hemisphere. Comparatively few species breed over any considerable part of the United States. Hence it is the lot of most students of bird life to know them for only a brief season, and only as hasty migrants, journeying to and from their northern home. Mr. Elliot's condensed, well-written, and thoroughly trustworthy biographies will thus prove most welcome to students who would know something of the life histories of these interesting and in many ways peculiarly attractive birds. The author, both as an ornithologist and as a sportsman, has had unusual opportunities for acquaintance with the birds in life, and thus writes to a large extent from personal observation; yet few indeed are the observers who have penetrated to the far northern homes of these lovers of arctic breeding-grounds, so that necessarily much that is here told is borrowed from other authors. The author makes a general acknowledgment of his indebtedness in his preface, but possibly a few explicit references to his principal sources of information would be of interest to some of his more inquiring readers.

Notwithstanding the many popular bird books that have recently appeared, there was still need for such a one as Mr. Elliot has so well supplied. The seventy-five full-page plates are effective reproductions of artistic drawings made especially for the work by the well-known bird artist, Mr. Edwin Sheppard of Philadelphia. The publisher has done his share in the production of a beautiful book, which in literary execution and scientific accuracy does credit to the high reputation of its author as an ornithologist.

The Constitution of the United States at the End of the First Century. By George S. Boutwell. Boston: D. C. Heath & Co. 1895.

MR. BOUTWELL'S purpose in this work, as he informs us in his preface, is to set forth in a concise form the substance of such of the leading decisions of the United States Supreme Court as explain or interpret the Constitution. He adds that an examination of these decisions "renders unavoidable the conclusion that the Constitution of the United States, in its principles and in its main features, is no longer the subject of controversy, of debate, or of doubt." After the extraordinary judicial proceedings connected with the recent attempt to impose an income tax, this statement is startling; but it is explained by the fact that Mr. Boutwell's preface was written in March of the present year. Yet even at that date the conclusion must be regarded as too sweeping, and a careful examination of this compilation shows that several matters of importance which are not altogether beyond controversy have been overlooked by the author. Thus, the great case of Munn vs. Illinois, which involved the right of the State legislatures to declare property to be affected with a public use, and to regulate the income derived from such property, and which has been gravely questioned in some recent opinions, is cited only as concerning the restraint of the attempts of the States to impose discriminating taxes on interstate commerce. The "Granger Cases," as they were called, also involved points that have not been considered as finally settled; but we cannot find that Mr. Boutwell has considered them at all. The subject involved—the prescription of rates of fare on railways—is not mentioned in the index under any head that we have been able to think of, nor have we had better success in searching the table of cases. Again, in the "Slaughterhouse Cases," the important points in the decisions are not suggested by the citations here, and in a number of instances we do not find the principal issue adequately set forth. In view of the Constitution now making in South Carolina, and of that in force in Mississippi, it is idle to say, so far as the fourteenth and fifteenth amendments to the Constitution are concerned, that there can be neither controversy nor debate nor doubt. It is quite obvious that these constitutions abridge the right to vote upon other grounds than the commission of crime; but whether the fourteenth amendment will be held by the Supreme Court to be violated or not is certainly a doubtful question, and one that is likely to arouse controversy.

When we find that but little more than 200 pages of the book are devoted to the exposition of the constitutional questions decided by the Supreme Court in the course of a century, we cease to be surprised at such deficiencies as we have noted above. The task could not be properly performed within such limits. We cheerfully recognize the industry displayed by the author in collecting and analyzing these constitutional cases, and we regard the conception of the work as a good one, but it ought to be carried out on a different scale. It is impossible to present a great constitutional question in a nutshell; there are historical and political references to be introduced which are necessary to the proper understanding of the cases, and such matter requires space for its setting forth. Mr. Boutwell's work has merit as a summary of constitutional decisions, although we cannot regard it as complete; but it does not deserve to take rank as a constitutional manual or commentary. It contains copies of the Declaration of Independence and of the Articles of Confederation, and a chapter on the Origin and Progress of Independence, which might well have given place to more relevant matter. It contains also, in addition to a table of cases and a general index, an analytical index to the Constitution which is extremely elaborate. We repeat, the plan of the work is a good one, and some additional labor on the part of the author would greatly increase its value.

BOOKS OF THE WEEK.

A Daughter of the King. F. T. Neely.
Aiken, Catherine. Methods of Mind-Training. Harpers. $1.

As You Like It. American Book Co. 20c.
Austen, Jane. Pride and Prejudice. Illustrated. Macmillan. $1.25.
Austin, Maud M. 'Cension: A Sketch from Paso del Norte. Harpers. $1.
Baldwin, Mrs. Alfred. The Shadow on the Blind, and Other Ghost Stories. London: Dent; New York: Macmillan. $1.50.
Bartlett, Mrs. E. B. Pleasant Days at Maplewood. New York: John Ireland.
Belloc, B. R. In a Walled Garden. Macmillan. $1.75.
Benson, A. C. Essays Macmillan. $2.
Blatchford, Robert. Tommy Atkins of the Ramchunders. Edward Arnold. $1.25.
Blow, Susan E. The Songs and Music of Froebel's Mother Play. Appletons.
Bradford, Gamaliel, jr. Types of American Character. Macmillan. 75c.
Bradford, Rev A. H. Heredity and Christian Problems. Macmillan. $1.50.
Braeme, Charlotte M. Thorns and Orange Blossoms. M. J. Ivers & Co. 25c.
Buck, F. J. A Man of Two Minds. Merriam Co. $1.
Bülow, Marie von. Hans von Bülow: Briefe und Schriften. 2 vols. Leipzig: Breitkopf und Härtel.

PROFESSOR TEN BRINK'S

FIVE LECTURES ON SHAKESPEARE.

TRANSLATED BY JULIA FRANKLIN.

12mo, cloth, gilt top, $1.25.

"*No single volume on the great dramatist is, in our judgment, superior in value to this modest but extremely able work.*"—The Outlook.

"*An excellent translation.*"—Dr. W. J. Rolfe, in the Critic.

"*Shakespearean readers of every class may open Prof. Bernhard Ten Brink's* Five Lectures on Shakespeare *with confidence. . . . It is not often that we find so much of the choice treasures of a vast learning and an incomparable critical mind brought together in one little book.*"—The Independent.

HENRY HOLT & CO., 29 WEST 23D ST., NEW YORK.

Yale Mixture.

A GENTLEMAN'S SMOKE.

You won't know the luxury of Pipe-Smoking until you use Yale Mixture.

A two-oz. trial package, postpaid, for 25 cents.

THE CHILD IN THE HOUSE.
AN IMAGINARY PORTRAIT.
BY WALTER PATER.

It seemed desirable to issue this early 'Imaginary Portrait' in a shape and style that would be at once choice AND MODERATE IN PRICE.

The First Edition of 425 copies was sold within 30 days after publication.

The Second Edition, 425 copies, printed on Japan Vellum, narrow 16mo, done up in flexible covers, with sealed wrappers and brocade style slide case, is now ready.

Price 75 cents net, postpaid.

Book lovers who are not yet acquainted with Mr. Mosher's editions would do well to procure his New List—a choice little affair, unique in style, mailed for 2-cent stamp.

THOMAS B. MOSHER,
37 Exchange Street, PORTLAND, MAINE.

Do me the favor to ask your wine merchant, or Park & Tilford (wholesale agents), for my "*Picarillo*" natural sherry, and "*Manzanilla Pasada.*"
Guillermo Doblache,

NEW BOOKS.

BY ANDREW LANG.

THE RED TRUE STORY BOOK.

Edited by Andrew Lang. With 19 full-page and 81 other Illustrations by Henry J. Ford. 12mo, cloth, ornamental, gilt edges, $2.00.

*** This volume is uniform with and in continuation of Messrs. Longmans' well-known series of Fairy and other story books edited by Andrew Lang, distinguished by the names of the colors in which the volumes are bound.

MY OWN FAIRY BOOK.

By Andrew Lang. With many Illustrations by Gordon Browne, T. Scott, and E. A. Lemann. 12mo, cloth extra, gilt edges, $2 00.

Contents: Prince Prigio.—Prince Ricardo.—The Gold of Fairnilee.

AN ORIGINAL COLOR BOOK.

THE ADVENTURES OF TWO DUTCH DOLLS AND A "GOLLIWOGG."

Illustrated in color by Florence K. Upton, with words by Bertha Upton. Oblong 4to, $2.00.

"Delightful for children, but perhaps even more fascinating for their elders. . . . The fun of this delicious piece of nonsense can only be compared with that of the immortal 'Alice in Wonderland.'"—*Daily Telegraph.*

BY DEAN FARRAR.

GATHERING CLOUDS:

A Tale of the Days of St. Chrysostom.

By Frederic W. Farrar, D.D., Dean of Canterbury, author of "The Life of Christ," "Darkness and Dawn," etc. Large crown 8vo, gilt top, $2.00.

DARKNESS AND DAWN:

or, Scenes in the Days of Nero.

An Historic Tale. Large crown 8vo, 608 pages. $2 00.

LONGMANS, GREEN, & CO.,
15 East 16th Street, New York.

NATIONS WANTED.

Volumes VII. and X., complete with all advertisements, preferred unbound. Address ROLAND HOLT, Reform Club, New York.

FOSTER ON THE CONSTITUTION

Commentaries, Historical and Juridical, on the Constitution of the United States. By Roger Foster.

Vol. I. nearly ready. For circulars, address THE BOSTON BOOK CO., 15½ Beacon St., Boston, Mass.

The Nation.

NEW YORK, THURSDAY, DECEMBER 19, 1895.

The Week.

THE question which Mr. Cleveland's war-like message suggests is mainly which of the two parties is likely to get most capital during the Presidential year out of this Venezuelan dispute. That we are going, in the name of the Monroe doctrine, to assert such ownership of the American hemisphere as will enable us to trace all the boundary lines on it to our own satisfaction in defiance of the rest of the world, is a thesis which we do not believe is yet ripe for discussion. What interests us most is, how his proposal to appoint a tracing commission will strike the Republicans. Will they give Mr. Cleveland the money for its expenses, and enable him all next year to pose as the war candidate for the Presidency? Or is his proposal sufficiently near war to make it a delicate matter to reject it, in view of the Jingo vote? Will they consent to have him put his own men on the commission, and thus get weekly glory out of the whole business between now and next October? These are the most important questions now pending. Mr. Cleveland showed, in 1888, by his treatment of poor Sackville-West, that he was not incapable of using foreign questions to achieve domestic victories. The present message shows that his party may still count on him for further assistance from the same source.

Speaker Reed is already learning that it is a very different thing to "run" a Republican House when he is simply putting through a policy at the beginning of a Presidential term on which the party is united, from what it is when he is seeking a Presidential nomination for himself and there is great division of opinion in the party as to the wisdom of making him the candidate. The Cleveland *Leader* gave prominence the other day to a despatch from its Washington correspondent, telling how angry the members of the National Wool-Growers' Association were at the way they were "turned down" by the Speaker when an Ohio Representative tried to get their memorial to Congress printed and referred to the ways and means committee, and Mr. Reed gave ex-Speaker Crisp a "tip" to make the objection that prevented the otherwise unanimous consent that was required. The *Leader* followed up the despatch next day with a very sharp editorial article, telling the Speaker that he "blundered" in taking "a narrow view of great party questions," when he "should be broad, patriotic, and amiable"; calling attention to the fact that, while he is an able man, he has 'some infirmities of temper and character"; expressing the opinion that, while he knows better than any other man in this country how business ought to be done in Congress, "there are other men who better know, perhaps, what the nature of the business done ought to be"; reminding him that "the successful statesman and politician is the man who meets competition and opposition with grace and amiable temper"; recalling the fact that, when the last Republican Administration was in power, Mr. Reed presented the spectacle of a popular party leader who was not on speaking terms with President Harrison, nor with Secretary of State Blaine, nor with Senators Hale and Frye, although Blaine, Hale, and Frye were neighbors of his in his own State of Maine; and, finally, notifying him that it is always good policy to fight one's political enemies and not one's political friends, and that "this plain rule, if closely observed, will make Mr. Reed far happier in his own heart, and also a much more tolerable leader, than he has been up to date." Evidently the Speaker is going to find plenty of what Horace Greeley used to call "mighty interesting reading" in the Republican press the next few months.

How thoroughly the Cincinnatus idea of a nomination for the Presidency has disappeared from our politics is shown afresh by McKinley's exhibition of eagerness just now. No sooner had St. Louis been pitched upon as the Republican convention city than he telegraphed for thirty rooms in each of three hotels to be reserved for him during convention week. He has also opened a Washington headquarters. This, for a man who admits that he is the logical candidate of his party, and gives it out that he is calmly waiting for the masses to rise up and make him President against his will, looks a good deal like giving public opinion needed help in crystallizing about him. Of course, all the real Cincinnatuses long since disappeared, but there was a certain comfort in the imitation Cincinnatuses while they lasted. It did not do to examine them too closely. Their ploughs had a way of turning furrows very near the public highway about nomination time, and their ostentatious drinks of spring water from the old brown jug were too apt to be broken off by messenger-boys with telegrams from their managers in the convention hall. But still the little fiction was a pleasant one to keep up, and it brought a kindly feeling into many hearts to have a candidate able to say, as Cincinnatus Blaine did in 1884, sitting amid his heaps of telegrams, "Well, no one can say that I did anything to influence the choice of the convention." It was Cincinnatus Reid, however, who did the most to break down the old tradition, by being surprised with the nomination when out looking at his flowers at eleven o'clock on a moonless night. This was too much, even for a confiding and generous people. McKinley's hot chase after the nomination has at least the merit of frankness, and he may yet be the first Presidential candidate actually to appear "on the ground," pulling and hauling for delegates and making promises right and left.

The Harrison boom seems to have been materially blocked by Mr. Sherman's direct charge that the Indiana candidate got the Republican nomination in 1888 by a corrupt bargain. The Ohio Senator, it will be remembered, declared that at the convention of that year Steve Elkins "had in his pocket a written promise from Mr. Harrison engaging that ex-Senator Platt should control the federal patronage of New York State in case of his nomination and election," and that "President Harrison stood to his bargain." It is now quite a month since this specific charge of corruption against the last Republican President was made by the leading Republican in the Senate, and Mr. Harrison's silence is coming to be interpreted as signifying that the truth of the allegation cannot be challenged. The Boston *Herald* expresses what we believe to be a general feeling when it says that "unless this charge is explained away, it is likely to rule out ex-President Harrison as a man with prospects of another nomination to the Presidency," inasmuch as "the American people are too jealous of the honor of their Presidents to allow him to be a safe candidate." Even the politicians who would not feel any moral scruples about supporting a man who would make a corrupt bargain, are not favorably disposed toward Mr. Harrison, because it is alleged, on excellent Republican authority, that he did not live up to his pledges.

Visitors to the field of Waterloo are generally entertained, both going and returning, by a number of children who run alongside the carriage throwing handsprings and standing on their heads, and then holding out their hands for small copper coins. The two Congressmen from Massachusetts who on Wednesday week offered resolutions to censure Ambassador Bayard, are statesmen of this type. They will stand on their heads or do anything else grotesque for the smallest piece of Chinese cash that was ever tossed into the gutter of politics. The acrobatic performances were begun by Mr. McCall, a greenhorn, evidently, for he limited his resolution to a request for information on the subject of Mr. Bayard's speech at Edinburgh. Mr. Barrett took the wind out of his sails by

proposing that Bayard be impeached. The Constitution provides that "the President, Vice-President, and all civil officers of the United States shall be removed from office on impeachment for and conviction of treason, bribery, or other high crimes and misdemeanors."

Mr. Bayard's offence consisted in using the following words in his speech at Edinburgh:

"In my country I have witnessed the insatiable growth of a form of socialism styled protection, which has done more to corrupt public life, to banish men of independent mind from public counsels, and to lower the tone of national representation than any other single cause. Protection now controlling, the sovereign power of taxation has been perverted, from its proper function of creating revenue to support the Government, into an engine of selfish profit, allied with combinations called Trusts. It thus has sapped the popular conscience by giving corrupting largess to special interests, and it throws legislation into the political market, where jobbers and chafferers take the place of statesmen."

Now this is not treason, because, under the Constitution, treason consists only in levying war against the United States, or in adhering to their enemies, giving them aid and comfort. The word "enemies" in this case means any country or people with whom the United States are at war. Of course Mr. Bayard's offence is not bribery. Therefore, if impeachable, it must be a high crime or misdemeanor. But a high crime or misdemeanor must be an offence indictable under a statute or at common law. Yet even Mr. Dingley was so upset mentally that when asked by Mr. Crisp whether he considered Mr. Bayard's remarks impeachable, he replied that he did. In other words, he stood on his head for a sou along with Barrett—poor man. Finally, Mr. Cannon moved to strike out from Barrett's resolution the words "by impeachment or otherwise," and his motion was agreed to without a division. The acrobatic performance had come to an end for the day. It is liable to start up again at any time.

Senator Mills of Texas has repeatedly demonstrated his courage and independence, as when, some months ago, he came out strongly against the free coinage of silver, but his mastery of the questions involved in this proposition seems not to have been complete. He has astonished the friends of sound money by introducing in the Senate a bill which, among other propositions that are safe enough, provides that, when the gold reserve shall fall below $100,000,000, the Secretary of the Treasury "shall" redeem the notes issued under the act "in silver." Of course such action by the Government would immediately destroy the parity of gold and silver, and put the currency of the country on a silver basis. That a man who realizes the terrible consequences of free coinage should not also perceive the equally disastrous effects of this policy, is amazing. But it is encouraging to find that the press of his State is doing its best to open the Senator's eyes. The Austin *Statesman*, the Democratic newspaper at the capital of Texas, says of the scheme:

"If the plan of Mr. Mills was adopted, all the evils contemplated by the coinage of free silver at 16 to 1 would be precipitated upon us. If the Mills financial bill became a law, we should, as if by magic, 'presto, change,' fall from a gold to a silver standard. Mr. Mills's bill is quite as dangerous as the broadest platform of the free coinage of silver at the ratio of 16 to 1."

Senator Dubois's proposition to distribute the appropriation bills among several committees, instead of leaving them practically in the hands of one, is defended on the ground that it would expedite business and secure more thorough consideration, but it is really another step towards chaos in our public finance. The great vice of our system of Government taxing and spending is, that one set of men do the taxing and another the spending. The spenders do not know or greatly care how much money there will be to spend. They hope for the best and go blindly ahead. The great check on them has been in the past that, by luck more than purpose, a sort of central controlling power has been lodged in the committee on appropriations. Everybody remembers how Samuel J. Randall, as chairman of this committee, was for years the terror of the spendthrifts, being able to rise in the House and convincingly prove that the appropriation bills were too large and must be cut down. The logrollers and the spendthrifts long ago saw to it that this barrier should not stand in their way; the breaking up and distribution of the appropriation bills in the House took place, with the results we know. Now it is proposed to destroy in the Senate, too, the central responsibility for extravagance and make everything plain sailing. It is a move in the wrong direction. We need to concentrate, not scatter, the work of controlling both Government income and Government outgo.

We find simultaneously in our Kansas exchanges the statement that a new census just taken shows that "there is probably not another State in the Union whose population is so thoroughly American as that of Kansas"—more than 90 per cent. of the people having been born in the United States—and this profound criticism of the President's plan for retiring greenbacks by Lucien Baker, a native American who has just taken his seat to serve a six years' term in the United States Senate:

"The truth of the matter is, Mr. Cleveland probably doesn't like the thought of greenbacks. They helped to whip too many of his party during the war."

The coincidence of the two announcements revives our curiosity as to how it happens that so "thoroughly American" a State as Kansas elects Llewellings as Governors, and Bakers and Peffers for Senators, while Wisconsin, with a great foreign population, is represented, both at the State and the national capitals, by sound-money men, whether the Republicans or the Democrats are in power; and Minnesota, with the largest proportion of foreign-born voters of all the States save its neighbor North Dakota, never allows Populism to get control, and sends a native of Norway to combat in the Senate the financial vagaries of the American Senators from Kansas.

The recent rather sensational developments in the affairs of the American Tobacco Company have their comic side so far as relates to pure speculation or gambling in the shares of the company in Wall Street; but there is an economic point also involved. In certain quarters there have been raised for some time voices against all huge corporations, Trusts, or combinations, on the ground of the dire consequences which must come upon the community because of the success that these corporations or Trusts must have through their practical monopoly. The American Tobacco Company has been often cited as an illustration, since the commercial methods adopted to prevent the sale of other tobaccos may properly be characterized as outrageous; such methods, it was argued, should be put down by law. But what is the result? The very means employed by the company to accomplish its monopolistic ends have been the instruments of its defeat; such a policy has aroused more determined opposition than any Trust or company doing a legitimate business has had to face, while at the same time the expense of such a course has compelled the stoppage of dividends. So far, then, from taking the case of this monopolistic company as furnishing an instance of the need of prohibitive legislation, it would be more in keeping with business principles to say that this same company is an illustration of the truth that no severe Trust laws are needed, and that the violation of fair dealing brings its own punishment where the possibilities of competition are open to everybody.

The Powers having got permission to bring up each a second guard-ship, are now refraining from exercising it. That is, inasmuch as they can have them in twelve hours whenever they want them, they are allowing them to wait orders down below. The reasons why the Powers do not move, in spite of the pending horrors, have to be guessed at, but it is comparatively easy to guess at them. The fact is, that the only Power which can reach the scene is Russia, and if she were willing to move, she could do but little in that region in the snow, though all accounts agree that she is getting ready by massing troops and preparing ships in the Black Sea. One of Russia's objections to moving probably is that when the break-up comes, she does not want to be told that what she has in possession, the

wild, mountainous, and remote Armenia, is all she is going to get. She wants Constantinople, and does not care who knows it. Austria wants Salonica and the whole of Macedonia, and an outbreak in Macedonia is said to be one of the coming troubles. Austria is waiting for this as an excuse for marching in. England wants to keep Egypt; France, Tunis and Syria; and Italy, Tripoli. They are all like candidates at a Presidential convention, watching each other, waiting for each other to make "a false step," or precipitate some sort of crisis, or hoping that the crisis will be brought on by some accident, such as a rising in Constantinople or another rebellion in Europe. But the main and controlling cause of their reserve is almost certainly the knowledge they all have, since 1870, of the frightful cost and slaughter of war, under the new military organizations. Each would try to outdo the others in the number of men it could put in the field; and whether there exists in Europe a single man capable of moving these great masses, or a commissariat capable of feeding them, nobody knows. The cost of the late Franco-German war is calculated at $7,500,000 a day. If the fighting should begin at sea, too, the chances are that whole fleets, which it has taken years and millions to construct, will go to the bottom in every battle. Now we do not believe there is a statesman in Europe to-day who has nerve enough to begin a war of this kind. Bismarck was the last man of that heroic mould, and he always avowed that if he had lost Sadowa, he would have shot himself. Not one of the European Ministers has either the physical or moral courage to say that the time for fighting has come. So they are all waiting for some accident that will relieve everybody of responsibility by making action seem inevitable.

Sir Charles Dilke speaks on foreign politics with infinitely more knowledge than Mr. Chamberlain, and in a speech on Monday affirmed that the latter's talk about imperial federation and a colonial customs union is imperial nonsense. He said emphatically, and with much truth, that Canada and Australia are much more likely to think of casting off all connection with England than of surrendering a jot of their present taxing power or local self-government. Mr. Chamberlain has, in fact, chosen a peculiarly inappropriate time for his schemes for international *rapprochement*. International jealousy and exacerbation are more rampant just now than for many years. It has got so that even war supplies cannot be purchased from hated foreigners without bringing the whole Parliament down on the back of the offending Minister, as in the French Chamber the other day, when it appeared that the French troops in Madagascar had been fed on English tinned goods. Better let them starve than do that.

A municipal scandal in Madrid seems hardly a sufficient cause for the fall of the Spanish ministry. The explanation lies in the nature of the scandal and the attitude of the Government towards it. The city Council had become Tammanyized, and was exposed by the Marquis of Cabriñana. That gentleman was the owner of some land expropriated by the city, but, when he asked for his pay, was himself asked by the councilmen what *he* would pay to get his money voted him. After getting definite propositions from several of them, he blew up the whole thing in the press, with names, facts, and dates all set forth. A storm of popular indignation at once burst upon the officials implicated, which was not lessened, as may easily be imagined, by an attempt to assassinate the daring Marquis—an attempt naturally charged upon them. Suspicion once directed their way, ugly questions began to be asked about their suddenly and mysteriously acquired wealth, *à la* Tammany, their fine houses and carriages obtained without visible income. Various shady municipal contracts were recalled and shown up, and a fierce demand arose for the speedy trial and punishment of the criminal councilmen. Here the central Government hesitated fatally. With true Tammany instinct, the imperilled officials resorted to their political "pull," besieged the members of the ministry whom they had helped in tight places, and dilated on the vast importance of keeping together for the next general election. An impression got abroad that the culprits would be allowed to escape, and so great grew the popular fury that the ministry itself has been broken before it. The Madrid Tammany "pull" has thus simply pulled down three members of the cabinet. But the whole incident is one of those fine, involuntary tributes to our institutions which we sometimes get from the Old World to cheer us on when we begin to despair of the triumph of democracy.

The annihilation of the greater part of Major Toselli's troops by the Abyssinians is not the first experience of this kind that the Italians have had. A loss of 700 men, however, even if few of them are Europeans, is a pretty serious check to expansion in that quarter. In 1868, when the British expedition overcame Theodore, it met with almost no opposition. The badly armed subjects of the Negus, tired of his cruelty and despotism, abandoned him on all sides. In the one skirmish of importance, the English had only about thirty men wounded. This easy success deceived the world as to the power of resistance of the Abyssinians; hence the Khedive Ismail, with his disciplined army and American officers, undertook to annex their land. The result was the battle of Gudda Gubi in 1875, in which the Egyptian force of some 7,000 men was utterly destroyed. In the following campaign a larger army was likewise defeated, only a small part of it escaping. For the next ten years the Negus John was busy in strengthening his authority over his turbulent subjects, especially Menelik, then only King of Shoa, till the Italian occupation of Massowa brought about a collision. In 1887 Ras Alula destroyed an Italian detachment at Dogali, and when 20,000 men were sent from Europe to avenge the disaster by a great victory, the Abyssinian army, after reconnoitring the position of the foe, wisely retreated into the interior of the country, unmolested and unpursued. Then followed a lull, due to the death of John in battle against the Mahdists and the accession of Menelik, who, to strengthen his position, agreed in 1889 to the treaty of Utchiali. The borders of Eritrea were pushed back for one reason or another, as is always the case in such colonies, until the struggle for Tigre with Ras Mangasha, son of King John, has led to another general war. The Abyssinians have shown themselves patriotic and brave, and they can bring into the field, if need be, a hundred thousand men, who, besides being undoubtedly much better armed than they were a few years ago, have had some training from European officers. Italy may still prevail against them, but if the Madagascar expedition has cost France 100,000,000 francs, how is a country nearly on the verge of bankruptcy to pay the price of making and retaining a conquest that is vastly more difficult?

Herr Bebel, standing up in the Reichstag for the right of a German representative to criticise the Kaiser, is perhaps not a very heroic figure, but he serves to show what a chunk of pure mediævalism are the Emperor's ideas of his own sacrosanct personality and lèse-majesté. It seems an anachronism for a representative in 1895 to have to send such a message to his monarch as Mirabeau sent Louis XVI., or as the Speaker of the House of Commons gave Charles I. in 1642. Bebel doubtless knew he ran no great risk personally. The Reichstag had already fought out this issue with William, and had decided that members must enjoy immunity for criticism even of an infallible and heaven-guided Emperor. He may pounce upon unlucky editors and Socialist orators who speak disrespectfully of him, but he cannot prevent the Reichstag from discussing his policy and his personality. Meanwhile his present fury against the Socialists, whom a few years ago he was coddling, is manifestly fitted to strengthen their hands by disposing all lovers of free speech in Germany to side with them. When a man like Prof. Delbrück is threatened with prosecution for speaking his mind on politics, it gives more than a show of reason to Bebel in declaring that the issue between the Socialists and William the Dasher-to-Pieces is simply the issue of freedom of speech and writing.

SECRETARY CARLISLE'S REPORT.

We think that intelligent men of business will agree that no Secretary of the Treasury in this generation has shown more alacrity in mastering his own department and the principles which underlie it than Mr. Carlisle. It must be remembered that his training and experience before he took the office did not at all fit him for its duties. The case was somewhat different with Secretary Manning (who likewise developed great aptitude for the work thrown upon him), for he was a bank president at the time of his appointment, whereas Mr. Carlisle was a lawyer, with only such instruction in public finance as may be picked up by an industrious Congressman. The evidences of his lack of training are recognizable in his Congressional career, but they are happily relieved by signs everywhere of capacity to learn, and willingness to abandon wrong positions and adopt better ones as soon as conviction was brought to his mind. Coupled with this readiness of perception is a power of exposition which very few men ever attain, of which we have had abundant examples during the past two years, and especially in those remarkable speeches connected with the Memphis sound-money convention.

Mr. Carlisle's official report on the finances now published is up to his standard in every particular, and it bears the marks of statesmanship in putting the naked truth before Congress and the people without any gloss whatever. To use a common phrase, he calls a spade a spade. He calls the greenback a burden on the nation's back, and an embarrassment to the financial operations of the Government, as it is. He asks for authority to retire the legal-tender notes once for all, and to restrict the Government to its proper and pristine business of collecting and disbursing the public revenue. Very likely he will not get it from the present Congress, very likely he will not get it at all; but his report of the present year will stand as an unanswerable argument in favor of it until some successor of his does get it.

A report of such length as this, and so crammed with matter of importance, cannot be analyzed in a single article. We can only touch upon a few of its salient points. The Secretary answers first the accusation frequently made that he has been using the proceeds of bond sales to pay the current expenses of the Government. Would it be believed that the law which *compels* him to use for current expenses the greenbacks that come to the Treasury for redemption in gold, was first proposed by John Sherman when he held the office of Secretary? That appears to be fact from a paragraph quoted by Mr. Carlisle from Sherman's annual report for 1877. He said that he believed that greenbacks could be so used after they had been redeemed; but, inasmuch as this construction of the law had been controverted, he desired that it should be expressly affirmed and put beyond reach of dispute. The act of May 31, 1878, was accordingly passed at his instance, making it mandatory upon the Secretary to pay out the greenbacks that have been redeemed, and keep them in circulation. This has been done by Secretary Carlisle so far as the public expenses would warrant. Of course the Secretary has no right to give away any greenbacks even to execute the mandate of the law of 1878.

The Secretary says that there is no need of additional revenue at this time, because the Treasury is full to overflowing with greenbacks turned in for gold, which *must be paid out*, under the terms of the law. He believes that the ordinary revenue will exceed the ordinary expenditure during the fiscal year beginning July 1, 1896, but in any event the difference must be small and will be more than covered by the great surplus carried over from the present year. This declaration will be gall and wormwood to the Ohio triumvirate who are working for a new tariff on wool under pretence that the Treasury is in need of funds, but really to tax the consumers of woollen goods for their own benefit.

Mr. Carlisle gives in detail an account of the bond-syndicate transaction of last February. The only new thing presented is his reason for not insisting on the exact fulfilment of the requirement that one-half of all the gold bought should come from Europe. Upon this point he says:

> "After a large part of the gold had been furnished from abroad, the Secretary, in order to prevent disturbance in the rates of foreign exchange at a critical period and avoid a condition which would force gold exports and consequent withdrawals from the Treasury, acquiesced in a departure from the literal terms of the contract, that one half of the coin should be procured abroad, and accepted deposits of gold then held in this country to complete the delivery. Ordinary prudence demanded that the success of the plan to protect the Treasury against withdrawals should not be endangered by insisting upon a strict compliance with all the details of the contract, especially as the Government could sustain no loss, and the whole amount of gold stipulated for was secured."

This reason must be accounted satisfactory. The main thing to be done was to quiet the public mind, to alleviate the panic, to put a stop to needless withdrawals of gold. Withdrawals of this class were imitative. People drew gold out because they saw others doing so. To have insisted on drawing gold from Europe at a time when sterling exchange was close to the exporting-point, would have led to necessary withdrawals from the Treasury, and this might have led to new imitative ones. The Secretary mentions also the interesting fact that the bond syndicate, after they had completed their deliveries under the contract, deposited upwards of $16,000,000 gold more than they were required to do, taking legal-tender notes in exchange therefor.

If the selling of bonds for coin to redeem the notes with, and the reissue of the notes, are to continue, the Secretary says that the result will be the creation of a public debt larger than would be required to retire and cancel the whole lot, and the annual interest charge will be much greater than it would be necessary to incur on a new class of bonds specially adapted to the purpose. He repeats the request that authority be granted for the issue of new class low-interest, short-time bonds, or certificates to meet emergencies. This request was embraced in his two preceding reports. An amendment to an appropriation bill granting such authority was carried through the Senate, at Mr. Sherman's instance, just before the present Cleveland Administration came in, but was rejected by the House on the threat of Mr. Bland that he would filibuster against the bill to the end of the session unless that clause were dropped. Mr. Sherman will now have a chance to try again, and he may succeed this time, as Mr. Bland no longer blocks the way.

The arguments advanced by the Secretary for retiring the greenbacks have never been more strongly put, and, indeed, cannot be. It is useless to attempt to summarize or condense them, since, although they are voluminous, they contain not a word too much. We can only commend them to the thoughtful attention of the people.

SENTIMENTAL JINGOISM.

By this term we would charitably characterize the address delivered by Judge Oliver Wendell Holmes at Sanders Theatre, Cambridge, on Memorial Day, and now printed, with all rights reserved, in the current issue of the *Harvard Graduates' Magazine*. Its theme was "The Soldier's Faith," and its object to glorify war and the war spirit. The young men who listened to it, the élite of our foremost university, were admonished that "war is the business of youth and early middle age," and were encouraged to pity the moralists and philanthropists who "declare that war is wicked, foolish, and soon to disappear." "The society," continued Judge Holmes, "for which many philanthropists, labor reformers, and men of fashion unite in longing, is one in which they may be comfortable and may shine without much trouble or any danger." General prosperity, in which, while all thrive, some get rich, seems to him to breed a belief that money is the main thing, and so to foster the hatred of the poor for the rich. "In this snug, over-safe corner of the world," he says—that is, a continent where Jingoism is a pure exotic—we need some discipline like war to remind us that we ought not to be as safe and comfortable as we are, and to make us "ready for danger" if not spoiling for a fight.

By such doctrine in such a place, we do not hesitate to say that the orator abused the holiday occasion. As if our Fourth of July festival had not done enough to perpetuate hostile feeling between England and America, and to make

the flag a war symbol above all else to the youth of this land, the newer festival of Memorial Day must end in a similar perversion. The natural forces which made secession and disruption impossible, have contributed to neutralize the inherent tendency of Memorial Day to prolong sectional antipathy, and have even wrested it in an opposite, most salutary direction. Judge Holmes does not say that he thinks another civil war would be better than our "little space of calm in the midst of the tempestuous, untamed streaming of the world," but he is on the lookout for a shindy in some quarter, and concludes that the memories of the war for the Union—a war as truly defensive as that of the Revolution—may be properly utilized to excite a bellicose temper in the student breast. The prospect of peaceful and smiling industry has on him the proverbial effect of a fine day on an Englishman—"Let us kill something."

Judge Holmes has been reared in a community which, as no other in the world, has exemplified what we may call the conscience of wealth; whose merchant princes have been princely not in lavish and ostentatious living, but in public benefactions. In Judge Holmes's eyes we must assume that all this is dross. Is not the air full of "danger"? Is it a time to be snugly settling down with permanent foundations for hospitals, kindergartens, colleges, libraries, museums, and pleasure-grounds? What are the rich doing to avert the hatred of the poor? *Risum teneatis?* The son and namesake of a great humorist gazes "with delight upon our polo-players. If once in a while, in our rough riding, a neck is broken, I regard it, not as a waste, but as a price well paid for the breeding of a race fit for headship and command"! And not only in a diversion all but reserved for the unemployed rich, who are commonly reckoned among the dangerous classes, does Judge Holmes discern the salvation of "faith in the worth of heroism"; every dangerous sport he sees pursued rejoices him. Moreover, inasmuch as "the students at Heidelberg, with their sword-slashed faces," inspired him "with sincere respect," he could not but be pleased if the Germanizing of his alma mater should embrace this barbarism also.

No reflecting person needs to be informed that war is the rich man's opportunity and the poor man's calamity, that it makes the rich richer and the poor poorer, and that no absurder mode of reconciling the two classes could be proposed. Who does not remember what our civil war did for the sudden making of great fortunes as well as of splendid names, and how the scale of riches was altered until a millionaire has ceased to excite attention? The poor are still laboring under the war debt and the war tariff, which the Jingoes are now bent on aggravating. They already had for a leader one Harvard graduate, Senator Lodge, and was it necessary for Judge Holmes also to make his bed with them? He could not do so if he were not blind to any definition of heroism that does not imply slaughter of one's fellow-beings. Talk as you please about the soldier's heroism, it does not surpass that of the locomotive engineer in the performance of his daily duty. And if Judge Holmes will take a leaf out of his Erasmus, he will find a Colloquy in which the soldier's perils are compared with those of child-bearing, to no advantage of the former. But women, since they cannot indulge in polo, or duelling, or battle, are implicitly excluded by Judge Holmes from all share in heroism, or knowledge of the article, or faith in it. They are the greatest sufferers by war, yet are not even fitted to receive what our orator calls "its divine message."

The truth is, that Judge Holmes, like most Jingoes, idealizes the commonplace act of dying and risk of death. There are a hundred who can face both in a becoming manner to one who can pursue a moral life amid all temptations. The murderer on the scaffold can die game; as many jockeys have broken their necks in the race-course as polo-players. We can never, in the civilized man, draw the line between physical and moral courage; and Darwin rightly discerned moral courage in that heroic baboon who went back into the plain to face the hunters, that he might bring off in safety a young one left behind. If we cultivate moral courage, we can leave physical courage to take care of itself. Mankind, while prizing both, pays its lasting honors to the former. Judge Holmes, with his customary taste, cites much good verse in support of his contention as against the moralists and philanthropists; but it is in vain. The poet of his own university has put Lincoln, of all the men of the civil war, on the highest pinnacle—not as nominal commander-in-chief of the army and navy, but for his homely virtues of sagacity, foresight, patience, humility, kindly-earnestness, courage.

> "Life may be given in many ways,
> And loyalty to Truth be sealed
> As bravely in the closet as the field."

UNION FOR CLEVELAND.

One of the interesting things in Jingoism is its readiness to stand behind the President in solid phalanx in case he wants to go to war with anybody. The Indianapolis *Journal*, Gen. Harrison's home organ, has lately expressed itself to the effect "that when it comes to resisting British aggression, there will be no Republicans and no Democrats. We shall all be Americans, and if Grover Cleveland is President when the crisis comes, we shall all be Cleveland men." Offers of enlistment for a war with England come in, too, every day or two from loose fishes of both parties all over the country. They all sink political differences for this occasion. The ex-Confederates are particularly anxious to back the President up in this matter. Ex-Gov. T. J. Churchill, a famous Confederate warrior, has offered his services to the President for the English war, by telegraph. He says the American people are a "unit" in favor, not so much of the Monroe doctrine as of "enforcing it." The fun lies not in the doctrine, but in the fighting over it.

What is striking and impressive about this willingness to rally round the President is that it shows itself only when it seems likely that he can be got to kill people and destroy property. The resemblance of Jingodom in this to an Indian village is very remarkable. A good leader of war parties has there all the men of the tribe under sixty at his back. When he is planning a raid on one of their neighbors with a promise of plenty of scalps, the critics have to hide their diminished heads. They are all Man-that's-Afraid-of-his-Horse men, or Man-that-Walks-under-the-Ground men. The disgruntled, or the prudent, or the peaceable, if there are any, have to lie still in the tepees and pretend to be asleep, while the warriors are painting themselves and cleaning their arms, outside. But if at this moment the leader were to propose that, instead of going on a raid, they should follow him into a potato-hoeing or a corn-planting enterprise, or should help him to build a school-house, execrations both loud and deep would greet him on every side. The language of the tribe would fail to supply epithets sufficient to describe his baseness and meanness. In fact, he would probably have to run for his life and stay away for a considerable period.

Jingoism is, in fact, like Indian readiness for war, simply another name for imperfect civilization. It is a simple outburst like negro-burning, lynching, and jail-breaking, of the imperfectly subdued barbarous instincts of an earlier time. To get men to abandon fighting as the chief and most honorable business of their lives, and the only respectable way of ending disputes, has been the main work of modern civilization; and what hard work it has been, one has only to read a little Froissart or Joinville to see. That the work is far from complete in this country there are signs every day in the unwillingness to submit to law either at home or abroad. At the South, even down to our own day, it has been not uncommon for the William M. Evartses to fall on the Daniel Lords with knife and pistol, or for the Chemical Bank Presidents to warn the Park Bank Presidents that they would be "shot on sight." This seems absurd to us, but only because we have passed into a more advanced stage of civilization.

This readiness on the part of his political enemies to support the President, should he decide to slaughter Englishmen and Canadians and lay waste their soil, is therefore a useful sociological study. But it must be taken in connection with

their furious unreadiness to support him when he proposes to engage in any useful work, or to make a contribution to civilization. When he says, "Brethren, let us all be Americans and reform our currency," or "Let us all be Americans and frame a rational system of taxation," or "Let us all be Americans and establish a good consular system," execrations meet him on every side. Shouts of "Put him in a hole!" "Wait till '97!" "Infamous," "Un-American," "Base duck-hunter," are heard in every direction. No union then; no "standing behind him." His smallest work of peace, or order, or humanity is treated as a piece either of deep-laid villany or of gross stupidity. In fact, it is quite safe to predict that the larger part of the patriotic work of the present Congress will consist in preparing "holes" for Cleveland and keeping him in them. Every question of national importance will be subordinated to this. His only mode of escape will be some plan of slaughter and devastation in some foreign country. If he will only make a good show of widows and orphans and human remains, and of destroyed property, he may make himself the idol of "good Americans," and have all his financial and other errors forgotten, including his duck-hunting. The temptation for an ordinary man to escape in this way is very strong. It has been known to affect even Presbyterian elders. There were signs in the last message to Congress that even Mr. Cleveland had felt its force—to what degree, it was left for his message on Venezuela to reveal. But, as has been shown a hundred times in the history of all civilized countries, the only certain popularity is that which comes from attempts to make people happy. The fame of destroyers is always built on a large amount of human misery, and Providence has arranged that this shall not be sure and shall not last.

FORCE AS A MORAL INFLUENCE.

As we take notice above, a judge of the Massachusetts Supreme Court has just printed an address to young men in favor of war—that is, of killing people and destroying their property—on the ground that if you put it off too long, your character runs down and you get too fond of money. Another judge, in Louisiana, has written a letter strongly recommending everybody, including women, to carry concealed weapons, as the best preventive of "assaults and burglaries." He makes no mention whatever, in the letter, of police or courts. Last of all, Chief-Justice Snodgrass of Tennessee has sought out in his office a lawyer who criticised a judgment of the court, and shot him twice handsomely, though not fatally.

These things seem to us part and parcel of the great movement against peace and law, as the two canker worms of modern society, which is spreading rapidly all over our nation. The dangers of peace as an influence on character have long been known and been gallantly struggled against by the nations of the Old World. The Swiss, in fact, felt the matter so deeply that, for two centuries, when there was no fighting going on at home, they hired themselves to fight in other people's quarrels, in order to get the benefit of the moral influence. Louis XIV., too, was so afraid of the effect of prolonged peace on the character of his people that he carried on war steadily for fifty years, with the happiest results. Napoleon followed his example, but on a greater scale and with more enthusiasm. The schooling the French people got from his campaigns have made them ever since the admiration of mankind for modesty, simplicity, and indifference to the pleasures of the senses. The spiritualizing influence of war was never so clearly revealed as in the career of this saintly people. Of the effect on the British of their wars, we need hardly speak. The indifference to material gain, and the longing for the things of the spirit, which have grown out of British battles by land and sea, are known to everybody. As to the effect of our own war, the rush into plain living which followed it, the contempt for wealth which suddenly showed itself among all classes of the community, the furious determination which displayed itself among debtors of every degree to pay their creditors not what the law allowed, but what was really due to them, the growth of stern integrity and candor among our public men, the disappearance of tramps, and the passionate love of industry which developed itself among the working classes, showed that we had not killed 500,000 men, between 1860 and 1865, in vain. They really died as moral instructors.

The judges we have mentioned above are simply protesting against the insidious, soul-destroying reverence for human life which has been gradually growing up among us, and which is so fatally corrupting our young men, and is at the South actually making duelling disreputable. The following letter recently sent by the Hon. Steve Clay of Cobb, Ga., in reply to a challenge from a litigant against whom he had appeared in court, shows how the poison is working in that section. Said the Hon. Steve:

"I am opposed to duelling. I am opposed to it because it is prohibited by the Constitution of this State, that I have frequently sworn to support and defend. I am opposed to it because it is condemned by every principle of our laws and every doctrine of our religion. I am opposed to it because I am unwilling to commit murder, or to become a party to its commission by others. I never intend to take the life of a human being, unless it is absolutely necessary to do so in self-defence. I have a family and dependent little ones who look to me for support. They have higher claims upon me than you can possibly have. You have neither a family nor a future, and hazard nothing but a life without ties or associations that make it desirable to live; a life embittered by disappointments, seared, wretched, and dwarfed by failure and selfishness. I have no reason for desiring to meet you out of the State, nor have I done you any wrong that entitles you to any redress at my hands. I have done you no injustice. If I had, I am manly enough to confess it and make the proper reparation for it."

The man who challenged doubtless felt himself suffering from the effects of peace. He felt that if he could only kill Steve, it would purify his moral nature and raise his whole character to a higher plane. He felt the meanness and baseness of sitting down quietly under Steve's language in court, and the degradation, in fact, of submitting to a court at all. He felt, in short, the tide of corruption and sloth rising around him, and determined to make one gallant effort to escape by killing somebody. The fops, the dudes, the diners-out, the luxurious bankers, as they hear the dollars chink, may laugh at this humble soul, but he none the less was eager to expose his life for the elevation of his race, and shall have his reward.

These judges also in effect protest against the growing respect for law, including international law. Coming from such a quarter, we confess, this protest is one of the sublimest things in human history. They live by the law; to the law they owe their salaries; to the popular reverence for it they owe the respect which surrounds them. But they are none the less ready to advise everybody to take the law into his own hands, to decide international disputes by the strong arm. Nay, one of them, feeling the futility of words, has been willing to brave popular prejudice by leaving the bench, going to the office of an offensive lawyer, and taking a crack at him with a revolver. This is the kind of courage the times call for. This is the kind of example our young men need. Such counsels, coming from such a quarter, must open the eyes of the community to the road it is travelling.

For what do obedience to the law and reliance on the law mean if not the surrender of one's own will, the concession to others of the power of deciding disputes in which one knows one is right? And what can be the result of this but enfeeblement of character and of purpose, the lowering of the standard of manhood and of courage, the loss of that trust in one's own right arm and a good sword which, from the earliest times, has been the boast and glory of the race? Chief-Justice Snodgrass has only wounded Beasley of the Chattanooga bar, but we say boldly that, even if he had killed him on the spot, the murder of hundreds of Beasleys would be a "price well paid," to use Judge Holmes's language, "for the breeding of a race fit for headship and command." It is for battle that men should be bred, and in the field of battle who would not sooner serve under Snodgrass than Mansfield or Marshall? We thank them all for their manly warnings to a generation rapidly sinking into wealth, quiet nights, and regular meals.

MR. CHAMBERLAIN'S COLONIAL SCHEMES.

THE gradual getting rid, by the English Conservatives, of the various disguises under which they won the last election, is one of the most interesting processes to which the English have been treated of late years. The Tory programme is, except probably in the matter of public education, being rapidly reduced to a series of negatives. That is, what they propose is mainly *not* to do any of those things the Liberals were going to do. This, of course, gets rid of home rule, and Welsh disestablishment, and local option, and a general assortment of Radical "fads." But the Tory constituencies expected substitutes for them, such as some sort of protection for agriculture, and free trade in India for the Manchester men, and increased subventions for the church schools, and something mysterious in the way of colonial policy. The most pressing of all these was the revival of agriculture, but all hope of it has vanished. A deputation waited on Lord Salisbury the other day to ask for a readjustment of the duty on beer so as to encourage hops and barley, but even this he rejected as "sounding" in protection, concerning which, he said, "public opinion had not changed." The Indian duties on cotton imports, for which Manchester has been waiting, are to be abolished as soon as the Indian budget balances. But no date is fixed, or indeed fixable, for this most desirable event, and Manchester naturally feels somewhat "sold." The church has apparently a better chance than any of the other malcontents, in the way of increased allowances to the voluntary schools, but nothing is settled. Everything is "under consideration," although Lord Salisbury's rather saucy tone towards a Wesleyan deputation which waited on him the other day makes the churchmen very hopeful. He openly ranged himself on that occasion on the Anglican side by speaking of "we Anglicans" and "you Wesleyans."

But nothing in the programme quite equals Mr. Chamberlain's performances. There is nothing even in Beaconsfield's career which quite matches the Birmingham orator's rôle. No one knew why he took the place of Colonial Secretary. He had never been associated with colonies in any way. The line he had marked out for himself clearly in politics was the provision of some sort of relief for the poor, the old, and the suffering. When he was a Radical he hinted that the expenses of this process would have to be got in some manner out of the pockets of the rich in the shape of "ransom." Since he became a Conservative he has hinted, but more obscurely, that they would be provided by some sort of financial operation, which the City men never clearly understood, but which was supposed to be "under consideration." But, to the great surprise of the country, the minute his Tory friends offered him office, he dropped the English poor and lowly and took charge of the colonies. To those who asked for an explanation of this he announced, with a marvellous imitation of Disraeli's best manner, that he looked on the colonies as "undeveloped estates," and he proposed to develop them. This is exactly the kind of phrase in which Disraeli used to delight, and Mr. Chamberlain has enjoyed the same immunity from inconvenient inquiries as to its meaning which Disraeli used to enjoy. How the colonies are "undeveloped estates," who is to develop them, what the Government has to do with it, where the money is to come from, who is to get the profits, are all questions which nobody has yet put to the brilliant Joseph, but there is no doubt that, when Parliament meets, there will be lively times about the enterprise.

At present he is supposed by his friends to be deeply meditating this scheme, whatever it is, and he is shrewdly talking very little. He received a warning as to the danger of too great explicitness from the *Economist*, not long ago, apropos of some astonishing figures he produced as to the commercial value of the Gold Coast. But recently he has begun writing despatches to the colonial governors about trade between Great Britain and the colonies. He says he is "impressed with the extreme importance of securing as large a share as possible of the mutual trade of the United Kingdom and the colonies for British producers and manufacturers, whether located in the colonies or Great Britain." He also asks for a return of foreign goods substituted for British goods in the colonies, and for a return of colonial products which might be advantageously exported to the United Kingdom, and for information as to quality, prices, and freight, etc. If this does no good, he says he will write another and fuller despatch.

We do not know how far this sort of game will be allowed to go before John Bull loses his temper, but nothing in Disraeli's career surpasses it. The effect is heightened by the fact that the Queen has taken quite a fancy to Mr. Chamberlain, as she did to Mr. Disraeli. He is a type of character and manner which apparently attracts her, and as long as he can bask in the royal favor he will probably not pay much attention to criticisms on his colonial plans. Nobody has as yet any idea of what he is going to do in the colonies—almost certainly nothing; but what his inquiries point to—some sort of legislation in aid of British and colonial trade, and the discovery of markets for languishing industries—is ludicrously out of tune with the policy of Great Britain and the trend of British opinion on these subjects for the last fifty years. Any such legislation would of course be a complete break with freedom of trade and with the great principle which triumphed in 1846—that individuals know their own business best. Of course there is not the smallest chance of any such legislation, or of the vote of money for Mr. Chamberlain's experiments. But his success in exciting the curiosity of the public about them and getting it to wait for them is a remarkable illustration of the willingness of mankind to be humbugged. What will remain of the affair in a year or two will be simply Mr. Chamberlain's despatches.

THE FINANCES OF THE FRENCH REPUBLIC.

IN a recent number of the *Journal des Débats* M. Leroy-Beaulieu returns to the theme he has so often treated—the gloomy look of the national balance-sheet. He acquits the reporters of the budgets of responsibility for the increasing expenditure. They have repeatedly warned the Legislature of the perils of the situation. In 1892 M. Cavaignac pointed out that in one year, 1883, the expenses outside of the budget amounted to 834,000,000 francs; and that between 1881 and 1892 the total expenditure of this description was 6,667,000,000 francs. It has been supposed that a more conservative policy has prevailed during the last few years; but M. Leroy-Beaulieu's analysis shows that this belief is not very well founded. There has been some diminution of expenditure on great public works: a country of the size of France must be sufficiently equipped for the present with 40,000 kilometres of railway. There has also been a saving of 65,000,000 francs, arising from the refunding of debt; and superficially the budgets of recent years are encouraging. The deficit of 1892 was only 10 millions; that of 1893 a little more than 84 millions; that of 1894 but 20 millions, and in 1895 there was actually a surplus of 166,220 francs!

The gratification felt at this showing is dispelled by two considerations. On the one hand, the revenue account in these budgets is swollen by including the proceeds of loans; on the other, a number of disbursements, of an ordinary and permanent character, are not included in the budgets. Thus, in 1892, over 20,000,000 francs of this exceptional revenue was received; in 1893, nearly 8,000,000 francs; in 1894, not far from 30,000,000 francs. The accounts for 1895 are not yet completed, but they will include extraordinary revenue amounting to over 37,000,000 francs. It thus appears that the deficit for the four years 1892-'95, instead of being 114,000,000 francs, would be more properly estimated at 210,000,000.

This of itself might not seem alarming, but we have yet to consider the extra-budgetary disbursements. Some expenses that were formerly excluded from the budget are now included; but there are others which are of regular occurrence, but which are still treated as extraordinary. M. Cochery, as reporter of the budget, officially gives these as amounting to 129,000,000 francs in 1892, 91,000,000 in 1893, and 188,000,000 in 1894. Hence the total deficit, excluding from revenue the proceeds of loans, would be 159,000,-

000 for 1892, 183,000,000 for 1893, and 238,000,000 for 1894. These figures, however, must be reduced by allowing for the payment of loans, which has taken place at the rate of about 63,000,000 francs a year during the three years referred to. On the other hand, M. Leroy-Beaulieu contends, the extension of loans at a reduced rate of interest, where unaccompanied with a corresponding reduction of taxes, implies a relative diminution of the resources of the people. The treatment, as an asset, of money advanced in payment of interest guaranteed by the Government on railway bonds, he very properly dismisses with contempt.

Well may M. Cochery cry out: "We are spending too much!" Within a dozen years the War Department has increased its expenses by 43,000,000 francs; the navy 61,000,000; colonies 11,000,000. Public instruction calls for 14,000,000 more, and will presently require twice as much; various charities have doubled their demand; civil pensions have increased by 9,000,000 since 1890; public works by 99,000,000. Moreover, there are laws in existence which demand additional appropriations to the amount of 164,000,000 per annum. Add to this that the departmental expenses within five years have increased 28,000,000, and those of the communes 74,000,000.

After all, there might be nothing terrible in this increased expenditure if the wealth of the people were increasing at a corresponding rate. Unfortunately, there is evidence that this is not the case. The population of France is stationary, if not actually decreasing; were it not for immigration it would certainly decrease. Moreover, the budget submitted by M. Cochery contains proof that the wealth of the French people is also stationary or declining; for the decreasing returns from taxation admit of no other explanation. The proceeds of the tax on the revenue from personal property have fallen nearly six per cent. since 1891. The tax on transfers of property between living persons yielded 187,000,000 in 1891 and 182,000,000 in 1894. Transfers on account of death also produce less, and the yield of the most important stamp taxes, except that on dealings at the Bourse, has fallen in four years from 129,000,000 to 124,000,000. These things, it must be remembered, have been done in a green tree. The cost of the acquisition of Madagascar remains to be met; and if France were to engage in a great European war, she could not possibly remain solvent. She has evidently nearly reached the limit of bearable taxation, and cannot be far from that of possible borrowing. But her legislators are incapable of reducing the exactions of Government. Finding that no more can be wrung from the income of the living, they are now turning to the accumulated wealth of the dead, and the Chamber has just voted, by a large majority, to appropriate such property to public uses, to the extent in certain cases of one-fifth of its amount.

"LIBRARIES."

THACKERAY was never tired of dilating on the advantage of authorship over other callings in the small amount of Persian apparatus it required. A little white paper, ink guaranteed not to blotch or run, and pens not to splutter, a table to sit at, and a chair or bed to sit on—and there you had the author's "plant" complete. With what delight, too, did he describe the *res angusta domi* of his Warringtons, his Philip Firmins, his Cassidys. Cowheel and tripe, rare vintages at 13 shillings the dozen, were the sufficient ambrosia and nectar of his slashing young reviewers and indefatigable newspaper exposers of the endless machinations of the Russians and Turks at so much the column. But this must be taken as a reflection of Thackeray's nearness to the degraded Grub-Street period of our literature, and his fondness for it. Johnson, with his threadbare coat, thinking it the pinnacle of felicity to know two days in advance how he was to get his dinner; Goldsmith, with his debts and duns; even Hood, grinning cheerfully in the face of poverty, disease, and death, had an unaccountable fascination over his intellect and heart. His sympathy so far got the better of his judgment that he did not see how shameful a thing it was for men of letters not to have the best of all that was going.

Luckily, we have changed all that. Literature has got out of such low places as the Mitre Tavern, and now exalts her mitred front in parliament and palace as grandly as Burke would have had the Established Church. Take the single item of authors' libraries. They show how far we have got beyond Thackeray's pens, ink, and paper on a deal table. The poorest of them have now a fine luxurious air with their rarities and fineries. Their attractive "nooks," their pictures and candlesticks and portières and writing-desks, quite incidentally their books, indicate in the most gratifying way the emergence of the literary profession from its dark and starveling age.

Let no one think that we speak of these luxuries from the standpoint of one privileged to gaze upon them from afar, with becoming awe; much less from that of personal ownership. Journalism in no way more surely proves that it is not literature than in so persistently going unclad in the latter's purple and fine linen. It is not necessary to say, then, that our knowledge of the interior fittings of the libraries of real authors is gained at second-hand. But the amount of second-hand, or second-class, information about them now accessible is getting to be enormous. We owe most of it to the kindly art of the photographer. Two things are now indispensable to a complete account of a popular living writer. One is a series of "human documents" in the shape of pictures of him from his unbreeched days down to his lean and slippered pantaloon period. The other is a series of photographs of his library. It is usually essential that he be himself seated at his desk, his brow sicklied o'er with the pale cast of thought how the picture is going to turn out. But in any case his favorite "corner" must be figured; his desk, carelessly covered with the manuscript for which all the publishers are madly bidding; his table, on which the world's greatest books that daily feed or relax his mind are displayed in a wild civility. In so many periodicals, and relating to so many writers, have these pictures been made public that the idea of an author without his library has come to be wholly unthinkable. He may have no literary baggage of his own on which the stern customs officers of posterity—or even of two years hence—will assess the smallest ad-valorem duty; he may have neither wit nor words nor power of speech; but he must have his library. Without it no photographer will pay the slightest attention to him; and, but for the hope of attracting and pleasing the photographer, of course, no truly modern man of letters would scorn delights and live laborious days.

In this, however, it is only fair to say that authors are but children of their age. The part which a "library" plays in the pictured surroundings of any man prominently before the public has come to be more and more necessary. No aspiring politician is ever caught without one. Next to a scene from his lovely domestic life, with his carefully tended aged mother on one side of the fire and his wife and preternaturally clean children on the other, nothing is more telling in a hard-fought campaign than a view of him in his library in deep communion with Justinian, Machiavelli, Grotius, Montesquieu, Burke, Hamilton, Story, and a copy of the paper in which the picture appears. The absolutely essential place of a library among the stage properties of a political "sage" is too well known to require more than mention. Even editors have had libraries attributed to them in the popular prints, but public taste, we are sorry to say, has not yet been educated up to the point of seeing any *vraisemblance* in this rather feeble attempt at illusion. Quite a neat thing in the library line was fathered upon a judge of this city the other day, with a harp standing conspicuously by the entrance. Some saw in this a design upon the Irish vote, which has so many times rung through Tara's halls; but others, more shrewdly, saw in it an arrangement for soothing, after the manner of David with Saul, a mind which much learning had made mad.

We have left ourselves no space in which to speak of the books which the libraries contain and of the amount of reading done in them by their owners. But, after all, it takes no space to tell about what does not exist. The idea of books as things to read is getting pretty dim at best, and to "libraries" of the kind we are treating it long ago ceased to have any real relation. Matthew Arnold said, despairing-

ly, that, if he lived to be eighty, he should probably be the only man in England who read anything but the newspapers and scientific reports. The prophecy has still seven years to run, but its fulfilment has already taken place in the libraries which exist only for the photographer and the smutch of publicity.

GENERAL THIÉBAULT.—II.

PARIS, November 29, 1895.

NAPOLEON was watching at Elba, with the keenest interest, the faults of the Bourbons and of the *émigrés*, and kept up secret communications with many of his partisans. At the Congress of Vienna, Prince Hardenberg and Talleyrand, "too guilty," says Thiébault, "towards Napoleon not to be the most cruel of his enemies," proposed that Napoleon should be transferred from the island of Elba to the distant island of St. Helena. In Thiébault's opinion, the Emperor had early formed the project of an expedition to France, and was only waiting for the dissolution of the Congress, for he knew that if he landed in France while the allied kings and their ambassadors were assembled, an armed coalition would be formed at once against him. But the Congress did not dissolve, and "an incident precipitated the action of Napoleon; this incident was the rebellion of Count d'Erlon and the march of this general on Paris." Thiébault's manuscript is interrupted at this point by the tearing out of nine pages. It continues with an account of the return from Elba, and the effect which this event produced in Paris. "If the Bourbons," says Thiébault, "left me no regret, Napoleon gave me no hope." He felt convinced that the return of the Emperor would only bring new misfortunes on France. "What is to be done?" was in everybody's mouth at the Tuileries, and in every house in Paris.

"On the 8th March I was at the Countess de V.'s, and, as everywhere, people spoke of this attack on a great kingdom by a single man as an astounding episode in such an extraordinary life. While it was admitted that if Napoleon was obliged to fire a single gun, he was lost, they spoke of the apprehensions caused by the troops. I said that to place a few soldiers, never mind which, in the presence of Napoleon and of the men whom he brought back with him, to bring them near enough for their faces to become visible and their voices to be heard, especially for Napoleon himself to be seen and heard, would render their defection inevitable, and that the only condition of avoiding the consequences of an irresistible attraction was to begin the fire with cannon at a great distance, for when once a drop of blood has flowed, soldiers hesitate no longer."

This idea was not followed, and, while the princes went in every direction to organize a vain resistance, Napoleon succeeded in doing what Thiébault had foreseen: he won over to his own cause, by the mere fact of his presence and of his own words, the troops which had been sent against him. On the 19th of March Thiébault went, as was usual on Sundays for the generals who were in Paris, to the Tuileries. He

"was drawn thither by the sentiment which leads people to the bed of a dying man. . . . I even shouted, like everybody, 'Vive le Roi!' when Louis XVIII. left the chapel to go to the Salon de la Paix—a hurrah of deference more than of foresight. Thinking that I had superabundantly fulfilled a conventional duty, I was about to go home when, in virtue of authority which had been given to him, Marshal Macdonald notified me that I had the command of all the troops which were on the point of being sent to Charenton, and that I should be specially intrusted with the mission of building, below the confluence of the Seine and the Marne, a bridge which would serve for the communications and even the retreat of the troops camping at Villejuif, where the headquarters was to be established. I had orders to defend and, if necessary, to blow up this bridge, as well as the bridge at Charenton, where I was at once to prepare a mine."

Thiébault recalls here the famous scene in the "Fourberies de Scapin"—"Que diable allait-il faire dans cette galère?" He felt that all was lost, and that he was sent on a fool's errand; but, he says, "whatever has even the appearance of duty has always been held sacred by me." So he went on his mission, tried in vain to find out what troops were going to Charenton, and took alone the road to that place. The Mayor was out; he chose himself a house in the village and established in it his headquarters. A young officer of artillery arrived with four guns; next came a colonel of royal volunteers; the colonel had no regiment, nor uniforms for one, nor guns, nor munitions. The few men who were with him had been picked up in the streets of Paris, and looked like thieves more than like soldiers. The Mayor arrived; he had no rations to furnish, he could procure no men for the construction of the bridge. Thiébault succeeded, with the greatest difficulty, in finding some soldiers and some workingmen, and threw his bridge across the river; he received from time to time contradictory news and orders. A regiment of cuirassiers came and placed itself in battle array near the bridge. The colonel told Thiébault that he had no further orders. A second regiment of cuirassiers arrived; its colonel, too, had no further orders. "If Napoleon," says Thiébault, "for some reason or other, had taken this road, if he had arrived before the bridge at Charenton and I had opened fire and blown up the bridge, it would not have hindered him at all; but, in the cruel hazard in which France was placed, strict obedience to the orders I had received became for me the most sacred duty of the soldier."

Napoleon did not arrive, and the cuirassiers became tired of waiting. Thiébault found himself almost alone, when he received a visit from an officer of the general staff of Paris, who wore already the tricolor cockade, and who ordered him verbally to dismiss all the officers who were with him, as well as the soldiers, and to return to his domicile in Paris. He left immediately, and, as he still retained his white cockade, he was hissed in the streets, had to dismount, and take a cab, and so return to his house by deserted ways.

"Popular exaltations have such an electric power that I had hardly left my house when I felt that I was seized by the current, and, after having gone to the hôtel of Marshal Macdonald with the idea that I was going there to give the last account of my duties to the Bourbons, I became the object of an irresistible force which took me to the Tuileries. It was a quarter past nine. Napoleon had just arrived. In the most delirious exaltation twenty thousand persons at least were pressed round the Pavilion of Flora, in the staircases, and in the apartments where I thought I should never arrive. On leaving his carriage the Emperor had been seized and carried bodily to the drawing-rooms. Those who carried him were half mad; a thousand others boasted of having kissed or touched his clothes."

We pass over many details of this famous scene, which Thiébault compares to "the resurrection of Christ." Napoleon recognized him in the midst of the crowd, "and, having accompanied my name with a nod of his head and a gracious smile, he was able to read my emotion in my face. And still three hours had hardly passed when, a soldier of the Bourbons, I had my guns directed against him; but now it seemed to me that I had become French again." If you remember how Thiébault changed his mind in his early youth, and how suddenly, under the impulse of a popular demonstration, he became one of the combatants of the Bastile, you will acknowledge that age had taken nothing from his impulsiveness. At any rate, he was not a hypocrite nor a trimmer; he was not among those whom Lafontaine speaks of in one of his fables as saying by turns "Vive le Roi!" and "Vive la Ligue!" and who are typified in England by the Vicar of Bray. Thiébault was candid, and did not look after his own interests; in fact, he generally compromised all his interests by his actions. He had served the Bourbons as a soldier, though he hated their rule and their persons; but Napoleon was always his idol, though never one of his favorites.

The great event of Napoleon's return was announced very laconically to France in the *Moniteur:* "The King and the princes left last night. His Majesty the Emperor arrived this evening." The impression in Paris was as great as that produced by the return of Bonaparte from Egypt, and, if we may believe Thiébault, "never did Napoleon exercise a greater moral influence." He blames him for having lost too much time in trying to negotiate with Europe, and in framing a useless and impracticable constitution; he gave time to the Allies while he continued to play the part of a sovereign at the Tuileries. On the 28th of March Thiébault received a visit from the Councillor of State Maret, who told him that his conduct at Charenton had been unfavorably noticed, that he had personal enemies in Berthier, the Prince of Neuchâtel, and in the Prince d'Eckmühl, and he advised him to write a letter to the Emperor, assuring him of his devotion, a duplicate of which letter should be left with the Minister of War. Thiébault wrote the letter, under the influence of the brother of the Duke de Bassano; he considered the advice given to him almost as an order; he little foresaw what consequences it would have for him afterwards.

The news from Europe became more and more disquieting; Thiébault was at the Élysée, the residence which Napoleon adopted during the Hundred Days, when the Emperor heard of the death of Berthier, by a fall from a balcony in the castle of Bamberg, owing to a stroke of apoplexy (such, at least, is the more likely version). "I never saw Napoleon so sad; he spent a whole hour in a little drawing-room next to the room where we were admitted. His face was contracted, his attitude sombre, his words briefer than was his custom. His proud head was drooping, his aspect had something sinister, and his gestures something convulsive." Berthier had abandoned at Fontainebleau the cause of the master whom he had served for fifteen years, but Napoleon could not forget the immense services of his chief of staff. The letters which Napoleon had addressed to all the sovereigns of Europe had not been answered nor even received; Murat had been defeated and dethroned. Napoleon tried, *in extremis*, a new system of government, and gratified France with the *Articles additionnels*, a liberal supplement to the Constitution of the Empire; he succeeded only in furnishing arms to his enemies.

On the 10th of June Thiébault went to the last reception which Napoleon held at the Tuileries:

"My gaze was fixed on him with all the more avidity, I might say pain; the more I examined him, the less I succeeded in finding him such

as I had known him at the time of his strength and his greatness. His look, once so formidable and so scrutinizing, had lost its power and its fixity; his face, which I had so often seen radiant with grace or modelled in bronze, had lost all expression, all character of strength; his contracted mouth had no longer its ancient beauty; his head had ceased to have the bearing which characterized the master of the world; his walk was as embarrassed as his countenance, and his gestures were uncertain. Everything about him was demoralized; the ordinary pallor of his complexion had taken on a pronounced greenish tint. Oh! what had become of the conqueror of Italy?"

Here Thiébault launches into a sort of panegyric, and pictures at length the Napoleon of the heroic times, especially in his dealings with his army.

When Napoleon left Paris, a great void seemed to have been formed. Everybody was waiting for the end, and felt that it could not be much deferred. On the 21st of June, Thiébault was approached by the Count de Valence, who had command of the first corps of the reserve, and offered him one of his divisions. His headquarters was set up at Montrouge: he had not yet seen any of his troops arrive when a captain entered his room, and, with an utterly disturbed face, screamed to him, "All is lost!" The news of Waterloo had just arrived, Napoleon was coming back to Paris. We will not follow Thiébault in his long analysis of the battle of Waterloo, and his criticisms of Napoleon and his generals. He went to the Élysée, and found it deserted. He saw Napoleon, and, saluting him more profoundly than usual, "Sire," said he, "let me offer you the expression of my deep and respectful devotion." "It is of France," said the Emperor, "that you must now think." He looked a moment at him, and turned to another person. And these were the last words exchanged between Napoleon and Thiébault. The rest is well known.

We have dilated chiefly on the parts of this history in which Thiébault appears in person. His memoirs will furnish the student with some valuable traits in the ever memorable physiognomy of Napoleon.

Correspondence.

THE OPPORTUNITY FOR A STATESMAN.

To the Editor of The Nation:

Sir: Will you let me call the attention of your readers to the impressive declaration of an educated and able professional man, a Sioux Indian, Dr. Charles A. Eastman, as to the terrible and swift decay of his people under the existing system of Indian administration? In a recent address Dr. Eastman, who is a man of thirty or thereabout, is reported as saying:

"The great trouble with our young men to-day is, that they have been precipitated into modern civilization with such suddenness that they have absorbed most of the evil of it and little of the good. They are mostly drunkards, rushers, and idlers, and are physical and moral degenerates. They are not the same men that the Indians of my day were. Then our young men thought nothing of ten and twenty-mile runs, and it was a common amusement with them to race and beat fleet ponies across the prairies. To-day you can scarcely find an Indian who can run as much as two miles, while in the old days it was nothing to do from fifty to seventy miles a day in foot travel, and to go for as many as three days and nights with out food. This difference between the Indians of old and the Indians of to-day only serves to illustrate the fact that the race has degenerated physically and morally since civilization has been thrust upon it.

"They say that the Indian is dying away. If the Indian is, it is a good thing. What we want to save is the man, the good in the young men, and by doing that we save the race. It is going to be hard work, for the small tribes are scattered all through the West, and, harassed and driven nearly crazy as they are by the Government, it is difficult to win over their confidence. They are absolutely without ambition now. . . . To-day the race is a ruined one—ruined by civilization. Every game with them is a medium for gambling. There are none of the manly contests of the old days now. They're all beggars, too, and even the very youngest is not ashamed to ask for alms. They live only to eat and sleep, and their thoughts are always of the present. The Indian spirit is broken, and nothing but systematic work will ever revive it."

This carries with it a fearful arraignment of our Government and of most of the well-meant efforts of our people, missionaries and others, to help the Indians.

Strange is it that no statesman at Washington turns his mind and his efforts to the one thing needful—the one absolutely necessary foundation for whatsoever of good is now available for the Indians, viz.: the establishing among them of a government of law. We have stupidly taken away from them the native springs of pride and character and self-reliance—their religion, their inherited customs, their own self-government—instead of building upon these in some rational and systematic endeavor to civilize them. Never was our shameful treatment of the tribal Indians more shameful and inexcusable than it is to-day, for now, within the last ten years, we know just how full and absolute our legal power over them is, and yet we neglect and refuse to use it for their good, and go on denying them a government of law, and keeping them outside the protection of the Constitution of the United States.

It is said that at Washington there are many young men just coming into Congress. Would to God that some of them would turn their attention to this matter, and bring blessing and honor upon their names by forcing upon the Government a speedy change in all this business. Two or three determined men in Congress could accomplish it. The time is fully ripe. James B. Thayer.

Cambridge, December 8, 1895.

OF THE EARTH, EARTHY.

To the Editor of The Nation:

Sir: In Wm. Hamilton Gibson's latest book, 'Our Edible Toadstools and Mushrooms,' a famous phrase is misquoted and given a prominent place. "For those who do hunger after the earthlie excrescences called mushrooms," his book is intended. On page 1578 of Thomas Johnson's edition (1633 or 1636) of Gerard's 'The Herball, or Generall Historie of Plants' are found these words: ". . . many that have both [*i. e.*, fish, and birds of the mountaines] do hunger after the earthie excrescences, called Mushrumes." Whether Gerard's own first edition (1597) says "earthlie" or "earthie" I cannot state. However, many of the current forms of this oft-quoted phrase fail in several points to preserve some of the original quaintness and piquancy of flavor.

Wilhelm Miller.

Cornell University, December 9, 1895.

THE CONGRESSIONAL CHAPLAINCY.

To the Editor of The Nation:

Sir: Apropos of your remarks relating to the disgusting exhibition by the new Congressional chaplain in offering a political prayer, the question arises, Why should there be such an officer at all? It is notorious that but few are present when the prayer is offered, and that even these few do not listen to the invocation. The writer has seen Congressmen engaged in any number of unedifying proceedings while prayer was being offered, and the thought arises that the cure for these things is not criticism, but abolition. While here in Massachusetts the thing is not so distressing on the political side, we have nevertheless within two years been treated to the ridiculous performance of the publication of 'The Chaplain's Prayers,' with the picture and biography of said chaplain attached. Nobody, as it seems to me, can feel more truly humiliated by these exhibitions than the people who believe in prayer and have an honest regard for the institutes of religion. While few bodies under the sun stand in greater need of divine help and rescue than the average Congress, the chaplaincy has long since become a scandal and an impertinence. It should be abolished.

Yours sincerely, A. A. Berle.

The Brighton Congregational Church,

THE ISSUE OF LETTRES DE CACHET IN BLANK.

To the Editor of The Nation:

Sir: The *Nation* called attention, some time since (No. 1567, pp. 29, 30), to the attack made by M. Funck-Brentano upon the long-prevalent belief in the sale of blank *lettres de cachet* under the old régime. Very properly would he win for himself a name as a legend-killer, as there stated, could he establish that a view that had passed unquestioned into the works of Michelet, Rambaud, and Duruy, and into the 'Encyclopædia Britannica' was a baseless fabrication. Not content, however, with denying that the *sale* of blank *lettres de cachet* was practised, M. Funck-Brentano calls in question the *issue* of any such orders by the kings of France. He tells us that, having been put in charge of the archives of the Bastile, he found, in all the mass of documents that thus passed under his eyes—some sixty thousand *dossiers*, containing an innumerable quantity of letters from persons of every rank and station—application for orders of arrest, appeals for liberation, reports from ministers down to police spies—"not only no trace of any *lettres de cachet* issued in blank, but not even a hint that any such letter ever was asked for."

Now, had M. Funck-Brentano confined his statements to the eighteenth century, and especially to the second half of that century, I should not challenge the correctness of his views, although I confess that I cannot regard the quotation from the letter of the Duc de La Vrillière of the 20th of August, 1770, reproduced in the *Nation*, as "of conclusive weight." But, however this may be, I am able to furnish documentary proof that, in the reign of Louis XIV. and in the last years of the seventeenth century, *lettres de cachet in blank were both asked for and issued.*

(1.) As to *the request* for *lettres de cachet* in blank: On the 2d of February, 1700, Le Gendre, royal intendant of police, justice, and finances, at Montauban, wrote to the Contrôleur-général at court, that one of the three most promising methods of effecting the conversion of the remaining Huguenots in his généralité was to display some examples of severity toward the obstinate. "For this purpose," he added, "I have asked M. de Châ-

teauneuf [the secretary of state under whom Protestant affairs came] *for twelve lettres de cachet in blank*, which I shall use only in case of extreme need" ("Pour cela, j'ai demandé à M. de Châteauneuf douze lettres de cachet, *le nom en blanc*, dont je ne me servirai que dans l'extrême besoin." 'Correspondance des Contrôleurs-généraux des finances avec les Intendants des provinces,' published by order of the Minister of Finance, Paris, 1874, 1882, ii., 23. I have referred to this passage and to the next in my 'Huguenots and the Revocation of the Edict of Nantes,' ii., 144.)

A month later M. Le Gendre again communicates with the Contrôleur-général (March 3, 1700), and encloses the copy of a letter which he has sent to Châteauneuf containing these words: "I have already had the honor to write to you regarding this matter [the gift of money to help needy "new converts"] and to beg you to send me a *few lettres de cachet in blank*, the mere sight of which will cause those that may be threatened by them to tremble" ("J'ai déjà eu l'honneur de vous en écrire et de vous suplier de m'envoyer quelques lettres de cachet, le nom en blanc, dont la seule inspection fera trembler ceux qui en seront menacés."—*Ibid*, ii., 28).

(2.) As to the *issue* of *lettres de cachet* in blank: I have been unable to ascertain whether the King granted to Le Gendre, at Montauban, the blank orders which the latter requested. Happily, however, there is no doubt that the King had granted them, fifteen years before, on the eve of the Revocation of the Edict of Nantes, to another officious intendant. The 'Mémoires de Nicolas-Joseph Foucault,' published by the Ministry of Public Instruction in the great "Collection de documents inédits sur l'histoire de France," contain at least two distinct references to the receipt of orders granted with the ominous vacant space for the insertion of the name of the victim. Foucault had just set on foot in Béarn the "Great Dragonnades" which were soon to spread to almost every part of France. On page 124 of his 'Mémoires' we read: "On the 16th of July [1685], M. de Croissy notified me that the King had given an order to arrest Sieur Dusseau, deputy of the Protestants of Béarn, and sent me six lettres de cachet to consign [to the Bastile or elsewhere] *the gentlemen that I might think proper*" ("pour reléguer les gentilshommes que je jugerois à propos"). These letters must have been in blank in order to be used thus.

Just one month later Foucault notes again that M. de Croissy has forwarded to him *some orders of the King in blank* for the same purpose: "M. de Croissy m'a envoyé, le 16 août, des orders du roi *en blanc* pour reléguer les gentilshommes opiniâtres" (*ibid.*, p. 126).

It will be seen, therefore, that the solicitation and the grant of *lettres de cachet* was not a "legend," but an indisputable fact, in the reign of Louis XIV. Consequently the conjecture of M. Funck-Brentano as to how the "legend" arose is as superfluous as it is unsatisfactory. We are told that printed forms did not displace the *lettres de cachet* fully written out by the hand until the last years of Louis XV. Here, however, are written *lettres de cachet*, with blanks left to be filled, asked for by intendants and issued to them, as instruments of intimidation and punishment, about three-quarters of a century earlier. Moreover, nothing in the tone of Le Gendre indicates that he was proffering a novel and unprecedented request, as there is no hint in the brief memoranda of Foucault that the grant was out of the ordinary course of things.

HENRY M. BAIRD.

NEW YORK UNIVERSITY.

ILL-EDITED TEXT-BOOKS.

TO THE EDITOR OF THE NATION:

SIR: While joining in "Y.'s" protest against editions with vocabularies of foreign texts for advanced students (*Nation*, Dec. 5), I beg at the same time to point out another fault deserving equally strong condemnation. I do so with the consciousness of the obligation under which teachers of modern languages are to editors and publishers for the scores, nay, hundreds, of school editions of German and French authors brought out in this country within the last dozen years—handy and attractive little volumes, many of which, because of the real value of the critical and historical introductions, and on account of the industry, scholarship, and pedagogical skill shown in the preparation of the notes, deserve the highest praise, and are equal to anything of the kind produced in any country. But some of the editors of modern-language texts have apparently gone to work without any definite idea of the help needed by the students, or, if they had a plan, have made no conscientious effort to carry it out. They have given at random a few translations of words to be found in small dictionaries, and explanations easily obtainable from the most common reference-books, but failed to elucidate passages or to comment on persons and things concerning which students not provided with a somewhat complete literary apparatus find it difficult to inform themselves. The amount of work put upon some editions of this class is hardly more than a good worker may accomplish in one summer afternoon or winter evening—certainly not sufficient to justify the editor in associating his name on the title-page with that of some great poet or historian whose pages are in some cases reprinted without having even received the necessary care of the proof-reader. It is difficult to understand why scholars of reputation and leading publishing-houses should engage in this kind of business. The least that we have a right to expect of an annotated edition is, that difficulties too great for the average student of the grade for which the volume is intended should be explained. To avoid scantiness as well as excess in the notes requires scholarship, experience, tact, and conscientiousness on the part of the annotator.

A. L.

DECEMBER 9, 1895.

ACETYLENE AND ALCOHOL.

TO THE EDITOR OF THE NATION:

SIR: A great deal has been printed in the papers lately in regard to acetylene gas, and I think it is time that chemists should characterize some of the statements made. It has been represented in the stock reports, etc., and the writer has even seen it stated or implied in the *Nation*, that acetylene could be made at such prices as to confirm its use for the manufacture of alcohol, benzole, or nitro-benzole, and aniline, from which the colors could be obtained.

Now there is just enough chemical truth in this to deceive the ignorant or the partially educated. It is true that acetylene can, to a small extent, be decomposed into benzole, that it can, by a roundabout method, be decomposed into alcohol; but it is utterly false that it can be done on any commercial scale to advantage. We might as well say that because marsh gas, which is the main constituent of the natural gas of Pennsylvania, can be decomposed by chlorine into chloride of methyl, and from that can be made into wood alcohol—we might, I say, as well advertise that alcohol can be made at fabulously cheap prices in this method, as to claim the same for acetylene.

The decomposition of water power into electricity, and that electricity into chemical energy, the use of that chemical energy to decompose a mixture of carbon and limestone, and the subsequent use of the carbide of calcium, is a very interesting, and, for some purposes, may be a useful process; but any one who will for one moment consider the matter will see that the original electricity directly converted into light must inevitably be far more economical than this very roundabout method, implying large losses in lime, in coal, and in electrical energy which are incident to the process.

To chemists who have examined the process critically and without previous bias, it seems a very great pity, if not a shame, that such an interesting chemical discovery should be so exaggerated as to become almost as much falsehood as truth. There is an old adage that "a lie that is half the truth is ever the blackest of lies."—I remain, sincerely yours,

CHEMIST.

TRADUTTORE, TRADITORE.

TO THE EDITOR OF THE NATION:

SIR: Permit me to protest against the wrong done to a great artist and a huge public. The December number of the *Century* contains an engraving, after Titian's "Flora," which has eyes out of drawing, a mouth pulled out sideways, a nostril with a mean shadow under it, and an undulating cheek-line, which turn the splendid original into a caricature. One of the pretexts for engraving rather than processing is that the tone can thus be better preserved; but while Titian's "Flora" is a blonde of the blondes, the "Flora" of the *Century* engraver is a dark woman of the Venetian type of beauty. Titian's "Flora" is fleshly, and that is already bad enough; the engraver's "Flora" is flashy as well! Why, in the name of all our duties to the public, present it with engraved caricatures when the cheapest processed reproduction of a photograph costing fifteen cents would do the original infinitely greater justice?

B. BERENSON.

FLORENCE, December 4, 1895.

Notes.

DODD, MEAD & CO. are to be the American publishers of Henry Harrisse's notable piece of research entitled, 'John Cabot, the Discoverer of North America, and Sebastian his Son: A Chapter of the Maritime History of England under the Tudors' (London: B. F. Stevens). There will be eleven maps and illustrations.

A Life of the late F. A. P. Barnard, President of Columbia College, by John Fulton, is in the Columbia University Press (Macmillan & Co.). The Life of Cardinal Newman, by Edmund Sheridan Purcell, will be issued directly by this house.

The Peter Paul Book Co., Buffalo, announce 'The Man Who Became a Savage,' by the traveller and naturalist W. T. Hornaday, with illustrations by Charles B. Hudson.

Silver, Burdett & Co., Boston, will soon is-

sue 'A History of American Literature'; 'Topical Notes on American Authors'; and an autobiography of the late Dr. Ezekiel G. Robinson of Brown University.

The Appalachian Mountain Club, Boston, will publish, early in the spring, a 'Guide to Walks in the Country about Boston,' with maps and illustrations by the amateur photographers of the club.

It might well prove that the most enduring part of Robert Louis Stevenson's literary product—as of his fame—should be his 'Child's Garden of Verses.' An edition of it to be recommended in every way has just been brought out by Charles Scribner's Sons in conjunction with the London publisher John Lane. An artist, Charles Robinson, possessing a graceful fancy and a sure decorative sense, has supplied a profusion of illustrations and embellishments. The letter-press is beautiful, and the blue-and-gold binding in excellent keeping with the contents.

Mr. Austin Dobson's 'Story of Rosina, and Other Verses' has been given to Hugh Thomson to illustrate, and to Dodd, Mead & Co. for their imprint. Mr. Thomson is not quite equal to the pathetic demands of the title-poem, but the humorous and the pastoral effects he matches well enough with his practised pencil, and his headpieces are uniformly pleasing and ingenious. Here too we have a rich and becoming binding.

In line with the foregoing is 'The *Spectator* in London' (Macmillan), with illustrations by Ralph Cleaver. The selection has been made with a view to offsetting the Sir Roger de Coverley scenes of country life in the eighteenth century, and hence is concerned with the town life of the day of Steele and Addison. Mr. Cleaver is but ill-equipped for his task from an antiquarian or an artistic point of view, and for the most part one turns from his drawings of the human figure to his headpieces for their architectural or landscape motives. The reader's imagination needs no extraneous support for the enjoyment of the excerpts from the *Spectator*.

A rubricated selection of 'Thoughts from the Writings of Richard Jefferies,' by H. S. H. Waylen, in plain bold type (but with too long a list of acknowledged errata), comes to us from the Longmans. It well exemplifies the style and the intellectual habit of the lamented author, and has the quality of an acceptable gift-book, without and within.

The aid of the De Vinne Press, parchment paper, vellum covers, and a limited edition, do not, in our judgment, redeem from shortcoming Mr. George Wharton Edwards's attempt to illustrate Spenser's 'Epithalamion' (Dodd, Mead & Co.). This archaism was worth while only for a master, and in Mr. Edwards's work one sees here much that is amateurish in form and unlovely in composition—even amusing, as in the foreshortening of the poet's leg on the title-page, and the leg-like curve of the turfy oval behind the reclining figure; or as in the seemingly unrooted and volant trees in the design facing the stanza, "But if ye saw that which no eyes can see." Still, there is the immortal verse in strong print.

'The Gillmans of Highgate,' by Alexander W. Gillman, makes a promise on the title-page which is broken in the fifty quarto pages following. The new letters from Coleridge are few, and add little to our previous knowledge. The author, or editor, is a grandson of Coleridge's friend James Gillman, with whom the poet lived for eighteen years before his death, tenderly cared for by Dr. Gillman and his wife. The apparent motive of the book (an extract from a genealogy, yet to be published) is to glorify the Gillman family by the reflected light of that kind behavior. But this, the beauty of which was most remarkable, has had ample justice done to it by Coleridge's various biographers. No man ever needed more such kindness as he received, but there is no reason why it should be counted to the descendants of the Highgate Gillmans for righteousness. Their son James had the doubtful distinction of being one of the founders of the first society for insuring children's lives. Two mooted points are set at rest by Mr. Alexander Gillman to his own satisfaction. Coleridge, he assures us, was entirely cured of the opium habit at Highgate, and, except at the beginning, he was wholly dependent on the Gillmans for his support. His evidence for either statement is inconclusive. The illustrations are interesting, even when most familiar.

'Algerian Memories,' by Fanny Bullock Workman and William Hunter Workman (London: T. F. Unwin; New York: A. D. F. Randolph & Co.), is one of an increasing number of works due to the use of two recent inventions, the bicycle and the kodak. Such works are not likely to be of any great or lasting value, and the present one is slight enough. The incidents described are not very exciting, nor is the ground traversed particularly new; still, the book can be read through in two or three hours without fatigue, in spite of the occasional clumsiness of the style. What shall we say to the word "kodakist"! The last two chapters are the best because the least hurried.

'Among the Pueblo Indians' is the title of a small volume, issued by the Merriam Co. of New York, in which Carl and Lillian Westcott Eickemeyer tell of a visit which they made to certain villages in the neighborhood of Santa Fé. There is nothing new in the story, unless the account of the game of "gallo" which they saw played on San Juan's day, in the village of Cochiti, can be so considered. In one portion of the game "a living rooster [*gallo*] was buried in the sand" up to the neck, and the object of the player as he rode by was to "catch the bird" and bear it off to his home. Evidently this is the game of "gander-pulling," well known in early times in portions of the South and West; the only difference being that with us the bird was hung by the legs to a cross-piece and the riders "grabbed for the head" as they galloped by under the pole. Whether the Indians borrowed the game from their Spanish neighbors, if indeed they had it, or from ourselves, we cannot say, but that they did borrow it, is, we think, beyond all question. In conclusion, a word of commendation for the way in which this little volume is issued may not be out of place. It is printed on good paper, with broad margins, and the illustrations, taken from photographs, give an excellent idea of the natural scenery and of certain phases of Indian life. There is an occasional defect of idiom, *e. g.*, on pp. 49, 50, where we have the expression "struck camp," when pitched camp or simply camped was meant; and, on p. 114, the crowd is told to "stand by" instead of stand or fall back.

Pedro Sarmiento, one of the foremost navigators of the sixteenth century, is best known for his exploration of the Straits of Magellan and his unfortunate attempt to make a settlement in those inhospitable regions. His accounts of his several expeditions for this purpose are now for the first time translated from their Spanish originals, recently brought to light, by Mr. C. R. Markham, and published as the ninety-first volume of the works issued by the Hakluyt Society ('Narratives of the Voyages of Pedro Sarmiento de Gamboa to the Straits of Magellan'). He appears to have been a man of great courage and resource, and his story, told most simply, reads like a romance. It ends with a pathetic account of his imprisonment in a French dungeon immediately after his release from captivity in England. Mr. Markham, the most competent of Englishmen for his task, has translated the various narratives and reports into terse Elizabethan English, and has added many valuable notes. There is an excellent index and three admirable maps.

P. Anderson Graham's 'Country Pastimes for Boys' (Longmans) is the fourth of a series of books intended for the use of boys happy enough to live in the country, and devoted to sports, popular natural history, etc. The book is adapted to country life in Great Britain, treating of British birds, animals, and plants, a large proportion of which are unknown on this side of the ocean, or which live here under very different conditions. For the English boy nothing, it would seem, could be better done, and we can only regret that a similar book from an American standpoint is not yet accessible. However, even for the American boy there is much of interest and value to be had by discriminating reading; and it would prove interesting to almost any bright youngster to endeavor to compare the habits of our wild birds and beasts with those of the British islands which are here so well described. The book is handsomely printed; many of the illustrations being of an unusual degree of excellence.

Col. Thomas W. Knox, in his 'Boy's Life of Gen. Grant' (The Merriam Co.), tells the story of our great general's military career in a simple, straightforward way which cannot fail to win the interest of his readers. The narrative shows marks of hasty writing, however, and is too eulogistic to be entirely trustworthy. The illustrations are most of them poor, and one at least, representing the Battle of Fredericksburg (p. 287), has no place in the book.

Part vii. of *Bibliographica* (London: Kegan Paul; New York: Scribners) has a remarkably substantial table of contents, beginning with a paper on "Venetian Ducali," by Mr. John W. Bradley. The MSS. so called consisted of certain oaths, diplomas, statutory commissions, or collections of regulations of the *Scuole*, and apparently made such a claim on the resources of the penman and miniaturist as to account for "the almost entire absence of native liturgical MSS., at least of a sumptuous kind." Some very fine specimens accompany the paper. Mr. W. H. Allnutt continues his series on "English Provincial Presses"; Sir E. Maunde Thompson exemplifies "The Grotesque and the Humorous in Illuminations of the Middle Ages"; Mr. Russell Martineau offers some Notes on the Latin Bible of 42 lines (1455), the result of a very patient collation of several copies, and subjoins variations of reading which demonstrate a resetting of the type. Mr. Alfred W. Pollard's "Transference of Woodcuts in the 15th and 16th Centuries" opens up a curious chapter in the history of book-illustration. The number concludes with an account of some American book clubs.

The Fifth Part of "Archæologia Oxoniensis" (London and Oxford: Frowde), lately received, is a very satisfactory eighteenpennyworth. Besides a paper on the architecture of the Bodleian Library, and a plate of a vaulted cellar that once belonged to the Oxford merchant gild, there is an account of a fresh discovery of British remains. Of the two skele-

tons found together, one is dolichocephalic, and therefore assigned by the editor to the "Iberian" race; the other hyper-brachycephalic, and accordingly set down as "Celtic." The editor gravely remarks that the presence of oyster-shells and of a coin of Antoninus would appear to indicate "friendly intercourse" between the races.

In the December number of the *New England Magazine* Mr. Abram English Brown makes a strong argument in favor of identifying the builder of the Old South Church in Boston with Joshua Blanchard Blanchard's journal is reproduced, with this entry: "1729, Aprell the 1st. I with other layd the foundation of the South Brick meeting house and finished the Brick ye 8th of Octr. following." And photographs are shown of the northeast cornerstone inscribed "I. B., 1729," a flaw in the stone giving to the I an appearance of an L, for which the letter has commonly been mistaken. Mr. Blanchard is also, on good ground, thought to have had a hand in building the original Faneuil Hall.

A much more extensive and important diary (1764–1779), that of John Rowe, a wealthy and prominent Boston merchant, formed the subject of a paper read by Sumner's biographer, Mr. Edward L. Pierce, in March last before the Massachusetts Historical Society, and lately printed in advance of the Proceedings. Mr. Pierce treats it skilfully by analyzing its contents under numerous heads, political, social, historical; and then makes further continuous excerpts without comment. Rowe's name has been perpetuated in Rowe Street, which ran through his three-acre farm in the heart of Boston. He owned one of the tea-ships, and joined in the patriotic protests against England's restrictions on American trade, but, churchman as he was, he deprecated armed resistance or separation. His diary fills some gaps in local Revolutionary annals, and is a good mirror of the manners and customs of his day. In particular, Mr. Pierce lays stress on the evidences of the rule of the mob in Boston.

The *Harvard Graduates' Magazine* for December has for its principal document Judge O. W. Holmes's address on "The Soldier's Faith" at Sanders Theatre on Decoration Day, in which a fine style competes with bad ethics for our admiration. An LL.D. of both Yale and Harvard, Judge Holmes finds it easy to approve of dangerous sports. Dr. Royce, on the other hand, in the same number, referring to Prof. Ladd of Yale taking Prof. Palmer's place once a week in the Harvard Ethical Seminary, makes this more humanizing comment: "There is a not unphilosophical satisfaction in the thought that, at the very moment when the athletic relations of Yale and Harvard are so unenjoyable, and when, in consequence of this fact, many hearts besides those of the athletes themselves are troubled with thoughts of estrangement and of misunderstanding, the philosophical departments of the two institutions are finding just the present sort of coöperation so natural and so effective in meeting our own needs." A report from Radcliffe College shows a total of 344 students, of which the graduate portion is drawn from a much wider radius than the undergraduate. The Divinity School now embraces a plurality of orthodox Congregational students—a fact likely to please neither Unitarians nor Orthodox. The building for the Fogg Art Museum (shown photographically) comes in for further censure for its defects. Judge Richardson makes another assault on the continued use of Latin as the official language of the University. The familiar Copley portrait of Nicholas Boylston has been chosen for reproduction in this number.

The larger part of the contents of the Boston Public Library Bulletin for July and October consists of the titles of works in the Russian and German languages. A continuation of the chronological index of historical fiction includes the countries of eastern Europe, and it is rather surprising to see how meagre the list is, the entries under the Eastern Empire and Turkey consisting largely of dramas, and those under Servia of collections of songs. There follows a useful catalogue of German fiction in the library, under both authors and titles, as well as English translations; and the last two years' accessions of English fiction are recorded.

The "Almanach Hachette" for 1896 has made its appearance. Its matter and its illustrations are all new, and it offers many prizes available to such of its readers as happen to be in Paris. To the outer world it presents 500 pages of useful information, closely but clearly printed, with 1,500 illustrations and ten maps. Its buyer receives good value for the 1 fr. 50c. which it costs him.

M. Salomon Reinach has just sent his "lettre de candidature" to the Académie des Inscriptions et Belles-lettres for the place made vacant by the death of M. Derenbourg. Other candidates are the Marquis de Beaucourt, Prof. Cagnat of the Collège de France, and Prof. Devéria of the École des Langues Orientales.

At the session of the Académie des Inscriptions of November 23, M. Léopold Delisle read a communication on an interesting bibliographical discovery which has just been made at Lyons. The library of that city possesses a very precious manuscript containing a Latin version of the Pentateuch which is earlier in date than the Vulgate. At the book-sale after the recent death of M. de Verna, there was offered a manuscript containing in three columns a Latin Biblical text in uncial characters which is the exact continuation of that of the codex in the library. It contains the Book of Joshua and the Judges almost complete. There is no doubt that the sheets found in M. de Verna's collection belonged originally to the library manuscript. The first page of the Verna completes a phrase begun on the last page of the principal codex. All the characteristic signs in the two are exactly alike. How the manuscript came into the possession of M. de Verna is not known. The main body of the Lyons codex was conveyed away some years ago by the too celebrated collector Libri, who sold it to Lord Ashburnham, by whom it was returned to the library. The Lyons Pentateuch has now become a Heptateuch, and Biblical critics have a new text of a version which is earlier than that of St. Jerome. M. Ulysse Robert, who has already admirably edited the Codex Lugdunensis, will without delay proceed to publish this precious addition to it.

—Dr. T. Berry Haycraft, in a brief communication in *Natural Science*, points out the fundamental difference which exists between organic individuals and inorganic objects in respect of the distribution of variation in their qualities. As first established by Quetelet, the measurable qualities of every living species, whether of animals or of plants, are regularly distributed about a mean. Take the height of a given race of men, the quality for which Quetelet first laid down his law: the greatest number of men are of average height, many are just above or just below it, and fewer and fewer are found at heights further and further removed from the average. If we lay off along a horizontal line distances representing the different heights, and erect at each of the distances perpendicular lines proportional to the number of individuals of that height, the tops of these perpendiculars will lie in a regular curve, which is symmetrical on both sides of the mean, and which is known as the curve of deviation from an average. But if the quality measured is a quality of inanimate objects, as for instance the weight of a thousand stones picked up at hazard on a beach, this symmetrical deviation about a mean does not exist. Dr. Haycraft suggests the constant death and sexual reproduction of living objects as the cause of this peculiarity; and as the peculiarity is an extremely desirable one in cases of an unchanging environment, he believes that he has here hit upon the essential function of sex. Interbreeding is a result attainable by sexual reproduction alone. The products of asexual reproduction are offspring which start on deviating lines, and never mix their qualities with those of their mates so long as asexual multiplication continues; but the progeny of a sexual union, as Galton has pointed out in his 'Natural Inheritance,' approaches even nearer to the mean type, or mid-species, than does the mid-parent itself. The rôle of sex Dr. Haycraft therefore finds to be the preservation of the average individual in face of a progressive tendency to variation, and he finds it curious that writers on the utility of sex should have overlooked so obvious a suggestion.

—Every evening for about two months M. Henri Rochefort has produced an instalment of his very entertaining memoirs in the *Jour* newspaper. These memoirs are, as was to be expected, not exactly gentle in tone, nor distinguished by moderation or by calm justice, but they are full of life and force, and present a vigorous portrait of what M. Rochefort has been, and, perhaps, in some regards what he wishes he had been. One incident of his early life is presented advantageously to himself, as appears from an article by M. Charles Maurras in the *Revue Encyclopédique*. M. Rochefort tells the story of a visit which Mgr. Sibour, the newly appointed Archbishop of Paris, made to the Lycée Saint-Louis not long after the days of June, 1848. The young republican was appointed to deliver an address in verse to the prelate. Machiavellian beyond his years, he delayed handing in any copy of his verses until the very moment of their delivery. Then he rose, he says, and broke out into a revolutionary pæan which almost caused his masters and the professors to sweat blood. Especially he urged that protection and care should be given to the children of those who had been executed. After all these years, four verses of the poem, which give an idea of its general tone, remain vividly in his mind:

> "Sans savoir si le père, accourant au péril,
> Et bravant l'échafaud pour prendre le fusil,
> Fut responsable ou non de la guerre civile,
> À ses fils orphelins vous offrez un asile."

M. Maurras finds that the manuscript of Rochefort's poem has been carefully preserved, and he gives in the *Revue* a photographic reproduction of it, in the strikingly handsome handwriting of its young author and signed by him. The real text differs sensibly from Rochefort's account of it. There is no republican severity in it, no protest against the scaffold, no talk of the "fusil" of the insurgent; while about the children of the condemned he roars you as gently as any sucking dove. Not one of the lines which M. Rochefort quotes appears in the manuscript, nor is

there anything in it which resembles them. M. Maurras says that he will leave this discrepancy for future historians to settle. It may be possible that the young Tyrtaeus, inspired by the moment, put his manuscript aside and burst into strains of unpremeditated art.

—The *North China Daily News* reports, in one of its latest issues, that the Rev. Timothy Richard is now in Pekin making arrangements for starting there a Chinese daily paper in the native tongue, and that he has the hearty support of many distinguished imperial courtiers. It was also added that the Emperor, on being informed of the project, was much pleased, hoping that, when it was realized, he should be early apprised of what is going on in the world, without being dependent on court gossip or the uncertain memorials of his ministers. A correspondent of the *Nation* who was in Canton five years ago found there such a paper printed in Chinese, already several years old and flourishing. Its editor, a native Chinese, had worked for five years on a newspaper in Hartford, Conn., and so become thoroughly furnished for his enterprise. Many of our readers must learn with surprise that the *China Mail*, an English newspaper at Hong Kong, has already attained to its jubilee year, and especially that the *China Review*, published bi-monthly in the same city, has reached its twenty-first volume. This publication, though mainly in English, receives contributions in Chinese, Latin, and the languages of southern Europe. Besides original articles on all subjects of special Oriental interest, the three chief departments are Correspondence, Notes and Queries, and Reviews of New Books. The subscription price is $6.50. Among the principal contributors are officers in the Imperial Customs Corps and in all the foreign consulates, as well as missionaries of every denomination—a truly cosmopolitan staff. Thus, the *China Review*, in regard to China and the neighboring countries, occupies a position analogous to that which has been filled in India by the *Calcutta Review*.

—At a general conference of the German *Sittlichkeitsvereine* it was resolved to make a thorough investigation of the moral condition of the Protestant population of Germany, and to this end circulars of inquiry containing a series of pertinent questions were sent to the evangelical clergy. About 900 answers have been received, and the results of the inquest published by Pastors H. Wittenberg and E. Hückstädt in a volume entitled 'Die Geschlechtlich sittlichen Verhältnisse der Evangelischen Landbewohner im Deutschen Reich' (Leipzig: Werther). The researches embodied in this volume are confined to East Germany. A second and concluding volume, comprising Middle, West, and South Germany, and compiled by Pastor E. Wagner, will be issued in the spring of 1896. The report is rather meagre in regard to the higher and so-called cultured classes and nobles, whose morals are known to be extremely lax, and among whom, as Prof. Ziegler of Strassburg has recently asserted, licentiousness is "in vogue." The chastest part of the population is the peasantry, wherever it has preserved its peculiar character, as in Holstein and portions of Pomerania, Brandenburg, and Saxony; but the working classes in general, both industrial and agricultural, are notoriously lewd, and violate the sixth commandment without the slightest compunction. It appears also from the report that the church exerts no perceptible influence in promoting purity of life, but that this depends almost wholly upon external circumstances and specifically economical conditions. Particular mention is made of the wretched dwellings, in which families herd together, as a prolific source of sexual immorality. The evil is not confined to overcrowded cities, but extends even to the remotest rural districts. This is especially true of the great landed estates in New Pomerania and Mecklenburg, where the feudal spirit still prevails and the peasants are in a state of semi serfdom. "One hardly knows whether to be more astonished at the indifference and shortsightedness of the proprietors who venture to offer such dwellings to their laborers, or at the indolence and degradation of the laborers who do not refuse to live in habitations so unfit for human beings." Another source of corruption is the army, with the false notions of manliness prevailing in the barracks. A soldier who keeps himself sexually pure is regarded by his comrades as "kein rechter Kerl," a fellow of no account. In this respect the rank and file merely adopt the code of morals and ideas of honor by which their officers are governed. As the result of this "education and habituation to unchastity," the recruit, after the expiration of his term of service, is apt to return home morally debauched and often physically infected.

—The neatest novelty in American aboriginal literature is a "Journey to the Country of the Manzaneros," a short historic relation in the Huilli-che dialect, Araucan language, dictated by the Indian Domingo Quintuprai to Prof. Rodolfo Lenz in Santiago, Chili. In 1871 this Chilian native undertook to bring a large cargo of brandy across the high Andes ridge to the Manzaneros, or "Apple-Orchard" Indians, as an object of trade, and for this purpose started with a considerable retinue of men and sumpter horses. The journey was perilous and not favored by the state of the weather. The crossing of the mountain creeks became peculiarly distressing, and several of the men and beasts perished on such occasions, chiefly because the men could not be kept sober all the time. The Indian narrative, from the mouth of Quintuprai, is made intelligible by Lenz's Spanish translation standing in the column opposite, and by the marginal notes, of a philological nature, added at the bottom of each page. The details of this "alcoholic" expedition are full of ethnographic interest, especially the colloquial paragraphs, in which conversations with people met on the road are quaintly reported. The dialect is of a vocalic nature, and many sounds in it are not found in European languages. Dr. R. Lenz, who is professor of the Instituto Pedagógico at Santiago, has published this "Viaje" in the ninetieth volume of the *Anales* of the University of Chili. It fills twenty-nine pages.

THE GOLD OF AFRICA.

The Gold Mines of the Rand: Being a Description of the Mining Industry of Witwatersrand, South African Republic. By Frederick H. Hatch (mining engineer) and J. A. Chalmers (mining engineer). Macmillan & Co. 1895. 8vo, pp. 306. With maps, plans, and illustrations.

Two books upon the South African gold fields have already been noticed in these columns. Both were by Germans and in the German language, and the observations upon which the last of these (that of Bergrath Schmeisser) was based were made in the summer and autumn of 1893. The English work before us gives data and statistics up to June, 1895. The senior author was once a member of the Geological Survey of Great Britain, and, during his stay in South Africa, has been closely associated with the young American mining engineer John Hays Hammond, who, according to common report, is the leading authority upon gold mining in the region; his professional services being valued at $60,000 per annum. Mr. Hammond contributes a few pages in the preface "upon the future of the Rand," which end with the following words: "I would regard as well within the bounds of conservatism the prediction that the annual output before the end of the century will exceed £20,000,000 sterling worth of gold." Mr. Hatch, in his introductory chapter, increases this estimate to £26,000,000 for the beginning of the next century, and adds that for the whole district, including outlying portions, a total production may be expected of upwards of £700,000,000, of which amount he later estimates that £200,000,000 will be profit.

If one were to judge the book by these quotations alone, he might be led to suspect that it was written in the interest of promoters of "Kaffir" companies on the London market. It is, however, a scientific exposition, giving the geological relations of the ore-bearing conglomerates of the Rand, so far as known at present; some "particulars" about the most important mines; what is known and logically surmised with regard to the continuance of the ore-bodies in depth; the methods of mining and the machinery (largely of American model) used in extracting the ore; the metallurgical treatment, including milling, chlorination, and cyaniding; the economics of the mines, *i. e.*, costs of mining and reduction; mining laws of the Republic; and, finally, gold production and dividends. All these are subjects upon which those practically interested in mines, either professionally or as owners of mining property, are glad to obtain trustworthy information, and that given by Mr. Hatch and his collaborator bears internal evidence of being carefully and intelligently compiled, and is rendered more clear by abundant and excellently executed illustrations. To be sure, our authors show here and there a trace of the national conservatism and want of familiarity with what is going on outside of "Greater Britain," as when, for instance, in discussing the probable depths at which it will be impracticable to carry on mining in the future, on account of the great subterranean heat, they not only reproduce the long since disproved theory of Church that the heat in the Comstock mines is produced by the kaolinization of the feldspars, but put it forward to account for the great heat in Mexican mines.

The general reader will, however, be less interested in the many technical details than in the general phenomena relative to the future production of the region, and in the effect which this production is likely to have upon the finances of the world. The gold-bearing conglomerates of the Rand—locally known as "reefs" (the Australian term for lodes), or "bankets" (a Dutch name for a kind of almond cake)—are found over an area of about 2,000 square miles, in which they have a general basin structure or inclination towards the middle of the area. Where mining is most actively carried on, its width from Johannesburg on the northern rim to Heidelberg on the south is over twenty-five miles. In the central section of the Rand, on the Johannesburg side,

where an almost continuous series of mines stretches eleven and one-half miles east and west, the beds are inclined (or dip) from the surface southward at very steep angles, varying from 25° to 80°, but averaging over 45° to the horizon. So steep a dip, if continued, would rapidly carry the beds beyond the limits of practical mining; but exploration, by actual mine workings, and by drilling at various points to the south of the mine workings and to vertical depths of more than 2,000 feet, has shown that the angle of dip decreases in depth very rapidly, though not uniformly, and at the depths now reached is about 25° or even less. It is readily seen that the question whether this angle of dip continues to decrease in depth or not, is one of vital importance for the future of the district, being one of those upon which the extent to which it will be practicable to mine the beds at a profit depends. The deepest mines in the world, outside of the copper region of Lake Superior, have reached depths of 3,000 to 3,500 feet, and in the Lake Superior region, where the increase of temperature with depth is unusually small, some shafts have already been sunk to still greater depths, and are planned to go to 5,000 and 6,000 feet. The rate of increase of temperature with depth in the Rand has not yet been definitely determined, but the indications are that it is rather below than above the normal.

The conglomerates of the Rand have many characteristics in common with those of Lake Superior — their steep initial dip, the occurrence of the valuable metal in the matrix and not in the pebbles, and the association of basic igneous rocks with the water-laid gravels. The principal differences are, that the valuable metal is gold instead of copper; that the metal-bearing beds are more numerous; that, while the Lake Superior beds are more uniform in angle of dip and less broken by faults and dikes, there is no definite evidence of basin structure—the other rim of the basin, if it exists, lying beneath the waters of the lake. Furthermore, geologists have proved that the copper was introduced into the Lake Superior conglomerates after they had been deposited and consolidated into rock, whereas many have maintained with regard to the "bankets" of the Rand that they are fossil placers resulting from the concentration, by ocean waves, of detritus from a shore of older rocks which contained abundant gold-bearing quartz veins. This consideration introduces another question which has an important bearing upon the future of the Rand. If the deposits are old placers, it is natural to expect that the gold will be found in them only in a belt of limited width along the ancient shore, whereas if it was introduced subsequently by chemical action—a theory which, according to Mr. Hatch, now finds most favor among the geologists of the region—the limitation to the extent of the gold-bearing deposits would have no relation whatever to the distance from the ancient shore or the depth at which they now exist. This question, even more than the others, is one to which a final answer can be obtained only by practical work. At present the conglomerate beds have been explored by drifts and by drills for a distance down the dip of about 8,000 feet from the outcrop, which may represent approximately the ancient shore line, and in this distance there is no evidence of any regular decrease in the richness of the conglomerate; indeed, the evidence, as far as it is furnished by the few points penetrated by drills, is rather the other way.

The average depth at which the outcrop mines are working is given at 800 to 900 feet on the slope of the reefs. The workings of some of the deep-level mines, or those which, like the Tamarack of Lake Superior, do not own the outcrop, are down over 2,000 feet on the slope. In this depth and over the longitudinal extent of 11½ miles occupied by the mines of the central district of the Rand, the tenor of the conglomerates in gold, though varying from point to point and from bed to bed, appears to be unusually uniform as compared with other great metalliferous deposits. The seventy-eight mines in this portion of the district had produced, according to Mr. Hatch's tables, from 1887 to the middle of 1895, gold worth over twenty four and a half million pounds sterling. The thirty-seven dividend paying mines in this group had paid in the same time over five and a half million pounds in dividends, while the dividend for the current year (1895) is estimated at over £2,000,000, or $10,000,000. Individual mines have paid dividends in several cases amounting to two and a half times, and, in a few, to more than five times their capital stock. With such facts as a basis for calculation, it is not to be wondered at that men's imaginations were easily worked upon, and that when once speculation in mine shares was fairly started, it went beyond bounds. From Mr. Hatch's tables we learn that, of one hundred and one mines quoted on the Johannesburg Exchange, the par value of whose issued stock was under nineteen million pounds, the market price of their shares had risen in June, 1895, to nearly eighty-two million pounds. This does not include all the mines floated on the London Stock Exchange which are classed under the general head of "Kaffirs," nor does it represent adequately the proportionate increase in market valuation of the latter, which, from newspaper accounts, would appear to have discounted the product of the region for the next fifty years—the probable duration accorded to it by the present authors. It is a pity that so unhealthy an excitement should have been aroused, and still more that, as report says, quite worthless properties have been capitalized and foisted upon a confiding and ignorant public, where there is so much ground for legitimate and substantial investments. But, while the reaction that must necessarily follow the pricking of these bubbles may temporarily retard legitimate mining in the Transvaal, it must be remembered that it has successfully passed through one such reaction in 1889–91, when much less was known about its resources.

In considering the effect which the product of the Transvaal will have upon the world's finances, it must be remembered first, that the productive area is about 100 times as large as that of the most prominent precious-metal districts of America—Leadville, Butte, or Cripple Creek; further, that its product is not ephemeral, like that of the placer deposits of California and Australia, which so violently disturbed values in the fifties. But, while increasing less rapidly, it is likely not to decrease again, but to go steadily onwards. The world's product of gold was 363 millions of dollars in the decade 1840–50, increasing to 1,333 millions in 1850–60, and gradually decreasing to about 1,000 millions in 1880–90. For the current decade it may well be 2,000 millions, and is likely to increase for many decades to come.

In the report on mineral resources of the United States for 1892, Mr. S. F. Emmons, reviewing the progress of the precious-metal industry from a geological standpoint, predicted an increase in the world's annual gold production from 130 million dollars in 1891 to 200 millions before the close of the decade, and a decrease in its silver production from 177 millions (coining value) in 1891 until it should become less than that of gold; thinking it probable that when the coinage value of the gold product should exceed that of the silver product, the price of the latter metal would experience a substantial increase. The increase in the gold product has been even more rapid than the American geologist estimated, and seems likely to reach the 200-million mark in 1895. While the silver product of the United States has decreased in the same period from 82 to 64 millions, that of the entire world has experienced a slight increase, owing to unusual developments in Mexico and South America. From what we learn in the present volume, however, it seems probable that another year will see the world's gold product again greater in coinage value than that of silver, as it was before 1880; and though it is likely thereafter to increase more rapidly than does the silver product, it is hardly likely that the relative proportion in the value of the products will become 7 of gold to 3 of silver, as was the case from 1850 to 1870.

MATTHEW ARNOLD'S LETTERS.—I.

Letters of Matthew Arnold. Collected and arranged by George W. E. Russell. Macmillan & Co. 1895. 2 vols.

It was the express wish of Mr. Arnold that no formal biography of him should be published. These letters, so adequate to the purpose, especially as supplemented by Mr. Russell's judicious annotations, will therefore be doubly welcome to Mr. Arnold's friends as the afterglow of a noble and illuminating spirit that set before its time; but also to the far wider circle of those who are interested in the story of a man, his fortunes and his family, told with unfailing sprightliness and sincerity. The greater part of these letters are addressed to members of the family, whence a perfect abandon and an entire absence of posing—a foible, however, of which Mr. Arnold was perhaps never guilty, even in the presence of the King of Italy or the King of Prussia. On the other hand, the intimacy of such letters by no means implies triviality. The gifted family to which Mrs. Humphry Ward belongs were interested in all that interested Mr. Arnold, from poetry to politics. "In their needy days," he says, "my poems had no better friends than my sisters." Of his mother we have Dean Stanley's testimony that she retained "a life-long reverence for his father's greatness without a blind attempt to rest in the form and letter of his words"; while, at the age of eighty-two, Mr. Arnold writes to Lady de Rothschild, "she was able, in spite of strong convictions, to appreciate 'Literature and Dogma' with all the fairness of mind of a woman in her prime." Next to the family, Lady de Rothschild has the largest share in these letters, which begin with one to his mother (January, 1848) when he was twenty-six years old. After a brilliant career at Winchester, Rugby, and Oxford, terminating in his election as a fellow of Oriel, he had just received the appointment of private secretary to Lord Lansdowne, then President of the Council. In 1850 the letters introduce us to a Miss Wightman, whom he married the following year. She was the daughter of Sir William Wightman, one of the justices of the Court of Queen's Bench. Shortly before, Mr. Arnold had been appointed by Lord Lansdowne an Inspector of Schools—a position which he continued to hold, in one district or another, till he retired on a pension in 1885.

His early letters to his elder sister are full of his reading and his political views. He tells her that he is reading Tasso, Goethe's letters, Bacon, Pindar, Sophocles, Milton, Thomas à Kempis, and Ecclesiasticus. After his marriage, the letters give us many details of his work and wanderings in inspecting schools. He occasionally escapes from them to the Continent, sometimes on official business, sometimes for a brief vacation. As the years go on, he is accompanied by his wife and children. These visits give occasion for descriptions of places and vivacious sketches of adventure. Arnold's style expresses all varieties of matter with clearness, ease, and grace, never running into rhetoric or the formal rhythm of literary prose. One might expect some flights of this sort in the description of the Alps or of Italy. One remembers that Shelley could never write in his dressing-gown, even to his wife; he could never lay aside his splendor of diction and his beautiful rhythm. Mr. Arnold, while never slipshod, uses prose as clear and transparent as those Alpine streams in which he delighted. From these letters we gradually learn his tastes, his passion for flowers, combining the learning of a botanist with the enthusiasm of a poet; his fondness for the "bright comradeship" of some mountain brook, and his real sympathy with birds and domestic animals. One letter narrates the virtues and graces of his Persian cat Atossa; another is an obituary of the pony Lola, who died suddenly in an honored old age. But, most of all, the playfulness and tenderness of his nature are revealed in his allusions to his children. They continually come up in this correspondence, and are never in the way, though we know that children are often *de trop* in books as well as in the drawing-room. We feel justified in offering one lovely idyl of the nursery, which must serve as a specimen of them all :

"The day I read your letter I said to Budge [his second son's pet name] as I was dressing for dinner, 'Budge, you must go and see your Aunt Forster.' 'No,' says Budge, '*do* let me 'top with papa.' So I turn to Tom, and when I remind him of the Noah's ark, Tom says he will go and stop with you 'for two days.' Upon which Budge begins to howl, and, running up to Tom, who is sitting on the camp-bed in my dressing-room, entreats him not to go away from him. 'Why not, Budge?' says Tom. 'Because I do love you so, Tiddy Tom,' says Budge. 'Oh,' says Tom, waving his hand with a melancholy air, 'this is *false*, Budge, this is all *false*.' You should have seen the sweet little melancholy face of the rogue as he said this."

This little gem of delicate observation reflects all the father as much as the children, and shows that he was as true a connoisseur in the ways and charms of children as the author of 'Pet Marjorie.' Budge and Tom and Dicky and Nelly are delightful people to meet; and the letters which announce to Mr. Arnold's mother the death of Basil and of Tom would be called perfect specimens of pathos, had we any right to regard them as literature at all.

Many of the letters are the record of Arnold's irksome toil as School Inspector. He tramped about the country like a commercial traveller; at midnight, after his visitations, he reads a hundred lines of the 'Odyssey,' "to save himself from putrefaction"; his examination papers are with him every day in the year—even by the bedside of his dying child. But this wasteful routine drew from him no jeremiads. He reminds us by contrast of Carlyle, who, when he had lost a night's sleep, would make the world echo with dithyrambic and Cyclopean lamentations. The British Government might certainly have put the author of 'Thyrsis' to a better use than correcting 10,000 grammar papers a year; but he had other official duties less wasteful and irksome. He was repeatedly sent to France and Germany to study the systems of education there in vogue. One useful result of his official labors was that they made him familiar with all classes of his countrymen, including "those Barbarians, the English aristocracy." In 1869 he received as a member of his household the young Duke of Genoa, Prince Thomas of Savoy, then a Harrow schoolboy. This necessarily multiplied his relations with the "Barbarians," though to him the Prince is simply "a dear boy."

In 1883 came his lecture tour in the United States. His account of this first visit to America describes many delicious bits of experience even more amusing to us than they could be to his correspondents. From the first he was received into those court circles whose doings our papers so faithfully record. He was, of course, beset with reporters, and deplores bitterly his inability to "hide his life." But how could he expect to combine privacy with the necessities of advertising? He could not even discover that large and respected class of Americans who are fond of the epicurean enjoyment of "hiding their lives." And there was, after all, a bright side to this publicity. Mr. Arnold was evidently not displeased to be asked for his autograph by waiters in the hotels, nor to learn that Gen. Grant had thanked the *Tribune* for its reports of his lectures, nor even to be told by Barnum, at whose house he was entertained, that his lecture "Numbers; or, The Majority and the Remnant," was "grand," and that he, Barnum, intended to belong to the "Remnant." He has everywhere to tell of kindness. He likes our well-warmed houses, "which quite spoil one for English houses with their chill rooms and frozen passages"; and our villas, "with their great piazzas, are the prettiest in the world." But he is not equally pleased with our life. In spite of the enthusiasm and the statistics of Mr. Carnegie, our civilization is to him "the civilization of the Australian colonies"; our life, compared with that of England, is "so uninteresting, so without savour and depth." He is distressed by the "profound *Gemeinheit*" of our cities and their architecture. After travelling across the continent as far as St. Louis, where he seemed to reach the boundary of the zone of "sweetness and light," he returns to Quebec to be captivated by it as we all are. "It is the most interesting thing I have seen on this continent. I would sooner be a poor priest in Quebec than a rich hog-merchant in Chicago." It is only fair to show the brighter side of the shield: "The political sense of the people here seems to be sounder than it is with us; the family has, compared with our middle class at home, that buoyancy, enjoyment, and freedom from restraint which are everywhere in America, and which show how the aristocracy acts as an incubus with us."

In 1885 Mr. Arnold retired from the post of Inspector of Schools which he had held for thirty-five years. The buoyant tone of his letters at this time shows what a pleasure and comfort it was to be released from the routine, and to devote himself untrammelled to the literary work which was his delight. But he was not long to enjoy his garden and his children and the pleasure of watching the grand pageant of the world move by, which he somewhere says is perhaps the chief delight a man can have upon the earth—a pageant, we may add, in which he had taken his part nobly and well. In 1888, just as he was about to meet his daughter, who married in the United States, he died suddenly, as his father had died, but in riper years and with the task of his life more nearly completed.

We have skimmed the lighter social and biographical interest of these letters. We must reserve for a further notice the equally interesting and even more valuable material which they contribute towards an adequate appreciation of Arnold's character, his opinions, and his literary work. But we cannot close this article without a tribute to Mr. Russell's admirable editing. In his notes the reader will find every date and fact and name that is needed to explain the allusions of the text. He even gives, for instance, Mr. Mallock's verses in the 'New Republic' written in parody of Mr. Arnold's style; a parody, by the way, of which the subject recognized no great likeness, either in the verses or in the conversation ascribed to him by a writer who had never so much as set eyes on him. One slight quarrel we have with Mr. Russell, and that is for omitting any kind of an index in a book which serious readers will have occasion to use for purposes of reference. Otherwise we have nothing to complain of in his handling, and indeed everything that is helpful to be thankful for.

Glossary of Greek Birds. By D'Arcy W. Thompson. Oxford: Clarendon Press; New York: Macmillan. 1895.

THIS is a work of great erudition, which, as the author himself says, "contains materials for research in greater measure than it presents the results of it." The variety and amount of material may be judged from the article on ἀετός, which fills nine pages of references and brief quotations, mostly from Greek authors, arranged under the headings, Epithets, Myth and Legend, Proverbs and Fable, Representations of Eagles. Under the first head we find about one hundred citations or references from Homer down to Nonnus; with regard to the single characteristic of keen-sightedness of the eagle, we have more than thirty citations. The swan's song is vouched for in two pages of allusions, beginning with Hesiod and ending with Chaucer and Tennyson. Notwithstanding this testimony and the consent of some modern naturalists, Mr. Thompson remarks: "I do not think it [the whooper, or whistling swan] can sing very well; it is beyond a doubt that the swan's song (like the halcyon's) veiled and still hides some mystical allusion." As to the myth of the halcyons and "halcyon days" it remains still unexplained. Prof. Thompson observes that the kingfisher, with which the halcyon is identified, does not nest in the winter season, nor in the sea. He conjectures that the story originally referred to some astronomical phenomenon, in connection with the Pleiades, of which constellation Alcyone is the principal star. At the winter solstice about 2000 B. C., the Pleiad culminated at nightfall in mid-heaven; this culmination, between three and four months after the heliacal rising of the Pleiad in autumn, was, he conjectures, symbolized as the nesting of the halcyon. The same line of astronomical explanation Prof. Thompson applies, with much greater certainty, in a large number of rather puzzling cases where the naturalists, including Aristotle, refer to certain mysterious "hostilities" between different species of birds and animals. For example, the eagle is said to be "hostile" to the swan, to the hare, and the bull; the Haliaëtus to the Ciris, the cock to the Attagas or Noumenios. When the eagle is said to attack the

swan and to be in turn defeated by it, we may understand the constellation Aquila, which rises in the east immediately after Cygnus, but sets in the west a little while before that (more northern) constellation. A like astronomical explanation applies to many other cases, which, if we attempt to explain them as facts for the naturalist, lead only to bewilderment. Such explanations are further illustrated and demonstrated by the symbolism of many Greek coins, such as that of Agrigentum, representing the eagle and the crab, or the tetradrachm of Eretria, figuring a bird on a bull's back (the Pleiad in the sign Taurus). The signification of these is clearly astronomical, as has lately been proved in detail by M. Svoronos in an article we had occasion to summarize in these columns.

As a corollary to this reasoning, Prof. Thompson, instead of increasing the number of species commonly identified, is disposed to diminish them. The Chrysaëtus, for instance, he regards as mystical and fabulous, like the Phœnix, and apropos of such myths he refers us to the somewhat hopeless scepticism of Grote. The study of myths has certainly made some satisfactory progress since Grote's day. We are inclined to think that the origin of some fabulous types may be explained by the primitive notions of metamorphosis which M. Houssay pointed out in a recent paper in the *Revue Archéologique* (January, 1895). It is quite clear from certain ambiguous forms figured on Mycenæan vases that the people of that period had already evolved the superstition of the barnacle-goose, and the general idea that sea-creatures are capable of trans forming themselves into terrestrial birds, insects, or animals to whose forms they bore some resemblance; that the horse, for example, could spring from the hippocampus.

Amid the discursive store of information which he presents, Prof. Thompson suggests many etymologies which might deserve more attention if he had taken some pains to reinforce them. What good reason, for example, is there to identify Thamyras with Thammuz, or Atthis, as an epithet of the nightingale, with Atys?

Great Astronomers. By Sir Robert S. Ball. London: Isbister; Philadelphia: Lippincott. 1895.

A BOOK of fourteen essays on the lives and works of as many astronomers, ancient and modern, but all deceased. It would have been a great subject for a great writer, for a scientific Sainte-Beuve. We cannot quarrel with the list of men treated. It was certainly best the writer should choose those whom he liked to write about. They are Ptolemy, Copernicus, Tycho Brahe, Galileo, Kepler, Newton, Flamsteed, Halley, Bradley, W. Herschel, La-Place, Brinkley, J. F. W. Herschel, Rosse, Airy, Hamilton, Le Verrier, and Adams. Some of them are pretty well-worn subjects. Brinkley, Adams, and Airy are probably the only ones concerning whom any new facts are here made known. Still, for the majority of the others, masterly critical accounts would have been welcome. It would have been better to make half as many essays twice as long.

No one method of treatment is followed, so that to get an idea of the book it is necessary to examine several of the lives. Sir Robert Ball is himself a brilliant mathematician and a very competent astronomer. He does not seem to be aware that several of the personal traits of Claudius Ptolemy can be made out from a diligent study of his writings. He does not even mention the fact that there is an astrological treatise, bearing the name of Ptolemy, which resists every test of genuineness. It has the great astronomer's method, style, and language; it bears his name and is addressed to the same person as the 'Almagest.' The geography of Ptolemy is only just mentioned, without any account of it. Sir Robert Ball cannot be ignorant that Ptolemy was a great mathematician, that he created spherical trigonometry, and calculated tables for the application of it. Was not this worth saying in a sketch of twenty-three pages? With what are these pages filled? Chiefly with an account of the Ptolemaic system of the world. But—we must suppose for the sake of simplification, for it cannot be that Sir Robert Ball is so ignorant—this account is falsified in such a manner that all that really was contributed to it by Ptolemy is erased, and what is provided is the rough description of the motions which was invented by Hipparchus, and which Ptolemy made his own by one of the most wonderful and profound pieces of mathematical ingenuity ever devised. Namely, Hipparchus had two circles, one carried round on the other, the planet being carried round the former. One of these motions is in geometrical truth nothing but the motion of the sun round the earth, or, what is the same thing (since in mere geometry all motion is relative), the motion of the earth round the sun. The other motion is the motion of the planet round the sun. The orbits are really ellipses; but they are so near circles (except for Mercury) that the difference in *shape* was not perceptible to the ancient observers. But the foci of the ellipses are perceptibly remote from the centre; and, moreover, since equal areas are described in equal times, the motion is physically more rapid near one focus than near the other. Now, Ptolemy almost perfectly represented all this by placing the orbit eccentrically from the earth, and then making the body that was supposed to move round the circle describe equal angles in equal times about a centre twice as far from the earth as the centre of the circle, and lying in the same direction. Nor was the motion in the second circle taken to be uniform. These hypotheses gave an essentially different character to the theory. The system of Hipparchus was a mere harmonic analysis; the Ptolemaic system needed only minor corrections to represent the true *relative* motions, or appearances in the heavens (which Ptolemy declared was all he aimed at), with a high degree of accuracy. At any rate, this, and this only, was the contribution of Ptolemy. It is a strange account of the man which attributes to him what was really done by another, and omits all mention of what he really did.

The account of Copernicus is hardly better. There is no allusion to the practical side of his life, his management of the vast estates of Frauenberg, his parliamentary career. His planetary system is not explained at all, although this has been successfully done in several elementary books. The differences between the points of view of Ptolemy and Copernicus are not explained. Ptolemy really only cared to account for the appearances of the heavens; and he clearly saw that it made no difference, with those appearances, whether the earth moved or not. It was a mere surplusage—a curious inquiry, somewhat metaphysical—to ask whether the earth moves or not. Then, in Ptolemy's time, everybody assumed that there is one substance of things celestial and another substance of things terrestrial. The stars were mere lights. There was no matter in them, such as we see on earth. There was thus no analogical argument to be drawn against their moving ever so rapidly. On the other hand, if the earth moves, then real terrestrial objects are moving with a velocity very many times greater than any of which we have any experience. Copernicus, on the other hand, lived at a time when the discovery of the New World inclined men to think that things remote were a good deal like things near at hand. Moreover, reflection upon Ptolemy's system, just as he had described it, would show that the general conception of it could be much simplified by making all the planets revolve round the sun. Ptolemy would not care for such simplification, as long as the computations of places remained the same, as they would remain. But in Copernicus a deeper philosophical spirit pervading Europe was beginning to awaken.

The life of Galileo is marked by the same inadequacy. Galileo's greatest discovery, that of the uniformly accelerated fall of bodies, is not mentioned. Keppler receives still worse treatment. One of the most interesting personalities that ever lived, and the author of the most wonderful piece of inductive reasoning, with the exception of Mendeleieff's law, ever performed, he is so feebly described that the reader gets but a glimpse into the nature of the man and none at all into the course of his thought. The modern essays are no better. The men, too, are smaller and less interesting. The chapter on Brinkley has two and a half pages about Brinkley and ten and a half about other things. It is modern superficial writing about a subject that would formerly have engaged the best talents, carried to its last point of newspaper-paragraphing.

Buckle and his Critics: A Study in Sociology. By John Mackinnon Robertson. London: Swan Sonnenschein.

MR. ROBERTSON is so possessed with the idea that injustice has been done to Buckle that he has prepared a volume of 565 pages—not very closely printed pages fortunately—to refute his critics, big and little, one after the other. We are inclined to ask him, now that the task has been accomplished, whether on reflection he really thinks that this is the best way of reaching his end. He believes, and probably with justice, that Buckle is too little read nowadays, and that it is too much the fashion to disregard or pooh-pooh him. Then, would it not be better for him to try to tell us, in as brief and forcible a way as he can, what he himself conceives to have been Buckle's contribution to human knowledge? As it is, we are left to piece together Mr. Robertson's interpretation of his master from scattered indications up and down 500 pages of acrimonious controversy. Few people will have the patience to do this; and, from Mr. Robertson's point of view, it will be a great pity.

It is the more to be regretted that Mr. Robertson's book should be thus repellent, and, indeed, ludicrous, because he is a writer of wide reading and of much penetration, and the master of a vivacious style. Even as it is, 'Buckle and his Critics' is a book that our professional "Sociologists" will do well to get: it will widen their horizon, and give some of them, especially in theological seminaries, a not unwholesome shock occasionally. But the book is a curious and characteristic product of a certain phase of English life. Mr. Robertson is the biographer of Mr. Bradlaugh, and a writer in the *National Reformer;* and we are probably not mistaken in supposing that he has more or less identified himself with the

small group of militant "secularists." Men who belong to such circles are very apt to feel themselves, in the expressive phrase, "rather out of things" socially, and to resent it. They assume the attitude of Esau, and of that particularly offensive variety, the omniscient Esau. Mr. Robertson is cocksure over a wider range than any writer it has recently been our duty to read; on all the great thinkers and investigators of the century he is ready to pronounce unhesitating judgment; and he has an air of always knowing the last thing. He is very ready to explain everybody else's opinions by his environment or training; to see academicism here, clericalism there, and obscurantism and compromise everywhere: it never occurs to him to think that his own opinions are anything but the utterances of dispassionate wisdom. Sometimes, when we have seen how much of Buckle's teaching Mr. Robertson's throws overboard, and observed how very little seems to be left of it after he has made his "suggested modifications" (in the useful "Synthetic Summary" at the end of the book), we have been inclined to suspect that the reason why he sticks up for his hero is chiefly that English respectability slights Buckle.

BOOKS OF THE WEEK.

Abbott, A. E. The Gods Give my Donkey Wings. Chicago: Stone & Kimball. $1.
Andersen, H C. The Nightingale. Boston: Berkel y Updike. $1.25.
Babyhood. Vol. XI. Dec. '94-Nov. '95. *Babyhood* Publishing Co.
Balzac, H. de. The Quest of the Absolute. London; Dent; New York: Macmillan. $1.50.
Blind, Mathilde. Birds of Passage: Songs of the Orient and Occident. London: Chatto & Windus.
Blunt, W. S. Esther, a Young Man's Tragedy; Together with the Love Sonnets of Proteus. Boston: Copeland & Day. $3.
Brooks, Noah. The Mediterranean Trip: A Short Guide. Scribners. $1.25.
Brown, Kate C. Beauty for Ashes. Boston: *Arena* Publishing Co.
Burrows, Prof. Montagu. The History of the Foreign Policy of Great Britain. London: Blackwood; New York: Putnams. $3.
Burton, Richard. Dumb in June. Boston: Copeland & Day. 75c
Cahun, Léon. Introduction à l'Histoire de l'Asie: Turcs et Mongols des Origines à 1405. Paris: A. Colin & Cie.
Cavendish on Whist. American Edition. Scribners.
Chapman, Mary B. Lyrics of Love and Nature. F. A. Stokes Co.
Cheney, J. V. That Dome in Air: Thoughts on Poetry and the Poets. Chicago: A. C. McClurg & Co. $1.25.
Cocke, Zitella. A Doric Reed. Boston: Copeland & Day. 75c.
Constant. Recollections of the Private Life of Napoleon Vol. I. Merriam Co. $2.50.
Cowell, Prof. E. B. The Jātaka. Vol. II. Cambridge: University Press; New York: Macmillan.
Cram, R. A. Black Spirits and White: A Book of Ghost Stories. Chicago: Stone & Kimball. $1.
Dos Passos, B. F. The Law of Collateral and Direct Inheritance, Legacy and Succession Taxes. 2d ed. St. Paul: West Publishing Co
Du Bois. Constance G. The Shield of the Fleur de Lis: A Novel. Merriam Co. $1.50.
Duff, Grace Shaw. Nicodemus. Boston: *Arena* Publishing Co.
Eggleston, Edward. Stories of American Life and Adventure. American Book Co. 50c.
Eggleston, Edward. Stories of Great Americans for Little Americans. American Book Co. 40c.
Eliot, George. Silas Marner. Boston: Houghton, Mifflin & Co. 40c.
Elliott, Prof. E. B. An Introduction to the Algebra of Quantics. Oxford: Clarendon Press; New York: Macmillan.
Ellis, E. S. The Youth's Dictionary of Mythology. New York: Woolfall Co. 50c.
Ellwanger, G. H. Idyllists of the Country Side. Dodd, Mead & Co. $1.25.
Foss, Sam Walter. Whiffs from Wild Meadows. Boston: Lee & Shepard.
Garland, Hamlin. Rose of Dutcher's Coolly. Chicago: Stone & Kimball. $1.50.
German and French Poems for Memorizing. Henry Holt & Co. 20c.
Hesdin, Raoul. The Journal of a Spy in Paris. January-July, 1794. Harpers. $1.25.
Hughes, Thomas. Tom Brown's School Days. Boston: Houghton, Mifflin & Co. 60c.
Hughes, Thomas. Vacation Rambles. Macmillan. $1.75.
Ia: A Love Story. Scribners. 75c.
Ingalls, Herbert. The Boston Charades. Boston: Lee & Shepard. $1.
King, Maude E. Round about a Brighton Coach Office. London: John Lane; New York: Macmillan.
Latimer, Elizabeth W. Europe in Africa in the Nineteenth Century. Chicago: A. C. McClurg & Co. $2.50.
Light on Current Topics. Bennet Lectures for 1895. Boston: Massachusetts New-Church Union. $1.
Lloyd, J. W. Wind-Harp Songs. Buffalo: Peter Paul Book Co. $1.
Moses, Prof. Bernard. The Railway Revolution in Mexico. San Francisco: The Berkeley Press.
Nichols, Bowyer. Words and Days: A Table-Book of Prose and Verse. London: Rivington, Percival & Co.
Norton, Prof. C. E. The Heart of Oak Books. 6 vols. Boston: D. C. Heath & Co.
Paine, Thomas. Rights of Man. Putnams. $1.
Perry, Rev. W. S. The Episcopate in America: Sketches Biographical and Bibliographical of the Bishops of the American Church. Christian Literature Co. $5.
Pope, G. W. Wonderful Adventures on Venus. Boston: *Arena* Publishing Co.
Rossiter, W. S. An Accidental Romance, and Other Stories. The Republic Press.
Sharp, William. The Gypsy Christ, and Other Tales. Chicago: Stone & Kimball. $1.
Shaw, W. A. Select Tracts and Documents Illustrative of English Monetary History, 1626-1730. London: Clement Wilson.
Sickels, D. B. Leaves of the Lotos. J. Selwin Tait & Sons.
Smart, William. Studies in Economics. Macmillan. $2.75.
Smith, L. P. The Youth of Parnassus, and Other Stories. Macmillan, $1.25.
Spears, J. R. The Gold-Diggings of Cape Horn. Putnams. $1.75.
Spenser, Edmund. Epithalamion. With drawings by George Wharton Edwards. Dodd, Mead & Co $7.50.
Stearns, F. P. Sketches from Concord and Appledore. Putnams. $2.
Stern, S. M. Studien und Plaudereien. 16th ed., revised. Henry Holt & Co. $1.10.
Stevenson, R. A. M. The Art of Velasquez. London: George Bell & Sons; New York: Macmillan. $18.

GEOLOGICAL BIOLOGY.

BY PROF. HENRY S. WILLIAMS

Of Yale. 8vo. 395 pp. $2.80 *net.*

PROF. N. S. SHALER of Harvard—"I have examined the work on Geological Biology by Professor H. S. Williams with great interest. I find that he has treated a difficult subject in a way which is likely to prove interesting and helpful to every intelligent person, and know of no other treatise which is so well adapted to the end it seeks to attain, which is to show the student the development of animals in the successive ages of the earth's history, and to teach him the principles which have controlled the on-going. The book seems to me to be a valuable addition to the resources of the teacher of geology."

Puerto de Santa Maria.

WANTED.—A PURCHASER FOR the leading Female College of Texas. $150,000 worth of property and a profitable school for less than one-third of its cost. Small cash payment; balance on ten years' time. Address

"TEXAS COLLEGE," care the *Nation*, N. Y.

2 Notable Series

The Heroes of the Nations

A series of biographical studies of the lives and work of certain representative historical characters, about whom have gathered the great traditions to which they belonged. The volumes are sold separately as follows: Cloth extra, $1.50; half morocco, uncut edges, gilt top, $1 75. Eight volumes now ready; each volume is fully illustrated, with maps and plans.

VOLUMES IN READINESS.—Nelson, Gustavus Adolphus, Pericles, Theodoric, Sir Philip Sidney, Julius Cæsar, John Wyclif, Napoleon, Henry of Navarre, Cicero, Abraham Lincoln, Prince Henry the Navigator, Julian the Philosopher, Louis XIV., Charles XII., Lorenzo de' Medici, and Jeanne d'Arc.

(Send for new illustrated prospectus of the series.)

The Story of the Nations

A series of Graphic Historical Studies. Each narrative is complete in one volume; small 8vo, profusely illustrated, and containing maps and plans. Price per volume, cloth extra, $1.50; half leather, gilt top, $1.75. 43 volumes now ready,

"This is the very plan on which Herodotus and Livy wrote their immortal histories or rather stories, . . . historians who were also superb story tellers, and story-tellers who were capital historians, with a sprinkle and tinkle of poetry thrown in for full measure."—*N. Y. Critic.*

(Send for new illustrated prospectus of the series.)

G. P. Putnam's Sons,

27 and 29 W. 23d St., New York.

FOR SALE.—ANNUAL REGISTER, v. 1–71; 1758-1829. Bd. in half calf. Apply to Vassar College Library, Poughkeepsie, N. Y.

The Nation.

NEW YORK, THURSDAY, DECEMBER 26, 1895.

The Week.

THE full text of Lord Salisbury's reply to Secretary Olney on the merits of the boundary dispute itself, as distinct from the Monroe fantasticalities, is printed in the *Congressional Record* of December 17. It is a statement of the British case such as has never before been made public. Mr. Olney, as Salisbury justly observes, had proceeded upon the basis of purely ex-parte Venezuelan representations; his historical argument is taken over bodily from the Venezuelans, as any one may see who will consult Senate Ex. Doc. No. 226, 50th Congress, where the whole of it appears in substance. That argument is now traversed by Lord Salisbury in a way sufficiently to account for Mr. Olney's turning tail. He set out by roundly affirming that the Venezuelans were right. After reading Salisbury's reply, he says he will have an investigation and see if they were right. An argument that has thus made the valiant Secretary eat his own words is surely worthy of consideration even by the war-crazed.

The Venezuelan claim that the territory is not British because the Spanish discovered America, is briefly dismissed by Lord Salisbury as both too vague and too sweeping: as well claim under the bull of Alexander VI. But the Venezuelans allege a specific decree of the King of Spain in 1768, describing Guiana (the then Spanish province of that name is meant) as bounded on the south by the Amazon and on the east by the Atlantic. This proves too much, as it would imply the right of Venezuela to all of British, French, and Dutch Guiana, as well as an enormous tract of Brazilian territory. Moreover, this decree cannot be supposed to have overlooked the Dutch settlements formally recognized in the treaty of Munster, 1648. Furthermore, though the Spanish Government was a party to the treaty of 1814, under which the Dutch settlements were definitely ceded to England, and though the frontiers claimed by Great Britain were perfectly well known to it, at no stage of the negotiation did it interpose any objection. Back of all these late and shadowy Spanish claims, however, Lord Salisbury goes to produce evidence which, if uncontradicted, is absolutely decisive about the Dutch, and hence the English, right to the Cuyuni River—the very territory which is now alone in serious dispute. In 1759 and again in 1769 the States General of Holland addressed formal remonstrances to the court of Madrid against Spanish incursions into the basin of the Cuyuni. These protests were never answered, and an examination of the Spanish archives reveals the fact that the Council of State concluded that it had nothing to offer in rebuttal. Lord Salisbury cites textually the opinion of the Council that the Spanish title to the Cuyuni was "very improbable." He also intimates generally that "researches in the national archives of Holland and Spain have furnished further and more convincing evidence in support of the British claims."

How criminally rash and insensate, in view of all this, appears the President's flat-footed assertion to Congress in his message of December 3, that Great Britain was proceeding "in derogation of the rights of Venezuela." That he has now to abandon that ignorant and reckless contention, and meekly admit that he does not know what the rights of Venezuela really are, makes his threats of war doubly disgraceful. What does he or Secretary Olney know of the documentary evidence in the Dutch and Spanish archives? What will his ridiculous commission know, who are to sit and gayly settle the whole thing on the basis of the evidence in the State Department at Washington? One comfort is that no lawyer with a reputation extending beyond the backwoods will consent to sit on such a commission unless all the evidence obtainable anywhere is to be laid before it. The result may be such another complete smashing of the American case as we suffered in the Bering Sea matter. The Russian archives lamentably failed Mr. Blaine in that affair, and it may well be that the Dutch and Spanish archives may equally bring Mr. Cleveland to grief. As far as his humiliation is concerned, that he has already himself provided for in full measure.

As was to have been expected, the President's conversion to the Jingo view of the Monroe Doctrine has had an electrifying effect upon all the South American republics. They are all "out gunning" for wars and revolutions, marching through the streets of their capitals, cheering and shouting and declaring their determination to fight all creation, and especially all European Powers with which they may be at odds, because now they feel sure that the United States will take their side in every such shindy. What a prospect this opens for us! Endless wars over petty disputes with which we have nothing to do and about questions which in no way concern us. A movement is said to be on foot for a conference of all the South American republics on the subject of the Monroe Doctrine, with a view to bringing them into line under it, with the United States as the champion and protector of all of them. We should need, as Prof. Burgess points out in the *Evening Post*, a standing army of 500,000 men, a navy of 500 ships, and a war expenditure of $1,000,000,000 a year to sustain this rôle, and we should also have to give up all other business and devote ourselves exclusively to war.

That President Cleveland has been his own executioner is made clear by contrasting what he said in 1893 with what he says now. In his message of December 18, 1893, he affirmed:

> "The law of nations is founded upon reason and justice, and the rules of conduct governing individual relations between citizens or subjects of a civilized state are equally applicable as between enlightened nations."

Now he says:

> "To-day the United States is practically sovereign on this continent, and its fiat is law. Why? It is *not* because of the pure friendship or good will felt for it. It is not simply by reason of its high character as a civilized state, nor because wisdom and *justice* and equity are the invariable characteristics of the dealings of the United States. It is because its infinite resources, combined with its isolated position, render it *master of the situation* and practically *invulnerable* as against any or all other Powers."

Was there ever such another case of a civilized man throwing away his clothes and joining the howling savages? Mr. Cleveland says now just what Debs said in the summer of 1894. Law or no law, Debs and his fellow-anarchists gloried in being "masters of the situation." It is a melancholy thing to find the President who put them down with a firm hand, now displaying himself as the greatest international anarchist of modern times.

We have received some inquiries as to what our explanation is of Mr. Cleveland's extraordinary break with his own best traditions, and his apparent indifference to the objects which he once seemed to have greatly at heart. We have no theory about the matter which we can support with any proof. The one which meets with most acceptance is that it has been urged on him by his party managers that something must be done, in preparation for the coming canvass, to put the Democratic party on its legs, seeing that it is now, owing to its utter failure with the finances, and its widespread alliance with villains and humbugs, a complete wreck; and that he has done what plenty of politicians have done in like cases before now, and what Mr. Seward recommended Mr. Lincoln to do—got up a foreign rumpus to turn attention away from home affairs, and rally to the support of the party the great army of the unthinking and chromo-patriotic and penniless. The puzzle of this is, that in so doing he has ruined the cause to which he has for the

past three years rendered such noble service, and to which he sacrificed nearly everything else, including civil-service reform. In fact, he bids fair to go out of office with the reputation of a great financial wrecker.

What a picture the Jingoes present as they fall in line "behind Cleveland," whom for months and years they have been denouncing as the exponent of all that was most detestable in American statesmanship. He has adopted all their arguments, stolen all their thunder, and they find themselves obliged to rally around him and throw up their hats and fill the air with huzzas for him. Think of it! Chandler and Lodge and Frye, Morgan and Livingston and Hill, circling hand in hand around Cleveland and cheering him till their voices crack! How keenly they must enjoy it, and with what conscious pride must he view this accession to the ranks of his admirers! With every Republican newspaper in the country singing his praises, with the *Tribune* announcing by special cable message from London that "Mr. Cleveland has been an English idol, but he is now dethroned," what reason will the Republicans have for opposing him next year? Cleveland cannot be denounced again as an un-American candidate, the Republicans cannot claim to be the only true American party, and cannot claim a monopoly of the American flag as a campaign emblem.

It is a relief to turn from the average slang-whanging editorial article of the day on the subject of our relations with foreign nations to one that embodies some reflections that are really worth consideration by a sensible man. Such views we find in the answer given by the Memphis (Tenn.) *Commercial Appeal* to a question that it asks, which must have occurred to many thoughtful people: "Why is it that the term 'Americanism,' as it is currently used in a large number of newspapers, has come to convey the idea of a dog, with tail erect and bristles raised, eager for a debate with some other dog?" The editor neatly shows the patness of the comparison, and points out that "every dog that is worthy of the name is a natural-born Jingo and full of the spirit of 'true Americanism,'" so that "he only needs to be taught to walk on his hind legs to be a fit candidate for the United States Senate from New Hampshire or Massachusetts, or to edit a Republican paper in Boston or New York." But why, the Memphis journal persists, should our patriots be "furiously angry with every nation on earth," and why does such a state of feeling exist in "a country that has so few causes for international jealousy or ill-will, and the largest opportunity ever given to a great and enlightened nation to cultivate feelings of fraternity"? There must be a reason for all this, and the *Commercial Appeal* finds it "in the policy of trade exclusiveness so diligently fostered and so long maintained in this country"—a policy which has "called to its aid every evil passion it could excite." It arrayed one section of the country against the other by teaching the Northern people that, in advocating lower taxes, the Southern Democrats were trying to disrupt the Union; and it strove to strengthen its argument against foreign competition by cultivating prejudice against all foreign countries, and representing "all the nations of the earth as being leagued to break down the tariff breastworks and ravage the land with foreign goods." The natural end of all this has been that "to teach hatred and hostility to other nations, to find an enemy in every stranger, and to fill their own land with imaginary traitors, has become second nature with a large class of Republican politicians and newspapers." This is certainly a strong argument. We should like to see the Jingo editors tackle it.

We doubt if the voice of the clergy has been so emphatic since the firing on Sumter as it was on Sunday. It spoke in a tone of as pure and ardent patriotism, too, as it did in 1861—as faithfully expressing now the horror in which the moral sense recoils from the wicked war talk of President and Congress as it did then the general alarm that threatened disunion. And the sermons were remarkably outspoken. Few of them were content with mere platitudes about peace. The directness and force with which the ablest clergymen in this city and throughout the country, as far as reported, addressed themselves to Mr. Cleveland's betrayal of the nation, were refreshing. There was little of the Congressional chaplain's mumbling about "an honorable peace," but a deal of plain talk about a dishonorable and traitorous attempt to imperil peace. Bishop Potter's characterization of the whole Jingo herd as "pinchbeck patriots" ought to stick to them. Nor were the congregations behind the preachers in reprobating the President's mad appeal to the basest passions of the mob. He got his fill of the bray of the mob on Wednesday and Thursday; on Friday and Saturday he was overwhelmed with the execrations of business men; on Sunday he received the most unanimous and crushing rebuke that the pulpit of this country ever addressed to a President. He made his appeal to the conscience of the mob; he has now heard from the conscience of the God-fearing people, and their judgment upon him leaves him morally impeached of high crimes and misdemeanors.

Gen. Lew Wallace ('Tale of the Christ') and Gen. O. O. Howard (Christian Soldier) are both furious for war. This they have a perfect right to be, but they have no right to mix up sanctimonious Christian phrases with their pagan war-whoops. Says Gen. Howard: "We are Christians; we both worship the same God and believe in the same Saviour, and war should not be; *but, for all that*, Cleveland has taken the right position, and there we should stand." In other words, Christian professions and sentiment are all very well for prayer-meetings and international Young Men's Christian Association gatherings, but if it is a question of getting back to the position and ethics of Sioux Indians for the sake of bringing on a war, just count upon us every time.

The prayer of the chaplain of the House on Friday was another illustration of the way the fighting parsons think they can disguise their real objects from the Deity. His prayer at the opening of Congress, that we might "be quick to resent insults to this our nation," was combined with a prayer for "peace within our borders," thus making an excellent after-dinner joke, which was wholly out of place in a prayer. Anybody whom the Almighty makes quick "to resent insults" can never have peace within his borders. On Friday the same chaplain prayed that we might have peace, "but let it be honorable peace," pretending to fear that the Almighty, by keeping him from fighting, would inflict a dishonorable peace on him. Now, we warn all fighting parsons that by no form of words can they conceal from the Deity what they are up to. The petitions reach the Throne of Grace stripped of all rhetorical drapery, in their naked barbarity. Here is the form in which their prayer arrives at its destination—"O Lord, grant that we may be able to kill plenty of our enemies and destroy their property for any reason that may seem good to ourselves." The "patriotism," and the "self-respect," and the "honor," and all the other tinsel and shabby finery in which these gentlemen invest their war-whoops, never reach the upper air of divine peace and love. Nobody is imposed on by these blasphemous harangues, while many are deeply disgraced. But the chaplains are not alone to blame. All Jingoes who try to clothe simple hatred of England or any foreign nation with the sacred name of love of country, or patriotism, are as great humbugs as the chaplains. A desire to invade Canada and kill Englishmen through simple dislike, differs in no respect, except intensity, from the feeling with which the Iroquois used to start out on the war-path to kill the Mohawks. It is simple desecration to call this truculent savagery the patriotism of the modern civilized man. The patriotism of the modern man, and above all the American man, is a desire, not to wade in enemy's blood, but to make his country preëminent in the arts of peace. It is one thing to defend one's house manfully if compelled, but quite

another to wander about among the bar-rooms in order to chastise anybody who seems likely to insult you.

All the London correspondents of New York papers are unanimous as to the effect upon the Armenian question of the Jingo war with England. One of them quotes an Armenian organizer as saying: "The hope of England's doing anything there has perished altogether, and the Armenian sympathizers here who are really in earnest are plunged into the depths of despair." Another declared: "Whatever else may be said, President Cleveland has come to the rescue of the unspeakable Turk. The Eastern question has dropped out of sight. The Sultan has ceased for a week to be a prominent figure in the eyes of Christendom. He has escaped observation, and has been left at liberty to order additional massacres of Armenians and continue the process of pacifying rebellious provinces by bloodshed and rapine." The latest news bears evidence that the Sultan has not been slow to "catch on" to the change in the situation, for it reports the attack upon Zeitun by Turkish troops, and the barely successful resistance of the Armenians in the place. Of course England cannot look out for the Armenians while she has a war with us on her hands. The only way by which the United States could exert any influence upon the Sultan was by giving our moral support to England in the matter, but we cannot fight England over a boundary-line dispute in Venezuela—a country in which there are no American residents—and at the same time join hands with England for the protection of the Christians in Armenia, among whom there are several hundred American citizens; so we have turned the Christians over to the Turk, and he is dealing with them in a style barbaric enough to suit the wildest Jingo.

We take the following from a circular of Dow, Jones & Co., issued just as the present deviltry was beginning:

"Some of the people who have been quoted as favoring war measures, say privately that it *does not do to appear unpatriotic*, but they personally think a great mistake has been made. At the Union League Club last night, a gentleman who made inquiries found the sentiment almost universal that a great mistake had been made, and that the language used by the President was entirely out of keeping with the subject. We have taken some pains to ask for opinions, and, *while nobody wants to be quoted*, practically everybody asked regrets the stand taken by the President and expresses disgust over the whole business."

We wish to say to those who are now so indignant over our present situation, that they will find in the above few lines the explanation of the greater part of the trouble. A large proportion of the intelligent and educated men of the country who are, or ought to be, in charge of our highest national interests, both moral and financial, in ordinary times, year after year, remain perfectly silent and apparently acquiescent while demagogues, ruffians, and ignoramuses fill the air with abuse of foreign nations, and threats to whip them, while the very children in the public schools are brought up to hate them, and consider the highest and most glorious duty of the patriot to kill them and burn their houses. Every rational man knows that this cannot go on for years and years without some day bringing on a crisis such as that in which we are now wallowing; and yet how many ever have the courage to raise their voices against it? Why, any blackguard can rise up and with perfect impunity make his own ravings about foreign affairs the only true expression of patriotism, and the best men in the community will not dare to tell him that he is a repulsive donkey. The unfortunate *Tribune*, just issuing from a patriotic debauch, is to-day declaring against "war talk." "War talk" is mainly harmful for the effect it produces on foreigners, as we now see. The war talk of idiots among themselves is innocuous. But war talk does not consist simply in abuse of a particular nation. It consists in threatening interpretations of the Monroe Doctrine; in blatherskite newspaper demands for a "vigorous foreign policy"; in instantaneous endorsements, without debate, of a minatory message; and in fact in everything which indicates national excitability, irrationality, and hysteria. We cannot afford to destroy all confidence abroad in our steadiness, calmness, and common sense. We are all business men, but foreigners will not do business with people whose mental soundness they suspect—and much of our current "patriotism" is a thinly veiled form of insanity.

Speaker Reed's committees attract no more attention than the gambols of the squirrels in Central Park. In comparison with the issues of peace and war with which the air is filled, they are of no consequence whatever. The committee on foreign affairs would have been very important if the House had not abdicated beforehand so much of the control over foreign affairs as the Constitution lodged in Congress—that is, the war-making power. By rushing blindly at Mr. Cleveland's heels, it did all that it could to clothe him with its own powers, and now it stands before the country naked. It will not recover from this exposure. If the country is saved now, it must be by the sober sense of the people. The tonic must come from the pulpits, the counting-rooms, the colleges, and—alas, that we should need to say it—from the socialists, who have been among the first to denounce the unholy and uncivilizing steps taken at Washington last week. The reformation must come from the bottom up. It will reach the committee on foreign affairs in due time, but not soon enough to save the reputation of its members.

As to the ways and means committee, it has gone to puttering over the tariff as though that could help anybody except a few special interests which want to seize this opportunity to plunder the public. If Mr. Cleveland has a grain of self-respect left, he will veto their bill. Probably they expect that he will. Probably they intend that he shall. This committee of ways and means is penetrated with the belief that the only thing needed by the Treasury is more revenue in general, whereas it needs gold and has no means of getting it, since Mr. Cleveland and Congress together have shocked the moral sense of the world by their senseless vaporings about Venezuela. The fact is, we have not a friend in Europe to-day. From France, Germany, Italy, Spain, and every other country that has a free press the word comes that we are in the wrong. The Jingoes thought that the peoples of Europe were as immoral as themselves, and that they would be glad to see England bullied by somebody. It turns out that they cannot tolerate a mere bully in their company. They cannot permit such doctrines as those put forward by Mr. Cleveland to prevail in the world's councils, because those doctrines may turn up at any time to their own detriment. Here is something for the committee on foreign affairs to chew over. The head of that committee has held a diplomatic position. Mr. Hitt knows what positions can be safely taken and what cannot, but he has not dared to say that his soul was his own up to this time. He may recover the power of speech later. Meanwhile there is reason to believe that an end has been made of the Presidential prospects of every man in Congress who has acquiesced in Mr. Cleveland's mad prank either by words or by silence—and that means all of them except Boutelle, if he had any such prospects.

All who believe in decent politics will rejoice over the assurance from Kentucky that Senator Blackburn cannot possibly secure a reëlection from the new Legislature. That body, as made up since the recent second election in a Louisville district, is evenly divided between the Republicans and the Democrats, allowing each of the great parties one of the two Populist members, as is justified by their prepossessions and affiliations. No Democrat—and, for that matter, no Republican—can secure an election to the Senate who has not behind him the solid strength of his own party. Blackburn cannot secure that strength on the Democratic side. Mr. Carroll, the Louisville member who has been twice given a seat in the Legislature by his district, has personally assured hard-money Democrats that he will never cast his vote for Blackburn, whatever action the party caucus may take. That tiresome blatherskite is, therefore, sure to be retired a year from next March.

THE REAL PROBLEM.

WHAT constitutes the gravity of the present crisis is not that we are issuing a commission of inquiry concerning matters of deep interest to us, but that we are issuing it as a hostile proceeding, with a threat of war behind it. What we are going to investigate, therefore, is not whether there is wrong on the British side, but what is the extent of the wrong. We are asking, too, a first-class power to acknowledge our right to trace her frontier in defiance of her own claims and in territory which does not belong to us. Is there any way out of this but war?

A large number of persons who are now applauding Mr. Cleveland's action answer this question by declaring that they may safely applaud, because there will be no war, as Great Britain is sure to back down. It is this belief that Great Britain will submit to anything rather than fight, which in our eyes constitutes the real danger of the situation. Our orators, writers, and teachers, even, have been sedulously spreading it for years, with the risk that the public and our public men would come to view bullying Great Britain with such levity that we should be some day landed in the difficulty in which we now find ourselves. For we might have ascertained the rights and wrongs of the Venezuelan matter officially and for our own information, in a friendly spirit, in civil language, and without threats or foregone conclusions. But in our way of asking for the evidence we have in the same breath acknowledged our ignorance of the facts and insulted one of the parties.

The minatory part of the Presidential message is purely gratuitous, and therefore desperately wicked. It was not necessary for a commission of inquiry, and in fact tends to defeat its object, while, according to the diplomatic usage of civilized countries, it means war. If Bismarck had written it, it would probably have been accompanied by mobilization. The opinion that we can get out of this without fighting or great humiliation comes in the main from newspaper editors who expect to make money out of the row, or from persons who know so little of England and foreign nations, or foreign affairs generally, that it would be waste of time to listen to them. No first-class power could possibly take notice of our commission, or appear before it, or pay any attention to its finding, after the way in which it has been presented to it.

In our belief, therefore, it is the duty of all patriotic men, and especially of business men—the work of congratulating the President on his stupendous folly being over—to come down to business, and see what is the prospect which they have to face in the probable event of war with Great Britain. Most of those who are "hollering" to-day probably fancy that we should all, barring the fighting men, find ourselves as comfortable in such a war as in the one with the South—that is, with an active business, plenty of money, open ports, full theatres, and exciting "extras." There could not be a greater mistake. We are only just recovering from a severe panic, and our currency is still trembling on the edge of a chasm. The mere existence of a minatory commission during the next six months of a "Presidential year" will retard if not wholly stop the process of recuperation, if it does not land us on a silver basis, and will cause heavy withdrawals of foreign capital from our securities. The war, unlike our last, will be a naval war, and the inferiority of our naval forces is so great that we have the authority of the General of the Army, in his last report, for saying that our navy could not possibly prevent the blockade of our whole coast within ten days, and the levying of ransom on every one of our Atlantic cities, including New York, on pain of bombardment. Our Jingo papers in this city would probably have to do their "hollering" at Yonkers or Peekskill. Not only would our ports be closed, and our coasting trade stopped, but a foreign trade of about $1,600,000,000, on which our agriculture and manufacturing industry are largely dependent, if not for success, for prosperity, would cease at one blow. Immigration and travel would both come to an end, and the national mind would be wholly turned away from civilizing agencies, from trade, commerce, currency, and manufactures, from art, literature, and science, and be concentrated on the accounts in the extras of the daily work of slaughter and destruction and the gradual rising of the tide of barbarism. The forced cessation, too, of work in every sort of enterprise, either through want of confidence or the loss of markets, would fill every town in the country with furious unemployed, with their heads full of socialism; and part, and a large part, of the work of our troops would be the protection of railroads, factories, and "princely mansions" from the attacks of hungry mobs. One of the delusions of the Jingoes has been for years that in fighting England we should be able to make up for our naval inferiority by attacks on her commerce at sea. This was true, in a measure, of the war of 1812. But, if there be any thoughtful men among Jingoes, they will remember that the whole conditions of maritime intercourse have changed since then, and that this weapon of offence has been practically taken away from us by the substitution of steam for sailing vessels. Merchant vessels are now steamers, and have to be chased by steamers, and we have no swift ones and no coaling-stations on the track of British commerce.

We know very well that there are Jingoes so afflicted by Providence that the more you tell them of the losses that war would occasion, the more eager they are for hostilities to begin; their notion being that, when you go to war, it is base and mean to count the cost. They think, like Louis XIV. or Napoleon, that there is nothing like fighting for "honor," and revel in the thought of the misery in which they will plunge other people. But we do not believe the mass of American business men have been converted all of a sudden into crack-brained Parisians. Who in listening to the Jingo yells these fine mornings can avoid hearing through the mist of years those other Jingo yells which started the Parisian crowd on the road "to Berlin," or asking themselves what war for "self-respect and honor" has ever been begun, continued, or ended without making its originators and promoters objects of execration to all subsequent generations?

THE VENEZUELA CORRESPONDENCE.

OUR share in the Venezuela correspondence is not calculated to flatter the national vanity. Some change has evidently come over our policy since the death of Secretary Gresham. He was very diligent in circulating from the State Department copies of the Monroe Doctrine as enunciated by Monroe, in defence of his abstention from meddling, as the Jingoes wished him to do, in the Nicaragua affair. Thousands of copies of a pamphlet of its own, and thousands of copies also of the *Evening Post's* reprint of Prof. Moore's essay on the Doctrine, were sent out by the Department. All this adhesion to the Doctrine, pure and simple, ceased when Secretary Olney came in. Since his accession, textual references to it have wholly stopped, and we have been treated to a series of glosses and additions of a highly explosive character, to which one of our correspondents has given the name of the "Cleveland Doctrine." The simple text has been withheld from the faithful as carefully by the Administration as by the newspaper Jingoes, whom we taunted so much on this point, and Mr. Olney's and the President's interpretations have been given forth to the world as the pure milk of the word.

The first intimation we got of what was brewing was the announcement in the President's message that we were opposed to "the forcible increase by any European power of its territory on this continent"; that Great Britain was actually guilty of this offence, as it was trying "to enlarge the area of British Guiana in derogation of the rights and against the will of Venezuela." This positive pronouncement on the merits of the controversy had two consequences. It made it impossible for us to act as arbitrators if arbitration there should be, and it left, in our judgment, nothing to arbitrate. Great Britain was wrong and Venezuela was right. Having thus declared ourselves frankly on the Venezuelan side, we called on Great Britain in a threatening manner to say categorically whether she would arbitrate in a case in which we had already decided for ourselves. In other words, after having become a party to the controversy without invitation, we

called for compulsory arbitration. We presume no thinking American familiar with the usages of civilized international intercourse read this bit of self-stultification without a touch of shame.

But worse was to come. The President in his message to Congress on Tuesday week abandoned Monroe wholly, and produced the "Cleveland Doctrine," which is "the recognition of those principles of international law which are based upon the theory that every nation shall have its rights protected and its just claims enforced." The confusion of thought and language here is remarkable. There is no principle of international law which provides protection for every theory and claim which any nation may make for itself. International law protects only such claims and theories as the civilized world has accepted as just and right. Pope Alexander VI., by a bull of May 4, 1493, gave everything west of the Cape Verde Islands to Spain and Portugal, and under it these Powers long "claimed" the whole American continent. Great Britain used to "claim" the exclusive jurisdiction in the narrow seas around the island, and the right to seize belligerent goods in neutral bottoms, and to seize British sailors on board neutral vessels. We, too, have claimed possession of Bering Sea. But international law knows nothing of claims like these. In that forum every valid claim has to be based on consensus. Whatever be the value of the Monroe Doctrine or the Cleveland Doctrine, therefore, it is not binding on any foreign Power until it has accepted it. The Cleveland Doctrine will be good international doctrine when other nations have agreed to it. Until then it remains, as regards foreign nations, exactly what the Spanish title under the Pope's bull was—only something to fight for. It has whatever force we choose to give it in arms, and no more. To ask for more, without negotiation or agreement with the South American or other states, is childish.

In the same message the President again humiliates us by his self-contradictions. He repeats his demand that Great Britain must submit to arbitration, after having pronounced against her claim; and after insisting that any enlargement of the area of foreign territory on this continent would be injurious to "our peace and safety as a nation, the integrity of our free institutions," etc., and should be resisted if necessary, he calmly admits that "any adjustment of boundary which Venezuela may deem for her advantage, and may enter into of her own free will, cannot of course be objected to by the United States." That is, Venezuela may, by private arrangement with Great Britain, imperil "our peace and safety as a nation," "the integrity of our free institutions, and the tranquil maintenance of our distinctive form of government"! The rhetoric of the closing paragraph of the message is worthy of the logic of the earlier part, and forcibly and clearly indicates the object of the whole composition.

Secretary Olney's argumentation is even more confused than that of his chief. He lays down, as "an admitted axiom of international law," that a nation may interpose in a controversy between other nations, but omits to mention that international law takes no notice of any interference which is not asked for by the parties to the controversy. He also produces, as if it were law, the right to interfere when its own "integrity and tranquillity" are menaced, but this is simply the right to go to war when it pleases, which has never been denied to any nation except by the insane. The Monroe Doctrine he defines thus:

> "The precise scope and limitations of this rule cannot be too clearly apprehended. It does not establish any general protectorate by the United States over other American states. It does not relieve any American state from its obligations as fixed by international law, nor prevent any European power directly interested from enforcing such obligations, or from inflicting merited punishment for the breach of them. It does not contemplate any interference in the internal affairs of any American state, or in the relations between it and any other American state. It does not justify any attempt on our part to change the established form of government of any American state, or to prevent the people of such state from altering that form according to their own will and pleasure. The rule in question has but a single purpose and object. It is that no European power or combination of European powers shall forcibly deprive an American state of the right and power of self-government, and of shaping for itself its own political fortunes and destinies."

But from this he deduces an extraordinary assortment of other doctrines. One is, that our non-interference in European conflicts demands, as some sort of reciprocity, the defence by us of the independence of all American states. Another is, that "the United States is practically sovereign on this continent, and its fiat law"—which is the first assertion of sovereignty over the whole hemisphere since the Pope's Bull, and, of course, makes us responsible for all wrongdoing from Canada to Cape Horn. Another is, that we must be distrustful of and hostile to European powers, as a lesson of experience. Another is, that any attempt forcibly to assume "political control" over an American state is an injury to the United States, and that the inclusion of Great Britain's dispute with Venezuela in this category "presents no real difficulty."

Passing over the Secretary's remarks about Africa and the danger of similar conditions arising on this hemisphere, we come to his conclusion that we must, in a supposed condition, be "armed to the teeth, convert the flower of our male population into soldiers and sailors, and thus annihilate a large share of the productive energy of the nation." What is all this correspondence about? It is a question whether the boundary line of Venezuela and British Guiana runs a few miles this way or that way—a matter which is no concern of ours anyway; but suppose it were our concern, and that the decision were against Venezuela, no matter how the decision were reached. Would the effect upon us be of the appalling nature described? Must we at once arm ourselves to the teeth? Must we convert the flower of our male population into soldiers and sailors? Venezuela is separated from us by two thousand miles of water, and more than that of land. Half-a-dozen countries lie between us. The distance could not be traversed by an army in any event. On the other hand, if we cast our eyes in the opposite direction, we find exactly the conditions which excite Mr. Olney's fears; that is, we find Great Britain established on our northern border for a distance of thirty-five hundred miles. She has been there all the time that we have been a nation. She has been *there* longer than we have been *here*, and nobody ever dreamed that she was a menace to us for that reason. All our troubles with Great Britain in the past have grown out of other things than the nearness of Canada. Neither Mr. Olney nor any other human being ever imagined the need of our "arming to the teeth" on account of Canada unless we intended to do harm to her—and thank God we have never had such intention since the treaty of Ghent was made, eighty years ago.

Now consider the argument that we must arm in self-defence if Great Britain does not submit to arbitration the question whether 40,000 people, living quietly under her rule—who have so lived all their lives—shall be transferred to one of the most turbulent and unstable governments in the world, and without consulting them at all. If the case were reversed and put to us, in manner and form like President Cleveland's impudent and insulting demand, we should declare war on that issue alone, and without waiting for an overt act. Everybody knows that we should do so. But, returning to Mr. Olney's fears for our safety in the premises, it may be said that he did not fear the results in this immediate case, but in its possible extension. There are only three countries of Europe that have any South American holdings, and one of them (Holland) may be cast out of the reckoning. The idea that we have anything to fear from any possible extension of the French and English boundaries of the Guianas, so that we must "arm to the teeth" and make the flower of our youth soldiers and sailors for all future time, passes the bounds of absurdity and becomes downright dishonesty. We cannot express our contempt for it.

PATRIOTISM AND FINANCE.

THE celebrated remark of Col. Yell of Yellville that "though his accounts might not balance, his heart beat warmly for his native land," seems to have suggested the following observation in Mr. Cleveland's message on Friday:

> "If in this particular instance our predicament is at all influenced by a recent insistence

upon the position we should occupy in our relation to certain questions concerning our foreign policy, this furnishes a signal and impressive warning that even the patriotic sentiment of our people is not an adequate substitute for a sound financial policy."

That any warning on such a point from such a man should be needed at this juncture, shows how far the Jingo madness has gone. Mr. Cleveland evidently needed it himself before he launched his war message. The effect of the message on the money market seems to have taken him by surprise. He was apparently of opinion that it made no difference whether people's accounts balanced or not, if their hearts beat warmly for their native land. Nothing has come from that quarter so likely to cause uneasiness among foreign investors as this admonition, because it reads as if we were a band of blind men led by another blind man, or rather a band of lunatics in charge of an unsound keeper. In their dealings with each other no people in the world show more sanity, not to say shrewdness, than Americans. Every financial transaction, from the sale of butter to the placing of railroad bonds, is based on a perfect knowledge of human nature. Every honest man in either selling or buying interrogates himself and concludes that others feel as he does, and makes his calculations accordingly. The total failure of this sense in international matters goes far to confirm the belief of a great many people that the "patriotism" which has been diffused among the masses during the past thirty years, and even taught to the children in the schools, is a species of madness. During the Chilian trouble, some one started the notion in Bridgeport, Conn., that it was an "insult" for a foreign vessel to come into an American port flying any flag but the stars and stripes. Within a day or two in came a British ship flying the union jack. Instant preparations were made by the local patriots to board her and mob the captain. Before the eruption actually took place, however, some one suggested telegraphing to the State Department to find out whether it was an insult or not for a foreign vessel to fly her own flag in our ports. The answer was of course satisfactory, and the trouble blew over; but what a revelation as to the state of mind even of intelligent New Englanders touching the usages of international intercourse!

Take again to-day the theory propounded and firmly held by many Jingoes, that the fall of securities in the market is a cunning device of Englishmen to annoy us or insult us, a kind of bloodless war, which only aggravates the English wrongdoing in the Venezuelan matter; or that other theory that the fall in Wall Street only affects the brokers, a selfish class whom it serves right, and that it should only make us the sterner in the assertion of our rights. We do not believe there is any question as to the name Nordau would give these delusions, and there is equally little question that they have their origin in a morbid patriotism, which manifests itself only in a desire to fight some one. We do not believe we exaggerate when we say that a disposition to engage in an armed conflict with some foreign nation is to-day the only meaning which the mass of the people attach to the word "patriotism." This is what they understand whenever it is mentioned. For this is now the only thing which leads the bulk of us to sink party differences in support of the Executive in the prospect of a foreign war. No danger or distress from any other cause will bring about any such result. It has caused the present Congress to abdicate the extremely important function of "declaring war" imposed on it by the Constitution, and practically hand it over to the Executive, by "standing behind the President," and giving him all the power he asked for in an international dispute, without debate or deliberation. Commenting on the wisdom of confiding this power of declaring war to Congress alone, Story says:

"But certainly, in a republic the chief magistrate ought not to be clothed with a power so summary, and, at the same time, so full of dangers to the public interest and the public safety. It would be to commit the liberties, as well as the rights of the people, to the ambition, resentment, or caprice, or rashness of a single mind."—(*Story on the Constitution, p. 120.*)

As a matter of fact this power has been placed in President Cleveland's hands without a word of deliberation or remonstrance from Congress, and if he began hostilities to-morrow, a wild yell of patriotic fervor is all that he would hear from either branch of Congress.

Who is responsible for the diffusion of these alarming notions among the American people, now containing a dangerously large body of persons who know nothing at all about finance or foreign exchange, as the history of the last twenty years abundantly shows, and nothing about foreign nations except that they are possible antagonists in war, and have heard of no international law except the Monroe doctrine? Well, we are afraid we must lay the blame largely on the business men and the more intelligent classes generally. The poison from which we are suffering to-day has been filtering into the public mind through the newspaper press, the magazines, and into the minds of the children through the school-books, for thirty years, so that instead of growing more humane and civilized in our relations with the rest of mankind as we have grown more powerful, we have become distinctly more unreasoning and barbarous. Our descent as a member of the family of nations since Webster and Marcy sat in the State Department, has been very marked, in spite of greatly increased intercourse with the Old World and of complete deliverance from the sensitiveness of youth and weakness which beset us in the beginning of the century. The half-savage attitude towards foreign nations has, as we have often remarked, been greatly stimulated by the arguments and appeals necessary to support a high tariff, but is also due, in a far larger degree, to the apparent acquiescence of the instructed class in any definition of "patriotism" which the demagogues and ignoramuses and sensational newspapers chose to propound. The fear of differing with any blatherskite who chose to mount the stump or make "copy" in a newspaper office, in order to tell us how to show love of country, has been one of the great shames and scandals of our recent history. It is to-day bearing its proper fruit in financial disorder, and we may thank God that it has not landed us in a war of which the opening years would be a chronicle of frightful loss and disaster. Opinion on any particular public question forms very slowly in America, but it takes nearly as much time to change it as to make it; and if the intelligent classes wish to save popular government on this continent for humanity and civilization, they must speak out more boldly when they see perverting processes at work on the popular mind.

JAY'S TREATY.

It happened, by an odd coincidence, that dinners were given on Thursday evening by commercial bodies in New York and Boston, to celebrate the one hundredth anniversary of the ratification of the treaty negotiated by John Jay with Great Britain. These celebrations were arranged several weeks before, and therefore had no reference to, the late explosion at Washington city, in which President Cleveland presented himself in such marked contrast to President Washington. Jay's treaty, although it had other interesting features, was a commercial treaty in the main. Hence it was properly celebrated at its hundredth anniversary by commercial interests. Peculiar interest attaches to it at this time from the fact that the treaty was welcomed by the statesmen of the country with favor, but was received by the populace with an outburst of wrath which took on the most disgraceful and outrageous forms. Indeed, if any hand less firm than that of Washington had been at the helm, the treaty would have been rejected and war with Great Britain would have ensued. The contrast with the present situation is found in the fact that the so-called statesmen are now eager for war, or pretend to be, while the people are for the most part stupefied to know what has caused the excitement.

When the war of the Revolution was ended, the United States did not spring into existence as a nation. They continued to be separate States held together by the loose tie called the Articles of Confederation. These gave the general Government no power to regulate commerce with foreign countries. It could only recommend the States to do this or

that, and the States could follow the recommendations, or not. The doctrines of the Mercantile Theory were then in vogue, the central idea of which was that what one nation gains by foreign trade some other nation loses. The consequence was that foreign trade had to be conducted under commercial treaties in which the contracting parties received and granted concessions. But the Government of the United States could not grant any concessions, because it could not bind the States. New York might agree to the terms of a commercial treaty and Pennsylvania might refuse. New York might agree to-day and withdraw her agreement to-morrow.

Therefore England refused to grant any trade concessions to this country. Our trade was mostly with her colonies and herself, and the want of trade privileges was a great affliction. There were other sources of irritation. Great Britain had agreed at the end of the war to vacate certain frontier posts in the West, but had not done so. She had agreed not to carry away any slaves when her fleet evacuated our ports, yet a great many negroes had escaped, either with or without the connivance of her officers. The number was estimated at 3,000, and pay was demanded for them. When she was pressed on these two subjects, she replied that we had agreed to restore the confiscated estates of the loyalists and to cease confiscation of the rest, and that both agreements had been violated. The fact was that the treaty provided that Congress should do all that it could, which was to "recommend" these things to the States, which the States refused to do in the same way that they refused to pay taxes when they did not choose to pay.

These causes of irritation were rife before the Constitution was adopted, and had brought the country to such a pitch of exasperation that any slight cause might start a blaze, and so things stood when the French Revolution broke out. England and France soon became involved in war, and both sought to gain an advantage by putting restraints on the commerce of neutrals. Great Britain also held to the "right of search" for British seamen, whom she impressed wherever they were found. This was, perhaps, the greatest grievance of all, since it was contended that many American sailors were forcibly dragged into the service of the English navy in this way. Things went on from bad to worse till 1794, when President Washington clearly perceived that these differences must be composed, or war would be the inevitable result. In order to avert this calamity, he decided to send an envoy extraordinary to London for this purpose. He first intended to send Hamilton, but, since the latter had become embroiled in the partisan politics of the day, he changed his mind and selected John Jay, the Chief Justice of the Supreme Court, "the only man," said Hamilton, "in whose qualifications for success there would be thorough confidence."

Mr. Jay accepted the mission. The treaty was negotiated and sent to the President, who called a special session of the Senate, by which it was ratified by 20 yeas to 10 nays. It only remained for the President to sign and promulgate it. Before it reached this country at all, rumors came that Mr. Jay was in a fair way of reaching a conclusion. Very few had expected this. Consequently, before the terms were known to all, the mutterings of a tempest were heard, and Jay was denounced in public meetings as an unpatriotic citizen and tool of our enemies. It was reported among other things that he had kissed the hand of the Queen. This served as the text for fierce denunciations, to which charges of bribery were soon added.

When the terms of the treaty became known, there was an explosion of rage, the recital of which in the histories of Hildreth, McMaster, and Schouler makes us wonder what manner of people our ancestors of the year 1795 were. Riots broke out in Boston, New York, Philadelphia, Charleston, and Savannah. British merchant ships were seized and burned. John Jay was burned in effigy, hanged in effigy, and drawn and quartered in effigy. Washington was denounced as a betrayer of his country's dearest rights; and one blackguard who had access to the newspapers of the day, went so far as to call him a thief. Hamilton was stoned in the streets of New York for making a speech counselling moderation, and went home with blood streaming from his face. It was said that the stones were thrown by some sailors from a French ship lying in the harbor, but it was evident that the natives did not object to this treatment of their greatest citizen.

These brutal demonstrations were intended to have an influence on Washington to prevent him from signing the treaty. He said nothing, but bided his time. After a little the sober sense of the community began to assert itself. The Chambers of Commerce of Boston and New York, as soon as they could meet without danger of being mobbed, assembled and passed resolutions in favor of ratification and sent them to the President. The soberer portion of Philadelphia did the same. Then Washington signed the treaty and proclaimed it as a part of the supreme law of the land, and now, one hundred years later, public meetings of business men are held to celebrate the ratification of Jay's treaty. Its opponents either are buried in oblivion, or are recognized only by the traces of folly and mobocracy which they left behind them.

THE FRENCH ACADEMY.—I.

PARIS, December 3, 1895.

THE French Academy has lost in a short time three of its most illustrious members—Renan, Taine, and Alexandre Dumas. Little is known out of France of the history and traditions of this Academy, and its relation to what is called the Institute. The recent visit of the Institute, with all its foreign correspondents, to the Duke d'Aumale, who made to the Institute the magnificent donation of Chantilly, with all its treasures, has drawn the attention of many persons to this same question of the constitution of the Institute and to the French Academy. The history of the French Academy is, to a certain extent, the history of French literature for two centuries. Its origin was very humble. Cardinal Richelieu, having learned that a certain number of literary men had regular meetings at the house of Conrart—the same Conrart of whom Boileau said sarcastically,

"Imitez de Conrart le silence prudent,"

asked, according to Pellisson, "if these persons would not like to form a body, and to meet regularly and under public authority." Here we have, in a word, the origin of the institution: it was not to be a mere coterie, a club, it was to have the patronage of the state. You will at once recognize the spirit which animates all the social life of France. The Academy is the creation of Richelieu, and till lately it was necessary for all the new members in their reception speech to allude to the famous Cardinal. The letters-patent of the foundation were issued on the 29th of January, 1635; they were confirmed by the Parlement only two years afterwards, in 1637.

Richelieu's despotic character had to make allowance for the principles of liberty which are essential to literary life. He admitted the principle of the election of the members of what was called the French Academy by the company itself; he allowed it to draw its own statutes, and the statutes guaranteed a complete equality among the members. He respected the liberty of the members in all the elections in this new self-elected body, and did not attempt to weigh in any manner in the choices which were to be made. The Academy itself chose its Perpetual Secretary (this name and this function have been continued to our day); the Director and the Chancellor were drawn by lot from the beginning as they are now. The independence of the Academy was severely tried when Richelieu asked its opinion of the "Cid" of Corneille. The Academy published only after five months of negotiation its 'Sentimens sur le Cid.' Richelieu was only half satisfied with the criticisms of the new Academicians; the public took the side of Corneille, and Boileau could write afterwards:

"L'Académie en corps a beau le condamner,
Tout Paris pour le Cid a les yeux de Chimène."

In 1642 the Hôtel Séguier became the centre of the meetings of the Academy; by degrees noblemen were introduced among the littérateurs, and the indirect protectorate of the King made itself more and more felt. Bussy was condescending enough to write: "It will always be necessary to leave in the Academy a certain number of men of letters, if only to finish the Dictionary, and for the assiduity which men like ourselves (*des gens comme nous*) could not have in such a place." After the death of Séguier, in 1672, the King became the protector of the Academy, and Colbert established it in the Louvre. He instituted the *jetons de présence* (each member receives, at the sitting he attends, a small sum, which is the same now as in the time of Colbert); he never interfered with the freedom of the elections. The prestige of Louis XIV., however,

was so great, and the number of *grands seigneurs* elected without any literary title was such, that the Academy seemed at one time to have for its only object the eulogy of the "Grand Roi." Louis XIV. rewarded it by treating it with much favor. He presented the Academy with the forty *fauteuils*. He never imposed any choice on the Academy, but he sometimes opposed an election; thus, he objected to the Duke du Maine, notwithstanding the great affection he had for him, and, by his influence, the election of La Fontaine was deferred for some time. When Louis XIV. expressed a desire that Boileau should be elected to the Academy, it was a mere act of justice on his part. One day, at supper, he asked Boileau, "Do you belong to the Academy?" Boileau answered that he was not worthy of such an honor. "Je veux que vous en soyez," said the King. Boileau might well write:

"Grand Roi, cesse de vaincre ou je cesse d'écrire,"

but he would not be elected by the King's order. A seat became vacant by the death of Colbert; Boileau made no visits, and La Fontaine presented himself. La Fontaine had sixteen votes, Boileau seven. The nomination was submitted to the King, who waited till a second seat was vacant. This time Boileau was elected by a unanimous vote. Louis XIV., who did not approve of the famous 'Contes' of La Fontaine, said to the members of the Academy who announced to him the election of Boileau: "Your choice is very agreeable to me and will be generally approved. You can now receive La Fontaine; he has promised to be good" (*d'être sage*).

It was under Louis XIV. that was founded a yearly prize for poetry; this foundation still subsists. A gift of 3,000 francs is awarded for the best poem written on a subject chosen every year by the Academy. Racine, who, besides immortal tragedies, wrote some very clever epigrams, said, on the subject of this prize, speaking of Louis XIV., after an illness of the King:

"Grand Dieu, conserve nous ce roi victorieux
Que tu viens de rendre à nos larmes,
Fais durer à jamais des jours si précieux;
Que ce soient là nos dernières alarmes;
Empêche d'aller jusqu'à lui
Le noir chagrin, le dangereux ennui,
Toute langueur, toute fièvre ennemie,
Et les vers de l'Académie."

The Academy of the seventeenth century can boast of such members as La Bruyère, Boileau, Fénelon, Racine, La Fontaine. It may be said to have given to the French men of letters a certain sort of solidarity. The bond of union (we will not call it fraternity) was perhaps less marked in the eighteenth century, because the men of letters became, so to speak, the satellites of one man—of Voltaire. The Academy was less the centre of the intellectual world than the group of the philosophers and the encyclopædists who recognized Voltaire as their leader and protector. Nevertheless, the history of the Academy in the eighteenth century shows that it became more and more a public institution, and in that respect it helped to prepare the great primacy and the intellectual empire which were seized in the latter part of the century by the men of letters—an empire which may be considered as having prepared the great French Revolution and substituted new principles and new ideas for the ideas and principles of the old régime.

Voltaire himself entered the Academy in 1746, not without great difficulty. The first representative of the philosophical school in the Academy was Montesquieu, who had been obliged to show Cardinal Fleury an edition of his 'Lettres Persanes' from which all the dangerous passages had been omitted. Voltaire tells the story in his 'Siècle de Louis XIV.' He was himself anxious to enter the Academy. "I thought," he wrote to the Duke de Richelieu, "of making myself a sort of rampart, with the Academy, against the persecutions which a man who writes freely must always fear in France." He had already written "Oedipe," the "Henriade," "Zaïre," "Mérope"; but his 'Philosophical Letters' had been condemned and burned. As usual, he did not hesitate to lie; he cleared himself by indirect means of the accusations brought against him. "My true sentiments with regard to the state and religion are well known to Cardinal Fleury," he wrote to the Bishop of Mirepoix, who was preceptor to the Dauphin. "I can say, before God, that I am a good citizen and a good Catholic." He wrote, in the same style, to the Archbishop of Sens, whose influence he feared. Frederick of Prussia sent him these verses on the occasion:

"Quoi! la grâce efficace opère:
Par Mirepoix endoctriné,
Et tout aspergé d'eau benite,
Abattu d'un jeune obstiné,
Allez-vous devenir hermite?"

Notwithstanding all these efforts, Voltaire was not elected; but he was tenacious; he wrote his poem on Fontenoy; he made an alliance with Madame de Pompadour; he was elected without any resistance on the death of President Bouhier.

Duclos, D'Alembert, President Hénault, Marmontel, are to be found among the members of the society in the reign of Louis XV., together with some princes of the blood; Duclos was elected Perpetual Secretary, a high academical office which is held for life, and which since 1742 has had for its remuneration a pension and an apartment first at the Louvre and now in the palace of the Institute. D'Alembert was chosen Perpetual Secretary after Duclos. When the Count de Clermont was elected academician, somebody said: "Since they make the Count de Clermont an academician, they ought to make D'Alembert a prince of the blood." This pleasantry shows in a pointed form the change which was taking place in public opinion; the Academy was becoming more and more a free centre of thought, an independent institution.

Since 1671 there has been every year a prize for eloquence given to the best essay on a religious question. Balzac, who was the initiator of this competition, desired that only religious subjects should be treated. Duclos substituted for these subjects the eulogy of the celebrated men of the nation. The Academy, though it remained faithful to its old tradition of having always some priests (generally bishops) among its members, showed its desire to have a lay rather than a theological character. Thomas, who is now well forgotten, made himself famous in his time by his "éloges."

The history of the French Academy under the reign of Louis XVI. is a continuation of the struggle between the philosophers and their adversaries. Voltaire made his famous last visit to Paris in 1778, and the Academy paid him extraordinary honors. The prizes instituted by means of the great donation of M. de Montyon, and destined (in the language of the donor) to recompense the "works most useful to the *temporal* good of humanity" and virtuous acts—these, together with other liberalities, gave to the Academy a large patronage, which manifested to all eyes the growing power of the philosophical school. All the choices made after 1774 were distinctly favorable to the alliance of political liberalism and of literature. The reception of Malesherbes, who was dear to the philosophers for having been a protector of the Encyclopedia, was almost a political event; he dared to put "patriotic sentiments among literary titles." Voltaire wrote from his retreat: "I should like the Academy to be always free, in order that there should be something free in France"; and six months before his death he still wrote: "The Academy is free. Cardinal Richelieu created it free, as God created man. . . . It is a body which makes itself more useful than people think, by doing nothing." Between the deaths of Voltaire and of D'Alembert, who did not long survive Voltaire, and 1789, there is a sort of interregnum in the history of the Academy. The great place which it had occupied during the philosophical period seems to have become more contracted. We shall next see what became of the institution during the Revolutionary period.

Correspondence.

"FORCE AS A MORAL INFLUENCE."

To the Editor of The Nation:

Sir: In an article in the *Nation* of December 19, under the above caption, after referring to the reformatory efforts of Chief-Justice Snodgress of Tennessee (who shot a lawyer), of a Massachusetts Supreme Court judge (who makes addresses to young men eulogizing war), and of a Louisiana judge (who advocates the carrying of concealed weapons), you point out the striking effects of war as a moral school by examples taken from the nations of the Old World. But why cross the ocean and tell us about the achievements of the French, the Swiss, or the British in killing men, when we have an ideal to emulate so much more complete and much nearer home? Does not the American Indian illustrate the beauties of force, and its logical results in the improvement of character and social conditions, far better than the half-hearted application of the doctrine in question by foreigners? The pages of Parkman and the records of missionaries, travellers, and colonial experiences give us vivid pictures of the moral influence of taking the law into one's own hands, as exemplified by the aborigines. No better illustrations could be desired by the learned judges of the superiority of individual physical prowess, stalking forth to look for insults to avenge in congenial wildernesses, over the toil of weaklings working for the common good and jealous of the peace of society.

Indeed, the evident restiveness of some judges off the bench at their perfunctory respect for law on the bench, of makers of law at the reign of law, of executive officers at the facts and hindrances of history and international codes when they are out on the war-path, and even of religious teachers at their official message of "Peace on earth, good will to men," is quite suggestive of the speedy realization of the Indian ideal. Perhaps the advantage of keeping this ideal "before the people" may be the more apparent if we remember that when we are all braves, and hunting and killing shall be the "proper *business* of youth and middle age" (to quote the admonition of Judge Holmes to the Harvard students), many perplexing questions and obnoxious institutions will have passed into oblivion or settled themselves. There will be no banks and hated bankers, no corporations, capitalists, and industrial managers, no foreign investors with American interests, no

American attachment for historic, legal, or economic precedent, no awkward law or embarrassing Gospel; but then—to quote our President—we shall be "masters of the situation!" Happy Indian ideal! L. C. B.

BETHLEHEM, PA., December 21, 1895.

TOMAHAWK CIVILIZATION.

TO THE EDITOR OF THE NATION:

SIR: As one reads the multiplying testimonials to the value of killing people, making widows and orphans, destroying property, and increasing the burdens of taxation, all as a means of elevating the moral character of the people, he is disposed to wonder what such men as Judge Holmes, Senator Lodge, and their school teach to their own children as to their proper relations with their playmates.

The fundamental principles of morals do not change as one passes from boyhood to manhood, and, according to the doctrine of this new growth of moral philosophers, the child should begin to bite, scratch, and kick his way to moral perfection at an early date. To lose the impressionable period of childhood for such training is surely an unwarranted neglect of the little ones placed under our care. As a tentative model for the guidance of parents, or of any who may be called upon to address kindergartens or Sunday-school children, I offer the following:

"My dear little boys: Of course you all want to grow up to be great men, but you cannot do so unless you start right. Men must know how to fight in order to be great and good, and so you must begin now while you are young and can learn easily. You must be sure not to let other little boys pick on you. You must pull their hair, throw stones at them, tear up their books, bite them, and scratch them. Then when you get old enough, you can have a gun and shoot them. Learn to tear up their books, mash their hats, and burn their playthings now, and then when you get older you can burn their houses, and spoil their fields, so that they will freeze and starve to death. If you learn to do these things now, then you will be good and great men when you grow up, and if you do not want to kill people yourselves, perhaps you can be Judges and Senators, like Mr. Holmes and Mr. Lodge."

In all seriousness, such an address would be no greater an anomaly in its essential character than the recent speech of Judge Holmes. We should like to see some really scientific explanation of the fact that New England is just now putting forward so many men who belong essentially to the tomahawk stage of civilization. W. H. J.

"HIDEOUS LEVITY."

TO THE EDITOR OF THE NATION:

SIR: I have been a subscriber to the *Nation* for some years, and never in full sympathy with its political views, although recognizing its ability and sincerity. But I am in the fullest sympathy with the righteous stand taken by the *Nation* on the outburst of savage war-feeling which seems to be rampant now in both political parties. The reckless utterances of some of our public men, the brutal allusions to war as almost a national blessing by some men high in public life, who seem to think that national honor and national savageism are convertible terms, have led up to the present disgraceful condition of things. I rejoice that the *Nation* has never veered from plain speaking on the tendency to turn the sentiment of the American people from the righteousness that exalts a nation, to a coarse bullying and knavish insolence that can result in the end in nothing but humiliation and dishonor.

I know of no better time to illustrate the spirit which many of our leading papers and public men are now exhibiting in treating of the Venezuelan dispute and the awful possibilities of an Anglo-American war, than a phrase which I came across the other day in reading the Matthew Arnold letters—"*a hideous levity.*" No matter whose this levity may be, whether it trickles down from the White House or Tammany, it must be met by the strongest forces which can be summoned in our sober and peace-loving citizenship. Let those of us who have no sympathy with the President's message say so; let the *Nation* and those journals whose heads have not been dizzied by the blatant Jingoism of the day, rebuke the demagogue whoever he may be, and strive to awaken the normal moral sentiment of the American people, which, possibly dormant now, will sooner or later assert itself.

MILTON REED.

FALL RIVER, MASS., December 21, 1895.

THE CAUSE OF LYNCHING.

TO THE EDITOR OF THE NATION:

SIR: Your correspondents in recent issues of the *Nation*, in dealing with the question of lynching, seem to me to have failed properly to emphasize the fundamental cause of the evil. One ascribes this barbarous practice to the prevalence of false reasoning regarding the efficiency of our courts; the other, admitting the existence of inefficiency, thinks this would be removed by curtailing the right of appeal, and by letting execution follow swiftly upon conviction. Some reforms of this kind are no doubt desirable, but it is doubtful if they would tend very far to do away with this evil. It is not distrust in the present administration of justice that generally is at the bottom of the difficulty. To assure one's self of this, one need only call to mind the kind of criminals on whom this form of punishment is usually inflicted. Even in the most incompetent and dilatory courts such criminals would have but little chance of escape. It is the rich and the lately respectable offenders who secure new trials, acquittals, or pardons. These usually are in no danger of being lynched. On the contrary, they often receive floral tributes and expressions of sympathy.

What passes for lynch-law seems largely to be a result, among many, of the institution of slavery. Two factors enter into the problem—first, a certain criminal tendency in the negro; second, race prejudice on the part of the whites. Hence we find that this mode of punishment—or rather of outrage—is practised with most frequency and barbarity when a negro has committed a crime against a white person. For similarity of offence, or on the rough frontiers, it has occasionally come to be employed even against whites. That a feeling of impatience at the not infrequent slowness and uncertainty of justice may be vaguely present to the minds of would-be lynchers, is quite possible; but reason about it they cannot do, for reasoning would in most cases defeat their purpose. It seems to be chiefly a matter of momentary impulse, reinforced, in case the offender is a negro, by the half-conscious thought that he is but a very distant relative of theirs.

In so far as the negro figures in the problem, the motive for lynching will completely disappear only when the two races shall each have learned an additional moral lesson—the blacks a deeper regard for moral virtue, the whites a more abiding sense of human brotherhood. Meanwhile, much may no doubt be done to check this evil through the application of proper external means. E.

CLINTON, IOWA, December 16, 1895.

[We believe no white man has ever been burnt alive in this country, except by the Indians, no matter what his offence. Into the burning, with hideous mutilations, of the blacks, enter both the cruelty of revenge and a spirit of terrorism directed principally against the rape of white women. The implication is, as we have before pointed out, that the negro is less than a human being—or, as our correspondent phrases it, "a very distant relative." The laws forbidding honorable intermarriage between the two races are the guarantee of the perpetuation of this savage atrocity; their abolition, the first step on the part of the whites towards its disappearance.

Jefferson wrote, in 1789, to Dr. Edward Bancroft: "A man's moral sense must be unusually strong if slavery does not make him a thief. He who is permitted by law to have no property of his own can with difficulty conceive that property is founded on anything but force." And the argument is equally applicable to chastity, which slavery rendered simply impossible among the blacks.—ED. NATION.]

THE MONUMENT MANIA.

TO THE EDITOR OF THE NATION:

SIR: A distinguished art critic has told us that our country is disgraced by such worthless monuments, for this reason: "No sooner does a man of any sort of distinction die than subscriptions are begged to erect him a monument, the principal mover in the effort being usually *some sculptor unknown to fame.*" R. L. Stevenson has lately died, and now an appeal is issued begging subscriptions to a memorial to him in San Francisco, one of the two principal movers being a sculptor unknown to fame—at least in this part of the country. The other principal is a personal friend of Stevenson's, who wishes thus to pay a personal debt of gratitude for the dedication of the 'Silverado Squatters.'

Now, without one word as to Stevenson's claim, as "a little Romantic," "a minor classic," to a memorial, or to the sculptor's claim to distinction, I wish to protest with all my power against this careless habit of erecting monuments without any guarantee whatever that they are worthy of erection. A man's admirers may gush and grovel in print as much as they please before his talent, but they have no right to make the rest of us artistically ridiculous. This is *my* country as well as any other man's; its reputation in all things, art as well as character, is dear to me; must I, must we, be at the mercy of whoever schemes to design and job a monument? Is there no protection against making our American art the scoff of all foreigners? A Stevenson fountain or monument would be especially observed of foreigners; he was a foreigner to us himself, and always felt himself one.

M. W. U.

CLIFTON, MASS.

PUBLIC INSTRUCTION IN ANTE-REVOLUTIONARY FRANCE.

To the Editor of The Nation:

Sir: In your review of Mr. Stanley Weyman's novel, 'The Red Cockade,' you state that the author is in error in showing us the French peasant of 1789 as absolutely without education. Your reviewer says that recent French writers tell us that he was better educated under the *ancien régime* than during the half-century which followed the Revolution. No authority is given for this assertion, which was a surprising one to me, as, I am sure, it must have been to many of your readers. I wish to quote in opposition to his view a most competent authority, Miss M. Betham Edwards, the author of a number of statistical books upon France and the editor of the last edition of Arthur Young's 'Travels.' In her introduction to the Travels she says (p. 13):

"One curious omission must have struck most readers of the French travels. This quick and accurate observer, who takes note of every object that meets his eye, who travels the three historic high-roads, diverging to the right and to the left in quest of information, never by any chance whatever mentions a village school. Had such schools existed, we may be sure that he would have visited them, bequeathing us in a few graphic sentences an outline of their plan and working. The education of the people was a dead letter in France at the time he wrote. Here and there the curé or *frères ignorantins* would get the children together and teach them to recite the catechism or spell a credo and pater noster. Writing, arithmetic, much less the teaching of French, were deemed unnecessary."

The Revolutionary and Napoleonic wars—during which the French peasant was to be found in arms all the way from Lisbon to Moscow—must have accomplished something in broadening the minds of even the most unlettered hinds. Veterans were constantly returning to the village and the plough, and others, recruited from the same class, were taking their places in the ranks. Can it be that, during all these years of upheaval and restlessness, the French peasant actually retrograded mentally? The wonderful advance of rural France in wealth and the comforts of living during the past century makes the broad statements of your reviewer seem reckless, especially in the absence of a specific reference to the authorities to which he vaguely alludes.

Yours truly, Thomas Robins.

Philadelphia, December 16, 1895.

[Arthur Young was mainly an observer of agricultural and economic conditions, and Miss Betham-Edwards was so singularly ignorant of modern works upon the French Revolution as to be quite unfit to supplement Arthur Young's deficiencies. A large number of writers have lately investigated the condition of primary education in France during the eighteenth century, and their conclusions fully justify the remarks of the reviewer. The first of these writers was the Abbé Allain, whose volume on 'L'Instruction Primaire en France avant la Révolution,' published in 1881, was followed by special studies on the same subject by Albert Duruy, Victor Pierre, Albert Babeau, the Abbé Maggiolo, and by many local historians, who entirely confirmed his conclusions on the universality and efficiency of village schools in France under the *ancien régime*. Some of these writers have gone further, and, not satisfied with demonstrating the excellence of primary education in France under the fostering care of the curés in the rural districts, have shown by statistics how the persecution of the clergy during the Revolution almost extinguished rural education, and left to the statesmen of the Convention and to Napoleon the task of building up a new system of national primary education.

Perhaps one citation of facts will be more effective than assertions or references to recognized authorities. In 1789 there were, in the districts which now form the department of the Meurthe-et-Moselle, 599 communes; in 566 of these there were one or more schools; in 1801, after the Consulate had been established and the Revolution was at an end, there were schools in only about 200. This statement is taken from an article by the Abbé Maggiolo in the *Revue de la Révolution*, vol. 4, p. 117, and similar figures can be quoted for other departments, such as those of the Lot, the Nord, the Haute-Garonne, and the Seine-Inférieure — departments sufficiently scattered to warrant the statement objected to in the review of Weyman's book. Upon the whole question of the overthrow of the former system of village education—owing to the persecution and emigration of the French priests—and the measures taken by the National Convention to meet the difficulty, our correspondent may consult an article by Prof. Morse Stephens of Cornell University upon "The Work of the Committees of Legislation and Public Instruction in the Convention," which appeared in the *Yale Review* for November, 1895.—Ed. Nation.]

ACETYLENE AND ALCOHOL.

To the Editor of The Nation:

Sir: The violent protest uttered by "Chemist" against certain statements about the possible commercial future of acetylene should not be allowed to pass without comment. The question of advantageous production of alcohol from acetylene is not to be settled in any such summary and off-hand fashion. The possibility or impossibility of making wood-alcohol from marsh-gas at a fabulously cheap price has no bearing on the matter. It is a problem by itself, and chemistry does not indicate that the solution must be unfavorable. It is simply a question of the cost of production starting with calcium carbide, as against the cost when grain is used, and must be worked out empirically. If the chemical reactions which are involved can be effected on the large scale with something like theoretical results, carbide of calcium at $40 a ton may very well enter the lists against grain as a profitable source of alcohol.

As to the use of acetylene for illuminating purposes, "Chemist" says "that the original electricity directly converted into light must inevitably be far more economical than this very roundabout method, implying large losses in lime, coal, and in electrical energy." If electricity could be converted into light directly, and without loss, as this statement seems to imply, acetylene and indeed all other sources of artificial illumination would be out of all economical consideration. But electricity cannot be converted into light without loss. There is loss from the instant that the current leaves the dynamo—loss in the conducting wires, loss in the transformer; and when the electricity which finally reaches the lamp is transformed into radiant energy, only about five per cent. of this is light. The making of acetylene does not necessarily imply large losses in even such cheap materials as coal and lime, and it is by no means "inevitable" that the light given by acetylene gas must be far more costly than the electric light. The matter is not to be disposed of by dogmatic assertion; it will be determined by experience, and experience thus far indicates that "Chemist" is wrong.

It is to be expected that one who dismisses the commercial claims of acetylene so abruptly may have rather hazy ideas in regard to the character of chemical reactions and the transformations of energy. That this is the case is certainly suggested by the language which "Chemist" employs. According to him, acetylene is "decomposed" into benzole (benzine) or into alcohol; and marsh gas is "decomposed" by chlorine into methyl chloride. None of these reactions are decompositions; the first two are building-up reactions or syntheses, and the third a substitution. Energy in the form of water power may be transformed into electrical energy, and this in turn is transformed in the electrical furnace into the heat necessary to bring about the reaction between lime and carbon which results in the formation of calcium carbide; but "Chemist" has it that water power is "decomposed" into electricity, and electricity into "chemical energy" which "decomposes" the mixture of carbon and lime. S.

Notes.

Macmillan & Co. will be the American publishers of the 'London Garland,' extracts from Chaucer, Lydgate, Spenser, etc., edited by W. E. Henley, with 100 illustrations by the Society of Illustrators, of which we gave a preliminary account some weeks ago.

Ginn & Co. announce for February 1 'Inductive Logic,' by William G. Ballantine, President of Oberlin College.

William J. Bok of Flatbush, Brooklyn, expects to publish next June 'The Quiet City, or, The Mighty Tenants of World-Famed Greenwood,' containing a great number of views of the monuments and portraits of the distinguished dead of that cemetery.

The advance sheets of the introduction to the 'Selections from the Coroners' Rolls (Henry III. to Henry V.),' edited for the Selden Society by Dr. Charles Gross, assistant professor of history at Harvard, are now at hand, and it is hoped that the volume will be ready for distribution before the close of the year. It is noteworthy that Dr. Gross is the first American editor of the Society's publications, and his choice and the fact of his qualification for the task show pleasantly that the interest in the preparation of material for the treatment of Anglo-Saxon legal history is not confined to our English brothers in the law.

G. P. Putnam's Sons have in press 'Renaissance Fancies and Studies,' a sequel to 'Euphorion,' by Vernon Lee; and 'Joan of Arc,' by Mrs. Oliphant.

Simultaneously with the exhibition of Thomas Paine relics in London, Mr. M. D. Conway

and his publishers, the Messrs. Putnam, have had the thought to issue 'The Rights of Man' by itself, from the plates of Mr. Conway's edition of Paine's writings. We need say no more except that the book is comely, and that a portrait of Paine after Jarvis serves as a frontispiece.

No one can object to the reprinting of 'The Marvellous Adventures of Sir John Maundevile, Kt.,' as a classic, and this has been done in a generous fashion by Archibald Constable & Co., London (New York: Macmillan). Mr. John Cameron Grant, in his preface, relates that he has followed the Cotton MS., "with only such alterations as to make it easily readable by an Englishman" of our day. He also takes credit, which must be allowed, for a proper paragraphing and for indexing. The illustrations, by Arthur Layard, we could easily have dispensed with. So mythical a personage as Sir John had better be left throughout to the imagination. A quaint adornment would have been proper enough, and something has been attempted in this vein by Mr. Layard.

Hans Christian Andersen's 'The Nightingale' has been made the object of a successful combination of the printer's and the designer's arts (Boston: Berkeley Updike). "The Merrymount Press" has called in the aid of Miss Mary J. Newill of Birmingham, whose pencil has wrought in sympathy with nature, the theme, and the conditions of print, and produced a graceful title-page and four attractive and restrained full-page illustrations. The abolition of the paragraph indention we can but regard as a freak in the otherwise clear, strong, and handsome letter-press. Nothing can prevent the feeling that the blank in the previous line concluding a paragraph was caused by the dropping out of a portion.

Mr. Saintsbury's wordy introduction to Bowyer Nichols's 'Words and Days: A Tale-book of Prose and Verse' (London: Rivington, Percival & Co.) was necessary in order to reveal the scheme of an exceptionally well-executed work. Any one might see the harmony of the selections under each day of the year (that is, on each page), or that Shakspere regularly leads the trio of authors borrowed from; but not all would feel the subtle harmony of the month's anthology, and fewer still would associate the day with a birth-date or death-date, as in the case of Gen. Charles Gordon. Such deliberate conjunctions might well have been pointed out in a little table at the end, preceding an author's index, which is a grave desideratum. For the rest we have only praise; the selections are of a high order, and the year-book is beautifully printed.

Prof. Norton's six "Heart of Oak Books" are now completed by the first three volumes, which begin with rhymes and jingles, pass to fables and nursery tales, to fairy stories and tales of adventure, and so connect with the rest of the "collection of traditional rhymes and stories for children, and of masterpieces of poetry and prose for use at home and at school, chosen with special reference to the cultivation of the imagination and the development of a taste for good reading." This little library cannot fail to fulfil its purpose. The notes are for the adult reader, and will not be thrown away in that quarter.

The two volumes of *St. Nicholas* for 1895 present a full and agreeably varied measure of entertainment and instruction. Three serials running throughout the year, with many short stories, should satisfy the most exorbitant in that direction; while more of Prof. Matthews's articles on American writers, Mr. Hornaday's on American quadrupeds, and Mr. Roosevelt's on early exploration and settlement in the West, cater to other tastes. Whimsicalities are not lacking for the youngest readers, and the æsthetic side of this justly popular magazine is as praiseworthy as ever.

A friend writes to us, apropos of our recent notice of 'The Journal of Françoise Krasinska,' that "it would have been worth while to remark that a translation had previously been published in this country, viz.: in the *Continental Monthly* (N. Y.), from July, 1863, to February, 1864, inclusive. In this version she is sensibly called Frances."

The contents of the January issue of the *American Historical Review* will include an article by Henry C. Lea upon the massacre of the Spanish Jews in 1391; a paper on Radisson and Groseilliers, by Henry C. Campbell of Milwaukee; "The Whigs of Colonial New York," by C. H. Levermore; the conclusion of Prof. Turner's "Western State-Making during the Revolutionary Era"; and a paper by Mr. Gaillard Hunt on office-seeking during Washington's Administration. Perhaps the most interesting portion of the contents, however, may prove to be a diary of a member of the Continental Congress (Richard Smith), beginning on September 12, 1775, and ending on March 30, 1776. It is an interesting and on the whole an important document. Of the items of interest it contains, but a small portion is to be found in the printed journals of the Continental Congress or in the diaries of John Adams and Samuel Ward.

A *Journal of Experimental Medicine*, to be issued at least quarterly, is to appear next month with the Appletons' imprint. It will be edited in Baltimore by Dr. Wm. H. Welch, 935 St. Paul St., and will have the collaboration of a very distinguished staff, besides twelve associate editors.

We acknowledge receipt of the first number of the *Black Book* (New York, 111 Broadway), but we confess that we find difficulty in describing such a wayward compound of scrap py prose and eccentric illustrations. Some sketches by Charles Dickens may attract a moment's attention, but we find little to interest in the "order of contents."

The *Geographical Journal* for December opens with an entertaining, if not precisely encouraging, account of the Jackson-Harmsworth North Polar Expedition. The first winter in Franz Josef Land seems to have been passed very pleasantly, thanks to the admirable provision for the welfare of the explorers and the abundance of game—bears, of which about sixty were killed, walrus, and birds. The scientific results so far are apparently only the rectification of the coast line near the winter quarters. One or two short expeditions have also shown that horses are "*the* means of reaching a high latitude from this direction." There is a lively description, with illustrations, of a journey to the pearl fisheries, tin mines, and pepper plantations of the southwestern provinces of Siam by Mr. H. W. Smyth, and a brief account of a visit last summer of the training squadron to Spitzbergen. This too is illustrated.

The December number of *Popular Astronomy* is as usual timely and readable. An article having a practical bearing, by Prof. E. Miller of the University of Kansas, deplores the fact that while other sciences are amply taught in high schools, astronomy is so frequently neglected, or at best given but desultory attention. Considering the relation of other sciences to this most practical one—not only photography and physics, but chemistry, geology, chronology, geography, and ocean commerce—it must be admitted that its importance is second to no other. Prof. Miller gives suggestions which are sensible and valuable for equipping high schools with apparatus. Prof. Payne continues his series of articles on the moon, and Dr. See writes of the stability of the equilibrium of the oceans. Father Rigge treats of the graphic construction of eclipses and occultations; and Prof. Pickering gives a short account of the remarkable variables in star-clusters found by Prof. Bailey in Peru, of which note has already been made.

The *Revue Encyclopédique* of December 1 announces that at New Year's, 1896, it will begin to appear as a weekly. No change will be made in its method or plan; it will remain as before essentially documentary, although there is a hint that it may become somewhat more *vivante*. The price of the yearly subscription will be slightly raised. The *Revue* will appear every Saturday in *livraisons* of twenty pages.

The most important contribution to the fourth number of the *Archivio Storico dell' Arte Italiana* for 1895 is the reproduction of a portrait of Petrarch, found in a Vatican manuscript of the *Canzioniere*. Although dating from the fifteenth century, the miniature appears to be a faithful copy of a fine original executed in Petrarch's life-time, and possibly, we venture to add, by his friend Simone Martini. There are many portrait-like traits of the face, among them something so convincing and free from idealism as a wart. Another portrait of Petrarch, found by M. Pierre de Nolhac in a manuscript of the Bibliothèque Nationale, is reproduced in this writer's 'Pétrarque et l'Humanisme.' The remaining articles are well calculated to surprise even those who have spent many years in art-exploration in Italy, showing, as they do, the inexhaustibility of that land where beautiful things sprang up almost as universally as there were inhabitants. Signor A. Rubbiani reveals unknown works by the Bolognese worker in terracotta, Vincenzo Onofri. In a long and copiously illustrated paper by Signor Alessandro Vesme, we are introduced to the interesting sculptor Matteo Sammicheli, and his monuments at Casale Monferrato, Saluzzo, and still less frequented towns, such as Chieri and Revello. Signor Supino continues his studies of early Tuscan sculptors with an article on Cellino di Nese, the author of the tomb of Cino in the Cathedral of Pistoia. An article on the Venetian exhibition held last winter in the New Gallery is valuable for its reproductions, the text being practically an adaptation of Mr. Berenson's pamphlet on the same subject.

A remarkable discovery of letters of the greatest rarity and interest has lately been made in an ancient castle in Caithness. They number several hundreds, and are of various dates of the earlier half of the present century. They were all addressed to Mr. George Thomson, the musician and projector of the well-known 'Miscellany of Scottish Song,' to which Burns was a contributor. None of these letters has ever seen the light. Among their writers are Jean Armour (Burns's wife), Gilbert Burns (the brother of the poet), and James Glencairn Burns (the poet's son). Besides these there are letters from Sir Walter Scott, Byron, Moore, Dickens, Boswell of Auchinleck, Hogg, Joanna Baillie, Haydn, Beethoven, Weber, and others of less note. The publication of these letters as a whole, or at all events such of them, and such extracts from others, as are considered of the greatest public interest, is to be made in the Glasgow *Evening News*,

and the first instalment was announced to appear on Friday, November 22.

—We have received the prospectus of the *Hungarian-American*, a monthly designed "to develop the American citizenship of the Hungarians here, both by promulgating the language of the country among them, and also by instructing them concerning their duties and privileges in the land of their adoption." The enterprise recalls Adolph Gyurman's unfortunate experience with the *Demokratischer Voelkerbund*, also in this city, in 1852. Gyurman was a fellow-refugee of Kossuth's and a journalist of experience, but, unlike his chief, he was not a trimmer. He did not propose to confine his gaze to Europe, but felt obliged, by "the unlimited critical nature of reason," to scrutinize the institutions of America, whether to commend them for European imitation, or to point a moral with them for avoidance. In his first issue, within a month of his landing with Kossuth, he dared to pronounce the Compromise of 1850 merely "provisional," especially in the matter of returning fugitive slaves. This at once brought a hornet's nest about Kossuth's ears, and led him very promptly to disown Gyurman and his conception of his "duties and privileges in the land of his adoption." We warn the *Hungarian-American*, in its "patriotic enterprise," not to ventilate any heresies against the Monroe Doctrine, or to regard it as a temporary manifesto, a purely historical document, and not an elastic Jingo web, capable of any amount of stretching, and worth spending $100,000 on, any day, to establish what it covers.

—More than a dozen years ago Mr. W. F. Boogher of Washington projected an historical magazine, and, after printing (but not issuing) a few numbers, abandoned the attempt. The pages which were printed are now collected into a handsome volume of 'Miscellaneous Americana,' and they contain so much good matter that it is to be regretted the "miscellany" was not continued. The six letters from Mrs. John Jay to Mrs. Robert Morris, describing her experiences in Madrid and Paris, are more interesting than her husband's catalogue of mortifications endured in his futile mission. The will of the father of Robert Morris, and the warrant under which the financier was arrested and thrown into the debtor's jail, are of high historical value. Papers relating to the prisoners-of-war in the Revolution, to Clement Biddle's service as a quartermaster, to the Shippens, Vinings, and Penns, are all new and have well deserved to be preserved. Stephen Allinson's "testimony of Quakers against slavery" shows that as early as 1688 the lawfulness of buying and keeping of negroes was questioned in that sect, and a long list of subsequent acts and monitions on the subject prove how strong was the feeling against slavery. In Pennsylvania some suspected witches were weighed against a large Bible. "All of them vastly outweighing it, the accused were then to be tied head and foot together and put into a river, on supposition that if they swam they must be guilty." This was in 1730. Eight portraits and a few other illustrations add to the value of the collection. Only three hundred copies are offered for sale by the compiler.

—Should we write and print "judgment" or "judgement"? The Clarendon Press has adopted the latter in consequence of receiving the following expression of opinion from Dr. Murray:

"I protest strongly against the vulgar and unscholarly habit of omitting it [*e*] from 'abridgement,' 'acknowledgement,' 'judgement,' 'lodgement,' which is against all analogy, etymology, and orthoepy, since elsewhere *g* is hard in English when not followed by *e* or *i*. I think the University Press ought to set a scholarly example instead of following the ignorant to do ill for the sake of saving four *e*'s."

In reply to a letter from a member of the London Association of Correctors of the Press, Dr. Murray also condemns the spelling "despatch" as erroneous usage for "dispatch." It appears that in some printing-offices both of these forms are used, one for the verb, the other for the noun; but there is no uniformity in the usage, one house adopting for the verb the spelling that the other used for the noun. Another moot point is whether to write "combatting" or "combating"; the Clarendon Press acts on the principle that the consonant should be doubled in the accented syllable, and not doubled in other cases. This rule would give us "bimetallic" and "bimetalism." The "New English Dictionary," however, spells both words with the double l. In France the Academy settles such things.

—It is hardly probable that the question of the unity of Rousseau's work would have received as much attention as it has on the part of his biographers and critics, were it not for the fact that he himself repeatedly insisted upon it in his writings, notably in his 'Émile,' in the 'Dialogues,' and in some of his Letters. Flagrant contradictions, not only between ideas advanced in the different treatises of Rousseau, but also between passages in one and the same work, cannot have escaped the notice of his readers. But the main question is, Can the principles expounded in his 'Social Contract' be reconciled with those of his two 'Discourses,' especially that on 'Inequality'? The latest contributor to the discussion, M. A. Espinas ("Le 'Système' de J. J. Rousseau," in recent issues of the *Revue Internationale de l'Enseignement*), vigorously maintains the negative, and shows that a transformation in the fundamental ideas of Rousseau took place after the publication of his second 'Discourse.' This writer's argumentation is far more exhaustive than Chuquet's, who also conceives the 'Social Contract' to be at variance with the entire work of Rousseau ('J. J. Rousseau,' in "Les Grands Écrivains"), and than Faguet's equally strong reasoning to the same end ('Études Littéraires, XVIIIe siècle'). John Morley's view of the subject, as briefly stated in the chapter on the 'Discourses,' is not consistent with the statements made farther on when discussing the 'Social Contract.' Lanson, in his excellent 'History of French Literature,' considers all difficulties removed by a page quoted from the 'Dialogues,' from which, we confess, we cannot derive as much light as he does. M. Espinas's arguments are so weighty that a reply is promised by M. Dreyfus-Brisac, editor-in-chief of the *Revue*, and will, we anticipate, prove to be one of the strongest documents on the opposite side, along with M. E. Lintilhac's defence of the unity of Rousseau's system (in 'Études Littéraires sur les Classiques Français'). Meanwhile, what must be admitted, it would seem, is that the 'Social Contract,' if not an apostasy of Jean Jacques from his earlier professions, is at least, to use the words of Fabre des Essarts (in Grand-Carteret's 'Rousseau, jugé par les Français d'aujourd'hui'), "une sorte de concordat entre le radieux passé et le triste présent"—a capitulation of his reason.

MATTHEW ARNOLD'S LETTERS.—II.

Letters of Matthew Arnold. Collected and arranged by George W. E. Russell. Macmillan & Co. 1895. 2 vols.

THERE are naturally many frank opinions and piquant sayings scattered through these volumes, though they are perfectly spontaneous and are never said for the sake of smartness and piquancy. Mr. Arnold knew Thackeray and was on friendly terms with him, but he "did not thoroughly like him"; and, oddly enough, "he is not, to my thinking, a great writer." He cannot face a new poem of Swinburne's "because his fatal habit of using one hundred words where one would suffice always offends me." After Carlyle's death, he writes to a French pastor, M. Fontanès: "I never much liked him. He seemed to me to be carrying coals to Newcastle—preaching earnestness to a nation which had plenty of it by nature, and less abundantly supplied with several other useful things." Apropos of his own degree at Oxford (1870), he remarks: "I have no doubt it is owing to the accident of a young and original sort of a man, Lord Salisbury, having the making of the list. . . . He is a dangerous man, though; religion he knows and science he knows—but the immense work between the two, which is for literature to accomplish, he knows nothing of." He speaks of Gladstone's "emotional verbiage" in the House of Commons, and gives a delightful account of a dinner in which he sat near Gladstone and Forbes, who had just returned from Bulgaria: "An evening of Bulgaria is too much; and of course Forbes knows nothing else, and Gladstone can go on for hours on that or any other subject. He was not animated, however, and even he must have been over-Bulgarized. Ruskin was there, looking very slight and spiritual. I am getting to like him. He gains much by evening dress, plain black and white, and by his fancy's being forbidden to range through the world of colored cravats." He writes to Morley, "Your Pericles [Gladstone] will never promote the author of 'Literature and Dogma,'" and is handsomely refuted a few days afterward by the offer from Pericles of a pension of £250 a year. Beaconsfield he meets at Lady Airlie's, and is conducted by him to what he calls "the poet's sofa." "He ended by declaring that I was the only living Englishman who had become a classic in his own life-time. The fact is, that what I have done in establishing a number of current phrases, such as 'Philistinism,' 'sweetness and light,' and so on, is just the sort of thing to strike him."

Arnold's visit to France in 1859, as commissioner of the British Government to report on secondary education in France, Germany, and Holland, was the means of introducing him to a number of eminent Frenchmen, among whom were Guizot, Villemain, Mérimée, and especially Sainte-Beuve. This was the beginning of a long acquaintance, accompanied by the interchange of many delicate flowers of compliment. "I would not have missed my evening with him," he writes to his wife, "for all the world. I believe he likes me, and likes my caring so much about his criticisms and appreciating his extraordinary delicacy of tact and judgment in literature." At this interview, Sainte-Beuve showed him a number of letters which he had had from George Sand and Alfred de Musset at the time of their love affair. He urged Arnold to visit George Sand, "but I am rather disinclined to take so long a journey to see such a fat old Muse," as M. de Circourt

calls her. He did make the visit to Berri, however, which he describes in his eloquent notice, written many years after, and the "fat old Muse" remarked of him to Renan: "Il me faisait l'effet d'un Milton jeune et voyageant." When he repeats this compliment to his sister in 1876, he adds: "Her death has been very much in my mind; she was the greatest spirit in our European world from the time that Goethe departed."

The path to Parnassus was not made smooth to this youthful Milton. The itinerant life which he led as inspector of schools brought, indeed, its recompense, but it undoubtedly told against his poetry. It left him no leisure to work his vein; his nerves and his energies were frittered away. The dynamics of the mind forbid the glow of fruitful creation to the poet who has just rummaged a file of examination papers. He confesses as much to his sister: "To attain perfection in the region of thought and feeling as well as perfection of form, is impossible without knocking one's self to pieces. Shelley and Keats could give their whole life to poetry, and were driven to it besides by their demon. . . . Even Tennyson, a far inferior intellectual power, has gained enormously by the devotion of his life to one object; while Goethe himself lost in poetry by the distraction of his varied interests." We must remember this confession in judging Mr. Arnold's poetical achievement. There is no doubt that, with leisure and favoring circumstances, we should have had from him several additional volumes of poems; but there is little doubt, also, that their quality would not have changed, their pitch and power would not have changed. They would still have remained meditative, thoughtful, finished "criticisms of life," of modern life and thought in the main. A puissant or a passionate spirit he never was; he was not "driven by his demon" to create. His "Thyrsis," he tells his mother, was forming in his mind for two years; his "Sohrab and Rustum" he "took great pleasure in writing, though this is not the case generally when I am composing." He is unquestionably the special voice of some of the special mental struggles of this generation. This is at once his merit and the peril of his poetical fame. The special fashion of such struggles passes away. The malady of an Obermann and the malady of a Clough may come to have only an antiquarian interest, but the quest of Thyrsis and the sorrow for his loss, the epic story of Sohrab and Rustum, have a perennial human interest. Nay, even the lines that picture the wanderings of the Oxus to the Ural Sea, which are in no sense a "criticism of life," but a passage of perfectly felicitous and melodious imagination, may be read with pleasure for their beauty long after the stanzas on Obermann are out of date and forgotten. A single thin volume of these poems and their companions will go down to posterity commended by their Attic grace and finish, their Attic thoughtfulness and perfection of form.

In one of the letters, Mr. Arnold mentions the case of a gentleman who has just written to him putting the following question: "I have read your 'Literature and Dogma,' and enjoyed it. Do you think, after this, I can conscientiously hold the position of churchwarden?" The question is rather humorous, but is not altogether impertinent. Mr. Arnold's own practice is quite clear, from this correspondence. He attends the church services regularly; he reads the "lessons of the day" with his children. He does this in a spirit of devout satisfaction and emotion. He receives solace and inspiration from the services of the church. He writes to his mother: "Tommy's death in particular was associated with several awakening and epoch-marking things. The chapter for the day of his death was that great chapter, the first of Isaiah; the first Sunday after his death was Advent Sunday, with its glorious collect and, in the Epistle, the passage [Romans xiii, 13] which converted St. Augustine." He shows here the same genuine feeling for the Bible that he shows in 'Literature and Dogma' for the book "with which conduct is inseparably connected." It is his delight and his companion. He asks his mother for a polyglot copy in Hebrew, Greek, Latin, and Luther's German, as a present for his forty-ninth birthday. He recurs to this gift with delight again and again. He reads in it every day, he tells her, especially Isaiah and Ecclesiasticus. He prepared his little book, 'A Bible-Reading for Schools,' because "nothing *grand* comes into the education of the people, . . . and, after all, Isaiah is immensely superior to Milton's 'Comus,' even as literature." In short, he shows himself here enthusiastically practising all that he urges in his essays. At the same time he writes to his sister: "There is a levity which is altogether evil; but to treat miracles and the common anthropomorphic ideas of God as what one may lose and yet keep one's hope, courage, and joy—this is desirable and necessary, if one holds, as I do, that the common anthropomorphic ideas of God and the reliance on miracles must and will inevitably pass away."

We quote these passages because they show Mr. Arnold clinging with his whole soul to his Church and his Bible, and at the same time ready to throw overboard the doctrines and mysteries of theology, the mechanism of ritual, the miracles and thaumaturgy of Christianity—even ready to forego the positive belief in a personal immortality which is the aspiration of the poor and the anodyne of many bereaved and suffering souls. To follow after righteousness is sufficient in this life; the rest may be left to the "power that makes for righteousness." The Church remains to him an Ethical Society—a society for the propagation of virtue, the pursuit of righteousness—but a society rooted in immemorial associations, and drawing its nourishment largely from a single book and a single exemplar of perfect life. There is a large class of thoughtful and conscientious men to whom such a society affords no aid and makes no appeal. But Mr. Arnold, in his attitude, at once conservative and reformatory, is a type of that very large class—the other class—of thoughtful men who still cling to the churches, who see that, as a matter of fact, the churches are everywhere changing and being transformed, no matter how vehemently the transformation is denied from time to time by this or that group of theologians who insist on shutting their eyes. The transformation in the churches goes on irresistibly and quietly; within the past fifty years it has been enormous, incredible—in fifty years more it may be greater and swifter still. To retain all that is sound and vital in so vast an organization, to apply so great a force in the true direction, seems the part of a reasonable economy, even if it were not the dictate of imperative sentiments and associations. And this is the value of an attempt at positive reconstruction, such as is offered in 'Literature and Dogma,' whatever may be the forms and reforms which the future may bring forth. Tolstoi also proposed his own reconstruction, which Mr. Arnold alludes to in these letters. But it is interesting to observe that Tolstoi's method with the New Testament is exactly the method of the theologians. He takes the letter of a few texts, and, by straining and wresting them and applying a pressure greater than they will bear, he turns out a set of iron formulas, such as his doctrine of non-resistance. He does not, in fact, apply that culture and right reason in his interpretation which Mr. Arnold is so optimistic as to hope that all of us, Philistines as well as the Populace, may some day attain to.

In this connection we light upon one prophecy which we believe is not destined to be fulfilled. Speaking to his mother of his 'Culture and Anarchy,' soon after its appearance, he says: "The chapters on Hebraism and Hellenism are in the main, I am convinced, so true that they will form a kind of centre for English thought and speculation." On the contrary, we believe the distinction is only roughly and approximately true; without strict and positive limitations it is rather dangerous and likely to mislead. The ethics of Plato and Aristotle and the Stoics, the examples of Socrates and Epictetus and Marcus Aurelius, cannot be neglected in making out the varied streams of influence that have converged to shape the moral sense of Western civilization. The Christian Fathers were ready to admit Plato to a limbo in their Paradise: Mr. Arnold himself, in the death-chamber of his son, chooses Marcus Aurelius for his consolation and companionship. When we reflect that Plato holds it impious to ascribe falsehood or unrighteousness to the deity—when we remember how the Bible has been quoted in our own country to defend slavery and polygamy—we see how wavering is that line which Mr. Arnold would draw hard and fast for us; how far he is from having attained a sound and useful generalization.

A series of familiar letters like this, extending through a lifetime, is inevitably the frankest and completest form of confession. It is not often that a man steps out of such a confessional without shattering somewhat the ideals of his admirers. We all remember with what trepidation we used to await the latest indiscretions and revelations of Mr. Carlyle's friends. Like Mr. Carlyle, Mr. Arnold was a lay-preacher, the inheritor in this way of his father's vocation as well as of his moral earnestness. It is an awkward thing to discover that the preacher does not exactly practise; and that was the peculiar awkwardness of the revelation of Mr. Carlyle's many faults and foibles. It is a relief and a pleasure to discover that in Mr. Arnold's case there is not another idol to shatter; that, on the contrary, in the light of these intimate disclosures, the figure we used to admire at a distance grows into a charming personality that may be respected as well as loved.

RECENT LAW BOOKS.

Law books are of two kinds, those which are the fruit of a reasoned analysis of the subject, and those which are not. If we say that Mr. Charles Fisk Beach's 'Commentaries on the Law of Insurance' (Houghton, Mifflin & Co.) belongs to the latter class, we say nothing very much to its discredit, since books of the former are few and far between. As a collection of cases, and especially of recent cases, it will be found very useful by the practising lawyer; but for a comprehension of the principles which underlie the subject we must look elsewhere. To make clearer exactly what we mean we will mention one or two points, taken up quite at

random. There is no thorough analysis of the various kinds of insurance. Marine and fire and life insurance are all discussed as if they were the same; in reality, unless they are carefully distinguished, the utmost confusion ensues. We have looked in vain for any proper discussion of valued marine policies, of the rule of "one-third new for old," and of particular average. In fact, so far as marine insurance goes, we do not risk much in saying that its principles are not explained, but rather confused. The cases, especially the important recent cases, are given at considerable length; but many of the notes consist of long lists of authorities, which the practitioner must reëxamine for himself. Recent cases are given very fully, but older ones are thrown in pell-mell, often in such a way as to obscure the principles which they illustrate.

The case of Strong vs. Manufacturers' Insurance Company (10 Pick. 40) decided substantially, among other things, that if one has an insurable interest in property at the time of effecting insurance, and an interest at the time of the loss, he is entitled to recover the whole amount of the loss—not exceeding, of course, the amount insured; the principle was applied to the case of a person who had mortgaged his house, whose interest had been seized on execution, but who still had a right to redeem. The case is one of importance and has always been followed in Massachusetts. In 'Phillips on Insurance' the principle is clearly stated in connection with the case (sec. 286). Now in Mr. Beach's book the case is several times cited, but we have not been able to find the principle clearly stated, and no one would imagine, from his way of dealing with the subject, that the case was a leading one. Again, King vs. State Mutual Fire Insurance Company (7 Cush. 1) is one of Chief-Justice Shaw's luminous judgments, with reference to the relative rights of mortgageor, mortgagee, and insurer. Though it states a rule which is not universally, nor perhaps generally, followed, it throws such a light upon the whole subject of fire insurance that to master it, after reading most other opinions, is like passing out of a bewildering maze into a broad highway. The case is referred to three times in Mr. Beach's volumes, but there is no evidence that he has any appreciation of its importance. These happen to be Massachusetts cases, but they are taken quite at random. The cases have not been studied so much as thrown together under headings, and the result of making law-books in this way is to impose upon the person who uses them a great deal of the work that might have been performed by the author.

Mr. John Brooks Leavitt's treatise on 'The Law of Negligence' (The Diossy Law-Book Co.) is an interesting experiment, inasmuch as the cases from which his law is drawn are of a single jurisdiction—the State of New York. Usually, in this country, cases are drawn from every quarter, with the natural result that there is often much confusion between rules of local and general application. Mr. Leavitt has also confined himself to the reported cases in the court of last resort. The result is, that in a volume of some 800 pages we have before us, first the cases themselves, condensed and chronologically arranged (a valuable collection); second, the law of negligence embodied in the form of rules—a sort of code—with the cases again given in the form of illustrations; third, an index of the cases, classified on the basis of resemblance in fact—*e. g.*, bringing together in one group all cases involving telegrams, in another all involving goods, etc. Although such a classification does not necessarily throw any light on the principles of law involved, it is often, in making a brief, of great convenience. The plan is original, and the execution no less so. So far as we have been able to test the book, the work is very well done. From the use of the word code, it might be supposed that Mr. Leavitt was a supporter of statutory codification; but such is not the case. He was a member of the anti-code committee of the New York Bar Association, and his codification of the law of negligence seems to be a *reductio ad absurdum* of the attempt to embody the common law of persons and contracts in the form of statutes.

The main point is this: At the time of the first draft of a civil code in this State, there were about a hundred different rulings on questions of negligence in the court of last resort. The codifiers undertook to state the law in half-a-dozen phrases, and, Mr. Leavitt says, these, "with one exception, were platitudes." Now, after the lapse of a generation, the cases number some 1,400, and it requires some two hundred and forty sections to state the law. Now very likely Mr. Leavitt's code might be still further condensed, and unquestionably the draft code was inadequate; but as to one thing there is no sort of question—that the enactment of the six propositions as to negligence in the form of a statute thirty or forty years ago would have had little more effect on the process of development that has taken place since, than would whispering "Abracadabra" in the ears of the judges. Further than this, the enactment of Mr. Leavitt's code, did he desire such a thing (which it is only fair to say he abhors), would not arrest the process, but would result in compelling an addition to the volume of the law of a whole host of new cases interpreting the various sections of the code. All this has been demonstrated *ad nauseam* by the history of the code of procedure; but the argument from experience is never replied to by the advocates of codification, who insist upon assuming that the moment a code is enacted the growth of law will stop.

To test Mr. Leavitt's code (or, as it might perhaps better be called, digest), we have examined with some care the sections 90–107 on common carriers. They seem to be in general accurately and well stated, and the only criticism which we shall venture to make is, that the author does not seem to grasp fully the distinction between the ruling of a court laid down for the guidance of a jury and a principle of law. A ruling in a given case may of course state a general principle, as that a contract must have a consideration, or that a deed is invalid without a seal; but generally it contains the application of some principle to some given state of facts. To get at the principle we must reduce the facts to what may be called their lowest terms. If this were not done; if the substance of the law consisted of the sum of the rulings laid down by judges and sustained as correct on appeal, the result would be a horrible hodge-podge. For example, section 102—"A common carrier may limit by contract, express or implied, but not by notice, his common-law liability as an insurer of goods carried by him"—states a principle of law. On the other hand, section 107—

> "When the contract for the shipment of goods is upon a printed blank, prepared by the carrier, and which has been so arranged that exemption clauses, limiting his common-law liability, are wrapped in such involved phraseology, and printed in such fine type and broad columns, that the fact that they are there is not likely to be noticed by the shipper, or if noticed their meaning is not likely to be clearly understood by him, it is a question of fact whether, by the use of such a blank, the carrier intended to entrap the shipper into making a different contract from one intended; and if he did, such exemption clauses are wholly inoperative and void"

—does not state a principle of law. The principle of law must be either that a contract procured by fraud is void, or that the assent of both shipper and carrier is necessary to exempt the latter from his common-law liability. It is really an application of section 102 to a particular state of facts. The fine type, the broad columns, the involved phraseology are not essential to the rule. The phraseology might have been clear, and the columns of an ordinary width, and the type large; if so faintly printed as to be illegible, the rule would still have applied. All this seems to be clear from the case of Blossom v. Dodd, 43 N. Y., 264, cited by the author.

Mr. Charles Wesley Eldridge's 'United States Internal Revenue Tax System, embracing all Internal Revenue Laws now in force' (Houghton, Mifflin & Co.), is sufficiently described by its title. There is no table of cases, probably because so few cases are cited in the volume. The work is almost entirely a revision of the statutes and regulations, and it is evidently very much needed, owing to the great number of amendments passed by Congress since 1873. The author's familiarity with the subject may be inferred from the fact that by appointment of the Secretary of the Treasury, and in association with Hon. W. H. Armstrong, he made the revision on which the Internal Revenue Title of the Revision of 1873 was based. While the book was being prepared for the press, the income tax of 1894, which forms part of it, was swept out of existence.

Our libraries contain some dozen treatises on building associations and other kindred societies, and of these the most complete is that of Mr. G. A. Endlich, 'The Law of Building Associations,' now published in a second edition by Frederick D. Linn & Co., Jersey City. It is not too much to say that to any one who desires to understand the subject it is indispensable. Since the first edition appeared, thirteen years ago, there has been a considerable crop of new cases, which the author has added. A few tables, showing arithmetically the operation and results of the principles on which such corporations do business, would, we think, increase the value of the book.

It is a pleasure to take up a volume like that of Prof. John Chipman Gray's 'Restraints on the Alienation of Property' (Boston Book Co.), which has also reached a second edition. It treats a well-defined subject fully, accurately, and, last but not least, in good English. A very large portion of the present edition deals with what are called "spendthrift trusts," in the recognition of which by the courts of the United States the author sees an illustration of a national failing—a disinclination to observe "the duty of keeping one's promises and paying one's debts." But a more unquestionable illustration is observable in the statutes passed by several States exempting large portions of debtors' property from execution. A spendthrift trust is one by which the founder places property in trust, the income to be paid for life to the beneficiary; the beneficiary having no power to anticipate, nor creditors to attach the income. Such trusts in the case of married women are matters of every-day occurrence, but this is a recognized exception to the ordinary rules of law, which protect creditors in dealing with beneficiaries under a trust, as well as in every other case. Prof.

Gray shows that the exception rests on common-law doctrines relating to married women, and that in legal theory there is no room for another exception as to spendthrifts. We must say, however, that whether it leads in practice to very grave abuse, seems to us a matter of doubt. The trust is usually a matter of record, and the creditor is not obliged to trust the spendthrift, any more than he is the married woman; and parents are under no great temptation to tie up large amounts of property in this way, because such trusts invariably cast a stigma upon the beneficiary, and indirectly upon themselves. Of course, if the power to create a spendthrift trust were used as a cover for fraud—if the beneficiary were no spendthrift at all, but a capable man of business, and the object of the trust merely to enable him to carry on business without paying his debts—it is to be hoped that the courts would find some means of ripping up such a transaction.

The recent case of Howell Osborne, however (4 N. Y., Supp. 496, referred to at p. 294), would seem to justify much of the suspicion and distrust of the doctrine expressed by Prof. Gray. There the testator's will gave trustees $500,000 in trust to apply the income to the use of his son for life. In such a case, a local statute provides that creditors may reach whatever portion of the income is not needed *for the education and support* of the son. A creditor of Osborne alleged that the income of the fund was about $25,000, and that the beneficiary needed only $2,500 a year. The court went out of its way (for the case was decided on another ground) to say that if a parent wishes to make provision "for the support of a profligate son," he has the right to afford him the means of living in the manner "to which he has been accustomed"—so that apparently all that the beneficiary would have to show, to keep his creditors at bay for ever, would be that he was accustomed to be profligate in his expenditure.

Mr. Lewis N. Dembitz's two-volume 'Treatise on Land Titles in the United States' (West Publishing Co., St. Paul), is likely to prove of considerable value to the profession. It cites some 6,000 cases, and, considering that the subject of eminent domain is barely alluded to, this fact of itself shows much research. The author excuses certain blemishes (which would, but for his admission, have hardly been detected) by saying that at the end of his three years' labors he was "worn out," and we can well believe it. There is a popular impression that, owing to the system of recording deeds, land titles in the United States are extremely simple, but, for a variety of reasons which we have no space to go into here, this country is really the paradise of land litigation. In the more unsettled parts of it, adverse possession alone produces every year a crop of lawsuits which, in a community where boundaries and titles have long been established and notorious, would be out of the question. The subjects examined by Mr. Dembitz are description and boundary, estates; title by descent, by grant, by devise, derived from the sovereign, by marriage, by judicial process, and by prescription; encumbrances, powers, the registry laws, estoppel and election, and judgments affecting land.

Till within comparatively recent times Comyn's Digest was still a cyclopædia of the common law. It is a striking illustration of the enormous progress that the analytical and systematic study of the law has since made that, while our shelves are now full of treatises on torts, in the Digest no such title is to be found. The work of bringing together and comparing the features common to actions *ex delicto* under one head, has fallen to the generation now on the stage. Yet this very fact, creditable as it is to those who have engaged in the task, should warn us of an ever-present danger — that of theorizing or generalizing out of the cases principles of decision which are mere gratuitous inferences, and which the courts have never recognized. To this danger Prof. Edwin A. Jaggard, in his 'Handbook of the Law of Torts' (St. Paul: West Publishing Co.), seems to us to be alive, and in general he has endeavored to follow and elucidate the principles of decision, rather than to overrule the courts. As a result, he has succeeded in stating the law of torts in some three hundred rules. So far as we have examined them, they seem generally to be well stated and copiously illustrated by cases, of which there are between 14,000 and 15,000. Considering that there are only 1,094 pages of text, this is a very great number, and of itself indicates how useful the book is likely to be. There are two parts, the first dealing with the general nature of torts, remedies, etc., the second with specific wrongs. Here and there we notice slips which ought in a future edition to be corrected. Rule 110, for instance, confounds the rule *actio personalis moritur cum personâ* with the rule that at common law no action lay for the death of a human being. The first rule applies to the death of either party to the action; in the second, neither party has died: A brings an action against B for causing the death of C (*e. g.*, C being the servant of the wife of A).

In the "Hornbook Series" of law-books issued by the West Publishing Co. of St. Paul, a recent volume is a 'Handbook of International Law,' by Capt. Edwin F. Glenn, U.S.A. We have tested this book on several points with unsatisfactory results. We opened it at the subject of right of asylum in legations, and found it laid down, in the heavy type employed in this series for the statement of principles, that this right "is expressly denied except in the case of political refugees in the Spanish-American States." Reading further, we find that in these countries "the custom of granting asylum to political refugees by foreign legations has become firmly established, and is recognized by the local governments to such an extent that the houses of consuls are respected." No authority whatever is cited for this proposition, and, immediately after it, comes the statement that the United States does not sanction this usage, and enjoins upon its representatives the avoidance of all pretexts for its exercise, assuring them that they will not be countenanced in any attempt knowingly to "harbor offenders against the laws from the pursuit of the legitimate agents of justice." We turned next to the massacre of the Italians at New Orleans in 1891, and found that it was impossible to learn from the text whether the United States paid an indemnity to the families of the Italians or not. Our next attempt was to ascertain the outcome of the controversy with Mexico in the Cutting case in 1886, and here too we were left in the dark. Somewhat discouraged, we undertook to learn the law of the *Itata* case, but, after patient search, were unable to discover any reference whatever to the episode. Neither Chili nor *Itata* appeared in the index, and the latter was not in the table of cases. At this point we suspended our examination, feeling satisfied that better manuals of International Law than this "Hornbook" were already available.

Another volume in this series is a 'Handbook of the Law of Sales,' by Francis B. Tiffany. The sales considered are of course those only of personal property, and, as the text is comprised within 250 pages, not all of the law that has grown up on this subject can be stated. The basis of the work is the English Sale of Goods Bill drafted by Judge Chalmers, a codification of the law which has just been enacted by Parliament; Benjamin on Sales is also frequently followed, and references made to Judge Chalmers's notes. The style is lucid and concise, and, so far as we have tested the work, we have found it accurate. It will not for the practising lawyer supersede the larger text-books, but for the student it may be found a convenient presentation of the outlines of a vast subject within moderate compass.

Mr. Wm. L. Clark's 'Handbook of Criminal Procedure' is one of the best of the Hornbook series. Procedure must necessarily be prescribed in the form of rules, and Mr. Clark is able not only to give the rules, but also to explain them. The book is a small one, but cites between two and three thousand cases. Wherever we have examined it, we have found it clear and to the point. It ought to be useful for the purpose of instruction in law-schools.

Mr. W. H. Buckler is an American lawyer, who is also a bachelor of laws of Trinity College, Cambridge; his volume on 'The Origin and History of Contract in Roman Law down to the end of the Republican Period' (London: C. J. Clay & Sons; New York: Macmillan), was the Yorke prize essay of 1893. Whether his view of the subject is historically correct, we do not pretend to say; but that it shows great research, is very clearly written, possesses great interest, and is marked by decided originality, cannot be questioned. It is in reality a concise reëxamination—in the light of all the evidence—of the leading theories as to the development of contract in Rome. We have been particularly struck with the account given of *nexum*. Compare it with that given in Hunter's 'Roman Law' (second ed., p.459), and the reader will get at a glance a measure of the pains taken by the author to sound the depths of the subject. At the risk of seeming hypercritical, we must suggest a doubt as to the advisability of the unexplained use by writers on Roman Law of the term *unilateral* as applied to such a contract as *nexum*. What is meant is, that the *promise* was on one side; but if there was a transfer of property on the other, the transaction as a whole has obviously two sides. The promise made by the debtor is not the contract itself; if it were, the transaction *per æs et libram* would have been needless.

The American Digest for 1895 (West Publishing Co.) contains 5,447 double-column pages of fine type, and something like 100,000 citations; in all human probability it will be larger next year. Seven years ago the United States Digest (for 1888) contained 759 pages. No doubt the decisions of more courts are now included; but, at this rate of increase, the Digest for 1902 ought to contain some 38,000 pages and 700,000 citations. If the view taken were that this enormous increase in the volume of the law must be ascribed to the fact that "crescit in orbe dolus," the blackest pessimism as to the future would be justifiable. But it is not to *dolus* that the perennial increase is attributable, but to the multiplication of independent jurisdictions and the piling up of unnecessary legislation. Any one who doubts this need only compare this Digest with that which comes out every year in England. The population of the United States is say 70,-

000,000; that of the United Kingdom is perhaps 40,000,000. The general principles of the law of the two countries are the same. Yet the English Annual Digest (1894) is a volume of 370 pages, and some 1,300 citations. There are not, however, in England forty-four independent States, nor in addition a federal system of courts, nor forty-four ignorant legislatures pouring forth annually or biennially volumes of statutes on every conceivable subject.

The Speech of Cicero in Defence of Cluentius. Translated, with an introduction and notes, by W. A. Peterson. Macmillan & Co. 1895.

DR. PETERSON'S translation of Cicero's speech for Cluentius furnishes an excellent account of one of the most famous of the *causes célèbres* of ancient Rome. How the modern reporter would have revelled in the particulars; for, as Mommsen remarks, "the criminal statistics of all times and countries will hardly furnish a parallel to the dreadful picture of crimes—so varied, so horrible, and so unnatural—which this trial unfolds before us." The historian here is referring to the final suit, in which Cicero (though he had previously been on the other side) appeared as the advocate of Cluentius. This was in 66 B.C., but the quarrel itself had dragged along for eight years through various courts. In the final issue, Cluentius was accused, at the instance of his own mother and by his stepbrother, on the charge of poisoning his stepfather Oppianicus. We are apt to think of the empire as the true time of decadence, but the facts in this case are a perfect revelation of the awful state of things that prevailed in the relations of private life, and the utter rottenness of private and public morals in the Ciceronian age. To be sure, in reading Cicero's speech we must remember that he afterwards boasted that in it he had "thrown dust in the eyes of the jury." We have, too, in the speech itself his ingenuous warning that, in his speeches, the hearer is not to think that he is listening to the advocate's own real convictions about the truth of the case before the court. But, when all is weighed, the undeniable facts are a terrible indictment against the society of the day.

What a woman was Cluentius's mother Sassia—*uxor generi, noverca filii, filiae pelex!* She had had three husbands. The first of these (the father of Cluentius) belonged to the *gens* whose mythical ancestor won the boat-race in the 'Aeneid'; the second was her own son-in-law; the third was Oppianicus. This last, the villain of the piece, had had five wives; one he poisoned, two he divorced, one died a natural death, and the fifth was Sassia. He had, according to Cicero, murdered or procured the murder of eleven souls—his first wife, his brother, a brother-in-law, a sister-in-law, two of his own sons, a cousin, his mother-in-law, two unborn children, and a political opponent. He had forged a will, bribed a jury, and attempted to poison Cluentius. The vilest of all motives, *auri sacra fames*, and not mere personal enmity, was at the bottom of all his crimes. Yet he was suffered to live, though banished from the city limits, and, when he died, many of his friends and guest-friends—*homines honesti atque omnibus rebus ornati*, as Cicero calls them, although only a few lines before he had branded Oppianicus as "an outlaw wandering from place to place and everywhere tabooed"—attended a meeting held at Sassia's instigation to inquire into the circumstances of his death. This was the man whom Cluentius was accused of having poisoned; and if only a moiety of the charges against Oppianicus were true, the world was well rid of the wretch, and society might have thanked the hand that had relieved it of his presence. But the gravest doubts attached to the character of Cicero's client himself, and the whole case is to this day *sub judice*.

Dr. Peterson has done his work well; his version is in real English, not "translation English," and the style and language resemble, to a remarkable degree, the pleas which are heard in modern court-rooms. The introduction is thoughtful enough to suit the learned, and not too professional for the general, reader. On two points of interpretation we may venture to differ from the translator. In section 81, he renders *ut ne eripi quidem pecunia posset*, "so that not even bribery could have saved him," thus making *pecunia*, and not *eripi*, the emphatic word. Even accepting the view (set forth in a note) that the tendency to place but one word between *ne* and *quidem* was so strong that sometimes compound phrases are intersected by *quidem*, this is simply begging the question. For it cannot be said that *eripi pecunia* is any more of a compound phrase than *pecunia eripi* would be; so that we are still face to face with the problem why *eripi*, and not *pecunia*, stands first. The answer is that it stands in the emphatic place because it is the important word. The citation of section 107, *ne is quidem absolvit*, is not to the point. Nobody would favor the absurd "not even he acquitted." The words mean "*he* didn't acquit either," or "*he* didn't acquit, not *he!*" and *is* is the emphatic word here also.

But the fact is, that in section 81 Dr. Peterson has not remarked the real difficulty, nor has any other editor, so far as we know. What is the context? It is admitted that a jury has been bribed; the point at issue is, which side did the bribing? The prosecutor gives reasons intended to show that it was not he. In the first place, he says, the gravity of my charges was such that there was no need of my bribing the jury. Secondly, the man whom I accused had been condemned already, *ut ne eripi quidem pecunia posset*. Now, whether these words mean "so that not even bribery could have saved him" (as Dr. Peterson translates), or "so that bribery couldn't have *torn him* from us" (as the reader would naturally take it), it is perfectly clear, in either case, that the words are no argument that the *prosecutor* has not bribed the jury. They rather suggest that even the defendant had no rational grounds for bribing. And yet the sole object of the whole chapter is to prove that the defendant actually did bribe the jury, and the orator gives, just below our passage, the grounds which would have led him to offer the bribe. A learned friend has suggested to us that *pecunia* may be a nominative, and not an ablative, and that the clause means, "So that a bribe couldn't have been *wrung out* of me." In support of this view it might be urged that, in every other passage in Cicero's orations in which *pecunia* is used with *eripio*, the idea is of the forcible abstraction of money from somebody (see Merguet's Lexicon, and cf. *Cluent.* secs. 65, 78). But we are not ready to accept this interpretation unless it should be permitted us to emend the place by inserting *mihi* somewhere—say after *ut* or before *pecunia*. With this suggestion we leave the crux to sharper wits. Perhaps, after all, *eripi* is corrupt.

The other point is a simpler one. In section 32, *per alieni corporis mortem atque cruciatum*, Dr. Peterson is worried by *corporis mortem*, which seems to him "a curious phrase," and he cites in his note Dr. Reid's emendation of *corporis tormenta*. But his anxiety seems wholly unnecessary; *mortem atque cruciatum* is a not uncommon phrase for "a death of agony," and as for *alieni corporis*, what else could the orator have said? Not *alterius* surely. We must have *alieni corporis* here for the contrast with *suo corpori* which has just been used in the foregoing clause. As for Quintilian's *vim atque mortem* (in his quotation of this very place), his memory may have played him a trick due to the occurrence of *vim attulisset* just above.

We cannot account for the curious statement on p. 125 that young Aurius "is spoken of in disparaging terms in section 11." On the contrary, he is praised there, and, throughout, his part was that of the tempted, not the tempter. On p. 11, line 5 from the bottom, "Marcus" is a misprint or a slip for "Numerius." We regret to add that the lack of an index will detract much from the usefulness of the book.

In Unnamed Wisconsin: Studies in the History of the Region between Lake Michigan and the Mississippi. By J. N. Davidson, A.M. To which is appended a Memoir of Mrs. Harriet Wood Wheeler. Milwaukee: Silas Chapman. 1895. Pp. 306.

WISCONSIN, by its census of 1895, shows a population of two millions, wanting a few thousands. Yet within three-score years and ten it was generally believed to be destined to become for ever an Indian reserve. In 1820 Morse, the best of American geographers, visited the country as a Government agent, and in his report said: "Let regulations be made to prohibit the introduction of white settlers within [Wisconsin] limits. Let this territory be reserved exclusively for Indians, for gathering into one body as many of the scattered and other Indians as may choose to settle there, in due time to be admitted to the Union," etc. Calhoun, then Secretary of War, recommended the project except, perhaps, the last clause, for he was as eager to subtract one from the roll of possible free States as he had been to add to the number of slave States by the acquisition of Florida. His views were seconded by all land speculators near Eastern Indians, notably by the Ogden Land Company, who looked upon the acres of the Six Nations as Ahab did on Naboth's vineyard. One friend of Eastern Indians told them "an act of Congress should be obtained to exclude whiskey and white heathen from their new home." Dr. Morse added: "You will never again be disturbed. The white man will never go there. He will never desire those lands. They are too far off." The steamer which brought Morse was the first save one that entered Lake Michigan. Neither of them would have come at all had they not been chartered to carry supplies to a military outpost. The region was declared too far north for successful farming by fur-traders, hundreds of whom infested the country, and their lies were believed till 1832. In 1830 lead mining had scarcely begun, and treaties before that date left the aborigines in possession of a larger area than the largest New England State. In 1836 the census was 11,687. Wisconsin, accordingly, was resorted to as a haven of hope by emigrants from New York tribes, and from others of which the original home had been Massachusetts, or which had been temporary colonists in Indiana.

Shepherds follow sheep, and so pastors who had ministered to these wanderers in their old homes came West with them. 'In Unnamed

Wisconsin' is a work which aims to portray Indian missions in Wisconsin—largely before that region had a name to live as a State in 1848, or even as a Territory in 1836. The antecedents of the immigrants are traced back more than a century — their fates and fortunes in the new home, and those of the older Indian residents. The trials and triumphs of the missionaries are described as no one could describe them without acquaintance with rare books and manuscripts more rare, as well as patient gathering of oral traditions, and, above all, delight in paying honor where honor is due. A representative missionary, and the one of whom most is said, is the Vermonter Wheeler. This man, fifty years ago, put in practice that system of industrial training which has usually passed for a more modern idea. It is a fact, not mentioned in the book but known to the present writer, that Wheeler was a carpenter's apprentice before he went to college. When disabled, after a quarter of a century in harness, he perfected a windmill which he had before taught Indians to make. His patent for it gave him and his a competence in old age and education to his children. As Mr. Davidson sweeps along on his main theme it is wonderful how many lights he flashes on collateral matters. Whether our curiosity concerns topography, or Indian names, or miners, or explorers, or traders, or impostors like the Lost Prince, or dignitaries in embryo like Presidents Taylor, Lincoln, and Davis—we here find what we seek. While missions are the soul of the book, it abounds in limbs and outward flourishes.

Errors for which the proof-reader is to blame are vexatiously numerous. Had the author been aware what large vessels were early dragged round the Sault, he would not have said "those needed on Lake Superior had to be built or put together there" (p. 51). Nor if mindful that Le Caron was on Lake Huron, and Marquette down the Mississippi before any trader, would he have disputed Bancroft so positively (p. 13). Marquette is described as returning in 1674 from his voyage of 1673 (p. 211) as if he had wintered south of Lake Michigan. Sir William Johnson is styled *Governor* of New York, and that more than once (pp. 63, 94). Regarding the westward route of Nicolet, Mr. Davidson is divided against himself. He says (p. 52): "Nicolet came by the broad way of the Great Lakes"; and again, "Nicolet probably went up the Ottawa" (p. 1). The first assertion has no authority, and in the second "certainly" should take the place of "probably," for, says Winsor, "The route by the Ottawa was the only passage which Nicolet knew" ('Cartier to Frontenac,' p. 151). Trifles like these, though they were manifold, could not lessen our thanks to a writer whose work is so good that it runs no risk of being superseded.

Bahama Songs and Stories: A Contribution to Folk-Lore. By Charles L. Edwards, Ph.D., Professor of Biology in the University of Cincinnati. Boston: Houghton, Mifflin & Co. 1895.

THIS handsome and eminently satisfactory work is the third volume of the Memoirs of the American Folk-Lore Society, and it will be strange if the libraries of the country do not get the start of the public at large in absorbing the scanty 350 copies of the limited edition. So far as the songs go, this collection will vie with any that has appeared since the 'Slave Songs of the United States.' There are forty of them in all, words and music, and while the majority of the tunes are not as interesting or characteristic as those of this continent, not a few have a kindred value. We should instance "Beautiful Sta'h," "Go down, Moses," "Ev'rybody wants to know," "Death was a little t'ing," "My Jesus led me to the Rock," "Never a Man speak like this Man," and the chorus of "Don't you weep after me." The words are more uniformly equivalent to those of our negro "spirituals," but there are some curious divergences in the pronunciation, into which even a cockney element intrudes. We take an example from the animal stories: "Vw'en the man vwas goin' to dat tree de hashes did drop hout. 'E vwent to his sour-sop tree; 'e heat as much 's 'e vwan'."

There are thirty-eight of these stories, and they are a distinct addition to the store amassed by Harris and Jones and others, though the affiliations are numerous and striking and are duly noted by Prof. Edwards. He has, however, in the case of his amusing version of "B' Rabby an' B' Tar-Baby," overlooked the sliding off of the conclusion into Uncle Remus's "Brother Rabbit Secures a Mansion," which Mr. Harris discovered by means of a variant brought to this country from Demerara. It gives one a little shock to find one of our fairy tales masquerading in "Greo-Grass an' Hop-o'-my-Thumb," and "The Forty Thieves" in "B' Hellibaby an' B' Dawndejane." The narrators have a set formula for beginning, "Once it vwas a time," etc., and for ending,

> "E bo ban, my story 's en',
> If you doan' believe my story's true," etc.

Prof. Edwards was justified in thinking truly African the mysterious syllables "E bo ban"; but, while the book was passing through the press, he learned of an English country "nominie"—

> "Be bow bended, my story's ended,
> If you don't like it, you may mend it," etc.,

and is evidently shaken in his former opinion.

The book opens with a brief but very agreeable introduction on life in the Bahamas, the habits of the black race, particularly in their "settin' up," corresponding to our Sea Island nocturnal "shouts." Strange to say, the folk-tales are handed down principally by the children. "In each community," says our author, "one boy becomes much the best story-teller, and from such a source I took most of the following tales." Prof. Edwards's appendix treats of African music, and concludes with a noticeable bibliography of this subject.

Sketches of Printers and Printing in Colonial New York. By Charles R. Hildeburn. Dodd, Mead & Co. 1895. 12mo, pp. xiv, 189.

SIX years ago Mr. Hildeburn issued his tentative 'Check-list' of New York imprints, and now carries his announced 'List of the Issues of the New York Press, 1693–1784' one point nearer completion in the above volume. The author's careful and minute research, already proved in the elaborate 'Issues of the Press of Pennsylvania' and the 'Catalogue of the Tower Collection of Colonial Laws,' is fully sustained in the present work, which is a distinct contribution to our knowledge not merely of printing, but scarcely less so of our early literary annals.

New York occupied a unique position in the colonial period as compared with the only other two centres of printing and literary activity among the provinces. Boston and Philadelphia, while nominally having free presses, were so overpoweringly influenced by a public sentiment colored with Congregationalism or Quakerism that local publications were, for the most part, of merely sectarian interest. Indeed, as the present work shows, writers in both cities opposed to the theocratic majority were in several cases compelled to send their works to tolerant New York in order to get them printed, and Mr. Hildeburn himself is in doubt as to whether the Keithian-Quaker controversy in Philadelphia was not the immediate cause of Bradford's establishing the first press in New York. In still another way this religious influence affected New York's rivals, for the Puritans and Quakers were generally opposed to plays and novels; and thus their influence hung as a dead weight upon any endeavor to produce belles-lettres. To this is due the honor New York has, of having printed the first plays in this country of both American (Hunter's "Androborus," 1714) and European (Addison's "Cato," 1753) production; the first novel (Richardson's 'Pamela,' 1744), and, later, the first edition of 'Robinson Crusoe,' the first volume of fairy tales, and other children's books. Not quite so easy to explain is the appearance here of the first printed protest against slavery (1693), though perhaps accounted for by the fact that New York seems to have never engaged so deeply in the slave trade as either Boston or Philadelphia.

A sketch of each printer is given by Mr. Hildeburn, and his most important books noted, the titles of the more interesting or typical being reproduced in facsimile. In this way thirty-three individuals are recorded who at one time or another composed the printing firms of New York. We can note no omissions from the list, though we should have been glad to see some reference to the printing-press on board Lord Howe's fleet in New York bay in July and August, 1776, on which at least one "Declaration" was struck off. The probabilities are that it was operated by Macdonald and Cameron, for they printed Howe's Declaration of September 19, 1776, and his Proclamation of November 30, and Mr. Hildeburn notes that most of that firm's publications were headed "by authority" or "by permission." This possibly gives a clue to the printers of the "Declaration" of Howe in 1777, which was probably printed on shipboard, being dated "Capes of Delaware," and this surmise corrects the date of the printers' removal to Philadelphia. The perplexity of the bibliography of those years of turmoil is well proved by a fact that Mr. Hildeburn for the first time puts in print:

"One other incident in Gaine's career in connection with his newspaper must be mentioned. It is, I believe, without a parallel in the annals of journalism. At the outbreak of the Revolution, Gaine, after a slight leaning towards the American cause, assumed and maintained a strict neutrality; but when it became likely that the British would occupy New York in September, 1776, he sent one of his presses to Newark, and on the 28th of that month began to issue there a quarto newspaper bearing the name and imprint of 'The New York *Gazette* and the Weekly *Mercury*, Printed by Hugh Gaine, at Newark, in East-New-Jersey,' devoted to the Whig cause, at the same time continuing to issue his neutral paper, of the same name, from his sign of 'The Bible and Crown,' in Hanover Square. The Newark edition was issued two days earlier than the New York one, but, besides bearing the same name, was numbered in sequence with the earliest issued. This was continued until November 2, making duplicate numbers and two papers of different politics from 1301 to 1307. After the battle of Long Island, Gaine concluded the American to be the losing side, withdrew from Newark, and gave his paper a British tone, which it preserved until its termination."

Nor is this the only contribution to the jour-

nalistic history of New York, for the author corrects Thomas's and Hudson's accounts in so many details as to entirely discredit them both. We note with interest that there was a "New York *Evening Post*" in 1744. For another similarity of conditions between the New York of that period and the New York of today, one paper was called the "Lying *Gazette*," while of another it was said that "the line at the top giving the name of the printer and the price of the paper were the only words of truth in it." Moreover, the "Lying *Gazette*" had what was probably the largest circulation of the day, being thirty-six hundred copies, unless the "circulation lie" was of older origin than is commonly supposed.

Like all Mr. Hildeburn's books, the proof-reading of his latest is wonderfully correct, the only noticeable error being the turning of Benjamin Rush into Benjamin Brush (p. 146). Another small point is that the author apparently is not aware that Mecon printed an edition of "Father Abraham's Speech" in 1758, though his statement, as far as it goes, is absolutely correct. Three engraved portraits, one hitherto unknown, and twenty-three facsimiles are very valuable additions. The book as a whole is a beautiful specimen of the De Vinne Press, and the limited edition of 375 copies will make it appeal to the book-fancier as well as to the scholar.

The Natural History of Plants: Their Forms, Growth, Reproduction, and Distribution. From the German of Anton Kerner von Marilaun, Professor in the University of Vienna, by F.W. Oliver, M. A., D.Sc., Quain Professor of Botany in University College, London. Vol. I. in two parts. New York: Henry Holt & Co. 1895. Large 8vo, pp. 777.

THIS is the excellent English translation of the well-known 'Pflanzenleben' of the Vienna Professor. After an interesting introduction dealing with the study of plants in ancient and modern times, the author brings the reader at once to the very highest ground in the field, from which he can take a wide outlook. This point of view, it is hardly necessary to state, is the doctrine of the protoplasts. It assumes that the minute differentiated granules of living matter within the vegetable organism are all imbedded in the general mass of protoplasm, and that they are thereby brought into contact with one another and with the outer world. All activities reside within these microscopic organs, and it is only by gaining a knowledge of their work that we can hope to understand how the plant performs its manifold functions. Absorption of the materials for the production of food, the conduction of these crude matters to the points where they are made use of in the sunlight, the conveyance of the prepared food to the places where it is employed in work or treasured for future use, and, finally, the phenomena of propagation, are all made clear when the character of the protoplasts is understood. In some treatises the consideration of these minute granules is left to a much later stage in the development of the subject. The wisdom of Prof. Kerner's method is justified by the result. From first to last the reader goes forward with a distinct understanding of the proportions and perspective of vegetal activities. He is inducted with a certain degree of confidence into the more recent discoveries, because the author seems to feel that each person can measure and weigh evidence for himself. It will not be a surprise, therefore, when it is stated that almost all the newer developments, even those which are not yet accepted universally by botanists, are given with a great degree of fulness.

The translation is uneven, but is for the most part of exceptional excellence. Long German sentences are boldly broken into distinct fragments, after a fashion which suggests French editing. The lucidity of style is remarkable, and renders the reading, not to say the studying, a pleasure. We must add that the illustrations are very numerous and tell ing, and that the treatise is enriched by a series of excellent drawings in color.

BOOKS OF THE WEEK.

American Church Almanac and Year Book for 1896. James Pott & Co. 25c.

153-157 Fifth Ave., New York.

"VENEZUELA."

A Market for an Impulse.

By WILLIAM WHITTEMORE TUFTS.

The characters are strongly drawn and the play of human passion reflects much credit on the author.—*The Boston Herald.*

The author, in his representation of human nature, must have anticipated the Venezuelan case, for we find here the affair in epitome. Skye is the World; Hilland Hilworthy is England; Mrs. Haverell is Venezuela; Peyton Wade is Grover Cleveland; Mallestone is an independent newspaper; Margaret Hilworthy and the cloaked men are the American People; Towne is an Old World Monarchy; and Baybridge, Murch and others are the Tacticians. The story illustrates the triumph of impulse over policy. Cloth, $1.25; Paper, 50 cents.

CASS REALTY CORPORATION.

GENERAL OFFICES:

No. 503 Fifth Avenue, New York City, New York.

The safest *Investment Institution* in the *Country.* For Clergymen, Lawyers, Physicians, Teachers, Authors, and Women. For the class that saves, and for all those who expect and require frequent and regular income from their investments. It is not intended for the *rich.*

The *Largest* and *Best* of its *Class.* Confines itself to *Productive Real Estate* in New York City. Small or large sums received. Payments made on account of subscriptions as may be arranged. Regular Quarterly Dividends. Principal safe. The opinion is universal that it is the soundest investment yet offered to the public.

The Corporation has never sold a share for less than par in cash, and no shares have ever been given in exchange for property. No bonds issued.

Preferred, 5 per cent., common, 6 per cent.; dividends quarterly. Shares One hundred dollars each. Preferred scrip bearing 5 per cent. interest in amounts to suit. Certificates will be issued for all sums of money paid in. Send money to order of Corporation, either by cheque or Post-Office order.

CHARLES W. CASS, *President.*

Agents of integrity and ability wanted—male or female—city or country. Reliable references required.

Timely Warning.

The great success of the chocolate preparations of the house of Walter Baker & Co. (established in 1780) has led to the placing on the market many misleading and unscrupulous imitations of their name, labels, and wrappers. Walter Baker & Co. are the oldest and largest manufacturers of pure and high-grade Cocoas and Chocolates on this continent. No chemicals are used in their manufactures.

Consumers should ask for, and be sure that they get, the genuine Walter Baker & Co.'s goods.

WALTER BAKER & CO., Limited,
DORCHESTER, MASS.

GRATEFUL—COMFORTING.

Epps's Cocoa

BREAKFAST—SUPPER.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided for our breakfast and supper a delicately flavored beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette.*

JUST PUBLISHED.

The Red Republic.

A Romance of the Commune. By ROBERT W. CHAMBERS, author of "The King in Yellow," "In the Quarter," etc., etc. 8vo, cloth, with ornamental cover design by the author, $1.25.

This story, the most serious thus far attempted by the author, has engaged his attention ever since the publication of his now famous "King in Yellow."

The scene of the story is laid in Paris during the exciting winter and spring of 1871, just after the German siege, and when Paris was in possession of the Communists. With the dramatic scene of the Commune as a background, the reader is presented with an idyl of love and art, as developed in a quiet studio and a secluded garden in the old Quarter of Paris. The story is not only true to history, but is exceptionally dramatic and vivid.

The Second Madame.

A Memoir of Elizabeth Charlotte, Duchesse d'Orleans. By M. LOUISE MCLAUGHLIN, author of "China Painting," "Pottery Decoration," etc. With illustrated headpieces. 16mo, $1.25.

The Gold Diggings of Cape Horn.

A Study of Life in Tierra del Fuego and Patagonia. By JOHN R. SPEARS. 8vo, illustrated, $1.75.

American War Ballads.

Edited by GEORGE CARY EGGLESTON. Comprising a selection of the most noteworthy war poetry produced during the Colonial Period, the Indian Wars, the Revolution, the War of 1812-14, the Mexican War, and the Civil War. Fully illustrated. One volume, 16mo, cloth, $1.50.

Nymphs, Nixies, and Naiads.

Legends of the Rhine, told in verse by M. A. B. EVANS, author of "In Various Moods." With illustrations by WILLIAM A. MCCULLOUGH. 12mo, $1.25.

Love and Laughter.

A Legacy of Rhyme. By JAMES G. BURNETT. With Introduction by WILLIAM WINTER, and Portrait. 12mo, ornamental cloth, gilt top, $1.25.

*** Send for illustrated Christmas number "Notes on New Books" and "Little List of Valuable Books."*
